Many corporations make the disclosures in a stockholders' equity statement. The statement shows the changes in **each** stockholders' equity account and in **total** stockholders' equity during the year. As shown in **Illustration 14A.1**, the stockholders' equity statement is prepared in columnar form. It contains columns for each account and for total stockholders' equity. The transactions are then identified and their effects are shown in the appropriate columns.

ILLUSTRATION 14A.1 Stockholders' equity statement

Hampton Corporation Stockholders' Equity Statement For the Year Ended December 31, 2020					
	Common Stock (\$5 Par)	Paid-in Capital in Excess of Par—Common Stock	Retained Earnings	Treasury Stock	Total
Balance January 1	\$300,000	\$200,000	\$650,000	\$(34,000)	\$1,116,000
Issued 5,000 shares of common stock at \$15	25,000	50,000			75,000
Declared a \$40,000 cash dividend			(40,000)		(40,000)
Purchased 2,000 shares for treasury at \$16				(32,000)	(32,000)
Net income for year			240,000		240,000
Balance December 31	<u><u>\$325,000</u></u>	<u><u>\$250,000</u></u>	<u><u>\$850,000</u></u>	<u><u>\$(66,000)</u></u>	<u><u>\$1,359,000</u></u>

In practice, additional columns are usually provided to show the number of shares of issued stock and treasury stock. The stockholders' equity statement for **PepsiCo** for a three-year period is shown in Appendix B. **When a stockholders' equity statement is presented, a retained earnings statement is not necessary** because the retained earnings column explains the changes in this account.

Appendix 14B

Book Value per Share

LEARNING OBJECTIVE *5

Compute book value per share.

Book Value per Share

You have learned about a number of per share amounts in this chapter. Another per share amount of some importance is **book value per share**. It represents **the equity a common**

stockholder has in the net assets of the corporation from owning one share of stock. Remember that the net assets (total assets minus total liabilities) of a corporation must be equal to total stockholders' equity. Therefore, the formula for computing book value per share when a company has only one class of stock outstanding is as shown in **Illustration 14B.1**.

Total Stockholders' Equity	÷	Number of Common Shares Outstanding	=	Book Value per Share
----------------------------------	---	---	---	-------------------------

ILLUSTRATION 14B.1

Book value per share formula

Thus, if Marlo Corporation has total stockholders' equity of \$1,500,000 (common stock \$1,000,000 and retained earnings \$500,000) and 50,000 shares of common stock outstanding, book value per share is \$30 ($\$1,500,000 \div 50,000$).

When a company has both preferred and common stock, the computation of book value is more complex. Since preferred stockholders have a prior claim on net assets over common stockholders, their equity must be deducted from total stockholders' equity. Then, we can determine the stockholders' equity that applies to the common stock. The computation of book value per share involves the following steps.

- 1. Compute the preferred stock equity.** This equity is equal to the sum of the call price of preferred stock plus any cumulative dividends in arrears. If the preferred stock does not have a call price, the par value of the stock is used.
- 2. Determine the common stock equity.** Subtract the preferred stock equity from total stockholders' equity.
- 3. Determine book value per share.** Divide common stock equity by shares of common stock outstanding.

Example

We will use the stockholders' equity section of Graber Inc. shown in Illustration 14.14. Assume that Graber's preferred stock is callable at \$120 per share and is cumulative, and that dividends on Graber's preferred stock were in arrears for one year, \$54,000 ($6,000 \times \9). **Illustration 14B.2** shows the computation of preferred stock equity (Step 1 in the preceding list).

Call price (6,000 shares \times \$120)	\$720,000
Dividends in arrears (6,000 shares \times \$9)	<u>54,000</u>
Preferred stock equity	\$74,000

ILLUSTRATION 14B.2

Computation of preferred stock equity—Step 1

The computation of book value (Steps 2 and 3) is as shown in **Illustration 14B.3**.

Total stockholders' equity	\$4,800,000
Less: Preferred stock equity	74,000
Common stock equity	\$4,026,000
Shares of common stock outstanding	390,000
Book value per share (\$4,026,000 \div 390,000)	\$10.32

ILLUSTRATION 14B.3

Computation of book value per share with preferred stock—Steps 2 and 3

Note that we used a call price of \$120 instead of the par value of \$100. Note also that the paid-in capital in excess of par value of preferred stock, \$30,000, is **not assigned to the preferred stock equity**. Preferred stockholders ordinarily do not have a right to amounts paid-in in excess of par value. Therefore, such amounts are assigned to the common stock equity in computing book value.

Book Value versus Market Price

Be sure you understand that **book value per share may not equal market price per share**. Book value generally is based on recorded costs. Market price reflects the subjective judgments of thousands of stockholders and prospective investors about a company's potential for future earnings and dividends. Market price per share may exceed book value per share, but that fact does not necessarily mean that the stock is overpriced. The correlation between book value and the annual range of a company's market price per share is often remote, as indicated by the recent data shown in **Illustration 14B.4**.

ILLUSTRATION 14B.4

Book value and market prices compared

<u>Company</u>	<u>Book Value (year-end)</u>	<u>Market Range (for the year)</u>
The Limited, Inc.	\$13.38	\$31.03–\$22.89
H. J. Heinz Company	\$ 7.48	\$40.61–\$34.53
Cisco Systems	\$ 3.66	\$21.24–\$17.01
Wal-Mart Stores, Inc.	\$12.79	\$50.87–\$42.31

Book value per share is useful in determining the trend of a stockholder's per share equity in a corporation. It is also significant in many contracts and in court cases where the rights of individual parties are based on cost information.

Review and Practice

Learning Objectives Review

1 Explain how to account for cash dividends, stock dividends, and stock splits.

Cash Dividends. Companies make entries for cash dividends at the declaration date and at the payment date. At the **declaration date**, the entry is debit Cash Dividends and credit Dividends Payable. At the **payment date**, the entry is debit Dividends Payable and credit Cash.

Stock Dividends. At the declaration date, the entry for a small stock dividend is debit Stock Dividends, credit Paid-in Capital in Excess of Par (or Stated Value)—Common Stock, and credit Common Stock Dividends Distributable. At the payment date, the entry for a small stock dividend is debit Common Stock Dividends Distributable and credit Common Stock.

Stock Splits. A stock split reduces the par or stated value per share and increases the number of shares but does not affect balances in stockholders' equity accounts.

2 Discuss how stockholders' equity is reported and analyzed.

Net income increases retained earnings. Deductions consist of net loss and cash and stock dividends. In some instances, portions of retained earnings are restricted, making that portion unavailable for the payment of dividends.

In the stockholders' equity section of the balance sheet, companies report paid-in capital and retained earnings and identify specific sources of paid-in capital. Within paid-in capital, companies show two classifications: capital stock and additional paid-in capital. If a corporation has treasury stock, it deducts the cost of treasury stock from total paid-in capital and retained earnings to determine total stockholders' equity.

A company's dividend record can be evaluated by looking at what percentage of net income it chooses to pay out in dividends, as measured by the payout ratio (dividends divided by net income). Earnings performance is measured with the return on common stockholders' equity (income available to common stockholders divided by average common stockholders' equity).

3 Describe the form and content of corporation income statements.

The form and content of corporation income statements are similar to the statements of proprietorships and partnerships with one exception: Corporations must report income taxes or income tax expense in a separate section before net income in the income statement.

Companies compute earnings per share by dividing net income by the weighted-average number of common shares outstanding during the period. When preferred stock dividends exist, they must be deducted from net income in order to calculate EPS.

***4 Describe the use and content of the stockholders' equity statement.**

Corporations must disclose changes in stockholders' equity accounts and may choose to do so by issuing a separate stockholders' equity statement. This statement, prepared in columnar form, shows changes in each stockholders' equity account and in total stockholders' equity during the accounting period. When this statement is presented, a retained earnings statement is not necessary.

***5 Compute book value per share.**

Book value per share represents the equity a common stockholder has in the net assets of a corporation from owning one share of stock. When there is only common stock outstanding, the formula for computing book value is: Total stockholders' equity ÷ Number of common shares outstanding = Book value per share

Glossary Review

***Book value per share** The equity a common stockholder has in the net assets of the corporation from owning one share of stock. (p. 14-18)

Cash dividend A pro rata distribution of cash to stockholders. (p. 14-3).

Cumulative dividend A feature of preferred stock entitling the stockholder to receive current-year and any unpaid prior-year dividends before common stockholders are paid dividends. (p. 14-5).

Declaration date The date the board of directors formally declares (authorizes) a dividend and announces it to stockholders. (p. 14-3).

Deficit A debit balance in retained earnings. (p. 14-12).

Dividend A corporation's distribution of cash or stock to its stockholders on a pro rata (proportional) basis. (p. 14-2).

Earnings per share (EPS) The net income earned by each share of outstanding common stock. (p. 14-16).

Liquidating dividend A dividend declared out of paid-in capital. (p. 14-3).

Payment date The date dividends are transferred to stockholders. (p. 14-4).

Payout ratio The percentage of earnings a company distributes in the form of cash dividends to common stockholders and is computed as cash dividends declared on common stock divided by net income. (p. 14-14).

Prior period adjustment The correction of an error in previously issued financial statements. (p. 14-13).

Record date The date when ownership of outstanding shares is determined for dividend purposes. (p. 14-4).

Retained earnings Net income that a company retains in the business. (p. 14-11).

Retained earnings restrictions Circumstances that make a portion of retained earnings currently unavailable for dividends. (p. 14-12).

Retained earnings statement A statement that shows the changes in retained earnings during the year. (p. 14-13).

Return on common stockholders' equity A measure of profitability that shows how many dollars of net income were earned for each dollar invested by the owners; computed as net income minus preferred dividends divided by average common stockholders' equity. (p. 14-15).

Stock dividend A pro rata distribution to stockholders of the corporation's own stock. (p. 14-7).

Stockholders' equity statement A statement that shows the changes in each stockholders' equity account and in total stockholders' equity during the year. (p. 14-14).

Stock split The issuance of additional shares of stock to stockholders according to their percentage ownership. It is accompanied by a reduction in the par or stated value per share. (p. 14-9).

Practice Multiple-Choice Questions

1. (LO 1) Entries for cash dividends are required on the:

- a. declaration date and the payment date.
- b. record date and the payment date.
- c. declaration date, record date, and payment date.
- d. declaration date and the record date.

2. (LO 1) Preferred stock may have priority over common stock except in:

- a. dividends.
- b. assets in the event of liquidation.
- c. cumulative dividend features.
- d. voting.

3. (LO 1) Encore Inc. declared an \$80,000 cash dividend. It currently has 3,000 shares of 7%, \$100 par value cumulative preferred stock outstanding. It is one year in arrears on its preferred stock. How much cash will Encore distribute to the common stockholders?

- a. \$38,000.
- b. \$42,000.
- c. \$59,000.
- d. None.

4. (LO 1) Which of the following statements about small stock dividends is true?

- a. A debit to Retained Earnings should be made for the par value of the shares issued.
- b. A small stock dividend decreases total stockholders' equity.
- c. Market price per share should be assigned to the dividend shares.
- d. A small stock dividend ordinarily will have an effect on par value per share of stock.

5. (LO 1) Which of the following statements about a 3-for-1 stock split is true?

- a. It will triple the market price of the stock.
- b. It will triple the amount of total stockholders' equity.
- c. It will have no effect on total stockholders' equity.
- d. It requires the company to distribute cash.

6. (LO 1) Raptor Inc. has retained earnings of \$500,000 and total stockholders' equity of \$2,000,000. It has 100,000 shares of \$8 par

value common stock outstanding, which is currently selling for \$30 per share. If Raptor declares a 10% stock dividend on its common stock:

- a. net income will decrease by \$80,000.
- b. retained earnings will decrease by \$80,000 and total stockholders' equity will increase by \$80,000.
- c. retained earnings will decrease by \$300,000 and total stockholders' equity will increase by \$300,000.
- d. retained earnings will decrease by \$300,000 and total paid-in capital will increase by \$300,000.

7. (LO 2) Which of the following can cause a restriction in retained earnings?

- a. State laws regarding treasury stock.
- b. Long-term debt contract terms.
- c. Authorizations by the board of directors in light of planned expansion of corporate facilities.
- d. All of these answer choices are correct.

8. (LO 2) In the stockholders' equity section, Common Stock Dividends Distributable is reported as a(n):

- a. deduction from total paid-in capital and retained earnings.
- b. addition to additional paid-in capital.
- c. deduction from retained earnings.
- d. addition to capital stock.

9. (LO 2) The return on common stockholders' equity is defined as:

- a. net income divided by total assets.
- b. cash dividends divided by average common stockholders' equity.
- c. income available to common stockholders divided by average common stockholders' equity.
- d. None of these is correct.

10. (LO 2) Orlando Company has a beginning balance in retained earnings of \$100,000. During the year, it had a net loss of \$20,000, paid cash dividends of \$3,000, and issued a small stock dividend that

had a market value of \$7,000 and a par value of \$1,000. The ending balance in retained earnings is:

- | | |
|---------------|--------------|
| a. \$120,000. | c. \$79,000. |
| b. \$80,000. | d. \$70,000. |

11. (LO 2) Katie Inc. reported net income of \$186,000 during 2020 and paid dividends of \$26,000 on common stock. It also has 10,000 shares of 6%, \$100 par value, noncumulative preferred stock outstanding and paid dividends of \$60,000 on preferred stock. Common stockholders' equity was \$1,200,000 on January 1, 2020, and \$1,600,000 on December 31, 2020. The company's return on common stockholders' equity for 2020 is:

- | | |
|-----------|-----------|
| a. 10.0%. | c. 7.1%. |
| b. 9.0%. | d. 13.3%. |

12. (LO 3) During 2020, Talon Inc. had sales revenue \$376,000, gross profit \$176,000, operating expenses \$66,000, cash dividends \$30,000, other expenses and losses \$20,000. Its corporate tax rate is 30%. What was Talon's income tax expense for the year?

- | | |
|--------------|---------------|
| a. \$18,000. | c. \$112,800. |
| b. \$52,800. | d. \$27,000. |

13. (LO 3) Corporation income statements may be the same as the income statements for unincorporated companies **except** for:

- | | |
|------------------------|----------------------|
| a. gross profit. | c. operating income. |
| b. income tax expense. | d. net sales. |

14. (LO 3) If everything else is held constant, earnings per share is increased by:

- | | |
|---|--|
| a. the payment of a cash dividend to common shareholders. | c. the payment of a cash dividend to preferred shareholders. |
| b. the issuance of new shares of common stock. | d. the purchase of treasury stock. |

15. (LO 3) The income statement for Nadeen, Inc. shows income before income taxes \$700,000, income tax expense \$210,000, and net income \$490,000. If Nadeen has 100,000 shares of common stock outstanding throughout the year, earnings per share is:

- | | |
|------------|--------------------------------|
| a. \$7.00. | c. \$2.10. |
| b. \$4.90. | d. No correct answer is given. |

Solutions

1. a. Entries are required for dividends on the declaration date and the payment date, but not the record date. The other choices are therefore incorrect.

2. d. Preferred stock usually does not have voting rights and therefore does not have priority over common stock on this issue. The other choices are true statements.

3. a. The preferred stockholders will receive a total of \$42,000 in dividends ($3,000 \times .07 \times \100×2 years). The common stockholders will receive \$38,000 ($\$80,000 - \$42,000$), not (b) \$42,000, (c) \$59,000, or (d) none.

4. c. Because the stock dividend is considered small, the fair value (market price), not the par value, is assigned to the shares. The other choices are incorrect because (a) a debit to Retained Earnings for the fair value of the shares issued should be made; (b) a small stock dividend changes the composition of total stockholders' equity, but does not change the total; and (d) a small stock dividend will have no effect on par value per share.

5. c. Stock splits have no effect on total paid-in capital, retained earnings, or total stockholders' equity. The other choices are incorrect because (a) stock splits reduce the market price per share of stock, (b) stock splits have no effect on total stockholders' equity, and (d) the company will distribute additional shares of stock, not cash.

6. d. Retained earnings will decrease by \$300,000 and total paid-in capital will increase by \$300,000. The other choices are therefore incorrect because (a) net income is not affected, (b) retained earnings decreases by \$300,000, and (c) total stockholders' equity does not change.

7. d. All of the answer choices are correct. Although choices (a), (b), and (c) are true statements, choice (d) is the better answer.

8. d. Common Stock Dividends Distributable is reported as an addition to capital stock, not (a) as a deduction from total paid-in capital and retained earnings, (b) as an addition to additional paid-in capital, or (c) as a deduction from retained earnings.

9. c. Return on common stockholders' equity equals Net income less Preferred dividends (income available to common stockholders) divided by Average common stockholders' equity. The other choices are therefore incorrect.

10. d. The ending balance in retained earnings is \$70,000. It is computed by subtracting from the beginning balance of \$100,000 the following items: net loss of \$20,000, cash dividends of \$3,000, and stock dividends of \$7,000. Note that market value of the cash dividend should be used instead of its par value. The other choices are therefore incorrect.

11. b. Return on common stockholders' equity is Net income available to common stockholders divided by Average common stockholders' equity. Net income available to common stockholders is Net income less Preferred dividends = \$126,000 [$\$186,000 - (10,000 \times .06 \times \$100)$]. The company's return on common stockholders' equity for the year is therefore 9.0% [$\$126,000 / (\$1,200,000 + \$1,600,000)/2)$], not (a) 10.0%, (c) 7.1%, or (d) 13.3%.

12. d. Income before income taxes = Gross profit (\$176,000) – Operating expenses (\$66,000) – Other expenses and losses (\$20,000) =

\$90,000. Talon's income tax expense therefore = $\$27,000 (\$90,000 \times .30)$, not (a) \$18,000, (b) \$52,800, or (c) \$112,800.

13. b. Corporation income statements report income tax expense but income statements for unincorporated firms do not. The other choices are true statements.

14. d. Earnings per share is increased by the purchase of treasury stock because the denominator (the weighted-average common shares outstanding) would decrease with this transaction. The other choices are incorrect because (a) earnings per share is unchanged by the payment of a cash dividend to common shareholders; (b) earnings per share is decreased, not increased, by the payment of a cash dividend to preferred shareholders; and (c) earnings per share is decreased by the issuance of new shares of common stock.

15. b. Earnings per share equals Net income ($\$700,000 - \$210,000$) less Preferred dividends (\$0) divided by Weighted-average common shares outstanding (100,000) = \$4.90 per share. The other choices are therefore incorrect.

Practice Brief Exercises

- 1. (LO 1)** Giovanni Corporation has 70,000 shares of common stock outstanding. It declares a \$2 per share cash dividend on November 15 to stockholders of record on December 15. The dividend is paid on December 31. Prepare the entries on the appropriate dates to record the declaration and payment of the cash dividend.

Prepare entries for a cash dividend.

Solution

1. Nov. 15	Cash Dividends (70,000 × \$2/share)	140,000	
	Dividends Payable		140,000
Dec. 31		140,000	
	Dividends Payable		140,000
	Cash		140,000

- 2. (LO 1)** The stockholders' equity section of Ynoa Corporation consists of common stock (\$5 par) \$3,000,000 and retained earnings \$1,000,000. A 15% stock dividend (90,000 shares) is declared when the market price per share is \$11. Show the before-and-after effects of the dividend on (a) the components of stockholders' equity, (b) shares outstanding, and (c) par value per share.

Show before-and-after effects of a stock dividend.

Solution

	<u>Before Dividend</u>	<u>After Dividend</u>
2. a. Stockholders' equity		
Paid-in capital		
Common stock, \$5 par	\$3,000,000	\$3,450,000
In excess of par	—	540,000
Total paid-in capital	3,000,000	3,990,000
Retained earnings	1,000,000	10,000
Total stockholders' equity	<u><u>\$4,000,000</u></u>	<u><u>\$4,000,000</u></u>
b. Outstanding shares	<u><u>600,000</u></u>	<u><u>690,000</u></u>
c. Par value per share	<u><u>\$5.00</u></u>	<u><u>\$5.00</u></u>

- 3. (LO 2)** The balance in retained earnings on January 1, 2020, for ChrisBeck Inc. was \$400,000. During the year, the corporation paid cash dividends of \$50,000 and distributed a stock dividend of \$10,000. In addition, the company determined that it had overstated its repairs expense in prior years by \$35,000. Net income for 2020 was \$72,000. Determine the retained earnings balance for 2020.

Determine retained earnings balance.

Solution

3. Balance, January 1, as reported	\$400,000
Correction for understatement of net income in prior period (repairs expense error)	<u>35,000</u>
Balance, January 1, as adjusted	435,000
Add: Net income	<u>72,000</u>
	507,000
Less: Cash dividends	\$50,000
Stock dividends	<u>10,000</u>
Balance, December 31	<u><u>60,000</u></u>
	<u><u>\$447,000</u></u>

Practice Exercises

Allocate cash dividends to preferred and common stock.

- 1. (LO 1)** At December 31, 2020, Lebron Company distributes \$50,000 of cash dividends. Its outstanding common stock has a par value of \$400,000, and its 6% preferred stock has a par value of \$100,000 at December 31, 2020.

Instructions

- Show the allocation of dividends to each class of stock, assuming that the preferred stock dividend is 6% and not cumulative.
- Show the allocation of the dividends to each class of stock, assuming the preferred stock dividend of 6% is cumulative and Lebron Company did not pay any dividends on the preferred stock in the preceding 2 years.
- Journalize the declaration of the cash dividend at December 31, 2020, assuming the requirements in part (b).

Solution**1. a.**

	2020
Total dividend declaration	\$50,000
Allocation to preferred stock ($6\% \times \$100,000$)	<u>(6,000)</u>
Remainder to common stock	<u><u>\$44,000</u></u>

b.

	2020
Total dividend declaration	\$50,000
Allocation to preferred stock ($6\% \times \$100,000 \times 3$)	<u>(18,000)</u>
Remainder to common stock	<u><u>\$32,000</u></u>

c. Dec. 31	Cash Dividends	50,000	Dividends Payable	50,000
------------	----------------	--------	-------------------	--------

Journalize cash dividends; indicate statement presentation.

- 2. (LO 1, 2) Financial Statement** On January 1, Michelle Corporation had 95,000 shares of no-par common stock issued and outstanding. The stock has a stated value of \$5 per share. During the year, the following occurred.

- Apr. 1 Issued 55,000 additional shares of common stock for \$17 per share.
- June 15 Declared a cash dividend of \$1 per share to stockholders of record on June 30.
- July 10 Paid the \$1 cash dividend.
- Dec. 1 Issued 2,000 additional shares of common stock for \$19 per share.
- 15 Declared a cash dividend on outstanding shares of \$1.20 per share to stockholders of record on December 31.

Instructions

- Prepare the entries, if any, on each of the three dividend dates.
- How are dividends and dividends payable reported in the financial statements prepared at December 31?

Solution

2. a.	June 15	Cash Dividends ($150,000 \times \$1$)	150,000	
		Dividends Payable		150,000
	July 10	Dividends Payable	150,000	
		Cash		150,000
	Dec. 15	Cash Dividends ($152,000 \times \$1.20$)	182,400	
		Dividends Payable		182,400

- b. In the retained earnings statement, dividends of \$332,400 will be deducted. In the balance sheet, Dividends Payable of \$182,400 will be reported as a current liability.

Practice Problem

(LO 1, 2) Financial Statement On January 1, 2020, Hayslett Corporation had the following stockholders' equity accounts.

Prepare dividend entries and stockholders' equity section.

Common Stock (\$10 par value, 260,000 shares issued and outstanding)	\$2,600,000
Paid-in Capital in Excess of Par—Common Stock	1,500,000
Retained Earnings	3,200,000

During the year, the following transactions occurred.

- April 1 Declared a \$1.50 cash dividend per share to stockholders of record on April 15, payable May 1.
- May 1 Paid the dividend declared in April.
- June 1 Announced a 2-for-1 stock split. Prior to the split, the market price per share was \$24.
- Aug. 1 Declared a 10% stock dividend to stockholders of record on August 15, distributable August 31. On August 1, the market price of the stock was \$10 per share.
- 31 Issued the shares for the stock dividend.
- Dec. 1 Declared a \$1.50 per share dividend to stockholders of record on December 15, payable January 5, 2021.
- 31 Determined that net income for the year was \$600,000.

Instructions

- a. Journalize the transactions and the closing entries for net income, stock dividends, and cash dividends.
- b. Prepare a stockholders' equity section at December 31. Assume accumulated other comprehensive income of \$105,000.

Solution

a.	Apr. 1	Cash Dividends ($260,000 \times \$1.50$)	390,000	
		Dividends Payable		390,000
	May 1	Dividends Payable	390,000	
		Cash		390,000
	June 1	No journal entry needed for stock split

Brief Exercises, DO IT! Exercises, Exercises, Problems, and many additional resources are available for practice in WileyPLUS.

Note: All asterisked Questions, Exercises, and Problems relate to material in the appendices to the chapter.

Questions

1. a. What is a dividend?
b. "Dividends must be paid in cash." Do you agree? Explain.
2. Jan Kimler maintains that adequate cash is the only requirement for the declaration of a cash dividend. Is Jan correct? Explain.
3. a. Three dates are important in connection with cash dividends. Identify these dates, and explain their significance to the corporation and its stockholders.
b. Identify the accounting entries that are made for a cash dividend and the date of each entry.
4. Farley Inc. declares a \$55,000 cash dividend on December 31, 2020. The required annual dividend on preferred stock is \$10,000. Determine the allocation of the dividend to preferred and common stockholders assuming the preferred stock is cumulative and dividends are 1 year in arrears.
5. Contrast the effects of a cash dividend and a stock dividend on a corporation's balance sheet.
6. Rich Mordica asks, "Since stock dividends don't change anything, why declare them?" What is your answer to Rich?
7. Gorton Corporation has 30,000 shares of \$10 par value common stock outstanding when it announces a 2-for-1 stock split. Before the split, the stock had a market price of \$120 per share. After the split, how many shares of stock will be outstanding? What will be the approximate market price per share?
8. The board of directors is considering either a stock split or a stock dividend. They understand that total stockholders' equity will remain the same under either action. However, they are not sure of the different effects of the two types of actions on other aspects of stockholders' equity. Explain the differences to the directors.
9. What is the purpose of a retained earnings restriction? Identify the possible causes of retained earnings restrictions.
10. How are retained earnings restrictions generally reported in the financial statements?
11. Rafy Furcal believes that both the beginning and ending balances in retained earnings are shown in the stockholders' equity section. Is Rafy correct? Discuss.
12. What is the formula for the payout ratio? What does it indicate?
13. Dean Percival, who owns many investments in common stock, says, "I don't care what a company's net income is. The stock price tells me everything I need to know!" How do you respond to Dean?
14. What is the unique feature of a corporation income statement? Illustrate this feature, using assumed data.
15. Why must preferred stock dividends be subtracted from net income in computing earnings per share?
16. What were the amounts of basic earnings per share of common stock that **Apple** reported in the years 2014 to 2015?
- *17. What is the formula for computing book value per share when a corporation has only outstanding common stock?
- *18. Emko Inc.'s common stock has a par value of \$1, a book value of \$24, and a current market price of \$18. Explain why these amounts are all different.

Brief Exercises

BE14.1 (LO 1) Greenwood Corporation has 80,000 shares of common stock outstanding. It declares a \$1 per share cash dividend on November 1 to stockholders of record on December 1. The dividend is paid on December 31. Prepare the entries on the appropriate dates to record the declaration and payment of the cash dividend.

Prepare entries for a cash dividend.

BE14.2 (LO 1) M. Bot Corporation has 10,000 shares of 8%, \$100 par value, cumulative preferred stock outstanding at December 31, 2020. No dividends were declared in 2018 or 2019. If M. Bot wants to pay \$375,000 of dividends in 2020, what amount of dividends will common stockholders receive?

Determine dividends paid to common stockholders.

BE14.3 (LO 1) Langley Corporation has 50,000 shares of \$10 par value common stock outstanding. It declares a 15% stock dividend on December 1 when the market price per share is \$16. The dividend shares are issued on December 31. Prepare the entries for the declaration and issuance of the stock dividend.

Prepare entries for a stock dividend.

BE14.4 (LO 1) The stockholders' equity section of Pretzer Corporation consists of common stock (\$10 par) \$2,000,000 and retained earnings \$500,000. A 10% stock dividend (20,000 shares) is declared when the market price per share is \$14. Show the before-and-after effects of the dividend on the following.

Show before-and-after effects of a stock dividend.

- a. The components of stockholders' equity.
- b. Shares outstanding.
- c. Par value per share.

BE14.5 (LO 2) For the year ending December 31, 2020, Soto Inc. reports net income \$170,000 and cash dividends \$85,000. Determine the balance in retained earnings at December 31, assuming the balance in retained earnings on January 1, 2020, was \$220,000.

Determine retained earnings balance.

BE14.6 (LO 2) SUPERVALU, one of the largest grocery retailers in the United States, is headquartered in Minneapolis. Suppose the following financial information (in millions) was taken from the company's 2020 annual report: net sales \$40,597, net income \$393, beginning common stockholders' equity \$2,581, and ending common stockholders' equity \$2,887. Compute the return on common stockholders' equity.

Calculate the return on common stockholders' equity.

BE14.7 (LO 3) Financial Statement The following information is available for Reinsch Corporation for the year ended December 31, 2020: cost of goods sold \$205,000, sales revenue \$350,000, other revenues and gains \$50,000, and operating expenses \$75,000. Assuming a corporate tax rate of 30%, prepare an income statement for the company.

Prepare a corporate income statement.

BE14.8 (LO 3) Ziegler Corporation reports net income of \$380,000 and a weighted-average of 200,000 shares of common stock outstanding for the year. Compute the earnings per share of common stock.

Compute earnings per share.

BE14.9 (LO 3) Income and common stock data for Ziegler Corporation are presented in BE14.8. Assume also that Ziegler has cumulative preferred stock dividends for the current year of \$30,000 that were declared and paid. Compute the earnings per share of common stock.

Compute earnings per share with cumulative preferred stock.

***BE14.10 (LO 5)** The balance sheet for Lauren Inc. shows the following: total paid-in capital and retained earnings \$877,000, total stockholders' equity \$817,000, common stock issued 44,000 shares, and common stock outstanding 38,000 shares. Compute the book value per share. (No preferred stock is outstanding.)

Compute book value per share.

DO IT! Exercises

DO IT! 14.1a (LO 1) Herr Corporation has 3,000 shares of 7%, \$100 par value preferred stock outstanding at December 31, 2020. At December 31, 2020, the company declared a \$105,000 cash dividend. Determine the dividend paid to preferred stockholders and common stockholders under each of the following scenarios.

Determine dividends paid to preferred and common stockholders.

1. The preferred stock is noncumulative, and the company has not missed any dividends in previous years.
2. The preferred stock is noncumulative, and the company did not pay a dividend in each of the two previous years.
3. The preferred stock is cumulative, and the company did not pay a dividend in each of the two previous years.

Determine effects of stock dividend and stock split.

Compute return on stockholders' equity and discuss changes.

Compute EPS and analyze changes.

DO IT! 14.1b (LO 1) Jurgens Company has had 4 years of net income. Due to this success, the market price of its 400,000 shares of \$3 par value common stock has increased from \$12 per share to \$46. During this period, paid-in capital remained the same at \$2,800,000. Retained earnings increased from \$1,800,000 to \$12,000,000. President E. Rife is considering either a 15% stock dividend or a 2-for-1 stock split. He asks you to show the before-and-after effects of each option on (a) retained earnings and (b) total stockholders' equity.

DO IT! 14.2 (LO 2) On January 1, 2020, Vahsholtz Corporation purchased 5,000 shares of treasury stock. Other information regarding Vahsholtz Corporation is provided as follows.

	2019	2020
Net income	\$100,000	\$110,000
Dividends on preferred stock	30,000	30,000
Dividends on common stock	20,000	18,000
Common stockholders' equity beginning of year	600,000	750,000
Common stockholders' equity end of year	750,000	830,000

(a) Compute return on common stockholders' equity for each year, and (b) discuss its change from 2019 to 2020.

DO IT! 14.3 (LO 3) On January 1, 2020, Vahsholtz Corporation purchased 5,000 shares of treasury stock. Other information regarding Vahsholtz Corporation is provided as follows.

	2019	2020
Net income	\$100,000	\$110,000
Dividends on preferred stock	\$30,000	\$30,000
Dividends on common stock	\$20,000	\$25,000
Weighted-average number of common shares outstanding	50,000	45,000
Common stockholders' equity beginning of year	\$600,000	\$750,000
Common stockholders' equity end of year	\$750,000	\$830,000

(a) Compute earnings per share for each year and (b) discuss its change from 2019 to 2020.

Exercises

Journalize cash dividends; indicate statement presentation.

E14.1 (LO 1) Financial Statement On January 1, Guillen Corporation had 95,000 shares of no-par common stock issued and outstanding. The stock has a stated value of \$5 per share. During the year, the following occurred.

- Apr. 1 Issued 25,000 additional shares of common stock for \$17 per share.
- June 15 Declared a cash dividend of \$1 per share to stockholders of record on June 30.
- July 10 Paid the \$1 cash dividend.
- Dec. 1 Issued 2,000 additional shares of common stock for \$19 per share.
- 15 Declared a cash dividend on outstanding shares of \$1.20 per share to stockholders of record on December 31.

Instructions

- a. Prepare the entries to record these transactions.
- b. How are dividends and dividends payable reported in the financial statements prepared at December 31?

Allocate cash dividends to preferred and common stock.

E14.2 (LO 1) Knudsen Corporation was organized on January 1, 2019. During its first year, the corporation issued 2,000 shares of \$50 par value preferred stock and 100,000 shares of \$10 par value common stock. At December 31, the company declared the following cash dividends: 2019, \$5,000; 2020, \$12,000; and 2021, \$28,000.

Instructions

- a. Show the allocation of dividends to each class of stock, assuming the preferred stock dividend is 6% and noncumulative.
- b. Show the allocation of dividends to each class of stock, assuming the preferred stock dividend is 7% and cumulative.
- c. Journalize the declaration of the cash dividend at December 31, 2021, under part (b).

E14.3 (LO 1) On January 1, 2020, Frontier Corporation had \$1,000,000 of common stock outstanding that was issued at par. It also had retained earnings of \$750,000. The company issued 40,000 shares of common stock at par on July 1 and earned net income of \$400,000 for the year.

Journalize stock dividends.

Instructions

Journalize the declaration of a 15% stock dividend on December 10, 2020, for the following independent assumptions.

- Par value is \$10, and market price is \$18.
- Par value is \$5, and market price is \$20.

E14.4 (LO 1) On October 31, the stockholders' equity section of Heins Company consists of common stock \$500,000 and retained earnings \$900,000. Heins is considering the following two courses of action: (1) declaring a 5% stock dividend on the 50,000, \$10 par value shares outstanding, or (2) effecting a 2-for-1 stock split that will reduce par value to \$5 per share. The current market price is \$14 per share.

Compare effects of a stock dividend and a stock split.

Instructions

Prepare a tabular summary of the effects of the alternative actions on the components of stockholders' equity, outstanding shares, and par value per share. Use the following column headings: Before Action, After Stock Dividend, and After Stock Split.

E14.5 (LO 1) On October 1, Little Bobby Corporation's stockholders' equity is as follows.

Common stock, \$5 par value	\$400,000
Paid-in capital in excess of par—common stock	25,000
Retained earnings	155,000
Total stockholders' equity	<u><u>\$580,000</u></u>

Indicate account balances after a stock dividend.

On October 1, Little Bobby declares and distributes a 10% stock dividend when the market price of the stock is \$15 per share.

Instructions

- Compute the par value per share (1) before the stock dividend and (2) after the stock dividend.
- Indicate the balances in the three stockholders' equity accounts after the stock dividend shares have been distributed.

E14.6 (LO 1, 2) During 2020, Roblez Corporation had the following transactions and events.

Indicate the effects on stockholders' equity components.

- Declared a cash dividend.
- Issued par value common stock for cash at par value.
- Completed a 2-for-1 stock split in which \$10 par value stock was changed to \$5 par value stock.
- Declared a small stock dividend when the market price was higher than par value.
- Made a prior period adjustment for overstatement of net income.
- Issued the shares of common stock required by the stock dividend declaration in item no. 4 above.
- Paid the cash dividend in item no. 1 above.
- Issued par value common stock for cash above par value.

Instructions

Indicate the effect(s) of each of the foregoing items on the subdivisions of stockholders' equity. Present your answer in tabular form with the following columns. Use (I) for increase, (D) for decrease, and (NE) for no effect. Item no. 1 is given as an example.

<u>Paid-in Capital</u>			
<u>Item</u>	<u>Capital Stock</u>	<u>Additional</u>	<u>Retained Earnings</u>
1	NE	NE	D

E14.7 (LO 1) Before preparing financial statements for the current year, the chief accountant for Toso Company discovered the following errors in the accounts.

Prepare correcting entries for dividends and a stock split.

- The declaration and payment of \$50,000 cash dividend was recorded as a debit to Interest Expense \$50,000 and a credit to Cash \$50,000.

2. A 10% stock dividend (1,000 shares) was declared on the \$10 par value stock when the market price per share was \$18. The only entry made was Stock Dividends (Dr.) \$10,000 and Dividend Payable (Cr.) \$10,000. The shares have not been issued.
3. A 4-for-1 stock split involving the issue of 400,000 shares of \$5 par value common stock for 100,000 shares of \$20 par value common stock was recorded as a debit to Retained Earnings \$2,000,000 and a credit to Common Stock \$2,000,000.

Instructions

Prepare the correcting entries at December 31.

Determine retained earnings balance.

E14.8 (LO 2) On January 1, 2020, Eddy Corporation had retained earnings of \$610,000. During the year, Eddy had the following selected transactions.

1. Declared cash dividends \$120,000.
2. Corrected overstatement of 2019 net income because of inventory error \$40,000.
3. Earned net income \$350,000.
4. Declared stock dividends \$90,000.

Instructions

Determine the retained earnings balance at the end of the year.

Determine retained earnings balance.

E14.9 (LO 2) Newland Company reported retained earnings at December 31, 2019, of \$310,000. Newland had 200,000 shares of common stock outstanding at the beginning of 2020.

The following transactions occurred during 2020.

1. A cash dividend of \$0.50 per share was declared and paid.
2. A 5% stock dividend was declared and distributed when the market price per share was \$15 per share.
3. Net income was \$285,000.

Instructions

Compute the ending balance in retained earnings at the end of 2020.

Calculate ratios to evaluate dividend and earnings performance.

E14.10 (LO 2) Writing The following financial information is available for Flintlock Corporation.

(in millions)	2020	2019
Average common stockholders' equity	\$2,532	\$2,591
Dividends declared for common stockholders	298	611
Dividends declared for preferred stockholders	40	40
Net income	504	555

Instructions

Calculate the payout ratio and return on common stockholders' equity for 2020 and 2019. Comment on your findings.

Calculate ratios to evaluate dividend and earnings performance.

E14.11 (LO 2) Writing Suppose the following financial information is available for **Walgreen Company**.

(in millions)	2020	2019
Average common stockholders' equity	\$13,622.5	\$11,986.5
Dividends declared for common stockholders	471	394
Dividends declared for preferred stockholders	0	0
Net income	2,006	2,157

Instructions

Calculate the payout ratio and return on common stockholders' equity for 2020 and 2019. Comment on your findings.

Prepare an income statement and compute earnings per share.

E14.12 (LO 3) Financial Statement The following information is available for Norman Corporation for the year ended December 31, 2020: sales revenue \$700,000, other revenues and gains \$92,000, operating expenses \$110,000, cost of goods sold \$465,000, other expenses and losses \$32,000, and preferred stock dividends \$30,000. The company's tax rate was 30%, and it had 50,000 shares outstanding during the entire year.

Instructions

- Prepare a corporate income statement.
- Calculate earnings per share.

E14.13 (LO 2, 3) Financial Statement In 2020, Pennington Corporation had net sales of \$600,000 and cost of goods sold of \$360,000. Operating expenses were \$153,000, and interest expense was \$7,500. The corporation's tax rate is 30%. The corporation declared preferred dividends of \$15,000 in 2020, and its average common stockholders' equity during the year was \$200,000.

Prepare an income statement and compute return on equity.

Instructions

- Prepare an income statement for Pennington Corporation.
- Compute Pennington Corporation's return on common stockholders' equity for 2020.

E14.14 (LO 3) Ringgold Corporation has outstanding at December 31, 2020, 50,000 shares of \$20 par value, cumulative, 6% preferred stock and 200,000 shares of \$5 par value common stock. All shares were outstanding the entire year. During 2020, Ringgold earned total revenues of \$2,000,000 and incurred total expenses (except income taxes) of \$1,300,000. Ringgold's income tax rate is 30%.

Compute EPS.

Instructions

Compute Ringgold's 2020 earnings per share.

E14.15 (LO 2, 3) The following financial information is available for Plummer Corporation.

Calculate ratios to evaluate earnings performance.

	2020	2019
Average common stockholders' equity	\$1,200,000	\$900,000
Dividends paid to common stockholders	50,000	30,000
Dividends paid to preferred stockholders	20,000	20,000
Net income	290,000	200,000
Market price of common stock	20	15

The weighted-average number of shares of common stock outstanding was 80,000 for 2019 and 100,000 for 2020.

Instructions

Calculate earnings per share and return on common stockholders' equity for 2020 and 2019.

E14.16 (LO 2, 3) This financial information is available for Klinger Corporation.

Calculate ratios to evaluate earnings performance.

	2020	2019
Average common stockholders' equity	\$1,800,000	\$1,900,000
Dividends paid to common stockholders	90,000	70,000
Dividends paid to preferred stockholders	20,000	20,000
Net income	200,000	191,000
Market price of common stock	20	25

The weighted-average number of shares of common stock outstanding was 180,000 for 2019 and 150,000 for 2020.

Instructions

Calculate earnings per share and return on common stockholders' equity for 2020 and 2019.

E14.17 (LO 3) At December 31, 2020, Millwood Corporation has 2,000 shares of \$100 par value, 8%, preferred stock outstanding and 100,000 shares of \$10 par value common stock issued. Millwood's net income for the year is \$241,000.

Compute earnings per share under different assumptions.

**Instructions**

Compute the earnings per share of common stock under the following independent situations. (Round to two decimals.)

- a. The dividend to preferred stockholders was declared. There has been no change in the number of shares of common stock outstanding during the year.
- b. The dividend to preferred stockholders was not declared. The preferred stock is cumulative. Millwood held 10,000 shares of common treasury stock throughout the year.

Prepare a stockholders' equity section.

- ***E14.18 (LO 2, 5) Financial Statement** A recent stockholders' equity section of **Aluminum Company of America (Alcoa)** showed the following (in alphabetical order): additional paid-in capital \$6,101, common stock \$925, preferred stock \$56, retained earnings \$7,428, and treasury stock \$2,828. (All dollar data are in millions.)

The preferred stock has 557,740 shares authorized, with a par value of \$100 and an annual \$3.75 per share cumulative dividend preference. At December 31 of the current year, 557,649 shares of preferred are issued and 546,024 shares are outstanding. There are 1.8 billion shares of \$1 par value common stock authorized, of which 924.6 million are issued and 844.8 million are outstanding at December 31.

Instructions

- a. Prepare the stockholders' equity section of the current year, including disclosure of all relevant data.
- b. Compute the book value per share of common stock, assuming there are no preferred dividends in arrears. (Round to two decimals.)

Compute book value per share with preferred stock.

- ***E14.19 (LO 5)** At December 31, Gorden Corporation has total stockholders' equity of \$3,200,000. Included in this total are preferred stock \$500,000 and paid-in capital in excess of par—preferred stock \$50,000. There are 10,000 shares of \$50 par value, 8% cumulative preferred stock outstanding. At year-end, 200,000 shares of common stock are outstanding.

Instructions

Compute the book value per share of common stock under each of the following assumptions.

- a. There are no preferred dividends in arrears, and the preferred stock does not have a call price.
- b. Preferred dividends are one year in arrears, and the preferred stock has a call price of \$60 per share.

Problems: Set A

Prepare dividend entries and stockholders' equity section.

- P14.1A (LO 1, 2) Financial Statement** On January 1, 2020, Geffrey Corporation had the following stockholders' equity accounts.

Common Stock (\$20 par value, 60,000 shares issued and outstanding)	\$1,200,000
Paid-in Capital in Excess of Par—Common Stock	200,000
Retained Earnings	600,000

During the year, the following transactions occurred.

- Feb. 1 Declared a \$1 cash dividend per share to stockholders of record on February 15, payable March 1.
- Mar. 1 Paid the dividend declared in February.
- Apr. 1 Announced a 2-for-1 stock split. Prior to the split, the market price per share was \$36.
- July 1 Declared a 10% stock dividend to stockholders of record on July 15, distributable July 31. On July 1, the market price of the stock was \$13 per share.
- 31 Issued the shares for the stock dividend.
- Dec. 1 Declared a \$0.50 per share dividend to stockholders of record on December 15, payable January 5, 2021.
- 31 Determined that net income for the year was \$350,000.

Instructions

- c. Total stockholders' equity
\$2,224,000

Prepare stockholders' equity section, and compute allocation of dividends and earnings per share.

- a. Journalize the transactions and the closing entries for net income and dividends.
- b. Enter the beginning balances, and post the entries to the stockholders' equity accounts. (Note: Open additional stockholders' equity accounts as needed.)
- c. Prepare a stockholders' equity section at December 31.

- P14.2A (LO 1, 2) Financial Statement** The post-closing trial balance of Storey Corporation at December 31, 2020, contains the following stockholders' equity accounts.

Preferred Stock (15,000 shares issued)	\$ 750,000
Common Stock (250,000 shares issued)	2,500,000
Paid-in Capital in Excess of Par—Preferred Stock	250,000
Paid-in Capital in Excess of Par—Common Stock	400,000
Common Stock Dividends Distributable	250,000
Retained Earnings	1,042,000

A review of the accounting records reveals the following.

1. No errors have been made in recording 2020 transactions or in preparing the closing entry for net income.
2. Preferred stock is \$50 par, 6%, and cumulative; 15,000 shares have been outstanding since January 1, 2019.
3. Authorized stock is 20,000 shares of preferred, 500,000 shares of common with a \$10 par value.
4. The January 1 balance in Retained Earnings was \$1,170,000.
5. On July 1, 20,000 shares of common stock were issued for cash at \$16 per share.
6. On September 1, the company discovered an understatement error of \$90,000 in computing salaries and wages expense in 2019. The net of tax effect of \$63,000 was properly debited directly to Retained Earnings.
7. A cash dividend of \$250,000 was declared and properly allocated to preferred and common stock on October 1. No dividends were paid to preferred stockholders in 2019.
8. On December 31, a 10% common stock dividend was declared out of retained earnings on common stock when the market price per share was \$16.
9. Net income for the year was \$585,000.
10. On December 31, 2020, the directors authorized disclosure of a \$200,000 restriction of retained earnings for plant expansion. (Use Note X.)

Instructions

- a. Reproduce the Retained Earnings account (T-account) for 2020.
- b. Prepare a stockholders' equity section at December 31, 2020.
- c. Compute the allocation of the cash dividend to preferred and common stock.

P14.3A (LO 1, 2) Financial Statement On January 1, 2020, Ven Corporation had the following stockholders' equity accounts.

Common Stock (no par value, 90,000 shares issued and outstanding)	\$1,600,000
Retained Earnings	500,000

During the year, the following transactions occurred.

- | | |
|--------|--|
| Feb. 1 | Declared a \$1 cash dividend per share to stockholders of record on February 15, payable March 1. |
| Mar. 1 | Paid the dividend declared in February. |
| Apr. 1 | Announced a 3-for-1 stock split. Prior to the split, the market price per share was \$36. |
| July 1 | Declared a 5% stock dividend to stockholders of record on July 15, distributable July 31. On July 1, the market price of the stock was \$16 per share. |
| 31 | Issued the shares for the stock dividend. |
| Dec. 1 | Declared a \$0.50 per share dividend to stockholders of record on December 15, payable January 5, 2021. |
| 31 | Determined that net income for the year was \$350,000. |

b. Total stockholders' equity
\$5,192,000

Prepare the stockholders' equity section, reflecting dividends and stock split.

Instructions

Prepare the stockholders' equity section of the balance sheet at (a) March 31, (b) June 30, (c) September 30, and (d) December 31, 2020.

d. Total stockholders' equity
\$2,218,250

***P14.4A (LO 4) Financial Statement** On January 1, 2020, Goodhue Inc. had the following stockholders' equity balances.

Prepare stockholders' equity statement.

Common Stock (400,000 shares issued)	\$800,000
Paid-in Capital in Excess of Par—Common Stock	500,000
Common Stock Dividends Distributable	120,000
Retained Earnings	600,000

During 2020, the following transactions and events occurred.

1. Issued 60,000 shares of \$2 par value common stock as a result of 15% stock dividend declared on December 15, 2021.
2. Issued 30,000 shares of common stock for cash at \$4 per share.
3. Purchased 25,000 shares of common stock for the treasury at \$5 per share.
4. Declared and paid a cash dividend of \$111,000.
5. Sold 8,000 shares of treasury stock for cash at \$5 per share.
6. Earned net income of \$360,000.

Total stockholders' equity
\$2,304,000

Prepare stockholders' equity section; compute book value per share.

Instructions

Prepare a stockholders' equity statement for the year.

***P14.5A (LO 2, 5) Financial Statement** The following stockholders' equity accounts arranged alphabetically are in the ledger of Westin Corporation at December 31, 2020.

Common Stock (\$10 stated value)	\$1,500,000
Paid-in Capital from Treasury Stock	6,000
Paid-in Capital in Excess of Par—Preferred Stock	42,400
Paid-in Capital in Excess of Stated Value—Common Stock	690,000
Preferred Stock (8%, \$100 par, noncumulative)	360,000
Retained Earnings	776,000
Treasury Stock—Common (7,000 shares)	92,000

a. **Total stockholders' equity**
\$3,282,400

Instructions

- a. Prepare a stockholders' equity section at December 31, 2020.
- b. Compute the book value per share of the common stock, assuming the preferred stock has a call price of \$110 per share.

Continuing Case

Shutterstock

Cookie Creations

(Note: This is a continuation of the Cookie Creations case from Chapters 1 through 13.)

CC14 After establishing their company's fiscal year-end to be October 31, Natalie and Curtis began operating Cookie & Coffee Creations Inc. on November 1, 2020. On that date, they issued both preferred and common stock. After the first year of operations, Natalie and Curtis want to prepare financial information for the year.

Go to WileyPLUS for complete case details and instructions.

Ethics Case

EC14 Molina Corporation has paid 60 consecutive quarterly cash dividends (15 years). The last 6 months, however, have been a cash drain on the company, as profit margins have been greatly narrowed by increasing competition. With a cash balance sufficient to meet only day-to-day operating needs, the president, Rob Lowery, has decided that a stock dividend instead of a cash dividend should be declared. He tells Molina's financial vice president, Debbie Oler, to issue a press release stating that the company is extending its consecutive dividend record with the issuance of a 5% stock dividend. "Write the press release convincing the stockholders that the stock dividend is just as good as a cash dividend," he orders. "Just watch our stock rise when we announce the stock dividend. It must be a good thing if that happens."

Instructions

- a. Who are the stakeholders in this situation?
- b. Is there anything unethical about Lowery's intentions or actions?
- c. What is the effect of a stock dividend on a corporation's stockholders' equity accounts? Which would you rather receive as a stockholder—a cash dividend or a stock dividend? Why?

Comprehensive Accounting Cycle Review

ACR14 Hawkeye Corporation's balance sheet at December 31, 2019, is presented below.

Journalize transactions and prepare financial statements.

Hawkeye Corporation Balance Sheet December 31, 2019			
Cash	\$ 24,600	Accounts payable	\$ 25,600
Accounts receivable	45,500	Common stock (\$10 par)	80,000
Allowance for doubtful accounts	(1,500)	Retained earnings	127,400
Supplies	4,400		<u><u>\$233,000</u></u>
Land	40,000		
Buildings	142,000		
Accumulated depreciation— buildings	(22,000)		
	<u><u>\$233,000</u></u>		

During 2020, the following transactions occurred.

1. On January 1, 2020, Hawkeye issued 1,200 shares of \$40 par, 7% preferred stock for \$49,200.
2. On January 1, 2020, Hawkeye also issued 900 shares of the \$10 par value common stock for \$21,000.
3. Hawkeye performed services for \$320,000 on account.
4. On April 1, 2020, Hawkeye collected fees of \$36,000 in advance for services to be performed from April 1, 2020, to March 31, 2021.
5. Hawkeye collected \$276,000 from customers on account.
6. Hawkeye bought \$35,100 of supplies on account.
7. Hawkeye paid \$32,200 on accounts payable.
8. Hawkeye reacquired 400 shares of its common stock on June 1, 2020, for \$28 per share.
9. Paid other operating expenses of \$188,200.
10. On December 31, 2020, Hawkeye declared the annual preferred stock dividend and a \$1.20 per share dividend on the outstanding common stock, all payable on January 15, 2021.
11. An account receivable of \$1,700 which originated in 2019 is written off as uncollectible.

Adjustment data:

1. A count of supplies indicates that \$5,900 of supplies remain unused at year-end.
2. Recorded revenue from item 4 above.
3. The allowance for doubtful accounts should have a balance of \$3,500 at year end.
4. Depreciation is recorded on the building on a straight-line basis based on a 30-year life and a salvage value of \$10,000.
5. The income tax rate is 30%. (*Hint:* Prepare the income statement up to income before income taxes and multiply by 30% to compute the amount.)

Instructions

(You may want to set up T-accounts to determine ending balances.)

- a. Prepare journal entries for the transactions listed above and adjusting entries.
- b. Prepare an adjusted trial balance at December 31, 2020.
- c. Prepare an income statement and a retained earnings statement for the year ending December 31, 2020, and a classified balance sheet as of December 31, 2020.
- b. Totals \$740,690
- c. Net income \$81,970
Tot. assets \$421,000

Expand Your Critical Thinking

Financial Reporting Problem: Apple Inc.

CT14.1 The financial statements of **Apple Inc.** are presented in Appendix A. The complete annual report, including the notes to the financial statements, is available at the company's website.

Instructions

Refer to Apple's financial statements and answer the following question.

What amount, if any, did Apple declare in dividends on common stock in the year ended September 26, 2015?

Comparative Analysis Problem:

PepsiCo, Inc. vs. The Coca-Cola Company

CT14.2 **PepsiCo's** financial statements are presented in Appendix B. Financial statements of **The Coca-Cola Company** are presented in Appendix C. The complete annual reports of PepsiCo and Coca-Cola, including the notes to the financial statements, are available at each company's respective website.

Instructions

- a. Compute earnings per share and return on common stockholders' equity for both companies for 2015. Assume PepsiCo's weighted-average shares were 1,469 million and Coca-Cola's weighted-average shares were 4,352 million. Can these measures be used to compare the profitability of the two companies? Why or why not?
- b. What was the total amount of dividends paid by each company in 2015?

Comparative Analysis Problem:

Amazon.com, Inc. vs. Wal-Mart Stores, Inc.

CT14.3 **Amazon.com, Inc.**'s financial statements are presented in Appendix D. Financial statements of **Wal-Mart Stores, Inc.** are presented in Appendix E. The complete annual reports of Amazon and Wal-Mart, including the notes to the financial statements, are available at each company's respective website.

Instructions

- a. What are the basic earnings per share for both Amazon and Wal-Mart as of December 31, 2015, and January 31, 2016, respectively?
- b. What was the total amount of dividends, if any, paid by Amazon for the year ending December 31, 2015? What was the total dividends paid by Wal-Mart for the year ending January 31, 2016?

Real-World Focus

CT14.4 Use the stockholders' equity section of an annual report and identify the major components.

Instructions

Go to the Annual Reports website, select a company of your choice, and then answer the following questions.

- a. What is the company's name?
- b. What classes of capital stock has the company issued?
- c. Compute the following for the two years shown:
 1. Payout ratio.
 2. Return on common stockholders' equity.
- d. Discuss the changes in each ratio.

Decision-Making Across the Organization

CT14.5 The stockholders' equity accounts of Gonzalez, Inc., at January 1, 2020, are as follows.

Preferred Stock, no par, 4,000 shares issued	\$400,000
Common Stock, no par, 140,000 shares issued	700,000
Retained Earnings	550,000

During 2020, the company had the following transactions and events.

- July 1 Declared a \$0.50 cash dividend per share on common stock.
- Aug. 1 Discovered a \$72,000 overstatement of 2019 depreciation expense. (Ignore income taxes.)
- Sept. 1 Paid the cash dividend declared on July 1.
- Dec. 1 Declared a 10% stock dividend on common stock when the market price of the stock was \$12 per share.
- 15 Declared a \$6 per share cash dividend on preferred stock, payable January 31, 2021.
- 31 Determined that net income for the year was \$320,000.

Instructions

With the class divided into groups, answer the following questions.

- Determine the retained earnings balance at December 31, 2020. There are no preferred dividends in arrears.
- Discuss why the overstatement of 2019 depreciation expense is not treated as an adjustment of the current year's income.
- Discuss the reasons why a company might decide to issue a stock dividend rather than a cash dividend.

Communication Activity

CT14.6 In the past year, Gosser Corporation declared a 10% stock dividend, and Jenks, Inc. announced a 2-for-1 stock split. Your parents own 100 shares of each company's \$50 par value common stock. During a recent phone call, your parents ask you, as an accounting student, to explain the differences between the two events.

Instructions

Write a letter to your parents that explains the effects of the two events on them as stockholders and the effects of each event on the financial statements of each corporation.

All About You

CT14.7 In this textbook, you learned that in response to the Sarbanes-Oxley Act, many companies have implemented formal ethics codes. Many other organizations also have ethics codes.

Instructions

Obtain the ethics code from an organization that you belong to (e.g., student organization, business school, employer, or a volunteer organization). Evaluate the ethics code based on how clearly it identifies proper and improper behavior. Discuss its strengths, and how it might be improved.

FASB Codification Activity

CT14.8 If your school has a subscription to the FASB Codification, log in and prepare responses to the following.

- What is a stock dividend?
- What is a stock split?
- At what percentage point does the issuance of additional shares qualify as a stock dividend, as opposed to a stock split?

A Look at IFRS

LEARNING OBJECTIVE 6

Compare the accounting for dividends, retained earnings, and income reporting under GAAP and IFRS.

The basic accounting for cash and stock dividends is essentially the same under both GAAP and IFRS although IFRS terminology may differ.

Key Points

Following are the key similarities and differences between GAAP and IFRS as related to dividends, retained earnings, and income reporting.

Similarities

- The accounting related to prior period adjustment is essentially the same under IFRS and GAAP.
- The stockholders' equity section is essentially the same under IFRS and GAAP. However, terminology used to describe certain components is often different. These differences are discussed in Chapter 13.
- The income statement using IFRS is called the **statement of comprehensive income**. A statement of comprehensive income is presented in a one- or two-statement format. The single-statement approach includes all items of income and expense, as well as each component of other comprehensive income or loss by its individual characteristic. In the two-statement approach, a traditional income statement is prepared. It is then followed by a statement of comprehensive income, which starts with net income or loss and then adds other comprehensive income or loss items. Regardless of which approach is reported, income tax expense is required to be reported.
- The computations related to earnings per share are essentially the same under IFRS and GAAP.

Differences

- The term **reserves** is used in IFRS to indicate all non-contributed (non-paid-in) capital. Reserves include retained earnings and other comprehensive income items, such as revaluation surplus and unrealized gains or losses on available-for-sale securities.
- IFRS often uses terms such as **retained profits** or **accumulated profit or loss** to describe retained earnings. The term retained earnings is also often used.
- Equity is given various descriptions under IFRS, such as shareholders' equity, owners' equity, capital and reserves, and shareholders' funds.

Looking to the Future

The IASB and the FASB are currently working on a project related to financial statement presentation. An important part of this study is to determine whether certain line items, subtotals, and totals should be clearly defined and required to be displayed in the financial statements. For example, it is likely that the statement of stockholders' equity and its presentation will be examined closely.

Both the IASB and FASB are working toward convergence of any remaining differences related to earnings per share computations. This convergence will deal with highly technical changes beyond the scope of this textbook.

IFRS Practice

IFRS Self-Test Questions

1. The basic accounting for cash dividends and stock dividends:
 - a. is different under IFRS versus GAAP.
 - b. is the same under IFRS and GAAP.
 - c. differs only for the accounting for cash dividends between GAAP and IFRS.
 - d. differs only for the accounting for stock dividends between GAAP and IFRS.

2. Which item is **not** considered part of reserves?
 - a. Unrealized loss on available-for-sale investments.
 - b. Revaluation surplus.
 - c. Retained earnings.
 - d. Issued shares.

3. Under IFRS, a statement of comprehensive income must include:
 - a. accounts payable.
 - b. retained earnings.
 - c. income tax expense.
 - d. preference stock.

4. Which set of terms can be used to describe total stockholders' equity under IFRS?
 - a. Shareholders' equity, capital and reserves, other comprehensive income.

5. Earnings per share computations related to IFRS and GAAP:
 - a. are essentially similar.
 - b. result in an amount referred to as earnings per share.
 - c. must deduct preferred (preference) dividends when computing earnings per share.
 - d. All of the answer choices are correct.

International Financial Reporting Problem: Louis Vuitton

IFRS14.1 The financial statements of **Louis Vuitton** are presented in Appendix F. The complete annual report, including the notes to its financial statements, is available at the company's website.

Instructions

Use the company's annual report to answer the following questions.

- a. Did the company declare and pay any dividends for the year ended December 31, 2015?
- b. Compute the company's return on ordinary shareholders' equity for the year ended December 31, 2015.
- c. What was Louis Vuitton's earnings per share for the year ended December 31, 2015?

Long-Term Liabilities

Chapter Preview

As you can see from the following Feature Story, having liabilities can be dangerous in difficult economic times. In this chapter, we will explain the accounting for the major types of long-term liabilities reported on the balance sheet. Long-term liabilities are obligations that are expected to be paid more than one year in the future. These liabilities may be bonds, long-term notes, or lease obligations.

Feature Story

And Then There Were Two

Debt can help a company acquire the things it needs to grow, but it is often the very thing that kills a company. A brief history of **Maxwell Car Company** illustrates the role of debt in the U.S. auto industry. In 1920, Maxwell Car Company was on the brink of financial ruin. Because it was unable to pay its bills, its creditors stepped in and took over. They hired a former **General Motors (GM)** executive named Walter Chrysler to reorganize the company. By 1925, he had taken over the

company and renamed it **Chrysler**. By 1933, Chrysler was booming, with sales surpassing even those of **Ford**.

But the next few decades saw Chrysler make a series of blunders. By 1980, with its creditors pounding at the gates, Chrysler was again on the brink of financial ruin.

At that point, Chrysler brought in a former Ford executive named Lee Iacocca to save the company. Iacocca argued that the United States could not afford to let Chrysler fail because of the loss of jobs. He convinced the federal government to grant loan guarantees—promises that if Chrysler failed to pay its creditors, the government would pay them. Iacocca then streamlined operations and brought out some profitable products. Chrysler

repaid all of its government-guaranteed loans by 1983, seven years ahead of the scheduled final payment.

To compete in today's global vehicle market, you must be big—really big. So in 1998, Chrysler merged with German automaker **Daimler-Benz** to form **DaimlerChrysler**. For a time, this left just two U.S.-based auto manufacturers—GM and Ford. But in 2007, DaimlerChrysler sold 81% of Chrysler to **Cerberus**, an investment group, to provide much-needed cash infusions to the automaker. In 2009, Daimler turned over

its remaining stake to Cerberus. Three days later, Chrysler filed for bankruptcy. But by 2010, it was beginning to show signs of a turnaround.

The car companies are giants. GM and Ford typically rank among the top five U.S. firms in total assets. But GM and Ford accumulated truckloads of debt on their way to getting big. Although debt made it possible to get so big, the Chrysler story, and GM's bankruptcy, make it clear that debt can also threaten a company's survival.

Major Characteristics of Bonds

LEARNING OBJECTIVE 1

Describe the major characteristics of bonds.

Long-term liabilities are obligations that a company expects to pay more than one year in the future. In this chapter, we explain the accounting for the principal types of obligations reported in the long-term liabilities section of the balance sheet. These obligations often are in the form of bonds or long-term notes.

Bonds are a form of interest-bearing note payable issued by corporations, universities, and governmental agencies. Bonds, like common stock, are sold in small denominations (usually \$1,000 or multiples of \$1,000). As a result, bonds attract many investors. When a corporation issues bonds, it is borrowing money. The person who buys the bonds (the bondholder) is lending money.

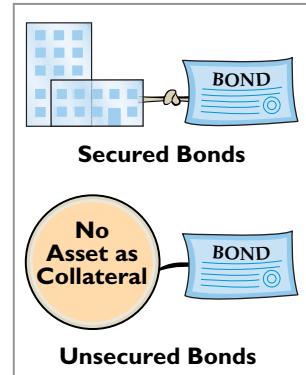

Types of Bonds

Bonds may have many different features. In the following sections, we describe the types of bonds commonly issued.

Secured and Unsecured Bonds

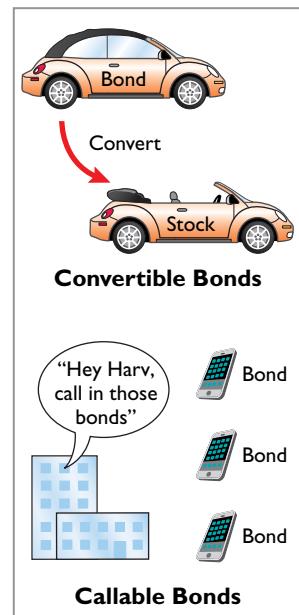

Secured bonds have specific assets of the issuer pledged as collateral for the bonds. A bond secured by real estate, for example, is called a **mortgage bond**. A bond secured by specific assets set aside to redeem (retire) the bonds is called a **sinking fund bond**.

Unsecured bonds, also called **debenture bonds**, are issued against the general credit of the borrower. Companies with good credit ratings use these bonds extensively. For example, at one time **DuPont** reported over \$2 billion of debenture bonds outstanding.

Convertible and Callable Bonds

Bonds that can be converted into common stock at the bondholder's option are **convertible bonds**. Bonds that the issuing company can redeem (buy back) at a stated dollar amount prior to maturity are **callable bonds**. Convertible bonds have features that are attractive both to bondholders and to the issuer. The conversion feature often gives bondholders an opportunity to benefit if the market price of the common stock increases substantially. Furthermore, until conversion, the bondholder receives interest on the bond. For the issuer, the bonds sell at a higher price and pay a lower rate of interest than comparable debt securities that do not have a conversion option. Many corporations, such as **USAir**, **United States Steel Corp.**, and **General Motors Corporation**, have issued convertible bonds.

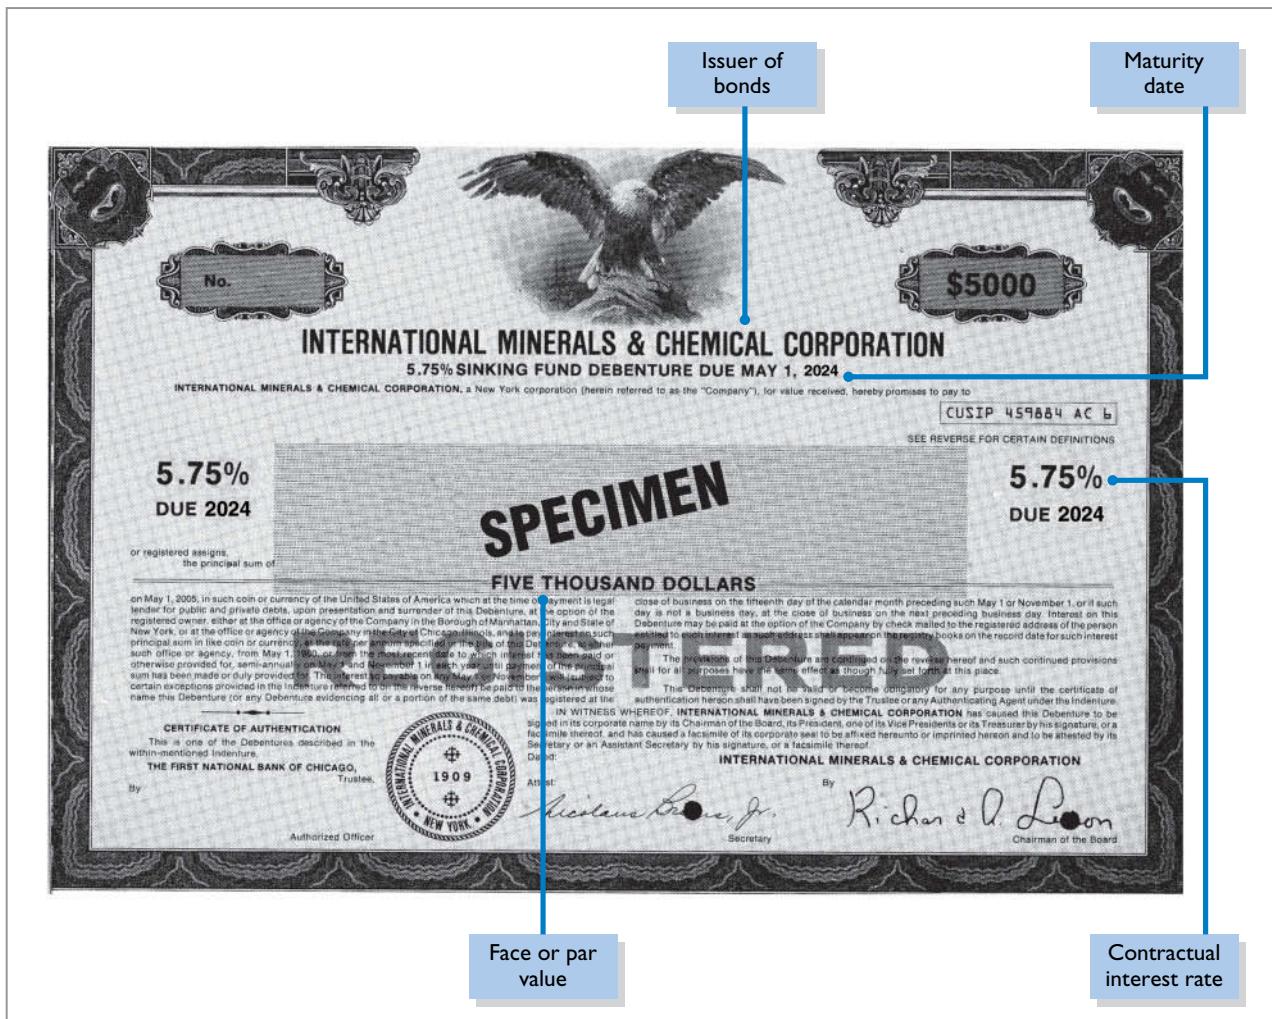

Issuing Procedures

State laws grant corporations the power to issue bonds. Both the board of directors and stockholders usually must approve bond issues. **In authorizing the bond issue, the board of directors must stipulate the number of bonds to be authorized, total face value, and contractual interest rate.** The total bond authorization often exceeds the number of bonds the company originally issues. This gives the corporation the flexibility to issue more bonds, if needed, to meet future cash requirements.

The **face value** is the amount of principal due at the maturity date. The **maturity date** is the date that the final payment is due to the investor from the issuing company. The **contractual interest rate**, often referred to as the **stated rate**, is the rate used to determine the amount of cash interest the borrower pays and the investor receives. Usually, the contractual rate is stated as an annual rate.

The terms of the bond issue are set forth in a legal document called a **bond indenture**. The indenture shows the terms and summarizes the rights of the bondholders and their trustees, and the obligations of the issuing company. The **trustee** (usually a financial institution) keeps records of each bondholder, maintains custody of unissued bonds, and holds conditional title to pledged property.

In addition, the issuing company arranges for the printing of **bond certificates**. The indenture and the certificate are separate documents. As shown in **Illustration 15.1**, a bond certificate provides the following information: name of the issuer, face value, contractual interest rate, and maturity date. An investment company that specializes in selling securities generally sells the bonds for the issuing company.

ILLUSTRATION 15.1 Bond certificate

Bond Trading

Bondholders have the opportunity to convert their holdings into cash at any time by selling the bonds at the current market price on national securities exchanges. **Bond prices are quoted as a percentage of the face value of the bond, which is usually \$1,000.** A \$1,000 bond with a quoted price of 97 means that the selling price of the bond is 97% of face value, or \$970 (see **Helpful Hint**). Newspapers and the financial press publish bond prices and trading activity daily, as shown in **Illustration 15.2**.

HELPFUL HINT

The price of a \$1,000 bond trading at $95\frac{1}{4}$ is \$952.50.

ILLUSTRATION 15.2**Market information for bonds**

Issuer	Bonds	Maturity	Close	Yield
Time Warner Cable	6.75	June 15, 2039	116.4	5.49

This bond listing indicates that **Time Warner Cable** has outstanding 6.75%, \$1,000 bonds that mature in 2039. They currently yield a 5.49% return. At the close of trading, the price was 116.4% of face value, or \$1,164.

A corporation makes journal entries **only when it issues or buys back bonds**, or when bondholders convert bonds into common stock. For example, **DuPont does not journalize** transactions between its bondholders and other investors. If Tom Smith sells his DuPont bonds to Faith Jones, DuPont does not journalize the transaction.

Determining the Market Price of a Bond

If your company needed financing and wanted to attract investors to purchase your bonds, how would the market set the price for these bonds? To be more specific, assume that Coronet, Inc. issues a **zero-interest bond** (pays no interest) with a face value of \$1,000,000 due in 20 years. For this bond, the only cash Coronet pays to bond investors is a million dollars at the end of 20 years. Would investors pay a million dollars for this bond? We hope not because a million dollars received 20 years from now is not the same as a million dollars received today.

The term **time value of money** is used to indicate the relationship between time and money—that a dollar received today is worth more than a dollar promised at some time in the future. If you had \$1 million today, you would invest it. From that investment, you would earn interest such that at the end of 20 years, you would have much more than \$1 million. Thus, if someone is going to pay you \$1 million 20 years from now, you would want to find its equivalent today, or its present value. In other words, you would want to determine the value today of the amount to be received in the future after taking into account current interest rates.

The current market price (present value) of a bond is the value at which it should sell in the marketplace. Market price therefore is a function of the three factors that determine present value: (1) the dollar amounts to be received, (2) the length of time until the amounts are received, and (3) the market rate of interest. The **market interest rate** is the rate investors demand for loaning funds.

To illustrate, assume that Acropolis Company on January 1, 2020, issues \$100,000 of 9% bonds, due in five years, with interest payable annually at year-end. The purchaser of the bonds would receive the following two types of cash payments: (1) **principal** of \$100,000 to be paid at maturity, and (2) five \$9,000 **interest payments** ($\$100,000 \times 9\%$) over the term of the bonds. **Illustration 15.3** shows a time diagram depicting both cash flows.

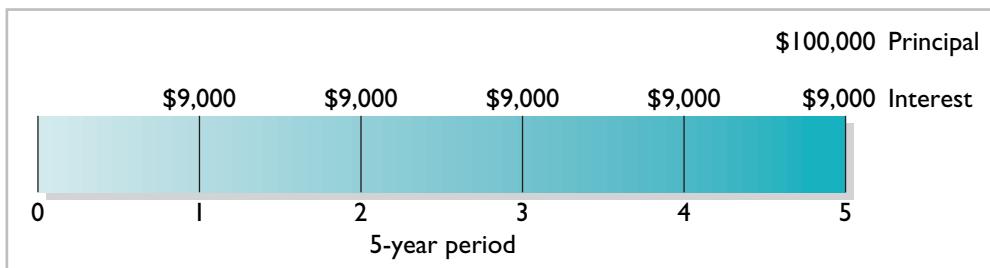

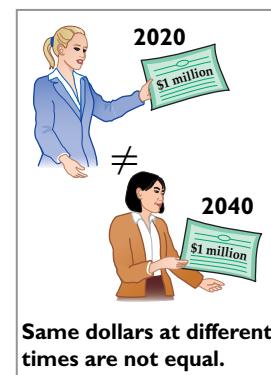

ILLUSTRATION 15.3

Time diagram depicting cash flows

The current market price of a bond is equal to the present value of all the future cash payments promised by the bond. **Illustration 15.4** lists and totals the present values of these amounts, assuming the market rate of interest is 9%.

Present value of \$100,000 received in 5 years	\$ 64,993
Present value of \$9,000 received annually for 5 years	<u>35,007</u>
Market price of bonds	\$100,000

ILLUSTRATION 15.4

Computing the market price of bonds

Tables are available to provide the present value numbers to be used, or these values can be determined mathematically or with financial calculators.¹ Appendix G provides further discussion of the concepts and the mechanics of the time value of money computations.

¹For those knowledgeable in the use of present value tables, the computations in the example shown in Illustration 15.4 are $\$100,000 \times .64993 = \$64,993$, and $\$9,000 \times 3.88965 = \$35,007$ (rounded).

Investor Insight

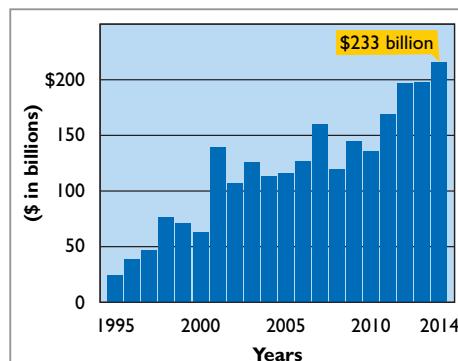

© alphaspirit/Shutterstock

Running Hot!

Consider these two large deals: **Apple Inc.** sold \$17 billion of debt, which at the time was the largest corporate bond ever sold. But shortly thereafter, it was beat by **Verizon Communications Inc.**, which sold \$49 billion of debt. The chart highlights the increased issuance of bonds.

As one expert noted about these increases, “Companies are taking advantage of this lower-rate environment in the limited period of time it is going to be around.” An interesting aspect of these bond issuances is that companies, like **Philip Morris International, Medtronic, Inc.,** and **Simon Properties**, are even selling 30-year bonds. These bond issuers are benefitting from “a massive sentiment shift,” says one bond expert. The belief that the economy will recover is making investors more comfortable holding longer-term bonds, as they search for investments that offer better returns than U.S. Treasury bonds.

Note: Data reflect each year through March 7.

Source: Thomson Reuters.

Sources: Vipal Monga, “The Big Number,” *Wall Street Journal* (March 20, 2012), p. B5; and Mike Cherney, “Renewed Embrace of Bonds Sparks Boom,” *Wall Street Journal* (March 8–9, 2014), p. B5.

What are the advantages for companies of issuing 30-year bonds instead of 5-year bonds? (Go to WileyPLUS for this answer and additional questions.)

DO IT! 1 | Bond Terminology

State whether each of the following statements is true or false. If false, indicate how to correct the statement.

- _____ 1. Mortgage bonds and sinking fund bonds are both examples of secured bonds.
- _____ 2. Unsecured bonds are also known as debenture bonds.
- _____ 3. The contractual interest rate is the rate investors demand for loaning funds.
- _____ 4. The face value is the amount of principal the issuing company must pay at the maturity date.
- _____ 5. The market price of a bond is equal to its maturity value.

ACTION PLAN

- Review the types of bonds and the basic terms associated with bonds.

Solution

1. True. 2. True. 3. False. The contractual interest rate is used to determine the amount of cash interest the borrower pays. 4. True. 5. False. The market price of a bond is the value at which it should sell in the marketplace. As a result, the market price of the bond and its maturity value are often different.

Related exercise material: **DO IT! 15.1 and E15.1.**

Accounting for Bond Transactions

LEARNING OBJECTIVE 2

Explain how to account for bond transactions.

A corporation records bond transactions when it issues (sells) or redeems (buys back) bonds and when bondholders convert bonds into common stock. If bondholders sell their bond investments to other investors, the issuing firm receives no further money on the transaction,

nor does the issuing corporation journalize the transaction (although it does keep records of the names of bondholders in some cases).

Bonds may be issued at face value, below face value (discount), or above face value (premium). Bond prices for both new issues and existing bonds are quoted as **a percentage of the face value of the bond**. **Face value is usually \$1,000.** Thus, a \$1,000 bond with a quoted price of 97 means that the selling price of the bond is 97% of face value, or \$970.

Issuing Bonds at Face Value

To illustrate the accounting for bonds issued at face value, assume that on January 1, 2020, Candlestick Inc. issues \$100,000, five-year, 10% bonds at 100 (100% of face value). The entry to record the sale is as follows.

A	=	L	+ SE
+100,000			+100,000
Cash Flows			

Candlestick reports bonds payable in the long-term liabilities section of the balance sheet because the maturity date is January 1, 2025 (more than one year away).

Over the term (life) of the bonds, companies make entries to record bond interest. Interest on bonds payable is computed in the same manner as interest on notes payable, as explained in Chapter 11. Assume that interest is payable annually on January 1 on the Candlestick bonds. In that case, Candlestick accrues interest of \$10,000 ($\$100,000 \times 10\%$) on December 31. At December 31, Candlestick recognizes the \$10,000 of interest expense incurred with the following adjusting entry.

A	=	L	+ SE
			-10,000 Exp
			+10,000
Cash Flows			

The company classifies **interest payable as a current liability** because it is scheduled for payment within the next year. When Candlestick pays the interest on January 1, 2021, it debits (decreases) Interest Payable and credits (decreases) Cash for \$10,000.

Candlestick records the payment on January 1 as follows.

A	=	L	+ SE
			-10,000
			-10,000
Cash Flows			

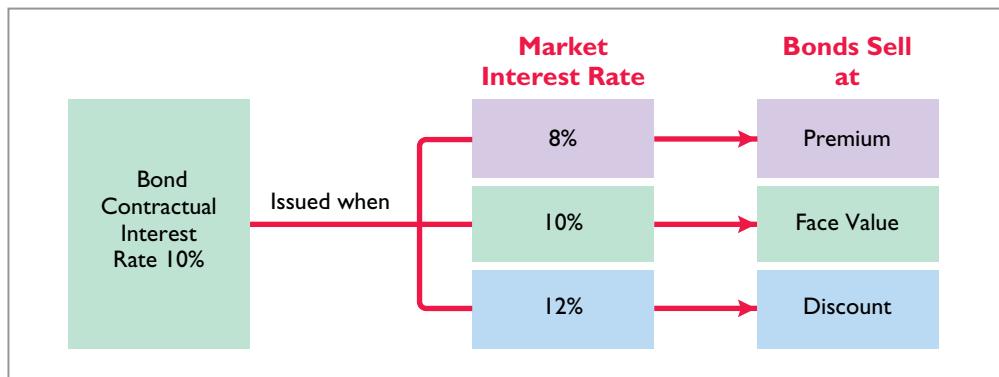

Discount or Premium on Bonds

The previous example assumed that the contractual (stated) interest rate and the market (effective) interest rate paid on the bonds were the same. Recall that the **contractual interest rate** is the rate applied to the face (par) value to arrive at the interest paid in a year. The **market interest rate** is the rate investors demand for loaning funds to the corporation. When the contractual interest rate and the market interest rate are the same, bonds sell **at face value (par value)**.

However, market interest rates change daily. The type of bond issued, the state of the economy, current industry conditions, and the company's performance all affect market interest rates. As a result, contractual and market interest rates often differ. To make bonds salable when the two rates differ, bonds sell below or above face value.

To illustrate, suppose that a company issues 10% bonds at a time when other bonds of similar risk are paying 12%. Investors will not be interested in buying the 10% bonds, so their value will fall below their face value. When a bond is sold for less than its face value, the difference between the face value of a bond and its selling price is called a **discount**. As a result of the decline in the bonds' selling price, the actual interest rate incurred by the company increases to the level of the current market interest rate.

Conversely, if the market rate of interest is **lower than** the contractual interest rate, investors will have to pay more than face value for the bonds. That is, if the market rate of interest is 8% but the contractual interest rate on the bonds is 10%, the price of the bonds will be bid up. When a bond is sold for more than its face value, the difference between the face value and its selling price is called a **premium**. **Illustration 15.5** shows these relationships.

ILLUSTRATION 15.5**Interest rates and bond prices****HELPFUL HINT****Discount on Bonds Payable**

Increase Debit ↓	Decrease Credit
Normal Balance	

A	=	L	+	SE
+98,000				
		-2,000		
		+100,000		

Cash Flows**Issuing Bonds at a Discount**

To illustrate issuance of bonds at a discount, assume that on January 1, 2020, Candlestick Inc. sells \$100,000, five-year, 10% bonds for \$98,000 (98% of face value). Interest is payable annually on January 1. The entry to record the issuance is as follows.

Jan. 1	Cash	98,000
	Discount on Bonds Payable	2,000
	Bonds Payable	
	(To record sale of bonds at a discount)	100,000

Although **Discount on Bonds Payable** has a debit balance, **it is not an asset** (see **Helpful Hint**). Rather, it is a **contra account**. This account is **deducted from bonds payable** on the balance sheet, as shown in **Illustration 15.6**.

ILLUSTRATION 15.6**Statement presentation of discount on bonds payable****Candlestick Inc.**
Balance Sheet (partial)

Long-term liabilities		
Bonds payable	\$100,000	
Less: Discount on bonds payable	2,000	\$98,000

HELPFUL HINT

Carrying value (book value) of bonds issued at a discount is determined by subtracting the balance of the discount account from the balance of the Bonds Payable account.

The \$98,000 represents the **carrying (or book) value** of the bonds (see **Helpful Hint**). On the date of issue, this amount equals the market price of the bonds.

The issuance of bonds below face value—at a discount—causes the total cost of borrowing to differ from the bond interest paid. That is, the issuing corporation must pay not only the contractual interest rate over the term of the bonds but also the face value (rather than the issuance price) at maturity. Therefore, the difference between the issuance price and face value of the bonds—the discount—is an **additional cost of borrowing**. The company records

this additional cost as **interest expense** over the life of the bonds. The total cost of borrowing \$98,000 for Candlestick is therefore \$52,000, computed as shown in **Illustration 15.7**.

Bonds Issued at a Discount	
Annual interest payments (\$100,000 × 10% = \$10,000; \$10,000 × 5)	\$50,000
Add: Bond discount (\$100,000 – \$98,000)	2,000
Total cost of borrowing	\$52,000

ILLUSTRATION 15.7

Total cost of borrowing—bonds issued at a discount

Alternatively, we can compute the total cost of borrowing as shown in **Illustration 15.8**.

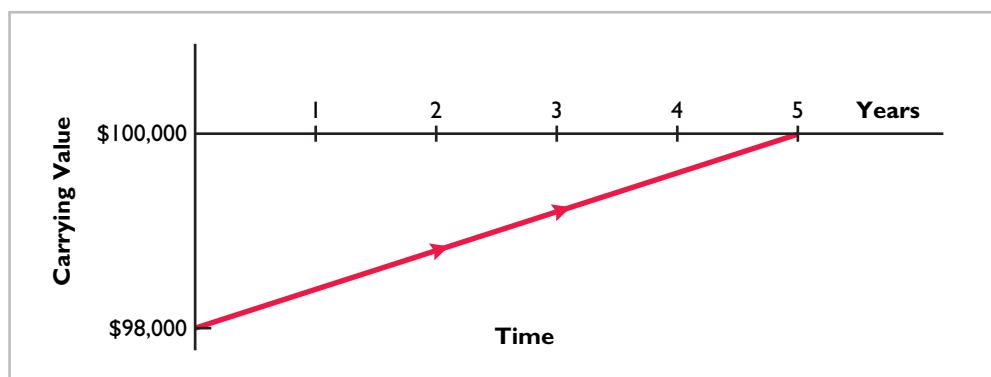

Bonds Issued at a Discount	
Principal at maturity	\$100,000
Annual interest payments (\$10,000 × 5)	50,000
Cash to be paid to bondholders	150,000
Less: Cash received from bondholders	98,000
Total cost of borrowing	\$ 52,000

ILLUSTRATION 15.8

Alternative computation of total cost of borrowing—bonds issued at a discount

To follow the expense recognition principle, companies allocate bond discount to expense in each period in which the bonds are outstanding. This is referred to as **amortizing the discount**. Amortization of the discount **increases** the amount of interest expense reported each period. That is, after the company amortizes the discount, the amount of interest expense it reports in a period will exceed the contractual amount. As shown in Illustration 15.7, for the bonds issued by Candlestick, total interest expense will exceed the contractual interest by \$2,000 over the life of the bonds.

As the discount is amortized, its balance declines. As a consequence, the carrying value of the bonds will increase, until at maturity the carrying value of the bonds equals their face amount. This is shown in **Illustration 15.9**. Appendices 15A and 15B at the end of this chapter discuss procedures for amortizing bond discount.

ILLUSTRATION 15.9

Amortization of bond discount

Issuing Bonds at a Premium

To illustrate the issuance of bonds at a premium, we now assume the Candlestick Inc. bonds described above sell for \$102,000 (102% of face value) rather than for \$98,000. The entry to record the sale is as follows.

Jan. 1	Cash		102,000		100,000	
	Bonds Payable					+2,000
	Premium on Bonds Payable					
	(To record sale of bonds at a premium)					

A	=	L	+	SE
+102,000		+100,000		
		+2,000		
Cash Flows				
+102,000				

Candlestick adds the premium on bonds payable **to the bonds payable amount** on the balance sheet, as shown in **Illustration 15.10** (see **Helpful Hint**).

ILLUSTRATION 15.10**Statement presentation
of bond premium****HELPFUL HINT****Premium on
Bonds Payable**

Decrease Debit	Increase Credit ↓ Normal Balance
-------------------	--

Candlestick Inc.
Balance Sheet (partial)

Long-term liabilities		
Bonds payable	\$100,000	
Add: Premium on bonds payable	2,000	\$102,000

The sale of bonds above face value causes the total cost of borrowing to be **less than the bond interest paid**. The reason: The borrower is not required to pay the bond premium at the maturity date of the bonds. Thus, the bond premium is considered to be a **reduction in the cost of borrowing** that reduces bond interest over the life of the bonds. The total cost of borrowing \$102,000 for Candlestick is computed as shown in **Illustration 15.11**.

ILLUSTRATION 15.11**Total cost of borrowing—
bonds issued at a premium****Bonds Issued at a Premium**

Annual interest payments $(\$100,000 \times 10\%) = \$10,000; \$10,000 \times 5$	\$50,000
Less: Bond premium ($\$102,000 - \$100,000$)	<u>2,000</u>
Total cost of borrowing	\$48,000

Alternatively, we can compute the cost of borrowing as shown in **Illustration 15.12**.

ILLUSTRATION 15.12**Alternative computation of
total cost of borrowing—bonds
issued at a premium****Bonds Issued at a Premium**

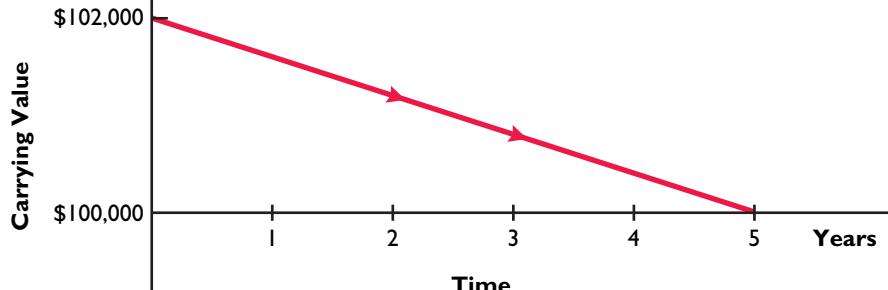

Principal at maturity	\$100,000
Annual interest payments ($\$10,000 \times 5$)	50,000
Cash to be paid to bondholders	150,000
Less: Cash received from bondholders	102,000
Total cost of borrowing	\$ 48,000

HELPFUL HINT

Both a discount and a premium account are valuation accounts. A *valuation account* is one that is needed to value properly the item to which it relates.

Similar to bond discount, companies allocate bond premium to expense in each period in which the bonds are outstanding (see **Helpful Hint**). This is referred to as **amortizing the premium**. Amortization of the premium **decreases** the amount of interest expense reported each period. That is, after the company amortizes the premium, the amount of interest expense it reports in a period will be less than the contractual amount. As shown in Illustration 15.11, for the bonds issued by Candlestick, contractual interest will exceed the interest expense by \$2,000 over the life of the bonds.

As the premium is amortized, its balance declines. As a consequence, the carrying value of the bonds will decrease, until at maturity the carrying value of the bonds equals their face amount. This is shown in **Illustration 15.13**. Appendices 15A and 15B at the end of this chapter discuss procedures for amortizing bond premium.

ILLUSTRATION 15.13**Amortization of bond premium**

DO IT! 2a | Bond Issuance

Giant Corporation issues \$200,000 of bonds for \$189,000. (a) Prepare the journal entry to record the issuance of the bonds, and (b) show how the bonds would be reported on the balance sheet at the date of issuance.

Solution

a.	Cash		189,000		
	Discount on Bonds Payable		11,000		
	Bonds Payable			200,000	
	(To record sale of bonds at a discount)				
b.	Long-term liabilities				
	Bonds payable		\$200,000		
	Less: Discount on bonds payable		11,000	\$189,000	

Related exercise material: BE15.1, BE15.2, BE15.3, BE15.4, BE15.5, DO IT! 15.2a, E15.2, E15.3, E15.4, and E15.6.

ACTION PLAN

- Record cash received, bonds payable at face value, and the difference as a discount or premium.
- Report discount as a deduction from bonds payable and premium as an addition to bonds payable.

Redeeming Bonds at Maturity

Regardless of the issue price of bonds, the book value of the bonds at maturity will equal their face value. Assuming that the company pays and records separately the interest for the last interest period, Candlestick Inc. records the redemption of its bonds at maturity as follows.

Jan. 1	Bonds Payable		100,000		
	Cash			100,000	
	(To record redemption of bonds at maturity)				

A	=	L	+	SE
		-100,000		
		-100,000		
		Cash Flows		
		-100,000		

Redeeming Bonds before Maturity

Bonds may be redeemed before maturity (see **Helpful Hint**). A company may decide to redeem bonds before maturity to reduce interest cost and to remove debt from its balance sheet. A company should redeem debt early only if it has sufficient cash resources.

When a company redeems bonds before maturity, it is necessary to (1) eliminate the carrying value of the bonds at the redemption date, (2) record the cash paid, and (3) recognize the gain or loss on redemption. The **carrying value** of the bonds is the face value of the bonds less any remaining bond discount or plus any remaining bond premium at the redemption date.

To illustrate, assume that Candlestick Inc. has sold its bonds at a premium. At the end of the fourth period, Candlestick redeems these bonds at 103 after paying the annual interest. Assume that the carrying value of the bonds at the redemption date is \$100,400 (principal \$100,000 and premium \$400). Candlestick records the redemption at the end of the fourth interest period (January 1, 2024) as follows.

Jan. 1	Bonds Payable		100,000		
	Premium on Bonds Payable		400		
	Loss on Bond Redemption			2,600	
	Cash				103,000
	(To record redemption of bonds at 103)				

HELPFUL HINT	
If a bond is redeemed prior to its maturity date and its carrying value exceeds its redemption price, this results in a gain.	

A	=	L	+	SE
		-100,000		
		-400		
		-2,600 Exp		
		-103,000		
		Cash Flows		
		-103,000		

Note that the loss of \$2,600 is the difference between the cash paid of \$103,000 and the carrying value of the bonds of \$100,400.

People, Planet, and Profit Insight

How About Some Green Bonds?

Green bonds are debt used to fund activities such as renewable-energy projects. For example, a company may use the proceeds from the sale of green bonds to clean up its manufacturing operations and cut waste (such as related to energy consumption).

The use of green bonds has taken off as companies now have guidelines as to how to disclose and report on these green-bond proceeds. These standardized disclosures provide transparency

as to how these bonds are used and their effect on overall profitability.

Investors are taking a strong interest in these bonds. Investing companies are installing socially responsible investing teams and have started to integrate sustainability into their investment processes. The disclosures of how companies are using the bond proceeds help investors to make better financial decisions.

Source: Ben Edwards, "Green Bonds Catch On," *Wall Street Journal* (April 3, 2014), p. C5.

Why might standardized disclosure help investors to better understand how proceeds from the sale or issuance of bonds are used? (Go to WileyPLUS for this answer and additional questions.)

DO IT! 2b | Bond Redemption

R & B Inc. issued \$500,000, 10-year bonds at a discount. Prior to maturity, when the carrying value of the bonds is \$496,000, the company redeems the bonds at 98. Prepare the entry to record the redemption of the bonds.

Solution

There is a gain on redemption. The cash paid, \$490,000 ($\$500,000 \times 98\%$), is less than the carrying value of \$496,000. The entry is:

Bonds Payable	500,000	
Discount on Bonds Payable		4,000
Gain on Bond Redemption		6,000
Cash		490,000
(To record redemption of bonds at 98)		

Related exercise material: **BE15.6, DO IT! 15.2b, E15.5, E15.7, and E15.8.**

ACTION PLAN

- Determine and eliminate the carrying value of the bonds.
- Record the cash paid.
- Compute and record the gain or loss (the difference between the first two items).

Accounting for Long-Term Notes Payable

LEARNING OBJECTIVE 3

Explain how to account for long-term notes payable.

Another type of long-term obligation is long-term notes payable. The use of notes payable in long-term debt financing is quite common. **Long-term notes payable** are similar to short-term interest-bearing notes payable except that the term of the notes exceeds one year. In periods of unstable interest rates, lenders may tie the interest rate on long-term notes to changes in the market rate for comparable loans.

A long-term note may be secured by a **mortgage** that pledges title to specific assets as security for a loan. Individuals widely use **mortgage notes payable** to purchase homes, and many small and some large companies use them to acquire plant assets. At one time, approximately 18% of **McDonald's** long-term debt related to mortgage notes on land, buildings, and improvements.

Like other long-term notes payable, the mortgage loan terms may stipulate either a **fixed** or an **adjustable** interest rate. The interest rate on a fixed-rate mortgage remains the same over the life of the mortgage. The interest rate on an adjustable-rate mortgage is adjusted periodically to reflect changes in the market rate of interest. Typically, the terms require the borrower

to make equal installment payments over the term of the loan. Each payment consists of (1) interest on the unpaid balance of the loan and (2) a reduction of loan principal. While the total amount of the payment remains constant, the interest decreases each period, while the portion applied to the loan principal increases.

Companies initially record mortgage notes payable at face value. They subsequently make entries for each installment payment. To illustrate, assume that Porter Technology Inc. issues a \$500,000, 8%, 20-year mortgage note on December 31, 2020, to obtain needed financing for a new research laboratory. The terms provide for annual installment payments of \$50,926 (not including real estate taxes and insurance). **Illustration 15.14** shows the installment payment schedule for the first four years.

Interest Period	(A) Cash Payment	(B) Interest Expense (D) × 8%	(C) Reduction of Principal (A) – (B)	(D) Principal Balance (D) – (C)
Issue date				\$500,000
1	\$50,926	\$40,000	\$10,926	489,074
2	50,926	39,126	11,800	477,274
3	50,926	38,182	12,744	464,530
4	50,926	37,162	13,764	450,766

ILLUSTRATION 15.14

Mortgage installment payment schedule

Porter records the mortgage loan on December 31, 2020, as follows.

Dec. 31	Cash	500,000	
	Mortgage Payable (To record mortgage loan)		500,000

On December 31, 2021, Porter records the first installment payment as follows.

Dec. 31	Interest Expense	40,000	
	Mortgage Payable	10,926	
	Cash (To record annual payment on mortgage)		50,926

In the balance sheet, the company reports the reduction in principal for the next year as a current liability, and it classifies the remaining unpaid principal balance as a long-term liability. At December 31, 2021, the total liability is \$489,074. Of that amount, \$11,800 is current and \$477,274 (\$489,074 – \$11,800) is long-term.

$$\begin{array}{r} A = L + SE \\ +500,000 \quad +500,000 \\ \hline \end{array}$$

Cash Flows
+500,000 

$$\begin{array}{r} A = L + SE \\ -40,000 \text{ Exp} \quad -10,926 \\ \hline -50,926 \end{array}$$

Cash Flows
-50,926 

DO IT! 3 | Long-Term Notes

Cole Research issues a \$250,000, 6%, 20-year mortgage note to obtain needed financing for a new lab. The terms call for annual payments of \$21,796 each. Prepare the entries to record the mortgage loan and the first payment.

Solution

Cash	250,000	
Mortgage Payable (To record mortgage loan)		250,000
Interest Expense	15,000*	
Mortgage Payable Cash (To record annual payment on mortgage)	6,796	21,796

*Interest expense = $\$250,000 \times 6\% = \$15,000$.

ACTION PLAN

- Record the issuance of the note as a cash receipt and a liability.
- Each installment payment consists of interest and payment of principal.

Reporting and Analyzing Long-Term Liabilities

LEARNING OBJECTIVE 4

Discuss how long-term liabilities are reported and analyzed.

ETHICS NOTE

Some companies try to minimize the amount of debt reported on their balance sheets by not reporting certain types of commitments as liabilities. This subject is of intense interest in the financial community.

ILLUSTRATION 15.15

Balance sheet presentation of long-term liabilities

Presentation

Companies report long-term liabilities in a separate section of the balance sheet immediately following current liabilities, as shown in **Illustration 15.15**. Alternatively, companies may present summary data in the balance sheet, with detailed data (interest rates, maturity dates, conversion privileges, and assets pledged as collateral) shown in a supporting schedule in the notes (see **Ethics Note**).

Lax Corporation Balance Sheet (partial)

Long-term liabilities			
Bonds payable 10% due in 2025		\$1,000,000	
Less: Discount on bonds payable		80,000	\$ 920,000
Mortgage payable, 11%, due in 2031 and secured by plant assets			500,000
Lease liability			440,000
Total long-term liabilities			\$1,860,000

Companies report the current maturities of long-term debt under current liabilities if they are to be paid within one year or the operating cycle, whichever is longer.

Use of Ratios

Two ratios are helpful in better understanding a company's debt-paying ability and long-term solvency. Solvency refers to the ability of a company to survive over a long period of time. Long-term creditors and stockholders are interested in a company's long-run solvency. Of particular interest is the company's ability to pay interest as it comes due and to repay the face value of the debt at maturity.

The **debt to assets ratio** measures the percentage of the total assets provided by creditors. It is computed by dividing total liabilities (both current and long-term liabilities) by total assets. To illustrate, we use data from a recent **General Motors** annual report. The company reported total liabilities of \$141,653 million, total assets of \$177,677 million, interest expense of \$403 million, income taxes of \$228 million, and net income of \$4,018 million. As shown in **Illustration 15.16**, General Motors' debt to assets ratio is 80%. The higher the percentage of debt to assets, the greater the risk that the company may be unable to meet its maturing obligation.

ILLUSTRATION 15.16

Debt to assets ratio

$$\text{Total Liabilities} \div \text{Total Assets} = \text{Debt to Assets Ratio}$$

$$$141,653 \div \$177,677 = 80\%$$

Times interest earned indicates the company's ability to meet interest payments as they come due. It is computed by dividing the sum of net income, interest expense, and income tax

expense by interest expense. As shown in **Illustration 15.17**, General Motors' times interest earned is 11.5 times. This interest coverage is considered safe.

Net Income + Interest Expense + Income Tax Expense	÷	Interest Expense	=	Times Interest Earned
\$4,018 + \$403 + \$228	÷	\$403	=	11.5 times

ILLUSTRATION 15.17

Times interest earned

Investor Insight

Debt Masking

In the wake of the financial crisis, many financial institutions are wary of reporting too much debt on their financial statements, for fear that investors will consider them too risky. The Securities and Exchange Commission (SEC) is concerned that some companies engage in “debt masking” to make it appear that they use less debt than they actually do. These companies enter into transactions at the end of the

accounting period that essentially remove debt from their books. Shortly after the end of the period, they reverse the transaction and the debt goes back on their books. The *Wall Street Journal* reported that 18 large banks “had consistently lowered one type of debt at the end of each of the past five quarters, reducing it on average by 42% from quarterly peaks.”

Source: Tom McGinty, Kate Kelly, and Kara Scannell, “Debt ‘Masking’ Under Fire,” *Wall Street Journal Online* (April 21, 2010).

What implications does debt masking have for an investor that is using the debt to assets ratio to evaluate a company’s solvency? (Go to WileyPLUS for this answer and additional questions.)

Debt and Equity Financing

To obtain large amounts of long-term capital, corporate management has to decide whether to issue additional common stock (equity financing), bonds or notes (debt financing), or a combination of the two. This decision is important to both the company and to investors and creditors. The capital structure of a company provides clues as to the potential profit that can be achieved and the risks taken by the company. Debt financing offers these advantages over common stock, as shown in **Illustration 15.18**.

Bond Financing	Advantages
	1. Stockholder control is not affected. Bondholders do not have voting rights, so current owners (stockholders) retain full control of the company.
	2. Tax savings result. Bond interest is deductible for tax purposes; dividends on stock are not.
Income statement EPS	3. Earning per share (EPS) may be higher. Although bond interest expense reduces net income, earning per share is higher under bond financing because no additional shares of common stock are issued.

ILLUSTRATION 15.18

Advantages of bond financing over common stock

As Illustration 15.18 shows, one reason to issue bonds is that they do not affect stockholder control. Because bondholders do not have voting rights, owners can raise capital with bonds and still maintain corporate control. In addition, bonds are attractive to

corporations because the cost of bond interest is tax-deductible. As a result of this tax treatment, which stock dividends do not offer, bonds may result in lower cost of capital than equity financing.

To illustrate another advantage of bond financing, assume that Microsystems, Inc. is considering two plans for financing the construction of a new \$5 million plant. Plan A involves issuance of 200,000 shares of common stock at the current market price of \$25 per share. Plan B involves issuance of \$5 million, 8% bonds at face value. Income before interest and taxes on the new plant will be \$1.5 million. Income taxes are expected to be 30%. Microsystems currently has 100,000 shares of common stock outstanding. **Illustration 15.19** shows the alternative effects on earnings per share.

ILLUSTRATION 15.19
Effects on earnings per share—stocks vs. bonds

	Plan A Issue Stock	Plan B Issue Bonds
Income before interest and taxes	\$1,500,000	\$1,500,000
Interest ($8\% \times \$5,000,000$)	—	400,000
Income before income taxes	1,500,000	1,100,000
Income tax expense (30%)	450,000	330,000
Net income	<u>\$1,050,000</u>	<u>\$ 770,000</u>
Outstanding shares	300,000	100,000
Earnings per share	\$3.50	\$7.70

Note that net income is \$280,000 less ($\$1,050,000 - \$770,000$) with long-term debt financing (bonds). However, earnings per share is higher because there are 200,000 fewer shares of common stock outstanding.

One disadvantage in using bonds is that the company must **pay interest** on a periodic basis. In addition, the company must also **repay the principal** at the due date. A company with fluctuating earnings and a relatively weak cash position may have great difficulty making interest payments when earnings are low. Furthermore, when the economy, stock market, or a company's revenues stagnate, debt payments can gobble up cash quickly and limit a company's ability to meet its financial obligations.

Lease Liabilities

A **lease** is a contractual agreement between a lessor (owner of a property) and a lessee (renter of the property). This arrangement gives the lessee the right to use specific property, which is owned by the **lessor**, for a specified period of time. In return for the use of the property, the **lessee** makes rental payments over the lease term to the lessor.

Leasing has grown tremendously in popularity. Today, it is the fastest growing form of capital investment. Instead of borrowing money to buy an airplane, computer, nuclear core, or satellite, a company makes periodic payments to lease these assets. Even gambling casinos lease their slot machines. The global leasing-equipment market is over a \$900 billion business, with the United States accounting for about one-third of the global market.

Accounting for Lease Arrangements

For all leases greater than one year, the lessee records a right-of-use asset and a lease liability. The lease liability is computed as the present value of the lease payments. The right-of-use asset is equal to the lease liability. To illustrate, assume that Gonzalez Company decides to lease new equipment. The lease term is four years; the economic life is estimated to be five years. The present value of the lease payments is \$190,000.

Gonzalez records the lease arrangement as follows.

	190,000	190,000	A = L + SE
Right-of-Use Asset	+190,000	+190,000	
Lease Liability (To record leased asset and lease liability)	Cash Flows no effect		

Balance Sheet Presentation

Gonzalez reports its leased asset on the balance sheet in the long-term assets section. It reports the lease liability on the balance sheet as a liability. The portion of the lease liability expected to be paid in the next year is a current liability. The remainder is classified as a long-term liability.

Income Statement Presentation

The income statement presentation of leases by lessees depends on whether the lease is considered a finance or operating lease. The lease is a finance lease if it meets one of five criteria (discussed in more advanced accounting courses). Leases that do not meet any of these five criteria are considered operating leases.

Under finance lease treatment, the right-of-use asset is amortized (depreciated) in a fashion similar to other fixed assets, and the interest expense is determined in a fashion similar to other long-term liabilities. Under operating lease treatment, a single expense amount is determined. The calculation of this expense amount is complex and is addressed in advanced accounting courses.

DO IT! 4 | Lease Liability; Analysis of Long-Term Liabilities

FX Corporation leases new equipment for six years on December 31, 2020. The present value of the lease payments is \$240,000. After recording this lease, FX has assets of \$2,000,000, liabilities of \$1,200,000, and stockholders' equity of \$800,000. (a) Prepare the entry to record the lease, and (b) compute and discuss the debt to assets ratio at year-end.

Solution

a. Right-of-Use Asset	240,000	240,000
Lease Liability (To record leased asset and lease liability)	240,000	240,000

- b. The debt to assets ratio = $\$1,200,000 \div \$2,000,000 = 60\%$. This means that 60% of its assets were provided by creditors. The higher the percentage of debt to assets, the greater the risk that the company may be unable to meet its maturing obligations.

Related exercise material: BE15.10, DO IT! 15.4, E15.13, and E15.14.

ACTION PLAN

- Record the present value of the lease payments as an asset and a liability.
- Use the formula for the debt to assets ratio (Total liabilities divided by Total assets).

Appendix 15A

Straight-Line Amortization

LEARNING OBJECTIVE *5

Apply the straight-line method of amortizing bond discount and bond premium.

Amortizing Bond Discount

To follow the expense recognition principle, companies allocate bond discount to expense in each period in which the bonds are outstanding. The **straight-line method of amortization**

allocates the same amount to interest expense in each interest period. The calculation is presented in **Illustration 15A.1**.

ILLUSTRATION 15A.1

Formula for straight-line method of bond discount amortization

$$\frac{\text{Bond Discount}}{\text{Number of Interest Periods}} = \text{Bond Discount Amortization}$$

In the Candlestick Inc. example, the company sold \$100,000, five-year, 10% bonds on January 1, 2020, for \$98,000. This resulted in a \$2,000 bond discount (\$100,000 – \$98,000). The bond discount amortization is \$400 ($\$2,000 \div 5$) for each of the five amortization periods. Candlestick records the first accrual of bond interest and the amortization of bond discount on December 31 as follows.

A	=	L	+	SE
				-10,400 Exp
		+400		
		+10,000		

Cash Flows
no effect

Dec. 31	Interest Expense	10,400
	Discount on Bonds Payable	
	Interest Payable	400
	(To record accrued bond interest and amortization of bond discount)	10,000

ALTERNATIVE TERMINOLOGY

The amount in the Discount on Bonds Payable account is often referred to as *Unamortized Discount on Bonds Payable*.

Over the term of the bonds, the balance in Discount on Bonds Payable will decrease annually by the same amount until it has a zero balance at the maturity date of the bonds (see **Alternative Terminology**). Thus, the carrying value of the bonds at maturity will be equal to the face value of the bonds.

Preparing a bond discount amortization schedule, as shown in **Illustration 15A.2**, is useful to determine interest expense, discount amortization, and the carrying value of the bond. As indicated, the interest expense recorded each period is \$10,400. Also note that the carrying value of the bond increases \$400 each period until it reaches its face value of \$100,000 at the end of period 5.

ILLUSTRATION 15A.2 Bond discount amortization schedule

Candlestick Inc. Bond Discount Amortization Schedule Straight-Line Method—Annual Interest Payments \$100,000 of 10%, 5-Year Bonds						
		(A) Interest to Be Paid (10% × \$100,000)	(B) Interest Expense to Be Recorded (A) + (C)	(C) Discount Amortization (\$2,000 ÷ 5)	(D) Unamortized Discount (D) – (C)	(E) Bond Carrying Value (\$100,000 – D)
1	Issue date				\$2,000	\$ 98,000
10	1	\$10,000	\$10,400	\$ 400	1,600	98,400
11	2	10,000	10,400	400	1,200	98,800
12	3	10,000	10,400	400	800	99,200
13	4	10,000	10,400	400	400	99,600
14	5	10,000	10,400	400	0	100,000
15		<u>\$50,000</u>	<u>\$52,000</u>	<u>\$2,000</u>		
17	Column (A) remains constant because the face value of the bonds (\$100,000) is multiplied by the annual contractual interest rate (10%) each period.					
18	Column (B) is computed as the interest paid (Column A) plus the discount amortization (Column C).					
19	Column (C) indicates the discount amortization each period.					
20	Column (D) decreases each period by the same amount until it reaches zero at maturity.					
21	Column (E) increases each period by the amount of discount amortization until it equals the face value at maturity.					

Amortizing Bond Premium

The amortization of bond premium parallels that of bond discount. **Illustration 15A.3** presents the formula for determining bond premium amortization under the straight-line method.

Bond Premium	÷	Number of Interest Periods	=	Bond Premium Amortization
---------------------	---	-----------------------------------	---	----------------------------------

ILLUSTRATION 15A.3

Formula for straight-line method of bond premium amortization

Continuing our example, assume Candlestick Inc., sells the bonds previously described for \$102,000, rather than \$98,000. This results in a bond premium of \$2,000 (\$102,000 – \$100,000). The premium amortization for each interest period is \$400 (\$2,000 ÷ 5). Candlestick records the first accrual of interest on December 31 as follows.

Dec. 31	Interest Expense Premium on Bonds Payable Interest Payable (To record accrued bond interest and amortization of bond premium)	9,600 400 10,000
---------	--	------------------------

$$A = L + SE$$

$$\begin{array}{r} -9,600 \text{ Exp} \\ -400 \\ \hline +10,000 \end{array}$$

Cash Flows
no effect

A bond premium amortization schedule, as shown in **Illustration 15A.4**, is useful to determine interest expense, premium amortization, and the carrying value of the bond. As indicated, the interest expense Candlestick records each period is \$9,600. Note that the carrying value of the bond decreases \$400 each period until it reaches its face value of \$100,000 at the end of period 5.

ILLUSTRATION 15A.4 Bond premium amortization schedule

Candlestick Inc.					
Bond Premium Amortization Schedule					
Straight-Line Method—Annual Interest Payments					
\$100,000 of 10%, 5-Year Bonds					
Interest Periods	(A) Interest to Be Paid (10% × \$100,000)	(B) Interest Expense to Be Recorded (A) – (C)	(C) Premium Amortization (\$2,000 ÷ 5)	(D) Unamortized Premium (D) – (C)	(E) Bond Carrying Value (\$100,000 + D)
Issue date				\$2,000	\$102,000
1	\$10,000	\$ 9,600	\$ 400	1,600	101,600
2	10,000	9,600	400	1,200	101,200
3	10,000	9,600	400	800	100,800
4	10,000	9,600	400	400	100,400
5	10,000	9,600	400	0	100,000
	<u>\$50,000</u>	<u>\$48,000</u>	<u>\$2,000</u>		
Column (A) remains constant because the face value of the bonds (\$100,000) is multiplied by the annual contractual interest rate (10%) each period. Column (B) is computed as the interest paid (Column A) less the premium amortization (Column C). Column (C) indicates the premium amortization each period. Column (D) decreases each period by the same amount until it reaches zero at maturity. Column (E) decreases each period by the amount of premium amortization until it equals the face value at maturity.					

Appendix 15B

Effective-Interest Amortization

LEARNING OBJECTIVE *6

Apply the effective-interest method of amortizing bond discount and bond premium.

To follow the expense recognition principle, companies allocate bond discount to expense in each period in which the bonds are outstanding. However, to completely comply with the expense recognition principle, interest expense as a percentage of carrying value should not change over the life of the bonds.

This percentage, referred to as the **effective-interest rate**, is established when the bonds are issued and remains constant in each interest period. Unlike the straight-line method, the effective-interest method of amortization accomplishes this result.

Under the **effective-interest method of amortization**, the amortization of bond discount or bond premium results in periodic interest expense equal to a constant percentage of the carrying value of the bonds. The effective-interest method results in **varying amounts** of amortization and interest expense per period but a **constant percentage rate**. In contrast, the straight-line method results in constant amounts of amortization and interest expense per period but a varying percentage rate.

Companies follow three steps under the effective-interest method:

1. Compute the **bond interest expense** by multiplying the carrying value of the bonds at the beginning of the interest period by the effective-interest rate.
2. Compute the **bond interest paid** (or accrued) by multiplying the face value of the bonds by the contractual interest rate.
3. Compute the **amortization amount** by determining the difference between the amounts computed in steps (1) and (2).

Illustration 15B.1 depicts these steps.

ILLUSTRATION 15B.1

Computation of amortization using effective-interest method

(1)	(2)	(3)
Bond Interest Expense	Bond Interest Paid	Amortization Amount
$\left[\begin{array}{c} \text{Carrying Value} \\ \text{of Bonds} \\ \text{at Beginning} \\ \text{of Period} \end{array} \times \begin{array}{c} \text{Effective-} \\ \text{Interest} \\ \text{Rate} \end{array} \right] - \left[\begin{array}{c} \text{Face} \\ \text{Amount} \\ \text{of Bond} \end{array} \times \begin{array}{c} \text{Contractual} \\ \text{Interest} \\ \text{Rate} \end{array} \right]$		=

HELPFUL HINT

Note that the amount of periodic interest expense increases over the life of the bonds when the effective-interest method is used for bonds issued at a discount. The reason is that a constant percentage is applied to an increasing bond carrying value to compute interest expense. The carrying value is increasing because of the amortization of the discount.

Both the straight-line and effective-interest methods of amortization result in the same total amount of interest expense over the term of the bonds. Furthermore, interest expense each interest period is generally comparable in amount. However, **when the amounts are materially different, generally accepted accounting principles (GAAP) require use of the effective-interest method.**

Amortizing Bond Discount

In the Candlestick Inc. example, the company sold \$100,000, five-year, 10% bonds on January 1, 2020, for \$98,000. This resulted in a \$2,000 bond discount (\$100,000 – \$98,000). This discount results in an effective-interest rate of approximately 10.5348% (see **Helpful Hint**). (The effective-interest rate can be computed using the techniques shown in Appendix G.)

Preparing a bond discount amortization schedule as shown in **Illustration 15B.2** facilitates the recording of interest expense and the discount amortization. Note that interest expense as a percentage of carrying value remains constant at 10.5348%.

ILLUSTRATION 15B.2 Bond discount amortization schedule

Candlestick Inc.					
	A	B	C	D	E
1	Candlestick Inc. Bond Discount Amortization Schedule Effective-Interest Method—Annual Interest Payments 10% Bonds Issued at 10.5348%				
2	Interest Periods	(A) Interest to Be Paid (10% × \$100,000)	(B) Interest Expense to Be Recorded (10.5348% × Preceding Bond Carrying Value)	(C) Discount Amortization (B) – (A)	(D) Unamortized Discount (D) – (C)
3	Issue date				(E) Bond Carrying Value (\$100,000 – D)
4	1	\$10,000	\$10,324 (10.5348% × \$98,000)	\$ 324	\$ 2,000
5	2	10,000	10,358 (10.5348% × \$98,324)	358	1,676
6	3	10,000	10,396 (10.5348% × \$98,682)	396	98,682
7	4	10,000	10,438 (10.5348% × \$99,078)	438	99,078
8	5	10,000	10,484 (10.5348% × \$99,516)	484	99,516
9		\$50,000	\$52,000	\$2,000	100,000
10					
11					
12					
13					
14					
15					
16					
17	Column (A) remains constant because the face value of the bonds (\$100,000) is multiplied by the annual contractual interest rate (10%) each period.				
18	Column (B) is computed as the preceding bond carrying value times the annual effective-interest rate (10.5348%).				
19	Column (C) indicates the discount amortization each period.				
20	Column (D) decreases each period until it reaches zero at maturity.				
21	Column (E) increases each period until it equals face value at maturity.				
22					
23					

For the first interest period, the computations of bond interest expense and the bond discount amortization are as shown in **Illustration 15B.3**.

Bond interest expense ($\$98,000 \times 10.5348\%$)	\$10,324
Less: Bond interest paid ($\$100,000 \times 10\%$)	<u>10,000</u>
Bond discount amortization	<u>\$ 324</u>

ILLUSTRATION 15B.3

Computation of bond discount amortization

As a result, Candlestick records the accrual of interest and amortization of bond discount on December 31 as follows.

Dec. 31	Interest Expense	10,324	
	Discount on Bonds Payable	324	
	Interest Payable	10,000	
	(To record accrued interest and amortization of bond discount)		

A	=	L	+	SE
				–10,324 Exp
				+324
<u>+10,000</u>				
Cash Flows				
no effect				

For the second interest period, bond interest expense will be \$10,358 ($\$98,324 \times 10.5348\%$), and the discount amortization will be \$358. At December 31, Candlestick makes the following adjusting entry.

A	=	L	+	SE		Dec. 31	Interest Expense	10,358	
				-10,358	Exp		Discount on Bonds Payable		358
		+358					Interest Payable		10,000
				+10,000			(To record accrued interest and amortization of bond discount)		
Cash Flows									
no effect									

Amortizing Bond Premium

Continuing our example, assume Candlestick Inc. sells the bonds previously described for \$102,000 rather than \$98,000. This would result in a bond premium of \$2,000 (\$102,000 – \$100,000). This premium results in an effective-interest rate of approximately 9.4794%. (The effective-interest rate can be solved for using the techniques shown in Appendix G.) **Illustration 15B.4** shows the bond premium amortization schedule.

ILLUSTRATION 15B.4 Bond premium amortization schedule

Candlestick Inc. Bond Premium Amortization Schedule Effective-Interest Method—Annual Interest Payments 10% Bonds Issued at 9.4794%						
		(A) Interest to Be Paid (10% × \$100,000)	(B) Interest Expense to Be Recorded (9.4794% × Preceding Bond Carrying Value)	(C) Premium Amortization (A) – (B)	(D) Unamortized Premium (D) – (C)	(E) Bond Carrying Value (\$100,000 + D)

7	Interest Periods					
8						
9	Issue date					
10	1	\$ 10,000	\$ 9,669 (9.4794% × \$102,000)	\$ 331	\$ 2,000	\$ 102,000
11	2	10,000	9,638 (9.4794% × \$101,669)	362	1,669	101,669
12	3	10,000	9,603 (9.4794% × \$101,307)	397	1,307	101,307
13	4	10,000	9,566 (9.4794% × \$100,910)	434	910	100,910
14	5	10,000	9,524* (9.4794% × \$100,476)	476*	476	100,476
15		\$50,000	\$48,000	\$2,000	–0–	100,000
16						
17	Column (A) remains constant because the face value of the bonds (\$100,000) is multiplied by the contractual interest rate (10%) each period.					
18	Column (B) is computed as the carrying value of the bonds times the annual effective-interest rate (9.4794%).					
19	Column (C) indicates the premium amortization each period.					
20	Column (D) decreases each period until it reaches zero at maturity.					
21	Column (E) decreases each period until it equals face value at maturity.					
22						
23	*Rounded to eliminate remaining discount resulting from rounding the effective rate.					

For the first interest period, the computations of bond interest expense and the bond premium amortization are as shown in **Illustration 15B.5**.

ILLUSTRATION 15B.5

Computation of bond premium amortization

Bond interest paid (\$100,000 × 10%)	\$10,000
Less: Bond interest expense (\$102,000 × 9.4794%)	9,669
Bond premium amortization	\$ 331

Dec. 31	Interest Expense Premium on Bonds Payable Interest Payable (To record accrued interest and amortization of bond premium)	9,669 331	10,000	A = L + SE -9,669 Exp -331 +10,000
				Cash Flows no effect

For the second interest period, interest expense will be \$9,638, and the premium amortization will be \$362. Note that the amount of periodic interest expense decreases over the life of the bond when companies apply the effective-interest method to bonds issued at a premium. The reason is that a constant percentage is applied to a decreasing bond carrying value to compute interest expense. The carrying value is decreasing because of the amortization of the premium.

Review and Practice

Learning Objectives Review

1 Describe the major characteristics of bonds.

Bonds can have many different features and may be secured, unsecured, convertible, or callable. The terms of the bond issue are set forth in a bond indenture, and a bond certificate provides the specific information about the bond itself.

2 Explain how to account for bond transactions.

When companies issue bonds, they debit Cash for the cash proceeds and credit Bonds Payable for the face value of the bonds. The account Premium on Bonds Payable shows a bond premium. Discount on Bonds Payable shows a bond discount.

When bondholders redeem bonds at maturity, the issuing company credits Cash and debits Bonds Payable for the face value of the bonds. When bonds are redeemed before maturity, the issuing company (a) eliminates the carrying value of the bonds at the redemption date, (b) records the cash paid, and (c) recognizes the gain or loss on redemption.

3 Explain how to account for long-term notes payable.

Long-term notes payable are similar to short-term notes payable except the terms of the long-term notes exceed one year. Each payment consists of (1) interest on the unpaid balance of the loan and (2) a reduction of loan principal. The interest decreases each period, while the portion applied to the loan principal increases.

4 Discuss how long-term liabilities are reported and analyzed.

Companies should report the nature and amount of each long-term debt in the balance sheet or in the notes accompanying the

financial statements. Companies may sell bonds to investors to raise long-term capital. Bonds offer the following advantages over common stock: (a) stockholder control is not affected, (b) tax savings result, and (c) earnings per share of common stock may be higher.

Stockholders and long-term creditors are interested in a company's long-run solvency. Debt to assets and times interest earned are two ratios that provide information about debt-paying ability and long-run solvency.

For all leases greater than one year, the lessee records a right-of-use asset and a lease liability. The lease liability is computed as the present value of the lease liability.

*5 Apply the straight-line method of amortizing bond discount and bond premium.

The straight-line method of amortization results in a constant amount of amortization and interest expense per period.

*6 Apply the effective-interest method of amortizing bond discount and bond premium.

The effective-interest method results in varying amounts of amortization and interest expense per period but a constant percentage rate of interest. When the difference between the straight-line and effective-interest method is material, GAAP requires use of the effective-interest method.

Glossary Review

Bond certificate A legal document that indicates the name of the issuer, the face value of the bonds, the contractual interest rate, and maturity date of the bonds. (p. 15-3).

Bond indenture A legal document that sets forth the terms of the bond issue. (p. 15-3).

Bonds A form of interest-bearing notes payable issued by corporations, universities, and governmental entities. (p. 15-3).

Callable bonds Bonds that are subject to redemption (buy back) at a stated dollar amount prior to maturity at the option of the issuer. (p. 15-3).

Contractual interest rate Rate used to determine the amount of cash interest the borrower pays and the investor receives. (p. 15-3).

Convertible bonds Bonds that permit bondholders to convert them into common stock at the bondholders' option. (p. 15-3).

Debenture bonds Bonds issued against the general credit of the borrower. Also called unsecured bonds. (p. 15-3).

Debt to assets ratio A solvency measure that indicates the percentage of total assets provided by creditors; computed as total liabilities divided by total assets. (p. 15-14).

Discount (on a bond) The difference between the face value of a bond and its selling price, when the bond is sold for less than its face value. (p. 15-7).

***Effective-interest method of amortization** Amortization of bond discount or bond premium which results in periodic interest expense equal to a constant percentage of the carrying value of the bonds. (p. 15-20).

***Effective-interest rate** Rate established when bonds are issued that maintains a constant value for interest expense as a percentage of bond carrying value in each interest period. (p. 15-20).

Face value Amount of principal due at the maturity date of the bond. (p. 15-3).

Long-term liabilities Obligations expected to be paid more than one year in the future. (p. 15-2).

Market interest rate The rate investors demand for loaning funds to the corporation. (p. 15-5).

Maturity date The date on which the final payment on the bond is due from the bond issuer to the investor. (p. 15-3).

Mortgage bond A bond secured by real estate. (p. 15-3).

Mortgage notes payable A long-term note secured by a mortgage that pledges title to specific assets as security for a loan. (p. 15-12).

Premium (on a bond) The difference between the selling price and the face value of a bond, when the bond is sold for more than its face value. (p. 15-8).

Secured bonds Bonds that have specific assets of the issuer pledged as collateral. (p. 15-3).

Sinking fund bonds Bonds secured by specific assets set aside to redeem them. (p. 15-3).

***Straight-line method of amortization** Allocates the same amount to interest expense in each interest period. (p. 15-17).

Times interest earned A solvency measure that indicates a company's ability to meet interest payments; computed by dividing the sum of net income, interest expense, and income tax expense by interest expense. (p. 15-14).

Time value of money The relationship between time and money. A dollar received today is worth more than a dollar promised at some time in the future. (p. 15-5).

Unsecured bonds Bonds issued against the general credit of the borrower. Also called debenture bonds. (p. 15-3).

Practice Multiple-Choice Questions

1. **(LO 1)** The term used for bonds that are unsecured is:

- a. callable bonds.
- c. debenture bonds.
- b. U.S. Treasury bonds.
- d. convertible bonds.

2. **(LO 1)** The market interest rate:

- a. is the contractual interest rate used to determine the amount of cash interest paid by the borrower.
- b. is listed in the bond indenture.
- c. is the rate investors demand for loaning funds.
- d. More than one of the above is true.

3. **(LO 2)** Karson Inc. issues 10-year bonds with a maturity value of \$200,000. If the bonds are issued at a premium, this indicates that:

- a. the contractual interest rate exceeds the market interest rate.
- b. the market interest rate exceeds the contractual interest rate.
- c. the contractual interest rate and the market interest rate are the same.
- d. no relationship exists between the two rates.

4. **(LO 2)** Four-Nine Corporation issued bonds that pay interest every January 1. The entry to accrue bond interest at December 31 includes a:

- a. debit to Interest Payable.
- b. credit to Cash.
- c. credit to Interest Expense.
- d. credit to Interest Payable.

5. **(LO 2)** Gester Corporation redeems its \$100,000 face value bonds at 105 on January 1, following the payment of annual interest. The carrying value of the bonds at the redemption date is \$103,745. The entry to record the redemption will include a:

- a. credit of \$3,745 to Loss on Bond Redemption.
- b. debit of \$3,745 to Premium on Bonds Payable.
- c. credit of \$1,255 to Gain on Bond Redemption.
- d. debit of \$5,000 to Premium on Bonds Payable.

- 6. (LO 3)** Howard Corporation issued a 20-year mortgage note payable on January 1, 2020. At December 31, 2020, the unpaid principal balance will be reported as:
- a current liability.
 - a long-term liability.
 - part current and part long-term liability.
 - interest payable.
- 7. (LO 3)** Andrews Inc. issues a \$497,000, 10% 3-year mortgage note on January 1. The note will be paid in three annual installments of \$200,000, each payable at the end of the year. What is the amount of interest expense that should be recognized by Andrews Inc. in the second year?
- \$16,567.
 - \$49,700.
 - \$34,670.
 - \$346,700.
- 8. (LO 4)** For 2020, Corn Flake Corporation reported net income of \$300,000. Interest expense was \$40,000 and income taxes were \$100,000. The times interest earned was:
- 3 times.
 - 4.4 times.
 - 7.5 times.
 - 11 times.
- *9. (LO 5)** On December 31, Hurley Corporation issues \$500,000, 5-year, 12% bonds at 96 with interest payable on December 31, 2020. The entry on December 31, 2021, to record payment of bond interest and the amortization of bond discount using the straight-line method will include a:
- debit to Interest Expense \$30,000.
 - debit to Interest Expense \$60,000.
 - credit to Discount on Bonds Payable \$4,000.
 - credit to Discount on Bonds Payable \$2,000.
- *10. (LO 5)** For the bonds issued in Question 9, what is the carrying value of the bonds at the end of the third interest period?
- \$492,000.
 - \$488,000.
 - \$486,000.
 - \$464,000.
- *11. (LO 6)** On January 1, Besalius Inc. issued \$1,000,000, 9% bonds for \$938,554. The market rate of interest for these bonds is 10%. Interest is payable annually on December 31. Besalius uses the effective-interest method of amortizing bond discount. At the end of the first year, Besalius should report unamortized bond discount of:
- \$54,900.
 - \$57,591.
 - \$51,610.
 - \$51,000.
- *12. (LO 6)** On December 31, Dias Corporation issued \$1,000,000, 14%, 5-year bonds with interest payable annually on December 31. The bonds sold for \$1,072,096. The market rate of interest for these bonds was 12%. On the first interest date, using the effective-interest method, the debit entry to Interest Expense is for:
- \$120,000.
 - \$125,581.
 - \$128,652.
 - \$140,000.

Solutions

- 1. c.** Debenture bonds are not secured by any collateral. The other choices are incorrect because (a) callable bonds can be paid off or retired by the issuer before they reach their maturity date, (b) U.S. Treasury bonds are secured by the federal government, and (d) convertible bonds permit bondholders to convert them into common stock at the bondholders' option.
- 2. c.** Market interest rate is the rate investors demand for loaning funds. The other choices are incorrect because (a) market interest rate is the same as contractual interest rate only if bonds sell at face value (par value) and (b) the contractual interest rate, not the market interest rate, is listed in the bond indenture. Choice (d) is wrong as there is only one correct answer.
- 3. a.** When bonds are issued at a premium, this indicates that the contractual interest rate is higher than the market interest rate. The other choices are incorrect because (b) when the market interest rate exceeds the contractual interest rate, bonds are sold at a discount; (c) when the contractual interest rate and the market interest rate are the same, bonds will be issued at par; and (d) the relationship between the market rate of interest and the contractual rate of interest determines whether bonds are issued at par, a discount, or a premium.
- 4. d.** The adjusting entry to accrue bond interest at December 31 includes a debit to Interest Expense and credit to Interest Payable. The other choices are therefore incorrect.
- 5. b.** The entry to record the retirement of bonds will include a debit to Bonds Payable of \$100,000, a debit to Premium on Bonds Payable of \$3,745 ($\$103,745 - \$100,000$), a credit to Cash of \$105,000 ($\$100,000 \times 1.05$) and a debit to Loss on Bond Redemption of \$1,255 ($\$105,000 - \$103,745$). The other choices are therefore incorrect.
- 6. c.** Howard Corporation reports the reduction in principal for the next year as a current liability, and it classifies the remaining unpaid principal balance as a long-term liability. The other choices are therefore incorrect.
- 7. c.** In the first year, Andrews will recognize \$49,700 of interest expense ($\$497,000 \times 10\%$). After the first payment is made, the amount remaining on the note will be \$346,700 [$\$497,000 \text{ principal} - (\$200,000 \text{ payment} - \$49,700 \text{ interest})$]. The remaining balance (\$346,700) is multiplied by the interest rate (10%) to compute the interest expense to be recognized for the second year, \$34,670 ($\$346,700 \times 10\%$), not (a) \$16,567, (b) \$49,700, or (d) \$346,700.
- 8. d.** Times interest earned = Net income + Interest expense + Income tax expense ($\$300,000 + \$40,000 + \$100,000 = \$440,000$) divided by Interest expense (\$40,000), which equals 11 times, not (a) 3, (b) 4.4, or (c) 7.5 times.
- *9. c.** $[\$500,000 - (96\% \times \$500,000)] = \$20,000$; $\$20,000 \div 5 = \$4,000$ of discount to amortize annually. As a result, the entry would involve a credit to Discount on Bonds Payable \$4,000. The other choices are therefore incorrect.

***10. a.** The carrying value of bonds increases by the amount of the periodic discount amortization. Discount amortization using the straight-line method is \$4,000 each period. Total discount amortization for three periods is \$12,000 ($\$4,000 \times 3$ periods) which is added to the initial carrying value (\$480,000) to arrive at \$492,000, the carrying value at the end of the third interest period, not (b) \$488,000, (c) \$486,000, or (d) \$464,000.

11. b. The beginning balance of unamortized discount is \$61,446 ($\$1,000,000 - \$938,554$). The discount amortization is \$3,855, the

difference between the cash interest payment of \$90,000 ($\$1,000,000 \times 9\%$) and the interest expense recorded of \$93,855 ($\$938,554 \times 10\%$). This discount amortization (\$3,855) is then subtracted from the beginning balance of unamortized discount (\$61,446), to arrive at a balance of \$57,591 at the end of the first year, not (a) \$54,900, (c) \$51,610, or (d) \$51,000.

***12. c.** The debit to Interest Expense = \$1,072,096 (initial carrying value of bond) $\times 12\%$ (market rate) = \$128,652, not (a) \$120,000, (b) \$125,581, or (d) \$140,000.

Practice Brief Exercises

Prepare entries for bonds issued at face value.

1. (LO 2) Kahnle Corporation issued 3,000, 7%, 5-year, \$1,000 bonds dated January 1, 2020, at 100. Interest is paid each January 1. (a) Prepare the journal entry to record the sale of these bonds on January 1, 2020. (b) Prepare the adjusting journal entry on December 31, 2020, to record interest expense. (c) Prepare the journal entry on January 1, 2021, to record interest paid.

Solution

1. a. Jan. 1	Cash Bonds Payable ($3,000 \times \$1,000$)		3,000,000	3,000,000
b. Dec. 31	Interest Expense Interest Payable ($\$3,000,000 \times 7\%$)		210,000	210,000
c. Jan. 1	Interest Payable Cash ($\$3,000,000 \times 7\%$)		210,000	210,000

Prepare entries for long-term notes payable.

2. (LO 3) Tyler-Danish Inc. issues a \$600,000, 10%, 10-year mortgage note on December 31, 2020, to obtain financing for a new building. The terms provide for annual installment payments of \$97,647. Prepare the entry to record the mortgage loan on December 31, 2020, and the first installment payment.

Solution

2.	Semiannual Interest Period	(A) <u>Cash Payment</u>	(B) <u>Interest Expense (D) $\times 10\%$</u>	(C) <u>Reduction of Principal (A) – (B)</u>	(D) <u>Principal Balance (D) – (C)</u>
	Issue Date				\$600,000
	1	\$97,647	\$60,000	\$37,647	562,353
	Dec. 31	Cash Mortgage Payable			600,000
	June 30	Interest Expense Mortgage Payable Cash			600,000
				60,000	539,997
				37,647	502,350
					97,647

Prepare statement presentation of long-term liabilities.

3. (LO 4) Financial Statement Presented below are liability items for Rymer Company at December 31, 2020. Prepare the long-term liabilities section of the balance sheet for Rymer Company.

Bonds payable, due 2022	\$700,000
Accounts Payable	100,000
Lease liability	120,000
Notes payable, due 2025	110,000
Premium on bonds payable	40,000

Solution**3. Long-term liabilities***

Bonds payable, due 2022	\$700,000	
Plus: Premium on bonds payable	<u>40,000</u>	\$740,000
Notes payable, due 2025		110,000
Lease liability		<u>120,000</u>
Total long-term liabilities		<u><u>\$970,000</u></u>

*Accounts Payable is a current liability

Practice Exercises

- 1. (LO 2)** North Airlines Company issued \$900,000 of 8%, 10-year bonds on January 1, 2020, at face value. Interest is payable annually on January 1.

Prepare entries for bonds issued at face value.

Instructions

Prepare the journal entries to record the following events.

- a. The issuance of the bonds.
- b. The accrual of interest on December 31.
- c. The payment of interest on January 1, 2021.
- d. The redemption of bonds at maturity, assuming interest for the last interest period has been paid and recorded.

Solution**1. a.**

January 1, 2020		
Cash	900,000	900,000

Bonds Payable

b.

December 31, 2020		
Interest Expense	72,000	72,000

Interest Payable (\$900,000 × 8%)

c.

January 1, 2021		
Interest Payable	72,000	72,000

Cash

d.

January 1, 2030		
Bonds Payable	900,000	900,000

Cash

- 2. (LO 2)** Hollenbeck Company issued \$3,000,000 of bonds on January 1, 2020.

Prepare entries for issuance, retirement, and conversion of bonds.

Instructions

- a. Prepare the journal entry to record the issuance of the bonds if they are issued at (1) 100, (2) 98, and (3) 103.
- b. Prepare the journal entry to record the retirement of the bonds at maturity, assuming the bonds were issued at 100.
- c. Prepare the journal entry to record the retirement of the bonds before maturity at 98. Assume the balance in Premium on Bonds Payable is \$18,000.

Solution

At 100		
2. a. 1. Cash (\$3,000,000 × 100%)	3,000,000	3,000,000
Bonds Payable		
At 98		
2. Cash (\$3,000,000 × 98%)	2,940,000	
Discount on Bonds Payable	60,000	
Bonds Payable		3,000,000

At 103		
3. Cash ($\$3,000,000 \times 103\%$)	3,090,000	
Bonds Payable		3,000,000
Premium on Bonds Payable		90,000
b. Bonds Payable	3,000,000	
Cash		3,000,000
c. Bonds Payable	3,000,000	
Premium on Bonds Payable		18,000
Cash ($\$3,000,000 \times 98\%$)		2,940,000
Gain on Bond Redemption		78,000

Prepare entries to record mortgage note and installment payments.

3. (LO 3) Clipper Company borrowed \$500,000 on December 31, 2020, by issuing a \$500,000, 7% mortgage note payable. The terms call for annual installment payments of \$80,000 on December 31.

Instructions

- Prepare the journal entries to record the mortgage loan and the first two installment payments.
- Indicate the amount of mortgage note payable to be reported as a current liability and as a long-term liability at December 31, 2021.

Solution

3. a.

December 31, 2020		
Cash	500,000	
Mortgage Payable		500,000
December 31, 2021		
Interest Expense ($\$500,000 \times 7\%$)	35,000	
Mortgage Payable	45,000	
Cash		80,000
December 31, 2022		
Interest Expense [$(\$500,000 - \$45,000) \times 7\%$]	31,850	
Mortgage Payable	48,150	
Cash		80,000

b. Current: \$48,150
Long-term: \$406,850 (\$500,000 – \$45,000 – \$48,150)

Practice Problem

Prepare entries to record issuance of bonds and long-term notes, interest accrual, and bond redemption.

- (LO 1, 2, 3) Snyder Software Inc. has successfully developed a new spreadsheet program. To produce and market the program, the company needed \$1.9 million of additional financing. On January 1, 2020, Snyder borrowed money as follows.

- Snyder issued \$1 million, 10%, 10-year bonds at face value. Interest is payable on January 1.
- Snyder also issued a \$400,000, 6%, 15-year mortgage payable. The terms provide for annual installment payments of \$41,185 on December 31.

Instructions

- For the 10-year, 10% bonds:
 - Journalize the issuance of the bonds on January 1, 2020.
 - Prepare the journal entry for interest expense in 2020.
 - Prepare the entry for the redemption of the bonds at 101 on January 1, 2033, after paying the interest due on this date.
- For the mortgage payable:
 - Prepare the entry for the issuance of the note on January 1, 2020.
 - Prepare a payment schedule for the first four installment payments.
 - Indicate the current and noncurrent amounts for the mortgage payable at December 31, 2020.

Solution**1. a. 2020**

Jan. 1	Cash Bonds Payable (To record issuance of bonds)	1,000,000	1,000,000
--------	---	-----------	-----------

b. 2020

Dec. 31	Interest Expense Interest Payable ($\$1,000,000 \times 10\%$) (To record accrual of annual interest)	100,000	100,000
---------	---	---------	---------

c. 2023

Jan. 1	Bonds Payable Loss on Bond Redemption Cash (To record redemption of bonds at 101)	1,000,000 10,000*	1,010,000
--------	---	----------------------	-----------

* $(\$1,010,000 - \$1,000,000)$ **2. a. 2020**

Jan. 1	Cash Mortgage Payable (To record issuance of mortgage payable)	400,000	400,000
--------	---	---------	---------

Interest Period	Cash Payment	Interest Expense	Reduction of Principal	Principal Balance
Issue date				\$400,000
1	\$41,185	\$24,000	\$17,185	382,815
2	41,185	22,969	18,216	364,599
3	41,185	21,876	19,309	345,290
4	41,185	20,717	20,468	324,822

c. Current liability: \$18,216

Long-term liability: \$364,599

WileyPLUS

Brief Exercises, DO IT! Exercises, Exercises, Problems, and many additional resources are available for practice in WileyPLUS.

Note: All asterisked Questions, Exercises, and Problems relate to material in the appendices to the chapter.

Questions

1. (a) What are long-term liabilities? Give three examples. (b) What is a bond?
2. Contrast the following types of bonds: (a) secured and unsecured, and (b) convertible and callable.
3. The following terms are important in issuing bonds: (a) face value, (b) contractual interest rate, (c) bond indenture, and (d) bond certificate. Explain each of these terms.
4. Describe the two major obligations incurred by a company when bonds are issued.
5. Assume that Remington Inc. sold bonds with a face value of \$100,000 for \$104,000. Was the market interest rate equal to, less than, or greater than the bonds' contractual interest rate? Explain.
6. If a 7%, 10-year, \$800,000 bond is issued at face value and interest is paid annually, what is the amount of the interest payment at the end of the first year period?
7. If the Bonds Payable account has a balance of \$900,000 and the Discount on Bonds Payable account has a balance of \$120,000, what is the carrying value of the bonds?
8. Which accounts are debited and which are credited if a bond issue originally sold at a premium is redeemed before maturity at 97 immediately following the payment of interest?
9. Rattigan Corporation is considering issuing a convertible bond. What is a convertible bond? Discuss the advantages of a convertible bond from the standpoint of (a) the bondholders and (b) the issuing corporation.

- 10.** Rob Grier, a friend of yours, has recently purchased a home for \$125,000, paying \$25,000 down and the remainder financed by a 10.5%, 20-year mortgage, payable at \$998.38 per month. At the end of the first month, Rob receives a statement from the bank indicating that only \$123.38 of principal was paid during the month. At this rate, he calculates that it will take over 67 years to pay off the mortgage. Is he right? Discuss.
- 11.** In general, what are the requirements for the financial statement presentation of long-term liabilities?
- 12.** (a) As a source of long-term financing, what are the major advantages of bonds over common stock? (b) What are the major disadvantages in using bonds for long-term financing?
- 13.** (a) What is a lease agreement? (b) What are the two common types of leases?
- 14.** Benedict Company entered into an agreement to lease 12 computers from Haley Electronics, Inc. The present value of the lease payments is \$186,300. Assuming that this is a finance lease, what entry would Benedict Company make on the date of the lease agreement?
- 15.** Did **Apple** redeem any of its debt during the fiscal year ended September 26, 2015? (*Hint:* Examine Apple's statement of cash flows.)
- *16.** Explain the straight-line method of amortizing discount and premium on bonds payable.
- *17.** DeWeese Corporation issues \$400,000 of 8%, 5-year bonds on January 1, 2020, at 105. Assuming that the straight-line method is used to amortize the premium, what is the total amount of interest expense for 2020?
- *18.** Kelli Deane is discussing the advantages of the effective-interest method of bond amortization with her accounting staff. What do you think Kelli is saying?
- *19.** Windsor Corporation issues \$500,000 of 9%, 5-year bonds on January 1, 2020, at 104. If Windsor uses the effective-interest method in amortizing the premium, will the annual interest expense increase or decrease over the life of the bonds? Explain.

Brief Exercises

Prepare entry for bonds issued.

BE15.1 (LO 2) Randle Inc. issues \$300,000, 10-year, 8% bonds at 98. Prepare the journal entry to record the sale of these bonds on March 1, 2020.

Prepare entry for bonds issued.

BE15.2 (LO 2) Price Company issues \$400,000, 20-year, 7% bonds at 101. Prepare the journal entry to record the sale of these bonds on June 1, 2020.

Prepare entries for bonds issued at face value.

BE15.3 (LO 2) Meera Corporation issued 4,000, 8%, 5-year, \$1,000 bonds dated January 1, 2020, at 100. Interest is paid each January 1.

- Prepare the journal entry to record the sale of these bonds on January 1, 2020.
- Prepare the adjusting journal entry on December 31, 2020, to record interest expense.
- Prepare the journal entry on January 1, 2021, to record interest paid.

Prepare entries for bonds sold at a discount and a premium.

BE15.4 (LO 2) Nasreen Company issues \$2 million, 10-year, 8% bonds at 97, with interest payable each January 1.

- Prepare the journal entry to record the sale of these bonds on January 1, 2020.
- Assuming instead that the above bonds sold for 104, prepare the journal entry to record the sale of these bonds on January 1, 2020.

Prepare entries for bonds issued.

BE15.5 (LO 2) Frankum Company has issued three different bonds during 2020. Interest is payable annually on each of these bonds.

- On January 1, 2020, 1,000, 8%, 5-year, \$1,000 bonds dated January 1, 2020, were issued at face value.
- On July 1, \$900,000, 9%, 5-year bonds dated July 1, 2020, were issued at 102.
- On September 1, \$400,000, 7%, 5-year bonds dated September 1, 2020, were issued at 98.

Prepare the journal entry to record each bond transaction at the date of issuance.

Prepare entry for redemption of bonds.

BE15.6 (LO 2) The balance sheet for Miley Consulting reports the following information on July 1, 2020.

Long-term liabilities			
Bonds payable		\$1,000,000	
Less: Discount on bonds payable	60,000		\$940,000

Miley decides to redeem these bonds at 101 after paying annual interest. Prepare the journal entry to record the redemption on July 1, 2020.

Prepare entries for long-term notes payable.

BE15.7 (LO 3) Hanschu Inc. issues an \$800,000, 10%, 10-year mortgage note on December 31, 2020, to obtain financing for a new building. The terms provide for annual installment payments of \$130,196. Prepare the entry to record the mortgage loan on December 31, 2020, and the first installment payment on December 31, 2021.

BE15.8 (LO 4) Financial Statement Presented below are long-term liability items for Lind Company at December 31, 2020. Prepare the long-term liabilities section of the balance sheet for Lind Company.

Prepare statement presentation of long-term liabilities.

Bonds payable, due 2022	\$600,000
Lease liability	70,000
Notes payable, due 2025	80,000
Discount on bonds payable	45,000

BE15.9 (LO 4) Suppose the 2020 **adidas** financial statements contain the following selected data (in millions).

Analyze solvency.

Current assets	\$4,485	Cash	\$775
Total assets	8,875	Interest expense	169
Current liabilities	2,836	Income taxes	113
Total liabilities	5,099	Net income	245

Compute the following values and provide a brief interpretation of each.

- a. Debt to assets ratio.
- b. Times interest earned.

BE15.10 (LO 4) Moby Inc. is considering two alternatives to finance its construction of a new \$2 million plant.

Compare bond versus stock financing.

- a. Issuance of 200,000 shares of common stock at the market price of \$10 per share.
- b. Issuance of \$2 million, 8% bonds at face value.

Complete the following table, and indicate which alternative is preferable.

	<u>Issue Stock</u>	<u>Issue Bond</u>
Income before interest and taxes	\$700,000	\$700,000
Interest expense from bonds	_____	_____
Income before income taxes	_____	_____
Income tax expense (30%)	_____	_____
Net income	\$ _____	\$ _____
Outstanding shares	_____	500,000
Earnings per share	_____	_____

BE15.11 (LO 4) Imhoff Company leases a new building from Noble Construction, Inc. The present value of the lease payments is \$700,000. The lease is a finance lease. Prepare the journal entry that the lessee should make to record this transaction.

Account for finance lease.

***BE15.12 (LO 5)** Sweetwood Company issues \$5 million, 10-year, 9% bonds at 96, with interest payable annually on January 1. The straight-line method is used to amortize bond discount.

Prepare entries for bonds issued at a discount.

- a. Prepare the journal entry to record the sale of these bonds on January 1, 2020.
- b. Prepare the adjusting journal entry to record interest expense and bond discount amortization on December 31, 2020.

***BE15.13 (LO 5)** Golden Inc. issues \$4 million, 5-year, 10% bonds at 102, with interest payable annually on January 1. The straight-line method is used to amortize bond premium.

Prepare entries for bonds issued at a premium.

- a. Prepare the journal entry to record the sale of these bonds on January 1, 2020.
- b. Prepare the adjusting journal entry to record interest expense and bond premium amortization on December 31, 2020.

***BE15.14 (LO 2, 6) Writing** Presented below is the partial bond discount amortization schedule for Gomez Corp. Gomez uses the effective-interest method of amortization.

Use effective-interest method of bond amortization.

<u>Interest Periods</u>	<u>Interest to Be Paid</u>	<u>Interest Expense to Be Recorded</u>	<u>Discount Amortization</u>	<u>Unamortized Discount</u>	<u>Bond Carrying Value</u>
Issue date				\$38,609	\$961,391
1	\$45,000	\$48,070	\$3,070	35,539	964,461
2	45,000	48,223	3,223	32,316	967,684

- a. Prepare the journal entry to record the payment of interest and the discount amortization at the end of period 1.
- b. Explain why interest expense is greater than interest paid.
- c. Explain why interest expense will increase each period.

DO IT! Exercises

Evaluate statements about bonds.

DO IT! 15.1 (LO 1) State whether each of the following statements is true or false. If false, indicate how to correct the statement.

- _____ 1. Mortgage bonds and sinking fund bonds are both examples of debenture bonds.
- _____ 2. Convertible bonds are also known as callable bonds.
- _____ 3. The market rate is the rate investors demand for loaning funds.
- _____ 4. Annual interest on bonds is equal to the face value times the stated rate.
- _____ 5. The present value of a bond is the value at which it should sell in the market.

Prepare journal entry for bond issuance and show balance sheet presentation.

DO IT! 15.2a (LO 2) Financial Statement Eubank Corporation issues \$500,000 of bonds for \$520,000. (a) Prepare the journal entry to record the issuance of the bonds, and (b) show how the bonds would be reported on the balance sheet at the date of issuance.

Prepare entry for bond redemption.

DO IT! 15.2b (LO 2) Prater Corporation issued \$400,000 of 10-year bonds at a discount. Prior to maturity, when the carrying value of the bonds was \$390,000, the company redeemed the bonds at 99. Prepare the entry to record the redemption of the bonds.

Prepare entries for mortgage note and installment payment on note.

DO IT! 15.3 (LO 3) Detwiler Orchard issues a \$700,000, 6%, 15-year mortgage note to obtain needed financing for a new lab. The terms call for annual payments of \$72,074 each. Prepare the entries to record the mortgage loan and the first installment payment.

Prepare entry for lease, and compute debt to assets ratio.

DO IT! 15.4 (LO 4) Huebner Corporation leases new equipment for 10 years on December 31, 2020. The present value of the lease payments is \$192,000. After recording this lease, Huebner has assets of \$1,800,000, liabilities of \$1,100,000, and stockholders' equity of \$700,000. (a) Prepare the entry to record the lease, and (b) compute and discuss the debt to assets ratio at year-end.

Exercises

Evaluate statements about bonds.

E15.1 (LO 1) Nick Bosch has prepared the following list of statements about bonds.

1. Bonds are a form of interest-bearing notes payable.
2. Secured bonds have specific assets of the issuer pledged as collateral for the bonds.
3. Secured bonds are also known as debenture bonds.
4. A conversion feature may be added to bonds to make them more attractive to bond buyers.
5. The rate used to determine the amount of cash interest the borrower pays is called the stated rate.
6. Bond prices are usually quoted as a percentage of the face value of the bond.
7. The present value of a bond is the value at which it should sell in the marketplace.

Instructions

Identify each statement as true or false. If false, indicate how to correct the statement.

Prepare entries for issuance of bonds, and payment and accrual of bond interest.

E15.2 (LO 2) On January 1, 2020, Klosterman Company issued \$500,000, 10%, 10-year bonds at face value. Interest is payable annually on January 1.

Instructions

Prepare journal entries to record the following.

- a. The issuance of the bonds.
- b. The accrual of interest on December 31, 2020.
- c. The payment of interest on January 1, 2021.

Prepare entries for bonds issued at face value.

E15.3 (LO 2) On January 1, 2020, Forrester Company issued \$400,000, 8%, 5-year bonds at face value. Interest is payable annually on January 1.

Instructions

Prepare journal entries to record the following.

- a. The issuance of the bonds.
- b. The accrual of interest on December 31, 2020.
- c. The payment of interest on January 1, 2021.

E15.4 (LO 2) Laudie Company issued \$400,000 of 9%, 10-year bonds on January 1, 2020, at face value. Interest is payable annually on January 1, 2021.

Prepare entries for bonds issued at face value.

Instructions

Prepare the journal entries to record the following events.

- a. The issuance of the bonds.
- b. The accrual of interest on December 31, 2020.
- c. The payment of interest on January 1, 2021.
- d. The redemption of bonds at maturity, assuming interest for the last interest period has been paid and recorded.

E15.5 (LO 2) Swisher Company issued \$2,000,000 of bonds on January 1, 2020.

Prepare entries for issuance and redemption of bonds.

Instructions

- a. Prepare the journal entry to record the issuance of the bonds if they are issued at (1) 100, (2) 98, and (3) 103.
- b. Prepare the journal entry to record the redemption of the bonds at maturity, assuming the bonds were issued at 100.
- c. Prepare the journal entry to record the redemption of the bonds before maturity at 98. Assume the balance in Premium on Bonds Payable is \$9,000.

E15.6 (LO 2) Whitmore Company issued \$500,000 of 5-year, 8% bonds at 97 on January 1, 2020. The bonds pay interest annually.

Prepare entries to record issuance of bonds at discount and premium.

Instructions

- a. 1. Prepare the journal entry to record the issuance of the bonds.
2. Compute the total cost of borrowing for these bonds.
- b. Repeat the requirements from part (a), assuming the bonds were issued at 105.

E15.7 (LO 2) The following section is taken from Ohlman Corp.'s balance sheet at December 31, 2019.

Prepare entries for bond interest and redemption.

Current liabilities	
Interest payable	\$ 112,000
Long-term liabilities	
Bonds payable, 7%, due January 1, 2024	1,600,000

Bond interest is payable annually on January 1. The bonds are callable on any interest date.

Instructions

- a. Journalize the payment of the bond interest on January 1, 2020.
- b. Assume that on January 1, 2020, after paying interest, Ohlman calls bonds having a face value of \$600,000. The call price is 103. Record the redemption of the bonds.
- c. Prepare the entry to record the accrual of interest on December 31, 2020.

E15.8 (LO 2) The following are two independent situations.

Prepare entries for redemption of bonds.

1. Longbine Corporation redeemed \$130,000 face value, 12% bonds on June 30, 2020, at 102. The carrying value of the bonds at the redemption date was \$117,500. The bonds pay annual interest, and the interest payment due on June 30, 2020, has been made and recorded.
2. Tastove Inc. redeemed \$150,000 face value, 12.5% bonds on June 30, 2020, at 98. The carrying value of the bonds at the redemption date was \$151,000. The bonds pay annual interest, and the interest payment due on June 30, 2020, has been made and recorded.

Instructions

For each independent situation above, prepare the appropriate journal entry for the redemption of the bonds.

Prepare entries to record mortgage note and payments.

E15.9 (LO 3) Jernigan Co. receives \$300,000 when it issues a \$300,000, 10%, mortgage note payable to finance the construction of a building at December 31, 2020. The terms provide for annual installment payments of \$50,000 on December 31.

Instructions

Prepare the journal entries to record the mortgage loan and the first two payments.

Prepare entries to record mortgage note and installment payments.

E15.10 (LO 3) Dreiling Company borrowed \$300,000 on January 1, 2020, by issuing a \$300,000, 8% mortgage note payable. The terms call for annual installment payments of \$40,000 on December 31.

Instructions

- Prepare the journal entries to record the mortgage loan and the first two installment payments.
- Indicate the amount of mortgage note payable to be reported as a current liability and as a long-term liability at December 31, 2020.

Prepare long-term liabilities section.

E15.11 (LO 4) Financial Statement The adjusted trial balance for Karr Farm Corporation at the end of the current year contained the following accounts.

Interest Payable	\$ 9,000
Lease Liability	89,500
Bonds Payable, due 2025	180,000
Premium on Bonds Payable	32,000

Instructions

Prepare the long-term liabilities section of the balance sheet.

Compare two alternatives of financing—issuance of common stock vs. issuance of bonds.

E15.12 (LO 4) Gilliland Airlines is considering two alternatives for the financing of a purchase of a fleet of airplanes. These two alternatives are:

- Issue 90,000 shares of common stock at \$30 per share. (Cash dividends have not been paid nor is the payment of any contemplated.)
- Issue 10%, 10-year bonds at face value for \$2,700,000.

It is estimated that the company will earn \$800,000 before interest and taxes as a result of this purchase. The company has an estimated tax rate of 30% and has 120,000 shares of common stock outstanding prior to the new financing.

Instructions

Determine the effect on net income and earnings per share for these two methods of financing.

Compute debt to assets ratio and times interest earned.

E15.13 (LO 4) Hatfield Corporation reports the following amounts in its 2020 financial statements:

	<u>At December 31, 2020</u>	<u>For the Year 2020</u>
Total assets	\$1,000,000	
Total liabilities	580,000	
Total stockholders' equity	?	
Interest expense		\$ 20,000
Income tax expense		100,000
Net income		150,000

Instructions

- Compute the December 31, 2020, balance in stockholders' equity.
- Compute the debt to assets ratio at December 31, 2020.
- Compute times interest earned for 2020.

Prepare entries for finance lease.

E15.14 (LO 4) On January 1, 2020, Throm Inc. entered into an agreement to lease 20 computers from Drummond Electronics. The terms of the lease agreement require three annual rental payments of \$20,000 (including 10% interest) beginning December 31, 2020. The present value of the three rental payments is \$49,735. Throm considers this a finance lease.

Instructions

Prepare the journal entry to record the lease agreement on the books of Throm Inc. on January 1, 2020.

***E15.15 (LO 5)** Adcock Company issued \$600,000, 9%, 20-year bonds on January 1, 2020, at 103. Interest is payable annually on January 1. Adcock uses straight-line amortization for bond premium or discount.

Instructions

Prepare the journal entries to record the following.

- a. The issuance of the bonds.
- b. The accrual of interest and the premium amortization on December 31, 2020.
- c. The payment of interest on January 1, 2021.
- d. The redemption of the bonds at maturity, assuming interest for the last interest period has been paid and recorded.

Prepare entries to record issuance of bonds, payment of interest, amortization of premium, and redemption at maturity.

***E15.16 (LO 5)** Gridley Company issued \$800,000, 11%, 10-year bonds on December 31, 2019, for \$730,000. Interest is payable annually on December 31. Gridley Company uses the straight-line method to amortize bond premium or discount.

Instructions

Prepare the journal entries to record the following.

- a. The issuance of the bonds.
- b. The payment of interest and the discount amortization on December 31, 2020.
- c. The redemption of the bonds at maturity, assuming interest for the last interest period has been paid and recorded.

Prepare entries to record issuance of bonds, payment of interest, amortization of discount, and redemption at maturity.

***E15.17 (LO 6)** Lorance Corporation issued \$400,000, 7%, 20-year bonds on January 1, 2020, for \$360,727. This price resulted in an effective-interest rate of 8% on the bonds. Interest is payable annually on January 1. Lorance uses the effective-interest method to amortize bond premium or discount.

Instructions

Prepare the journal entries to record the following. (Round to the nearest dollar.)

- a. The issuance of the bonds.
- b. The accrual of interest and the discount amortization on December 31, 2020.
- c. The payment of interest on January 1, 2021.

Prepare entries for issuance of bonds, payment of interest, and amortization of discount using effective-interest method.

***E15.18 (LO 6)** LRNA Company issued \$380,000, 7%, 10-year bonds on January 1, 2020, for \$407,968. This price resulted in an effective-interest rate of 6% on the bonds. Interest is payable annually on January 1. LRNA uses the effective-interest method to amortize bond premium or discount.

Instructions

Prepare the journal entries to record the following. (Round to the nearest dollar.)

- a. The issuance of the bonds.
- b. The accrual of interest and the premium amortization on December 31, 2020.
- c. The payment of interest on January 1, 2021.

Prepare entries for issuance of bonds, payment of interest, and amortization of premium using effective-interest method.

Problems: Set A

P15.1A (LO 2, 4) Financial Statement On May 1, 2020, Herron Corp. issued \$600,000, 9%, 5-year bonds at face value. The bonds were dated May 1, 2020, and pay interest annually on May 1. Financial statements are prepared annually on December 31.

Prepare entries to record issuance of bonds, interest accrual, and bond redemption.

Instructions

- a. Prepare the journal entry to record the issuance of the bonds.
- b. Prepare the adjusting entry to record the accrual of interest on December 31, 2020.
- c. Show the balance sheet presentation on December 31, 2020.
- d. Prepare the journal entry to record payment of interest on May 1, 2021.
- d. Int. exp. \$18,000

- e. Prepare the adjusting entry to record the accrual of interest on December 31, 2021.
- f. Assume that on January 1, 2022, Herron pays the accrued bond interest and calls the bonds. The call price is 102. Record the payment of interest and redemption of the bonds.

Prepare entries to record issuance of bonds, interest accrual, and bond redemption.

c. Loss \$224,000

Prepare entries for interest payment, bond redemption, and interest accrual.

P15.2A (LO 2, 4) Financial Statement Kershaw Electric sold \$6,000,000, 10%, 10-year bonds on January 1, 2020. The bonds were dated January 1, 2020, and paid interest on January 1. The bonds were sold at 98.

Instructions

- a. Prepare the journal entry to record the issuance of the bonds on January 1, 2020.
- b. At December 31, 2020, \$8,000 of the Discount on Bonds Payable account has been amortized. Show the balance sheet presentation of the long-term liability at December 31, 2020.
- c. On January 1, 2022, when the carrying value of the bonds was \$5,896,000, the company redeemed the bonds at 102. Record the redemption of the bonds assuming that interest for the period has already been paid.

P15.3A (LO 2) The following section is taken from Mareska's balance sheet at December 31, 2020.

Current liabilities	
Interest payable	\$ 40,000
Long-term liabilities	
Bonds payable (8%, due January 1, 2024)	500,000

Interest is payable annually on January 1. The bonds are callable on any annual interest date.

Instructions

- a. Journalize the payment of the bond interest on January 1, 2021.
- b. Assume that on January 1, 2021, after paying interest, Mareska calls bonds having a face value of \$200,000. The call price is 103. Record the redemption of the bonds.
- c. Prepare the adjusting entry on December 31, 2021, to accrue the interest on the remaining bonds.

Prepare installment payments schedule and journal entries for a mortgage note payable.

b. December 31 debit
Mortgage Payable \$27,612
c. Current liability—2020
\$29,821

Prepare entries to record issuance of bonds, interest accrual, and straight-line amortization for 2 years.

P15.4A (LO 3, 4) Financial Statement Talkington Electronics issues a \$400,000, 8%, 15-year mortgage note on December 31, 2019. The proceeds from the note are to be used in financing a new research laboratory. The terms of the note provide for annual installment payments, exclusive of real estate taxes and insurance, of \$59,612. Payments are due on December 31.

Instructions

- a. Prepare an installment payments schedule for the first 4 years.
- b. Prepare the entries for (1) the loan and (2) the first installment payment.
- c. Show how the total mortgage liability should be reported on the balance sheet at December 31, 2020.

***P15.5A (LO 4, 5) Financial Statement** Paris Electric sold \$3,000,000, 10%, 10-year bonds on January 1, 2020. The bonds were dated January 1 and pay interest annually on January 1. Paris Electric uses the straight-line method to amortize bond premium or discount. The bonds were sold at 104.

Instructions

- a. Prepare the journal entry to record the issuance of the bonds on January 1, 2020.
- b. Prepare a bond premium amortization schedule for the first 4 interest periods.
- c. Prepare the journal entries for interest and the amortization of the premium in 2020 and 2021.
- d. Show the balance sheet presentation of the bond liability at December 31, 2021.

b. Amortization \$12,000

d. Premium on bonds payable
\$96,000

Prepare entries to record issuance of bonds, interest, and straight-line amortization of bond premium and discount.

***P15.6A (LO 4, 5) Financial Statement** Saberhagen Company sold \$3,500,000, 8%, 10-year bonds on January 1, 2020. The bonds were dated January 1, 2020 and pay interest annually on

January 1. Saberhagen Company uses the straight-line method to amortize bond premium or discount.

Instructions

- a. Prepare all the necessary journal entries to record the issuance of the bonds and bond interest expense for 2020, assuming that the bonds sold at 104.
- b. Prepare journal entries as in part (a) assuming that the bonds sold at 98.
- c. Show the balance sheet presentation for the bonds at December 31, 2020, for both the requirements in (a) and (b).
- a. Amortization \$14,000
- b. Amortization \$7,000
- c. Premium on bonds payable
\$126,000
Discount on bonds payable
\$63,000

*P15.7A (LO 5) The following is taken from the Colaw Company balance sheet.

Colaw Company
Balance Sheet (partial)
December 31, 2020

Current liabilities			
Interest payable (for 12 months from January 1 to December 31)		\$ 210,000	
Long-term liabilities			
Bonds payable, 7% due January 1, 2031	\$3,000,000		
Add: Premium on bonds payable	<u>200,000</u>	3,200,000	

Interest is payable annually on January 1. The bonds are callable on any annual interest date. Colaw uses straight-line amortization for any bond premium or discount. From December 31, 2020, the bonds will be outstanding for an additional 10 years (120 months).

Instructions

- a. Journalize the payment of bond interest on January 1, 2021.
- b. Prepare the entry to amortize bond premium and to accrue the interest due on December 31, 2021.
- c. Assume that on January 1, 2022, after paying interest, Colaw Company calls bonds having a face value of \$1,200,000. The call price is 101. Record the redemption of the bonds.
- d. Prepare the adjusting entry at December 31, 2022, to amortize bond premium and to accrue interest on the remaining bonds.
- b. Amortization \$20,000
- c. Gain \$60,000
- d. Amortization \$12,000

*P15.8A (LO 6) On January 1, 2020, Lock Corporation issued \$1,800,000 face value, 5%, 10-year bonds at \$1,667,518. This price resulted in an effective-interest rate of 6% on the bonds. Lock uses the effective-interest method to amortize bond premium or discount. The bonds pay annual interest January 1.

Instructions

(Round all computations to the nearest dollar.)

- a. Prepare the journal entry to record the issuance of the bonds on January 1, 2020.
- b. Prepare an amortization table through December 31, 2022 (three interest periods) for this bond issue.
- c. Prepare the journal entry to record the accrual of interest and the amortization of the discount on December 31, 2020.
- d. Prepare the journal entry to record the payment of interest on January 1, 2021.
- e. Prepare the journal entry to record the accrual of interest and the amortization of the discount on December 31, 2021.
- c. Interest
Expense \$100,051

*P15.9A (LO 4, 6) **Writing Financial Statement** On January 1, 2020, Jade Company issued \$2,000,000 face value, 7%, 10-year bonds at \$2,147,202. This price resulted in a 6% effective-interest rate on the bonds. Jade uses the effective-interest method to amortize bond premium or discount. The bonds pay annual interest on each January 1.

Prepare entries to record interest payments, straight-line premium amortization, and redemption of bonds.

Prepare journal entries to record issuance of bonds, payment of interest, and amortization of bond discount using effective-interest method.

Prepare journal entries to record issuance of bonds, payment of interest, and effective-interest amortization, and balance sheet presentation.

Instructions

a. 4. Interest
Expense \$128,162

- a. Prepare the journal entries to record the following transactions.
 1. The issuance of the bonds on January 1, 2020.
 2. Accrual of interest and amortization of the premium on December 31, 2020.
 3. The payment of interest on January 1, 2021.
 4. Accrual of interest and amortization of the premium on December 31, 2021.
- b. Show the proper long-term liabilities balance sheet presentation for the liability for bonds payable at December 31, 2021.
- c. Provide the answers to the following questions in narrative form.
 1. What amount of interest expense is reported for 2021?
 2. Would the bond interest expense reported in 2021 be the same as, greater than, or less than the amount that would be reported if the straight-line method of amortization were used?

Continuing Case

Cookie Creations

(Note: This is a continuation of the Cookie Creations case from Chapters 1 through 14.)

CC15 Natalie and Curtis have been experiencing great demand for their cookies and muffins. As a result, they are now thinking about buying a commercial oven. They know which oven they want and how much it will cost. They have some cash set aside for the purchase and will need to borrow the rest. They met with a bank manager to discuss their options.

Go to WileyPLUS for complete case details and instructions.

Ethics Case

EC15 Ken Iwig is the president, founder, and majority owner of Olathe Medical Corporation, an emerging medical technology products company. Olathe is in dire need of additional capital to keep operating and to bring several promising products to final development, testing, and production. Ken, as owner of 51% of the outstanding stock, manages the company's operations. He places heavy emphasis on research and development and on long-term growth. The other principal stockholder is Barb Lowery who, as a nonemployee investor, owns 40% of the stock. Barb would like to deemphasize the R&D functions and emphasize the marketing function, to maximize short-run sales and profits from existing products. She believes this strategy would raise the market price of Olathe's stock.

All of Ken's personal capital and borrowing power is tied up in his 51% stock ownership. He knows that any offering of additional shares of stock will dilute his controlling interest because he won't be able to participate in such an issuance. But, Barb has money and would likely buy enough shares to gain control of Olathe. She then would dictate the company's future direction, even if it meant replacing Ken as president and CEO.

The company already has considerable debt. Raising additional debt will be costly, will adversely affect Olathe's credit rating, and will increase the company's reported losses due to the growth in interest expense. Barb and the other minority stockholders express opposition to the assumption of additional debt, fearing the company will be pushed to the brink of bankruptcy. Wanting to maintain his control and to preserve the direction of "his" company, Ken is doing everything to avoid a stock issuance. He is contemplating a large issuance of bonds, even if it means the bonds are issued with a high effective-interest rate.

Instructions

- a. Who are the stakeholders in this situation?
- b. What are the ethical issues in this case?
- c. What would you do if you were Ken?

Comprehensive Accounting Cycle Review

ACR15 Quigley Corporation's trial balance at December 31, 2020, is presented below. All 2020 transactions have been recorded except for the items described below.

	<u>Debit</u>	<u>Credit</u>
Cash	\$ 25,500	
Accounts Receivable	51,000	
Inventory	22,700	
Land	65,000	
Buildings	95,000	
Equipment	40,000	
Allowance for Doubtful Accounts		\$ 450
Accumulated Depreciation—Buildings		30,000
Accumulated Depreciation—Equipment		14,400
Accounts Payable		19,300
Interest Payable		—0—
Dividends Payable		—0—
Unearned Rent Revenue		8,000
Bonds Payable (10%)		50,000
Common Stock (\$10 par)		30,000
Paid-in Capital in Excess of Par—Common Stock		6,000
Preferred Stock (\$20 par)		—0—
Paid-in Capital in Excess of Par—Preferred Stock		—0—
Retained Earnings		75,050
Treasury Stock	—0—	
Cash Dividends	—0—	
Sales Revenue		570,000
Rent Revenue		—0—
Bad Debt Expense	—0—	
Interest Expense	—0—	
Cost of Goods Sold	400,000	
Depreciation Expense	—0—	
Other Operating Expenses	39,000	
Salaries and Wages Expense	<u>65,000</u>	
Total	<u>\$803,200</u>	<u>\$803,200</u>

Unrecorded transactions and adjustments:

- On January 1, 2020, Quigley issued 1,000 shares of \$20 par, 6% preferred stock for \$22,000.
- On January 1, 2020, Quigley also issued 1,000 shares of common stock for \$23,000.
- Quigley reacquired 300 shares of its common stock on July 1, 2020, for \$49 per share.
- On December 31, 2020, Quigley declared the annual cash dividend on the preferred stock and a \$1.50 per share dividend on the outstanding common stock, all payable on January 15, 2021.
- Quigley estimates that uncollectible accounts receivable at year-end is \$5,100.
- The building is being depreciated using the straight-line method over 30 years. The salvage value is \$5,000.
- The equipment is being depreciated using the straight-line method over 10 years. The salvage value is \$4,000.
- The unearned rent was collected on October 1, 2020. It was the receipt of 4 months' rent in advance (October 1, 2020 through January 31, 2021).
- The 10% bonds payable pay interest every January 1. The interest for the 12 months ended December 31, 2020, has not been paid or recorded.

Instructions

(Ignore income taxes.)

- Prepare journal entries for the transactions and adjustment listed above.
- Prepare an updated December 31, 2020, trial balance, reflecting the journal entries in (a). b. Total \$871,200

- c. Prepare a multiple-step income statement for the year ending December 31, 2020.
 - d. Prepare a retained earnings statement for the year ending December 31, 2020.
 - e. Prepare a classified balance sheet as of December 31, 2020.
- e. Total assets \$273,400

Expand Your Critical Thinking

Financial Reporting Problem: Apple Inc.

CT15.1 The financial statements of **Apple Inc.** are presented in Appendix A. The complete annual report, including the notes to the financial statements, is available at the company's website.

Instructions

- a. What were Apple's total long-term liabilities at September 26, 2015? What was the increase/decrease in total long-term liabilities from the prior year?
- b. Determine whether Apple redeemed (bought back) any long-term liabilities during the fiscal year ended September 26, 2015.

Comparative Analysis Problem: PepsiCo, Inc. vs. The Coca-Cola Company

CT15.2 **PepsiCo's** financial statements are presented in Appendix B. Financial statements of **The Coca-Cola Company** are presented in Appendix C. The complete annual reports of PepsiCo and Coca-Cola, including the notes to the financial statements, are available at each company's respective website.

Instructions

- a. Based on the information contained in these financial statements, compute the following 2015 ratios for each company.
 - 1. Debt to assets.
 - 2. Times interest earned.
- b. What conclusions concerning the companies' long-run solvency can be drawn from these ratios?

Comparative Analysis Problem: Amazon.com, Inc. vs. Wal-Mart Stores, Inc.

CT15.3 **Amazon.com, Inc.**'s financial statements are presented in Appendix D. Financial statements of **Wal-Mart Stores, Inc.** are presented in Appendix E. The complete annual reports of Amazon and Wal-Mart, including the notes to the financial statements, are available at each company's respective website.

Instructions

- a. Based on the information contained in these financial statements, compute the following 2015 ratios for Amazon and 2016 ratios for Wal-Mart.
 - 1. Debt to assets.
 - 2. Times interest earned.
- b. What conclusions concerning the companies' long-run solvency can be drawn from these ratios?

Real-World Focus

CT15.4 Bond or debt securities pay a stated rate of interest. This rate of interest is dependent on the risk associated with the investment. Also, bond prices change when the risks associated with those bonds change. **Standard & Poor's** provides ratings for companies that issue debt securities.

Instructions

Go to the Standard & Poor's website and search for answers to the following questions.

- a. Explain the meaning of an "A" rating. Explain the meaning of a "C" rating.
- b. What types of things can cause a change in a company's credit rating?
- c. Explain the relationship between a company's credit rating and the merit of an investment in that company's bonds.

Decision-Making Across the Organization

***CT15.5** On January 1, 2018, Glover Corporation issued \$2,400,000 of 5-year, 8% bonds at 95. The bonds pay interest annually on January 1. By January 1, 2020, the market rate of interest for bonds of risk similar to those of Glover Corporation had risen. As a result, the market value of these bonds was \$2,000,000 on January 1, 2020—below their carrying value. Joanna Glover, president of the company, suggests repurchasing all of these bonds in the open market at the \$2,000,000 price. To do so, the company will have to issue \$2,000,000 (face value) of new 10-year, 11% bonds at par. The president asks you, as controller, “What is the feasibility of my proposed repurchase plan?”

Instructions

With the class divided into groups, answer the following.

- a. What is the carrying value of the outstanding Glover Corporation 5-year bonds on January 1, 2020? (Assume straight-line amortization.)
- b. Prepare the journal entry to redeem the 5-year bonds on January 1, 2020. Prepare the journal entry to issue the new 10-year bonds.
- c. Prepare a short memo to the president in response to her request for advice. List the economic factors that you believe should be considered for her repurchase proposal.

Communication Activity

CT15.6 Sam Masasi, president of Masasi Corporation, is considering the issuance of bonds to finance an expansion of his business. He has asked you to (1) discuss the advantages of bonds over common stock financing, (2) indicate the types of bonds he might issue, and (3) explain the issuing procedures used in bond transactions.

Instructions

Write a memo to the president, answering his request.

All About You

CT15.7 Numerous articles have been written that identify early warning signs that you might be getting into trouble with your personal debt load. You can find many good articles on this topic on the Internet.

Instructions

Find an article that identifies early warning signs of personal debt trouble. Write a summary of the article and bring your summary and the article to class to share.

FASB Codification Activity

CT15.8 If your school has a subscription to the FASB Codification, log in and prepare responses to the following:

- a. What is the definition of long-term obligation?
- b. What guidance does the Codification provide for the disclosure of long-term obligations?

A Look at IFRS

LEARNING OBJECTIVE 7

Compare the accounting for long-term liabilities under GAAP and IFRS.

IFRS and GAAP have similar definitions of liabilities but have a different approach for accounting for certain long-term liabilities.

Key Points

Following are the key similarities and difference between GAAP and IFRS as related to accounting for long-term liabilities.

Similarities

- As indicated in Chapter 11, in general GAAP and IFRS define liabilities similarly.
- IFRS requires that companies classify liabilities as current or noncurrent on the face of the statement of financial position (balance sheet), except in industries where a **presentation** based on liquidity would be considered to provide more useful information (such as financial institutions). When current liabilities (also called short-term liabilities) are presented, they are generally presented in order of liquidity.
- Under IFRS, liabilities are classified as current if they are expected to be paid within 12 months.
- Similar to GAAP, items are normally reported in order of liquidity. Companies sometimes show liabilities before assets. Also, they will sometimes show noncurrent (long-term) liabilities before current liabilities.
- The basic calculation for bond valuation is the same under GAAP and IFRS. In addition, the accounting for bond liability transactions is essentially the same between GAAP and IFRS.
- IFRS requires use of the effective-interest method for amortization of bond discounts and premiums. GAAP also requires the effective-interest method, except that it allows use of the straight-line method where the difference is not material. Under IFRS, companies do not use a premium or discount account but instead show the bond at its net amount. For example, if a \$100,000 bond was issued at 97, under IFRS a company would record:

Cash		97,000	
Bonds Payable			97,000

Differences

- Both Boards share the same objective of recording leases by lessees and lessors according to their economic substance—that is, according to the definitions of assets and liabilities. However, GAAP for leases is much more “rules-based” with specific criteria to determine if a lease arrangement is a finance or operating lease. IFRS is more conceptual in its provisions.
- Leases classified as operating leases under GAAP are accounted for differently under IFRS. Also, IFRS allows alternative measurement bases for right-of-use assets (e.g., the revaluation model).

Looking to the Future

The FASB and IASB are currently involved in two projects, each of which has implications for the accounting for liabilities. One project is investigating approaches to differentiate between debt and equity instruments. The other project, the elements phase of the conceptual framework project, will evaluate the definitions of the fundamental building blocks of accounting. The results of these projects could change the classification of many debt and equity securities.

IFRS Practice

IFRS Self-Test Questions

- The accounting for bonds payable is:
 - essentially the same under IFRS and GAAP.
 - differs in that GAAP requires use of the straight-line method for amortization of bond premium and discount.
 - the same except that market prices may be different because the present value calculations are different between IFRS and GAAP.
 - not covered by IFRS.
 - The leasing standards employed by IFRS:
 - rely more heavily on interpretation of the conceptual meaning of assets and liabilities than GAAP.
- are more “rules based” than those of GAAP.
 - employ the same “bright-line test” as GAAP.
 - are identical to those of GAAP.
 - The joint projects of the FASB and IASB could potentially:
 - change the definition of liabilities.
 - change the definition of equity.
 - change the definition of assets.
 - All of the above.

IFRS Exercises

IFRS15.1 Briefly describe some of the similarities and differences between GAAP and IFRS with respect to the accounting for liabilities.

IFRS15.2 Ratzlaff Company issues (in euros) €2 million, 10-year, 8% bonds at 97, with interest payable annually on January 1.

Instructions

- a. Prepare the journal entry to record the sale of these bonds on January 1, 2020.
- b. Assuming instead that the above bonds sold for 104, prepare the journal entry to record the sale of these bonds on January 1, 2020.

International Financial Statement Analysis: Louis Vuitton

IFRS15.3 The financial statements of **Louis Vuitton** are presented in Appendix F. The complete annual report, including the notes to its financial statements, is available at the company's website.

Instructions

Use the company's annual report to answer the following questions.

- a. According to the notes to the financial statements, what is the composition of long-term gross borrowings?
- b. According to the accounting policy note to the financial statements, how are borrowings measured?
- c. Determine the amount of fixed-rate and adjustable-rate (floating) borrowings (gross) that the company reports.
- d. Identify where non-current liabilities are reported on the company's balance sheet.

Answers to IFRS Self-Test Questions

Investments

Chapter Preview

Time Warner's management, as the following Feature Story indicates, believes in aggressive growth through investing in the stock of existing companies. Besides purchasing stock, companies also purchase other securities such as bonds issued by corporations or by governments. Companies can make investments for a short or long period of time, as a passive investment, or with the intent to control another company. As you will see in this chapter, the way in which a company accounts for its investments is determined by a number of factors.

Feature Story

"Is There Anything Else We Can Buy?"

In a rapidly changing world, you must keep up or suffer the consequences. In business, change requires investment.

A case in point is found in the entertainment industry. Technology is bringing about innovations so quickly that it is nearly impossible to guess which technologies will last and which will soon fade away. For example, will both satellite

TV and cable TV survive? Or, will both be replaced by something else?

Consider the publishing industry as well. Will paper newspapers and magazines be replaced completely by online news? If you are a publisher, you have to make your best guess about what the future holds and invest accordingly.

Time Warner Inc. lives at the center of this arena. It is not an environment for the timid, and Time Warner's philosophy is anything but that. Instead, it might be characterized as, "If we can't beat you, we will buy you." Its mantra is "invest,

invest, invest.” A partial list of Time Warner’s holdings gives an idea of its reach:

Magazines: *Time*, *Life*, *Sports Illustrated*, and *Fortune*.

Book publishers: Time-Life Books; Book-of-the-Month Club; Little, Brown & Co; and Sunset Books.

Television and movies: Warner Bros. (“The Big Bang Theory” and “The Mentalist”), HBO, and movies like *The Hobbit: The Desolation of Smaug* and *Into the Storm*.

Broadcasting: TNT, CNN news, and Turner’s library of thousands of classic movies.

Internet: America Online and AOL Anywhere.

Time Warner owns more information and entertainment copyrights and brands than any other company in the world.

Recently, Rupert Murdoch, chairman and CEO of **21st Century Fox**, made an unsolicited \$80 billion offer to buy the major media conglomerate. Murdoch’s bid put “a positive light on Time Warner’s assets,” says one analyst. Murdoch eventually withdrew his bid, which resulted in driving down Time Warner’s stock price. However, analysts expect the stock to eventually rebound as the long-term institutional investors start taking advantage of the lower price.

Source: Gene Marcial, “Why Time Warner Will Deliver Superb Growth and Valuation Despite Murdoch’s Surrender,” *Forbes* (August 6, 2014).

Accounting for Debt Investments

LEARNING OBJECTIVE 1

Explain how to account for debt investments.

Why Corporations Invest

Corporations purchase investments in debt or stock securities generally for one of three reasons. First, a corporation may have **excess cash** that it does not need for the immediate purchase of operating assets. For example, many companies experience seasonal fluctuations in sales. A Cape Cod marina has more sales in the spring and summer than in the fall and winter. The reverse is true for an Aspen ski shop. Thus, at the end of an operating cycle, many companies may have cash on hand that is temporarily idle until the start of another operating cycle.

These companies may invest the excess funds to earn—through interest and dividends—a greater return than they would get by just holding the funds in the bank. **Illustration 16.1** shows the role that temporary investments play in the operating cycle.

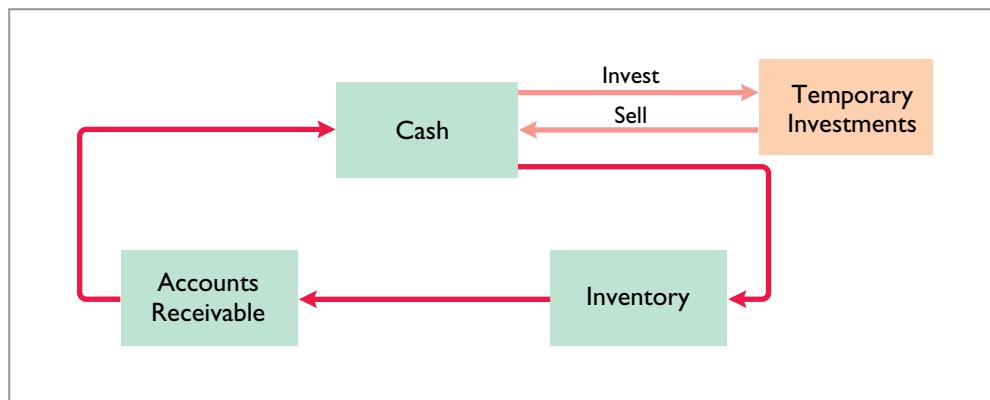

ILLUSTRATION 16.1

Temporary investments and the operating cycle

A second reason some companies such as banks purchase investments is to generate **earnings from investment income**. Although banks make most of their earnings by lending money, they also generate earnings by investing primarily in debt securities. Banks purchase investment securities because loan demand varies both seasonally and with changes in the economic climate. Thus, when loan demand is low, a bank must find other uses for its cash.

Some companies attempt to generate investment income through speculative investments. That is, they are speculating that the investment will increase in value and thus result in positive returns. Therefore, they invest mostly in the common stock of other corporations.

Third, companies also invest for **strategic reasons**. A company may purchase a non-controlling interest in another company in a related industry in which it wishes to establish a presence. Or, a company can exercise some influence over one of its customers or suppliers by purchasing a significant, but not controlling, interest in that company. Another option is for a corporation to purchase a controlling interest in another company in order to enter a new industry without incurring the costs and risks associated with starting from scratch.

In summary, businesses invest in other companies for the reasons shown in **Illustration 16.2**.

Reason	Typical Investment
To house excess cash until needed 	Low-risk, highly liquid, short-term securities such as government-issued securities
To generate earnings 	Banks and financial institutions often purchase debt securities, while mutual funds and index funds purchase debt and stock securities
To meet strategic goals 	Stocks of companies in a related industry or in an unrelated industry that the company wishes to enter

ILLUSTRATION 16.2

Why corporations invest

Accounting for Debt Investments

Debt investments are investments in government and corporation bonds. In accounting for debt investments, companies make entries to record (1) the acquisition, (2) the interest revenue, and (3) the sale.

Recording Acquisition of Bonds

At acquisition, debt investments are recorded at cost. Cost includes all expenditures necessary to acquire these investments, such as the price paid plus brokerage fees (commissions), if any.

For example, assume that Kuhl Corporation acquires 50 Doan Inc. 8%, 10-year, \$1,000 bonds on January 1, 2020, for \$50,000. Kuhl records the investment as:

A	=	L	+	SE
+50,000				
-50,000				
Cash Flows				
-50,000				

Jan. 1	Debt Investments (50 × \$1,000)	50,000	
	Cash		50,000
	(To record purchase of 50 Doan Inc. bonds)		

Recording Bond Interest

The Doan Inc. bonds pay interest of \$4,000 annually on January 1 ($\$50,000 \times 8\%$). If Kuhl Corporation's fiscal year ends on December 31, it accrues the interest of \$4,000 earned since January 1. The adjusting entry is:

A	=	L	+	SE
+4,000				
		+4,000 Rev		
Cash Flows				
no effect				

Dec. 31	Interest Receivable	4,000	
	Interest Revenue		4,000
	(To accrue interest on Doan Inc. bonds)		

Kuhl reports Interest Receivable as a current asset in the balance sheet. It reports Interest Revenue under "Other revenues and gains" in the income statement.

Kuhl reports receipt of the interest on January 1 as follows.

A	=	L	+	SE
+4,000				
-4,000				
Cash Flows				
+4,000				

Jan. 1	Cash	4,000	
	Interest Receivable		4,000
	(To record receipt of accrued interest)		

A credit to Interest Revenue at this time is incorrect because the company earned and accrued interest revenue in the preceding accounting period.

Recording Sale of Bonds

When Kuhl sells the bonds, it credits the investment account for the cost of the bonds. Kuhl records as a gain or loss any difference between the net proceeds from the sale (sales price less brokerage fees) and the cost of the bonds.

Assume, for example, that Kuhl Corporation receives net proceeds of \$54,000 on the sale of the Doan Inc. bonds on January 1, 2021, after receiving the interest due. Since the securities cost \$50,000, the company realizes a gain of \$4,000. It records the sale as:

A	=	L	+	SE
+54,000				
-50,000				
		+4,000 Rev		
Cash Flows				
+54,000				

Jan. 1	Cash	54,000	
	Debt Investments		50,000
	Gain on Sale of Debt Investments		4,000
	(To record sale of Doan Inc. bonds)		

Kuhl reports the gain on sale of debt investments under "Other revenues and gains" in the income statement and reports losses under "Other expenses and losses."

Investor Insight

© Jane0606/Shutterstock

Hey, I Thought It Was Safe!

It is often stated that bond investments are safer than stock investments. After all, with an investment in bonds, you are guaranteed return of principal and interest payments over the life of the bonds. However, here are some other factors you may want to consider:

- In 2013, the value of bonds fell by 2% due to interest rate risk. That is, when interest rates rise, it makes the yields paid on existing bonds less attractive. As a result, the price of the existing bond you are holding falls.
- While interest rates are currently low, it is likely that they will increase in the future. If you hold bonds, there is a real possibility that the value of your bonds will be reduced.

- Credit risk also must be considered. Credit risk means that a company may not be able to pay back what it borrowed. Former bondholders in companies like **General Motors**, **United Air Lines**, and **Eastman Kodak** saw their bond values drop substantially when these companies declared bankruptcy.

An advantage of a bond investment over stock is that if you hold it to maturity, you will receive your principal and also interest payments over the life of the bond. But if you have to sell your bond investment before maturity, you may be facing a roller coaster regarding its value.

Why is the fluctuating value of bonds of concern if a company intends to hold them until maturity? (Go to WileyPLUS for this answer and additional questions.)

DO IT! 1 | Debt Investments

Waldo Corporation had the following transactions pertaining to debt investments.

Jan. 1, 2020	Purchased 30, \$1,000 Hillary Co. 10% bonds for \$30,000. Interest is payable annually on January 1.	
Dec. 31, 2020	Accrued interest on Hillary Co. bonds in 2020.	
Jan. 1, 2021	Received interest on Hillary Co. bonds.	
Jan. 1, 2021	Sold 15 Hillary Co. bonds for \$14,600.	
Dec. 31, 2021	Accrued interest on Hillary Co. bonds in 2021.	

Journalize the above transactions, including the accrual of interest on December 31, 2020.

Solution

Jan. 1 (2020)	Debt Investments Cash (To record purchase of 30 Hillary Co. bonds)	30,000	30,000
Dec. 31 (2020)	Interest Receivable Interest Revenue (\$30,000 × 10%) (To accrue interest on Hillary Co. bonds)	3,000	3,000
Jan. 1 (2021)	Cash Interest Receivable (To record receipt of interest on Hillary Co. bonds)	3,000	3,000
Jan. 1 (2021)	Cash Loss on Sale of Debt Investments Debt Investments (\$30,000 × 15/30) (To record sale of 15 Hillary Co. bonds)	14,600 400	15,000
Dec. 31 (2021)	Interest Receivable Interest Revenue (\$15,000 × 10%) (To accrue interest on Hillary Co. bonds)	1,500	1,500

ACTION PLAN

- Record bond investments at cost.
- Record interest when accrued.
- When bonds are sold, credit the investment account for the cost of the bonds.
- Record any difference between the cost and the net proceeds as a gain or loss.

Accounting for Stock Investments

LEARNING OBJECTIVE 2

Explain how to account for stock investments.

Stock investments are investments in the capital stock of other corporations. When a company holds stock (and/or debt) of several different corporations, the group of securities is identified as an **investment portfolio**.

The accounting for investments in common stock depends on the extent of the investor's influence over the operating and financial affairs of the issuing corporation (the **investee**). **Illustration 16.3** shows the general guidelines.

ILLUSTRATION 16.3

Accounting guidelines for stock investments

Investor's Ownership Interest in Investee's Common Stock	Presumed Influence on Investee	Accounting Guidelines
 Less than 20%	Insignificant	Cost method
 Between 20% and 50%	Significant	Equity method
 More than 50%	Controlling	Consolidated financial statements

Companies are required to use judgment instead of blindly following the guidelines.¹ We explain the application of each guideline next.

HELPFUL HINT

The entries for investments in common stock also apply to investments in preferred stock.

Holdings of Less than 20%

In accounting for stock investments of less than 20%, companies use the cost method. Under the **cost method**, companies record the investment at cost, and recognize revenue only when cash dividends are received (see **Helpful Hint**).

Recording Acquisition of Stock Investments

At acquisition, stock investments are recorded at cost. Cost includes all expenditures necessary to acquire these investments, such as the price paid plus any brokerage fees (commissions), if any.

For example, assume that on July 1, 2020, Sanchez Corporation acquires 1,000 shares (10% ownership) of Beal Corporation common stock. Sanchez pays \$40 per share. The entry for the purchase is:

A	=	L	+	SE
+40,000				
-40,000				

Cash Flows 

July 1	Stock Investments (1,000 × \$40)	40,000
	Cash	
	(To record purchase of 1,000 shares of Beal Corporation common stock)	40,000

¹Among the factors that companies should consider in determining an investor's influence are whether (1) the investor has representation on the investee's board of directors, (2) the investor participates in the investee's policy-making process, (3) there are material transactions between the investor and investee, and (4) the common stock held by other stockholders is concentrated or dispersed.

Recording Dividends

During the time Sanchez owns the stock, it makes entries for any cash dividends received. If Sanchez receives a \$2 per share dividend on December 31, the entry is:

A	=	L	+	SE
+2,000				+2,000 Rev

Cash Flows
+2,000

Sanchez reports Dividend Revenue under “Other revenues and gains” in the income statement. Unlike interest on notes and bonds, dividends do not accrue. Therefore, companies do not make adjusting entries to accrue dividends.

Recording Sale of Stock

When a company sells a stock investment, it recognizes as a gain or a loss the difference between the net proceeds from the sale (sales price less brokerage fees) and the cost of the stock.

Assume that Sanchez Corporation receives net proceeds of \$39,000 on the sale of its Beal stock on February 10, 2021. Because the stock cost \$40,000, Sanchez incurred a loss of \$1,000. The entry to record the sale is:

A	=	L	+	SE
+39,000				-1,000 Exp
-40,000				
Cash Flows +39,000				

Cash Flows
+39,000

Sanchez reports the loss under “Other expenses and losses” in the income statement. It would show a gain on sale under “Other revenues and gains.”

Holdings Between 20% and 50%

When an investor company owns only a small portion of the shares of stock of another company, the investor cannot exercise control over the investee. But, when an investor owns between 20% and 50% of the common stock of a corporation, it is presumed that the investor has significant influence over the financial and operating activities of the investee. The investor probably has a representative on the investee’s board of directors. Through that representative, the investor may exercise some control over the investee. The investee company in some sense becomes part of the investor company.

For example, even prior to purchasing all of **Turner Broadcasting, Time Warner** owned 20% of Turner. Because it exercised significant control over major decisions made by Turner, Time Warner used an approach called the equity method. Under the **equity method, the investor records its share of the net income of the investee in the year when it is earned**. An alternative might be to delay recognizing the investor’s share of net income until the investee declares a cash dividend. But, that approach would ignore the fact that the investor and investee are, in some sense, one company, making the investor better off by the investee’s net income.

Under the **equity method**, the investor company initially records the investment in common stock at cost (see **Helpful Hint**). After that, it **adjusts** the investment account annually to show the investor’s equity in the investee. Each year, the investor does the following. (1) It increases (debits) the investment account and increases (credits) revenue for its share of the investee’s net income.² (2) The investor also decreases (credits) the investment account for the amount of dividends received. The investment account is reduced for dividends received because payment of a dividend decreases the net assets of the investee.

HELPFUL HINT

Under the equity method, the investor recognizes revenue on the accrual basis, i.e., when it is recognized by the investee.

²Conversely, the investor increases (debits) a loss account and decreases (credits) the investment account for its share of the investee’s net loss.

Recording Acquisition of Stock

Assume that Milar Corporation acquires 30% of the common stock of Beck Company for \$120,000 on January 1, 2020. The entry to record this transaction is:

A	=	L	+	SE
+120,000				
-120,000				

Cash Flows
-120,000

Jan. 1	Stock Investments Cash (To record purchase of Beck common stock)	120,000	120,000
--------	---	---------	---------

Recording Revenue and Dividends

For 2020, Beck reports net income of \$100,000. It declares and pays a \$40,000 cash dividend. Milar records (1) its share of Beck's income, \$30,000 ($30\% \times \$100,000$) and (2) the reduction in the investment account for the dividends received, \$12,000 ($\$40,000 \times 30\%$). The entries are:

A	=	L	+	SE
+30,000				
		+30,000 Rev		

Cash Flows
no effect

A	=	L	+	SE
+12,000				
-12,000				

Cash Flows
+12,000

		(1)	
Dec. 31	Stock Investments Revenue from Stock Investments (To record 30% equity in Beck's 2020 net income)	30,000	30,000
		(2)	
Dec. 31	Cash Stock Investments (To record dividends received)	12,000	12,000

After Milar posts the transactions for the year, its investment and revenue accounts are as shown in **Illustration 16.4**.

ILLUSTRATION 16.4

Investment and revenue
accounts after posting

	Stock Investments		Revenue from Stock Investments	
	Jan. 1	Dec. 31	Dec. 31	30,000
	120,000	12,000		
	Dec. 31	30,000		
	Dec. 31 Bal.	138,000		

During the year, the investment account increased \$18,000. This increase of \$18,000 is explained as follows: (1) Milar records a \$30,000 increase in revenue from its stock investment in Beck, and (2) Milar records a \$12,000 decrease due to dividends received from its stock investment in Beck.

Note that the difference between reported revenue under the cost method and reported revenue under the equity method can be significant. For example, Milar would report only \$12,000 of dividend revenue ($30\% \times \$40,000$) if it used the cost method.

Holdings of More than 50%

A company that owns more than 50% of the common stock of another entity is known as the **parent company**. The entity whose stock the parent company owns is called the **subsidiary (affiliated) company**. Because of its stock ownership, the parent company has a **controlling interest** in the subsidiary.

When a company owns more than 50% of the common stock of another company, it usually prepares **consolidated financial statements**. These statements present the total assets and liabilities controlled by the parent company. They also present the total revenues and expenses of the subsidiary companies. Companies prepare consolidated statements **in addition to** the financial statements for the parent and individual subsidiary companies.

As noted earlier, prior to acquiring all of **Turner Broadcasting**, Time Warner accounted for its investment in Turner using the equity method. Time Warner's net investment in Turner was reported in a single line item—Other investments. After the merger, Time Warner instead consolidated Turner's results with its own. Under this approach, Time Warner included the individual assets and liabilities of Turner with its own assets. That is, Turner's plant and equipment were added to Time Warner's plant and equipment, its receivables were added to Time Warner's receivables, and so on. A similar sort of consolidation went on when **AOL** merged with Time Warner (see **Helpful Hint**).

HELPFUL HINT

If the parent (A) has three wholly owned subsidiaries (B, C, and D), there are four separate legal entities but only one economic entity from the viewpoint of the shareholders of the parent company.

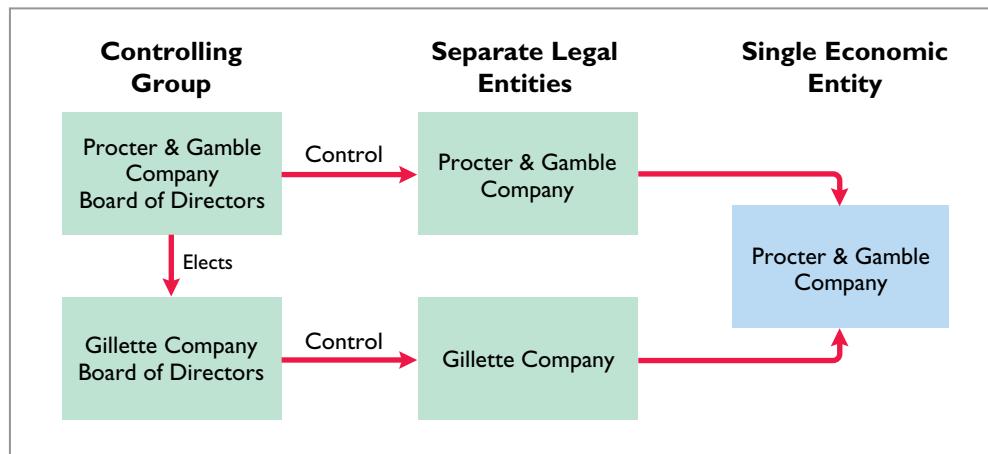

Accounting Across the Organization Procter & Gamble Company

© Stigur Karlsson/iStockphoto

How Procter & Gamble Accounts for Gillette

Several years ago, **Procter & Gamble Company** acquired **Gillette Company** for \$53.4 billion. The common stockholders of Procter

& Gamble elect the board of directors of the company, who in turn select the officers and managers of the company. Procter & Gamble's board of directors controls the property owned by the corporation, which includes the common stock of Gillette. Thus, they are in a position to elect the board of directors of Gillette and, in effect, control its operations. These relationships are graphically illustrated here.

Where on Procter & Gamble's balance sheet will you find its investment in Gillette Company?
(Go to WileyPLUS for this answer and additional questions.)

Consolidated statements are useful to the stockholders, board of directors, and management of the parent company. These statements indicate the magnitude and scope of operations of the companies under common control. For example, regulators and the courts undoubtedly used the consolidated statements of **AT&T** to determine whether a breakup of the company was in the public interest. **Illustration 16.5** lists three companies that prepare consolidated statements and some of the companies they have owned.

ILLUSTRATION 16.5

Examples of consolidated companies and their subsidiaries

DO IT! 2 | Stock Investments

Presented below are two independent situations.

1. Rho Jean Inc. acquired 5% of the 400,000 shares of common stock of Stillwater Corp. at a total cost of \$6 per share on May 18, 2020. On August 30, Stillwater declared and paid a \$75,000 dividend. On December 31, Stillwater reported net income of \$244,000 for the year.
2. Debbie, Inc. obtained significant influence over North Sails by buying 40% of North Sails' 60,000 outstanding shares of common stock at a cost of \$12 per share on January 1, 2020. On April 15, North Sails declared and paid a cash dividend of \$45,000. On December 31, North Sails reported net income of \$120,000 for the year.

Prepare all necessary journal entries for 2020 for (1) Rho Jean Inc. and (2) Debbie, Inc.

Solution

1. May 18	Stock Investments (400,000 × 5% × \$6) Cash (To record purchase of 20,000 shares of Stillwater Co. stock)	120,000		120,000
Aug. 30	Cash Dividend Revenue (\$75,000 × 5%) (To record receipt of cash dividend)		3,750	3,750
2. Jan. 1	Stock Investments (60,000 × 40% × \$12) Cash (To record purchase of 24,000 shares of North Sails' stock)	288,000		288,000
Apr. 15	Cash Stock Investments (\$45,000 × 40%) (To record receipt of cash dividend)		18,000	18,000
Dec. 31	Stock Investments (\$120,000 × 40%) Revenue from Stock Investments (To record 40% equity in North Sails' net income)	48,000		48,000

Related exercise material: **BE16.2, BE16.3, DO IT! 16.2, E16.4, E16.5, E16.6, E16.7, and E16.8.**

ACTION PLAN

- Presume that the investor has relatively little influence over the investee when an investor owns less than 20% of the common stock of another corporation. In this case, net income earned by the investee is not considered a proper basis for recognizing income from the investment by the investor.
- Presume significant influence for investments of 20%–50%. Therefore, record the investor's share of the net income of the investee.

Reporting Investments in Financial Statements

LEARNING OBJECTIVE 3

Discuss how debt and stock investments are reported in the financial statements.

The value of debt and stock investments may fluctuate greatly during the time they are held. For example, in a 12-month period, the stock of **Time Warner** hit a high of 58½ and a low of 9. In light of such price fluctuations, how should companies value investments at the balance sheet date? Valuation could be at cost, at fair value, or at the lower-of-cost-or-market value.

Many people argue that fair value offers the best approach because it represents the expected cash realizable value of securities. **Fair value** is the amount for which a security could be sold in a normal market. Others counter that unless a security is going to be sold soon, the fair value is not relevant because the price of the security will likely change again.

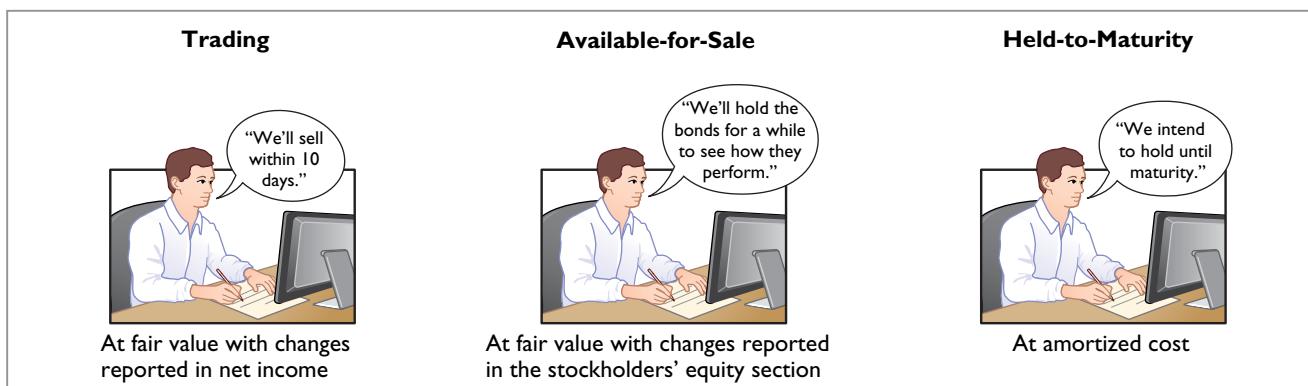

Debt Securities

For purposes of valuation and reporting at a financial statement date, debt investments are classified into three categories:

- Trading securities** are bought and held primarily for sale in the near term to generate income on short-term price differences.
- Available-for-sale securities** are held with the intent of selling them sometime in the future.
- Held-to-maturity securities** are debt securities that the investor has the intent and ability to hold to maturity.³

Illustration 16.6 shows the valuation guidelines for these debt securities.

ILLUSTRATION 16.6 Valuation guidelines for debt securities

Trading Securities

Trading securities are held with the intention of selling them in a short period of time (generally less than three months and sometimes less than a full day). **Trading** means frequent buying and selling. As indicated in Illustration 16.6, companies adjust trading securities to fair value at the end of each period (an approach referred to as **mark-to-market** accounting). They report changes from cost **as part of net income**. The changes are reported as **unrealized gains or losses** because the securities have not been sold. The unrealized gain or loss is the difference between the **total cost** of trading securities and their **total fair value**. Companies classify trading securities as a current asset (see **Helpful Hint**).

As an example, **Illustration 16.7** shows the costs and fair values for investments classified as trading securities for Pace Corporation on December 31, 2020. Pace has an unrealized gain of \$7,000 because total fair value (\$147,000) is \$7,000 greater than total cost (\$140,000).

HELPFUL HINT

Companies report an unrealized gain or loss in the income statement because of the likelihood that the securities will be sold at fair value since they are a short-term investment.

Trading Securities, December 31, 2020

Investments	Cost	Fair Value	Unrealized Gain (Loss)
Yorkville Company bonds	\$ 50,000	\$ 48,000	\$ (2,000)
Kodak Company bonds	90,000	99,000	9,000
Total	<u><u>\$140,000</u></u>	<u><u>\$147,000</u></u>	<u><u>\$ 7,000</u></u>

ILLUSTRATION 16.7

Valuation of trading securities

The fact that trading securities are a short-term investment increases the likelihood that Pace will sell them at fair value for a gain. Pace records fair value and the unrealized gain

³This category is provided for completeness. The accounting and valuation issues related to held-to-maturity securities are discussed in more advanced accounting courses.

through an adjusting entry at the time it prepares financial statements. In this entry, the company uses a valuation allowance account, Fair Value Adjustment—Trading, to record the difference between the total cost and the total fair value of the securities. The adjusting entry for Pace is:

A	=	L	+	SE
+7,000				+7,000 Rev
Cash Flows no effect				

Dec. 31	Fair Value Adjustment—Trading Unrealized Gain or Loss—Income (To record unrealized gain on trading securities)	7,000	7,000
---------	---	-------	-------

The use of the Fair Value Adjustment—Trading account enables the company to maintain a record of the investment cost. Actual cost is needed to determine the gain or loss realized when the securities are sold. The company adds the debit balance (or subtracts a credit balance) of the Fair Value Adjustment—Trading account to the cost of the investments to arrive at a fair value for the trading securities.

The fair value of the securities is the amount companies report on the balance sheet. They report the unrealized gain on the income statement under “Other revenues and gains.” The term **income** in the account title indicates that the gain affects net income.

If the total cost of the trading securities is greater than total fair value, an unrealized loss has occurred. In such a case, the adjusting entry is a debit to Unrealized Gain or Loss—Income and a credit to Fair Value Adjustment—Trading. Companies report the unrealized loss under “Other expenses and losses” in the income statement.

The Fair Value Adjustment—Trading account is carried forward into future accounting periods. No entries are made to this account during the period. At the end of each reporting period, a company adjusts the balance in the account to the difference between cost and fair value at that time. It closes the Unrealized Gain or Loss—Income account at the end of the reporting period.

Available-for-Sale Securities

As indicated earlier, available-for-sale securities are held with the intent of selling them sometime in the future. If the intent is to sell the securities within the next year or operating cycle, a company classifies the securities as current assets in the balance sheet. Otherwise, it classifies them as long-term assets in the investments section of the balance sheet.

Companies also report available-for-sale securities at fair value. The procedure for determining fair value and unrealized gain or loss for these securities is the same as that for trading securities. To illustrate, assume that Shelton Corporation has two securities that are classified as available-for-sale. **Illustration 16.8** provides information on the cost, fair value, and amount of the unrealized gain or loss on December 31, 2020. There is an unrealized loss of \$9,537 because total cost (\$293,537) is \$9,537 more than total fair value (\$284,000).

ILLUSTRATION 16.8

Valuation of available-for-sale securities

Available-for-Sale Securities, December 31, 2020

Investments	Cost	Fair Value	Unrealized Gain (Loss)
Campbell Soup Co. bonds	\$ 93,537	\$103,600	\$10,063
Hershey Foods bonds	200,000	180,400	(19,600)
Total	<u><u>\$293,537</u></u>	<u><u>\$284,000</u></u>	<u><u>\$ (9,537)</u></u>

HELPFUL HINT

The entry is the same regardless of whether the securities are considered short-term or long-term.

Both the adjusting entry and the reporting of the unrealized loss from Shelton’s available-for-sale securities differ from those illustrated for trading securities. The differences result because these securities are not going to be sold in the near term. Thus, prior to actual sale it is much more likely that changes in fair value may reverse the unrealized loss. Therefore, Shelton does not report an unrealized loss in the income statement. Instead, the company reports it as an item of other comprehensive income in the comprehensive income statement. In the adjusting entry, Shelton identifies the fair value adjustment account with available-for-sale securities, and identifies the unrealized gain or loss account with stockholders’ equity (see **Helpful Hint**). The adjusting entry for Shelton to record the unrealized loss of \$9,537 is:

Dec. 31	Unrealized Gain or Loss—Equity Fair Value Adjustment—Available-for-Sale (To record unrealized loss on available-for-sale securities)	9,537	9,537	A = L + SE -9,537 Eq
---------	--	-------	-------	-------------------------

If total fair value exceeds total cost, Shelton would record the adjusting entry as an increase (debit) to Fair Value Adjustment—Available-for-Sale and a credit to Unrealized Gain or Loss—Equity.

Shelton's unrealized loss of \$9,537 would appear in the comprehensive income statement as shown in **Illustration 16.9**.

Shelton Corporation
Comprehensive Income Statement
For the Year Ended December 31, 2020

Net income	\$118,000
Other comprehensive income	
Unrealized loss on available-for-sale securities	(9,537)
Comprehensive income	<u><u>\$108,463</u></u>

For available-for-sale securities, the company carries forward the Unrealized Gain or Loss—Equity account to future periods. At each future balance sheet date, the account is adjusted with the Fair Value Adjustment—Available-for-Sale account to show the difference between cost and fair value at that time (see **Ethics Note**).

ILLUSTRATION 16.9
Comprehensive income statement

ETHICS NOTE

The SEC accused investment bank **Morgan Stanley** of overstating the value of certain bond investments by \$75 million. The SEC stated that, in applying fair value accounting, Morgan Stanley used its own more optimistic assumptions rather than relying on external pricing sources.

DO IT! 3a | Trading and Available-for-Sale Debt Securities

Some of Powderhorn Corporation's investment debt securities are classified as trading securities and some are classified as available-for-sale. The cost and fair value of each category at December 31, 2020, are shown below.

	Cost	Fair Value	Unrealized Gain (Loss)
Trading securities	\$93,600	\$94,900	\$1,300
Available-for-sale securities	\$48,800	\$51,400	\$2,600

At December 31, 2019, the Fair Value Adjustment—Trading account had a debit balance of \$9,200, and the Fair Value Adjustment—Available-for-Sale account had a credit balance of \$5,750. Prepare the required journal entries for each group of securities for December 31, 2020.

Solution

Trading securities:

Unrealized Gain or Loss—Income Fair Value Adjustment—Trading (To record unrealized loss on trading securities)	7,900*	7,900
--	--------	-------

*\$9,200 – \$1,300

Available-for-sale securities:

Fair Value Adjustment—Available-for-Sale Unrealized Gain or Loss—Equity (To record unrealized gain on available-for-sale securities)	8,350**	8,350
--	---------	-------

**\$5,750 + \$2,600

ACTION PLAN

- Mark trading securities to fair value and report the adjustment in current-period income.
- Mark available-for-sale securities to fair value and report the adjustment as a separate component of stockholders' equity.

Equity Securities

The valuation and reporting of equity securities at a financial statement date depends on the levels of influence involved, as shown in **Illustration 16.10**.

ILLUSTRATION 16.10

Accounting and reporting for equity securities by category

Category	Valuation	Unrealized Gains or Losses	Other Income Effects
Holdings less than 20%	Fair value	Recognized in net income	Dividends declared; gains and losses from sale.
Holdings between 20% and 50%	Equity	Not recognized	Proportionate share of investee's net income.
Holdings more than 50%	Consolidation	Not recognized	Not applicable.

When an investor has an interest of less than 20%, it is presumed that the investor has little or no influence over the investee. In such cases, if market prices are available subsequent to acquisition, the company values and reports the stock investment using the fair value method.

Illustration of Stock Holdings Less than 20%

At December 31, 2020, Shelton Corporation has two equity securities in which it has less than a 20% ownership interest and therefore has little or no influence over these companies. Shelton has the following cost and fair value for these two companies, as shown in **Illustration 16.11**.

ILLUSTRATION 16.11

Computation of fair value adjustment—equity security portfolio (2020)

Investments	Cost	Fair Value	Unrealized Gain (Loss)
Twitter Co.	\$259,700	\$275,000	\$ 15,300
Campbell Soup Co.	317,500	304,000	(13,500)
Totals	<u>\$577,200</u>	<u>\$579,000</u>	<u>\$ 1,800</u>

For Shelton's equity securities portfolio, the gross unrealized gain is \$15,300 and the gross unrealized loss is \$13,500, resulting in a net unrealized gain of \$1,800. That is, the fair value of the equity securities portfolio is above cost by \$1,800.

Shelton records the net unrealized gains and losses related to changes in the fair value equity securities in an Unrealized Gain or Loss—Income account. In this case, Shelton prepares an adjusting entry debiting the Fair Value Adjustment—Stock account and crediting the Unrealized Gain or Loss—Income account to record the increase in fair value and to record the gain as follows.

December 31, 2020

Fair Value Adjustment—Stock	1,800
Unrealized Gain or Loss—Income	1,800
(To record unrealized gain on equity securities)	1,800

Similar to trading securities, Shelton adjusts the balance in the Fair Value Adjustment—Stock account for the difference between cost and fair value. In addition, the unrealized gain related to Shelton's equity securities are reported in the “Other revenues and gains” section of the income statement.

Balance Sheet Presentation

In the balance sheet presentation, companies must classify investments as either short-term or long-term (see **Helpful Hint**).

Short-Term Investments

Short-term investments (also called **marketable securities**) are securities held by a company that are (1) **readily marketable** and (2) **intended to be converted into cash** within the next year or operating cycle, whichever is longer. Investments that do not meet **both criteria** are classified as **long-term investments**.

Readily Marketable. An investment is **readily marketable** when it can be sold easily whenever the need for cash arises. Short-term paper⁴ meets this criterion because a company can readily sell it to other investors. Stocks and bonds traded on organized securities markets, such as the New York Stock Exchange, are readily marketable because they can be bought and sold daily. In contrast, there may be only a limited market for the securities issued by small corporations and no market for the securities of a privately held company.

Intent to Convert. Intent to convert means that management intends to sell the investment within the next year or operating cycle, whichever is longer. Generally, this criterion is satisfied when the investment is considered a resource that the company will use whenever the need for cash arises. For example, a ski resort may invest idle cash during the summer months with the intent to sell the securities to buy supplies and equipment shortly before the next winter season. This investment is considered short-term even if lack of snow cancels the next ski season and eliminates the need to convert the securities into cash as intended.

Because of their high liquidity, companies list short-term investments immediately below Cash in the current assets section of the balance sheet. Short-term investments are reported at fair value. For example, Weber Corporation would report its trading securities as shown in **Illustration 16.12**.

Weber Corporation Balance Sheet (partial)		
Current assets		
Cash	\$21,000	
Debt investments (at fair value)		60,000

ILLUSTRATION 16.12

Balance sheet presentation of short-term investments

Long-Term Investments

Companies generally report long-term investments in a separate section of the balance sheet immediately below “Current assets,” as shown in **Illustration 16.13**. Long-term investments in available-for-sale securities are reported at fair value. Investments in common stock accounted for under the equity method are reported at equity.

Weber Corporation Balance Sheet (partial)		
Investments		
Debt investment (at fair value)	\$100,000	
Stock investments (at fair value)		50,000
Stock investments (at equity)		150,000
Total investments		\$300,000

ILLUSTRATION 16.13

Balance sheet presentation of long-term investments

⁴Short-term paper includes (1) certificates of deposits (CDs) issued by banks, (2) money market certificates issued by banks and savings and loan associations, (3) Treasury bills issued by the U.S. government, and (4) commercial paper issued by corporations with good credit ratings.

HELPFUL HINT

Trading securities are always classified as short-term. Available-for-sale securities can be either short-term or long-term.

Presentation of Realized and Unrealized Gain or Loss

Companies must present in the financial statements gains and losses on investments, whether realized or unrealized. In the income statement, companies report gains and losses, as well as interest and dividend revenue, in the nonoperating activities section under the categories listed in **Illustration 16.14**.

ILLUSTRATION 16.14

Nonoperating items related to investments

Other Revenues and Gains

- Interest Revenue
- Dividend Revenue
- Gain on Sale of Investments
- Unrealized Gain

Other Expenses and Losses

- Loss on Sale of Investments
- Unrealized Loss

Companies report the cumulative amount of other comprehensive income items from the current and previous years as a separate component of stockholders' equity. To illustrate, assume that Muzzillo Inc. has common stock of \$3,000,000, retained earnings of \$1,500,000, and an accumulated other comprehensive loss of \$100,000. **Illustration 16.15** shows the financial statement presentation of the accumulated other comprehensive loss.

ILLUSTRATION 16.15

Total liabilities and stockholders' equity		\$1,710,000

Note 1. Retained earnings of \$100,000 is restricted for plant expansion.

DO IT! 3b | Financial Statement Presentation of Investments

Identify where each of the following items would be reported in the financial statements.

1. Interest earned on investments in bonds.
2. Fair value adjustment—stock.
3. Unrealized gain or loss—equity.
4. Gain on sale of investments in stock.
5. Unrealized gain—income.

Use the following possible categories:

Balance sheet:

Current assets	Current liabilities
Investments	Long-term liabilities
Property, plant, and equipment	Stockholders' equity
Intangible assets	

Income statement:

Other revenues and gains	Other expenses and losses
--------------------------	---------------------------

ACTION PLAN

- Classify investments as current assets if they will be held for less than one year.
- Report unrealized gains or losses on trading securities in income.
- Report unrealized gains or losses on available-for-sale securities in equity.
- Report realized gains and losses on investments in the income statement as “Other revenues and gains” or as “Other expenses and losses.”

Solution

Item	Financial Statement	Category
1. Interest earned on investments in bonds.	Income statement	Other revenues and gains
2. Fair value adjustment—stock	Balance sheet	Investments
3. Unrealized gain or loss—equity	Balance sheet	Stockholders' equity
4. Gain on sale of investments in stock	Income statement	Other revenues and gains
5. Unrealized gain—income	Income statement	Other revenues and gains

Review and Practice

Learning Objectives Review

1 Explain how to account for debt investments.

Corporations invest for three common reasons: (a) they have excess cash, (b) they view investment income as a significant revenue source, and (c) they have strategic goals such as gaining control of a competitor or supplier or moving into a new line of business.

Entries for investments in debt securities are required when companies purchase bonds, receive or accrue interest, and sell bonds.

2 Explain how to account for stock investments.

Entries for investments in common stock are required when companies purchase stock, receive dividends, and sell stock. When ownership is less than 20%, the cost method is used—the investment is recorded at cost. When ownership is between 20% and 50%, the equity method should be used—the investor records its share of the net income of the investee in the year it is earned.

When a company owns more than 50% of the common stock of another company, consolidated financial statements are usually

prepared. These statements are especially useful to the stockholders, board of directors, and management of the parent company.

3 Discuss how debt and stock investments are reported in the financial statements.

Investments in debt securities are classified as trading, available-for-sale, or held-to-maturity for valuation and reporting purposes. Trading securities are reported as current assets at fair value, with changes from cost reported in net income. Available-for-sale securities are also reported at fair value, with the changes from cost reported as items of other comprehensive income. Available-for-sale securities are classified as short-term or long-term depending on their expected realization.

Investments in stock when ownership is less than 20% are reported at fair values, with changes from cost reported in net income.

Short-term investments are securities held by a company that are readily marketable and intended to be converted to cash within the next year or operating cycle, whichever is longer. Investments that do not meet both criteria are classified as long-term investments.

Glossary Review

Available-for-sale securities Securities that are held with the intent of selling them sometime in the future. (p. 16-11).

Consolidated financial statements Financial statements that present the assets and liabilities controlled by the parent company and the total revenues and expenses of the subsidiary companies. (p. 16-8).

Controlling interest Ownership of more than 50% of the common stock of another entity. (p. 16-8).

Cost method An accounting method in which the investment in common stock is recorded at cost, and revenue is recognized only when cash dividends are received. (p. 16-6).

Debt investments Investments in government and corporation bonds. (p. 16-4).

Equity method An accounting method in which the investment in common stock is initially recorded at cost, and the investment account is then adjusted annually to show the investor's equity in the investee. (p. 16-7).

Fair value Amount for which a security could be sold in a normal market. (p. 16-10).

Held-to-maturity securities Debt securities that the investor has the intent and ability to hold to their maturity date. (p. 16-11).

Investment portfolio A group of stocks and/or debt securities in different corporations held for investment purposes. (p. 16-6).

Long-term investments Investments that are not readily marketable or that management does not intend to convert into cash within the next year or operating cycle, whichever is longer. (p. 16-15).

Mark-to-market Approach used by companies to adjust securities to fair value at the end of each period. (p. 16-11).

Parent company A company that owns more than 50% of the common stock of another entity. (p. 16-8).

Short-term investments (marketable securities) Investments that are readily marketable and intended to be converted into cash within the next year or operating cycle, whichever is longer. (p. 16-15).

Stock investments Investments in the capital stock of other corporations. (p. 16-6).

Subsidiary (affiliated) company A company in which more than 50% of its stock is owned by another company. (p. 16-8).

Trading securities Securities bought and held primarily for sale in the near term to generate income on short-term price differences. (p. 16-11).

Practice Multiple-Choice Questions

1. (LO 1) Which of the following is **not** a primary reason why corporations invest in debt and equity securities?

- a. They wish to gain control of a competitor.
- b. They have excess cash.
- c. They wish to move into a new line of business.
- d. They are required to by law.

2. (LO 1) Debt investments are initially recorded at:

- a. cost.
- b. cost plus accrued interest.
- c. fair value.
- d. face value.

3. (LO 1) Hanes Company sells debt investments costing \$26,000 for \$28,000. In journalizing the sale, credits are to:

- a. Debt Investments and Loss on Sale of Debt Investments.
- b. Debt Investments and Gain on Sale of Debt Investments.
- c. Stock Investments and Gain on Sale of Stock Investments.
- d. No correct answer is given.

4. (LO 2) Pryor Company receives net proceeds of \$42,000 on the sale of stock investments that cost \$39,500. This transaction will result in reporting in the income statement a:

- a. loss of \$2,500 under “Other expenses and losses.”
- b. loss of \$2,500 under “Operating expenses.”
- c. gain of \$2,500 under “Other revenues and gains.”
- d. gain of \$2,500 under “Operating revenues.”

5. (LO 2) The equity method of accounting for long-term investments in stock should be used when the investor has significant influence over an investee and owns:

- a. between 20% and 50% of the investee’s common stock.
- b. 20% or more of the investee’s common stock.
- c. more than 50% of the investee’s common stock.
- d. less than 20% of the investee’s common stock.

6. (LO 2) Assume that Horicon Corp. acquired 25% of the common stock of Sheboygan Corp. on January 1, 2020, for \$300,000. During 2020, Sheboygan Corp. reported net income of \$160,000 and paid total dividends of \$60,000. If Horicon uses the equity method to account for its investment, the balance in the investment account on December 31, 2020, will be:

- a. \$300,000.
- b. \$325,000.
- c. \$400,000.
- d. \$340,000.

7. (LO 2) Using the information in Question 6, what entry would Horicon make to record the receipt of the dividend from Sheboygan?

- a. Debit Cash and credit Revenue from Stock Investments.
- b. Debit Cash Dividends and credit Revenue from Stock Investments.

- c. Debit Cash and credit Stock Investments.
- d. Debit Cash and credit Dividend Revenue.

8. (LO 2) You have a controlling interest if:

- a. you own more than 20% of a company’s stock.
- b. you are the president of the company.
- c. you use the equity method.
- d. you own more than 50% of a company’s stock.

9. (LO 2) Which of the following statements is **false**? Consolidated financial statements are useful to:

- a. determine the profitability of specific subsidiaries.
- b. determine the total profitability of companies under common control.
- c. determine the breadth of a parent company’s operations.
- d. determine the full extent of total obligations of companies under common control.

10. (LO 3) At the end of the first year of operations, the total cost of the trading securities portfolio is \$120,000. Total fair value is \$115,000. The financial statements should show:

- a. a reduction of an asset of \$5,000 and a realized loss of \$5,000.
- b. a reduction of an asset of \$5,000 and an unrealized loss of \$5,000 in the stockholders’ equity section.
- c. a reduction of an asset of \$5,000 in the current assets section and an unrealized loss of \$5,000 in “Other expenses and losses.”
- d. a reduction of an asset of \$5,000 in the current assets section and a realized loss of \$5,000 in “Other expenses and losses.”

11. (LO 3) At December 31, 2020, the fair value of available-for-sale debt securities is \$41,300 and the cost is \$39,800. At January 1, 2020, there was a credit balance of \$900 in the Fair Value Adjustment—Available-for-Sale account. The required adjusting entry would be:

- a. Debit Fair Value Adjustment—Available-for-Sale for \$1,500 and credit Unrealized Gain or Loss—Equity for \$1,500.
- b. Debit Fair Value Adjustment—Available-for-Sale for \$600 and credit Unrealized Gain or Loss—Equity for \$600.
- c. Debit Fair Value Adjustment—Available-for-Sale for \$2,400 and credit Unrealized Gain or Loss—Equity for \$2,400.
- d. Debit Unrealized Gain or Loss—Equity for \$2,400 and credit Fair Value Adjustment—Available-for-Sale for \$2,400.

12. (LO 3) If a company wants to increase its reported income by manipulating its investment accounts, which should it do?

- a. Sell its “winner” trading securities and hold its “loser” trading securities.
- b. Hold its “winner” trading securities and sell its “loser” trading securities.

- c. Sell its “winner” available-for-sale securities and hold its “loser” available-for-sale securities.
- d. Hold its “winner” available-for-sale securities and sell its “loser” available-for-sale securities.

13. (LO 3) In the balance sheet, a debit balance in Unrealized Gain or Loss—Equity is reported as a(n):

- a. increase to stockholders’ equity.
- b. decrease to stockholders’ equity.

- c. loss in the income statement.
- d. loss in the retained earnings statement.

14. (LO 3) Short-term debt investments must be readily marketable and expected to be sold within:

- a. 3 months from the date of purchase.
- b. the next year or operating cycle, whichever is shorter.
- c. the next year or operating cycle, whichever is longer.
- d. the operating cycle.

Solutions

1. d. Corporations are not required to by law to invest in debt and equity securities. The other choices are reasons why corporations invest in debt and equity securities.

2. a. When debt investments are purchased, they are recorded at cost, not (b) cost plus accrued interest, (c) fair value, or (d) face value.

3. b. Credits are made to Debt Investments \$26,000 and Gain on Sale of Debt Investments \$2,000 (\$28,000 – \$26,000). The other choices are therefore incorrect.

4. c. Because the cash received (\$42,000) is greater than the cost (\$39,500), this sale results in a gain, not a loss, which will be reported under “Other revenues and gains” in the income statement. The other choices are therefore incorrect.

5. a. The equity method is used when the investor can exercise significant influence and owns between 20% and 50% of the investee’s common stock. The other choices are therefore incorrect.

6. b. Horicon records the acquisition of the stock investment by debiting Stock Investments \$300,000 and crediting Cash \$300,000. Then, Horicon records (1) its share in Sheboygan Corp.’s net income (\$160,000 × .25) by debiting Stock Investments \$40,000 and crediting Revenue from Stock Investments \$40,000 and (2) the reduction in the investment account for the dividends received (\$60,000 × .25) by debiting Cash \$15,000 and crediting Stock Investments \$15,000. Thus, the balance in the investment account on December 31 will be \$325,000 (\$300,000 + \$40,000 – \$15,000), not (a) \$300,000, (c) \$400,000, or (d) \$340,000.

7. c. Horicon records the receipt of the dividend from Sheboygan by debiting Cash and crediting Stock Investments. The other choices are therefore incorrect.

8. d. You have a controlling interest if you own more than 50% of a company’s stock, not (a) 20% of a company’s stock, (b) are president of the company, or (c) use the equity method.

9. a. Consolidated financial statements are not useful in determining the profitability of specific subsidiaries (legal entities) because

consolidated financial statements represent the results of the single economic entity. The other choices are true statements.

10. c. The difference between the fair value (\$115,000) and total cost (\$120,000) of trading securities at the end of the first year would result in a reduction of an asset of \$5,000 through the valuation allowance account in the current assets section and an unrealized loss of \$5,000 in “Other expenses and losses.” The other choices are therefore incorrect.

11. c. In this case, there is an unrealized gain of \$1,500 because total fair value of \$41,300 is \$1,500 greater than the total cost of \$39,800. The desired balance in the market adjustment account is \$1,500 debit. The required adjusting entry considers the existing credit balance of \$900 and is a debit to Fair Value Adjustment—Available-for-Sale for \$2,400 (\$1,500 + \$900) and a credit to Unrealized Gain or Loss—Equity for \$2,400 (\$1,500 + \$900). The other choices are therefore incorrect.

12. c. When a company sells its winners as related to available-for-sale securities, it has a realized gain that increases net income. Selling the winners will affect the balance in Unrealized Holding Gain or Loss—Equity, but any change in this balance does not affect net income. Choices (a) and (b) are incorrect because trading securities’ gains and losses related to changes in valuation are reported in net income. Thus, when a company sells a trading security, it should have no effect on net income because the value change was recognized in net income previously. Choice (d) is incorrect because selling the losing available-for-sale securities will decrease net income.

13. b. A debit balance in Unrealized Gain or Loss—Equity is reported on the balance sheet as a separate component of stockholders’ equity, decreasing stockholders’ equity. The other choices are therefore incorrect.

14. c. Short-term investments are current assets that are expected to be consumed, sold, or converted to cash within one year or the operating cycle, whichever is longer. The other choices are therefore incorrect.

Practice Brief Exercises

Journalize entries for debt investments.

1. (LO 1) Liriano Corporation purchased debt investments for 85,000 on January 1, 2020. On July 1, 2020, Liriano received cash interest of \$6,800. Journalize the purchase and the receipt of interest. Assume that no interest has been accrued.

Solution

1. Jan. 1	Debt Investments Cash	85,000	85,000
July 1	Cash Interest Revenue	6,800	6,800

- 2. (LO 2)** On June 1, Willyjuan Company buys 2,000 shares of Minaya common stock for \$57,000 cash. On October 15, Willyjuan sells the stock investments for \$54,000 in cash. Journalize the purchase and sale of the common

Journalize entries for stock investments.

Solution

2. June 1	Stock Investments Cash	57,000	57,000
Oct. 15	Cash Loss on Sale of Stock Investments Stock Investments	54,000 3,000	57,000

- 3. (LO 3) Financial Statement** The cost of the trading securities of Dylan Company at December 31, 2020, is \$46,000. At December 31, 2020, the fair value of the securities is \$50,000. (a) Prepare the adjusting entry to record the securities at fair value. (b) Show the financial statement presentation at December 31, 2020.

Prepare adjusting entry and indicate statement presentation using fair value.

Solution

3. a. Dec. 31	Fair value Adjustment—Trading Unrealized Gain or Loss Income (\$50,000 – \$46,000)	4,000	4,000
---------------	---	-------	-------

b. Balance Sheet

Current assets	
Short-term investments, at fair value	\$50,000

Income Statement

Other revenues and gains	
Unrealized gain—income	\$4,000

Practice Exercises

- 1. (LO 1)** Potter Company purchased 50 Quinn Company 6%, 10-year, \$1,000 bonds on January 1, 2020, for \$50,000. The bonds pay interest annually. On January 1, 2021, after receipt of interest, Potter Company sold 30 of the bonds for \$28,100.

Journalize debt investment transactions, accrue interest, and record sale.

Instructions

Prepare the journal entries to record the transactions described above.

Solution

1.	January 1, 2020	
	Debt Investments Cash	50,000 50,000
	December 31, 2020	
	Interest Receivable Interest Revenue (\$50,000 × 6%)	3,000 3,000
	January 1, 2021	
	Cash Interest Receivable	3,000 3,000
	January 1, 2021	
	Cash Loss on Sale of Debt Investments Debt Investments (30/50 × \$50,000)	28,100 1,900 30,000

- 2. (LO 2)** Lucy Inc. had the following transactions in 2020 pertaining to investments in common stock.

Journalize transactions for investments in stocks.

- Jan. 1 Purchased 4,000 shares of Morgan Corporation common stock (5% interest) for \$180,000 cash.
 July 1 Received a cash dividend of \$3 per share.
 Dec. 1 Sold 600 shares of Morgan Corporation common stock for \$32,000 cash.
 Dec. 31 Received a cash dividend of \$3 per share.

Instructions

Journalize the transactions.

Solution**2.**

January 1, 2020		
Stock Investments	180,000	
Cash		180,000
July 1, 2020		
Cash ($4,000 \times \$3$)	12,000	
Dividend Revenue		12,000
December 1, 2020		
Cash	32,000	
Stock Investments ($\$180,000 \times 600/4,000$)		27,000
Gain on Sale of Stock Investments		5,000
December 31, 2020		
Cash [$(4,000 - 600) \times \$3$]	10,200	
Dividend Revenue		10,200

Prepare adjusting entries for fair value, and indicate statement presentation for two classes of securities.

3. (LO 3) Financial Statement Remy Company started business on January 1, 2020, and has the following data at December 31, 2020.

Securities	Cost	Fair Value
Trading	\$120,000	\$132,000
Available-for-sale	100,000	86,000

The available-for-sale securities are held as a long-term investment.

Instructions

- Prepare the adjusting entries to report each class of securities at fair value.
- Indicate the statement presentation of each class of securities and the related unrealized gain (loss) accounts.

Solution**3.****December 31, 2020**

a. Fair Value Adjustment—Trading (\$132,000 – \$120,000)	12,000	12,000
Unrealized Gain or Loss—Income		
Unrealized Gain or Loss—Equity (\$100,000 – \$86,000)	14,000	14,000

b.**Balance Sheet**

Current assets	
Short-term investments, at fair value	\$132,000
Investments	
Debt investment, at fair value	86,000
Stockholders' equity	
Less: Accumulated other comprehensive income	\$ (14,000)
Income Statement	
Other revenues and gains	
Unrealized gain—income	\$ 12,000

Practice Problem

Journalize transactions and prepare adjusting entry to record fair value.

(LO 2,3) In its first year of operations, DeMarco Company had the following selected transactions in stock investments (holdings less than 20%).

- June 1 Purchased for cash 600 shares of Sanburg common stock at \$24 per share.
 July 1 Purchased for cash 800 shares of Cey Corporation common stock at \$33 per share.
 Sept. 1 Received a \$1 per share cash dividend from Cey Corporation.
 Nov. 1 Sold 200 shares of Sanburg common stock for cash at \$27 per share.
 Dec. 15 Received a \$0.50 per share cash dividend on Sanburg common stock.

At December 31, the fair values per share were Sanburg \$25 and Cey \$30.

Instructions

- Journalize the transactions.
- Prepare the adjusting entry at December 31 to report the securities at fair value.

Solution

a. June 1	Stock Investments Cash ($600 \times \$24$) (To record purchase of 600 shares of Sanburg common stock)	14,400	14,400
July 1	Stock Investments Cash ($800 \times \$33$) (To record purchase of 800 shares of Cey common stock)	26,400	26,400
Sept. 1	Cash ($800 \times \$1.00$) Dividend Revenue (To record receipt of \$1 per share cash dividend from Cey Corporation)	800	800
Nov. 1	Cash ($200 \times \$27$) Stock Investments ($200 \times \24) Gain on Sale of Stock Investments (To record sale of 200 shares of Sanburg common stock)	5,400	4,800 600
Dec. 15	Cash [$(600 - 200) \times \$0.50$] Dividend Revenue (To record receipt of \$0.50 per share dividend from Sanburg)	200	200
b. Dec. 31	Unrealized Gain or Loss—Income Fair Value Adjustment—Stock (To record unrealized loss on trading securities)	2,000	2,000

Investment	Cost	Fair Value	Unrealized Gain (Loss)
Sanburg common stock	\$ 9,600 ^a	\$10,000 ^b	\$ 400
Cey common stock	26,400 ^c	24,000 ^d	(2,400)
Totals	<u><u>\$36,000</u></u>	<u><u>\$34,000</u></u>	<u><u>\$(2,000)</u></u>

^a $400 \times \$24$; ^b $400 \times \$25$; ^c $800 \times \$33$; ^d $800 \times \$30$

Questions

- What are the reasons that corporations invest in securities?
- a. What is the cost of an investment in bonds?
b. When is interest on bonds recorded?
- Alex Ramirez is confused about losses and gains on the sale of debt investments. Explain to Alex (a) how the gain or loss is computed, and (b) the statement presentation of the gains and losses.
- Seibel Company sells Mayo's bonds costing \$40,000 for \$45,000, including \$500 of accrued interest. Seibel records a \$5,000 gain on this sale. Is this correct? Explain.
- What is the cost of an investment in stock?
- To acquire Peoples Corporation stock, J. Rich pays \$62,000 in cash. What entry should be made for this investment?

- 7.** (a) When should a long-term investment in common stock be accounted for by the equity method? (b) When is revenue recognized under this method?
- 8.** Ling Corporation uses the equity method to account for its ownership of 35% of the common stock of Gorman Packing. During 2020, Gorman reported a net income of \$80,000 and declares and pays cash dividends of \$10,000. What recognition should Ling Corporation give to these events?
- 9.** What constitutes “significant influence” when an investor’s financial interest is below the 50% level?
- 10.** Distinguish between the cost and equity methods of accounting for investments in stocks.
- 11.** What are consolidated financial statements?
- 12.** What are the valuation guidelines for trading and available-for-sale debt investments at a balance sheet date?
- 13.** Jill Ernst is the controller of J-Products, Inc. At December 31, the end of its first year of operations, the company’s investments in trading debt securities cost \$74,000 and have a fair value of \$72,000. Indicate how Jill would report these data in the financial statements prepared on December 31.
- 14.** Using the data in Question 13, how would Jill report the data if the investments were long-term and the debt securities were classified as available-for-sale?
- 15.** Boise Company’s investments in equity securities at December 31 show total cost of \$200,000 and total fair value of \$210,000. Boise has less than a 20% ownership interest in the equity securities. Prepare the adjusting entry.
- 16.** Where is Accumulated Other Comprehensive Loss reported on the balance sheet?
- 17.** Bargain Wholesale Supply owns stock in Cyrus Corporation, which it intends to hold indefinitely because of some negative tax consequences if sold. Should the investment in Cyrus be classified as a short-term investment? Why?

Brief Exercises

Journalize entries for debt investments.

BE16.1 (LO 1) Ownbey Corporation purchased debt investments for \$52,000 on January 1, 2020. On July 1, 2020, Ownbey received cash interest of \$2,340. Journalize the purchase and the receipt of interest. Assume that no interest has been accrued.

Journalize entries for stock investments.

BE16.2 (LO 2) On August 1, Shaw Company buys 1,000 shares of Estrada common stock for \$37,000 cash. On December 1, Shaw sells the stock investments for \$40,000 in cash. Journalize the purchase and sale of the common stock.

Record transactions under the equity method of accounting.

BE16.3 (LO 2) Noler Company owns 25% of Lauer Company. For the current year, Lauer reports net income of \$180,000 and declares and pays a \$50,000 cash dividend. Record Noler’s equity in Lauer’s net income and the receipt of dividends from Lauer.

Prepare adjusting entry using fair value.

BE16.4 (LO 3) The cost of the trading debt securities of Munoz Company at December 31, 2020, is \$64,000. At December 31, 2020, the fair value of the securities is \$59,000. Prepare the adjusting entry to record the securities at fair value.

Indicate statement presentation using fair value.

BE16.5 (LO 3) Financial Statement For the data presented in BE16.4, show the financial statement presentation of the trading securities and related accounts.

Prepare adjusting entry using fair value.

BE16.6 (LO 3) In its first year of operations, Godfrey Corporation purchased, as a long-term investment, available-for-sale debt securities costing \$72,000. At December 31, 2020, the fair value of the securities is \$68,000. Prepare the adjusting entry to record the securities at fair value.

Indicate statement presentation using fair value.

BE16.7 (LO 3) Financial Statement For the data presented in BE16.6, show the financial statement presentation of the securities and related accounts. Assume the securities are noncurrent.

Prepare investments section of balance sheet.

BE16.8 (LO 3) Financial Statement Kruger Corporation has the following long-term investments. (1) Common stock of Eidman Co. (10% ownership), cost \$108,000, fair value \$115,000. (2) Common stock of Pickerill Inc. (30% ownership), cost \$210,000, equity \$260,000. (3) Debt investment, cost \$90,000, fair value \$150,000. Prepare the investments section of the balance sheet.

Journalize transactions under cost and equity methods.

BE16.9 (LO 2, 3) Christina Corporation purchased 400 shares of Nolan Inc. common stock for \$13,200 (Christina does not have significant influence). During the year, Nolan paid a cash dividend of \$3.25 per share. At year-end, Nolan stock was selling for \$34.50 per share. Prepare Christina’s journal entries to

record (a) the purchase of the investment, (b) the dividends received, and (c) the fair value adjustment. (Assume a zero balance in the Fair Value Adjustment account.)

BE16.10 (LO 3) Detroit Company has a stock portfolio valued at \$6,000. Its cost was \$4,000. If the Fair Value Adjustment account has a debit balance of \$300, prepare the journal entry at year-end.

Prepare journal entries for trading securities.

DO IT! Exercises

DO IT! 16.1 (LO 1) Kurtyka Corporation had the following transactions relating to debt investments: *Make entries for bond investment.*

- Jan. 1, 2020 Purchased 50, \$1,000, 10% Spiller Company bonds for \$50,000. Interest is payable annually on January 1.
- Dec. 31, 2020 Accrued interest on Spiller Company bonds.
- Jan. 1, 2021 Received interest from Spiller Company bonds.
- Jan. 1, 2021 Sold 30 Spiller Company bonds for \$29,000.

Journalize the above transactions, including the adjusting entry for the accrual of interest on December 31, 2020.

DO IT! 16.2 (LO 2) Presented below are two independent situations:

1. Edelman Inc. acquired 10% of the 500,000 shares of common stock of Schuberger Corporation at a total cost of \$11 per share on June 17, 2020. On September 3, Schuberger declared and paid a \$160,000 dividend. On December 31, Schuberger reported net income of \$550,000 for the year.
2. Wen Corporation obtained significant influence over Hunsaker Company by buying 30% of Hunsaker's 100,000 outstanding shares of common stock at a cost of \$18 per share on January 1, 2020. On May 15, Hunsaker declared and paid a cash dividend of \$150,000. On December 31, Hunsaker reported net income of \$270,000 for the year.

Prepare all necessary journal entries for 2020 for (a) Edelman and (b) Wen.

DO IT! 16.3a (LO 3) Some of Tollakson Corporation's investments in debt securities are classified as trading securities and some are classified as available-for-sale. The cost and fair value of each category at December 31, 2020, were as follows: *Make journal entries for trading and available-for-sale securities.*

	<u>Cost</u>	<u>Fair Value</u>	<u>Unrealized Gain (Loss)</u>
Trading securities	\$96,300	\$84,900	\$(11,400)
Available-for-sale securities	\$59,000	\$63,200	\$ 4,200

At December 31, 2019, the Fair Value Adjustment—Trading account had a debit balance of \$3,200, and the Fair Value Adjustment—Available-for-Sale account had a credit balance of \$5,750. Prepare the required journal entries for each group of securities for December 31, 2020.

DO IT! 16.3b (LO 3) Financial Statement Identify where each of the following items would be reported in the financial statements. *Indicate financial statement presentation of investments.*

1. Loss on sale of investments in stock.
2. Unrealized gain or loss—equity.
3. Fair value adjustment—trading.
4. Interest earned on investments in bonds.
5. Unrealized loss on trading securities.

Use the following possible categories:

Balance sheet:

Current assets	Current liabilities
Investments	Long-term liabilities
Property, plant, and equipment	Stockholders' equity
Intangible assets	

Income statement:

Other revenues and gains	Other expenses and losses
--------------------------	---------------------------

Exercises

Understand debt and stock investments.

E16.1 (LO 1) Mr. Taliaferro is studying for an accounting test and has developed the following questions about investments.

1. What are three reasons why companies purchase investments in debt or stock securities?
2. Why would a corporation have excess cash that it does not need for operations?
3. What is the typical investment when investing cash for short periods of time?
4. What are the typical investments when investing cash to generate earnings?
5. Why would a company invest in securities that provide no current cash flows?
6. What is the typical stock investment when investing cash for strategic reasons?

Instructions

Provide answers for Mr. Taliaferro.

Journalize debt investment transactions and accrue interest.

E16.2 (LO 1) Jenek Corporation had the following transactions pertaining to debt investments.

1. Purchased 40 Leeds Co. 9% bonds (each with a face value of \$1,000) for \$40,000 cash. Interest is payable annually on January 1, 2020.
2. Accrued interest on Leeds Co. bonds on December 31, 2020.
3. Received interest on Leeds Co. bonds on January 1, 2021.
4. Sold 30 Leeds Co. bonds for \$33,000 on January 1, 2021.

Instructions

Journalize the transactions.

Journalize debt investment transactions, accrue interest, and record sale.

E16.3 (LO 1) Flynn Company purchased 70 Rinehart Company 6%, 10-year, \$1,000 bonds on January 1, 2020, for \$70,000. The bonds pay interest annually on January 1. On January 1, 2021, after receipt of interest, Flynn Company sold 40 of the bonds for \$38,500.

Instructions

Prepare the journal entries to record the transactions described above.

Journalize stock investment transactions.

E16.4 (LO 2) Financial Statement Hulse Company had the following transactions pertaining to stock investments.

- | | |
|---------|--|
| Feb. 1 | Purchased 600 shares of Wade common stock (2%) for \$7,200 cash. |
| July 1 | Received cash dividends of \$1 per share on Wade common stock. |
| Sept. 1 | Sold 300 shares of Wade common stock for \$4,300. |
| Dec. 1 | Received cash dividends of \$1 per share on Wade common stock. |

Instructions

- a. Journalize the transactions.
- b. Explain how dividend revenue and the gain (loss) on sale should be reported in the income statement.

Journalize transactions for investments in stocks.

E16.5 (LO 2) Nosker Inc. had the following transactions pertaining to investments in common stock.

- | | |
|---------|---|
| Jan. 1 | Purchased 2,500 shares of Escalante Corporation common stock (5%) for \$152,000 cash. |
| July 1 | Received a cash dividend of \$3 per share. |
| Dec. 1 | Sold 500 shares of Escalante Corporation common stock for \$32,000 cash. |
| Dec. 31 | Received a cash dividend of \$3 per share. |

Instructions

Journalize the transactions.

Journalize transactions for investments in stocks.

E16.6 (LO 2) On February 1, Rinehart Company purchased 500 shares (2% ownership) of Givens Company common stock for \$32 per share. On March 20, Rinehart Company sold 100 shares of Givens stock for \$2,900. Rinehart received a dividend of \$1.00 per share on April 25. On June 15, Rinehart sold 200 shares of Givens stock for \$7,600. On July 28, Rinehart received a dividend of \$1.25 per share.

Instructions

Prepare the journal entries to record the transactions described above.

E16.7 (LO 2) On January 1, Zabel Corporation purchased a 25% equity in Helbert Corporation for \$180,000. At December 31, Helbert declared and paid a \$60,000 cash dividend and reported net income of \$200,000.

Journalize and post transactions, under the equity method.

Instructions

- Journalize the transactions.
- Determine the amount to be reported as an investment in Helbert stock at December 31.

E16.8 (LO 2, 3) The following are two independent situations.

- Gambino Cosmetics acquired 10% of the 200,000 shares of common stock of Nevins Fashion at a total cost of \$13 per share on March 18, 2020. On June 30, Nevins declared and paid a \$60,000 dividend. On December 31, Nevins reported net income of \$122,000 for the year. At December 31, the market price of Nevins Fashion was \$15 per share.
- Kanza, Inc., obtained significant influence over Rogan Corporation by buying 40% of Rogan's 30,000 outstanding shares of common stock at a total cost of \$9 per share on January 1, 2020. On June 15, Rogan declared and paid a cash dividend of \$30,000. On December 31, Rogan reported a net income of \$80,000 for the year.

Journalize entries under cost and equity methods.

Instructions

Prepare all the necessary journal entries for 2020 for (a) Gambino Cosmetics and (b) Kanza, Inc.

E16.9 (LO 2) Writing Agee Company purchased 70% of the outstanding common stock of Himes Corporation.

Understand the usefulness of consolidated statements.

Instructions

- Explain the relationship between Agee Company and Himes Corporation.
- How should Agee account for its investment in Himes?
- Why is the accounting treatment described in (b) useful?

E16.10 (LO 3) Financial Statement At December 31, 2020, the trading debt securities for Storrer, Inc. are as follows.

Prepare adjusting entry to record fair value, and indicate statement presentation.

Security	Cost	Fair Value
A	\$17,500	\$16,000
B	12,500	14,000
C	23,000	21,000
	<u>\$53,000</u>	<u>\$51,000</u>

Instructions

- Prepare the adjusting entry at December 31, 2020, to report the securities at fair value.
- Show the balance sheet and income statement presentation at December 31, 2020, after adjustment to fair value.

E16.11 (LO 3) Financial Statement Writing Data for debt investments classified as trading securities are presented in E16.10. Assume instead that the investments are classified as available-for-sale debt securities. They have the same cost and fair value as indicated in E16.10. The securities are considered to be a long-term investment.

Prepare adjusting entry to record fair value, and indicate statement presentation.

Instructions

- Prepare the adjusting entry at December 31, 2020, to report the securities at fair value.
- Show the statement presentation at December 31, 2020, after adjustment to fair value.
- E. Kretsinger, a member of the board of directors, does not understand the reporting of the unrealized gains or losses. Write a letter to Ms. Kretsinger explaining the reporting and the purposes that it serves.

E16.12 (LO 3) Financial Statement Uttinger Company has the following data at December 31, 2020.

Prepare adjusting entries for fair value, and indicate statement presentation for two classes of securities.

Securities	Cost	Fair Value
Trading	\$120,000	\$126,000
Available-for-sale	100,000	96,000

The available-for-sale securities are held as a long-term investment.

Instructions

- Prepare the adjusting entries to report each class of securities at fair value.
- Indicate the statement presentation of each class of securities and the related unrealized gain (loss) accounts.

Problems: Set A

Journalize debt investment transactions and show financial statement presentation.

P16.1A (LO 1, 3) Financial Statement Vilander Carecenters Inc. provides financing and capital to the healthcare industry, with a particular focus on nursing homes for the elderly. The following selected transactions relate to bonds acquired as an investment by Vilander, whose fiscal year ends on December 31.

2020

- Jan. 1 Purchased at face value \$2,000,000 of Javier Nursing Centers, Inc., 10-year, 8% bonds dated January 1, 2020, directly from Javier.
Dec. 31 Accrual of interest at year-end on the Javier bonds.

(Assume that all intervening transactions and adjustments have been properly recorded and that the number of bonds owned has not changed from December 31, 2020, to December 31, 2022.)

2023

- Jan. 1 Received the annual interest on the Javier bonds.
Jan. 1 Sold \$1,000,000 Javier bonds at 106.
Dec. 31 Accrual of interest at year-end on the Javier bonds.

Instructions

- a. Gain on sale of debt investment \$60,000

- Journalize the listed transactions for the years 2020 and 2023.
- Assume that the fair value of the bonds at December 31, 2020, was \$2,200,000. These bonds are classified as available-for-sale securities. Prepare the adjusting entry to record these bonds at fair value.
- Based on your analysis in part (b), show the balance sheet presentation of the bonds and interest receivable at December 31, 2020. Assume the investments are considered long-term. Indicate where any unrealized gain or loss is reported in the financial statements.

Journalize investment transactions, prepare adjusting entry, and show statement presentation.

P16.2A (LO 2, 3) Financial Statement In January 2020, the management of Kinzie Company concludes that it has sufficient cash to permit some short-term investments in debt and equity securities. During the year, the following transactions occurred.

- Feb. 1 Purchased 600 shares of Muninger common stock for \$32,400.
Mar. 1 Purchased 800 shares of Batman common stock for \$20,000.
Apr. 1 Purchased 50 of \$1,000, 7% Yoakem bonds for \$50,000. Interest is payable semiannually on April 1 and October 1.
July 1 Received a cash dividend of \$0.60 per share on the Muninger common stock.
Aug. 1 Sold 200 shares of Muninger common stock at \$58 per share.
Sept. 1 Received a \$1 per share cash dividend on the Batman common stock.
Oct. 1 Received the semiannual interest on the Yoakem bonds.
Oct. 1 Sold the Yoakem bonds for \$49,000.

At December 31, the fair value of the Muninger common stock was \$55 per share. The fair value of the Batman common stock was \$24 per share.

Instructions

- a. Gain on sale of stock investment \$800

- Journalize the transactions and post to the accounts Debt Investments and Stock Investments. (Use the T-account form.)
- Prepare the adjusting entry at December 31, 2020, to report the investment securities at fair value. All securities are considered to be trading securities.
- Show the balance sheet presentation of investment securities at December 31, 2020.
- Identify the income statement accounts and give the statement classification of each account.

P16.3A (LO 2, 3) Financial Statement On December 31, 2020, Turnball Associates owned the following securities, held as a long-term investment. The securities are not held for influence or control of the investee.

Journalize transactions and adjusting entry for stock investments.

Common Stock	Shares	Cost
Gehring Co.	2,000	\$60,000
Wooderson Co.	5,000	45,000
Kitselton Co.	1,500	30,000

On December 31, 2020, the total fair value of the securities was equal to its cost. In 2021, the following transactions occurred.

- Aug. 1 Received \$0.50 per share cash dividend on Gehring Co. common stock.
- Sept. 1 Sold 1,500 shares of Wooderson Co. common stock for cash at \$8 per share.
- Oct. 1 Sold 800 shares of Gehring Co. common stock for cash at \$33 per share.
- Nov. 1 Received \$1 per share cash dividend on Kitselton Co. common stock.
- Dec. 15 Received \$0.50 per share cash dividend on Gehring Co. common stock.
- 31 Received \$1 per share annual cash dividend on Wooderson Co. common stock.

At December 31, the fair values per share of the common stocks were: Gehring Co. \$32, Wooderson Co. \$8, and Kitselton Co. \$18.

Instructions

- a. Journalize the 2021 transactions and post to the account Stock Investments. (Use the T-account form.)
- b. Prepare the adjusting entry at December 31, 2021, to show the securities at fair value.
- c. Show the balance sheet presentation of the investments at December 31, 2021. At this date, Turnball Associates has common stock \$1,500,000 and retained earnings \$1,000,000.
- b. **Unrealized loss \$4,100**

P16.4A (LO 2, 3) Heidebrecht Design acquired 20% of the outstanding common stock of Quayle Company on January 1, 2020, by paying \$800,000 for the 30,000 shares. Quayle declared and paid \$0.30 per share cash dividends on March 15, June 15, September 15, and December 15, 2020. Quayle reported net income of \$320,000 for the year. At December 31, 2020, the market price of Quayle common stock was \$34 per share.

Prepare entries under the cost and equity methods, and tabulate differences.

Instructions

- a. Prepare the journal entries for Heidebrecht Design for 2020 assuming Heidebrecht Design cannot exercise significant influence over Quayle.
- b. Prepare the journal entries for Heidebrecht Design for 2020, assuming Heidebrecht Design can exercise significant influence over Quayle. Use the equity method.
- c. Indicate the balance sheet and income statement account balances at December 31, 2020, under each method of accounting.

- a. **Total dividend revenue \$36,000**
- b. **Revenue from stock investments \$64,000**

P16.5A (LO 2, 3) Financial Statement The following securities are in Frederick Company's portfolio of long-term securities at December 31, 2020.

Journalize stock investment transactions and show statement presentation.

	Cost
1,000 shares of Willhite Corporation common stock	\$52,000
1,400 shares of Hutcherson Corporation common stock	84,000
1,200 shares of Downing Corporation preferred stock	33,600

On December 31, 2020, the total cost of the portfolio equaled total fair value. Frederick had the following transactions related to the securities during 2021.

- Jan. 20 Sold all 1,000 shares of Willhite Corporation common stock at \$55 per share.
- 28 Purchased 400 shares of \$70 par value common stock of Liggett Corporation at \$78 per share.
- 30 Received a cash dividend of \$1.15 per share on Hutcherson Corp. common stock.
- Feb. 8 Received cash dividends of \$0.40 per share on Downing Corp. preferred stock.
- 18 Sold all 1,200 shares of Downing Corp. preferred stock at \$27 per share.
- July 30 Received a cash dividend of \$1.00 per share on Hutcherson Corp. common stock.
- Sept. 6 Purchased an additional 900 shares of \$10 par value common stock of Liggett Corporation at \$82 per share.
- Dec. 1 Received a cash dividend of \$1.50 per share on Liggett Corporation common stock.

At December 31, 2021, the fair values of the securities were:

Hutcherson Corporation common stock	\$64 per share
Liggett Corporation common stock	\$72 per share

Instructions

- a. Loss on sale of stock investment \$1,200
- b. Post to the investment account. (Use a T-account.)
- c. Prepare the adjusting entry at December 31, 2021 to report the portfolio at fair value.
- d. Show the balance sheet presentation at December 31, 2021, for the investment-related accounts.

Prepare a balance sheet.

P16.6A (LO 3) Financial Statement The following data, presented in alphabetical order, are taken from the records of Nieto Corporation.

Accounts payable	\$ 260,000
Accounts receivable	140,000
Accumulated depreciation—buildings	180,000
Accumulated depreciation—equipment	52,000
Allowance for doubtful accounts	6,000
Bonds payable (10%, due 2028)	500,000
Buildings	950,000
Cash	62,000
Common stock (\$10 par value; 500,000 shares authorized, 150,000 shares issued)	1,500,000
Dividends payable	80,000
Equipment	275,000
Goodwill	200,000
Income taxes payable	120,000
Inventory	170,000
Investment in Mara common stock (30% ownership), at equity	380,000
Investment in Sasse common stock, at fair value	300,000
Land	390,000
Notes payable (due 2021)	70,000
Paid-in capital in excess of par—common stock	130,000
Premium on bonds payable	40,000
Prepaid insurance	16,000
Retained earnings	125,000
Short-term investments, at fair value	180,000

The investment in Sasse common stock is considered to be a long-term security.

Instructions

Total assets \$2,825,000

Prepare a classified balance sheet at December 31, 2020.

Continuing Case

Cookie Creations

(Note: This is a continuation of the Cookie Creations case from Chapters 1 through 15.)

CC16 Natalie has been approached by Ken Thornton, a shareholder of The Beanery Coffee Inc. Ken wants to retire and would like to sell his 1,000 shares in The Beanery Coffee, which represents 30% of all shares issued. The Beanery is currently operated by Ken's twin daughters, who each own 35% of the common shares. The Beanery not only operates a coffee shop but also roasts and sells beans to retailers, under the name "Rocky Mountain Beanery."

Ken has met with Curtis and Natalie to discuss the business operation. All have concluded that there would be many advantages for Cookie & Coffee Creations Inc. to acquire an interest in The Beanery Coffee. Despite the apparent advantages, however, Natalie and Curtis are still not convinced that they should participate in this business venture.

Ethics Case

EC16 Harding Financial Services Company holds a large portfolio of debt and equity securities as an investment. The total fair value of the portfolio at December 31, 2020, is greater than total cost. Some securities have increased in value and others have decreased. Ann Bales, the financial vice president, and Kim Reeble, the controller, are in the process of classifying for the first time the securities in the portfolio.

Bales suggests classifying the securities that have increased in value as trading securities in order to increase net income for the year. She wants to classify the securities that have decreased in value as long-term available-for-sale securities, so that the decreases in value will not affect 2020 net income.

Reebel disagrees. She recommends classifying the securities that have decreased in value as trading securities and those that have increased in value as long-term available-for-sale securities. Reeble argues that the company is having a good earnings year and that recognizing the losses now will help to smooth income for this year. Moreover, for future years, when the company may not be as profitable, the company will have built-in gains.

Instructions

- a. Will classifying the securities as Bales and Reeble suggest actually affect earnings as each says it will?
- b. Is there anything unethical in what Bales and Reeble propose? Who are the stakeholders affected by their proposals?
- c. Assume that Bales and Reeble properly classify the portfolio. At year-end, Bales proposes to sell the securities that will increase 2020 net income, and that Reeble proposes to sell the securities that will decrease 2020 net income. Is this unethical?

Comprehensive Accounting Cycle Review

ACR16 Writing Part I Debby Kauffman and her two colleagues, Jamie Hiatt and Ella Rincon, are personal trainers at an upscale health spa/resort in Tampa, Florida. They want to start a health club that specializes in health plans for people in the 50+ age range. The growing population in this age range and strong consumer interest in the health benefits of physical activity have convinced them they can profitably operate their own club. In addition to many other decisions, they need to determine what type of business organization they want. Jamie believes there are more advantages to the corporate form than a partnership, but he hasn't yet convinced Debby and Ella. They have come to you, a small-business consulting specialist, seeking information and advice regarding the choice of starting a partnership versus a corporation.

Instructions

- a. Prepare a memo (dated May 26, 2019) that describes the advantages and disadvantages of both partnerships and corporations. Advise Debby, Jamie, and Ella regarding which organizational form you believe would better serve their purposes. Make sure to include reasons supporting your advice.

Part II After deciding to incorporate, each of the three investors receives 20,000 shares of \$2 par common stock on June 12, 2019, in exchange for their co-owned building (\$200,000 fair value) and \$100,000 total cash they contributed to the business. The next decision that Debby, Jamie, and Ella need to make is how to obtain financing for renovation and equipment. They understand the difference between equity securities and debt securities, but do not understand the tax, net income, and earnings per share consequences of equity versus debt financing on the future of their business.

Instructions

- b. Prepare notes for a discussion with the three entrepreneurs in which you will compare the consequences of using equity versus debt financing. As part of your notes, show the differences in interest and tax expense assuming \$1,400,000 is financed with common stock, and then alternatively with debt. Assume that when common stock is used, 140,000 shares will be issued. When debt is used, assume the interest rate on debt is 9%, the tax rate is 32%, and income before interest and taxes is \$300,000. (You may want to use an electronic spreadsheet.)

Part III During the discussion about financing, Ella mentions that one of her clients, Timothy Hansen, has approached her about buying a significant interest in the new club. Having an interested investor

sways the three to issue equity securities to provide the financing they need. On July 21, 2019, Mr. Hansen buys 90,000 shares at a price of \$10 per share.

The club, LifePath Fitness, opens on January 12, 2020, and after a slow start begins to produce the revenue desired by the owners. The owners decide to pay themselves a stock dividend since cash has been less than abundant since they opened their doors. The 10% stock dividend is declared by the owners on July 27, 2020. The market price of the stock is \$3 on the declaration date. The date of record is July 31, 2020 (there have been no changes in stock ownership since the initial issuance), and the issue date is August 15, 2020. By the middle of the fourth quarter of 2020, the cash flow of LifePath Fitness has improved to the point that the owners feel ready to pay themselves a cash dividend. They declare a \$0.05 cash dividend on December 4, 2020. The record date is December 14, 2020, and the payment date is December 24, 2020.

Instructions

- c. (1) Record all of the transactions related to the common stock of LifePath Fitness during the years 2019 and 2020. (2) Indicate how many shares are issued and outstanding after the stock dividend is issued.

Part IV Since the club opened, a major concern has been the pool facilities. Although the existing pool is adequate, Debby, Jamie, and Ella all desire to make LifePath a cutting-edge facility. Until the end of 2020, financing concerns prevented this improvement. However, because there has been steady growth in clientele, revenue, and income since the third quarter of 2020, the owners have explored possible financing options. They are hesitant to issue stock and change the ownership mix because they have been able to work together as a team with great effectiveness. They have formulated a plan to issue secured term bonds to raise the needed \$600,000 for the pool facilities. By the end of December 2020, everything was in place for the bond issue to go ahead. On January 1, 2021, the \$600,000 face value bonds were issued. The bonds pay annual interest of 6% on January 1 of each year. The bonds mature in 10 years, and amortization is computed using the straight-line method.

Instructions

- d. Record (1) the issuance of the secured bonds, (2) the adjusting entry required at December 31, 2021, (3) the interest payment made on January 1, 2022, and (4) the interest accrued on December 31, 2022.

Part V Mr. Hansen's purchase of the stock of LifePath Fitness was done through his business. The stock investment has always been accounted for using the cost method on his firm's books. However, early in 2022 he decided to take his company public. He is preparing an IPO (initial public offering), and he needs to have the firm's financial statements audited. One of the issues to be resolved is to restate the stock investment in LifePath Fitness using the equity method since Mr. Hansen's ownership percentage is greater than 20%.

Instructions

- e. (1) Give the entries that would have been made on Hansen's books if the equity method of accounting for investments had been used from the initial investment through 2021. Assume the following data for LifePath. (*Hint:* Hanson owns 40% of LifePath.)

	<u>2019</u>	<u>2020</u>	<u>2021</u>
Net income	\$30,000	\$70,000	\$105,000
Total cash dividends	\$ 0	\$ 8,250	\$ 30,000

- (2) Compute the balance in the Stock Investment account (as it relates to LifePath Fitness) at the end of 2021.

Expand Your Critical Thinking

Financial Reporting Problem: Apple Inc.

CT16.1 The annual report of **Apple Inc.** is presented in Appendix A. The complete annual report, including the notes to the financial statements, is available at the company's website.

Instructions

- a. Determine the percentage increase for (1) short-term marketable securities from 2014 to 2015, and (2) long-term marketable securities from 2014 to 2015.
- b. Using Apple's consolidated statement of cash flows, determine:
 1. Purchases of marketable securities during the current year.
 2. How much was spent for business acquisitions, net of cash acquired during the current year.

Comparative Analysis Problem: PepsiCo, Inc. vs. The Coca-Cola Company

CT16.2 **PepsiCo**'s financial statements are presented in Appendix B. Financial statements of **The Coca-Cola Company** are presented in Appendix C. The complete annual reports of PepsiCo and Coca-Cola, including the notes to the financial statements, are available at each company's respective website.

Instructions

Based on the information contained in these financial statements, determine the net cash used in investing (investment) activities for the current year (from the statement of cash flows) for each company.

Comparative Analysis Problem: Amazon.com, Inc. vs. Wal-Mart Stores, Inc.

CT16.3 **Amazon.com, Inc.**'s financial statements are presented in Appendix D. Financial statements of **Wal-Mart Stores, Inc.** are presented in Appendix E. The complete annual reports of Amazon and Wal-Mart, including the notes to the financial statements, are available at each company's respective website.

Instructions

Based on the information contained in these financial statements, determine the net cash used in investing activities for each company.

Real-World Focus

CT16.4 Most publicly traded companies are examined by numerous analysts. These analysts often don't agree about a company's future prospects. In this exercise, you will find analysts' ratings about companies and make comparisons over time and across companies in the same industry. You will also see to what extent the analysts experienced "earnings surprises." Earnings surprises can cause changes in stock prices.

Instructions

Go to the **Yahoo! Finance** website and then select a company. Use the website's resources to answer the following questions.

- a. How many analysts rated the company?
- b. What percentage rated it a strong buy?
- c. What was the average rating for the week?
- d. Did the average rating improve or decline relative to the previous week?
- e. What was the amount of the earnings surprise percentage during the last quarter?

Decision-Making Across the Organization

CT16.5 At the beginning of the question-and-answer portion of the annual stockholders' meeting of Neosho Corporation, stockholder John Linton asks, "Why did management sell the holdings in JMB Company at a loss when this company has been very profitable during the period Neosho held its stock?"

Since president Tony Cedeno has just concluded his speech on the recent success and bright future of Neosho, he is taken aback by this question and responds, “I remember we paid \$1,300,000 for that stock some years ago. I am sure we sold that stock at a much higher price. You must be mistaken.”

Linton retorts, “Well, right here in footnote number 7 to the annual report it shows that 240,000 shares, a 30% interest in JMB, were sold on the last day of the year. Also, it states that JMB earned \$520,000 this year and paid out \$160,000 in cash dividends. Further, a summary statement indicates that in past years, while Neosho held JMB stock, JMB earned \$1,240,000 and paid out \$440,000 in dividends. Finally, the income statement for this year shows a loss on the sale of JMB stock of \$180,000. So, I doubt that I am mistaken.”

Red-faced, president Cedeno turns to you.

Instructions

With the class divided into groups, answer the following.

- a. What dollar amount did Neosho receive upon the sale of the JMB stock?
- b. Explain why both stockholder Linton and president Cedeno are correct.

Communication Activity

CT16.6 Fegan Corporation has purchased two securities for its portfolio. The first is a stock investment in Plummer Corporation, one of its suppliers. Fegan purchased 10% of Plummer with the intention of holding it for a number of years, but has no intention of purchasing more shares. The second investment was a purchase of debt securities. Fegan purchased the debt securities because its analysts believe that changes in market interest rates will cause these securities to increase in value in a short period of time. Fegan intends to sell the securities as soon as they have increased in value.

Instructions

Write a memo to Sam Nichols, the chief financial officer, explaining how to account for each of these investments. Explain what the implications for reported income are from this accounting treatment.

All About You

CT16.7 The **Securities and Exchange Commission** (SEC) is the primary regulatory agency of U.S. financial markets. Its job is to ensure that the markets remain fair for all investors.

Instructions

- a. Go to the SEC website and find the definition of the following terms.
 1. Ask price.
 2. Margin.
 3. Prospectus.
 4. Index fund.
- b. Search the SEC site for “investor quiz” and then take the money smarts quiz.

FASB Codification Activity

CT16.8 If your school has a subscription to the FASB Codification, log in and prepare responses to the following.

- a. What is the definition of a trading security?
- b. What is the definition of an available-for-sale security?
- c. What is definition of a holding gain or loss?

A Look at IFRS

LEARNING OBJECTIVE 4

Compare the accounting for investments under GAAP and IFRS.

Until recently, when the IASB issued *IFRS 9*, the accounting and reporting for investments under IFRS and GAAP were for the most part very similar. However, *IFRS 9* introduces a new framework for classifying investments.

Key Points

Following are the similarities and differences between GAAP and IFRS as related to investments.

Similarities

- The basic accounting entries to record the acquisition of debt securities, the receipt of interest, and the sale of debt securities are the same under IFRS and GAAP.
- The basic accounting entries to record the acquisition of stock investments, the receipt of dividends, and the sale of stock securities are the same under IFRS and GAAP.
- Both IFRS and GAAP use the same criteria to determine whether the equity method of accounting should be used—that is, significant influence with a general guide of over 20% ownership, IFRS uses the term **associate investment** rather than equity investment to describe its investment under the equity method.
- Equity investments are generally recorded and reported at fair value under IFRS. Equity investments do not have a fixed interest or principal payment schedule and therefore cannot be accounted for at amortized cost. In general, equity investments are valued at fair value, with all gains and losses reported in income, similar to GAAP.

Differences

- Under IFRS, both the investor and an associate company should follow the same accounting policies. As a result, in order to prepare financial information, adjustments are made to the associate's policies to conform to the investor's books. GAAP does not have that requirement.
- In general, IFRS requires that companies determine how to measure their financial assets based on two criteria:
 - ◆ The company's business model for managing their financial assets; and
 - ◆ The contractual cash flow characteristics of the financial asset.

If a company has (1) a business model whose objective is to hold assets in order to collect contractual cash flows and (2) the contractual terms of the financial asset gives specified dates to cash flows that are solely payments of principal and interest on the principal amount outstanding, then the company should use cost (often referred to as amortized cost).

For example, assume that **Mitsubishi** purchases a bond investment that it intends to hold to maturity (held-for-collection). Its business model for this type of investment is to collect interest and then principal at maturity. The payment dates for the interest rate and principal are stated on the bond. In this case, Mitsubishi accounts for the investment at cost. If, on the other hand, Mitsubishi purchased the bonds as part of a trading strategy to speculate on interest rate changes (a trading investment), then the debt investment is reported at fair value. As a result, only debt investments such as receivables, loans, and bond investments that meet the two criteria above are recorded at amortized cost. All other debt investments are recorded and reported at fair value.

- Unrealized gains and losses related to available-for-sale shares are reported in other comprehensive income under IFRS. These gains and losses that accumulate are then reported in the statement of financial position. Under GAAP, unrealized gains and losses on shares are reported as part of net income.

Looking to the Future

As indicated earlier, the IASB has issued a new revised IFRS which deals with the accounting issues related to investment securities. The FASB has also issued a new standard in this area. Some differences exist between the IFRS and the FASB regarding investments, but in general they are very similar.

IFRS Practice

IFRS Self-Test Questions

1. The following asset is **not** considered a financial investment under IFRS:
 - a. trading securities.
 - b. equity securities.
 - c. held-for-collection securities.
 - d. inventories.
2. Under IFRS, the equity method of accounting for long-term investments in common stock should be used when the investor has significant influence over an investee and owns:
 - a. between 20% and 50% of the investee's common stock.
 - b. 30% or more of the investee's common stock.
3. Under IFRS, the unrealized loss on trading investments should be reported:
 - a. as part of other comprehensive loss reducing net income.
 - b. on the income statement reducing net income.
 - c. as part of other comprehensive loss not affecting net income.
 - d. directly to stockholders' equity bypassing the income statement.

Answers to IFRS Self-Test Questions

Statement of Cash Flows

Chapter Preview

The balance sheet, income statement, and retained earnings statement do not always show the whole picture of the financial condition of a company or institution. In fact, looking at the financial statements of some well-known companies, a thoughtful investor might ask questions like these: How did **Eastman Kodak** finance cash dividends of \$649 million in a year in which it earned only \$17 million? How could **United Air Lines** purchase new planes that cost \$1.9 billion in a year in which it reported a net loss of over \$2 billion? How did the companies that spent a combined fantastic \$3.4 trillion on mergers and acquisitions in a recent year finance those deals? Answers to these and similar questions can be found in this chapter, which presents the statement of cash flows.

Feature Story

Got Cash?

Companies must be ready to respond to changes quickly in order to survive and thrive. This requires careful management of cash. One company that managed cash successfully in its

early years was **Microsoft**. During those years, the company paid much of its payroll with stock options (rights to purchase company stock in the future at a given price) instead of cash. This conserved cash and turned more than a thousand of its employees into millionaires.

In recent years, Microsoft has had a different kind of cash problem. Now that it has reached a more “mature” stage in life,

it generates so much cash—roughly \$1 billion per month—that it cannot always figure out what to do with it. At one time, Microsoft had accumulated \$60 billion.

The company said it was accumulating cash to invest in new opportunities, buy other companies, and pay off pending lawsuits. Microsoft's stockholders complained that holding all this cash was putting a drag on the company's profitability. Why? Because Microsoft had the cash invested in very low-yielding government securities. Stockholders felt that the company either should find new investment projects that would bring higher returns, or return some of the cash to stockholders.

Finally, Microsoft announced a plan to return cash to stockholders by paying a special one-time \$32 billion dividend. This special dividend was so large that, according to the U.S. Commerce Department, it caused total personal income in the United States to rise by 3.7% in one month—the largest increase ever recorded by the agency. (It also made the holiday

season brighter, especially for retailers in the Seattle area.) Microsoft also doubled its regular annual dividend to \$3.50 per share. Further, it announced that it would spend another \$30 billion buying treasury stock.

Apple also has encountered this cash “problem.” Recently, Apple had nearly \$100 billion in liquid assets (cash, cash equivalents, and investment securities). The company was generating \$37 billion of cash per year from its operating activities but spending only about \$7 billion on plant assets and purchases of patents. In response to shareholder pressure, Apple announced that it would begin to pay a quarterly dividend of \$2.65 per share and buy back up to \$10 billion of its stock. Analysts noted that the dividend consumes only \$10 billion of cash per year. This leaves Apple wallowing in cash. The rest of us should have such problems.

Usefulness and Format of the Statement of Cash Flows

LEARNING OBJECTIVE 1

Discuss the usefulness and format of the statement of cash flows.

The balance sheet, income statement, and retained earnings statement provide only limited information about a company's cash flows (cash receipts and cash payments). For example, comparative balance sheets show the net increase in property, plant, and equipment during the year. But, they do not show how the additions were financed or paid for. The income statement shows net income based on the accrual basis of accounting. But, it does not indicate the amount of cash generated by operating activities. The retained earnings statement shows cash dividends declared but not the cash dividends paid during the year. None of these statements presents a detailed summary of where cash came from and how it was used.

Usefulness of the Statement of Cash Flows

The **statement of cash flows** reports the cash receipts, cash payments, and net change in cash resulting from operating, investing, and financing activities during a period. The information in a statement of cash flows helps investors, creditors, and others assess the following.

- 1. The entity's ability to generate future cash flows.** By examining relationships between items in the statement of cash flows, investors can better predict the amounts, timing, and uncertainty of future cash flows than they can from accrual-basis data.
- 2. The entity's ability to pay dividends and meet obligations.** If a company does not have adequate cash, it cannot pay employees, settle debts, or pay dividends. Employees, creditors, and stockholders should be particularly interested in this statement because it alone shows the flows of cash in a business.
- 3. The reasons for the difference between net income and net cash provided (used) by operating activities.** Net income provides information on the success or failure of a business. However, some financial statement users are critical of accrual-basis net income because it requires many estimates (see **Ethics Note**). As a result, users often challenge the reliability of the number. Such is not the case with cash. Many readers of the statement of cash flows want to know the reasons for the difference between net income and net cash provided by operating activities. Then, they can assess for themselves the reliability of the income number.
- 4. The cash investing and financing transactions during the period.** By examining a company's investing and financing transactions, a financial statement reader can better understand why assets and liabilities changed during the period.

ETHICS NOTE

Though we discourage reliance on cash flows to the exclusion of accrual accounting, comparing net cash provided by operating activities to net income can reveal important information about the "quality" of reported net income. Such a comparison can reveal the extent to which net income provides a good measure of actual performance.

Classification of Cash Flows

The statement of cash flows classifies cash receipts and cash payments as operating, investing, and financing activities. Transactions and other events characteristic of each kind of activity are as follows.

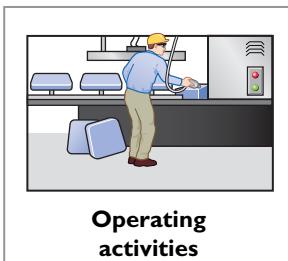

- 1. Operating activities** include the cash effects of transactions that create revenues and expenses. They thus enter into the determination of net income.
- 2. Investing activities** include (a) acquiring and disposing of investments and property, plant, and equipment, and (b) lending money and collecting the loans.
- 3. Financing activities** include (a) obtaining cash from issuing debt and repaying the amounts borrowed, and (b) obtaining cash from stockholders, repurchasing shares, and paying dividends.

The operating activities category is the most important. It shows the cash provided by company operations. This source of cash is generally considered to be the best measure of a company's ability to generate sufficient cash to continue as a going concern.

Illustration 17.1 lists typical cash receipts and cash payments within each of the three classifications. **Study the list carefully.** It will prove very useful in solving homework exercises and problems.

ILLUSTRATION 17.1

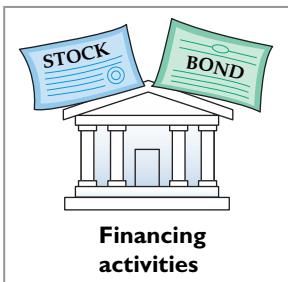

Typical receipt and payment classifications

Operating activities

Investing activities

Financing activities

TYPES OF CASH INFLOWS AND OUTFLOWS

Operating activities—Income statement items

Cash inflows:

- From sale of goods or services.
- From interest received and dividends received.

Cash outflows:

- To suppliers for inventory.
- To employees for wages.
- To government for taxes.
- To lenders for interest.
- To others for expenses.

Investing activities—Changes in investments and long-term assets

Cash inflows:

- From sale of property, plant, and equipment.
- From sale of investments in debt or equity securities of other entities.
- From collection of principal on loans to other entities.

Cash outflows:

- To purchase property, plant, and equipment.
- To purchase investments in debt or equity securities of other entities.
- To make loans to other entities.

Financing activities—Changes in long-term liabilities and stockholders' equity

Cash inflows:

- From sale of common stock.
- From issuance of debt (bonds and notes).

Cash outflows:

- To stockholders as dividends.
- To redeem long-term debt or reacquire capital stock (treasury stock).

Note the following general guidelines:

1. Operating activities involve income statement items.
2. Investing activities involve cash flows resulting from changes in investments and long-term asset items.
3. Financing activities involve cash flows resulting from changes in long-term liability and stockholders' equity items.

Companies classify as operating activities some cash flows related to investing or financing activities. For example, receipts of investment revenue (interest and dividends) are classified as operating activities. So are payments of interest to lenders. Why are these considered operating activities? **Because companies report these items in the income statement, where results of operations are shown.**

Significant Noncash Activities

Not all of a company's significant activities involve cash. Examples of significant noncash activities are as follows.

1. Direct issuance of common stock to purchase assets.
2. Conversion of bonds into common stock.

3. Direct issuance of debt to purchase assets.
4. Exchanges of plant assets.

Companies do not report in the body of the statement of cash flows significant financing and investing activities that do not affect cash. Instead, they report these activities in either a **separate schedule** at the bottom of the statement of cash flows or in a **separate note or supplementary schedule** to the financial statements (see **Helpful Hint**). The reporting of these noncash activities in a separate schedule satisfies the **full disclosure principle**.

In solving homework assignments, you should present significant noncash investing and financing activities in a separate schedule at the bottom of the statement of cash flows (see the last item in Illustration 17.2 below).

HELPFUL HINT

Do not include noncash investing and financing activities in the body of the statement of cash flows. Report this information in a separate schedule.

Accounting Across the Organization Target Corporation

Darren McCollester/Getty Images, Inc.

Net What?

Net income is not the same as net cash provided by operating activities. The table shows some results from recent annual reports (dollars in millions), including **Target Corporation**. Note how the numbers differ greatly across the list even though all these companies engage in retail merchandising.

Company	Net Income	Net Cash Provided by Operating Activities
Kohl's Corporation	\$ 889	\$ 1,884
Wal-Mart Stores, Inc.	16,669	25,591
J. C. Penney Company, Inc.	(1,388)	(1,814)
Costco Wholesale Corp.	20,391	3,437
Target Corporation	1,971	6,520

In general, why do differences exist between net income and net cash provided by operating activities? (Go to WileyPLUS for this answer and additional questions.)

Format of the Statement of Cash Flows

The general format of the statement of cash flows presents the results of the three activities discussed previously—operating, investing, and financing—plus the significant noncash investing and financing activities. **Illustration 17.2** shows a widely used form of the statement of cash flows.

ILLUSTRATION 17.2

Format of statement of cash flows

Company Name Statement of Cash Flows For the Period Covered		
Cash flows from operating activities (List of individual items)	<u>XX</u>	
Net cash provided (used) by operating activities		XXX
Cash flows from investing activities (List of individual inflows and outflows)	<u>XX</u>	
Net cash provided (used) by investing activities		XXX
Cash flows from financing activities (List of individual inflows and outflows)	<u>XX</u>	
Net cash provided (used) by financing activities		XXX
Net increase (decrease) in cash	<u>XXX</u>	
Cash at beginning of period	<u>XXX</u>	
Cash at end of period	<u><u>XXX</u></u>	
Noncash investing and financing activities (List of individual noncash transactions)	<u><u><u>XXX</u></u></u>	

The cash flows from operating activities section always appears first, followed by the investing activities section and then the financing activities section. The sum of the operating, investing, and financing sections equals the net increase or decrease in cash for the period. This amount is added to the beginning cash balance to arrive at the ending cash balance—the same amount reported on the balance sheet.

DO IT! 1 | Classification of Cash Flows

During its first week, Duffy & Stevenson Company had these transactions.

1. Issued 100,000 shares of \$5 par value common stock for \$800,000 cash.
2. Borrowed \$200,000 from Castle Bank, signing a 5-year note bearing 8% interest.
3. Purchased two semi-trailer trucks for \$170,000 cash.
4. Paid employees \$12,000 for salaries and wages.
5. Collected \$20,000 cash for services performed.

Classify each of these transactions by type of cash flow activity. (*Hint:* Refer to Illustration 17.1.)

Solution

ACTION PLAN

- Identify the three types of activities used to report all cash inflows and outflows.
- Report as operating activities the cash effects of transactions that create revenues and expenses and enter into the determination of net income.
- Report as investing activities transactions that (a) acquire and dispose of investments and long-term assets and (b) lend money and collect loans.
- Report as financing activities transactions that (a) obtain cash from issuing debt and repay the amounts borrowed and (b) obtain cash from stockholders and pay them dividends.

Preparing the Statement of Cash Flows—Indirect Method

LEARNING OBJECTIVE 2

Prepare a statement of cash flows using the indirect method.

Companies prepare the statement of cash flows differently from the three other basic financial statements. First, it is not prepared from an adjusted trial balance. It requires detailed information concerning the changes in account balances that occurred between two points in time. An adjusted trial balance will not provide the necessary data. Second, the statement of cash flows deals with cash receipts and payments. As a result, the company **adjusts** the effects of the use of accrual accounting **to determine cash flows**.

The information to prepare this statement usually comes from three sources:

- **Comparative balance sheets.** Information in the comparative balance sheets indicates the amount of the changes in assets, liabilities, and stockholders' equity from the beginning to the end of the period.
- **Current income statement.** Information in this statement helps determine the amount of net cash provided or used by operating activities during the period.
- **Additional information.** Such information includes transaction data that are needed to determine how cash was provided or used during the period.

Preparing the statement of cash flows from these data sources involves three major steps, explained in **Illustration 17.3**.

STEP 1: Determine net cash provided/used by operating activities by converting net income from an accrual basis to a cash basis.

This step involves analyzing not only the current year's income statement but also comparative balance sheets and selected additional data.

STEP 2: Analyze changes in noncurrent asset and liability accounts and stockholders' equity accounts and record as investing and financing activities, or disclose as noncash transactions.

This step involves analyzing comparative balance sheet data and selected additional information for their effects on cash.

STEP 3: Compare the net change in cash on the statement of cash flows with the change in the Cash account reported on the balance sheet to make sure the amounts agree.

The difference between the beginning and ending cash balances can be easily computed from comparative balance sheets.

ILLUSTRATION 17.3

Three major steps in preparing the statement of cash flows

Indirect and Direct Methods

In order to perform Step 1, a company **must convert net income from an accrual basis to a cash basis**. This conversion may be done by either of two methods: (1) the indirect method or (2) the direct method. **Both methods arrive at the same amount** for “Net cash provided by operating activities.” They differ in **how** they arrive at the amount.

The **indirect method** adjusts net income for items that do not affect cash. A great majority of companies (98%) use this method. Companies favor the indirect method for two reasons: (1) it is easier and less costly to prepare, and (2) it focuses on the differences between net income and net cash flow from operating activities.

The **direct method** shows operating cash receipts and payments. It is prepared by adjusting each item in the income statement from the accrual basis to the cash basis. The FASB has expressed a preference for the direct method but allows the use of either method.

The next section illustrates the more popular indirect method. Appendix 17A illustrates the direct method.

Indirect Method—Computer Services Company

To explain how to prepare a statement of cash flows using the indirect method, we use financial information from Computer Services Company. **Illustration 17.4** presents Computer Services' current- and previous-year balance sheets, its current-year income statement, and related financial information for the current year.

ILLUSTRATION 17.4

Comparative balance sheets, income statement, and additional information for Computer Services Company

Computer Services Company Comparative Balance Sheets December 31			
	2020	2019	Change in Account Balance Increase/Decrease
Assets			
Current assets			
Cash	\$ 55,000	\$ 33,000	\$ 22,000 Increase

Common stock	70,000	50,000	20,000 Increase
Retained earnings	<u>164,000</u>	<u>48,000</u>	<u>116,000 Increase</u>
Total liabilities and stockholders' equity	<u>\$398,000</u>	<u>\$138,000</u>	

Computer Services Company
Income Statement
For the Year Ended December 31, 2020

Sales revenue		\$507,000
Cost of goods sold	\$150,000	
Operating expenses (excluding depreciation)	111,000	
Depreciation expense	9,000	
Loss on disposal of plant assets	3,000	
Interest expense	<u>42,000</u>	<u>315,000</u>
Income before income tax		192,000
Income tax expense		<u>47,000</u>
Net income		<u>\$145,000</u>

Additional information for 2020:

1. Depreciation expense was comprised of \$6,000 for building and \$3,000 for equipment.
2. The company sold equipment with a book value of \$7,000 (cost \$8,000, less accumulated depreciation \$1,000) for \$4,000 cash.
3. Issued \$110,000 of long-term bonds in direct exchange for land.
4. A building costing \$120,000 was purchased for cash. Equipment costing \$25,000 was also purchased for cash.
5. Issued common stock for \$20,000 cash.
6. The company declared and paid a \$29,000 cash dividend.

We now apply the three steps for preparing a statement of cash flows to the information provided for Computer Services Company.

Step 1: Operating Activities

Determine Net Cash Provided/Used by Operating Activities by Converting Net Income from an Accrual Basis to a Cash Basis

To determine net cash provided by operating activities under the indirect method, companies **adjust net income in numerous ways**. A useful starting point is to understand **why** net income must be converted to net cash provided by operating activities.

Under generally accepted accounting principles, most companies use the accrual basis of accounting. This basis requires that companies record revenue when a performance obligation is satisfied and record expenses when incurred. Revenues include credit sales for which the company has not yet collected cash. Expenses incurred include some items that have not yet been paid in cash. Thus, under the accrual basis, net income is not the same as net cash provided by operating activities.

Therefore, under the **indirect method**, companies must adjust net income to convert certain items to the cash basis. The indirect method (or reconciliation method) starts with net income and converts it to net cash provided by operating activities. **Illustration 17.5** lists the three types of adjustments.

Net Income	+/-	Adjustments	=	Net Cash Provided/ Used by Operating Activities
		<ul style="list-style-type: none"> • Add back noncash expenses, such as depreciation expense and amortization expense. • Deduct gains and add losses that resulted from investing and financing activities. • Analyze changes to noncash current asset and current liability accounts. 		

ILLUSTRATION 17.5

Three types of adjustments to convert net income to net cash provided by operating activities

We explain the three types of adjustments in the next three sections.

Depreciation Expense

Computer Services' income statement reports depreciation expense of \$9,000. Although depreciation expense reduces net income, it does not reduce cash. In other words, depreciation expense is a noncash charge. The company must add it back to net income to negate the effect of the expense to arrive at net cash provided by operating activities (see **Helpful Hint**). Computer Services reports depreciation expense in the statement of cash flows as in **Illustration 17.6**.

Cash flows from operating activities		
Net income	\$145,000	
Adjustments to reconcile net income to net cash provided by operating activities:		
Depreciation expense	9,000	
Net cash provided by operating activities	<u>\$154,000</u>	

HELPFUL HINT

Depreciation is similar to any other expense in that it reduces net income. It differs in that it does not involve a current cash outflow. That is why it must be *added back* to net income to arrive at net cash provided by operating activities.

ILLUSTRATION 17.6

Adjustment for depreciation

As the first adjustment to net income in the statement of cash flows, companies frequently list depreciation and similar noncash charges such as amortization of intangible assets and bad debt expense.

Loss on Disposal of Plant Assets

Illustration 17.1 states that cash received from the sale (disposal) of plant assets is reported in the investing activities section. Because of this, **companies eliminate from net income all gains and losses related to the disposal of plant assets, to arrive at net cash provided by operating activities**.

In our example, Computer Services' income statement reports a \$3,000 loss on the disposal of plant assets (book value \$7,000, less \$4,000 cash received from disposal of plant assets). The company's loss of \$3,000 should be added to net income in order to determine net cash provided by operating activities. The loss reduced net income but did not reduce cash. **Illustration 17.7** shows that the \$3,000 loss is eliminated by adding \$3,000 back to net income to arrive at net cash provided by operating activities.

ILLUSTRATION 17.7**Adjustment for loss on disposal of plant assets**

Cash flows from operating activities		
Net income	\$145,000	
Adjustments to reconcile net income to net cash provided by operating activities:		
Depreciation expense	\$9,000	
Loss on disposal of plant assets	3,000	12,000
Net cash provided by operating activities		\$157,000

If a gain on disposal occurs, the company deducts the gain from net income in order to determine net cash provided by operating activities. **In the case of either a gain or a loss, companies report as a source of cash in the investing activities section of the statement of cash flows the actual amount of cash received from the sale.**

Changes to Noncash Current Asset and Current Liability Accounts

A final adjustment in reconciling net income to net cash provided by operating activities involves examining all changes in current asset and current liability accounts. The accrual-accounting process records revenues in the period in which the performance obligation is satisfied and expenses as incurred. For example, Accounts Receivable reflects amounts owed to the company for sales that have been made but for which cash collections have not yet been received. Prepaid Insurance reflects insurance that has been paid for but which has not yet expired (therefore has not been expensed). Similarly, Salaries and Wages Payable reflects salaries and wages expense that has been incurred but has not been paid.

As a result, companies need to adjust net income for these accruals and prepayments to determine net cash provided by operating activities. Thus, they must analyze the change in each current asset and current liability account to determine its impact on net income and cash.

Changes in Noncash Current Assets. The adjustments required for changes in non-cash current asset accounts are as follows. **Deduct from net income increases in current asset accounts, and add to net income decreases in current asset accounts, to arrive at net cash provided by operating activities.** We observe these relationships by analyzing the accounts of Computer Services.

Decrease in Accounts Receivable. Computer Services' accounts receivable decreased by \$10,000 (from \$30,000 to \$20,000) during the period. For Computer Services, this means that cash receipts were \$10,000 higher than sales revenue. The Accounts Receivable account in **Illustration 17.8** shows that Computer Services had \$507,000 in sales revenue (as reported on the income statement), but it collected \$517,000 in cash.

ILLUSTRATION 17.8**Analysis of accounts receivable**

Accounts Receivable				
1/1/20	Balance	30,000	Receipts from customers	517,000
	Sales revenue	507,000		
12/31/20	Balance	20,000		

As shown in Illustration 17.9, to adjust net income to net cash provided by operating activities, the company adds to net income the decrease of \$10,000 in accounts receivable. When the Accounts Receivable balance increases, cash receipts are lower than sales revenue earned under the accrual basis. Therefore, the company deducts from net income the amount of the increase in accounts receivable, to arrive at net cash provided by operating activities.

Increase in Inventory. Computer Services' inventory increased \$5,000 (from \$10,000 to \$15,000) during the period. The change in the Inventory account reflects the difference between the amount of inventory purchased and the amount sold. For Computer Services, this means that

the cost of merchandise purchased exceeded the cost of goods sold by \$5,000. As a result, cost of goods sold does not reflect \$5,000 of cash payments made for merchandise. The company deducts from net income this inventory increase of \$5,000 during the period, to arrive at net cash provided by operating activities (see Illustration 17.9). If inventory decreases, the company adds to net income the amount of the change, to arrive at net cash provided by operating activities.

Increase in Prepaid Expenses. Computer Services' prepaid expenses increased during the period by \$4,000. This means that cash paid for expenses is higher than expenses reported on an accrual basis. In other words, the company has made cash payments in the current period that will not be charged to expenses until future periods. To adjust net income to net cash provided by operating activities, the company deducts from net income the \$4,000 increase in prepaid expenses (see **Illustration 17.9**).

Cash flows from operating activities	
Net income	\$145,000
Adjustments to reconcile net income to net cash provided by operating activities:	
Depreciation expense	\$ 9,000
Loss on disposal of plant assets	3,000
Decrease in accounts receivable	10,000
Increase in inventory	(5,000)
Increase in prepaid expenses	(4,000)
	13,000
Net cash provided by operating activities	\$158,000

ILLUSTRATION 17.9

Adjustments for changes in current asset accounts

If prepaid expenses decrease, reported expenses are higher than the expenses paid. Therefore, the company adds to net income the decrease in prepaid expenses, to arrive at net cash provided by operating activities.

Changes in Current Liabilities. The adjustments required for changes in current liability accounts are as follows. **Add to net income increases in current liability accounts and deduct from net income decreases in current liability accounts, to arrive at net cash provided by operating activities.**

Increase in Accounts Payable. For Computer Services, Accounts Payable increased by \$16,000 (from \$12,000 to \$28,000) during the period. That means the company received \$16,000 more in goods than it actually paid for. As shown in Illustration 17.10, to adjust net income to determine net cash provided by operating activities, the company adds to net income the \$16,000 increase in Accounts Payable.

Decrease in Income Taxes Payable. When a company incurs income tax expense but has not yet paid its taxes, it records income taxes payable. A change in the Income Taxes Payable account reflects the difference between income tax expense incurred and income tax actually paid. Computer Services' Income Taxes Payable account decreased by \$2,000. That means the \$47,000 of income tax expense reported on the income statement was \$2,000 less than the amount of taxes paid during the period of \$49,000. As shown in **Illustration 17.10**, to adjust net income to a cash basis, the company must reduce net income by \$2,000.

Cash flows from operating activities	
Net income	\$145,000
Adjustments to reconcile net income to net cash provided by operating activities:	
Depreciation expense	\$ 9,000
Loss on disposal of plant assets	3,000
Decrease in accounts receivable	10,000
Increase in inventory	(5,000)
Increase in prepaid expenses	(4,000)
Increase in accounts payable	16,000
Decrease in income taxes payable	(2,000)
Net cash provided by operating activities	\$172,000

ILLUSTRATION 17.10

Adjustments for changes in current liability accounts

Illustration 17.10 shows that after starting with net income of \$145,000, the sum of all of the adjustments to net income was \$27,000. This resulted in net cash provided by operating activities of \$172,000.

Summary of Conversion to Net Cash Provided by Operating Activities—Indirect Method

As shown in the previous illustrations, the statement of cash flows prepared by the indirect method starts with net income. It then adds or deducts items to arrive at net cash provided by operating activities. The required adjustments are of three types:

1. Noncash charges such as depreciation and amortization.
2. Gains and losses on the disposal of plant assets.
3. Changes in noncash current asset and current liability accounts.

Illustration 17.11 provides a summary of these changes and required adjustments.

ILLUSTRATION 17.11

Adjustments required to convert net income to net cash provided by operating activities

Anatomy of a Fraud

For more than a decade, the top executives at the Italian dairy products company **Parmalat** engaged in multiple frauds that overstated cash and other assets by more than \$1 billion while understating liabilities by between \$8 and \$12 billion. Much of the fraud involved creating fictitious sources and uses of cash. Some of these activities incorporated sophisticated financial transactions with subsidiaries created with the help of large international financial institutions. However, much of the fraud employed very basic, even sloppy, forgery of documents. For example, when outside auditors requested confirmation of bank accounts (such as a fake \$4.8 billion account in the Cayman Islands), documents were created on scanners, with signatures that were cut and pasted from

other documents. These were then passed through a fax machine numerous times to make them look real (if difficult to read). Similarly, fictitious bills were created in order to divert funds to other businesses owned by the Tanzi family (who controlled Parmalat).

Total take: Billions of dollars

The Missing Control

Independent internal verification. Internal auditors at the company should have independently verified bank accounts and major transfers of cash to outside companies that were controlled by the Tanzi family.

DO IT! 2a | Cash from Operating Activities

Josh's PhotoPlus reported net income of \$73,000 for 2020. Included in the income statement were depreciation expense of \$7,000 and a gain on disposal of plant assets of \$2,500. Josh's comparative balance sheets show the following balances.

	12/31/19	12/31/20
Accounts receivable	\$17,000	\$21,000
Accounts payable	6,000	2,200

Calculate net cash provided by operating activities for Josh's PhotoPlus.

ACTION PLAN

- Add noncash charges such as depreciation back to net income to compute net cash provided by operating activities.

Solution

Cash flows from operating activities	
Net income	\$73,000
Adjustments to reconcile net income to net cash provided by operating activities:	
Depreciation expense	\$ 7,000
Gain on disposal of plant assets	(2,500)
Increase in accounts receivable	(4,000)
Decrease in accounts payable	(3,800) (3,300)
Net cash provided by operating activities	\$69,700

Related exercise material: BE17.4, BE17.5, BE17.6, DO IT! 17.2a, E17.4, E17.5, E17.6, and E17.7.

ACTION PLAN (cont.)

- Deduct from net income gains on the disposal of plant assets, or add losses back to net income, to compute net cash provided by operating activities.
- Use changes in noncash current asset and current liability accounts to compute net cash provided by operating activities.

Step 2: Investing and Financing Activities

Analyze Changes in Noncurrent Asset and Liability Accounts and Stockholders' Equity Accounts and Record as Investing and Financing Activities, or as Noncash Investing and Financing Activities

Increase in Land. As indicated from the change in the Land account and the additional information, Computer Services purchased land of \$110,000 by directly exchanging bonds for land. The issuance of bonds payable for land has no effect on cash. But, it is a significant noncash investing and financing activity that merits disclosure in a separate schedule (see Illustration 17.13).

Increase in Buildings. As the additional data indicate, Computer Services acquired an office building for \$120,000 cash. This is a cash outflow reported in the investing activities section (see Illustration 17.13).

Increase in Equipment. The Equipment account increased \$17,000. The additional information explains that this net increase resulted from two transactions: (1) a purchase of equipment of \$25,000, and (2) the sale for \$4,000 of equipment costing \$8,000. These transactions are investing activities (see **Helpful Hint**). The company should report each transaction separately. Thus, it reports the purchase of equipment as an outflow of cash for \$25,000. It reports the sale as an inflow of cash for \$4,000. The T-account in **Illustration 17.12** shows the reasons for the change in this account during the year.

Equipment			
1/1/20 Balance	10,000	Cost of equipment sold	8,000
Purchase of equipment	25,000		
12/31/20 Balance	27,000		

The following entry shows the details of the equipment sale transaction.

Cash	4,000	
Accumulated Depreciation—Equipment	1,000	
Loss on Disposal of Plant Assets	3,000	
Equipment		8,000

Increase in Bonds Payable. The Bonds Payable account increased \$110,000. As indicated in the additional information, the company acquired land from the issuance of these bonds. It reports this noncash transaction in a separate schedule at the bottom of the statement.

Increase in Common Stock. The balance sheet reports an increase in Common Stock of \$20,000. The additional information section notes that this increase resulted from the issuance

HELPFUL HINT

The investing and financing activities are measured and reported the same way under both the direct and indirect methods.

ILLUSTRATION 17.12**Analysis of equipment**

Cash Flows
+4,000

HELPFUL HINT

When companies issue stocks or bonds for cash, the actual proceeds will appear in the statement of cash flows as a financing inflow (rather than the par value of the stocks or face value of bonds).

of new shares of stock. This is a cash inflow reported in the financing activities section (see **Helpful Hint**).

Increase in Retained Earnings. Retained earnings increased \$116,000 during the year. This increase can be explained by two factors: (1) net income of \$145,000 increased retained earnings, and (2) dividends of \$29,000 decreased retained earnings. The company adjusts net income to net cash provided by operating activities in the operating activities section. Payment of the dividends (not the declaration) is a **cash outflow that the company reports as a financing activity**.

Statement of Cash Flows—2020

Using the previous information, we can now prepare a statement of cash flows for 2020 for Computer Services Company as shown in **Illustration 17.13** (see **Helpful Hint**).

ILLUSTRATION 17.13
Statement of cash flows,
2020—indirect method

Computer Services Company Statement of Cash Flows—Indirect Method For the Year Ended December 31, 2020		
Cash flows from operating activities		
Net income		\$145,000
Adjustments to reconcile net income to net cash provided by operating activities:		
Depreciation expense	\$ 9,000	
Loss on disposal of plant assets	3,000	
Decrease in accounts receivable	10,000	
Increase in inventory	(5,000)	
Increase in prepaid expenses	(4,000)	
Increase in accounts payable	16,000	
Decrease in income taxes payable	(2,000)	<u>27,000</u>
Net cash provided by operating activities		172,000
Cash flows from investing activities		
Purchase of building	(120,000)	
Purchase of equipment	(25,000)	
Sale of equipment	4,000	
Net cash used by investing activities		(141,000)
Cash flows from financing activities		
Issuance of common stock	20,000	
Payment of cash dividends	(29,000)	
Net cash used by financing activities		(9,000)
Net increase in cash		22,000
Cash at beginning of period		33,000
Cash at end of period		<u>\$ 55,000</u>
Noncash investing and financing activities		
Issuance of bonds payable to purchase land		<u>\$110,000</u>

HELPFUL HINT

Note that in the investing and financing activities sections, positive numbers indicate cash inflows (receipts), and negative numbers indicate cash outflows (payments).

Step 3: Net Change in Cash

Compare the Net Change in Cash on the Statement of Cash Flows with the Change in the Cash Account Reported on the Balance Sheet to Make Sure the Amounts Agree

Illustration 17.13 indicates that the net change in cash during the period was an increase of \$22,000. This agrees with the change in Cash account reported on the balance sheet in Illustration 17.4.

Accounting Across the Organization

Burning Through Our Cash

Box (cloud storage), **Cyan** (game creator), **FireEye** (cyber security), and **MobileIron** (mobile security of data) are a few of the tech companies that recently have issued or are about to issue stock to the public. Investors now have to determine whether these tech companies have viable products and high chances for success.

An important consideration in evaluating a tech company is determining its financial flexibility—its ability to withstand adversity if an economic setback occurs. One way to measure financial flexibility is to assess a company's cash burn rate, which determines how long its cash will hold out if the company is expending more cash than it is receiving.

FireEye, for example, used cash in excess of \$50 million in 2013. But the company also had over \$150 million as a cash cushion, so it would take over 30 months before it runs out of cash. And even though Box has a much lower cash burn rate than FireEye, it still has over a year's cushion. Compare that to the tech companies in 2000, when over one-quarter of them were on track to run out of cash within a year. And many did. Fortunately, the tech companies of today seem to be better equipped to withstand an economic setback.

Source: Shira Ovide, "Tech Firms' Cash Hoards Cool Fears of a Meltdown," *Wall Street Journal* (May 14, 2014).

What implications does a company's cash burn rate have for its survival? (See WileyPLUS for this answer and additional questions.)

Cash at end of period		<u><u>\$ 54,000</u></u>

Analyzing the Statement of Cash Flows

LEARNING OBJECTIVE 3

Analyze the statement of cash flows.

Traditionally, investors and creditors used ratios based on accrual accounting. These days, cash-based ratios are gaining increased acceptance among analysts.

Free Cash Flow

In the statement of cash flows, net cash provided by operating activities is intended to indicate the cash-generating capability of a company. Analysts have noted, however, that **net cash provided by operating activities fails to take into account that a company must invest in new fixed assets** just to maintain its current level of operations. Companies also must at least **maintain dividends at current levels** to satisfy investors. The measurement of free cash flow provides additional insight regarding a company's cash-generating ability. **Free cash flow** describes the net cash provided by operating activities after adjustment for capital expenditures and dividends.

Consider the following example. Suppose that MPC produced and sold 10,000 personal computers this year. It reported \$100,000 net cash provided by operating activities. In order to maintain production at 10,000 computers, MPC invested \$15,000 in equipment. It chose to pay \$5,000 in dividends. Its free cash flow was \$80,000 ($\$100,000 - \$15,000 - \$5,000$). The company could use this \$80,000 either to purchase new assets to expand the business or to pay an \$80,000 dividend and continue to produce 10,000 computers. In practice, free cash flow is often calculated with the formula in **Illustration 17.14**. (Alternative definitions also exist.)

$$\text{Free Cash Flow} = \text{Net Cash Provided by Operating Activities} - \text{Capital Expenditures} - \text{Cash Dividends}$$

ILLUSTRATION 17.14
Free cash flow

Illustration 17.15 provides basic information (in millions) excerpted from the 2015 statement of cash flows of **Microsoft Corporation**.

Real World		Microsoft Corporation Statement of Cash Flows (partial) 2015	
Cash provided by operating activities		\$29,080	
Cash flows from investing activities			
Additions to property and equipment	\$ (5,944)		
Purchases of investments	(98,729)		
Sales of investments	70,848		
Acquisitions of companies	(3,723)		
Maturities of investments	15,013		
Other	(466)		
Cash used by investing activities		(23,001)	
Cash paid for dividends		(9,882)	

ILLUSTRATION 17.15
Microsoft's cash flow information (\$ in millions)

Microsoft's free cash flow is calculated as shown in **Illustration 17.16**.

ILLUSTRATION 17.16**Calculation of Microsoft's free cash flow (\$ in millions)**

Cash provided by operating activities	\$29,080
Less: Expenditures on property, plant, and equipment	5,944
Dividends paid	9,882
Free cash flow	\$13,254

Microsoft generated approximately \$17.25 billion of free cash flow. This is a tremendous amount of cash generated in a single year. It is available for the acquisition of new assets, the retirement of stock or debt, or the payment of dividends. Also note that Microsoft's cash from operations of \$29.1 billion is greater than its 2015 net income of \$12.2 billion. This lends additional credibility to Microsoft's income number as an indicator of potential future performance.

DO IT! 3 | Free Cash Flow

Chicago Corporation issued the following statement of cash flows for 2020.

Chicago Corporation Statement of Cash Flows—Indirect Method For the Year Ended December 31, 2020		
Cash flows from operating activities		
Net income		\$ 19,000
Adjustments to reconcile net income to net cash provided by operating activities:		
Depreciation expense	\$ 8,100	
Loss on disposal of plant assets	1,300	
Decrease in accounts receivable	6,900	
Increase in inventory	(4,000)	
Decrease in accounts payable	(2,000)	<u>10,300</u>
Net cash provided by operating activities		29,300
Cash flows from investing activities		
Sale of investments	1,100	
Purchase of equipment	(19,000)	
Net cash used by investing activities		(17,900)
Cash flows from financing activities		
Issuance of stock	10,000	
Payment on long-term note payable	(5,000)	
Payment for dividends	(9,000)	
Net cash used by financing activities		(4,000)
Net increase in cash		7,400
Cash at beginning of year		10,000
Cash at end of year		<u>\$ 17,400</u>

(a) Compute free cash flow for Chicago Corporation. (b) Explain why free cash flow often provides better information than "Net cash provided by operating activities."

Solution

- Free cash flow = \$29,300 – \$19,000 – \$9,000 = \$1,300
- Net cash provided by operating activities fails to take into account that a company must invest in new plant assets just to maintain the current level of operations. Companies must also maintain dividends at current levels to satisfy investors. The measurement of free cash flow provides additional insight regarding a company's cash-generating ability.

Related exercise material: **BE17.8, BE17.9, BE17.10, BE17.11, DO IT! 17.3, E17.8, and E17.10.**

ACTION PLAN

- Compute free cash flow as Net cash provided by operating activities – Capital expenditures – Cash dividends.

Appendix 17A

Statement of Cash Flows—Direct Method

LEARNING OBJECTIVE *4

Prepare a statement of cash flows using the direct method.

To explain and illustrate the direct method for preparing a statement of cash flows, we use the transactions of Computer Services Company for 2020. **Illustration 17A.1** presents information related to 2020 for the company.

To prepare a statement of cash flows under the direct approach, we apply the three steps outlined in Illustration 17.3.

Step 1: Operating Activities

Determine Net Cash Provided/Used by Operating Activities by Converting Net Income Components from an Accrual Basis to a Cash Basis

Under the **direct method**, companies compute net cash provided by operating activities by **adjusting each item in the income statement** from the accrual basis to the cash basis. To

ILLUSTRATION 17A.1

Comparative balance sheets, income statement, and additional information for Computer Services Company

ILLUSTRATION 17A.1

(continued)

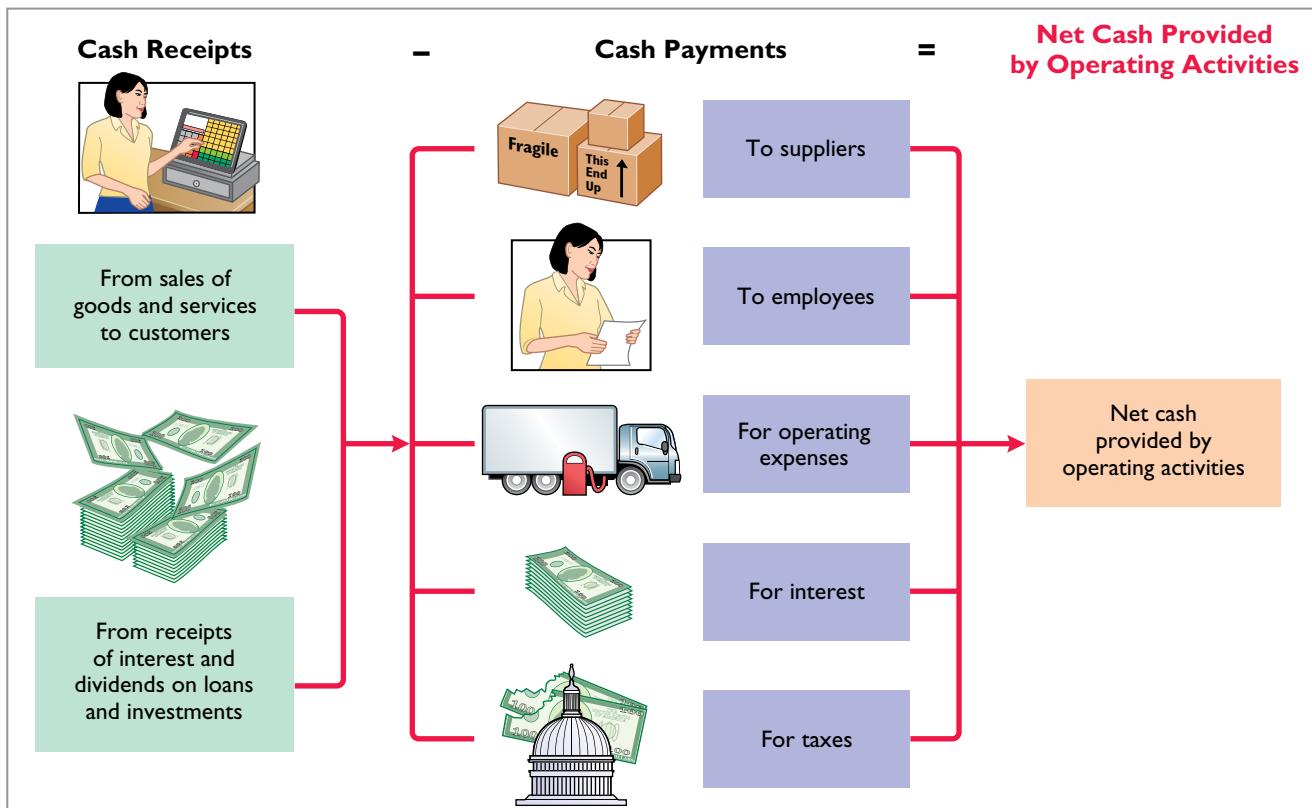

Computer Services Company
Income Statement
For the Year Ended December 31, 2020

Sales revenue	\$507,000
Cost of goods sold	\$150,000
Operating expenses (excluding depreciation)	111,000
Depreciation expense	9,000
Loss on disposal of plant assets	3,000
Interest expense	<u>42,000</u>
Income before income tax	192,000
Income tax expense	47,000
Net income	<u><u>\$145,000</u></u>

Additional information for 2020:

1. Depreciation expense was comprised of \$6,000 for building and \$3,000 for equipment.
2. The company sold equipment with a book value of \$7,000 (cost \$8,000, less accumulated depreciation \$1,000) for \$4,000 cash.
3. Issued \$110,000 of long-term bonds in direct exchange for land.
4. A building costing \$120,000 was purchased for cash. Equipment costing \$25,000 was also purchased for cash.
5. Issued common stock for \$20,000 cash.
6. The company declared and paid a \$29,000 cash dividend.

simplify and condense the operating activities section, companies **report only major classes of operating cash receipts and cash payments**. For these major classes, the difference between cash receipts and cash payments is the net cash provided by operating activities. These relationships are as shown in **Illustration 17A.2**.

ILLUSTRATION 17A.2 Major classes of cash receipts and payments

An efficient way to apply the direct method is to analyze the items reported in the income statement in the order in which they are listed. We then determine cash receipts and cash payments related to these revenues and expenses. The following presents the adjustments required to prepare a statement of cash flows for Computer Services Company using the direct approach.

Cash Receipts from Customers. The income statement for Computer Services reported sales revenue from customers of \$507,000. How much of that was cash receipts? To answer that, a company considers the change in accounts receivable during the year. When accounts receivable increase during the year, revenues on an accrual basis are higher than cash receipts from customers. Operations led to revenues, but not all of those revenues resulted in cash receipts.

To determine the amount of cash receipts, a company deducts from sales revenue the increase in accounts receivable. On the other hand, there may be a decrease in accounts receivable. That would occur if cash receipts from customers exceeded sales revenue. In that case, a company adds to sales revenue the decrease in accounts receivable. For Computer Services, accounts receivable decreased \$10,000. Thus, cash receipts from customers were \$517,000, computed as shown in **Illustration 17A.3**.

Sales revenue	\$507,000
Add: Decrease in accounts receivable	<u>10,000</u>
Cash receipts from customers	\$517,000

ILLUSTRATION 17A.3

Computation of cash receipts from customers

Computer Services can also determine cash receipts from customers from an analysis of the Accounts Receivable account, as shown in **Illustration 17A.4**.

Accounts Receivable			
1/1/20 Balance	30,000	Receipts from customers	517,000
Sales revenue	507,000		
12/31/20 Balance	20,000		

Illustration 17A.5 shows the relationships among cash receipts from customers, sales revenue, and changes in accounts receivable (see **Helpful Hint**).

$$\text{Cash Receipts from Customers} = \text{Sales Revenue} \left\{ \begin{array}{l} + \text{Decrease in Accounts Receivable} \\ \text{or} \\ - \text{Increase in Accounts Receivable} \end{array} \right.$$

ILLUSTRATION 17A.4

Analysis of accounts receivable

HELPFUL HINT

The T-account shows that sales revenue plus decrease in accounts receivable equals cash receipts.

ILLUSTRATION 17A.5

Formula to compute cash receipts from customers—direct method

Cash Payments to Suppliers. Computer Services reported cost of goods sold of \$150,000 on its income statement. How much of that was cash payments to suppliers? To answer that, it is first necessary to find purchases for the year. To find purchases, a company adjusts cost of goods sold for the change in inventory. When inventory increases during the year, purchases for the year have exceeded cost of goods sold. As a result, to determine the amount of purchases, a company adds to cost of goods sold the increase in inventory.

In 2020, Computer Services' inventory increased \$5,000. It computes purchases as shown in **Illustration 17A.6**.

Cost of goods sold	\$150,000
Add: Increase in inventory	<u>5,000</u>
Purchases	\$155,000

ILLUSTRATION 17A.6

Computation of purchases

Computer Services can also determine purchases from an analysis of the Inventory account, as shown in **Illustration 17A.7**.

ILLUSTRATION 17A.7**Analysis of inventory**

Inventory				
1/1/20	Balance	10,000	Cost of goods sold	150,000
	Purchases	155,000		
12/31/20	Balance	15,000		

After computing purchases, a company can determine cash payments to suppliers. This is done by adjusting purchases for the change in accounts payable. When accounts payable increase during the year, purchases on an accrual basis are higher than they are on a cash basis. As a result, to determine cash payments to suppliers, a company deducts from purchases the increase in accounts payable. On the other hand, if cash payments to suppliers exceed purchases, there will be a decrease in accounts payable. In that case, a company adds to purchases the decrease in accounts payable. For Computer Services, cash payments to suppliers were \$139,000, computed as shown in **Illustration 17A.8**.

ILLUSTRATION 17A.8**Computation of cash payments to suppliers**

Purchases	\$155,000
Deduct: Increase in accounts payable	16,000
Cash payments to suppliers	\$139,000

Computer Services also can determine cash payments to suppliers from an analysis of the Accounts Payable account, as shown in **Illustration 17A.9**.

ILLUSTRATION 17A.9**Analysis of accounts payable**

Accounts Payable				
Payments to suppliers	139,000	1/1/20	Balance	12,000
			Purchases	155,000
		12/31/20	Balance	28,000

HELPFUL HINT

The T-account shows that purchases less increase in accounts payable equals payments to suppliers.

Illustration 17A.10 shows the relationships among cash payments to suppliers, cost of goods sold, changes in inventory, and changes in accounts payable (see **Helpful Hint**).

ILLUSTRATION 17A.10**Formula to compute cash payments to suppliers—direct method**

$$\text{Cash Payments to Suppliers} = \text{Cost of Goods Sold} \left\{ \begin{array}{l} + \text{ Increase in Inventory or} \\ - \text{ Decrease in Inventory} \end{array} \right\} \left\{ \begin{array}{l} + \text{ Decrease in Accounts Payable or} \\ - \text{ Increase in Accounts Payable} \end{array} \right\}$$

Cash Payments for Operating Expenses. Computer Services reported on its income statement operating expenses of \$111,000. How much of that amount was cash paid for operating expenses? To answer that, we need to adjust this amount for any changes in prepaid expenses and accrued expenses payable. For example, if prepaid expenses increased during the year, cash paid for operating expenses is higher than operating expenses reported on the income statement. To convert operating expenses to cash payments for operating expenses, a company adds the increase in prepaid expenses to operating expenses. On the other hand, if prepaid expenses decrease during the year, it deducts the decrease from operating expenses.

Companies must also adjust operating expenses for changes in accrued expenses payable. When accrued expenses payable increase during the year, operating expenses on an accrual basis are higher than they are in a cash basis. As a result, to determine cash payments

for operating expenses, a company deducts from operating expenses an increase in accrued expenses payable. On the other hand, a company adds to operating expenses a decrease in accrued expenses payable because cash payments exceed operating expenses.

Computer Services' cash payments for operating expenses were \$115,000, computed as shown in **Illustration 17A.11**.

Operating expenses	\$111,000
Add: Increase in prepaid expenses	4,000
Cash payments for operating expenses	\$115,000

ILLUSTRATION 17A.11

Computation of cash payments for operating expenses

Illustration 17A.12 shows the relationships among cash payments for operating expenses, changes in prepaid expenses, and changes in accrued expenses payable.

$$\begin{array}{lcl} \text{Cash Payments for Operating Expenses} & = & \text{Operating Expenses} \\ & & \left\{ \begin{array}{l} + \text{ Increase in Prepaid Expenses or} \\ - \text{ Decrease in Prepaid Expenses} \end{array} \right\} \left\{ \begin{array}{l} + \text{ Decrease in Accrued Expenses Payable or} \\ - \text{ Increase in Accrued Expenses Payable} \end{array} \right\} \end{array}$$

ILLUSTRATION 17A.12

Formula to compute cash payments for operating expenses—direct method

Depreciation Expense and Loss on Disposal of Plant Assets. Computer Services' depreciation expense in 2020 was \$9,000. Depreciation expense is not shown on a statement of cash flows under the direct method because it is a noncash charge. If the amount for operating expenses includes depreciation expense, operating expenses must be reduced by the amount of depreciation to determine cash payments for operating expenses.

The loss on disposal of plant assets of \$3,000 is also a noncash charge. The loss on disposal of plant assets reduces net income, but it does not reduce cash. Thus, the loss on disposal of plant assets is not shown on the statement of cash flows under the direct method.

Other charges to expense that do not require the use of cash, such as the amortization of intangible assets and bad debt expense, are treated in the same manner as depreciation.

Cash Payments for Interest. Computer Services reported on the income statement interest expense of \$42,000. Since the balance sheet did not include an accrual for interest payable for 2019 or 2020, the amount reported as expense is the same as the amount of interest paid.

Cash Payments for Income Taxes. Computer Services reported income tax expense of \$47,000 on the income statement. Income taxes payable, however, decreased \$2,000. This decrease means that income taxes paid were more than income taxes reported in the income statement. Cash payments for income taxes were therefore \$49,000 as shown in **Illustration 17A.13**.

Income tax expense	\$47,000
Add: Decrease in income taxes payable	2,000
Cash payments for income taxes	\$49,000

ILLUSTRATION 17A.13

Computation of cash payments for income taxes

Computer Services can also determine cash payments for income taxes from an analysis of the Income Taxes Payable account, as shown in **Illustration 17A.14**.

Income Taxes Payable

Cash payments for income taxes	49,000	1/1/20	Balance	8,000
			Income tax expense	47,000
		12/31/20	Balance	6,000

ILLUSTRATION 17A.14

Analysis of income taxes payable

Illustration 17A.15 shows the relationships among cash payments for income taxes, income tax expense, and changes in income taxes payable.

ILLUSTRATION 17A.15

Formula to compute cash payments for income taxes—direct method

$$\text{Cash Payments for Income Taxes} = \text{Income Tax Expense} \quad \left\{ \begin{array}{l} + \text{Decrease in Income Taxes Payable} \\ \text{or} \\ - \text{Increase in Income Taxes Payable} \end{array} \right.$$

The operating activities section of the statement of cash flows of Computer Services is shown in **Illustration 17A.16**.

ILLUSTRATION 17A.16

Operating activities section of the statement of cash flows

Cash flows from operating activities	
Cash receipts from customers	\$517,000
Less: Cash payments:	
To suppliers	\$139,000
For operating expenses	115,000
For interest expense	42,000
For income taxes	49,000
	<u>345,000</u>
Net cash provided by operating activities	\$172,000

When a company uses the direct method, it must also provide in a **separate schedule** (not shown here) the net cash flows from operating activities as computed under the indirect method. Note that whether a company uses the indirect or direct method, the net cash provided by operating activities is the same for both methods.

Step 2: Investing and Financing Activities

Analyze Changes in Noncurrent Asset and Liability Accounts and Stockholders' Equity Accounts and Record as Investing and Financing Activities, or Disclose as Noncash Transactions

Increase in Land. As indicated from the change in the Land account and the additional information, Computer Services purchased land of \$110,000 by directly exchanging bonds for land. The exchange of bonds payable for land has no effect on cash. But, it is a significant noncash investing and financing activity that merits disclosure in a separate schedule (see Illustration 17A.18).

Increase in Buildings. As the additional data indicate, Computer Services acquired an office building for \$120,000 cash. This is a cash outflow reported in the investing activities section (see Illustration 17A.18).

HELPFUL HINT

The investing and financing activities are measured and reported the same under both the direct and indirect methods.

Increase in Equipment. The Equipment account increased \$17,000. The additional information explains that this was a net increase that resulted from two transactions: (1) a purchase of equipment of \$25,000, and (2) the sale for \$4,000 of equipment costing \$8,000. These transactions are investing activities (see **Helpful Hint**). The company should report each transaction separately. The statement in Illustration 17A.18 reports the purchase of equipment as an outflow of cash for \$25,000. It reports the sale as an inflow of cash for \$4,000. The T-account in **Illustration 17A.17** shows the reasons for the change in this account during the year.

ILLUSTRATION 17A.17

Analysis of equipment

Equipment			
1/1/20 Balance	10,000	Cost of equipment sold	8,000
Purchase of equipment	25,000		
12/31/20 Balance	27,000		

The following entry shows the details of the equipment sale transaction.

Cash	4,000	
Accumulated Depreciation—Equipment	1,000	
Loss on Disposal of Plant Assets	3,000	
Equipment		8,000

A	=	L	+	SE
+4,000				
+1,000				
				-3,000 Exp
-8,000				
Cash Flows				
+4,000				

Increase in Bonds Payable. The Bonds Payable account increased \$110,000. As indicated in the additional information, the company acquired land by directly exchanging bonds for land. Illustration 17A.18 reports this noncash transaction in a separate schedule at the bottom of the statement.

Increase in Common Stock. The balance sheet reports an increase in Common Stock of \$20,000. The additional information section notes that this increase resulted from the issuance of new shares of stock. This is a cash inflow reported in the financing activities section in Illustration 17A.18 (see **Helpful Hint**).

Increase in Retained Earnings. Retained earnings increased \$116,000 during the year. This increase can be explained by two factors: (1) net income of \$145,000 increased retained earnings, and (2) dividends of \$29,000 decreased retained earnings. **Payment** of the dividends (not the declaration) is a **cash outflow** that the company reports as a financing activity in **Illustration 17A.18**.

HELPFUL HINT

When companies issue stocks or bonds for cash, the actual proceeds will appear in the statement of cash flows as a financing inflow (rather than the par value of the stocks or face value of bonds).

Statement of Cash Flows—2020

Illustration 17A.18 shows the statement of cash flows for Computer Services Company.

Computer Services Company Statement of Cash Flows—Direct Method For the Year Ended December 31, 2020

ILLUSTRATION 17A.18

Statement of cash flows,
2020—direct method

Cash flows from operating activities	
Cash receipts from customers	\$ 517,000
Less: Cash payments:	
To suppliers	\$ 139,000
For operating expenses	115,000
For income taxes	49,000
For interest expense	42,000
Net cash provided by operating activities	345,000
	172,000
Cash flows from investing activities	
Sale of equipment	4,000
Purchase of building	(120,000)
Purchase of equipment	(25,000)
Net cash used by investing activities	(141,000)
Cash flows from financing activities	
Issuance of common stock	20,000
Payment of cash dividends	(29,000)
Net cash used by financing activities	(9,000)
Net increase in cash	22,000
Cash at beginning of period	33,000
Cash at end of period	<u><u>\$ 55,000</u></u>
Noncash investing and financing activities	
Issuance of bonds payable to purchase land	\$ 110,000

Step 3: Net Change in Cash

Compare the Net Change in Cash on the Statement of Cash Flows with the Change in the Cash Account Reported on the Balance Sheet to Make Sure the Amounts Agree

Illustration 17A.18 indicates that the net change in cash during the period was an increase of \$22,000. This agrees with the change in balances in the Cash account reported on the balance sheets in Illustration 17A.1.

Appendix 17B

Worksheet for the Indirect Method

LEARNING OBJECTIVE *5

Use a worksheet to prepare the statement of cash flows using the indirect method.

When preparing a statement of cash flows, companies may need to make numerous adjustments of net income. In such cases, they often use **a worksheet to assemble and classify the data that will appear on the statement**. The worksheet is merely an aid in preparing the statement. Its use is optional. **Illustration 17B.1** shows the skeleton format of the worksheet for preparation of the statement of cash flows.

The following guidelines are important in preparing a worksheet.

1. In the balance sheet accounts section, **list accounts with debit balances separately from those with credit balances**. This means, for example, that Accumulated Depreciation appears under credit balances and not as a contra account under debit balances. Enter the beginning and ending balances of each account in the appropriate columns. Enter as reconciling items in the two middle columns the transactions that caused the change in the account balance during the year.

ILLUSTRATION 17B.1

Format of worksheet

XYZ Company					
	Home	Insert	Page Layout	Formulas	Data
P18	fx				
1					
2

4					
		XYZ Company Worksheet			
		Statement of Cash Flows For the Year Ended . . .			
5					
6					
7					
8	Balance Sheet Accounts	End of Last Year Balances	Reconciling Items		End of Current Year Balances
9	Debit balance accounts	XX	Debit	Credit	XX
10		XX	XX	XX	XX
11	Totals	XXX			XXX
12	Credit balance accounts	XX	XX	XX	XX
13		XX	XX	XX	XX
14	Totals	XXX			XXX
15					
16	Statement of Cash				
17	Flows Effects				
18	Operating activities				
19	Net income			XX	
20	Adjustments to net income			XX	XX
21	Investing activities				
22	Receipts and payments			XX	XX
23	Financing activities				
24	Receipts and payments			XX	XX
25	Totals			XXX	XXX
26	Increase (decrease) in cash			(XX)	XX
27	Totals			XXX	XXX
28					

After all reconciling items have been entered, each line pertaining to a balance sheet account should “foot across.” That is, the beginning balance plus or minus the reconciling item(s) must equal the ending balance. When this agreement exists for all balance sheet accounts, all changes in account balances have been reconciled.

- The bottom portion of the worksheet consists of the operating, investing, and financing activities sections. It provides the information necessary to prepare the formal statement of cash flows. **Enter inflows of cash as debits in the reconciling columns. Enter outflows of cash as credits in the reconciling columns.** Thus, in this section, the sale of equipment for cash at book value appears as a debit under investing activities. Similarly, the purchase of land for cash appears as a credit under investing activities.
- The reconciling items shown in the worksheet are not entered in any journal or posted to any account.** They do not represent either adjustments or corrections of the balance sheet accounts. They are used only to facilitate the preparation of the statement of cash flows.

Preparing the Worksheet

Preparing a worksheet involves a series of prescribed steps. The steps in this case are:

- Enter in the balance sheet accounts section the balance sheet accounts and their beginning and ending balances.
- Enter in the reconciling columns of the worksheet the data that explain the changes in the balance sheet accounts other than cash and their effects on the statement of cash flows.
- Enter on the cash line and at the bottom of the worksheet the increase or decrease in cash. This entry should enable the totals of the reconciling columns to be in agreement.

To illustrate the preparation of a worksheet, we will use the 2020 data for Computer Services Company. Your familiarity with these data (from the chapter) should help you understand the use of a worksheet. For ease of reference, the comparative balance sheets, income statement, and selected data for 2020 are presented in **Illustration 17B.2**.

ILLUSTRATION 17B.2

Comparative balance sheets, income statement, and additional information for Computer Services Company

ILLUSTRATION 17B.2

(continued)

Computer Services Company			
P18	A	B	C
Computer Services Company			
Income Statement			
For the Year Ended December 31, 2020			
5 Sales revenue			\$507,000
6 Cost of goods sold		\$150,000	
7 Operating expenses (excluding depreciation)		111,000	
8 Depreciation expense		9,000	
9 Loss on disposal of plant assets		3,000	
10 Interest expense		42,000	315,000
11 Income before income taxes			192,000
12 Income tax expense			47,000
13 Net income			\$145,000
14			

Additional information for 2020:

1. Depreciation expense was comprised of \$6,000 for building and \$3,000 for equipment.
2. The company sold equipment with a book value of \$7,000 (cost \$8,000, less accumulated depreciation \$1,000) for \$4,000 cash.
3. Issued \$110,000 of long-term bonds in direct exchange for land.
4. A building costing \$120,000 was purchased for cash. Equipment costing \$25,000 was also purchased for cash.
5. Issued common stock for \$20,000 cash.
6. The company declared and paid a \$29,000 cash dividend.

Determining the Reconciling Items

Companies can use one of several approaches to determine the reconciling items. For example, they can first complete the changes affecting net cash provided by operating activities, and then can determine the effects of financing and investing transactions. Or, they can analyze the balance sheet accounts in the order in which they are listed on the worksheet. We will follow this latter approach for Computer Services, except for cash. As indicated in Step 3, **cash is handled last**.

Accounts Receivable. The decrease of \$10,000 in accounts receivable means that cash collections from sales revenue are higher than the sales revenue reported in the income statement. To convert net income to net cash provided by operating activities, we add the decrease of \$10,000 to net income. The entry in the reconciling columns of the worksheet is:

a. Operating—Decrease in Accounts Receivable	10,000	
Accounts Receivable		10,000

Inventory. Computer Services' inventory balance increases \$5,000 during the period. The Inventory account reflects the difference between the amount of inventory that the company purchased and the amount that it sold. For Computer Services, this means that the cost of merchandise purchased exceeds the cost of goods sold by \$5,000. As a result, cost of goods sold does not reflect \$5,000 of cash payments made for merchandise. We deduct this inventory increase of \$5,000 during the period from net income to arrive at net cash provided by operating activities. The worksheet entry is:

b. Inventory	5,000	
Operating—Increase in Inventory		5,000

Prepaid Expenses. An increase of \$4,000 in prepaid expenses means that expenses deducted in determining net income are less than expenses that were paid in cash. We deduct the increase of \$4,000 from net income in determining net cash provided by operating activities. The worksheet entry is:

c. Prepaid Expenses	4,000	
Operating—Increase in Prepaid Expenses		4,000

Land. The increase in land of \$110,000 resulted from a purchase through the issuance of long-term bonds. The company should report this transaction as a significant noncash investing and financing activity (see **Helpful Hint**). The worksheet entry is:

d. Land	110,000	
Bonds Payable		110,000

Buildings. The cash purchase of a building for \$120,000 is an investing activity cash outflow. The entry in the reconciling columns of the worksheet is:

e. Buildings	120,000	
Investing—Purchase of Building		120,000

Equipment. The increase in equipment of \$17,000 resulted from a cash purchase of \$25,000 and the disposal of plant assets (equipment) costing \$8,000. The book value of the equipment was \$7,000, the cash proceeds were \$4,000, and a loss of \$3,000 was recorded. The worksheet entries are:

f. Equipment	25,000	
Investing—Purchase of Equipment		25,000
g. Investing—Sale of Equipment	4,000	
Operating—Loss on Disposal of Plant Assets	3,000	
Accumulated Depreciation—Equipment	1,000	
Equipment		8,000

Accounts Payable. We must add the increase of \$16,000 in accounts payable to net income to determine net cash provided by operating activities. The worksheet entry is:

h. Operating—Increase in Accounts Payable	16,000	
Accounts Payable		16,000

Income Taxes Payable. When a company incurs income tax expense but has not yet paid its taxes, it records income taxes payable. A change in the Income Taxes Payable account reflects the difference between income tax expense incurred and income tax actually paid. Computer Services' Income Taxes Payable account decreases by \$2,000. That means the \$47,000 of income tax expense reported on the income statement was \$2,000 less than the amount of taxes paid during the period of \$49,000. To adjust net income to a cash basis, we must reduce net income by \$2,000. The worksheet entry is:

i. Income Taxes Payable	2,000	
Operating—Decrease in Income Taxes		2,000
Payable		2,000

Bonds Payable. The increase of \$110,000 in this account resulted from the issuance of bonds for land. This is a significant noncash investing and financing activity. Worksheet entry (d) above is the only entry necessary.

Common Stock. The balance sheet reports an increase in Common Stock of \$20,000. The additional information section notes that this increase resulted from the issuance of new shares of stock. This is a cash inflow reported in the financing section. The worksheet entry is:

j. Financing—Issuance of Common Stock	20,000	
Common Stock		20,000

Accumulated Depreciation—Buildings, and Accumulated Depreciation—Equipment. Increases in these accounts of \$6,000 and \$3,000, respectively, resulted from depreciation expense. Depreciation expense is a **noncash charge that we must add to net income** to determine net cash provided by operating activities. The worksheet entries are:

k. Operating—Depreciation Expense	6,000	
Accumulated Depreciation—Buildings		6,000
l. Operating—Depreciation Expense	3,000	
Accumulated Depreciation—Equipment		3,000

Retained Earnings. The \$116,000 increase in retained earnings resulted from net income of \$145,000 and the declaration and payment of a \$29,000 cash dividend. Net income is

HELPFUL HINT

These amounts are asterisked in the worksheet to indicate that they result from a significant noncash transaction.

included in net cash provided by operating activities, and the dividends are a financing activity cash outflow. The entries in the reconciling columns of the worksheet are:

m. Operating—Net Income	145,000	
Retained Earnings		145,000
n. Retained Earnings		29,000
Financing—Payment of Dividends		29,000

Disposition of Change in Cash. The firm's cash increased \$22,000 in 2020. The final entry on the worksheet, therefore, is:

o. Cash	22,000	
Increase in Cash		22,000

As shown in the worksheet, we enter the increase in cash in the reconciling credit column as a **balancing** amount. This entry should complete the reconciliation of the changes in the balance sheet accounts. Also, it should permit the totals of the reconciling columns to be in agreement. When all changes have been explained and the reconciling columns are in agreement, the reconciling columns are ruled to complete the worksheet. The completed worksheet for Computer Services Company is shown in **Illustration 17B.3**.

Appendix 17C

Statement of Cash Flows—T-Account Approach

LEARNING OBJECTIVE *6

Use the T-account approach to prepare a statement of cash flows.

Many people like to use T-accounts to provide structure to the preparation of a statement of cash flows. The use of T-accounts is based on the accounting equation:

$$\text{Assets} = \text{Liabilities} + \text{Equity}$$

Now, let's rewrite the left-hand side as:

$$\text{Cash} + \text{Noncash Assets} = \text{Liabilities} + \text{Equity}$$

Next, rewrite the equation by subtracting Noncash Assets from each side to isolate Cash on the left-hand side:

$$\text{Cash} = \text{Liabilities} + \text{Equity} - \text{Noncash Assets}$$

Finally, if we insert the Δ symbol (which means “change in”), we have:

$$\Delta \text{Cash} = \Delta \text{Liabilities} + \Delta \text{Equity} - \Delta \text{Noncash Assets}$$

What this means is that the change in cash is equal to the change in all of the other balance sheet accounts. Another way to think about this is that if we analyze the changes in all of the noncash balance sheet accounts, we will explain the change in the Cash account. This, of course, is exactly what we are trying to do with the statement of cash flows.

To implement this approach, first prepare a large Cash T-account with sections for operating, investing, and financing activities. Then, prepare smaller T-accounts for all of the other noncash balance sheet accounts. Insert the beginning and ending balances for each of these accounts. Once you have done this, then walk through the steps outlined in Illustration 17.3. As you walk through the steps, enter debit and credit amounts into the affected accounts. When all of the changes in the T-accounts have been explained, you are done. To demonstrate, we apply this approach to the example of Computer Services Company that is presented in the chapter. Each of the adjustments in **Illustration 17C.1** is numbered so you can follow them through the T-accounts.

1. Post net income as a debit to the operating section of the Cash T-account and a credit to Retained Earnings. Make sure to label all adjustments to the Cash T-account. It also helps to number each adjustment so you can trace all of them if you make an error.
2. Post depreciation expense as a debit to the operating section of Cash and a credit to each of the appropriate accumulated depreciation accounts.
3. Post any gains or losses on the sale of property, plant, and equipment. To do this, it is best to first prepare the journal entry that was recorded at the time of the sale and then

ILLUSTRATION 17C.1 T-account approach

Cash					
Operating					
(1) Net income	145,000		5,000	Inventory (5)	
(2) Depreciation expense	9,000		4,000	Prepaid expenses (6)	
(3) Loss on equipment	3,000		2,000	Income taxes payable (8)	
(4) Accounts receivable	10,000				
(7) Accounts payable	16,000				
Net cash provided by operating activities	172,000				
Investing					
(3) Sold equipment	4,000		120,000	Purchased building (10)	
			25,000	Purchased equipment (11)	
			141,000	Net cash used by investing activities	
Financing					
(12) Issued common stock	20,000		29,000	Dividend paid (13)	
			9,000	Net cash used by financing activities	
Net increase in cash	<u>22,000</u>				
Accounts Receivable		Inventory	Prepaid Expenses	Land	
30,000	10,000 (4)	10,000 (5) 5,000	1,000 (6) 4,000	20,000 (9) 110,000	
20,000		15,000	5,000	130,000	
Buildings		Accumulated Depreciation—Buildings	Equipment	Accumulated Depreciation—Equipment	
40,000 (10) 120,000		5,000 6,000 (2)	10,000 (11) 25,000	8,000 (3)	1,000 (3) 1,000
160,000		11,000	27,000		3,000
Accounts Payable		Income Taxes Payable	Bonds Payable	Common Stock	Retained Earnings
	12,000 16,000 (7)	(8) 2,000	8,000 6,000	20,000 110,000 (9) 130,000	50,000 20,000 (12) 70,000
	28,000				48,000 145,000 (1) <u>(13) 29,000</u>
					164,000

post each element of the journal entry. For example, for Computer Services the entry was as follows.

Cash	4,000
Accumulated Depreciation—Equipment	1,000
Loss on Disposal of Plant Assets	3,000
Equipment	8,000

The \$4,000 cash entry is a source of cash in the investing section of the Cash account. Accumulated Depreciation—Equipment is debited for \$1,000. The Loss on Disposal of Plant Assets (equipment) is a debit to the operating section of the Cash T-account. Finally, Equipment is credited for \$8,000.

- 4–8.** Next, post each of the changes to the noncash current asset and current liability accounts. For example, to explain the \$10,000 decline in Computer Services' accounts receivable, credit Accounts Receivable for \$10,000 and debit the operating section of the Cash T-account for \$10,000.

9. Analyze the changes in the noncurrent accounts. Land was purchased by issuing bonds payable. This requires a debit to Land for \$110,000 and a credit to Bonds Payable for \$110,000. Note that this is a significant noncash event that requires disclosure at the bottom of the statement of cash flows.
10. Buildings is debited for \$120,000, and the investing section of the Cash T-account is credited for \$120,000 as a use of cash from investing.
11. Equipment is debited for \$25,000 and the investing section of the Cash T-account is credited for \$25,000 as a use of cash from investing.
12. Common Stock is credited for \$20,000 for the issuance of shares of stock, and the financing section of the Cash T-account is debited for \$20,000.
13. Retained Earnings is debited to reflect the payment of the \$29,000 dividend, and the financing section of the Cash T-account is credited to reflect the use of Cash.

At this point, all of the changes in the noncash accounts have been explained. All that remains is to subtotal each section of the Cash T-account and compare the total change in cash with the change shown on the balance sheet. Once this is done, the information in the Cash T-account can be used to prepare a statement of cash flows.

Review and Practice

Learning Objectives Review

1 Discuss the usefulness and format of the statement of cash flows.

The statement of cash flows provides information about the cash receipts, cash payments, and net change in cash resulting from the operating, investing, and financing activities of a company during the period. Operating activities include the cash effects of transactions that enter into the determination of net income. Investing activities involve cash flows resulting from changes in investments and long-term asset items. Financing activities involve cash flows resulting from changes in long-term liability and stockholders' equity items.

2 Prepare a statement of cash flows using the indirect method.

The preparation of a statement of cash flows involves three major steps. (1) Determine net cash provided/used by operating activities by converting net income from an accrual basis to a cash basis. (2) Analyze changes in noncurrent asset and liability accounts and stockholders' equity accounts and record as investing and financing activities, or disclose as noncash transactions. (3) Compare the net change in cash on the statement of cash flows with the change in the Cash account reported on the balance sheet to make sure the amounts agree.

3 Analyze the statement of cash flows.

Free cash flow indicates the amount of cash a company generated during the current year that is available for the payment of additional dividends or for expansion.

***4 Prepare a statement of cash flows using the direct method.**

The preparation of the statement of cash flows involves three major steps. (1) Determine net cash provided/used by adjusting each item in the income statement from the accrual basis to the cash basis. (2) Analyze changes in noncurrent asset and liability accounts and stockholders' equity accounts and record as investing and financing activities, or disclose as noncash transactions. (3) Compare the net change in cash on the statement of cash flows with the change in the Cash account reported on the balance sheet to make sure the amounts agree. The direct method reports cash receipts less cash payments to arrive at net cash provided by operating activities.

***5 Use a worksheet to prepare the statement of cash flows using the indirect method.**

When there are numerous adjustments, a worksheet can be a helpful tool in preparing the statement of cash flows. Key guidelines for using a worksheet are as follows. (1) List accounts with debit balances separately from those with credit balances. (2) In the reconciling columns in the bottom portion of the worksheet, show cash inflows as debits and cash outflows as credits. (3) Do not enter reconciling items in any journal or account, but use them only to help prepare the statement of cash flows.

The steps in preparing the worksheet are as follows. (1) Enter beginning and ending balances of balance sheet accounts. (2) Enter debits and credits in reconciling columns. (3) Enter the increase or decrease in cash in two places as a balancing amount.

***6 Use the T-account approach to prepare a statement of cash flows.**

To use T-accounts to prepare the statement of cash flows: (1) prepare a large Cash T-account with sections for operating, investing,

and financing activities; (2) prepare smaller T-accounts for all other noncash accounts; (3) insert beginning and ending balances for all balance sheet accounts; and (4) follows the steps in Illustration 17C.1, entering debit and credit amounts as needed.

Glossary Review

***Direct method** A method of preparing a statement of cash flows that shows operating cash receipts and payments. It is prepared by adjusting each item in the income statement from the accrual basis to the cash basis. (pp. 17-7, 17-19).

Financing activities Cash flow activities that include (a) obtaining cash from issuing debt and repaying the amounts borrowed and (b) obtaining cash from stockholders, repurchasing shares, and paying dividends. (p. 17-3).

Free cash flow Net cash provided by operating activities adjusted for capital expenditures and cash dividends paid. (p. 17-17).

Indirect method A method of preparing a statement of cash flows in which net income is adjusted for items that do not affect cash, to determine net cash provided by operating activities. (pp. 17-7, 17-9).

Investing activities Cash flow activities that include (a) purchasing and disposing of investments and property, plant, and equipment using cash and (b) lending money and collecting the loans. (p. 17-3).

Operating activities Cash flow activities that include the cash effects of transactions that create revenues and expenses and thus enter into the determination of net income. (p. 17-3).

Statement of cash flows A basic financial statement that provides information about the cash receipts, cash payments, and net change in cash during a period, resulting from operating, investing, and financing activities. (p. 17-3).

Practice Multiple-Choice Questions

1. (LO 1) Which of the following is **incorrect** about the statement of cash flows?

- a. It is a fourth basic financial statement.
- b. It provides information about cash receipts and cash payments of an entity during a period.
- c. It reconciles the ending Cash account balance to the balance per the bank statement.
- d. It provides information about the operating, investing, and financing activities of the business.

2. (LO 1) Which of the following is **not** reported in the statement of cash flows?

- a. The net change in stockholders' equity during the year.
- b. Cash payments for plant assets during the year.
- c. Cash receipts from sales of plant assets during the year.
- d. How acquisitions of plant assets during the year were financed.

3. (LO 1) The statement of cash flows classifies cash receipts and cash payments by these activities:

- a. operating and nonoperating.
- b. investing, financing, and operating.
- c. financing, operating, and nonoperating.
- d. investing, financing, and nonoperating.

4. (LO 1) Which is an example of a cash flow from an operating activity?

- a. Payment of cash to lenders for interest.
- b. Receipt of cash from the sale of common stock.
- c. Payment of cash dividends to the company's stockholders.
- d. None of the above.

5. (LO 1) Which is an example of a cash flow from an investing activity?

- a. Receipt of cash from the issuance of bonds payable.
- b. Payment of cash to repurchase outstanding common stock.
- c. Receipt of cash from the sale of equipment.
- d. Payment of cash to suppliers for inventory.

6. (LO 1) Cash dividends paid to stockholders are classified on the statement of cash flows as:

- a. an operating activity.
- b. an investing activity.
- c. a combination of (a) and (b).
- d. a financing activity.

7. (LO 1) Which is an example of a cash flow from a financing activity?

- a. Receipt of cash from sale of land.
- b. Issuance of debt for cash.
- c. Purchase of equipment for cash.
- d. None of the above.

8. (LO 1) Which of the following is **incorrect** about the statement of cash flows?

- a. The direct method may be used to report net cash provided by operating activities.
- b. The statement shows the net cash provided (used) for three categories of activity.
- c. The operating section is the last section of the statement.
- d. The indirect method may be used to report net cash provided by operating activities.

Use the indirect method to solve Questions 9 through 11.

9. (LO 2) Net income is \$132,000, accounts payable increased \$10,000 during the year, inventory decreased \$6,000 during the year, and accounts receivable increased \$12,000 during the year. Under the indirect method, what is net cash provided by operating activities?

- a. \$102,000.
- c. \$124,000.
- b. \$112,000.
- d. \$136,000.

10. (LO 2) Items that are added back to net income in determining net cash provided by operating activities under the indirect method do **not** include:

- a. depreciation expense.
- b. an increase in inventory.
- c. amortization expense.
- d. loss on disposal of plant assets.

11. (LO 2) The following data are available for Allen Clapp Corporation.

Net income	\$200,000
Depreciation expense	40,000
Dividends paid	60,000
Gain on sale of land	10,000
Decrease in accounts receivable	20,000
Decrease in accounts payable	30,000

Net cash provided by operating activities is:

- a. \$160,000.
- c. \$240,000.
- b. \$220,000.
- d. \$280,000.

12. (LO 2) The following data are available for Orange Peels Corporation.

Proceeds from sale of land	\$100,000
Proceeds from sale of equipment	50,000
Issuance of common stock	70,000
Purchase of equipment	30,000
Payment of cash dividends	60,000

Net cash provided by investing activities is:

- a. \$120,000.
- c. \$150,000.
- b. \$130,000.
- d. \$190,000.

13. (LO 2) The following data are available for Something Strange!

Increase in accounts payable	\$ 40,000
Increase in bonds payable	100,000
Sale of investment	50,000
Issuance of common stock	60,000
Payment of cash dividends	30,000

Net cash provided by financing activities is:

- a. \$90,000.
- c. \$160,000.
- b. \$130,000.
- d. \$170,000.

14. (LO 3) The statement of cash flows should **not** be used to evaluate an entity's ability to:

- a. earn net income.
- b. generate future cash flows.
- c. pay dividends.
- d. meet obligations.

15. (LO 3) Free cash flow provides an indication of a company's ability to:

- a. manage inventory.
- b. generate cash to pay additional dividends.
- c. generate cash to invest in new capital expenditures.
- d. Both (b) and (c).

Use the direct method to solve Questions 16 and 17.

***16. (LO 4)** The beginning balance in accounts receivable is \$44,000, the ending balance is \$42,000, and sales during the period are \$129,000. What are cash receipts from customers?

- a. \$127,000.
- c. \$131,000.
- b. \$129,000.
- d. \$141,000.

***17. (LO 4)** Which of the following items is reported on a statement of cash flows prepared by the direct method?

- a. Loss on sale of building.
- b. Increase in accounts receivable.
- c. Depreciation expense.
- d. Cash payments to suppliers.

***18. (LO 5)** In a worksheet for the statement of cash flows, a decrease in accounts receivable is entered in the reconciling columns as a credit to Accounts Receivable and a debit in the:

- a. investing activities section.
- b. operating activities section.
- c. financing activities section.
- d. None of the above.

***19. (LO 5)** In a worksheet for the statement of cash flows, a worksheet entry that includes a credit to accumulated depreciation will also include a:

- a. credit in the operating activities section and a debit in another section.
- b. debit in the operating activities section.
- c. debit in the investing activities section.
- d. debit in the financing activities section.

Solutions

1. c. The statement of cash flows does not reconcile the ending cash balance to the balance per the bank statement. The other choices are true statements.

2. a. The net change in stockholders' equity during the year is not reported in the statement of cash flows. The other choices are true statements.

3. b. Operating, investing, and financing activities are the three classifications of cash receipts and cash payments used in the statement of cash flows. The other choices are therefore incorrect.

4. a. Payment of cash to lenders for interest is an operating activity. The other choices are incorrect because (b) receipt of cash from the sale of common stock is a financing activity, (c) payment of cash dividends to the company's stockholders is a financing activity, and (d) there is a correct answer.

5. c. Receipt of cash from the sale of equipment is an investing activity. The other choices are incorrect because (a) the receipt of cash from the issuance of bonds payable is a financing activity, (b) payment of cash to repurchase outstanding common stock is a financing activity, and (d) payment of cash to suppliers for inventory is an operating activity.

- 6. d.** Cash dividends paid to stockholders are classified as a financing activity, not (a) an operating activity, (b) an investing activity, or (c) a combination of (a) and (b).
- 7. b.** Issuance of debt for cash is a financing activity. The other choices are incorrect because (a) the receipt of cash from the sale of land is an investing activity, (c) the purchase of equipment for cash is an investing activity, and (d) there is a correct answer.
- 8. c.** The operating section of the statement of cash flows is the first, not the last, section of the statement. The other choices are true statements.
- 9. d.** Net cash provided by operating activities is computed by adjusting net income for the changes in the three current asset/current liability accounts listed. An increase in accounts payable (\$10,000) and a decrease in inventory (\$6,000) are added to net income (\$132,000), while an increase in accounts receivable (\$12,000) is subtracted from net income, or $\$132,000 + \$10,000 + \$6,000 - \$12,000 = \$136,000$, not (a) \$102,000, (b) \$112,000, or (c) \$124,000.
- 10. b.** An increase in inventory is subtracted, not added, to net income in determining net cash provided by operating activities. The other choices are incorrect because (a) depreciation expense, (c) amortization expense, and (d) loss on disposal of plant assets are all added back to net income in determining net cash provided by operating activities.
- 11. b.** Net cash provided by operating activities is \$220,000 (Net income \$200,000 + Depreciation expense \$40,000 – Gain on sale of land \$10,000 + Decrease in accounts receivable \$20,000 – Decrease in accounts payable \$30,000), not (a) \$160,000, (c) \$240,000, or (d) \$280,000.
- 12. a.** Net cash provided by investing activities is \$120,000 (Sale of land \$100,000 + Sale of equipment \$50,000 – Purchase of equipment \$30,000), not (b) \$130,000, (c) \$150,000, or (d) \$190,000. Issuance of common stock and payment of cash dividends are financing activities.
- 13. b.** Net cash provided by financing activities is \$130,000 (Increase in bonds payable \$100,000 + Issuance of common stock \$60,000 – Payment of cash dividends \$30,000), not (a) \$90,000, (c) \$160,000, or (d) \$170,000. Increase in accounts payable is an operating activity and sale of investment is an investing activity.
- 14. a.** The statement of cash flows is not used to evaluate an entity's ability to earn net income. The other choices are true statements.
- 15. d.** Free cash flow provides an indication of a company's ability to generate cash to pay additional dividends and to invest in new capital expenditures. Choice (a) is incorrect because other measures besides free cash flow provide the best measure of a company's ability to manage inventory. Choices (b) and (c) are true statements, but (d) is the better answer.
- *16. c.** Cash from customers amount to \$131,000 (\$129,000 + \$2,000 (decrease in accounts receivable)). The other choices are therefore incorrect.
- *17. d.** Cash payments to suppliers are reported on a statement of cash flows prepared by the direct method. The other choices are incorrect because (a) loss on sale of building, (b) increase in accounts receivable, and (c) depreciation expense are reported in the operating activities section of the statement of cash flows when the indirect, not direct, method is used.
- *18. b.** Because accounts receivable is a current asset, the debit belongs in the operating activities section of the worksheet, not in the (a) investing activities or (c) financing activities section. Choice (d) is incorrect as there is a right answer.
- *19. b.** A worksheet entry that includes a credit to accumulated depreciation will also include a debit to depreciation expense. This debit in the operating activities section of the statement of cash flows will be added to the net income to determine net cash provided by operating activities. The other choices are therefore incorrect.

Practice Brief Exercises

Identify investing activity transactions.

- 1. (LO 1)** The following is a summary of the Cash account of Covey Company:

Cash (Summary Form)

Balance, Jan. 1	8,000		
Receipts from customers	364,000	Payments for goods	200,000
Dividends on stock investments	6,000	Payments for operating expenses	140,000
Proceeds from sale of land	96,000	Purchase of equipment	70,000
Proceeds from issuance of bonds payable	300,000	Taxes paid	8,000
		Dividends paid	50,000
Balance, Dec. 31	306,000		

What amount of net cash provided (used) by investing activities should be reported in the statement of cash flows?

Solution

- 1. Cash flows from investing activities**

Proceeds from sale of land	\$96,000
Purchase of equipment	(70,000)
Net cash provided by financing activities	\$26,000

Compute net cash provided by operating activities—indirect method.

- 2. (LO 2)** Engel, Inc. reported net income of \$1.6 million in 2020. Depreciation for the year was \$140,000, accounts receivable increased \$250,000, and accounts payable increased \$210,000. The company also had a gain on disposal of plant assets of \$19,000. Compute net cash provided by operating activities using the indirect method.

Solution

2. Net income	\$1,600,000
Adjustments to reconcile net income to net cash provided by operating activities	
Depreciation expense	\$ 140,000
Gain on disposal of plant assets	(19,000)
Accounts receivable increase	(250,000)
Accounts payable increase	<u>210,000</u>
Net cash provided by operating activities	<u><u>\$1,681,000</u></u>

- 3. (LO 3)** Goldberg Corporation reported net cash provided by operating activities of \$410,000, net cash used by investing activities of \$200,000 (including cash spent for equipment of \$160,000), and net cash provided by financing activities of \$60,000. Dividends of \$110,000 were paid. Calculate free cash flow.

Calculate free cash flow.

Solution

3. Free cash flow = $\$410,000 - \$160,000 - \$110,000 = \$140,000$

Practice Exercises

- 1. (LO 2)** Furst Corporation had the following transactions.

Prepare journal entries to determine effect on statement of cash flows.

1. Paid salaries of \$14,000.
2. Issued 1,000 shares of \$1 par value common stock for equipment worth \$16,000.
3. Sold equipment (cost \$10,000, accumulated depreciation \$6,000) for \$3,000.
4. Sold land (cost \$12,000) for \$16,000.
5. Issued another 1,000 shares of \$1 par value common stock for \$18,000.
6. Recorded depreciation of \$20,000.

Instructions

For each transaction above, **(a)** prepare the journal entry, and **(b)** indicate how it would affect the statement of cash flows. Assume the indirect method.

Solution

1. a. Salaries and Wages Expense	14,000	
Cash		14,000
b. Salaries and wages expense is not reported separately on the statement of cash flows. It is part of the computation of net income in the income statement and is included in the net income amount on the statement of cash flows.		
2. a. Equipment	16,000	
Common Stock		1,000
Paid-in Capital in Excess of Par—Common Stock		15,000
b. The issuance of common stock for equipment (\$16,000) is reported as a noncash financing and investing activity at the bottom of the statement of cash flows.		
3. a. Cash	3,000	
Loss on Disposal of Plant Assets	1,000	
Accumulated Depreciation—Equipment	6,000	
Equipment		10,000
b. The cash receipt (\$3,000) is reported in the investing section. The loss (\$1,000) is added to net income in the operating section.		

4. a.	Cash Land Gain on Disposal of Plant Assets	16,000	12,000 4,000
b. The cash receipt (\$16,000) is reported in the investing section. The gain (\$4,000) is deducted from net income in the operating section.			
5. a.	Cash Common Stock Paid-in Capital in Excess of Par—Common Stock	18,000	1,000 17,000
b. The cash receipt (\$18,000) is reported in the financing section.			
6. a.	Depreciation Expense Accumulated Depreciation—Equipment	20,000	20,000
b. Depreciation expense (\$20,000) is added to net income in the operating section.			

Prepare statement of cash flows and compute free cash flow.

2. (LO 2, 3) Financial Statement Strong Corporation's comparative balance sheets are presented below.

Strong Corporation
Comparative Balance Sheets
December 31

	2020	2019
Cash	\$ 28,200	\$ 17,700
Accounts receivable	24,200	22,300
Investments	23,000	16,000
Equipment	60,000	70,000
Accumulated depreciation—equipment	(14,000)	(10,000)
Total	<u>\$121,400</u>	<u>\$116,000</u>
Accounts payable	\$ 19,600	\$ 11,100
Bonds payable	10,000	30,000
Common stock	60,000	45,000
Retained earnings	31,800	29,900
Total	<u>\$121,400</u>	<u>\$116,000</u>

Additional information:

- Net income was \$28,300. Dividends declared and paid were \$26,400.
- Equipment which cost \$10,000 and had accumulated depreciation of \$1,200 was sold for \$4,300.
- All other changes in noncurrent account balances had a direct effect on cash flows, except the change in accumulated depreciation.

Instructions

- Prepare a statement of cash flows for 2020 using the indirect method.
- Compute free cash flow.

Solution

2. a.

Strong Corporation
Statement of Cash Flows
For the Year Ended December 31, 2020

Cash flows from operating activities	
Net income	\$ 28,300
Adjustments to reconcile net income to net cash provided by operating activities:	
Depreciation expense	\$ 5,200*
Loss on disposal of plant assets	4,500**

Increase in accounts payable	8,500	
Increase in accounts receivable	<u>(1,900)</u>	<u>16,300</u>
Net cash provided by operating activities		44,600
 Cash flows from investing activities		
Sale of equipment	4,300	
Purchase of investments	<u>(7,000)</u>	
Net cash used by investing activities		(2,700)
 Cash flows from financing activities		
Issuance of common stock	15,000	
Retirement of bonds	<u>(20,000)</u>	
Payment of dividends	<u>(26,400)</u>	
Net cash used by financing activities		(31,400)
Net increase in cash		10,500
Cash at beginning of period		<u>17,700</u>
Cash at end of period		<u>\$ 28,200</u>

*[\$14,000 – (\$10,000 – \$1,200)]; **[\$4,300 – (\$10,000 – \$1,200)]

b. $\$44,600 - \$0 - \$26,400 = \$18,200$

Practice Problem

(LO 2, 4) Financial Statement The income statement for the year ended December 31, 2020, for Kosinski Manufacturing Company contains the following condensed information.

Prepare statement of cash flows using indirect and direct methods.

Kosinski Manufacturing Company Income Statement For the Year Ended December 31, 2020

Sales revenue	\$6,583,000
Cost of goods sold	\$2,810,000
Operating expenses (excluding depreciation)	2,086,000
Depreciation expense	880,000
Loss on disposal of plant assets	<u>24,000</u>
	<u>5,800,000</u>
Income before income taxes	783,000
Income tax expense	<u>353,000</u>
Net income	<u>\$ 430,000</u>

The \$24,000 loss resulted from selling equipment for \$270,000 cash. Equipment was purchased at a cost of \$750,000.

The following balances are reported on Kosinski's comparative balance sheets at December 31.

Kosinski Manufacturing Company Comparative Balance Sheets (partial)

	2020	2019
Cash	\$672,000	\$130,000
Accounts receivable	775,000	610,000
Inventory	834,000	867,000
Accounts payable	521,000	501,000

Income tax expense of \$353,000 represents the amount paid in 2020. Dividends declared and paid in 2020 totaled \$200,000.

Instructions

- a. Prepare the statement of cash flows using the indirect method.
- *b. Prepare the statement of cash flows using the direct method.

Solution

a.

Kosinski Manufacturing Company Statement of Cash Flows—Indirect Method For the Year Ended December 31, 2020		
Cash flows from operating activities		
Net income		\$ 430,000
Adjustments to reconcile net income to net cash provided by operating activities:		
Depreciation expense	\$ 880,000	
Loss on disposal of plant assets	24,000	
Increase in accounts receivable	(165,000)	
Decrease in inventory	33,000	
Increase in accounts payable	20,000	<u>792,000</u>
Net cash provided by operating activities		1,222,000
Cash flows from investing activities		
Sale of equipment	270,000	
Purchase of equipment	(750,000)	
Net cash used by investing activities		(480,000)
Cash flows from financing activities		
Payment of cash dividends	(200,000)	
Net cash used by financing activities		(200,000)
Net increase in cash		542,000
Cash at beginning of period		130,000
Cash at end of period		<u>\$ 672,000</u>

*b.

Kosinski Manufacturing Company Statement of Cash Flows—Direct Method For the Year Ended December 31, 2020		
Cash flows from operating activities		
Cash collections from customers		\$6,418,000*
Less: Cash payments:		
To suppliers	\$2,757,000**	
For operating expenses	2,086,000	
For income taxes	353,000	<u>5,196,000</u>
Net cash provided by operating activities		1,222,000
Cash flows from investing activities		
Sale of equipment	270,000	
Purchase of equipment	(750,000)	
Net cash used by investing activities		(480,000)

Cash flows from financing activities	
Payment of cash dividends	<u>(200,000)</u>
Net cash used by financing activities	<u>(200,000)</u>
Net increase in cash	542,000
Cash at beginning of period	<u>130,000</u>
Cash at end of period	<u>\$ 672,000</u>

Direct-Method Computations:

*Computation of cash collections from customers:

Sales revenue	\$6,583,000
Deduct: Increase in accounts receivable	<u>(165,000)</u>
Cash collections from customers	<u>\$6,418,000</u>

**Computation of cash payments to suppliers

Cost of goods sold per income statement	\$2,810,000
Deduct: Decrease in inventories	<u>(33,000)</u>
Deduct: Increase in accounts payable	<u>(20,000)</u>
Cash payments to suppliers	<u>\$2,757,000</u>

WileyPLUS

Brief Exercises, DO IT! Exercises, Exercises, Problems, and many additional resources are available for practice in WileyPLUS.

Note: All asterisked Questions, Exercises, and Problems relate to material in the appendices to the chapter.

Questions

1. a. What is a statement of cash flows?
- b. Mark Paxson maintains that the statement of cash flows is an optional financial statement. Do you agree? Explain.
2. What questions about cash are answered by the statement of cash flows?
3. Distinguish among the three types of activities reported in the statement of cash flows.
4. a. What are the major sources (inflows) of cash in a statement of cash flows?
- b. What are the major uses (outflows) of cash?
5. Why is it important to disclose certain noncash transactions? How should they be disclosed?
6. Diane Hollowell and Terry Parmenter were discussing the format of the statement of cash flows of Snow Candy Co. At the bottom of Snow Candy's statement of cash flows was a separate section entitled "Noncash investing and financing activities." Give three examples of significant noncash transactions that would be reported in this section.
7. Why is it necessary to use comparative balance sheets, a current income statement, and certain transaction data in preparing a statement of cash flows?
8. Contrast the advantages and disadvantages of the direct and indirect methods of preparing the statement of cash flows. Are both methods acceptable? Which method is preferred by the FASB? Which method is more popular?
9. When the total cash inflows exceed the total cash outflows in the statement of cash flows, how and where is this excess identified?
10. Describe the indirect method for determining net cash provided (used) by operating activities.
11. Why is it necessary to convert accrual-basis net income to cash-basis income when preparing a statement of cash flows?
12. The president of Merando Company is puzzled. During the last year, the company experienced a net loss of \$800,000, yet its cash increased \$300,000 during the same period of time. Explain to the president how this could occur.
13. Identify five items that are adjustments to convert net income to net cash provided by operating activities under the indirect method.
14. Why and how is depreciation expense reported in a statement of cash flows prepared using the indirect method?
15. Why is the statement of cash flows useful?

- 16.** During 2020, Doubleday Company converted \$1,700,000 of its total \$2,000,000 of bonds payable into common stock. Indicate how the transaction would be reported on a statement of cash flows, if at all.
- 17.** In its 2015 statement of cash flows, what amount did **Apple** report for net cash (a) provided by operating activities, (b) used for investing activities, and (c) used for financing activities?
- *18.** Describe the direct method for determining net cash provided by operating activities.
- *19.** Give the formulas under the direct method for computing (a) cash receipts from customers and (b) cash payments to suppliers.
- *20.** Molino Inc. reported sales revenue of \$2 million for 2020. Accounts receivable decreased \$200,000 and accounts payable increased \$300,000. Compute cash receipts from customers, assuming that the receivable and payable transactions related to operations.
- *21.** In the direct method, why is depreciation expense not reported in the cash flows from operating activities section?
- *22.** Why is it advantageous to use a worksheet when preparing a statement of cash flows? Is a worksheet required to prepare a statement of cash flows?

Brief Exercises

Indicate statement presentation of selected transactions.

Classify items by activities.

Identify financing activity transactions.

Compute net cash provided by operating activities—indirect method.

Compute net cash provided by operating activities—indirect method.

Compute net cash provided by operating activities—indirect method.

Determine cash received from sale of equipment.

BE17.1 (LO 1) Each of the items below must be considered in preparing a statement of cash flows for Baskerville Co. for the year ended December 31, 2020. For each item, state how it should be shown in the statement of cash flows for 2020 if the indirect method is used.

- a. Issued bonds for \$200,000 cash.
- b. Purchased equipment for \$150,000 cash.
- c. Sold land costing \$20,000 for \$20,000 cash.
- d. Declared and paid a \$50,000 cash dividend.

BE17.2 (LO 1) Classify each item as an operating, investing, or financing activity. Assume all items involve cash unless there is information to the contrary.

- | | |
|------------------------------------|--------------------------------------|
| a. Purchase of equipment. | d. Cash received from sale of goods. |
| b. Proceeds from sale of building. | e. Payment of dividends. |
| c. Redemption of bonds payable. | f. Issuance of common stock. |

BE17.3 (LO 1) The following T-account is a summary of the Cash account of Cuellar Company.

Cash (Summary Form)

Balance, Jan. 1	8,000		
Receipts from customers	364,000	Payments for goods	200,000
Dividends on stock investments	6,000	Payments for operating expenses	140,000
Proceeds from sale of equipment	36,000	Interest paid	10,000
Proceeds from issuance of bonds payable	300,000	Taxes paid	8,000
		Dividends paid	50,000
Balance, Dec. 31	306,000		

What amount of net cash provided (used) by financing activities should be reported in the statement of cash flows?

BE17.4 (LO 2) Telfer, Inc. reported net income of \$2.8 million in 2020. Depreciation for the year was \$160,000, accounts receivable decreased \$350,000, and accounts payable decreased \$280,000. Compute net cash provided by operating activities using the indirect method.

BE17.5 (LO 2) The net income for Metz Co. for 2020 was \$280,000. For 2020, depreciation on plant assets was \$70,000, and the company incurred a loss on disposal of plant assets of \$12,000. Compute net cash provided by operating activities under the indirect method, assuming there were no other relevant changes in the company's accounts.

BE17.6 (LO 2) The comparative balance sheets for Montalvo Company show these changes in non-cash current asset accounts: accounts receivable decrease \$80,000, prepaid expenses increase \$28,000, and inventories increase \$30,000. Compute net cash provided by operating activities using the indirect method assuming that net income is \$300,000.

BE17.7 (LO 2) The T-accounts for Equipment and the related Accumulated Depreciation—Equipment for Luo Company at the end of 2020 are shown here.

Equipment			Accumulated Depreciation—Equipment		
Beg. bal.	80,000	Disposals	22,000	Disposals	5,500
Acquisitions	41,600			Beg. bal.	44,500
End. bal.	99,600			Depr. exp.	12,000
				End. bal.	51,000

In addition, Luo's income statement reported a loss on the disposal of plant assets of \$6,500. What amount was reported on the statement of cash flows as "cash flow from sale of equipment"?

BE17.8 (LO 3) Assume that during 2020, **Cypress Semiconductor Corporation** reported net cash provided by operating activities of \$155,793,000, net cash used in investing activities of \$207,826,000 (including cash spent for plant assets of \$132,280,000), and net cash used in financing activities of \$33,372,000. Dividends of \$5,000,000 were paid. Calculate free cash flow.

Calculate free cash flow.

BE17.9 (LO 3) Hinck Corporation reported net cash provided by operating activities of \$360,000, net cash used by investing activities of \$250,000 (including cash spent for capital assets of \$200,000), and net cash provided by financing activities of \$70,000. Dividends of \$140,000 were paid. Calculate free cash flow.

Calculate free cash flow.

BE17.10 (LO 3) Suppose in a recent quarter, **Alliance Atlantis Communications Inc.** reported net cash provided by operating activities of \$45,600,000 and revenues of \$264,800,000. Cash spent on plant asset additions during the quarter was \$1,600,000. No dividends were paid. Calculate free cash flow.

Calculate free cash flow.

BE17.11 (LO 3) The management of Morrow Inc. is trying to decide whether it can increase its dividend. During the current year, it reported net income of \$875,000. It had net cash provided by operating activities of \$734,000, paid cash dividends of \$70,000, and had capital expenditures of \$280,000. Compute the company's free cash flow, and discuss whether an increase in the dividend appears warranted. What other factors should be considered?

Calculate and analyze free cash flow.

***BE17.12 (LO 4)** Suppose **Columbia Sportswear Company** had accounts receivable of \$206,024,000 at the beginning of a recent year, and \$267,653,000 at year-end. Sales revenue was \$1,095,307,000 for the year. What is the amount of cash receipts from customers?

Compute receipts from customers—direct method.

***BE17.13 (LO 4)** Howell Corporation reported income tax expense of \$340,000,000 on its 2020 income statement and income taxes payable of \$297,000,000 at December 31, 2019, and \$522,000,000 at December 31, 2020. What amount of cash payments were made for income taxes during 2020?

Compute cash payments for income taxes—direct method.

***BE17.14 (LO 4)** Sisson Corporation reports operating expenses of \$80,000 excluding depreciation expense of \$15,000 for 2020. During the year, prepaid expenses decreased \$6,600 and accrued expenses payable increased \$4,400. Compute the cash payments for operating expenses in 2020.

Compute cash payments for operating expenses—direct method.

***BE17.15 (LO 5)** During the year, prepaid expenses decreased \$5,600, and accrued expenses increased \$2,400. Indicate how the changes in prepaid expenses and accrued expenses payable should be entered in the reconciling columns of a worksheet. Assume that beginning balances were prepaid expenses \$18,600 and accrued expenses payable \$8,200.

Indicate entries in worksheet.

DO IT! Exercises

DO IT! 17.1 (LO 1) Ragsdell Corporation had the following transactions.

Classify transactions by type of cash flow activity.

1. Issued \$200,000 of bonds payable.
2. Paid utilities expense.
3. Issued 500 shares of preferred stock for \$45,000.
4. Sold land and a building for \$250,000.
5. Lent \$30,000 to Tegtmeier Corporation, receiving Tegtmeier's 1-year, 12% note.

Classify each of these transactions by type of cash flow activity (operating, investing, or financing).

DO IT! 17.2a (LO 2) Wise Photography reported net income of \$130,000 for 2020. Included in the income statement were depreciation expense of \$6,000, amortization expense of \$2,000, and a gain on disposal of plant assets of \$3,600. Wise's comparative balance sheets show the following balances.

Calculate net cash from operating activities.

	12/31/19	12/31/20
Accounts receivable	\$27,000	\$21,000
Accounts payable	6,000	9,200

Calculate net cash provided by operating activities for Wise Photography.

Prepare statement of cash flows—indirect method.

DO IT! 17.2b (LO 2) Financial Statement Alex Company reported the following information for 2020.

Alex Company Comparative Balance Sheets December 31			
	2020	2019	Change Increase/Decrease
Assets			
Cash	\$ 59,000	\$ 36,000	\$ 23,000 Increase
Accounts receivable	62,000	22,000	40,000 Increase
Inventory	44,000	—0—	44,000 Increase
Prepaid expenses	6,000	4,000	2,000 Increase
Land	55,000	70,000	15,000 Decrease
Buildings	200,000	200,000	—0—
Accumulated depreciation—buildings	(21,000)	(14,000)	7,000 Increase
Equipment	183,000	68,000	115,000 Increase
Accumulated depreciation—equipment	(28,000)	(10,000)	18,000 Increase
Totals	<u>\$560,000</u>	<u>\$376,000</u>	
Liabilities and Stockholders' Equity			
Accounts payable	\$ 43,000	\$ 40,000	\$ 3,000 Increase
Accrued expenses payable	—0—	10,000	10,000 Decrease
Bonds payable	100,000	150,000	50,000 Decrease
Common stock (\$1 par)	230,000	60,000	170,000 Increase
Retained earnings	187,000	116,000	71,000 Increase
Totals	<u>\$560,000</u>	<u>\$376,000</u>	

Alex Company Income Statement For the Year Ended December 31, 2020		
Sales revenue		\$941,000
Cost of goods sold	\$475,000	
Operating expenses	231,000	
Interest expense	12,000	
Loss on disposal of plant assets	<u>2,000</u>	<u>720,000</u>
Income before income taxes		221,000
Income tax expense		65,000
Net income		<u>\$156,000</u>

Additional information:

1. Operating expenses include depreciation expense of \$40,000.
2. Land was sold at its book value for cash.
3. Cash dividends of \$85,000 were declared and paid in 2020.
4. Equipment with a cost of \$166,000 was purchased for cash. Equipment with a cost of \$51,000 and a book value of \$36,000 was sold for \$34,000 cash.
5. Bonds of \$50,000 were redeemed at their face value for cash.
6. Common stock (\$1 par) of \$170,000 was issued for cash.

Use this information to prepare a statement of cash flows using the indirect method.

DO IT! 17.3 (LO 3) Obermeyer Corporation issued the following statement of cash flows for 2020.

Compute and discuss free cash flow.

Obermeyer Corporation
Statement of Cash Flows—Indirect Method
For the Year Ended December 31, 2020

Cash flows from operating activities	
Net income	\$59,000
Adjustments to reconcile net income to net cash provided by operating activities:	
Depreciation expense	\$ 9,100
Loss on disposal of plant assets	9,500
Increase in inventory	(5,000)
Decrease in accounts receivable	3,300
Decrease in accounts payable	(2,200) <u>14,700</u>
Net cash provided by operating activities	73,700
Cash flows from investing activities	
Sale of investments	3,100
Purchase of equipment	(27,000) <u>(23,900)</u>
Net cash used by investing activities	
Cash flows from financing activities	
Issuance of stock	20,000
Payment on long-term note payable	(10,000)
Payment for dividends	(15,000) <u>(5,000)</u>
Net cash used by financing activities	
Net increase in cash	44,800
Cash at beginning of year	13,000
Cash at end of year	\$57,800

(a) Compute free cash flow for Obermeyer Corporation. (b) Explain why free cash flow often provides better information than “Net cash provided by operating activities.”

Exercises

E17.1 (LO 1) Tabares Corporation had these transactions during 2020.

Classify transactions by type of activity.

- a. Issued \$50,000 par value common stock for cash.
- b. Purchased a machine for \$30,000, giving a long-term note in exchange.
- c. Issued \$200,000 par value common stock upon conversion of bonds having a face value of \$200,000.
- d. Declared and paid a cash dividend of \$18,000.
- e. Sold a long-term investment with a cost of \$15,000 for \$15,000 cash.
- f. Collected \$16,000 from sale of goods.
- g. Paid \$18,000 to suppliers.

Instructions

Indicate whether each transaction is an operating activity, investing activity, financing activity, or noncash investing and financing activity.

E17.2 (LO 1) An analysis of comparative balance sheets, the current year's income statement, and the general ledger accounts of Wellman Corp. uncovered the following items. Assume all items involve cash unless there is information to the contrary.

Classify transactions by type of activity.

- a. Payment of interest on notes payable.
- b. Exchange of land for patent.
- c. Sale of building at book value.
- d. Payment of dividends.
- e. Depreciation.
- f. Receipt of dividends on investment in stock.
- g. Receipt of interest on notes receivable.
- h. Issuance of common stock.
- i. Amortization of patent.
- j. Issuance of bonds for land.
- k. Purchase of land.
- l. Conversion of bonds into common stock.
- m. Sale of land at a loss.
- n. Retirement of bonds.

Instructions

Indicate how each item should be classified in the statement of cash flows (indirect method) using these four major classifications: operating activity (that is, the item would be included in net income or listed among the adjustments to net income to determine net cash provided by operating activities under the indirect method), investing activity, financing activity, and significant noncash investing and financing activity.

Prepare journal entry and determine effect on cash flows.

E17.3 (LO 1) Cushmanberry Corporation had the following transactions.

1. Sold land (cost \$12,000) for \$15,000.
2. Issued common stock at par for \$20,000.
3. Recorded depreciation on buildings for \$17,000.
4. Paid salaries of \$9,000.
5. Issued 1,000 shares of \$1 par value common stock for equipment worth \$8,000.
6. Sold equipment (cost \$10,000, accumulated depreciation \$7,000) for \$1,200.

Instructions

For each transaction above, (a) prepare the journal entry, and (b) indicate how it would affect the statement of cash flows using the indirect method.

Prepare the operating activities section—indirect method.

E17.4 (LO 2) **Financial Statement** Gutierrez Company reported net income of \$225,000 for 2020. Gutierrez also reported depreciation expense of \$45,000 and a loss of \$5,000 on the disposal of plant assets. The comparative balance sheet shows a decrease in accounts receivable of \$15,000 for the year, a \$17,000 increase in accounts payable, and a \$4,000 decrease in prepaid expenses.

Instructions

Prepare the operating activities section of the statement of cash flows for 2020. Use the indirect method.

Prepare the operating activities section—indirect method.

E17.5 (LO 2) **Financial Statement** The current sections of Scoggin Inc.'s balance sheets at December 31, 2019 and 2020, are presented here. Scoggin's net income for 2020 was \$153,000. Depreciation expense was \$24,000.

	2020	2019
Current assets		
Cash	\$105,000	\$ 99,000
Accounts receivable	110,000	89,000
Inventory	158,000	172,000
Prepaid expenses	27,000	22,000
Total current assets	<u>\$400,000</u>	<u>\$382,000</u>
Current liabilities		
Accrued expenses payable	\$ 15,000	\$ 5,000
Accounts payable	85,000	92,000
Total current liabilities	<u>\$100,000</u>	<u>\$ 97,000</u>

Instructions

Prepare the net cash provided by operating activities section of the company's statement of cash flows for the year ended December 31, 2020, using the indirect method.

Prepare statement of cash flows—indirect method.

E17.6 (LO 2) **Financial Statement** The following information is available for Stamos Corporation for the year ended December 31, 2020.

Beginning cash balance	\$ 45,000
Accounts payable decrease	3,700
Depreciation expense	162,000
Accounts receivable increase	8,200
Inventory increase	11,000
Net income	284,100
Cash received for sale of land at book value	35,000
Cash dividends paid	12,000
Income taxes payable increase	4,700
Cash used to purchase building	289,000
Cash used to purchase treasury stock	26,000
Cash received from issuing bonds	200,000

Instructions

Prepare a statement of cash flows using the indirect method.

E17.7 (LO 2) The following three accounts appear in the general ledger of Herrick Corp. during 2020.

Prepare partial statement of cash flows—indirect method.

		Equipment	Debit	Credit	Balance
Jan. 1	Balance				160,000
July 31	Purchase of equipment	70,000			230,000
Sept. 2	Cost of equipment constructed	53,000			283,000
Nov. 10	Cost of equipment sold		49,000		234,000

		Accumulated Depreciation—Equipment	Debit	Credit	Balance
Jan. 1	Balance				71,000
Nov. 10	Accumulated depreciation on equipment sold	30,000			41,000
Dec. 31	Depreciation for year		28,000		69,000

		Retained Earnings	Debit	Credit	Balance
Jan. 1	Balance				105,000
Aug. 23	Dividends (cash)	14,000			91,000
Dec. 31	Net income		77,000		168,000

Instructions

From the postings in the accounts, indicate how the information is reported on a statement of cash flows using the indirect method. The loss on disposal of plant assets was \$7,000. (*Hint:* Cost of equipment constructed is reported in the investing activities section as a decrease in cash of \$53,000.)

E17.8 (LO 2, 3) Financial Statement Rojas Corporation's comparative balance sheets are presented below.

Prepare statement of cash flows and compute free cash flow.

Rojas Corporation		
Comparative Balance Sheets		
December 31		
	2020	2019
Cash	\$ 14,300	\$ 10,700
Accounts receivable	21,200	23,400
Land	20,000	26,000
Buildings	70,000	70,000
Accumulated depreciation—buildings	(15,000)	(10,000)
Total	<u><u>\$110,500</u></u>	<u><u>\$120,100</u></u>
Accounts payable	\$ 12,370	\$ 31,100
Common stock	75,000	69,000
Retained earnings	23,130	20,000
Total	<u><u>\$110,500</u></u>	<u><u>\$120,100</u></u>

Additional information:

1. Net income was \$22,630. Dividends declared and paid were \$19,500.
2. No noncash investing and financing activities occurred during 2020.
3. The land was sold for cash of \$4,900.

Instructions

- a. Prepare a statement of cash flows for 2020 using the indirect method.
- b. Compute free cash flow.

Prepare a statement of cash flows—indirect method.

E17.9 (LO 2) Financial Statement Here are comparative balance sheets for Velo Company.

Velo Company Comparative Balance Sheets December 31		
<u>Assets</u>	<u>2020</u>	<u>2019</u>
Cash	\$ 63,000	\$ 22,000
Accounts receivable	85,000	76,000
Inventory	170,000	189,000
Land	75,000	100,000
Equipment	270,000	200,000
Accumulated depreciation—equipment	(66,000)	(32,000)
Total	\$597,000	\$555,000
<u>Liabilities and Stockholders' Equity</u>		
Accounts payable	\$ 39,000	\$ 47,000
Bonds payable	150,000	200,000
Common stock (\$1 par)	216,000	174,000
Retained earnings	192,000	134,000
Total	\$597,000	\$555,000

Additional information:

- Net income for 2020 was \$93,000.
- Cash dividends of \$35,000 were declared and paid.
- Bonds payable amounting to \$50,000 were redeemed for cash \$50,000.
- Common stock was issued for \$42,000 cash.
- No equipment was sold during 2020, but land was sold at cost.

Instructions

Prepare a statement of cash flows for 2020 using the indirect method.

Prepare statement of cash flows and compute free cash flow.

E17.10 (LO 2, 3) Financial Statement Rodriguez Corporation's comparative balance sheets are presented below.

Rodriguez Corporation Comparative Balance Sheets December 31		
	<u>2020</u>	<u>2019</u>
Cash	\$ 15,200	\$ 17,700
Accounts receivable	25,200	22,300
Investments	20,000	16,000
Equipment	60,000	70,000
Accumulated depreciation—equipment	(14,000)	(10,000)
Total	\$106,400	\$116,000
Accounts payable	\$ 14,600	\$ 11,100
Bonds payable	10,000	30,000
Common stock	50,000	45,000
Retained earnings	31,800	29,900
Total	\$106,400	\$116,000

Additional information:

- Net income was \$18,300. Dividends declared and paid were \$16,400.
- Equipment which cost \$10,000 and had accumulated depreciation of \$1,200 was sold for \$3,300.
- No noncash investing and financing activities occurred during 2020.

Instructions

- Prepare a statement of cash flows for 2020 using the indirect method.
- Compute free cash flow.

***E17.11 (LO 4)** Macgregor Company completed its first year of operations on December 31, 2020. Its initial income statement showed that Macgregor had revenues of \$192,000 and operating expenses of \$78,000. Accounts receivable and accounts payable at year-end were \$60,000 and \$23,000, respectively. Assume that accounts payable related to operating expenses. Ignore income taxes.

Compute net cash provided by operating activities—direct method.

Instructions

Compute net cash provided by operating activities using the direct method.

***E17.12 (LO 4)** Suppose a recent income statement for **McDonald's Corporation** shows cost of goods sold \$4,852.7 million and operating expenses (including depreciation expense of \$1,201 million) \$10,671.5 million. The comparative balance sheet for the year shows that inventory increased \$18.1 million, prepaid expenses increased \$56.3 million, accounts payable (merchandise suppliers) increased \$136.9 million, and accrued expenses payable increased \$160.9 million.

Compute cash payments—direct method.

Instructions

Using the direct method, compute (a) cash payments to suppliers and (b) cash payments for operating expenses.

***E17.13 (LO 4)** The 2020 accounting records of Blocker Transport reveal these transactions and events.

Payment of interest	\$ 10,000	Collection of accounts receivable	\$182,000
Cash sales	48,000	Payment of salaries and wages	53,000
Receipt of dividend revenue	18,000	Depreciation expense	16,000
Payment of income taxes	12,000	Proceeds from sale of vehicles	12,000
Net income	38,000	Purchase of equipment for cash	22,000
Payment of accounts payable for merchandise	115,000	Loss on sale of vehicles	3,000
Payment for land	74,000	Payment of dividends	14,000
		Payment of operating expenses	28,000

Compute cash flow from operating activities—direct method.

Instructions

Prepare the cash flows from operating activities section using the direct method. (Not all of the items will be used.)

***E17.14 (LO 4)** The following information is taken from the 2020 general ledger of Swisher Company.

Calculate cash flows—direct method.

Rent	Rent expense	\$ 48,000
	Prepaid rent, January 1	5,900
	Prepaid rent, December 31	9,000
Salaries	Salaries and wages expense	\$ 54,000
	Salaries and wages payable, January 1	10,000
	Salaries and wages payable, December 31	8,000
Sales	Sales revenue	\$175,000
	Accounts receivable, January 1	16,000
	Accounts receivable, December 31	7,000

Instructions

In each case, compute the amount that should be reported in the operating activities section of the statement of cash flows under the direct method.

***E17.15 (LO 5)** Comparative balance sheets for International Company are presented as follows.

Prepare a worksheet.

Assets	International Company	
	Comparative Balance Sheets	
	December 31	
Cash	\$ 73,000	\$ 22,000
Accounts receivable	85,000	76,000
Inventory	180,000	189,000
Land	75,000	100,000
Equipment	250,000	200,000
Accumulated depreciation—equipment	(66,000)	(42,000)
Total	\$597,000	\$545,000

Liabilities and Stockholders' Equity	2020	2019
Accounts payable	\$ 34,000	\$ 47,000
Bonds payable	150,000	200,000
Common stock (\$1 par)	214,000	164,000
Retained earnings	199,000	134,000
Total	<u>\$597,000</u>	<u>\$545,000</u>

Additional information:

1. Net income for 2020 was \$135,000.
2. Cash dividends of \$70,000 were declared and paid.
3. Bonds payable amounting to \$50,000 were redeemed for cash \$50,000.
4. Common stock was issued for \$50,000 cash.
5. Depreciation expense was \$24,000.
6. Sales revenue for the year was \$978,000.
7. Land was sold at cost, and equipment was purchased for cash.

Instructions

Prepare a worksheet for a statement of cash flows for 2020 using the indirect method. Enter the reconciling items directly on the worksheet, using letters to cross-reference each entry.

Problems: Set A

Distinguish among operating, investing, and financing activities.

P17.1A (LO 1) You are provided with the following information regarding events that occurred at Moore Corporation during 2020 or changes in account balances as of December 31, 2020.

(1) Statement of Cash Flow Section Affected	(2) If Operating, Did It Increase or Decrease Reported Cash from Operating Activities?
a. Depreciation expense was \$80,000.	
b. Interest Payable account increased \$5,000.	
c. Received \$26,000 from sale of plant assets.	
d. Acquired land by issuing common stock to seller.	
e. Paid \$17,000 cash dividend to preferred stockholders.	
f. Paid \$4,000 cash dividend to common stockholders.	
g. Accounts Receivable account decreased \$10,000.	
h. Inventory increased \$2,000.	
i. Received \$100,000 from issuing bonds payable.	
j. Acquired equipment for \$16,000 cash.	

Instructions

Moore prepares its statement of cash flows using the indirect approach. Complete the first column of the table, indicating whether each item affects the operating activities section (O) (that is, the item would be listed among the adjustments to net income to determine net cash provided by operating activities under the indirect approach), investing activities section (I), financing activities section (F), or is a noncash (NC) transaction reported in a separate schedule. For those items classified as operating activities (O), indicate whether the item is added (A) or subtracted (S) from net income to determine net cash provided by operating activities.

Determine cash flow effects of changes in equity accounts.

P17.2A (LO 2) The following account balances relate to the stockholders' equity accounts of Kerbs Corp. at year-end.

	2020	2019
Common stock, 10,500 and 10,000 shares, respectively, for 2020 and 2019	\$170,000	\$140,000
Preferred stock, 5,000 shares	125,000	125,000
Retained earnings	300,000	250,000

A small stock dividend was declared and issued in 2020. The result of the stock dividend was to decrease retained earnings by \$10,500 and increase common stock by \$10,500. Cash dividends were \$15,000 in both 2020 and 2019. The common stock has no par or stated value.

Instructions

- What was the amount of net income reported by Kerbs Corp. in 2020?
- Determine the amounts of any cash inflows or outflows related to the common stock and dividend accounts in 2020.
- Indicate where each of the cash inflows or outflows identified in (b) would be classified on the statement of cash flows.

P17.3A (LO 2) Financial Statement The income statement of Whitlock Company is presented here.

a. Net income \$75,500

Prepare the operating activities section—indirect method.

Whitlock Company Income Statement	
For the Year Ended November 30, 2020	
Sales revenue	\$7,700,000
Cost of goods sold	
Beginning inventory	\$1,900,000
Purchases	4,400,000
Goods available for sale	6,300,000
Ending inventory	1,400,000
Total cost of goods sold	4,900,000
Gross profit	2,800,000
Operating expenses	1,150,000
Net income	\$1,650,000

Additional information:

- Accounts receivable increased \$200,000 during the year, and inventory decreased \$500,000.
- Prepaid expenses increased \$150,000 during the year.
- Accounts payable to suppliers of merchandise decreased \$340,000 during the year.
- Accrued expenses payable decreased \$100,000 during the year.
- Operating expenses include depreciation expense of \$70,000.

Instructions

Prepare the operating activities section of the statement of cash flows for the year ended November 30, 2020, for Whitlock Company, using the indirect method.

Cash from operating activities
\$1,430,000

Prepare the operating activities section—direct method.

Cash from operating activities
\$1,430,000

Prepare the operating activities section—indirect method.

Zumbrunn Company Income Statement	
For the Year Ended December 31, 2020	
Service revenue	\$970,000
Operating expenses, excluding depreciation	\$624,000
Depreciation expense	60,000
Loss on disposal of plant assets	16,000
Income before income taxes	700,000
Income tax expense	270,000
Net income	40,000
	\$230,000

Zumbrunn's balance sheets contained the comparative data at December 31, shown below.

	2020	2019
Accounts receivable	\$75,000	\$65,000
Accounts payable	46,000	28,000
Income taxes payable	11,000	7,000

Accounts payable pertain to operating expenses.

Cash from operating activities
\$318,000

Prepare the operating activities section—direct method.

Cash from operating activities
\$318,000

Prepare a statement of cash flows—indirect method, and compute free cash flow.

Instructions

Prepare the operating activities section of the statement of cash flows using the indirect method.

***P17.6A (LO 4) Financial Statement** Data for Zumbrunn Company are presented in P17.5A.

Instructions

Prepare the operating activities section of the statement of cash flows using the direct method.

P17.7A (LO 2, 3) Financial Statement The following are the financial statements of Nosker Company.

**Nosker Company
Comparative Balance Sheets
December 31**

Assets	2020	2019
Cash	\$ 38,000	\$ 20,000
Accounts receivable	30,000	14,000
Inventory	27,000	20,000
Equipment	60,000	78,000
Accumulated depreciation—equipment	<u>(29,000)</u>	<u>(24,000)</u>
Total	<u>\$126,000</u>	<u>\$108,000</u>
Liabilities and Stockholders' Equity		
Accounts payable	\$ 24,000	\$ 15,000
Income taxes payable	7,000	8,000
Bonds payable	27,000	33,000
Common stock	18,000	14,000
Retained earnings	<u>50,000</u>	<u>38,000</u>
Total	<u>\$126,000</u>	<u>\$108,000</u>

**Nosker Company
Income Statement
For the Year Ended December 31, 2020**

Sales revenue	\$242,000
Cost of goods sold	<u>175,000</u>
Gross profit	67,000
Operating expenses	<u>24,000</u>
Income from operations	43,000
Interest expense	<u>3,000</u>
Income before income taxes	40,000
Income tax expense	<u>8,000</u>
Net income	<u><u>\$ 32,000</u></u>

Additional data:

- Dividends declared and paid were \$20,000.
- During the year, equipment was sold for \$8,500 cash. This equipment cost \$18,000 originally and had a book value of \$8,500 at the time of sale.
- All depreciation expense, \$14,500, is in the operating expenses.
- All sales and purchases are on account.

Instructions

- Prepare a statement of cash flows using the indirect method.
- Compute free cash flow.

***P17.8A (LO 3, 4) Financial Statement** Data for Nosker Company are presented in P17.7A. Further analysis reveals the following.

- Accounts payable pertain to merchandise suppliers.
- All operating expenses except for depreciation were paid in cash.

- Cash from operating activities \$31,500

Prepare a statement of cash flows—direct method, and compute free cash flow.

**Instructions**

- Prepare a statement of cash flows for Nosker Company using the direct method.
- Compute free cash flow.

P17.9A (LO 2) Financial Statement Condensed financial data of Cheng Inc. follow.

- Cash from operating activities \$31,500

Prepare a statement of cash flows—indirect method.

Cheng Inc.		
Comparative Balance Sheets		
December 31		
Assets	2020	2019
Cash	\$ 80,800	\$ 48,400
Accounts receivable	92,800	33,000
Inventory	117,500	102,850
Prepaid expenses	28,400	26,000
Investments	143,000	114,000
Equipment	270,000	242,500
Accumulated depreciation—equipment	<u>(50,000)</u>	<u>(52,000)</u>
Total	<u>\$682,500</u>	<u>\$514,750</u>
Liabilities and Stockholders' Equity		
Accounts payable	\$112,000	\$ 67,300
Accrued expenses payable	16,500	17,000
Bonds payable	110,000	150,000
Common stock	220,000	175,000
Retained earnings	<u>224,000</u>	<u>105,450</u>
Total	<u>\$682,500</u>	<u>\$514,750</u>

Cheng Inc.
Income Statement
For the Year Ended December 31, 2020

Sales revenue	\$392,780
Less:	
Cost of goods sold	\$135,460
Operating expenses, excluding depreciation	12,410
Depreciation expense	46,500
Income tax expense	27,280
Interest expense	4,730
Loss on disposal of plant assets	<u>7,500</u>
Net income	<u>233,880</u> <u>\$158,900</u>

Additional information:

- New equipment costing \$85,000 was purchased for cash during the year.
- Old equipment having an original cost of \$57,500 was sold for \$1,500 cash.
- Bonds matured and were paid off at face value for cash.
- A cash dividend of \$40,350 was declared and paid during the year.

- Cash from operating activities \$31,500

Cash from operating activities
\$180,250

Prepare a statement of cash flows—direct method.

Cash from operating activities
\$180,250

Prepare a statement of cash flows—indirect method.

Instructions

Prepare a statement of cash flows using the indirect method.

***P17.10A (LO 4) Financial Statement** Data for Cheng Inc. are presented in P17.9A. Further analysis reveals that accounts payable pertain to merchandise creditors.

Instructions

Prepare a statement of cash flows for Cheng Inc. using the direct method.

P17.11A (LO 2) Financial Statement The comparative balance sheets for Rothlisberger Company as of December 31 are presented below.

Rothlisberger Company
Comparative Balance Sheets
December 31

Assets	2020	2019
Cash	\$ 81,000	\$ 45,000
Accounts receivable	41,000	62,000
Inventory	151,450	142,000
Prepaid expenses	15,280	21,000
Land	105,000	130,000
Buildings	200,000	200,000
Accumulated depreciation—buildings	(60,000)	(40,000)
Equipment	221,000	155,000
Accumulated depreciation—equipment	(45,000)	(35,000)
Total	\$709,730	\$680,000
Liabilities and Stockholders' Equity		
Accounts payable	\$ 47,730	\$ 40,000
Bonds payable	260,000	300,000
Common stock, \$1 par	200,000	160,000
Retained earnings	202,000	180,000
Total	\$709,730	\$680,000

Additional information:

1. Operating expenses include depreciation expense of \$42,000 and charges from prepaid expenses of \$5,720.
2. Land was sold for cash at book value.
3. Cash dividends of \$20,000 were paid.
4. Net income for 2020 was \$42,000.
5. Equipment was purchased for \$88,000 cash. In addition, equipment costing \$22,000 with a book value of \$10,000 was sold for \$6,000 cash.
6. Bonds were converted at face value by issuing 40,000 shares of \$1 par value common stock.

Cash from operating activities
\$113,000

Prepare a worksheet—indirect method.

Instructions

Prepare a statement of cash flows for the year ended December 31, 2020, using the indirect method.

***P17.12A (LO 5)** Condensed financial data of Oakley Company appear below.

Oakley Company
Comparative Balance Sheets
December 31

Assets	2020	2019
Cash	\$ 82,700	\$ 47,250

Shutterstock

Ethics Case

EC17 Wesley Corp. is a medium-sized wholesaler of automotive parts. It has 10 stockholders who have been paid a total of \$1 million in cash dividends for 8 consecutive years. The board's policy requires that, for this dividend to be declared, net cash provided by operating activities as reported in Wesley's current year's statement of cash flows must exceed \$1 million. President and CEO Samuel Gunkle's job is secure so long as he produces annual operating cash flows to support the usual dividend.

At the end of the current year, controller Gerald Rondelli presents president Samuel Gunkle with some disappointing news: The net cash provided by operating activities is calculated by the indirect method to be only \$970,000. The president says to Gerald, "We must get that amount above \$1 million. Isn't there some way to increase operating cash flow by another \$30,000?" Gerald answers, "These

figures were prepared by my assistant. I'll go back to my office and see what I can do." The president replies, "I know you won't let me down, Gerald."

Upon close scrutiny of the statement of cash flows, Gerald concludes that he can get the operating cash flows above \$1 million by reclassifying a \$60,000, 2-year note payable listed in the financing activities section as "Proceeds from bank loan—\$60,000." He will report the note instead as "Increase in payables—\$60,000" and treat it as an adjustment of net income in the operating activities section. He returns to the president, saying, "You can tell the board to declare their usual dividend. Our net cash flow provided by operating activities is \$1,030,000." "Good man, Gerald! I knew I could count on you," exults the president.

Instructions

- a. Who are the stakeholders in this situation?
- b. Was there anything unethical about the president's actions? Was there anything unethical about the controller's actions?
- c. Are the board members or anyone else likely to discover the misclassification?

Expand Your Critical Thinking

Financial Reporting Problem: Apple Inc.

CT17.1 The financial statements of **Apple Inc.** are presented in Appendix A. The complete annual report, including the notes to the financial statements, is available at the company's website.

Instructions

- a. What was the amount of net cash provided by operating activities for the year ended September 26, 2015? For the year ended September 27, 2014?
- b. What was the amount of increase or decrease in cash and cash equivalents for the year ended September 26, 2015? For the year ended September 27, 2014?
- c. Which method of computing net cash provided by operating activities does Apple use?
- d. From your analysis of the 2015 statement of cash flows, did the change in accounts receivable increase or decrease cash? Did the change in inventories increase or decrease cash? Did the change in accounts payable increase or decrease cash?
- e. What was the net outflow or inflow of cash from investing activities for the year ended September 26, 2015?
- f. What was the amount of income taxes paid in the year ended September 26, 2015?

Comparative Analysis Problem: PepsiCo, Inc. vs. The Coca-Cola Company

CT17.2 **PepsiCo's** financial statements are presented in Appendix B. Financial statements of **The Coca-Cola Company** are presented in Appendix C. The complete annual reports of PepsiCo and Coca-Cola, including the notes to the financial statements, are available at each company's respective website.

Instructions

- a. Based on the information contained in these financial statements, compute free cash flow for each company.
- b. What conclusions concerning the management of cash can be drawn from these data?

Comparative Analysis Problem: Amazon.com, Inc. vs. Wal-Mart Stores, Inc.

CT17.3 **Amazon.com, Inc.**'s financial statements are presented in Appendix D. Financial statements of **Wal-Mart Stores, Inc.** are presented in Appendix E. The complete annual reports for Amazon and Wal-Mart, including the notes to the financial statements, are available at each company's respective website.

Instructions

- a. Based on the information contained in these financial statements, compute free cash flow for each company.
- b. What conclusions concerning the management of cash can be drawn from these data?

Decision-Making Across the Organization

CT17.4 Tom Epps and Mary Jones are examining the following statement of cash flows for Guthrie Company for the year ended January 31, 2020.

Statement of Cash Flows For the Year Ended January 31, 2020

Sources of cash	
From sales of merchandise	\$380,000
From sale of capital stock	420,000
From sale of investment (purchased below)	80,000
From depreciation	55,000
From issuance of note for truck	20,000
From interest on investments	6,000
Total sources of cash	<u>961,000</u>
Uses of cash	
For purchase of fixtures and equipment	330,000
For merchandise purchased for resale	258,000
For operating expenses (including depreciation)	160,000
For purchase of investment	75,000
For purchase of truck by issuance of note	20,000
For purchase of treasury stock	10,000
For interest on note payable	3,000
Total uses of cash	<u>856,000</u>
Net increase in cash	<u><u>\$105,000</u></u>

Tom claims that Guthrie's statement of cash flows is an excellent portrayal of a superb first year with cash increasing \$105,000. Mary replies that it was not a superb first year. Rather, she says, the year was an operating failure, that the statement is presented incorrectly, and that \$105,000 is not the actual increase in cash. The cash balance at the beginning of the year was \$140,000.

Instructions

With the class divided into groups, answer the following.

- a. Using the data provided, prepare a statement of cash flows in proper form using the indirect method. The only noncash items in the income statement are depreciation and the gain from the sale of the investment. Assume that all merchandise purchased has been sold.
- b. With whom do you agree, Tom or Mary? Explain your position.

Real-World Focus

CT17.5 Purpose: Learn about the **Securities and Exchange Commission (SEC)**.

Instructions

Go to the SEC website, choose **About the SEC**, and then answer the following questions.

- a. How many enforcement actions does the SEC take each year against securities law violators? What are typical infractions?
- b. After the Depression, Congress passed the Securities Acts of 1933 and 1934 to improve investor confidence in the markets. What two "common sense" notions are these laws based on?
- c. Who was the President of the United States at the time of the creation of the SEC? Who was the first SEC Chairperson?

CT17.6 Purpose: Use the Internet to view SEC filings.

Instructions

Go to the **Yahoo-Edgar Online** website, find the SEC filings for the company of your choice, and then answer the following questions.

- a. What company did you select?
- b. Which filing is the most recent? What is the date?
- c. What other recent SEC filings are available for your viewing?

Communication Activity

CT17.7 Will Hardin, the owner-president of Computer Services Company, is unfamiliar with the statement of cash flows that you, as his accountant, prepared. He asks for further explanation.

Instructions

Write him a brief memo explaining the form and content of the statement of cash flows as shown in Illustration 17.13.

All About You

CT17.8 In this chapter, you learned that companies prepare a statement of cash flows in order to keep track of their sources and uses of cash and to help them plan for their future cash needs. Planning for your own short- and long-term cash needs is every bit as important as it is for a company.

Instructions

Read the online article “Financial Uh-Oh? No Problem” and answer the following questions. To access this article, it may be necessary to register at no cost.

- a. Describe the three factors that determine how much money you should set aside for short-term needs.
- b. How many months of living expenses does the article suggest to set aside?
- c. Estimate how much you should set aside based upon your current situation. Are you closer to Cliff’s scenario or to Prudence’s?

FASB Codification Activity

CT17.9 If your school has a subscription to the FASB Codification, log in and prepare responses to the following. Use the Master Glossary to determine the proper definitions.

- a. What are cash equivalents?
- b. What are financing activities?
- c. What are investing activities?
- d. What are operating activities?
- e. What is the primary objective for the statement of cash flow? Is working capital the basis for meeting this objective?
- f. Do companies need to disclose information about investing and financing activities that do not affect cash receipts or cash payments? If so, how should such information be disclosed?

A Look at IFRS

LEARNING OBJECTIVE 7

Compare the procedures for the statement of cash flows under GAAP and IFRS.

As in GAAP, the statement of cash flows is a required statement for IFRS. In addition, the content and presentation of an IFRS statement of cash flows is similar to the one used for GAAP. However, the disclosure requirements related to the statement of cash flows are more extensive under GAAP. *IAS 7 (“Cash Flow Statements”)* provides the overall IFRS requirements for cash flow information.

Key Points

Following are the key similarities and differences between GAAP and IFRS as related to the statement of cash flows.

Similarities

- Companies preparing financial statements under IFRS must also prepare a statement of cash flows as an integral part of the financial statements.
- Both IFRS and GAAP require that the statement of cash flows should have three major sections—operating, investing, and financing activities—along with changes in cash and cash equivalents.
- Similar to GAAP, the statement of cash flows can be prepared using either the indirect or direct method under IFRS. In both U.S. and international settings, companies choose for the most part to use the indirect method for reporting net cash flows from operating activities.
- The definition of cash equivalents used in IFRS is similar to that used in GAAP. A major difference is that in certain situations, bank overdrafts are considered part of cash and cash equivalents under IFRS (which is not the case in GAAP). Under GAAP, bank overdrafts are classified as financing activities in the statement of cash flows and are reported as liabilities on the balance sheet.

Differences

- IFRS requires that noncash investing and financing activities be excluded from the statement of cash flows. Instead, these noncash activities should be reported elsewhere. This requirement is interpreted to mean that noncash investing and financing activities should be disclosed in the notes to the financial statements instead of in the financial statements. Under GAAP, companies may present this information on the face of the statement of cash flows.
- One area where there can be substantial differences between IFRS and GAAP relates to the classification of interest, dividends, and taxes. The following table indicates the differences between the two approaches.

Item	IFRS	GAAP
Interest paid	Operating or financing	Operating
Interest received	Operating or investing	Operating
Dividends paid	Operating or financing	Financing
Dividends received	Operating or investing	Operating
Taxes paid	Operating—unless specific identification with financing or investing activity	Operating

- Under IFRS, some companies present the operating section in a single line item, with a full reconciliation provided in the notes to the financial statements. This presentation is not seen under GAAP.

Looking to the Future

Presently, the FASB and the IASB are involved in a joint project on the presentation and organization of information in the financial statements. One interesting approach, revealed in a published proposal from that project, is that in the future the income statement and balance sheet would adopt headings similar to those of the statement of cash flows. That is, the income statement and balance sheet would be broken into operating, investing, and financing sections.

IFRS Practice

IFRS Self-Test Questions

- Under IFRS, interest paid can be reported as:
 - only a financing activity.
 - a financing activity or an investing activity.
 - a financing activity or an operating activity.
 - only an operating activity.
 - IFRS requires that noncash items:
 - be reported in the section to which they relate, that is, a noncash investing activity would be reported in the investing section.
 - be disclosed in the notes to the financial statements.
 - do not need to be reported.
 - be treated in a fashion similar to cash equivalents.
- In the future, it appears likely that:
 - the income statement and balance sheet will have headings of operating, investing, and financing, much like the statement of cash flows.
 - cash and cash equivalents will be combined in a single line item.
 - the IASB will not allow companies to use the direct approach to the statement of cash flows.
 - None of the above.

4. Under IFRS:

- a. taxes are always treated as an operating activity.
- b. the income statement uses the headings operating, investing, and financing.
- c. dividends received can be either an operating or investing activity.
- d. dividends paid can be either an operating or investing activity.

5. Which of the following is correct?

- a. Under IFRS, the statement of cash flows is optional.
- b. IFRS requires use of the direct approach in preparing the statement of cash flows.
- c. The majority of companies following GAAP and the majority following IFRS employ the indirect approach to the statement of cash flows.
- d. Under IFRS, companies offset financing activities against investing activities.

IFRS Exercises

IFRS17.1 Discuss the differences that exist in the treatment of bank overdrafts under GAAP and IFRS.

IFRS17.2 Describe the treatment of each of the following items under IFRS versus GAAP.

- | | |
|-----------------------|------------------------|
| a. Interest paid. | c. Dividends paid. |
| b. Interest received. | d. Dividends received. |

International Financial Reporting Problem: Louis Vuitton

IFRS17.3 The financial statements of **Louis Vuitton** are presented in Appendix F. The complete annual report, including the notes to its financial statements, is available at the company's website.

Instructions

Use the company's annual report to answer the following questions.

- a. In which section (operating, investing, or financing) does Louis Vuitton report interest paid (finance costs)?
- b. In which section (operating, investing, or financing) does Louis Vuitton report dividends received?
- c. If Louis Vuitton reported under GAAP rather than IFRS, how would its treatment of bank overdrafts differ?

Financial Analysis: The Big Picture

Chapter Preview

We can all learn an important lesson from Warren Buffett: Study companies carefully if you wish to invest. Do not get caught up in fads but instead find companies that are financially healthy. Using some of the basic decision tools presented in this textbook, you can perform a rudimentary analysis on any company and draw basic conclusions about its financial health. Although it would not be wise for you to bet your life savings on a company's stock relying solely on your current level of knowledge, we strongly encourage you to practice your new skills wherever possible. Only with practice will you improve your ability to interpret financial numbers.

Before we unleash you on the world of high finance, we present a few more important concepts and techniques as well as one more comprehensive review of corporate financial statements. We use all of the decision tools presented in this textbook to analyze a single company, with comparisons to a competitor and industry averages.

Feature Story

It Pays to Be Patient

A recent issue of *Forbes* magazine listed Warren Buffett as the second richest person in the world. His estimated wealth was \$69 billion, give or take a few million. How much is \$69 billion? If you invested \$69 billion in an investment earning just 4%, you could spend \$7.6 million per day—every day—forever.

So, how does Buffett spend his money? Basically, he doesn't! He still lives in the same house that he purchased in Omaha, Nebraska, in 1958 for \$31,500. He still drives his own car (a Cadillac DTS). And, in case you were thinking that his kids are riding the road to Easy Street, think again. Buffett has committed to donate virtually all of his money to charity before he dies.

How did Buffett amass this wealth? Through careful investing. Buffett epitomizes a “value investor.” He applies the basic techniques he learned in the 1950s from the great value investor Benjamin Graham. He looks for companies that have good long-term potential but are currently underpriced. He invests in companies that have low exposure to debt and that reinvest their earnings for future growth. He does not get caught up in fads or the latest trends.

For example, Buffett sat out on the dot-com mania in the 1990s. When other investors put lots of money into

fledgling high-tech firms, Buffett didn't bite because he did not find dot-com companies that met his criteria. He didn't get to enjoy the stock price boom on the way up, but on the other hand, he didn't have to ride the price back down to Earth. When the dot-com bubble burst, everyone else was suffering from investment shock. Buffett swooped in and scooped up deals on companies that he had been following for years.

In 2012, the stock market had again reached near record highs. Buffett's returns had been significantly lagging the market. Only 26% of his investments at that time were in stock, and he was sitting on \$38 billion in cash. One commentator noted that “if the past is any guide, just when Buffett seems to look most like a loser, the party is about to end.”

If you think you want to follow Buffett's example and transform your humble nest egg into a mountain of cash, be warned. His techniques have been widely circulated and emulated, but never practiced with the same degree of success. You should probably start by honing your financial analysis skills. A good way for you to begin your career as a successful investor is to master the fundamentals of financial analysis discussed in this chapter.

Sustainable Income and Quality of Earnings

LEARNING OBJECTIVE 1

Apply the concepts of sustainable income and quality of earnings.

Sustainable Income

The value of a company like **Google** is a function of the amount, timing, and uncertainty of its future cash flows. Google's current and past income statements are particularly useful in helping analysts predict these future cash flows. In using this approach, analysts must make sure that Google's past income numbers reflect its **sustainable income**, that is, do not include unusual (out-of-the-ordinary) revenues, expenses, gains, and losses. **Sustainable income** is, therefore, the most likely level of income to be obtained by a company in the future. Sustainable income differs from actual net income by the amount of unusual revenues, expenses, gains, and losses included in the current year's income. Analysts are interested in sustainable income because it helps them derive an estimate of future earnings without the "noise" of unusual items.

Fortunately, an income statement provides information on sustainable income by separating operating transactions from nonoperating transactions. This statement also highlights intermediate components of income such as income from operations, income before income taxes, and income from continuing operations. In addition, information on unusual items such as gains or losses on discontinued items and components of other comprehensive income are disclosed.

Illustration 18.1 presents a statement of comprehensive income for Cruz Company for the year 2020. A statement of comprehensive income includes not only net income but a broader measure of income called comprehensive income. The two major unusual items in this statement are discontinued operations and other comprehensive income (highlighted in red). When estimating future cash flows, analysts must consider the implications of each of these components.

Cruz Company	
Statement of Comprehensive Income	
For the Year Ended 2020	
Sales revenue	\$900,000
Cost of goods sold	650,000
Gross profit	250,000
Operating expenses	100,000
Income from operations	150,000
Other revenues (expenses) and gains (losses)	20,000
Income before income taxes	170,000
Income tax expense	24,000
Income from continuing operations	146,000
Discontinued operations (net of tax)	30,000
Net income	176,000
Other comprehensive income items (net of tax)	10,000
Comprehensive income	<u><u>\$186,000</u></u>

ILLUSTRATION 18.1

Statement of comprehensive income

In looking at Illustration 18.1, note that Cruz Company's two major types of unusual items, discontinued operations and other comprehensive income, are reported net of tax. That is, Cruz first calculates income tax expense before income from continuing operations. Then,

it calculates income tax expense related to the discontinued operations and other comprehensive income, and displays each item separately, net of tax. The general concept is, “Let the tax follow the income or loss.” We discuss discontinued operations and other comprehensive income in more detail next.

Discontinued Operations

Discontinued operations refers to the disposal of a **significant component** of a business, such as the elimination of a major class of customers or an entire activity. For example, to downsize its operations, **General Dynamics Corp.** sold its missile business to **Hughes Aircraft Co.** for \$450 million. In the net income section of its statement of comprehensive income, General Dynamics reported the sale in a separate section entitled “Discontinued operations.”

Following the disposal of a significant component, the company should report on its statement both income from continuing operations and income (or loss) from discontinued operations. **The income (loss) from discontinued operations consists of two parts: the income (loss) from operations and the gain (loss) on disposal of the component.**

To illustrate, assume that during 2020 Acro Energy Inc. has income before income taxes of \$800,000. During 2020, Acro discontinued and sold its unprofitable chemical division. The loss in 2020 from chemical operations (net of \$60,000 taxes) was \$140,000. The loss on disposal of the chemical division (net of \$30,000 taxes) was \$70,000. Assuming a 30% tax rate on income, **Illustration 18.2** shows Acro’s statement of comprehensive income presentation (see **Helpful Hint**).

ILLUSTRATION 18.2

Statement presentation of discontinued operations

HELPFUL HINT

Observe the dual disclosures: (1) the results of operation of the discontinued division must be separated from the results of continuing operations, and (2) the company must also report the disposal of the division.

Acro Energy Inc.		
Statement of Comprehensive Income (partial)		
For the Year Ended December 31, 2020		
Income before income taxes		\$800,000
Income tax expense		240,000
Income from continuing operations		560,000
Discontinued operations		
Loss from operation of chemical division,		
net of \$60,000 income tax savings		\$140,000
Loss from disposal of chemical division,		
net of \$30,000 income tax savings		70,000
Net income		210,000
		\$350,000

Note that the statement uses the caption “Income from continuing operations” and adds a new section “Discontinued operations.” **The new section reports both the operating loss and the loss on disposal net of applicable income taxes.** This presentation clearly indicates the separate effects of continuing operations and discontinued operations on net income.

What Does “Non-Recurring” Really Mean?

Many companies incur restructuring charges as they attempt to reduce costs. They often label these items in the income statement as “non-recurring” charges, to suggest that they are isolated events, unlikely to occur in future periods. The question for analysts is, are these costs really one-time, “non-recurring events” or do they reflect problems that the company will be facing for many

periods in the future? If they are one-time events, then they can be largely ignored when trying to predict future earnings.

But, some companies report “one-time” restructuring charges over and over again. For example, **Procter & Gamble** reported a restructuring charge in 12 consecutive quarters, and **Motorola** had “special” charges in 14 consecutive quarters. On the other hand, other companies have a restructuring charge only once in a 5- or 10-year period. There appears to be no substitute for careful analysis of the numbers that comprise net income.

If a company takes a large restructuring charge, what is the effect on the company’s current income statement versus future ones? (Go to WileyPLUS for this answer and additional questions.)

Comprehensive Income

Most revenues, expenses, gains, and losses are included in net income. However, as discussed in earlier chapters, certain gains and losses that bypass net income are reported as part of a more inclusive earnings measure called comprehensive income. **Comprehensive income** is the sum of net income and other comprehensive income items.¹

Illustration of Comprehensive Income. Accounting standards require that companies adjust most investments in stocks and bonds up or down to their market price at the end of each accounting period. For example, assume that during 2020, its first year of operations, Stassi Corporation purchased **IBM** bonds for \$10,500 as an investment, which it intends to sell sometime in the future. At the end of 2020, Stassi was still holding the investment, but the bonds' market price was now \$8,000. In this case, Stassi is required to reduce the recorded value of its IBM investment by \$2,500. The \$2,500 difference is an unrealized loss.

Should Stassi include this \$2,500 unrealized loss in net income? It depends on whether Stassi classifies the IBM bonds as a trading security or an available-for-sale security. A **trading security** is bought and held primarily for sale in the near term to generate income on short-term price differences. Companies report unrealized losses on trading securities in the “Other expenses and losses” section of the income statement. The rationale: It is likely that the company will realize the unrealized loss (or an unrealized gain), so the company should report the loss (gain) as part of net income.

If Stassi did not purchase the investment for trading purposes, it is classified as available-for-sale. **Available-for-sale securities** are held with the intent of selling them sometime in the future. Companies do not include unrealized gains or losses on available-for-sale securities in net income. Instead, they report them as part of “Other comprehensive income.” Other comprehensive income is not included in net income.

Format. One format for reporting other comprehensive income is to report a separate comprehensive income statement. For example, assuming that Stassi Corporation has a net income of \$300,000 and a 20% tax rate, the unrealized loss would be reported below net income, net of tax, as shown in **Illustration 18.3**.

Stassi Corporation	
Comprehensive Income Statement	
For the Year Ended December 31, 2020	
Net income	\$300,000
Other comprehensive income	
Unrealized loss on available-for-sale securities, net of \$500 tax savings	2,000
Comprehensive income	<u><u>\$298,000</u></u>

ILLUSTRATION 18.3

Lower portion of combined statement of income and comprehensive income

Companies report the cumulative amount of other comprehensive income from all years as a separate component of stockholders' equity. To illustrate, assume Stassi has common stock of \$3,000,000, retained earnings of \$300,000, and accumulated other comprehensive loss of \$2,000. (To simplify, we are assuming that this is Stassi's first year of operations. Since it has only operated for one year, the cumulative amount of other comprehensive income is this year's loss of \$2,000.) **Illustration 18.4** shows the balance sheet presentation of the accumulated other comprehensive loss.

¹The FASB's Conceptual Framework describes comprehensive income as including all changes in stockholders' equity during a period except those changes resulting from investments by stockholders and distributions to stockholders.

ILLUSTRATION 18.4

Unrealized loss in stockholders' equity section

Stassi Corporation
Balance Sheet (partial)

Stockholders' equity	
Common stock	\$3,000,000
Retained earnings	<u>300,000</u>
Total paid-in capital and retained earnings	3,300,000
Accumulated other comprehensive loss	(2,000)
Total stockholders' equity	<u><u>\$3,298,000</u></u>

Note that the presentation of the accumulated other comprehensive loss is similar to the presentation of the cost of treasury stock in the stockholders' equity section. (An unrealized gain would be added in this section of the balance sheet.)

Complete Statement of Comprehensive Income. As seen in Illustration 18.1, as an alternative to preparing a separate comprehensive income statement, many companies report net income and other comprehensive income in a combined statement of comprehensive income. (*For your homework in this chapter, use this combined format.*) The statement of comprehensive income for Pace Corporation in **Illustration 18.5** presents the types of items found on this statement, such as net sales, cost of goods sold, operating expenses, and income taxes. In addition, it shows how companies report discontinued operations and other comprehensive income (highlighted in red).

ILLUSTRATION 18.5

Complete statement of comprehensive income

Pace Corporation
Statement of Comprehensive Income
For the Year Ended December 31, 2020

Net sales	\$440,000
Cost of goods sold	<u>260,000</u>
Gross profit	180,000
Operating expenses	<u>110,000</u>
Income from operations	70,000
Other revenues and gains	5,600
Other expenses and losses	<u>9,600</u>
Income before income taxes	66,000
Income tax expense ($\$66,000 \times 30\%$)	<u>19,800</u>
Income from continuing operations	46,200
Discontinued operations	
Loss from operation of plastics division, net of income tax savings \$18,000 ($\$60,000 \times 30\%$)	\$42,000
Gain on disposal of plastics division, net of \$15,000 income taxes ($\$50,000 \times 30\%$)	<u>35,000</u>
Net income	<u>7,000</u>
Net income	<u>39,200</u>
Other comprehensive income	
Unrealized gain on available-for-sale securities, net of income taxes (\$15,000 $\times 30\%$)	<u>10,500</u>
Comprehensive income	<u><u>\$ 49,700</u></u>

Changes in Accounting Principle

For ease of comparison, users of financial statements expect companies to prepare their statements on a basis **consistent** with the preceding period. A **change in accounting principle** occurs when the principle used in the current year is different from the one used in the preceding

year. An example is a change in inventory costing methods (such as FIFO to average-cost). Accounting rules permit a change when management can show that the new principle is preferable to the old principle.

Companies report most changes in accounting principle retroactively.² That is, they report both the current period and previous periods using the new principle. As a result, the same principle applies in all periods. This treatment improves the ability to compare results across years.

Investor Insight United Parcel Service (UPS)

Larry MacDougal/AP/Wide World Photos

More Frequent Ups and Downs

In the past, U.S. companies used a method to account for their pension plans that smoothed out the gains and losses on their pension portfolios by spreading gains and losses over multiple years. Many felt that this approach was beneficial because it reduced the volatility of reported net income. However, recently some companies have opted to adopt a method that comes closer to recognizing gains and losses in the period in

which they occur. Some of the companies that have adopted this approach are **United Parcel Service (UPS)**, **Honeywell International**, **IBM**, **AT&T**, and **Verizon Communications**. The CFO at UPS said he favored the new approach because “events that occurred in prior years will no longer distort current-year results. It will result in better transparency by eliminating the noise of past plan performance.” When UPS switched, it resulted in a charge of \$827 million from the change in accounting principle.

Source: Bob Sechler and Doug Cameron, “UPS Alters Pension-Plan Accounting,” *Wall Street Journal* (January 30, 2012).

When predicting future earnings, how should analysts treat the one-time charge that results from a switch to the different approach for accounting for pension plans? (Go to WileyPLUS for this answer and additional questions.)

Quality of Earnings

The quality of a company’s earnings is of extreme importance to analysts. A company that has a high **quality of earnings** provides full and transparent information that will not confuse or mislead users of the financial statements.

Recent accounting scandals suggest that some companies are spending too much time managing their income and not enough time managing their business. Here are some of the factors affecting quality of earnings.

Alternative Accounting Methods

Variations among companies in the application of generally accepted accounting principles may hamper comparability and reduce quality of earnings. For example, suppose one company uses the FIFO method of inventory costing, while another company in the same industry uses LIFO. If inventory is a significant asset to both companies, it is unlikely that their current ratios are comparable. For example, if **General Motors Corporation** used FIFO instead of LIFO for inventory valuation, its inventories in a recent year would have been 26% higher, which significantly affects the current ratio (and other ratios as well).

In addition to differences in inventory costing methods, differences also exist in reporting such items as depreciation and amortization. Although these differences in accounting methods might be detectable from reading the notes to the financial statements, adjusting the financial data to compensate for the different methods is often difficult, if not impossible.

²An exception to the general rule is a change in depreciation methods. The effects of this change are reported in current and future periods. Discussion of this approach is left for more advanced courses.

Pro Forma Income

Companies whose stock is publicly traded are required to present their income statement following generally accepted accounting principles (GAAP). In recent years, many companies have been also reporting a second measure of income, called pro forma income. **Pro forma income** usually excludes items that the company thinks are unusual or non-recurring. For example, in a recent year, **Cisco Systems** (a high-tech company) reported a quarterly net loss under GAAP of \$2.7 billion. Cisco reported pro forma income for the same quarter as a profit of \$230 million. This large difference in profits between GAAP income numbers and pro forma income is not unusual. For example, during one nine-month period, the 100 largest companies on the Nasdaq stock exchange reported a total pro forma income of \$19.1 billion but a total loss as measured by GAAP of \$82.3 billion—a difference of about \$100 billion!

To compute pro forma income, companies generally exclude any items they deem inappropriate for measuring their performance. Many analysts and investors are critical of the practice of using pro forma income because these numbers often make companies look better than they really are. As the financial press noted, pro forma numbers might be called “earnings before bad stuff.” Companies, on the other hand, argue that pro forma numbers more clearly indicate sustainable income because they exclude unusual and non-recurring expenses. “Cisco’s technique gives readers of financial statements a clear picture of Cisco’s normal business activities,” the company said in a statement issued in response to questions about its pro forma income accounting.

Recently, the SEC provided some guidance on how companies should present pro forma information. Stay tuned: Everyone seems to agree that pro forma numbers can be useful if they provide insights into determining a company’s sustainable income. However, many companies have abused the flexibility that pro forma numbers allow and have used the measure as a way to put their companies in a more favorable light.

Improper Recognition

Because some managers feel pressure from Wall Street to continually increase earnings, they manipulate earnings numbers to meet these expectations. The most common abuse is the improper recognition of revenue. One practice that some companies use is called **channel stuffing**. Offering deep discounts, companies encourage customers to buy early (stuff the channel) rather than later. This boosts the seller’s earnings in the current period, but it often leads to a disaster in subsequent periods because customers have no need for additional goods. To illustrate, **Bristol-Myers Squibb** at one time indicated that it used sales incentives to encourage wholesalers to buy more drugs than they needed. As a result, the company had to issue revised financial statements showing corrected revenues and income.

Another practice is the improper capitalization of operating expenses. **WorldCom** capitalized over \$7 billion of operating expenses in order to report positive net income. In other situations, companies fail to report all their liabilities. **Enron** promised to make payments on certain contracts if financial difficulty developed, but these guarantees were not reported as liabilities. In addition, disclosure was so lacking in transparency that it was impossible to understand what was happening at the company.

DO IT! 1 | Unusual Items

In its proposed 2020 income statement, AIR Corporation reports income before income taxes \$400,000, unrealized gain on available-for-sale securities \$100,000, income taxes \$120,000 (not including unusual items), loss from operation of discontinued flower division \$50,000, and loss on disposal of discontinued flower division \$90,000. The income tax rate is 30%. Prepare a correct statement of comprehensive income, beginning with “Income before income taxes.”

ACTION PLAN

- Show discontinued operations and other comprehensive income net of tax.

Solution

AIR Corporation Statement of Comprehensive Income (partial) For the Year Ended December 31, 2020		
Income before income taxes	\$400,000	
Income tax expense	120,000	
Income from continuing operations	280,000	
Discontinued operations		
Loss from operation of flower division, net of \$15,000 income tax savings	\$35,000	
Loss on disposal of flower division, net of \$27,000 income tax savings	63,000	98,000
Net income	182,000	
Other comprehensive income		
Unrealized gain on available-for-sale securities, net of \$30,000 income taxes	70,000	
Comprehensive income	\$252,000

Horizontal Analysis and Vertical Analysis

LEARNING OBJECTIVE 2

Apply horizontal analysis and vertical analysis.

As indicated, in assessing the financial performance of a company, investors are interested in the core or sustainable earnings of a company. In addition, investors are interested in making comparisons from period to period. Throughout this textbook, we have relied on three types of comparisons to improve the decision-usefulness of financial information:

- 1. Intracompany basis.** Comparisons within a company are often useful to detect changes in financial relationships and significant trends. For example, a comparison of **Kellogg's** current year's cash amount with the prior year's cash amount shows either an increase or a decrease. Likewise, a comparison of Kellogg's year-end cash amount with the amount of its total assets at year-end shows the proportion of total assets in the form of cash.
- 2. Intercompany basis.** Comparisons with other companies provide insight into a company's competitive position. For example, investors can compare Kellogg's total sales for the year with the total sales of its competitors in the breakfast cereal area, such as **General Mills**.
- 3. Industry averages.** Comparisons with industry averages provide information about a company's relative position within the industry. For example, financial statement readers can compare Kellogg's financial data with the averages for its industry compiled by financial rating organizations such as **Dun & Bradstreet**, **Moody's**, and **Standard & Poor's**, or with information provided on the Internet by organizations such as **Yahoo!** on its financial site.

We use three basic tools in financial statement analysis to highlight the significance of financial statement data:

1. Horizontal analysis
2. Vertical analysis
3. Ratio analysis

In previous chapters, we relied primarily on ratio analysis, supplemented with some basic horizontal and vertical analysis. In the remainder of this section, we introduce more formal forms of horizontal and vertical analysis. In the next section, we review ratio analysis in some detail.

Horizontal Analysis

Horizontal analysis, also known as trend analysis, is a technique for evaluating a series of financial statement data over a period of time. Its purpose is to determine the increase or decrease that has taken place, expressed as either an amount or a percentage. For example, here are recent net sales figures (in thousands) of Chicago Cereal Company:

2020	2019	2018	2017	2016
\$11,776	\$10,907	\$10,177	\$9,614	\$8,812

If we assume that 2016 is the base year, we can measure all percentage increases or decreases relative to this base-period amount with the formula shown in **Illustration 18.6**.

ILLUSTRATION 18.6

Horizontal analysis—computation of changes since base period

$$\frac{\text{Change Since Base Period}}{\text{Base Period}} = \frac{\text{Current-Year Amount} - \text{Base-Year Amount}}{\text{Base-Year Amount}}$$

For example, we can determine that net sales for Chicago Cereal increased approximately 9.1% $[(\$9,614 - \$8,812) \div \$8,812]$ from 2016 to 2017. Similarly, we can also determine that net sales increased by 33.6% $[(\$11,776 - \$8,812) \div \$8,812]$ from 2016 to 2020.

Alternatively, we can express current-year sales as a percentage of the base period. To do so, we would divide the current-year amount by the base-year amount, as shown in **Illustration 18.7**.

ILLUSTRATION 18.7

Horizontal analysis—computation of current year in relation to base year

$$\frac{\text{Current Results in Relation to Base Period}}{\text{Base Period}} = \frac{\text{Current-Year Amount}}{\text{Base-Year Amount}}$$

Current-period sales expressed as a percentage of the base period for each of the five years, using 2016 as the base period, are shown in **Illustration 18.8**.

ILLUSTRATION 18.8

Horizontal analysis of net sales

Chicago Cereal Company				
Net Sales (in thousands)				
Base Period 2016				
2020	2019	2018	2017	2016
\$11,776	\$10,907	\$10,177	\$9,614	\$8,812
133.6%	123.8%	115.5%	109.1%	100%

The large increase in net sales during 2017 would raise questions regarding possible reasons for such a significant change. Chicago Cereal's 2017 notes to the financial statements explain that the company completed an acquisition of Elf Foods Company during 2017. This major acquisition would help explain the increase in sales highlighted by horizontal analysis.

To further illustrate horizontal analysis, we use the financial statements of Chicago Cereal Company. Its two-year condensed balance sheets for 2020 and 2019, showing dollar and percentage changes, are presented in **Illustration 18.9** (see **Helpful Hint**).

Chicago Cereal Company Condensed Balance Sheets December 31 (in thousands)				
			Increase (Decrease) during 2020	
	2020	2019	Amount	Percent
Assets				
Current assets	\$ 2,717	\$ 2,427	\$ 290	11.9
Property assets (net)	2,990	2,816	174	6.2
Other assets	<u>5,690</u>	<u>5,471</u>	<u>219</u>	4.0
Total assets	<u><u>\$11,397</u></u>	<u><u>\$10,714</u></u>	<u><u>\$ 683</u></u>	6.4
Liabilities and Stockholders' Equity				
Current liabilities	\$ 4,044	\$ 4,020	\$ 24	0.6
Long-term liabilities	<u>4,827</u>	<u>4,625</u>	<u>202</u>	4.4

ILLUSTRATION 18.9

Horizontal analysis of balance sheets

HELPFUL HINT

When using horizontal analysis, be sure to examine both dollar amount changes and percentage changes. It is not necessarily bad if a company's earnings are growing at a declining rate. The amount of increase may be the same as or more than the base year, but the percentage change may be less because the base is greater each year.

The comparative balance sheets show that a number of changes occurred in Chicago Cereal's financial position from 2019 to 2020. In the assets section, current assets increased \$290,000, or 11.9% ($\$290 \div \$2,427$), and property assets (net) increased \$174,000, or 6.2%. Other assets increased \$219,000, or 4.0%. In the liabilities section, current liabilities increased \$24,000, or 0.6%, while long-term liabilities increased \$202,000, or 4.4%. In the stockholders' equity section, we find that retained earnings increased \$806,000, or 31.2%.

Illustration 18.10 presents two-year comparative income statements of Chicago Cereal Company for 2020 and 2019, showing dollar and percentage changes (see **Helpful Hint**).

Chicago Cereal Company Condensed Income Statements For the Years Ended December 31 (in thousands)				
			Increase (Decrease) during 2020	
	2020	2019	Amount	Percent
Net sales	\$11,776	\$10,907	\$869	8.0
Cost of goods sold	<u>6,597</u>	<u>6,082</u>	<u>515</u>	8.5
Gross profit	<u>5,179</u>	<u>4,825</u>	<u>354</u>	7.3
Selling and administrative expenses	<u>3,311</u>	<u>3,059</u>	<u>252</u>	8.2
Income from operations	1,868	1,766	102	5.8
Interest expense	<u>321</u>	<u>294</u>	<u>27</u>	9.2
Income before income taxes	<u>1,547</u>	<u>1,472</u>	<u>75</u>	5.1
Income tax expense	<u>444</u>	<u>468</u>	<u>(24)</u>	(5.1)
Net income	<u><u>\$ 1,103</u></u>	<u><u>\$ 1,004</u></u>	<u><u>\$ 99</u></u>	9.9

ILLUSTRATION 18.10

Horizontal analysis of income statements

HELPFUL HINT

Note that, in a horizontal analysis, while the amount column is additive (the total is \$99,000), the percentage column is not additive (9.9% is not a total).

Horizontal analysis of the income statements shows the following changes. Net sales increased \$869,000, or 8.0% ($\$869 \div \$10,907$). Cost of goods sold increased \$515,000, or 8.5% ($\$515 \div \$6,082$). Selling and administrative expenses increased \$252,000, or 8.2% ($\$252 \div \$3,059$). Overall, gross profit increased 7.3% and net income increased 9.9%. The increase in net income can be attributed to the increase in net sales and a decrease in income tax expense.

The measurement of changes from period to period in percentages is relatively straightforward and quite useful. However, complications can result in making the computations. If an item has no value in a base year or preceding year and a value in the next year, no percentage change can be computed.

Vertical Analysis

Vertical analysis, also called common-size analysis, is a technique for evaluating financial statement data that expresses each item in a financial statement as a **percentage of a base amount**. For example, on a balance sheet we might express current assets as 22% of total assets (total assets being the base amount). Or, on an income statement we might express selling expenses as 16% of net sales (net sales being the base amount).

Presented in **Illustration 18.11** are the comparative balance sheets of Chicago Cereal for 2020 and 2019, analyzed vertically. The base for the asset items is **total assets**, and the base for the liability and stockholders' equity items is **total liabilities and stockholders' equity**.

ILLUSTRATION 18.11
Vertical analysis of balance sheets

Chicago Cereal Company				
Condensed Balance Sheets				
December 31 (in thousands)				
				2020
				2019
Assets	Amount	Percent*	Amount	Percent*
Current assets	\$ 2,717	23.8	\$ 2,427	22.6
Property assets (net)	2,990	26.2	2,816	26.3
Other assets	5,690	50.0	5,471	51.1
Total assets	<u><u>\$11,397</u></u>	100.0	<u><u>\$10,714</u></u>	100.0
Liabilities and Stockholders' Equity				
Current liabilities	\$ 4,044	35.5	\$ 4,020	37.5
Long-term liabilities	4,827	42.4	4,625	43.2
Total liabilities	8,871	77.9	8,645	80.7
Stockholders' equity				
Common stock	493	4.3	397	3.7
Retained earnings	3,390	29.7	2,584	24.1
Treasury stock (cost)	(1,357)	(11.9)	(912)	(8.5)
Total stockholders' equity	<u><u>2,526</u></u>	22.1	<u><u>2,069</u></u>	19.3
Total liabilities and stockholders' equity	<u><u>\$11,397</u></u>	100.0	<u><u>\$10,714</u></u>	100.0

*Numbers have been rounded to total 100%.

In addition to showing the relative size of each category on the balance sheets, vertical analysis can show the percentage change in the individual asset, liability, and stockholders' equity items. In this case, current assets increased \$290,000 from 2019 to 2020, and they increased from 22.6% to 23.8% of total assets. Property assets (net) decreased from 26.3% to 26.2% of total assets. Other assets decreased from 51.1% to 50.0% of total assets. Also, retained earnings increased by \$806,000 from 2019 to 2020, and total stockholders' equity increased from 19.3% to 22.1% of total liabilities and stockholders' equity. This switch to a higher percentage of equity financing has two causes. First, while total liabilities increased by \$226,000, the percentage of liabilities declined from 80.7% to 77.9% of total liabilities and stockholders' equity. Second, retained earnings increased by \$806,000, from 24.1% to 29.7%

of total liabilities and stockholders' equity. Thus, the company shifted toward equity financing by relying less on debt and by increasing the amount of retained earnings.

Vertical analysis of the comparative income statements of Chicago Cereal, shown in **Illustration 18.12**, reveals that cost of goods sold as a percentage of net sales increased from 55.8% to 56.0%, and selling and administrative expenses increased from 28.0% to 28.1%. Net income as a percentage of net sales increased from 9.2% to 9.4%. Chicago Cereal's increase in net income as a percentage of sales is due primarily to the decrease in income tax expense as a percentage of sales.

Chicago Cereal Company Condensed Income Statements For the Years Ended December 31 (in thousands)				
	2020		2019	
	Amount	Percent*	Amount	Percent*
Net sales	\$11,776	100.0	\$10,907	100.0
Cost of goods sold	6,597	56.0	6,082	55.8
Gross profit	5,179	44.0	4,825	44.2
Selling and administrative expenses	3,311	28.1	3,059	28.0
Income from operations	1,868	15.9	1,766	16.2
Interest expense	321	2.7	294	2.7
Income before income taxes	1,547	13.2	1,472	13.5
Income tax expense	444	3.8	468	4.3
Net income	\$ 1,103	9.4	\$ 1,004	9.2

*Numbers have been rounded to total 100%.

ILLUSTRATION 18.12

Vertical analysis of income statements

Vertical analysis also enables you to compare companies of different sizes. For example, one of Chicago Cereal's competitors is Giant Mills. Giant Mills' sales are 1,000 times larger than those of Chicago Cereal. Vertical analysis enables us to meaningfully compare the condensed income statements of Chicago Cereal and Giant Mills, as shown in **Illustration 18.13**.

Condensed Income Statements For the Year Ended December 31, 2020				
	Chicago Cereal (in thousands)	Giant Mills, Inc. (in millions)		
	Amount	Percent*	Amount	Percent*
Net sales	\$11,776	100.0	\$17,910	100.0
Cost of goods sold	6,597	56.0	11,540	64.4
Gross profit	5,179	44.0	6,370	35.6
Selling and administrative expenses	3,311	28.1	3,474	19.4
Non-recurring charges and (gains)	0	—	(62)	(0.3)
Income from operations	1,868	15.9	2,958	16.5
Other expenses and revenues (including income taxes)	765	6.5	1,134	6.3
Net income	\$ 1,103	9.4	\$ 1,824	10.2

ILLUSTRATION 18.13

Intercompany comparison
by vertical analysis

Although Chicago Cereal's net sales are much less than those of Giant Mills, vertical analysis eliminates the impact of this size difference for our analysis. Chicago Cereal has a higher gross profit percentage 44.0%, compared to 35.6% for Giant Mills. But, Chicago Cereal's selling and administrative expenses are 28.1% of net sales, while those of Giant Mills are 19.4% of net sales. Looking at net income, we see that Giant Mills' percentage is higher. Chicago Cereal's net income as a percentage of net sales is 9.4%, compared to 10.2% for Giant Mills.

Anatomy of a Fraud

Sometimes relationships between numbers can be used to detect fraud. Financial ratios that appear abnormal or statistical abnormalities in the numbers themselves can reveal fraud. For example, the fact that **WorldCom**'s line costs, as a percentage of either total expenses or revenues, differed very significantly from its competitors should have alerted people to the possibility of fraud. Or, consider the case of a bank manager, who cooperated with a group of his friends to defraud the bank's credit card department. The manager's friends would apply for credit cards and then run up balances of slightly less than \$5,000. The bank had a policy of allowing bank personnel to write-off balances of less than \$5,000 without seeking supervisor approval. The fraud was detected by applying statistical analysis based on Benford's Law. Benford's Law states that in a random collection of numbers, the frequency of lower digits (e.g., 1, 2, or 3) should be much higher than higher digits (e.g., 7, 8, or 9). In this case, bank auditors analyzed the

first two digits of amounts written off. There was a spike at 48 and 49, which was not consistent with what would be expected if the numbers were random.

Total take: Thousands of dollars

The Missing Control

Independent internal verification. While it might be efficient to allow employees to write off accounts below a certain level, it is important that these write-offs be reviewed and verified periodically. Such a review would likely call attention to an employee with large amounts of write-offs, or in this case, write-offs that were frequently very close to the approval threshold.

ACTION PLAN

- Find the percentage change by dividing the amount of the increase by the 2019 amount (base year).

Ratio Analysis

LEARNING OBJECTIVE 3

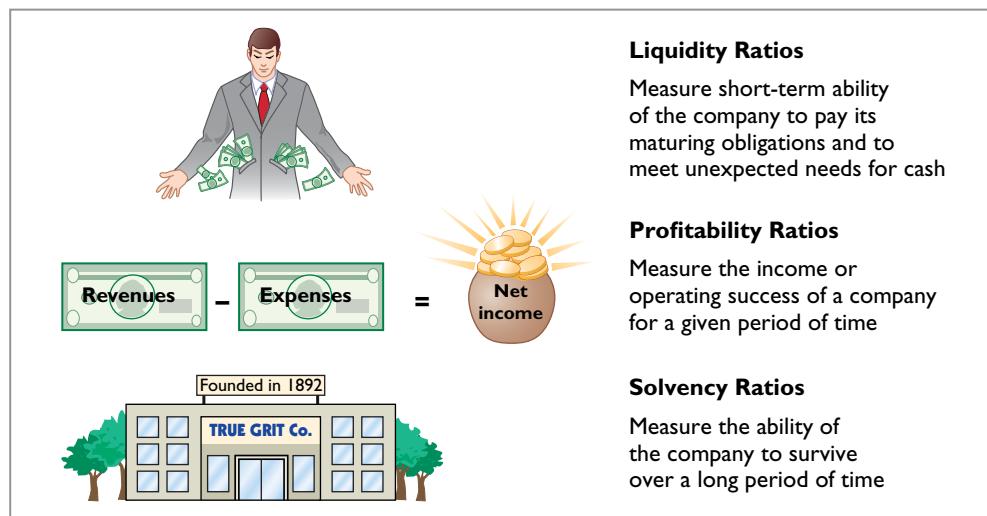

Analyze a company's performance using ratio analysis.

Ratio analysis expresses the relationship among selected items of financial statement data. A **ratio** expresses the mathematical relationship between one quantity and another. The relationship is expressed in terms of either a percentage, a rate, or a simple proportion. To illustrate,

in a recent year, **Nike, Inc.** had current assets of \$13,626 million and current liabilities of \$3,926 million. We can find the relationship between these two measures by dividing current assets by current liabilities. The alternative means of expression are as follows.

- Percentage:** Current assets are 347% of current liabilities.
Rate: Current assets are 3.47 times current liabilities.
Proportion: The relationship of current assets to liabilities is 3.47:1.

To analyze the primary financial statements, we can use ratios to evaluate liquidity, profitability, and solvency. **Illustration 18.14** describes these classifications.

**ILLUSTRATION 18.14**

Financial ratio classifications

Ratios can provide clues to underlying conditions that may not be apparent from individual financial statement components. However, a single ratio by itself is not very meaningful. Thus, in the discussion of ratios we will use the following types of comparisons.

1. **Intracompany comparisons** for two years for Chicago Cereal.
2. **Industry average comparisons** based on median ratios for the industry.
3. **Intercompany comparisons** based on Giant Mills as Chicago Cereal's principal competitor.

Liquidity Ratios

Liquidity ratios (**Illustration 18.15**) measure the short-term ability of the company to pay its maturing obligations and to meet unexpected needs for cash. Short-term creditors such as bankers and suppliers are particularly interested in assessing liquidity.

Liquidity Ratios

Working capital	$\text{Current assets} - \text{Current liabilities}$
Current ratio	$\frac{\text{Current assets}}{\text{Current liabilities}}$
Inventory turnover	$\frac{\text{Cost of goods sold}}{\text{Average inventory}}$
Days in inventory	$\frac{365 \text{ days}}{\text{Inventory turnover}}$
Accounts receivable turnover	$\frac{\text{Net credit sales}}{\text{Average net accounts receivable}}$
Average collection period	$\frac{365 \text{ days}}{\text{Accounts receivable turnover}}$

ILLUSTRATION 18.15

Summary of liquidity ratios

Investor Insight

Nova Stock/SuperStock

How to Manage the Current Ratio

The apparent simplicity of the current ratio can have real-world limitations because adding equal amounts to both the numerator and the denominator causes the ratio to decrease.

Assume, for example, that a company has \$2,000,000 of current assets and \$1,000,000 of current liabilities. Its current ratio is 2:1. If it purchases \$1,000,000 of inventory on account, it will have \$3,000,000

of current assets and \$2,000,000 of current liabilities. Its current ratio decreases to 1.5:1. If, instead, the company pays off \$500,000 of its current liabilities, it will have \$1,500,000 of current assets and \$500,000 of current liabilities. Its current ratio increases to 3:1. Thus, any trend analysis should be done with care because the ratio is susceptible to quick changes and is easily influenced by management.

How might management influence a company's current ratio? (Go to WileyPLUS for this answer and additional questions.)

Solvency Ratios

Solvency ratios (Illustration 18.16) measure the ability of the company to survive over a long period of time. Long-term creditors and stockholders are interested in a company's long-run solvency, particularly its ability to pay interest as it comes due and to repay the balance of debt at its maturity.

ILLUSTRATION 18.16

Summary of solvency ratios

Solvency Ratios

Debt to assets ratio

markets was worsened by inadequate research reports and ratings provided by the financial rating agencies. Critics contend that the rating

High Ratings Can Bring Low Returns

Moody's, Standard & Poor's, and Fitch are three big firms that perform financial analysis on publicly traded companies and then publish ratings of the companies' creditworthiness. Investors and lenders rely heavily on these ratings in making investment and lending decisions. Some people feel that the collapse of the financial markets was worsened by inadequate research reports and ratings provided by the financial rating agencies. Critics contend that the rating

agencies were reluctant to give large companies low ratings because they feared that by offending them they would lose out on business opportunities. For example, the rating agencies gave many so-called mortgage-backed securities ratings that suggested that they were low risk. Later, many of these very securities became completely worthless. Steps have been taken to reduce the conflicts of interest that lead to these faulty ratings.

Source: Aaron Lucchetti and Judith Burns, "Moody's CEO Warned Profit Push Posed a Risk to Quality of Ratings," *Wall Street Journal Online* (October 23, 2008).

Why are credit rating agencies important to the financial markets? (Go to WileyPLUS for this answer and additional questions.)

Comprehensive Example of Ratio Analysis

In this section, we provide a comprehensive review of ratios used for evaluating the financial health and performance of a company. We use the financial information in **Illustrations 18.18** through **18.21** to calculate Chicago Cereal Company's 2020 ratios. You can use these data to review the computations.

As indicated in the chapter, we can classify ratios into three types for analysis of the primary financial statements:

- Liquidity ratios.** Measures of the short-term ability of the company to pay its maturing obligations and to meet unexpected needs for cash.

2. **Solvency ratios.** Measures of the ability of the company to survive over a long period of time.
3. **Profitability ratios.** Measures of the income or operating success of a company for a given period of time.

As a tool of analysis, ratios can provide clues to underlying conditions that may not be apparent from an inspection of the individual components of a particular ratio. But, a single ratio by itself is not very meaningful. Accordingly, in this discussion we use the following three comparisons.

1. **Intracompany comparisons** covering two years for Chicago Cereal (using comparative financial information from Illustrations 18.18 through 18.21).
2. **Intercompany comparisons** using Giant Mills as one of Chicago Cereal's competitors.
3. **Industry average comparisons** based on **MSN.com** median ratios for manufacturers of flour and other grain mill products and comparisons with other sources. For some of the ratios that we use, industry comparisons are not available (denoted "na").

Liquidity Ratios

Liquidity ratios measure the short-term ability of the company to pay its maturing obligations and to meet unexpected needs for cash. Short-term creditors such as bankers and suppliers are particularly interested in assessing liquidity. The measures used to determine the company's short-term debt-paying ability are the current ratio, the accounts receivable turnover, the average collection period, the inventory turnover, and days in inventory.

1. **Current ratio.** The **current ratio** expresses the relationship of current assets to current liabilities, computed by dividing current assets by current liabilities. It is widely used for evaluating a company's liquidity and short-term debt-paying ability. The 2020 and 2019 current ratios for Chicago Cereal and comparative data are shown in **Illustration 18.22**.

ILLUSTRATION 18.22 Current ratio

Ratio	Formula	Chicago Cereal		Giant Mills		Industry Average
		2020	2019	2020	.67	
Current ratio	$\frac{\text{Current assets}}{\text{Current liabilities}}$	\$2,717	= .67	.60	.67	1.06
		\$4,044				

What do the measures tell us? Chicago Cereal's 2020 current ratio of .67 means that for every dollar of current liabilities, it has \$0.67 of current assets. We sometimes state such ratios as .67:1 to reinforce this interpretation. Its current ratio—and therefore its liquidity—increased significantly in 2020. It is well below the industry average but the same as that of Giant Mills.

2. **Accounts receivable turnover.** Analysts can measure liquidity by how quickly a company converts certain assets to cash. A low value for the current ratio can sometimes be compensated for if some of the company's current assets are highly liquid.

How liquid, for example, are the receivables? The ratio used to assess the liquidity of the receivables is the **accounts receivable turnover**, which measures the number of times, on average, a company collects receivables during the period. The accounts receivable turnover is computed by dividing net credit sales (net sales less cash sales) by average net accounts receivable during the year. The accounts receivable turnover for Chicago Cereal is shown in **Illustration 18.23**.

ILLUSTRATION 18.23 Accounts receivable turnover

Ratio	Formula	Chicago Cereal		Giant Mills 2020	Industry Average
		2020	2019		
Accounts receivable turnover	$\frac{\text{Net credit sales}}{\text{Average net accounts receivable}}$	$\frac{\$11,776}{(\$1,026 + \$945) \div 2} = 11.9$	12.0	12.2	11.2

In computing the rate, we assumed that all Chicago Cereal's sales are credit sales. Its accounts receivable turnover declined slightly in 2020. The turnover of 11.9 times is higher than the industry average of 11.2 times, and slightly lower than Giant Mills' turnover of 12.2 times.

3. **Average collection period.** A popular variant of the accounts receivable turnover converts it into an **average collection period** in days. This is done by dividing the accounts receivable turnover into 365 days. The average collection period for Chicago Cereal is shown in **Illustration 18.24**.

ILLUSTRATION 18.24 Average collection period

Ratio	Formula	Chicago Cereal		Giant Mills 2020	Industry Average
		2020	2019		
Average collection period	$\frac{365}{\text{Accounts receivable turnover}} = \frac{365}{11.9} = 30.7$	30.7	30.4	29.9	32.6

Chicago Cereal's 2020 accounts receivable turnover of 11.9 times is divided into 365 days to obtain approximately 31 days. This means that the average collection period for receivables is about 31 days. Its average collection period is slightly longer than that of Giant Mills and shorter than that of the industry.

Analysts frequently use the average collection period to assess the effectiveness of a company's credit and collection policies. The general rule is that the collection period should not greatly exceed the credit term period (i.e., the time allowed for payment).

4. **Inventory turnover.** The **inventory turnover** measures the number of times average inventory was sold during the period. Its purpose is to measure the liquidity of the inventory. A high measure indicates that inventory is being sold and replenished frequently. The inventory turnover is computed by dividing the cost of goods sold by the average inventory during the period. Unless seasonal factors are significant, average inventory can be computed from the beginning and ending inventory balances. Chicago Cereal's inventory turnover is shown in **Illustration 18.25**.

ILLUSTRATION 18.25 Inventory turnover

Ratio	Formula	Chicago Cereal		Giant Mills 2020	Industry Average
		2020	2019		
Inventory turnover	$\frac{\text{Cost of goods sold}}{\text{Average inventory}} = \frac{\$6,597}{(\$924 + \$824) \div 2} = 7.5$	7.5	7.9	7.4	6.7

Chicago Cereal's inventory turnover decreased slightly in 2020. The turnover of 7.5 times is higher than the industry average of 6.7 times and similar to that of Giant Mills. Generally, the faster the inventory turnover, the less cash is tied up in inventory and the

less the chance of inventory becoming obsolete. Of course, a downside of high inventory turnover is that it sometimes results in lost sales because if a company keeps less inventory on hand, it is more likely to run out of inventory when it is needed.

- 5. Days in inventory.** A variant of the inventory turnover is the **days in inventory**, which measures the average number of days inventory is held. The days in inventory for Chicago Cereal is shown in **Illustration 18.26**.

Ratio	Formula	Chicago Cereal		Giant	Industry
		2020	2019	Mills 2020	Average
Days in inventory	$\frac{365}{\text{Inventory turnover}}$	365 7.5	= 48.7 46.2	49.3	54.5

ILLUSTRATION 18.26
Days in inventory

Chicago Cereal's 2020 inventory turnover of 7.5 divided into 365 is approximately 49 days. An average selling time of 49 days is faster than the industry average and similar to that of Giant Mills. Some of this difference might be explained by differences in product lines across the two companies, although in many ways the types of products of these two companies are quite similar.

Inventory turnovers vary considerably among industries. For example, grocery store chains have a turnover of 10 times and an average selling period of 37 days. In contrast, jewelry stores have an average turnover of 1.3 times and an average selling period of 281 days. Within a company, there may even be significant differences in inventory turnover among different types of products. Thus, in a grocery store the turnover of perishable items such as produce, meats, and dairy products is faster than the turnover of soaps and detergents.

To conclude, nearly all of these liquidity measures suggest that Chicago Cereal's liquidity changed little during 2020. Its liquidity appears acceptable when compared to the industry as a whole and when compared to Giant Mills.

Solvency Ratios

Solvency ratios measure the ability of the company to survive over a long period of time. Long-term creditors and stockholders are interested in a company's long-run solvency, particularly its ability to pay interest as it comes due and to repay the face value of debt at maturity. The debt to assets ratio and times interest earned provide information about debt-paying ability. In addition, free cash flow provides information about the company's solvency and its ability to pay additional dividends or invest in new projects.

- 6. Debt to assets ratio.** The **debt to assets ratio** measures the percentage of total financing provided by creditors. It is computed by dividing total liabilities (both current and long-term debt) by total assets. This ratio indicates the degree of financial leveraging. It also provides some indication of the company's ability to withstand losses without impairing the interests of its creditors. The higher the percentage of debt to assets, the greater the risk that the company may be unable to meet its maturing obligations. Thus, from the creditors' point of view, a low ratio of debt to assets is desirable. Chicago Cereal's debt to assets ratio is shown in **Illustration 18.27**.

Ratio	Formula	Chicago Cereal		Giant	Industry
		2020	2019	Mills 2020	Average
Debt to assets ratio	$\frac{\text{Total liabilities}}{\text{Total assets}}$	\$8,871 \$11,397	= 78% 81%	55%	55%

ILLUSTRATION 18.27
Debt to assets ratio

Chicago Cereal's 2020 ratio of 78% means that creditors have provided financing sufficient to cover 78% of the company's total assets. Alternatively, it says that it would have to liquidate 78% of its assets at their book value in order to pay off all of its debts. Its ratio is above the industry average of 55%, as well as that of Giant Mills. This suggests that it is less solvent than the industry average and Giant Mills. Chicago Cereal's solvency improved slightly during the year.

The adequacy of this ratio is often judged in light of the company's earnings. Generally, companies with relatively stable earnings, such as public utilities, have higher debt to assets ratios than cyclical companies with widely fluctuating earnings, such as many high-tech companies.

Another ratio with a similar meaning is the **debt to equity ratio**. It shows the relative use of borrowed funds (total liabilities) compared with resources invested by the owners. Because this ratio can be computed in several ways, be careful when making comparisons with it. Debt may be defined to include only the noncurrent portion of liabilities, and intangible assets may be excluded from stockholders' equity (which would equal tangible net worth). If debt and assets are defined as above (all liabilities and all assets), then when the debt to assets ratio equals 50%, the debt to equity ratio is 1:1.

- 7. Times interest earned.** The **times interest earned** (also called interest coverage) indicates the company's ability to meet interest payments as they come due. It is computed by dividing the sum of net income, interest expense, and income tax expense by interest expense. Note that this ratio uses income before interest expense and income taxes because this amount represents what is available to cover interest. Chicago Cereal's times interest earned is shown in **Illustration 18.28**.

ILLUSTRATION 18.28 Times interest earned

Ratio	Formula	Chicago Cereal		Giant	Industry
		2020	2019	Mills 2020	Average
Times interest earned	$\frac{\text{Net Income} + \text{Interest expense} + \text{Income tax expense}}{\text{Interest expense}}$	$\frac{\$1,103 + \$321 + \$444}{\$321} = 5.8$	6.0	9.9	5.5

For Chicago Cereal, the 2020 interest coverage was 5.8 times, which indicates that income before interest and taxes was 5.8 times the amount needed for interest expense. This is less than the rate for Giant Mills, but it slightly exceeds the rate for the industry. The debt to assets ratio decreased for Chicago Cereal during 2020, and its times interest earned held relatively constant.

- 8. Free cash flow.** One indication of a company's solvency, as well as of its ability to pay dividends or expand operations, is the amount of excess cash it generated after investing in capital expenditures and paying dividends. This amount is referred to as **free cash flow**. For example, if you generate \$100,000 of net cash provided by operating activities but you spend \$30,000 on capital expenditures and pay \$10,000 in dividends, you have \$60,000 ($\$100,000 - \$30,000 - \$10,000$) to use either to expand operations, pay additional dividends, or pay down debt. Chicago Cereal's free cash flow is shown in **Illustration 18.29**.

ILLUSTRATION 18.29 Free cash flow

Ratio	Formula	Chicago Cereal		Giant	Industry
		2020	2019	Mills 2020	Average
Free cash flow	$\text{Net cash provided by operating activities} - \text{Capital expenditures} - \text{Cash dividends}$	$\$1,503 - \$472 - \$475 = \556 (in thousands)	\$507	\$895 (in millions)	na

Chicago Cereal's free cash flow increased slightly from 2019 to 2020. During both years, the net cash provided by operating activities was more than enough to allow it to acquire additional productive assets and maintain dividend payments. It could have used the remaining cash to reduce debt if necessary. Given that Chicago Cereal is much smaller than Giant Mills, we would expect its free cash flow to be substantially smaller, which it is.

Profitability Ratios

Profitability ratios measure the income or operating success of a company for a given period of time. A company's income, or the lack of it, affects its ability to obtain debt and equity financing, its liquidity position, and its ability to grow. As a consequence, creditors and investors alike are interested in evaluating profitability. Analysts frequently use profitability as the ultimate test of management's operating effectiveness.

The relationships among measures of profitability are very important. Understanding them can help management determine where to focus its efforts to improve profitability. **Illustration 18.30** diagrams these relationships. Our discussion of Chicago Cereal's profitability is structured around this diagram.

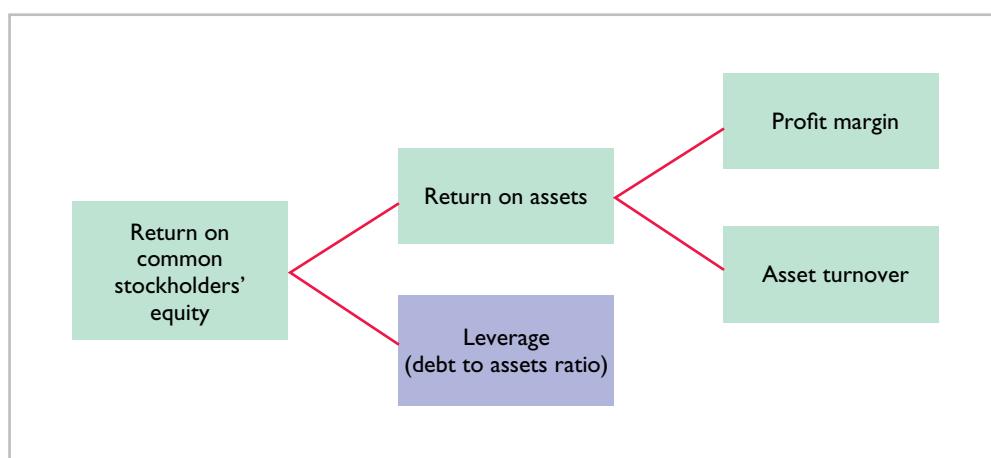

ILLUSTRATION 18.30
Relationships among
profitability measures

9. **Return on common stockholders' equity (ROE).** A widely used measure of profitability from the common stockholder's viewpoint is the **return on common stockholders' equity (ROE)**. This ratio shows how many dollars of net income the company earned for each dollar invested by the owners. It is computed by dividing net income minus any preferred dividends—that is, income available to common stockholders—by average common stockholders' equity. The return on common stockholders' equity for Chicago Cereal is shown in **Illustration 18.31**.

ILLUSTRATION 18.31 Return on common stockholders' equity

Ratio	Formula	Chicago Cereal		Giant	Industry
		2020	2019	Mills 2020	Average
Return on common stockholders' equity	$\frac{\text{Net Income} - \text{Preferred dividends}}{\text{Average common stockholders' equity}}$	$\frac{\$1,103 - \$0}{(\$2,526 + \$2,069) \div 2} =$ $\frac{48\%}{46\%}$	48%	46%	25%

Chicago Cereal's 2020 return on common stockholders' equity is unusually high at 48%. The industry average is 19% and Giant Mills' return is 25%. In the subsequent sections, we investigate the causes of this high return.

- 10. Return on assets.** The return on common stockholders' equity is affected by two factors: the **return on assets** and the degree of leverage. The return on assets measures the overall profitability of assets in terms of the income earned on each dollar invested in assets. It is computed by dividing net income by average total assets. Chicago Cereal's return on assets is shown in **Illustration 18.32**.

ILLUSTRATION 18.32 Return on assets

Ratio	Formula	Chicago Cereal		Giant Mills 2020	Industry Average
		2020	2019		
Return on assets	$\frac{\text{Net income}}{\text{Average total assets}}$	$\frac{\$1,103}{(\$11,397 + \$10,714) \div 2} =$	10.0%	9.4%	6.2%

Chicago Cereal had a 10.0% return on assets in 2020. This rate is significantly higher than that of Giant Mills and the industry average.

Note that its rate of return on common stockholders' equity (48%) is substantially higher than its rate of return on assets (10%). The reason is that it has made effective use of **leverage**. **Leveraging** or **trading on the equity** at a gain means that the company has borrowed money at a lower rate of interest than the rate of return it earns on the assets it purchased with the borrowed funds. Leverage enables management to use money supplied by nonowners to increase the return to owners.

A comparison of the rate of return on assets with the rate of interest paid for borrowed money indicates the profitability of trading on the equity. If you borrow money at 8% and your rate of return on assets is 11%, you are trading on the equity at a gain. Note, however, that trading on the equity is a two-way street. For example, if you borrow money at 11% and earn only 8% on it, you are trading on the equity at a loss.

Chicago Cereal earns more on its borrowed funds than it has to pay in interest. Thus, the return to stockholders exceeds the return on assets because of the positive benefit of leverage. Recall from our earlier discussion that Chicago Cereal's percentage of debt financing, as measured by the ratio of debt to assets (or debt to equity), was higher than Giant Mills' and the industry average. It appears that Chicago Cereal's high return on common stockholders' equity is due in part to its use of leverage.

- 11. Profit margin.** The return on assets is affected by two factors, the first of which is the profit margin. The **profit margin**, or rate of return on sales, is a measure of the percentage of each dollar of sales that results in net income. It is computed by dividing net income by net sales for the period. Chicago Cereal's profit margin is shown in **Illustration 18.33**.

ILLUSTRATION 18.33**Profit margin**

Ratio	Formula	Chicago Cereal		Giant Mills 2020	Industry Average
		2020	2019		
Profit margin	$\frac{\text{Net income}}{\text{Net sales}}$	$\frac{\$1,103}{\$11,776} =$	9.4%	9.2%	8.2%

Chicago Cereal experienced a slight increase in its profit margin from 2019 to 2020 of 9.2% to 9.4%. Its profit margin was higher than the industry average and that of Giant Mills.

High-volume (high inventory turnover) businesses such as grocery stores and pharmacy chains generally have low profit margins. Low-volume businesses such as jewelry stores and airplane manufacturers have high profit margins.

- 12. Asset turnover.** The other factor that affects the return on assets is the asset turnover. The **asset turnover** measures how efficiently a company uses its assets to generate sales. It is determined by dividing net sales by average total assets for the period. The resulting number shows the dollars of sales produced by each dollar invested in assets. **Illustration 18.34** shows the asset turnover for Chicago Cereal.

Ratio	Formula	Chicago Cereal		Giant Mills		Industry Average	
				2020	2019	2020	Average
Asset turnover	$\frac{\text{Net sales}}{\text{Average total assets}}$	$\frac{\$11,776}{(\$11,397 + \$10,714) \div 2}$	=	1.07	1.02	.76	.87

ILLUSTRATION 18.34**Asset turnover**

The asset turnover shows that in 2020, Chicago Cereal generated sales of \$1.07 for each dollar it had invested in assets. The ratio rose from 2019 to 2020. Its asset turnover is above the industry average and that of Giant Mills.

Asset turnovers vary considerably among industries. The average asset turnover for utility companies is .45, for example, while the grocery store industry has an average asset turnover of 3.49.

In summary, Chicago Cereal's return on assets increased from 9.4% in 2019 to 10.0% in 2020. Underlying this increase was an increased profitability on each dollar of sales (as measured by the profit margin) and a rise in the sales-generating efficiency of its assets (as measured by the asset turnover). We can analyze the combined effects of profit margin and asset turnover on return on assets for Chicago Cereal as shown in **Illustration 18.35**.

ILLUSTRATION 18.35 Composition of return on assets

Ratios:	Profit Margin	×	Asset Turnover	=	Return on Assets
	$\frac{\text{Net Income}}{\text{Net Sales}}$	×	$\frac{\text{Net Sales}}{\text{Average Total Assets}}$	=	$\frac{\text{Net Income}}{\text{Average Total Assets}}$
Chicago Cereal					
2020	9.4%	×	1.07 times	=	10.1%*
2019	9.2%	×	1.02 times	=	9.4%

*Difference from value in Illustration 18.32 due to rounding.

- 13. Gross profit rate.** One factor that strongly influences the profit margin is the gross profit rate. The **gross profit rate** is determined by dividing gross profit (net sales less cost of goods sold) by net sales. This rate indicates a company's ability to maintain an adequate selling price above its cost of goods sold.

As an industry becomes more competitive, this ratio declines. For example, in the early years of the personal computer industry, gross profit rates were quite high. Today, because of increased competition and a belief that most brands of personal computers are similar in quality, gross profit rates have become thin. Analysts should closely monitor gross profit rates over time. **Illustration 18.36** shows Chicago Cereal's gross profit rate.

Ratio	Formula	Chicago Cereal		Giant Mills		Industry Average	
				2020	2019	2020	Average
Gross profit rate	$\frac{\text{Gross profit}}{\text{Net sales}}$	$\frac{\$5,179}{\$11,776} =$	44%	44%	34%	30%	

ILLUSTRATION 18.36**Gross profit rate**

Chicago Cereal's gross profit rate remained constant from 2019 to 2020.

- 14. Earnings per share (EPS).** Stockholders usually think in terms of the number of shares they own or plan to buy or sell. Expressing net income earned on a per share basis provides a useful perspective for determining profitability. **Earnings per share** is a measure of the net income earned on each share of common stock. It is computed by dividing net income by the average number of common shares outstanding during the year.

The terms “net income per share” or “earnings per share” refer to the amount of net income applicable to each share of **common stock**. Therefore, when we compute earnings per share, if there are preferred dividends declared for the period, we must deduct them from net income to arrive at income available to the common stockholders. Chicago Cereal’s earnings per share is shown in **Illustration 18.37**.

ILLUSTRATION 18.37**Earnings per share**

Ratio	Formula	Chicago Cereal			Giant	Industry Average
		2020	2019	2020	Mills	
Earnings per share (EPS)	$\frac{\text{Net income} - \text{Preferred dividends}}{\text{Weighted-average common shares outstanding}}$	\$1,103 - \$0 = 418.7	\$2.63	\$2.40	\$2.90	na

Note that no industry average is presented in Illustration 18.37. Industry data for earnings per share are not reported, and in fact the Chicago Cereal and Giant Mills ratios should not be compared. Such comparisons are not meaningful because of the wide variations in the number of shares of outstanding stock among companies. Chicago Cereal’s earnings per share increased 23 cents per share in 2020. This represents a 9.6% increase from the 2019 EPS of \$2.40.

- 15. Price-earnings ratio.** The **price-earnings ratio** is an oft-quoted statistic that measures the ratio of the market price of each share of common stock to the earnings per share. The price-earnings (P-E) ratio reflects investors’ assessments of a company’s future earnings. It is computed by dividing the market price per share of the stock by earnings per share. Chicago Cereal’s price-earnings ratio is shown in **Illustration 18.38**.

ILLUSTRATION 18.38**Price-earnings ratio**

Ratio	Formula	Chicago Cereal			Giant	Industry Average
		2020	2019	2020	Mills	
Price-earnings ratio	$\frac{\text{Market price per share}}{\text{Earnings per share}}$	\$52.92	20.1	20.9	24.3	35.8

At the end of 2020 and 2019, the market price of Chicago Cereal’s stock was \$52.92 and \$50.06, respectively.

In 2020, each share of Chicago Cereal’s stock sold for 20.1 times the amount that was earned on each share. Chicago Cereal’s price-earnings ratio is lower than Giant Mills’ ratio of 24.3 and lower than the industry average of 35.8 times. Its lower P-E ratio suggests that the market is less optimistic about Chicago Cereal than about Giant Mills. However, it might also signal that Chicago Cereal’s stock is underpriced.

- 16. Payout ratio.** The **payout ratio** measures the percentage of earnings distributed in the form of cash dividends. It is computed by dividing cash dividends declared on common stock by net income. Companies that have high growth rates are characterized by low payout ratios because they reinvest most of their net income in the business. The payout ratio for Chicago Cereal is shown in **Illustration 18.39**.

The 2020 and 2019 payout ratios for Chicago Cereal are slightly lower than that of Giant Mills (54%) but higher than the industry average (37%).

Management has some control over the amount of dividends paid each year, and companies are generally reluctant to reduce a dividend below the amount paid in a previous year. Therefore, the payout ratio will actually increase if a company’s net income

Ratio	Formula	Chicago Cereal		Giant Mills 2020	Industry Average
		2020	2019		
Payout ratio	Cash dividends declared on common stock Net income	\$475 \$1,103 =	43% 45%	54%	37%

ILLUSTRATION 18.39**Payout ratio**

declines but the company keeps its total dividend payment the same. Of course, unless the company returns to its previous level of profitability, maintaining this higher dividend payout ratio is probably not possible over the long run.

Before drawing any conclusions regarding Chicago Cereal's dividend payout ratio, we should calculate this ratio over a longer period of time to evaluate any trends and also try to find out whether management's philosophy regarding dividends has changed recently. The "Selected Financial Data" section of Chicago Cereal's Management Discussion and Analysis shows that over a 5-year period, earnings per share rose 45%, while dividends per share grew only 19%.

In terms of the types of financial information available and the ratios used by various industries, what can be practically covered in this textbook gives you only the "Titanic approach." That is, you are seeing only the tip of the iceberg compared to the vast databases and types of ratio analysis that are available on computers. The availability of information is not a problem. The real trick is to be discriminating enough to perform relevant analysis and select pertinent comparative data.

DO IT! 3 | Ratio Analysis

The condensed financial statements of John Cully Company, for the years ended June 30, 2020 and 2019, are presented as follows.

John Cully Company		
Balance Sheets		
June 30		
(in thousands)		
Assets	2020	2019
Current assets		
Cash and cash equivalents	\$ 553.3	\$ 611.6
Accounts receivable (net)	776.6	664.9
Inventory	768.3	653.5
Prepaid expenses and other current assets	204.4	269.2
Total current assets	2,302.6	2,199.2
Investments	12.3	12.6
Property, plant, and equipment (net)	694.2	647.0
Intangibles and other assets	876.7	849.3
Total assets	<u>\$3,885.8</u>	<u>\$3,708.1</u>
Liabilities and Stockholders' Equity		
Current liabilities	\$1,497.7	\$1,322.0
Long-term liabilities	679.5	637.1
Stockholders' equity—common	1,708.6	1,749.0
Total liabilities and stockholders' equity	<u>\$3,885.8</u>	<u>\$3,708.1</u>

ACTION PLAN

- Remember that the current ratio includes all current assets.
- Use average balances for turnover ratios like inventory, accounts receivable, and return on assets.

John Cully Company
Income Statements
For the Years Ended June 30

	(in thousands)	
	2020	2019
Sales revenue	\$6,336.3	\$5,790.4
Costs and expenses		
Cost of goods sold	1,617.4	1,476.3
Selling and administrative expenses	4,007.6	3,679.0
Interest expense	13.9	27.1
Total costs and expenses	5,638.9	5,182.4
Income before income taxes	697.4	608.0
Income tax expense	291.3	232.6
Net income	\$ 406.1	\$ 375.4

Compute the following ratios for 2020 and 2019.

- a. Current ratio.
- b. Inventory turnover. (Inventory on 6/30/18 was \$599.0.)
- c. Profit margin.
- d. Return on assets. (Assets on 6/30/18 were \$3,349.9.)
- e. Return on common stockholders' equity. (Stockholders' equity on 6/30/18 was \$1,795.9.)
- f. Debt to assets ratio.
- g. Times interest earned.

Solution

	2020	2019
a. Current ratio:		
$\$2,302.6 \div \$1,497.7 =$	1.5:1	
$\$2,199.2 \div \$1,322.0 =$		1.7:1
b. Inventory turnover:		
$\$1,617.4 \div [(\$768.3 + \$653.5) \div 2] =$	2.3 times	
$\$1,476.3 \div [(\$653.5 + \$599.0) \div 2] =$		2.4 times
c. Profit margin:		
$\$406.1 \div \$6,336.3 =$	6.4%	
$\$375.4 \div \$5,790.4 =$		6.5%
d. Return on assets:		
$\$406.1 \div [(\$3,885.8 + \$3,708.1) \div 2] =$	10.7%	
$\$375.4 \div [(\$3,708.1 + \$3,349.9) \div 2] =$		10.6%
e. Return on common stockholders' equity:		
$(\$406.1 - \$0) \div [(\$1,708.6 + \$1,749.0) \div 2] =$	23.5%	
$(\$375.4 - \$0) \div [(\$1,749.0 + \$1,795.9) \div 2] =$		21.2%
f. Debt to assets ratio:		
$(\$1,497.7 + \$679.5) \div \$3,885.8 =$	56.0%	
$(\$1,322.0 + \$637.1) \div \$3,708.1 =$		52.8%
g. Times interest earned:		
$(\$406.1 + \$13.9 + \$291.3) \div \$13.9 =$	51.2 times	
$(\$375.4 + \$27.1 + \$232.6) \div \$27.1 =$		23.4 times

Review and Practice

Learning Objectives Review

1 Apply the concepts of sustainable income and quality of earnings.

Sustainable income analysis is useful in evaluating a company's performance. Sustainable income is the most likely level of income to be obtained by the company in the future. Discontinued operations and other comprehensive income are presented separately to highlight their unusual nature. Items below income from continuing operations must be presented net of tax.

A high quality of earnings provides full and transparent information that will not confuse or mislead users of the financial statements. Issues related to quality of earnings are (1) alternative accounting methods, (2) pro forma income, and (3) improper recognition.

2 Apply horizontal analysis and vertical analysis.

Horizontal analysis is a technique for evaluating a series of data over a period of time to determine the increase or decrease that has taken place, expressed as either a dollar amount or a percentage.

Vertical analysis is a technique that expresses each item in a financial statement as a percentage of a relevant total or a base amount.

3 Analyze a company's performance using ratio analysis.

Financial ratios as provided in Illustration 18.15 (liquidity), Illustration 18.16 (solvency), and Illustration 18.17 (profitability) are used to provide clues to the underlying conditions of a company. Analysis is enhanced by intracompany, intercompany, and industry comparisons of these three classes of ratios.

Glossary Review

Accounts receivable turnover A measure of the liquidity of receivables; computed as net credit sales divided by average net accounts receivable. (p. 18-19).

Asset turnover A measure of how efficiently a company uses its assets to generate sales; computed as net sales divided by average total assets. (p. 18-24).

Available-for-sale securities Securities that are held with the intent of selling them sometime in the future. (p. 18-5).

Average collection period The average number of days that receivables are outstanding; calculated as accounts receivable turnover divided into 365 days. (p. 18-20).

Change in accounting principle Use of an accounting principle in the current year different from the one used in the preceding year. (p. 18-6).

Comprehensive income The sum of net income and other comprehensive income items. (p. 18-5).

Current ratio A measure used to evaluate a company's liquidity and short-term debt-paying ability; calculated as current assets divided by current liabilities. (p. 18-19).

Days in inventory A measure of the average number of days inventory is held; computed as inventory turnover divided into 365 days. (p. 18-21).

Debt to assets ratio A measure of the percentage of total financing provided by creditors; computed as total liabilities divided by total assets. (p. 18-21).

Discontinued operations The disposal of a significant component of a business. (p. 18-4).

Earnings per share The net income earned by each share of common stock; computed as net income less preferred dividends divided by the weighted-average common shares outstanding. (p. 18-25).

Free cash flow A measure of solvency. Cash remaining from operating activities after adjusting for capital expenditures and dividends paid. (p. 18-22).

Gross profit rate Gross profit expressed as a percentage of sales; computed as gross profit divided by net sales. (p. 18-25).

Horizontal analysis A technique for evaluating a series of financial statement data over a period of time to determine the increase (decrease) that has taken place, expressed as either a dollar amount or a percentage. (p. 18-10).

Inventory turnover A measure of the liquidity of inventory. Measures the number of times average inventory was sold during the period; computed as cost of goods sold divided by average inventory. (p. 18-20).

Leveraging Borrowing money at a lower rate of interest than can be earned by using the borrowed money; also referred to as *trading on the equity*. (p. 18-24).

Liquidity ratios Measures of the short-term ability of the company to pay its maturing obligations and to meet unexpected needs for cash. (p. 18-15).

Payout ratio A measure of the percentage of earnings distributed in the form of cash dividends; calculated as cash dividends declared on common stock divided by net income. (p. 18-26).

Price-earnings (P-E) ratio A comparison of the market price of each share of common stock to the earnings per share; computed as the market price per share of the stock divided by earnings per share. (p. 18-26).

Profitability ratios Measures of the income or operating success of a company for a given period of time. (p. 18-16).

Profit margin A measure of the net income generated by each dollar of sales; computed as net income divided by net sales. (p. 18-24).

Pro forma income A measure of income that usually excludes items that a company thinks are unusual or non-recurring. (p. 18-8).

Quality of earnings Indicates the level of full and transparent information that is provided to users of the financial statements. (p. 18-7).

Ratio An expression of the mathematical relationship between one quantity and another. The relationship may be expressed either as a percentage, a rate, or a simple proportion. (p. 18-14).

Ratio analysis A technique for evaluating financial statements that expresses the relationship between selected financial statement data. (p. 18-14).

Return on assets A profitability measure that indicates the amount of net income generated by each dollar of assets; calculated as net income divided by average total assets. (p. 18-24).

Return on common stockholders' equity (ROE) A measure of the dollars of net income earned for each dollar invested by the owners; computed as income available to common stockholders divided by average common stockholders' equity. (p. 18-23).

Solvency ratios Measures of the ability of a company to survive over a long period of time, particularly to pay interest as it comes due and to repay the balance of debt at its maturity. (p. 18-16).

Sustainable income The most likely level of income to be obtained by a company in the future. (p. 18-3).

Times interest earned A measure of a company's solvency and ability to meet interest payments as they come due; calculated as the sum of net income, interest expense, and income tax expense divided by interest expense. (p. 18-22).

Trading on the equity See *leveraging*. (p. 18-24).

Trading securities Securities bought and held primarily for sale in the near term to generate income on short-term price differences. (p. 18-5).

Vertical analysis A technique for evaluating financial statement data that expresses each item in a financial statement as a percentage of a base amount. (p. 18-12).

Practice Multiple-Choice Questions

1. (LO 1) In reporting discontinued operations, the income statement should show in a special section:

- a. gains on the disposal of the discontinued component.
- b. losses on the disposal of the discontinued component.
- c. Neither (a) nor (b).
- d. Both (a) and (b).

2. (LO 1) Cool Stools Corporation has income before taxes of \$400,000 and a loss on discontinued operations of \$100,000. If the income tax rate is 25% on all items, the statement of comprehensive income should show income from continuing operations and discontinued operations, respectively, of

- a. \$325,000 and \$100,000.
- b. \$325,000 and \$75,000.
- c. \$300,000 and \$100,000.
- d. \$300,000 and \$75,000.

3. (LO 1) Which of the following would be considered an "Other comprehensive income" item?

- a. Gain on disposal of discontinued operations.
- b. Unrealized loss on available-for-sale securities.
- c. Loss related to flood.
- d. Net income.

4. (LO 1) Which situation below might indicate a company has a low quality of earnings?

- a. The same accounting principles are used each year.
- b. Revenue is recognized when the performance obligation is satisfied.
- c. Maintenance costs are capitalized and then depreciated.
- d. The company's P-E ratio is high relative to competitors.

5. (LO 2) In horizontal analysis, each item is expressed as a percentage of the:

- a. net income amount.
- b. stockholders' equity amount.
- c. total assets amount.
- d. base-year amount.

6. (LO 2) Adams Corporation reported net sales of \$300,000, \$330,000, and \$360,000 in the years 2018, 2019, and 2020, respectively.

If 2018 is the base year, what percentage do 2020 sales represent of the base?

- | | |
|----------|----------|
| a. 77%. | c. 120%. |
| b. 108%. | d. 130%. |

7. (LO 2) The following schedule is a display of what type of analysis?

	<u>Amount</u>	<u>Percent</u>
Current assets	\$200,000	25%
Property, plant, and equipment	<u>600,000</u>	75%
Total assets	<u>\$800,000</u>	

- a. Horizontal analysis.
- b. Differential analysis.
- c. Vertical analysis.
- d. Ratio analysis.

8. (LO 2) In vertical analysis, the base amount for depreciation expense is generally:

- a. net sales.
- b. depreciation expense in a previous year.
- c. gross profit.
- d. fixed assets.

9. (LO 3) Which measure is an evaluation of a company's ability to pay current liabilities?

- a. Accounts receivable turnover.
- b. Current ratio.
- c. Both (a) and (b).
- d. None of the above.

10. (LO 3) Which measure is useful in evaluating the efficiency in managing inventories?

- a. Inventory turnover.
- b. Days in inventory.
- c. Both (a) and (b).
- d. None of the above.

11. (LO 3) Which of these is **not** a liquidity ratio?

- a. Current ratio.
- b. Asset turnover.
- c. Inventory turnover.
- d. Accounts receivable turnover.

12. (LO 3) Plano Corporation reported net income \$24,000, net sales \$400,000, and average assets \$600,000 for 2020. What is the 2020 profit margin?

- a. 6%.
- c. 40%.
- b. 12%.
- d. 200%.

Use the following financial statement information as of the end of each year to answer Questions 13–17.

	2020	2019
Inventory	\$ 54,000	\$ 48,000
Current assets	81,000	106,000
Total assets	382,000	326,000
Current liabilities	27,000	36,000
Total liabilities	102,000	88,000
Common stockholders' equity	240,000	198,000
Net sales	784,000	697,000
Cost of goods sold	306,000	277,000
Net income	134,000	90,000
Income tax expense	22,000	18,000
Interest expense	12,000	12,000
Dividends paid to preferred stockholders	4,000	4,000

Solutions

1. d. Gains and losses from the operations of a discontinued segment and gains and losses on the disposal of the discontinued segment are shown in a separate section immediately after continuing operations in the income statement. Choices (a) and (b) are correct, but (d) is the better answer. Choice (c) is wrong as both (a) and (b) are correct.

2. d. Income tax expense = $25\% \times \$400,000 = \$100,000$; therefore, income from continuing operations = $\$400,000 - \$100,000 = \$300,000$. The loss on discontinued operations is shown net of tax, $\$100,000 \times 75\% = \$75,000$. The other choices are therefore incorrect.

3. b. Unrealized gains and losses on available-for-sale securities are part of other comprehensive income. The other choices are incorrect because (a) a gain on the disposal of discontinued operations is reported as an unusual item, (c) loss related to a flood is reported among other expenses and losses, and (d) net income is a separate line item.

4. c. Capitalizing and then depreciating maintenance costs suggests that a company is trying to avoid expensing certain costs by deferring them to future accounting periods to increase current-period income. The other choices are incorrect because (a) using the same accounting principles each year and (b) recognizing revenue when the performance obligation is satisfied is in accordance with GAAP. Choice (d) is incorrect because a high P-E ratio does not suggest that a firm has low quality of earnings.

5. d. Horizontal analysis converts each succeeding year's balance to a percentage of the base year amount, not (a) net income amount, (b) stockholders' equity amount, or (c) total assets amount.

6. c. The trend percentage for 2020 is $120\% (\$360,000/\$300,000)$, not (a) 77%, (b) 108%, or (d) 130%.

7. c. The data in the schedule is a display of vertical analysis because the individual asset items are expressed as a percentage of total assets. The other choices are therefore incorrect. Horizontal analysis is a technique for evaluating a series of data over a period of time.

	2020	2019
Dividends paid to common stockholders	15,000	10,000
13. (LO 3) Compute the days in inventory for 2020.		
a. 64.4 days.	c. 6 days.	
b. 60.8 days.	d. 24 days.	
14. (LO 3) Compute the current ratio for 2020.		
a. 1.26:1.	c. 0.80:1.	
b. 3.0:1.	d. 3.75:1.	
15. (LO 3) Compute the profit margin for 2020.		
a. 17.1%.	c. 37.9%.	
b. 18.1%.	d. 5.9%.	
16. (LO 3) Compute the return on common stockholders' equity for 2020.		
a. 54.2%.	c. 61.2%.	
b. 52.5%.	d. 59.4%.	
17. (LO 3) Compute the times interest earned for 2020.		
a. 11.2 times.	c. 14.0 times.	
b. 65.3 times.	d. 13.0 times.	

8. a. In vertical analysis, net sales is used as the base amount for income statement items, not (b) depreciation expense in a previous year, (c) gross profit, or (d) fixed assets.

9. c. Both the accounts receivable turnover and the current ratio measure a firm's ability to pay current liabilities. Choices (a) and (b) are correct but (c) is the better answer. Choice (d) is incorrect because both (a) and (b) are correct.

10. c. Both inventory turnover and days in inventory measure a firm's efficiency in managing inventories. Choices (a) and (b) are correct but (c) is the better answer. Choice (d) is incorrect because both (a) and (b) are correct.

11. b. Asset turnover is a measure of profitability. The other choices are incorrect because the (a) current ratio, (c) inventory turnover, and (d) accounts receivable turnover are all measures of a firm's liquidity.

12. a. Profit margin = Net income (\$24,000) ÷ Net sales (\$400,000) = 6%, not (b) 12%, (c) 40%, or (d) 200%.

13. b. Inventory turnover = Cost of goods sold/Average inventory $\{ \$306,000 / [(\$54,000 + \$48,000) / 2] \} = 6$ times. Thus, days in inventory = $60.8 (365/6)$, not (a) 64.4, (c) 6, or (d) 24 days.

14. b. Current ratio = Current assets/Current liabilities $(\$81,000 / \$27,000) = 3.0:1$, not (a) 1.26:1, (c) 0.80:1, or (d) 3.75:1.

15. a. Profit margin = Net income/Net sales $(\$134,000 / \$784,000) = 17.1\%$, not (b) 18.1%, (c) 37.9%, or (d) 5.9%.

16. d. Return on common stockholders' equity = Net income $(\$134,000) -$ Dividends to preferred stockholders $(\$4,000) /$ Average common stockholders' equity $[(\$240,000 + \$198,000) / 2] = 59.4\%$, not (a) 54.2%, (b) 52.5%, or (c) 61.2%.

17. c. Times interest earned = Net income + Interest expense + Income tax expense divided by Interest expense $[(\$134,000 + \$12,000 + \$22,000) / \$12,000] = 14.0$ times, not (a) 11.2, (b) 65.3, or (d) 13.0 times.

Practice Brief Exercises

Prepare a discontinued operations section.

- 1. (LO 1) Financial Statement** On September 30, Reynaldo Corporation discontinued its operations in Africa. During the year, the operating gain was \$100,000 before taxes. On September 1, Reynaldo disposed of its African facilities at a pretax loss of \$350,000. The applicable tax rate is 30%. Show the discontinued operations section of the statement of comprehensive income.

Solution

1.

Reynaldo Corporation Partial Income Statement

Gain from operations of discontinued division, net of \$30,000 income taxes ($\$100,000 \times 30\%$)	\$ 30,000
Loss from disposal of discontinued division, net of \$105,000 income tax saving ($\$350,000 \times 30\%$)	(245,000) \$(215,000)

Prepare horizontal analysis.

- 2. (LO 2)** Using the following data from the comparative balance sheet of Alfredo Company, perform horizontal analysis.

	<u>December 31, 2020</u>	<u>December 31, 2019</u>
Accounts payable	\$ 300,000	\$ 200,000
Common stock	700,000	600,000
Total liabilities and equity	2,000,000	1,800,000

Solution

2.

	<u>December 31, 2020</u>	<u>December 31, 2019</u>	Increase or (Decrease)	
			Amount	Percent*
Accounts payable	\$ 300,000	\$ 200,000	\$100,000	50%
Common stock	700,000	600,000	100,000	17
Total liabilities and stockholders' equity	2,000,000	1,800,000	200,000	11

* $100/200 = 50\%$; $100/600 = 16.7\%$; $200/1,800 = 11.1\%$

Calculate ratios.

- 3. (LO 2)** Gonzalez Company has beginning inventory of \$400,000, cost of goods sold of \$2,200,000, and days in inventory of 73. What is Gonzalez' inventory turnover and ending inventory?

Solution

3. Days in inventory = $365/\text{Inventory turnover}$

$$73 = 365/\text{Inventory turnover}.$$

$$\text{Inventory turnover} = 5 (365/73)$$

$$\text{Inventory turnover} = \text{Cost of goods sold}/\text{Average inventory}$$

$$5 = \$2,200,000/\text{Average inventory}$$

$$\text{Average inventory} = \$2,200,000/5 = \$440,000.$$

Since beginning inventory is \$400,000, ending inventory must be \$480,000: $(\$400,000 + \$480,000)/2 = \$440,000$.

Practice Exercises

Prepare horizontal and vertical analysis.

- 1. (LO 2)** The comparative condensed balance sheets of Roadway Corporation are presented below.

Roadway Corporation Condensed Balance Sheets December 31

<u>Assets</u>	<u>2020</u>	<u>2019</u>
Current assets	\$ 76,000	\$ 80,000
Property, plant, and equipment (net)	99,000	90,000
Intangibles	25,000	40,000
Total assets	<u><u>\$200,000</u></u>	<u><u>\$210,000</u></u>

Liabilities and Stockholders' Equity	2020	2019
Current liabilities	\$ 40,800	\$ 48,000
Long-term liabilities	143,000	150,000
Stockholders' equity	16,200	12,000
Total liabilities and stockholders' equity	<u>\$200,000</u>	<u>\$210,000</u>

Instructions

- Prepare a horizontal analysis of the balance sheet data for Roadway Corporation using 2019 as a base.
- Prepare a vertical analysis of the balance sheet data for Roadway Corporation in columnar form for 2020.

Solution

1. a.

Roadway Corporation Condensed Balance Sheets December 31				
	2020	2019	Increase (Decrease)	Percent Change from 2019
Assets				
Current assets	\$ 76,000	\$ 80,000	\$ (4,000)	(5.0%)
Property, plant, and equipment (net)	99,000	90,000	9,000	10.0%
Intangibles	25,000	40,000	(15,000)	(37.5%)
Total assets	<u>\$200,000</u>	<u>\$210,000</u>	<u>\$(10,000)</u>	<u>(4.8%)</u>
Liabilities and Stockholders' Equity				
Current liabilities	\$ 40,800	\$ 48,000	\$ (7,200)	(15.0%)
Long-term liabilities	143,000	150,000	(7,000)	(4.7%)
Stockholders' equity	16,200	12,000	4,200	35.0%
Total liabilities and stockholders' equity	<u>\$200,000</u>	<u>\$210,000</u>	<u>\$(10,000)</u>	<u>(4.8%)</u>

b.

Roadway Corporation Condensed Balance Sheet December 31, 2020		
	Amount	Percent
Assets		
Current assets	\$ 76,000	38.0%
Property, plant, and equipment (net)	99,000	49.5%
Intangibles	25,000	12.5%
Total assets	<u>\$200,000</u>	<u>100.0%</u>
Liabilities and Stockholders' Equity		
Current liabilities	\$ 40,800	20.4%
Long-term liabilities	143,000	71.5%
Stockholders' equity	16,200	8.1%
Total liabilities and stockholders' equity	<u>\$200,000</u>	<u>100.0%</u>

Compute ratios.

2. (LO 3) Rondo Corporation's comparative balance sheets are presented below.

Rondo Corporation
Balance Sheets
December 31

	2020	2019
Cash	\$ 5,300	\$ 3,700
Accounts receivable	21,200	23,400
Inventory	9,000	7,000
Land	20,000	26,000
Buildings	70,000	70,000
Accumulated depreciation—buildings	<u>(15,000)</u>	<u>(10,000)</u>
Total	<u>\$110,500</u>	<u>\$120,100</u>
Accounts payable	\$ 10,370	\$ 31,100
Common stock	75,000	69,000
Retained earnings	<u>25,130</u>	<u>20,000</u>
Total	<u>\$110,500</u>	<u>\$120,100</u>

Rondo's 2020 income statement included net sales of \$120,000, cost of goods sold of \$70,000, and net income of \$14,000.

Instructions

Compute the following ratios for 2020.

- a. Current ratio.
- b. Accounts receivable turnover.
- c. Inventory turnover.
- d. Profit margin.
- e. Asset turnover.
- f. Return on assets.
- g. Return on common stockholders' equity.
- h. Debt to assets ratio.

Solution

2. a. $(\$5,300 + \$21,200 + \$9,000) / \$10,370 = 3.42 \text{ times}$
- b. $\$120,000 / [(\$21,200 + \$23,400) / 2] = 5.38 \text{ times}$
- c. $\$70,000 / [(\$9,000 + \$7,000) / 2] = 8.8 \text{ times}$
- d. $\$14,000 / \$120,000 = 11.7\%$
- e. $\$120,000 / [(\$110,500 + \$120,100) / 2] = 1.04 \text{ times}$
- f. $\$14,000 / [(\$110,500 + \$120,100) / 2] = 12.1\%$
- g. $\$14,000 / \{ [(\$75,000 + \$25,130) + (\$69,000 + \$20,000)] / 2 \} = 14.8\%$
- h. $\$10,370 / \$110,500 = 9.4\%$

Practice Problem

Prepare a statement of comprehensive income.

(LO 1) Financial Statement The events and transactions of Dever Corporation for the year ending December 31, 2020, resulted in the following data.

Cost of goods sold	\$2,600,000
Net sales	4,400,000
Other expenses and losses	9,600
Other revenues and gains	5,600
Selling and administrative expenses	1,100,000
Income from operations of plastics division	70,000
Gain from disposal of plastics division	500,000
Unrealized loss on available-for-sale securities	60,000

Analysis reveals the following:

1. All items are before the applicable income tax rate of 30%.
2. The plastics division was sold on July 1.
3. All operating data for the plastics division have been segregated.

Instructions

Prepare a statement of comprehensive income for the year.

Solution

Dever Corporation Statement of Comprehensive Income For the Year Ended December 31, 2020		
Net sales	\$4,400,000	
Cost of goods sold	2,600,000	
Gross profit	1,800,000	
Selling and administrative expenses	1,100,000	
Income from operations	700,000	
Other revenues and gains	5,600	
Other expenses and losses	9,600	
Income before income taxes	696,000	
Income tax expense ($\$696,000 \times 30\%$)	208,800	
Income from continuing operations	487,200	
Discontinued operations		
Income from operation of plastics division, net of \$21,000		
income taxes ($\$70,000 \times 30\%$)	49,000	
Gain from disposal of plastics division, net of \$150,000		
income taxes ($\$500,000 \times 30\%$)	350,000	399,000
Net income	886,200	
Unrealized loss on available-for-sale securities, net of \$18,000		
income tax savings ($\$60,000 \times 30\%$)	42,000	
Comprehensive income	\$ 844,200	

WileyPLUS

Brief Exercises, DO IT! Exercises, Exercises, Problems, and many additional resources are available for practice in WileyPLUS.

Questions

- Explain sustainable income. What relationship does this concept have to the treatment of discontinued operations on the income statement?
- Hogan Inc. reported 2019 earnings per share of \$3.26 and had no discontinued operations. In 2020, earnings per share on income from continuing operations was \$2.99, and earnings per share on net income was \$3.49. Do you consider this trend to be favorable? Why or why not?
- Moosier Inc. has been in operation for 3 years and uses the FIFO method of pricing inventory. During the fourth year, Moosier changes to the average-cost method for all its inventory. How will Moosier report this change?
- What amount did **Apple** report as “Other comprehensive income (loss)” in its consolidated statement of comprehensive income ending September 26, 2015? By what percentage did Apple’s “Comprehensive income” differ from its “Net income”?
- Identify and explain factors that affect quality of earnings.
- Explain how the choice of one of the following accounting methods over the other raises or lowers a company’s net income during a period of continuing inflation.
 - Use of FIFO instead of LIFO for inventory costing.
 - Use of a 6-year life for machinery instead of a 9-year life.
 - Use of straight-line depreciation instead of declining-balance depreciation.
- Two popular methods of financial statement analysis are horizontal analysis and vertical analysis. Explain the difference between these two methods.

- 8.** a. If Erin Company had net income of \$300,000 in 2019 and it experienced a 24.5% increase in net income for 2020, what is its net income for 2020?
 b. If 6 cents of every dollar of Erin's revenue is net income in 2019, what is the dollar amount of 2019 revenue?
- 9.** a. Gina Jaimes believes that the analysis of financial statements is directed at two characteristics of a company: liquidity and profitability. Is Gina correct? Explain.
 b. Are short-term creditors, long-term creditors, and stockholders interested in primarily the same characteristics of a company? Explain.
- 10.** a. Distinguish among the following bases of comparison: intra-company, intercompany, and industry averages.
 b. Give the principal value of using each of the three bases of comparison.
- 11.** Name the major ratios useful in assessing (a) liquidity and (b) solvency.
- 12.** Vern Thoms is puzzled. His company had a profit margin of 10% in 2020. He feels that this is an indication that the company is doing well. Tina Amos, his accountant, says that more information is needed to determine the company's financial well-being. Who is correct? Why?
- 13.** What does each type of ratio measure?
 a. Liquidity ratios.
 b. Solvency ratios.
 c. Profitability ratios.
- 14.** What is the difference between the current ratio and working capital?
- 15.** Handi Mart, a retail store, has an accounts receivable turnover of 4.5 times. The industry average is 12.5 times. Does Handi Mart have a collection problem with its receivables?
- 16.** Which ratios should be used to help answer each of these questions?
 a. How efficient is a company in using its assets to produce sales?
 b. How near to sale is the inventory on hand?
- 17.** At year-end, the price-earnings ratio of **General Motors** was 11.3, and the price-earnings ratio of **Microsoft** was 28.14. Which company did the stock market favor? Explain.
- 18.** What is the formula for computing the payout ratio? Do you expect this ratio to be high or low for a growth company?
- 19.** Holding all other factors constant, indicate whether each of the following changes generally signals good or bad news about a company.
 a. Increase in profit margin.
 b. Decrease in inventory turnover.
 c. Increase in current ratio.
 d. Decrease in earnings per share.
 e. Increase in price-earnings ratio.
 f. Increase in debt to assets ratio.
 g. Decrease in times interest earned.
- 20.** The return on assets for Ayala Corporation is 7.6%. During the same year, Ayala's return on common stockholders' equity is 12.8%. What is the explanation for the difference in the two rates?
- 21.** Which two ratios do you think should be of greatest interest in each of the following cases?
 a. A pension fund considering the purchase of 20-year bonds.
 b. A bank contemplating a short-term loan to a customer.
 c. A common stockholder.
- 22.** Keanu Inc. has net income of \$200,000, average shares of common stock outstanding of 40,000, and preferred dividends for the period of \$20,000. What is Keanu's earnings per share of common stock? Fred Tyme, the president of Keanu, believes that the computed EPS of the company is high. Comment.

Brief Exercises

Prepare a discontinued operations section.

BE18.1 (LO 1) Financial Statement On June 30, Flores Corporation discontinued its operations in Mexico. On September 1, Flores disposed of the Mexico facility at a pretax loss of \$640,000. The applicable tax rate is 25%. Show the discontinued operations section of Flores's statement of comprehensive income.

Prepare statement of comprehensive income including unusual items.

BE18.2 (LO 1) Financial Statement An inexperienced accountant for Silva Corporation showed the following in the income statement: income before income taxes \$450,000 and unrealized gain on available-for-sale securities (before taxes) \$70,000. The unrealized gain on available-for-sale securities and income before income taxes are both subject to a 25% tax rate. Prepare a correct statement of comprehensive income.

Indicate how a change in accounting principle is reported.

BE18.3 (LO 1) On January 1, 2020, Bryce Inc. changed from the LIFO method of inventory pricing to the FIFO method. Explain how this change in accounting principle should be treated in the company's financial statements.

Prepare horizontal analysis.

BE18.4 (LO 2) Using these data from the comparative balance sheet of Rollaird Company, perform horizontal analysis.

	<u>December 31, 2020</u>	<u>December 31, 2019</u>
Accounts receivable	\$ 460,000	\$ 400,000
Inventory	780,000	650,000
Total assets	3,164,000	2,800,000

BE18.5 (LO 2) Using the data presented in BE18.4 for Rollaird Company, perform vertical analysis.

Prepare vertical analysis.

BE18.6 (LO 2) Net income was \$500,000 in 2018, \$485,000 in 2019, and \$518,400 in 2020. What is the percentage of change from (a) 2018 to 2019, and (b) from 2019 to 2020? Is the change an increase or a decrease?

Calculate percentage of change.

BE18.7 (LO 2) If Coho Company had net income of \$382,800 in 2020 and it experienced a 16% increase in net income over 2019, what was its 2019 net income?

Calculate net income.

BE18.8 (LO 2) Vertical analysis (common-size) percentages for Palau Company's sales revenue, cost of goods sold, and expenses are as follows.

Vertical Analysis	2020	2019	2018
Sales revenue	100.0%	100.0%	100.0%
Cost of goods sold	60.5	62.9	64.8
Expenses	26.0	26.6	27.5

Did Palau's net income as a percent of sales increase, decrease, or remain unchanged over the 3-year period? Provide numerical support for your answer.

Analyze change in net income.

BE18.9 (LO 2) Writing Horizontal analysis (trend analysis) percentages for Phoenix Company's sales revenue, cost of goods sold, and expenses are listed here.

Analyze change in net income.

Horizontal Analysis	2020	2019	2018
Sales revenue	96.2%	104.8%	100.0%
Cost of goods sold	101.0	98.0	100.0
Expenses	105.6	95.4	100.0

Explain whether Phoenix's net income increased, decreased, or remained unchanged over the 3-year period.

BE18.10 (LO 3) Writing Suppose these selected condensed data are taken from recent balance sheets of **Bob Evans Farms** (in thousands).

Calculate current ratio.

	2020	2019
Cash	\$ 13,606	\$ 7,669
Accounts receivable	23,045	19,951
Inventory	31,087	31,345
Other current assets	12,522	11,909
Total current assets	<u>\$ 80,260</u>	<u>\$ 70,874</u>
Total current liabilities	<u>\$245,805</u>	<u>\$326,203</u>

Compute the current ratio for each year and comment on your results.

BE18.11 (LO 3) Writing The following data are taken from the financial statements of Colby Company.

Evaluate collection of accounts receivable.

	2020	2019
Accounts receivable (net), end of year	\$ 550,000	\$ 540,000
Net sales on account	4,300,000	4,000,000
Terms for all sales are 1/10, n/45		

- a. Compute for each year (1) the accounts receivable turnover and (2) the average collection period. At the end of 2018, accounts receivable was \$520,000.
- b. What conclusions about the management of accounts receivable can be drawn from these data?

BE18.12 (LO 3) Writing The following data were taken from the income statements of Mydorff Company.

Evaluate management of inventory.

	2020	2019
Sales revenue	\$6,420,000	\$6,240,000
Beginning inventory	960,000	840,000
Purchases	4,840,000	4,661,000
Ending inventory	1,020,000	960,000

- a. Compute for each year (1) the inventory turnover and (2) days in inventory.
- b. What conclusions concerning the management of the inventory can be drawn from these data?

BE18.13 (LO 3) Writing Staples, Inc. is one of the largest suppliers of office products in the United States. Suppose it had net income of \$738.7 million and sales of \$24,275.5 million in 2020. Its total assets were \$13,073.1 million at the beginning of the year and \$13,717.3 million at the end of the year.

Calculate profitability ratios.

What is Staples, Inc.'s (a) asset turnover and (b) profit margin? (Round to two decimals.) Provide a brief interpretation of your results.

Calculate profitability ratios.

BE18.14 (LO 3) Hollie Company has stockholders' equity of \$400,000 and net income of \$72,000. It has a payout ratio of 18% and a return on assets of 20%. How much did Hollie pay in cash dividends, and what were its average total assets?

Calculate and analyze free cash flow.

BE18.15 (LO 3) Writing Selected data taken from a recent year's financial statements of trading card company **Topps Company, Inc.** are as follows (in millions).

Net sales	\$326.7
Current liabilities, beginning of year	41.1
Current liabilities, end of year	62.4
Net cash provided by operating activities	10.4
Total liabilities, beginning of year	65.2
Total liabilities, end of year	73.2
Capital expenditures	3.7
Cash dividends	6.2

Compute the free cash flow. Provide a brief interpretation of your results.

DO IT! Exercises

Prepare statement of comprehensive income including unusual items.

DO IT! 18.1 (LO 1) Financial Statement In its proposed 2020 income statement, Hrabik Corporation reports income before income taxes \$500,000, income taxes \$100,000 (not including unusual items), loss on operation of discontinued music division \$60,000, gain on disposal of discontinued music division \$40,000, and unrealized loss on available-for-sale securities \$150,000. The income tax rate is 20%. Prepare a correct statement of comprehensive income, beginning with income before income taxes.

Prepare horizontal analysis.

DO IT! 18.2 (LO 2) Summary financial information for Gandaulf Company is as follows.

	Dec. 31, 2020	Dec. 31, 2019
Current assets	\$ 200,000	\$ 220,000
Plant assets	<u>1,040,000</u>	<u>780,000</u>
Total assets	<u><u>\$1,240,000</u></u>	<u><u>\$1,000,000</u></u>

Compute the amount and percentage changes in 2020 using horizontal analysis, assuming 2019 is the base year.

Compute ratios.

DO IT! 18.3 (LO 3) The condensed financial statements of Murawski Company for the years 2019 and 2020 are presented as follows. (Amounts in thousands.)

Murawski Company		
Balance Sheets		
December 31		
	2020	2019
Current assets		
Cash and cash equivalents	\$ 330	\$ 360
Accounts receivable (net)	470	400
Inventory	460	390
Prepaid expenses	120	160
Total current assets	1,380	1,310
Investments	10	10
Property, plant, and equipment	420	380
Intangibles and other assets	530	510
Total assets	<u><u>\$2,340</u></u>	<u><u>\$2,210</u></u>
Current liabilities	\$ 900	\$ 790
Long-term liabilities	410	380
Stockholders' equity—common	1,030	1,040
Total liabilities and stockholders' equity	<u><u>\$2,340</u></u>	<u><u>\$2,210</u></u>

Murawski Company
Income Statements
For the Years Ended December 31

	<u>2020</u>	<u>2019</u>
Sales revenue	\$3,800	\$3,460
Costs and expenses		
Cost of goods sold	955	890
Selling & administrative expenses	2,400	2,330
Interest expense	25	20
Total costs and expenses	<u>3,380</u>	<u>3,240</u>
Income before income taxes	420	220
Income tax expense	126	66
Net income	<u>\$ 294</u>	<u>\$ 154</u>

Compute the following ratios for 2020 and 2019.

- a. Current ratio.
- b. Inventory turnover. (Inventory on 12/31/18 was \$340.)
- c. Profit margin.
- d. Return on assets. (Assets on 12/31/18 were \$1,900.)
- e. Return on common stockholders' equity. (Stockholders' equity on 12/31/18 was \$900.)
- f. Debt to assets ratio.
- g. Times interest earned.

Exercises

E18.1 (LO 1) Financial Statement Writing For its fiscal year ending October 31, 2020, Haas Corporation reports the following partial data shown below.

Income before income taxes	\$540,000
Income tax expense ($20\% \times \$420,000$)	<u>84,000</u>
Income from continuing operations	456,000
Loss on discontinued operations	<u>120,000</u>
Net income	<u><u>\$336,000</u></u>

The loss on discontinued operations was comprised of a \$50,000 loss from operations and a \$70,000 loss from disposal. The income tax rate is 20% on all items.

Instructions

- a. Prepare a correct statement of comprehensive income beginning with income before income taxes.
- b. Explain in memo form why the income statement data are misleading.

E18.2 (LO 1) Financial Statement Trayer Corporation has income from continuing operations of \$290,000 for the year ended December 31, 2020. It also has the following items (before considering income taxes).

Prepare a correct statement of comprehensive income.

Prepare statement of comprehensive income.

1. An unrealized loss of \$80,000 on available-for-sale securities.
2. A gain of \$30,000 on the discontinuance of a division (comprised of a \$10,000 loss from operations and a \$40,000 gain on disposal).

Assume all items are subject to income taxes at a 20% tax rate.

Instructions

Prepare a statement of comprehensive income, beginning with income from continuing operations.

Prepare horizontal analysis.

	<u>December 31, 2020</u>	<u>December 31, 2019</u>
Current assets	\$106,000	\$ 90,000
Plant assets (net)	400,000	350,000
Current liabilities	99,000	65,000
Long-term liabilities	122,000	90,000
Common stock, \$1 par	130,000	115,000
Retained earnings	155,000	170,000

Instructions

Prepare a schedule showing a horizontal analysis for 2020, using 2019 as the base year.

Prepare vertical analysis.

	<u>2020</u>	<u>2019</u>
Sales revenue	\$800,000	\$600,000
Cost of goods sold	520,000	408,000
Selling expenses	120,000	72,000
Administrative expenses	60,000	48,000
Income tax expense	30,000	24,000
Net income	70,000	48,000

Instructions

Prepare a schedule showing a vertical analysis for 2020 and 2019.

Prepare horizontal and vertical analyses.

E18.5 (LO 2) Suppose the comparative balance sheets of **Nike, Inc.** are presented here.

Nike, Inc.
Comparative Balance Sheets
May 31
(\$ in millions)

<u>Assets</u>	<u>2020</u>	<u>2019</u>
Current assets	\$ 9,734	\$ 8,839
Property, plant, and equipment (net)	1,958	1,891
Other assets	1,558	1,713
Total assets	<u>\$13,250</u>	<u>\$12,443</u>
<u>Liabilities and Stockholders' Equity</u>		
Current liabilities	\$ 3,277	\$ 3,322
Long-term liabilities	1,280	1,296
Stockholders' equity	8,693	7,825
Total liabilities and stockholders' equity	<u>\$13,250</u>	<u>\$12,443</u>

Instructions

- Prepare a horizontal analysis of the balance sheet data for Nike, using 2019 as a base. (Show the amount of increase or decrease as well.)
- Prepare a vertical analysis of the balance sheet data for Nike for 2020.

Prepare horizontal and vertical analyses.

E18.6 (LO 2) Here are the comparative income statements of Delaney Corporation.

Delaney Corporation
Comparative Income Statements
For the Years Ended December 31

	<u>2020</u>	<u>2019</u>
Net sales	\$598,000	\$500,000
Cost of goods sold	<u>477,000</u>	<u>420,000</u>
Gross profit	121,000	80,000
Operating expenses	80,000	44,000
Net income	<u>\$ 41,000</u>	<u>\$ 36,000</u>

Instructions

- Prepare a horizontal analysis of the income statement data for Delaney Corporation, using 2019 as a base. (Show the amounts of increase or decrease.)
- Prepare a vertical analysis of the income statement data for Delaney Corporation for both years.

E18.7 (LO 3) Nordstrom, Inc. operates department stores in numerous states. Suppose selected financial statement data (in millions) for 2020 are presented below.

Compute liquidity ratios.

	End of Year	Beginning of Year
Cash and cash equivalents	\$ 795	\$ 72
Accounts receivable (net)	2,035	1,942
Inventory	898	900
Other current assets	326	303
Total current assets	<u>\$4,054</u>	<u>\$3,217</u>
Total current liabilities	<u>\$2,014</u>	<u>\$1,601</u>

For the year, net credit sales were \$8,258 million, cost of goods sold was \$5,328 million, and net cash provided by operating activities was \$1,251 million.

Instructions

Compute the current ratio, accounts receivable turnover, average collection period, inventory turnover, and days in inventory at the end of the current year.

E18.8 (LO 3) Gwynn Incorporated had the following transactions involving current assets and current liabilities during February 2020.

Perform current ratio analysis.

- Feb. 3 Collected accounts receivable of \$15,000.
- 7 Purchased equipment for \$23,000 cash.
- 11 Paid \$3,000 for a 1-year insurance policy.
- 14 Paid accounts payable of \$12,000.
- 18 Declared cash dividends, \$4,000.

Additional information:

As of February 1, 2020, current assets were \$120,000 and current liabilities were \$40,000.

Instructions

Compute the current ratio as of the beginning of the month and after each transaction.

E18.9 (LO 3) Lendell Company has these comparative balance sheet data:

Compute selected ratios.

**Lendell Company
Balance Sheets
December 31**

	2020	2019
Cash	\$ 15,000	\$ 30,000
Accounts receivable (net)	70,000	60,000
Inventory	60,000	50,000
Plant assets (net)	<u>200,000</u>	<u>180,000</u>
	<u>\$345,000</u>	<u>\$320,000</u>
Accounts payable	\$ 50,000	\$ 60,000
Mortgage payable (15%)	100,000	100,000
Common stock, \$10 par	140,000	120,000
Retained earnings	<u>55,000</u>	<u>40,000</u>
	<u>\$345,000</u>	<u>\$320,000</u>

Additional information for 2020:

- Net income was \$25,000.
- Sales on account were \$375,000. Sales returns and allowances amounted to \$25,000.
- Cost of goods sold was \$198,000.

4. Net cash provided by operating activities was \$48,000.
5. Capital expenditures were \$25,000, and cash dividends were \$10,000.

Instructions

Compute the following ratios at December 31, 2020.

- a. Current ratio.
- b. Accounts receivable turnover.
- c. Average collection period.
- d. Inventory turnover.
- e. Days in inventory.
- f. Free cash flow.

Compute selected ratios.

E18.10 (LO 3) Suppose selected comparative statement data for the giant bookseller **Barnes & Noble** are presented here. All balance sheet data are as of the end of the fiscal year (in millions).

	2020	2019
Net sales	\$5,121.8	\$5,286.7
Cost of goods sold	3,540.6	3,679.8
Net income	75.9	135.8
Accounts receivable	81.0	107.1
Inventory	1,203.5	1,358.2
Total assets	2,993.9	3,249.8
Total common stockholders' equity	921.6	1,074.7

Instructions

Compute the following ratios for 2020.

- a. Profit margin.
- b. Asset turnover.
- c. Return on assets.
- d. Return on common stockholders' equity.
- e. Gross profit rate.

Compute selected ratios.

E18.11 (LO 3) Here is the income statement for Myers, Inc.

Myers, Inc.
Income Statement
For the Year Ended December 31, 2020

Sales revenue	\$400,000
Cost of goods sold	230,000
Gross profit	170,000
Expenses (including \$16,000 interest and \$24,000 income taxes)	98,000
Net income	<u>\$ 72,000</u>

Additional information:

1. Common stock outstanding January 1, 2020, was 32,000 shares, and 40,000 shares were outstanding at December 31, 2020.
2. The market price of Myers stock was \$14 at December 31, 2020.
3. Cash dividends of \$21,000 were paid, \$5,000 of which were to preferred stockholders.

Instructions

Compute the following measures for 2020.

- | | |
|--------------------------|---------------------------|
| a. Earnings per share. | c. Payout ratio. |
| b. Price-earnings ratio. | d. Times interest earned. |

Compute amounts from ratios.

E18.12 (LO 3) Panza Corporation experienced a fire on December 31, 2020, in which its financial records were partially destroyed. It has been able to salvage some of the records and has ascertained the following balances.

	<u>December 31, 2020</u>	<u>December 31, 2019</u>
Cash	\$ 30,000	\$ 10,000
Accounts receivable (net)	72,500	126,000
Inventory	200,000	180,000
Accounts payable	50,000	90,000
Notes payable	30,000	60,000
Common stock, \$100 par	400,000	400,000
Retained earnings	113,500	101,000

Additional information:

1. The inventory turnover is 3.8 times.
2. The return on common stockholders' equity is 22%. The company had no additional paid-in capital.
3. The accounts receivable turnover is 11.2 times.
4. The return on assets is 18%.
5. Total assets at December 31, 2019, were \$605,000.

Instructions

Compute the following for Panza Corporation.

- a. Cost of goods sold for 2020.
- b. Net credit sales for 2020.
- c. Net income for 2020.
- d. Total assets at December 31, 2020.

E18.13 (LO 3) The condensed financial statements of Ness Company for the years 2019 and 2020 are presented below.

Compute ratios.

**Ness Company
Balance Sheets
December 31 (in thousands)**

	<u>2020</u>	<u>2019</u>
Current assets		
Cash and cash equivalents	\$ 330	\$ 360
Accounts receivable (net)	470	400
Inventory	460	390
Prepaid expenses	130	160
Total current assets	<u>1,390</u>	<u>1,310</u>
Property, plant, and equipment (net)	410	380
Investments	10	10
Intangibles and other assets	530	510
Total assets	<u>\$2,340</u>	<u>\$2,210</u>
Current liabilities	\$ 820	\$ 790
Long-term liabilities	480	380
Stockholders' equity—common	1,040	1,040
Total liabilities and stockholders' equity	<u>\$2,340</u>	<u>\$2,210</u>

**Ness Company
Income Statements
For the Years Ended December 31 (in thousands)**

	<u>2020</u>	<u>2019</u>
Sales revenue	<u>\$3,800</u>	<u>\$3,460</u>
Costs and expenses		
Cost of goods sold	970	890
Selling & administrative expenses	2,400	2,330
Interest expense	10	20
Total costs and expenses	<u>3,380</u>	<u>3,240</u>
Income before income taxes	420	220
Income tax expense	168	88
Net income	<u>\$ 252</u>	<u>\$ 132</u>

Compute the following ratios for 2020 and 2019.

- Current ratio.
- Inventory turnover. (Inventory on December 31, 2018, was \$340.)
- Profit margin.
- Return on assets. (Assets on December 31, 2018, were \$1,900.)
- Return on common stockholders' equity. (Equity on December 31, 2018, was \$900.)
- Debt to assets ratio.
- Times interest earned.

Problems: Set A

Prepare vertical analysis and comment on profitability.

P18.1A (LO 2, 3) Writing Here are comparative statement data for Duke Company and Lord Company, two competitors. All balance sheet data are as of December 31, 2020, and December 31, 2019.

	Duke Company		Lord Company	
	2020	2019	2020	2019
Net sales	\$1,849,000		\$546,000	
Cost of goods sold	1,063,200		289,000	
Operating expenses	240,000		82,000	
Interest expense	6,800		3,600	
Income tax expense	62,000		28,000	
Current assets	325,975	\$312,410	83,336	\$ 79,467
Plant assets (net)	526,800	500,000	139,728	125,812
Current liabilities	66,325	75,815	35,348	30,281
Long-term liabilities	113,990	90,000	29,620	25,000
Common stock, \$10 par	500,000	500,000	120,000	120,000
Retained earnings	172,460	146,595	38,096	29,998

Instructions

- Prepare a vertical analysis of the 2020 income statement data for Duke Company and Lord Company.
- Comment on the relative profitability of the companies by computing the 2020 return on assets and the return on common stockholders' equity for both companies.

Compute ratios from balance sheets and income statements.

P18.2A (LO 3) The comparative statements of Wahlberg Company are presented here.

Wahlberg Company Income Statements For the Years Ended December 31		
	2020	2019
Net sales	\$1,890,540	\$1,750,500
Cost of goods sold	1,058,540	1,006,000
Gross profit	832,000	744,500
Selling and administrative expenses	500,000	479,000
Income from operations	332,000	265,500
Other expenses and losses		
Interest expense	22,000	20,000
Income before income taxes	310,000	245,500
Income tax expense	92,000	73,000
Net income	\$ 218,000	\$ 172,500

Wahlberg Company
Balance Sheets
December 31

Assets	2020	2019
Current assets		
Cash	\$ 60,100	\$ 64,200
Debt investments (short-term)	74,000	50,000
Accounts receivable	117,800	102,800
Inventory	<u>126,000</u>	<u>115,500</u>
Total current assets	377,900	332,500
Plant assets (net)	<u>649,000</u>	<u>520,300</u>
Total assets	<u><u>\$1,026,900</u></u>	<u><u>\$852,800</u></u>
Liabilities and Stockholders' Equity		
Current liabilities		
Accounts payable	\$ 160,000	\$145,400
Income taxes payable	<u>43,500</u>	<u>42,000</u>
Total current liabilities	203,500	187,400
Bonds payable	<u>220,000</u>	<u>200,000</u>
Total liabilities	<u>423,500</u>	<u>387,400</u>
Stockholders' equity		
Common stock (\$5 par)	290,000	300,000
Retained earnings	<u>313,400</u>	<u>165,400</u>
Total stockholders' equity	<u>603,400</u>	<u>465,400</u>
Total liabilities and stockholders' equity	<u><u>\$1,026,900</u></u>	<u><u>\$852,800</u></u>

All sales were on account. Net cash provided by operating activities for 2020 was \$220,000. Capital expenditures were \$136,000, and cash dividends were \$70,000.

Instructions

Compute the following ratios for 2020.

- a. Earnings per share.
- b. Return on common stockholders' equity.
- c. Return on assets.
- d. Current ratio.
- e. Accounts receivable turnover.
- f. Average collection period.
- g. Inventory turnover.
- h. Days in inventory.
- i. Times interest earned.
- j. Asset turnover.
- k. Debt to assets ratio.
- l. Free cash flow.

P18.3A (LO 3) Writing Condensed balance sheet and income statement data for Jergan Corporation are presented here.

Perform ratio analysis, and discuss changes in financial position and operating results.

Jergan Corporation
Balance Sheets
December 31

	2020	2019	2018
Cash	\$ 30,000	\$ 20,000	\$ 18,000
Accounts receivable (net)	50,000	45,000	48,000
Other current assets	90,000	95,000	64,000
Investments	55,000	70,000	45,000
Plant and equipment (net)	<u>500,000</u>	<u>370,000</u>	<u>358,000</u>
	<u><u>\$725,000</u></u>	<u><u>\$600,000</u></u>	<u><u>\$533,000</u></u>
Current liabilities	\$ 85,000	\$ 80,000	\$ 70,000
Long-term debt	145,000	85,000	50,000
Common stock, \$10 par	320,000	310,000	300,000
Retained earnings	<u>175,000</u>	<u>125,000</u>	<u>113,000</u>
	<u><u>\$725,000</u></u>	<u><u>\$600,000</u></u>	<u><u>\$533,000</u></u>

**Jergan Corporation
Income Statements
For the Years Ended December 31**

	2020	2019
Sales revenue	\$740,000	\$600,000
Less: Sales returns and allowances	40,000	30,000
Net sales	700,000	570,000
Cost of goods sold	425,000	350,000
Gross profit	275,000	220,000
Operating expenses (including income taxes)	180,000	150,000
Net income	\$ 95,000	\$ 70,000

Additional information:

1. The market price of Jergan's common stock was \$7.00, \$7.50, and \$8.50 for 2018, 2019, and 2020, respectively.
2. You must compute dividends paid. All dividends were paid in cash.

Instructions

- a. Compute the following ratios for 2019 and 2020.

1. Profit margin.	5. Price-earnings ratio.
2. Gross profit rate.	6. Payout ratio.
3. Asset turnover.	7. Debt to assets ratio.
4. Earnings per share.	
- b. Based on the ratios calculated, discuss briefly the improvement or lack thereof in the financial position and operating results from 2019 to 2020 of Jergan Corporation.

Compute ratios; comment on overall liquidity and profitability.

P18.4A (LO 3) The following financial information is for Priscoll Company.

**Priscoll Company
Balance Sheets
December 31**

Assets	2020	2019
Cash	\$ 70,000	\$ 65,000
Debt investments (short-term)	55,000	40,000
Accounts receivable	104,000	90,000
Inventory	230,000	165,000
Prepaid expenses	25,000	23,000
Land	130,000	130,000
Building and equipment (net)	260,000	185,000
Total assets	\$874,000	\$698,000

Liabilities and Stockholders' Equity

	2020	2019
Notes payable (short-term)	\$170,000	\$120,000
Accounts payable	65,000	52,000
Accrued liabilities	40,000	40,000
Bonds payable, due 2023	250,000	170,000
Common stock, \$10 par	200,000	200,000
Retained earnings	149,000	116,000
Total liabilities and stockholders' equity	\$874,000	\$698,000

**Priscoll Company
Income Statements
For the Years Ended December 31**

	2020	2019
Sales revenue	\$882,000	\$790,000
Cost of goods sold	640,000	575,000
Gross profit	242,000	215,000
Operating expenses	190,000	167,000
Net income	\$ 52,000	\$ 48,000

Additional information:

1. Inventory at the beginning of 2019 was \$115,000.
2. Accounts receivable (net) at the beginning of 2019 were \$86,000.
3. Total assets at the beginning of 2019 were \$660,000.
4. No common stock transactions occurred during 2019 or 2020.
5. All sales were on account.

Instructions

- a. Indicate, by using ratios, the change in liquidity and profitability of Priscoll Company from 2019 to 2020. (*Note:* Not all profitability ratios can be computed nor can cash-basis ratios be computed.)
- b. The following are three independent situations and a ratio that may be affected. For each situation, compute the affected ratio (1) as of December 31, 2020, and (2) as of December 31, 2021, after giving effect to the situation.

Situation	Ratio
1. 18,000 shares of common stock were sold at par on July 1, 2021. Net income for 2021 was \$54,000.	Return on common stockholders' equity
2. All of the notes payable were paid in 2021. All other liabilities remained at their December 31, 2020, levels. At December 31, 2021, total assets were \$900,000.	Debt to assets ratio
3. The market price of common stock was \$9 and \$12 on December 31, 2020 and 2021, respectively. Net income for 2021 was \$54,000.	Price-earnings ratio

P18.5A (LO 3) Writing Suppose selected financial data of **Target** and **Wal-Mart** for 2020 are presented here (in millions).

Compute selected ratios, and compare liquidity, profitability, and solvency for two companies.

Target Corporation	Wal-Mart Stores, Inc.
Income Statement Data for Year	
Net sales	\$65,357
Cost of goods sold	45,583
Selling and administrative expenses	15,101
Interest expense	707
Other income (expense)	(94)
Income tax expense	1,384
Net income	\$ 2,488
	\$ 14,335
Balance Sheet Data (End of Year)	
Current assets	\$18,424
Noncurrent assets	26,109
Total assets	\$44,533
Current liabilities	\$11,327
Long-term debt	17,859
Total stockholders' equity	15,347
Total liabilities and stockholders' equity	\$44,533
	\$170,706
Beginning-of-Year Balances	
Total assets	\$44,106
Total stockholders' equity	13,712
Current liabilities	10,512
Total liabilities	30,394
	\$163,429
	65,682
	55,390
	97,747

	Target Corporation	Wal-Mart Stores, Inc.
	Other Data	
Average net accounts receivable	\$ 7,525	\$ 4,025
Average inventory	6,942	33,836
Net cash provided by operating activities	5,881	26,249
Capital expenditures	1,729	12,184
Dividends	496	4,217

Instructions

- a. For each company, compute the following ratios.
- | | |
|--|---|
| 1. Current ratio.
2. Accounts receivable turnover.
3. Average collection period.
4. Inventory turnover.
5. Days in inventory.
6. Profit margin. | 7. Asset turnover.
8. Return on assets.
9. Return on common stockholders' equity.
10. Debt to assets ratio.
11. Times interest earned.
12. Free cash flow. |
|--|---|
- b. Compare the liquidity, solvency, and profitability of the two companies.

Continuing Case

© leungchopan/
Shutterstock

Cookie Creations

(Note: This is a continuation of the Cookie Creations case from Chapters 1 through 17.)

CC18 Natalie and Curtis have comparative balance sheets and income statements for Cookie & Coffee Creations Inc. They have been told that they can use these financial statements to prepare horizontal and vertical analyses, to calculate financial ratios, to analyze how their business is doing, and to make some decisions they have been considering.

Go to **WileyPLUS** for complete case details and instructions.

Ethics Case

EC18 René Kelly, president of RL Industries, wishes to issue a press release to bolster her company's image and maybe even its stock price, which has been gradually falling. As controller, you have been asked to provide a list of 20 financial ratios and other operating statistics for RL Industries' first-quarter financials and operations.

Two days after you provide the data requested, Erin Lourdes, the public relations director of RL, asks you to prove the accuracy of the financial and operating data contained in the press release written by the president and edited by Erin. In the news release, the president highlights the sales increase of 25% over last year's first quarter and the positive change in the current ratio from 1.5:1 last year to 3:1 this year. She also emphasizes that production was up 50% over the prior year's first quarter.

You note that the release contains only positive or improved ratios and none of the negative or deteriorated ratios. For instance, no mention is made that the debt to assets ratio has increased from 35% to 55%, that inventories are up 89%, and that although the current ratio improved, the accounts receivable turnover fell from 12 to 9. Nor is there any mention that the reported profit for the quarter would have been a loss had not the estimated lives of RL plant and machinery been increased by 30%. Erin emphasized, "The Pres wants this release by early this afternoon."

Instructions

- a. Who are the stakeholders in this situation?
b. Is there anything unethical in the president's actions?
c. Should you as controller remain silent? Does Erin have any responsibility?

Expand Your Critical Thinking

Financial Reporting Problem: Apple Inc.

CT18.1 Your parents are considering investing in **Apple Inc.** common stock. They ask you, as an accounting expert, to make an analysis of the company for them. Apple's financial statements are presented in Appendix A. The complete annual report, including the notes to the financial statements, is available at the company's website.

Instructions

(Follow the approach in the chapter for rounding numbers.)

- a. Make a 3-year trend analysis, using 2013 as the base year, of (1) net sales and (2) net income. Comment on the significance of the trend results.
- b. Compute for 2015 and 2014 the (1) profit margin, (2) asset turnover, (3) return on assets, and (4) return on common stockholders' equity. How would you evaluate Apple's profitability? Total assets at September 28, 2013, were \$207,000 and total stockholders' equity at September 28, 2013, was \$123,549.
- c. Compute for 2015 and 2014 the (1) debt to assets ratio and (2) times interest earned. How would you evaluate Apple's long-term solvency?
- d. What information outside the annual report may also be useful to your parents in making a decision about Apple?

Comparative Analysis Problem: PepsiCo, Inc. vs. The Coca-Cola Company

CT18.2 **PepsiCo**'s financial statements are presented in Appendix B. Financial statements of **The Coca-Cola Company** are presented in Appendix C. The complete annual reports of PepsiCo and Coca-Cola, including the notes to the financial statements, are available at each company's respective website.

Instructions

- a. Based on the information contained in these financial statements, determine each of the following for each company.
 1. The percentage increase (decrease) in (i) net sales and (ii) net income from 2014 to 2015.
 2. The percentage increase in (i) total assets and (ii) total common stockholders' (shareholders') equity from 2014 to 2015.
 3. The basic earnings per share and price-earnings ratio for 2015. (For both PepsiCo and Coca-Cola, use the basic earnings per share.) Coca-Cola's common stock had a market price of \$42.63 at the end of fiscal-year 2015, and PepsiCo's common stock had a market price of \$103.41.
- b. What conclusions concerning the two companies can be drawn from these data?

Comparative Analysis Problem: Amazon.com, Inc. vs. Wal-Mart Stores, Inc.

CT18.3 **Amazon.com, Inc.**'s financial statements are presented in Appendix D. Financial statements of **Wal-Mart Stores, Inc.** are presented in Appendix E. The complete annual reports of Amazon and Wal-Mart, including the notes to the financial statements, are available at each company's respective website.

Instructions

- a. Based on the information contained in these financial statements, determine each of the following for each company.
 1. The percentage increase (decrease) in (i) net sales and (ii) net income from 2014 to 2015.
 2. The percentage increase in (i) total assets and (ii) total common stockholders' (shareholders') equity from 2014 to 2015.
 3. The basic earnings per share and price-earnings ratio for 2015. (For both Amazon and Wal-Mart, use the basic earnings per share.) Amazon's common stock had a market price of \$398.79 at the end of fiscal-year 2015, and Wal-Mart's common stock had a market price of \$74.68.
- b. What conclusions concerning the two companies can be drawn from these data?

Decision-Making Across the Organization

CT18.4 You are a loan officer for White Sands Bank of Taos. Paul Jason, president of P. Jason Corporation, has just left your office. He is interested in an 8-year loan to expand the company's operations. The

borrowed funds would be used to purchase new equipment. As evidence of the company's debt-worthiness, Jason provided you with the following facts.

	<u>2020</u>	<u>2019</u>
Current ratio	3.1	2.1
Asset turnover	2.8	2.2
Net income	Up 32%	Down 8%
Earnings per share	\$3.30	\$2.50

Jason is a very insistent (some would say pushy) man. When you told him that you would need additional information before making your decision, he acted offended and said, "What more could you possibly want to know?" You responded that, at a minimum, you would need complete, audited financial statements.

Instructions

With the class divided into groups, answer the following.

- Explain why you would want the financial statements to be audited.
- Discuss the implications of the ratios provided for the lending decision you are to make. That is, does the information paint a favorable picture? Are these ratios relevant to the decision?
- List three other ratios that you would want to calculate for this company, and explain why you would use each.

Real-World Focus

CT18.5 Purpose: To employ comparative data and industry data to evaluate a company's performance and financial position.

Instructions

Identify two competing companies and then go to the Money homepage of the **MSN** website. Under the "Fundamentals" heading, use the Growth, Profitability, Financial health, Price ratios, and Management effectiveness tabs to answer the following questions.

- Evaluate the company's liquidity relative to the industry averages and to the competitor that you chose.
- Evaluate the company's solvency relative to the industry averages and to the competitor that you chose.
- Evaluate the company's profitability relative to the industry averages and to the competitor that you chose.

CT18.6 The April 25, 2012, edition of the *Wall Street Journal* contains an article by Spencer Jakab entitled "Amazon's Valuation Is Hard to Justify."

Instructions

Read the article and answer the following questions.

- Explain what is meant by the statement that "On a split-adjusted basis, today's share price is the equivalent of \$1,166."
- The article says that **Amazon.com** nearly doubled its capital spending on items such as fulfillment centers (sophisticated warehouses where it finds, packages, and ships goods to customers). Discuss the implications that this spending would have on the company's return on assets in the short-term and in the long-term.
- How does Amazon's P-E ratio compare to that of **Apple**, **Netflix**, and **Wal-Mart**? What does this suggest about investors' expectations about Amazon's future earnings?
- What factor does the article cite as a possible hurdle that might reduce Amazon's ability to raise its operating margin back to previous levels?

Communication Activity

CT18.7 Larry Dundee is the chief executive officer of Palmer Electronics. Dundee is an expert engineer but a novice in accounting. Dundee asks you, as an accounting student, to explain (a) the bases for comparison in analyzing Palmer's financial statements and (b) the factors affecting quality of earnings.

Instructions

Write a memo to Larry Dundee that explains the basis for comparison and the factors affecting quality of earnings.

All About You

CT18.8 In this chapter, you learned how to use many tools for performing a financial analysis of a company. When making personal investments, however, it is most likely that you won't be buying stocks and bonds in individual companies. Instead, when most people want to invest in stock, they buy mutual funds. By investing in a mutual fund, you reduce your risk because the fund diversifies by buying the stock of a variety of different companies, bonds, and other investments, depending on the stated goals of the fund.

Before you invest in a fund, you will need to decide what type of fund you want. For example, do you want a fund that has the potential of high growth (but also high risk), or are you looking for lower risk and a steady stream of income? Do you want a fund that invests only in U.S. companies, or do you want one that invests globally? Many resources are available to help you with these types of decisions.

Instructions

Search the Internet for “investment allocation questionnaire” and then complete one from a reputable source. Which type of investment fund is appropriate for you and why?

FASB Codification Activity

CT18.9 If your school has a subscription to the FASB Codification, log in and prepare responses to the following. Use the Master Glossary for determining the proper definitions.

- a. Discontinued operations.
- b. Comprehensive income.

A Look at IFRS

LEARNING OBJECTIVE 4

Compare financial statement analysis and income statement presentation under GAAP and IFRS.

The tools of financial statement analysis are the same throughout the world. Techniques such as vertical and horizontal analysis, for example, are tools used by analysts regardless of whether GAAP- or IFRS-related financial statements are being evaluated. In addition, the ratios provided in the textbook are the same ones that are used internationally.

The beginning of this chapter relates to the income statement. As in GAAP, the income statement is a required statement under IFRS. In addition, the content and presentation of an IFRS income statement is similar to the one used for GAAP. *IAS 1* (revised), “Presentation of Financial Statements,” provides general guidelines for the reporting of income statement information. In general, the differences in the presentation of financial statement information are relatively minor.

Key Points

Following are the key similarities between GAAP and IFRS as related to financial statement analysis and income statement presentation. There are no significant differences between the two standards.

- The tools of financial statement analysis covered in this chapter are universal and therefore no significant differences exist in the analysis methods used.
- The basic objectives of the income statement are the same under both GAAP and IFRS. As indicated in the textbook, a very important objective is to ensure that users of the income statement can evaluate the sustainable income of the company. Thus, both the IASB and the FASB are interested in distinguishing normal levels of income from unusual items in order to better predict a company's future profitability.
- The basic accounting for discontinued operations is the same under IFRS and GAAP.

- The accounting for changes in accounting principles and changes in accounting estimates are the same for both GAAP and IFRS.
- Both GAAP and IFRS follow the same approach in reporting comprehensive income.

Looking to the Future

The FASB and the IASB are working on a project that would rework the structure of financial statements. Recently, the IASB decided to require a statement of comprehensive income, similar to what was required under GAAP. In addition, another part of this project addresses the issue of how to classify various items in the income statement. A main goal of this new approach is to provide information that better represents how businesses are run. In addition, the approach draws attention away from one number—net income.

IFRS Practice

IFRS Self-Test Questions

1. The basic tools of financial analysis are the same under both GAAP and IFRS **except** that:

- horizontal analysis cannot be done because the format of the statements is sometimes different.
- analysis is different because vertical analysis cannot be done under IFRS.
- the current ratio cannot be computed because current liabilities are often reported before current assets in IFRS statements of position.
- None of the above.

2. Presentation of comprehensive income must be reported under IFRS in:

- the statement of stockholders' equity.
- the income statement ending with net income.

- the notes to the financial statements.

- a statement of comprehensive income.

3. In preparing its income statement for 2020, Parmalane assembles the following information.

Sales revenue	\$500,000
Cost of goods sold	300,000
Operating expenses	40,000
Loss on discontinued operations	20,000

Ignoring income taxes, what is Parmalane's income from continuing operations for 2020 under IFRS?

- \$260,000.
- \$250,000.
- \$240,000.
- \$160,000.

International Financial Reporting Problem: Louis Vuitton

IFRS18.1 The financial statements of **Louis Vuitton** are presented in Appendix F. The complete annual report, including the notes to its financial statements, is available at the company's website.

Instructions

Use the company's **2015 annual report** to answer the following questions.

- What was the company's profit margin for 2015? Has it increased or decreased from 2014?
- What was the company's operating profit for 2015?
- The company reported comprehensive income of €4,148 million in 2015. What are the other comprehensive gains and losses recorded in 2015?

Answers to IFRS Self-Test Questions

Managerial Accounting

Chapter Preview

This chapter focuses on issues illustrated in the following Feature Story about **Current Designs** and its parent company **Wenonah Canoe**. To succeed, the company needs to determine and control the costs of material, labor, and overhead, and understand the relationship between costs and profits. Managers often make decisions that determine their company's fate—and their own. Managers are evaluated on the results of their decisions. Managerial accounting provides tools to assist management in making decisions and to evaluate the effectiveness of those decisions.

Feature Story

Just Add Water ... and Paddle

Mike Cichanowski grew up on the Mississippi River in Winona, Minnesota. At a young age, he learned to paddle a canoe so he could explore the river. Before long, Mike began crafting his own canoes from bent wood and fiberglass in his dad's garage. Then, when his canoe-making shop outgrew the garage, he moved it into an old warehouse. When that was going to be

torn down, Mike came to a critical juncture in his life. He took out a bank loan and built his own small shop, giving birth to the company **Wenonah Canoe**.

Wenonah Canoe soon became known as a pioneer in developing techniques to get the most out of new materials such as plastics, composites, and carbon fibers—maximizing strength while minimizing weight.

In the 1990s, as kayaking became popular, Mike made another critical decision when he acquired **Current Designs**, a premier Canadian kayak manufacturer. This venture

allowed Wenonah to branch out with new product lines while providing Current Designs with much-needed capacity expansion and manufacturing expertise. Mike moved Current Designs' headquarters to Minnesota and made a big (and potentially risky) investment in a new production facility. Today, the company's 90 employees produce about 12,000 canoes and kayaks per year. These are sold across the country and around the world.

Mike will tell you that business success is “a three-legged stool.” The first leg is the knowledge and commitment to make a great product. Wenonah’s canoes and Current Designs’ kayaks are widely regarded as among the very best. The second leg is the ability to sell your product. Mike’s company started

off making great canoes, but it took a little longer to figure out how to sell them. The third leg is not something that most of you would immediately associate with entrepreneurial success. It is what goes on behind the scenes—accounting. Good accounting information is absolutely critical to the countless decisions, big and small, that ensure the survival and growth of the company.

Bottom line: No matter how good your product is, and no matter how many units you sell, if you don’t have a firm grip on your numbers, you are up a creek without a paddle.

Go to the Review and Practice section at the end of the chapter for a review of key concepts and practice applications with solutions.

Visit WileyPLUS with ORION for additional tutorials and practice opportunities.

Managerial Accounting Basics

LEARNING OBJECTIVE 1

Identify the features of managerial accounting and the functions of management.

Managerial accounting provides economic and financial information for managers and other internal users. The skills that you learn in this course will be vital to your future success in business. You don't believe us? Let's look at some examples of some of the crucial activities of employees at **Current Designs** and where those activities are addressed in this textbook.

In order to know whether it is making a profit, Current Designs needs accurate information about the cost of each kayak (Chapters 20 and 21). To be profitable, Current Designs adjusts the number of kayaks it produces in response to changes in economic conditions and consumer tastes. It needs to understand how changes in the number of kayaks it produces impact its production costs and profitability (Chapter 22). Further, Current Designs' managers often consider alternative courses of action. For example, should the company accept a special order from a customer, produce a particular kayak component internally or outsource it, or continue or discontinue a particular product line (Chapter 23)?

In order to plan for the future, Current Designs prepares budgets (Chapter 24), and it then compares its budgeted numbers with its actual results to evaluate performance and identify areas that need to change (Chapters 25 and 26). Finally, it sometimes needs to make substantial investment decisions, such as the building of a new plant or the purchase of new equipment (Chapter 27).

Someday, you are going to face decisions just like these. You may end up in sales, marketing, management, production, or finance. You may work for a company that provides medical care, produces software, or serves up mouth-watering meals. No matter what your position is and no matter what your product, the skills you acquire in this class will increase your chances of business success. Put another way, in business you can either guess or you can make an informed decision. As a CEO of **Microsoft** once noted: "If you're supposed to be making money in business and supposed to be satisfying customers and building market share, there are numbers that characterize those things. And if somebody can't speak to me quantitatively about it, then I'm nervous." This course gives you the skills you need to quantify information so you can make informed business decisions.

Comparing Managerial and Financial Accounting

There are both similarities and differences between managerial and financial accounting. First, each field of accounting deals with the economic events of a business. For example, *determining* the unit cost of manufacturing a product is part of managerial accounting. *Reporting* the total cost of goods manufactured and sold is part of financial accounting. In addition, both managerial and financial accounting require that a company's economic events be quantified and communicated to interested parties. **Illustration 19.1** summarizes the principal differences between financial accounting and managerial accounting.

Management Functions

Managers' activities and responsibilities can be classified into three broad functions:

1. Planning.
2. Directing.
3. Controlling.

ILLUSTRATION 19.1 Differences between financial and managerial accounting

Feature	Financial Accounting	Managerial Accounting
Primary Users of Reports	External users: stockholders, creditors, and regulators.	Internal users: officers and managers.
Types and Frequency of Reports	Financial statements. Quarterly and annually.	Internal reports. As frequently as needed.
Purpose of Reports	General-purpose.	Special-purpose for specific decisions.
Content of Reports	Pertains to business as a whole. Highly aggregated (condensed). Limited to double-entry accounting and cost data. Generally accepted accounting principles.	Pertains to subunits of the business. Very detailed. Extends beyond double-entry accounting to any relevant data. Evaluated based on relevance to decisions.
Verification Process	Audited by CPA.	No independent audits.

In performing these functions, managers make decisions that have a significant impact on the organization.

Planning requires managers to look ahead and to establish objectives. These objectives are often diverse: maximizing short-term profits and market share, maintaining a commitment to environmental protection, and contributing to social programs. For example, **Hewlett-Packard**, in an attempt to gain a stronger foothold in the computer industry, greatly reduced its prices to compete with **Dell**. A key objective of management is to **add value** to the business under its control. Value is usually measured by the price of the company's stock and by the potential selling price of the company.

Directing involves coordinating a company's diverse activities and human resources to produce a smooth-running operation. This function relates to implementing planned objectives and providing necessary incentives to motivate employees. For example, manufacturers such as **Campbell Soup Company**, **General Motors**, and **Dell** need to coordinate purchasing, manufacturing, warehousing, and selling. Service corporations such as **American Airlines**, **Federal Express**, and **AT&T** coordinate scheduling, sales, service, and acquisitions of equipment and supplies. Directing also involves selecting executives, appointing managers and supervisors, and hiring and training employees.

The third management function, **controlling**, is the process of keeping the company's activities on track. In controlling operations, managers determine whether planned goals are met. When there are deviations from targeted objectives, managers decide what changes are needed to get back on track. Scandals at companies like **Enron**, **Lucent**, and **Xerox** attest to the fact that companies need adequate controls to ensure that the company develops and distributes accurate information.

How do managers achieve control? A smart manager in a very small operation can make personal observations, ask good questions, and know how to evaluate the answers. But using this approach in a larger organization would result in chaos. Imagine the president of **Current Designs** attempting to determine whether the company is meeting its planned objectives without some record of what has happened and what is expected to occur. Thus, large businesses typically use a formal system of evaluation. These systems include such features as budgets, responsibility centers, and performance evaluation reports—all of which are features of managerial accounting.

Decision-making is not a separate management function. Rather, it is the outcome of the exercise of good judgment in planning, directing, and controlling.

Organizational Structure

Most companies prepare **organization charts** to show the interrelationships of activities and the delegation of authority and responsibility within the company. **Illustration 19.2** shows a typical organization chart.

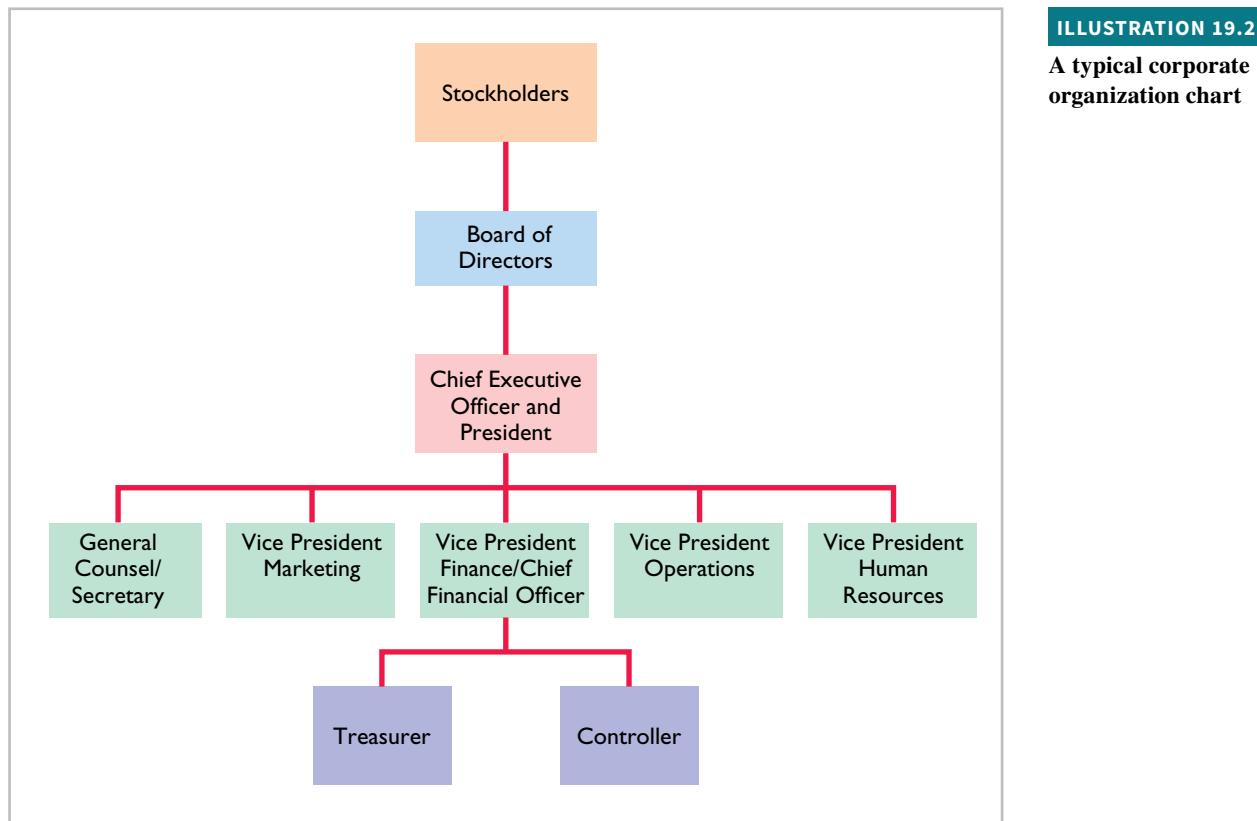

ILLUSTRATION 19.2

A typical corporate organization chart

Stockholders own the corporation, but they manage it indirectly through a **board of directors** they elect. The board formulates the operating policies for the company or organization. The board also selects officers, such as a president and one or more vice presidents, to execute policy and to perform daily management functions.

The **chief executive officer (CEO)** has overall responsibility for managing the business. As the organization chart shows, the CEO delegates responsibilities to other officers.

Responsibilities within the company are frequently classified as either line or staff positions. Employees with **line positions** are directly involved in the company's primary revenue-generating operating activities. Examples of line positions include the vice president of operations, vice president of marketing, plant managers, supervisors, and production personnel. Employees with **staff positions** are involved in activities that support the efforts of the line employees. In a company like **General Electric** or **Facebook**, employees in finance, legal, and human resources have staff positions. While activities of staff employees are vital to the company, these employees are nonetheless there to serve the line employees who engage in the company's primary operations.

The **chief financial officer (CFO)** is responsible for all of the accounting and finance issues the company faces. The CFO is supported by the **controller** and the **treasurer**. The controller's responsibilities include (1) maintaining the accounting records, (2) ensuring an adequate system of internal control, and (3) preparing financial statements, tax returns, and internal reports. The treasurer has custody of the corporation's funds and is responsible for maintaining the company's cash position.

Also serving the CFO is the internal audit staff. The staff's responsibilities include reviewing the reliability and integrity of financial information provided by the controller and treasurer. Staff members also ensure that internal control systems are functioning properly to

safeguard corporate assets. In addition, they investigate compliance with policies and regulations. In many companies, these staff members also determine whether resources are used in the most economical and efficient fashion.

The vice president of operations oversees employees with line positions. For example, the company might have multiple plant managers, each of whom reports to the vice president of operations. Each plant also has department managers, such as fabricating, painting, and shipping, each of whom reports to the plant manager.

Management Insight

DPR Construction

Sam Edwards/Caiaimage/Getty Images

in the CEO position. **Samsung** even had three CEOs at the same time. On the other hand, **Abercrombie and Fitch** operated for more than two years without a CEO because its CEO unexpectedly quit and a suitable replacement was hard to find. In fact, some companies replace the CEO position with a management committee. These companies feel this structure improves decision-making and

Does a Company Need a CEO?

Can a company function without a person at the top? Nearly all companies have a CEO although some, such as **Oracle**, **Chipotle**, and **Whole Foods**, have operated with two people

increases collaboration. For example, the 4,000 employees of **DPR Construction** are overseen by an eight-person committee. Committee members are rotated off gradually but then continue to advise current members. The company notes that this approach provides more continuity over time than the sometimes sudden and harsh changes that occur when CEOs are replaced.

Source: Rachel Feintzeig, "Companies Manage with No CEO," *Wall Street Journal* (December 13, 2016).

What are some of the advantages cited by companies that choose a structure that lacks a CEO? (Go to WileyPLUS for this answer and additional questions).

DO IT! 1 | Managerial Accounting Overview

Indicate whether the following statements are true or false. If false, explain why.

- Managerial accountants have a single role within an organization: collecting and reporting costs to management.
- Financial accounting reports are general-purpose and intended for external users.
- Managerial accounting reports are special-purpose and issued as frequently as needed.
- Managers' activities and responsibilities can be classified into three broad functions: cost accounting, budgeting, and internal control.
- Managerial accounting reports must now comply with generally accepted accounting principles (GAAP).

Solution

- False. Managerial accountants do determine product costs, but they are also responsible for evaluating how well the company employs its resources. As a result, when the company makes critical strategic decisions, managerial accountants serve as team members alongside personnel from production, marketing, and engineering.
- True.
- True.
- False. Managers' activities are classified into three broad functions: planning, directing, and controlling. Planning requires managers to look ahead to establish objectives. Directing involves coordinating a company's diverse activities and human resources to produce a smooth-running operation. Controlling keeps the company's activities on track.
- False. Managerial accounting reports are for internal use and thus do not have to comply with GAAP.

ACTION PLAN

- Understand that managerial accounting is a field of accounting that provides economic and financial information for managers and other internal users.
- Understand that financial accounting provides information for external users.
- Analyze which users require which different types of information.

Managerial Cost Concepts

LEARNING OBJECTIVE 2

Describe the classes of manufacturing costs and the differences between product and period costs.

In order for managers at **Current Designs** to plan, direct, and control operations effectively, they need good information. One very important type of information relates to costs. Managers should ask questions such as the following.

1. What costs are involved in making a product or performing a service?
2. If we decrease production volume, will costs change?
3. What impact will automation have on total costs?
4. How can we best control costs?

To answer these questions, managers obtain and analyze reliable and relevant cost information. The first step is to understand the various cost categories that companies use.

Manufacturing Costs

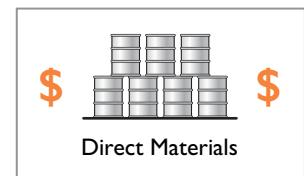

Manufacturing consists of activities and processes that convert raw materials into finished goods. Contrast this type of operation with merchandising, which sells products in the form in which they are purchased. Manufacturing costs incurred to produce a product are classified as direct materials, direct labor, and manufacturing overhead.

Direct Materials

To obtain the materials that will be converted into the finished product, the manufacturer purchases raw materials. **Raw materials** are the basic materials and parts used in the manufacturing process.

Raw materials that can be physically and directly associated with the finished product during the manufacturing process are **direct materials**. Examples include flour in the baking of bread, syrup in the bottling of soft drinks, and steel in the making of automobiles. A primary direct material of many Current Designs' kayaks is polyethylene powder. Some of its high-performance kayaks use Kevlar®.

Some raw materials cannot be easily associated with the finished product. These are called indirect materials. **Indirect materials** have one of two characteristics. (1) They do not physically become part of the finished product (such as polishing compounds used by Current Designs for the finishing touches on kayaks). Or, (2) they are impractical to trace to the finished product because their physical association with the finished product is too small in terms of cost (such as cotter pins and lock washers used in kayak rudder assembly). Companies account for indirect materials as part of **manufacturing overhead**.

Direct Labor

The work of factory employees that can be physically and directly associated with converting raw materials into finished goods is **direct labor**. Bottlers at **Coca-Cola**, bakers at **Sara Lee**, and equipment operators at **Current Designs** are employees whose activities are usually classified as direct labor. **Indirect labor** refers to the work of employees that has no physical association with the finished product or for which it is impractical to trace costs to the goods produced. Examples include wages of factory maintenance people, factory time-keepers, and factory supervisors. Like indirect materials, companies classify indirect labor as **manufacturing overhead**.

Manufacturing Overhead

Manufacturing overhead consists of costs that are indirectly associated with the manufacture of the finished product. Overhead costs also include manufacturing costs that cannot be classified as direct materials or direct labor. Manufacturing overhead includes indirect materials, indirect labor, depreciation on factory buildings and machines, and insurance, taxes, and maintenance on factory facilities.

One study of manufactured goods found the following magnitudes of the three different product costs as a percentage of the total product cost: direct materials 54%, direct labor 13%, and manufacturing overhead 33%. Note that the direct labor component is the smallest. This component of product cost is dropping substantially because of automation. Companies are working hard to increase productivity by decreasing labor. In some companies, direct labor has become as little as 5% of the total cost.

Tracing direct materials and direct labor costs to specific products is fairly straightforward. Good recordkeeping can tell a company how much plastic it used in making each type of gear, or how many hours of factory labor it took to assemble a part. But allocating overhead costs to specific products presents problems. How much of the purchasing agent's salary is attributable to the hundreds of different products made in the same plant? What about the grease that keeps the machines running smoothly, or the computers that make sure paychecks are generated on time? Boiled down to its simplest form, the question becomes: Which products cause the incurrence of which costs? In subsequent chapters, we show various methods of allocating overhead to products.

Product Versus Period Costs

ALTERNATIVE TERMINOLOGY

Product costs are also called *inventoriable* costs.

Each of the manufacturing cost components—direct materials, direct labor, and manufacturing overhead—are product costs. As the term suggests, **product costs** are costs that are a necessary and integral part of producing the finished product (see **Alternative Terminology**). Companies record product costs, when incurred, as an asset called inventory. These costs do not become expenses until the company sells the finished goods inventory. At that point, the company records the expense as cost of goods sold.

Period costs are costs that are matched with the revenue of a specific time period rather than included as part of the cost of a salable product. These are nonmanufacturing costs. Period costs include selling and administrative expenses. In order to determine net income, companies deduct these costs from revenues in the period in which they are incurred.

Illustration 19.3 summarizes these relationships and cost terms. Our main concern in this chapter is with product costs.

ILLUSTRATION 19.3

Product versus period costs

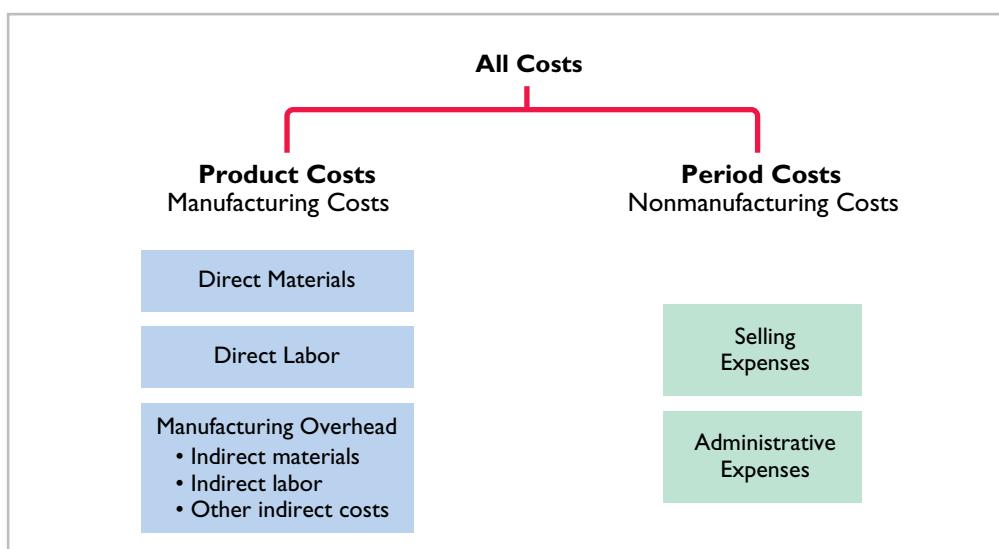

Illustration of Cost Concepts

To improve your understanding of cost concepts, we illustrate them here through an extended example. Suppose you started your own snowboard factory, Terrain Park Boards. Think that's impossible? **Burton Snowboards** was started by Jake Burton Carpenter, when he was only 23 years old. Jake initially experimented with 100 different prototype designs before settling on a final design. Then Jake, along with two relatives and a friend, started making 50 boards per day in Londonderry, Vermont. Unfortunately, while they made a lot of boards in their first year, they were only able to sell 300 of them. To get by during those early years, Jake taught tennis and tended bar to pay the bills.

Here are some of the costs that your snowboard factory, Terrian Park Boards, would incur.

1. The materials cost of each snowboard (wood cores, fiberglass, resins, metal screw holes, metal edges, and ink) is \$30.
2. The labor costs (for example, to trim and shape each board using jig saws and band saws) are \$40.
3. Depreciation on the factory building and equipment (for example, presses, grinding machines, and lacquer machines) used to make the snowboards is \$25,000 per year.
4. Property taxes on the factory building (where the snowboards are made) are \$6,000 per year.
5. Advertising costs (mostly online and catalogue) are \$60,000 per year.
6. Sales commissions related to snowboard sales are \$20 per snowboard.
7. Salaries for factory maintenance employees are \$45,000 per year.
8. The salary of the plant manager is \$70,000.
9. The cost of shipping is \$8 per snowboard.

Illustration 19.4 shows how Terrain Park Boards would assign these manufacturing and selling costs to the various categories.

Terrian Park Boards				
Cost Item	Product Costs			Period Costs
	Direct Materials	Direct Labor	Manufacturing Overhead	
1. Material cost (\$30 per board)	X			
2. Labor costs (\$40 per board)		X		
3. Depreciation on factory equipment (\$25,000 per year)			X	
4. Property taxes on factory building (\$6,000 per year)			X	
5. Advertising costs (\$60,000 per year)				X
6. Sales commissions (\$20 per board)				X
7. Maintenance salaries (factory facilities, \$45,000 per year)			X	
8. Salary of plant manager (\$70,000 per year)			X	
9. Cost of shipping boards (\$8 per board)				X

ILLUSTRATION 19.4

Assignment of costs to cost categories

Total manufacturing costs are the sum of the **product costs**—direct materials, direct labor, and manufacturing overhead—inurred in the current period. If Terrain Park Boards produces 10,000 snowboards the first year, the total manufacturing costs would be \$846,000, as shown in **Illustration 19.5**.

ILLUSTRATION 19.5**Computation of total manufacturing costs**

Cost Number and Item	Manufacturing Cost
1. Material cost ($\$30 \times 10,000$)	\$300,000
2. Labor cost ($\$40 \times 10,000$)	400,000
3. Depreciation on factory equipment	25,000
4. Property taxes on factory building	6,000
7. Maintenance salaries (factory facilities)	45,000
8. Salary of plant manager	70,000
Total manufacturing costs	\$846,000

Once it knows the total manufacturing costs, Terrain Park Boards can compute the manufacturing cost per unit. Assuming 10,000 units, the cost to produce one snowboard is \$84.60 ($\$846,000 \div 10,000$ units).

The cost concepts discussed in this chapter are used extensively in subsequent chapters. So study Illustration 19.4 carefully. If you do not understand any of these classifications, go back and reread the appropriate section.

DO IT! 2 | Managerial Cost Concepts

A bicycle company has these costs: tires, salaries of employees who put tires on the wheels, factory building depreciation, advertising expenditures, factory machine lubricants, spokes, salary of factory manager, salary of accountant, handlebars, and salaries of factory maintenance employees. Classify each cost as direct materials, direct labor, overhead, or a period cost.

Solution

Direct materials: Tires, spokes, and handlebars. **Direct labor:** Salaries of employees who put tires on the wheels. **Manufacturing overhead:** Factory building depreciation, factory machine lubricants, salary of factory manager, and salaries of factory maintenance employees. **Period costs:** Advertising expenditures and salary of accountant.

Related exercise material: **BE19.3, BE19.4, BE19.5, BE19.6, DO IT! 19.2, E19.2, E19.3, E19.4, E19.5, E19.6, and E19.7.**

ACTION PLAN

- **Direct materials:** any raw materials physically and directly associated with the finished product.
- **Direct labor:** the work of factory employees directly associated with the finished product.
- **Manufacturing overhead:** any costs indirectly associated with the finished product.
- **Costs that are not product costs are period costs.**

Manufacturing Costs in Financial Statements

LEARNING OBJECTIVE 3

Demonstrate how to compute cost of goods manufactured and prepare financial statements for a manufacturer.

The financial statements of a manufacturer are very similar to those of a merchandiser. For example, you will find many of the same sections and same accounts in the financial statements of **Procter & Gamble** that you find in the financial statements of **Dick's Sporting Goods**. The principal differences between their financial statements occur in two places: the cost of goods sold section in the income statement and the current assets section in the balance sheet.

Income Statement

Under a periodic inventory system, the income statements of a merchandiser and a manufacturer differ in the cost of goods sold section. Merchandisers compute cost of goods sold by adding the beginning inventory to the **cost of goods purchased** and subtracting the ending inventory. Manufacturers compute cost of goods sold by adding the beginning finished goods inventory to the **cost of goods manufactured** and subtracting the ending finished goods inventory. **Illustration 19.6**, which assumes a periodic inventory system, shows these different methods.

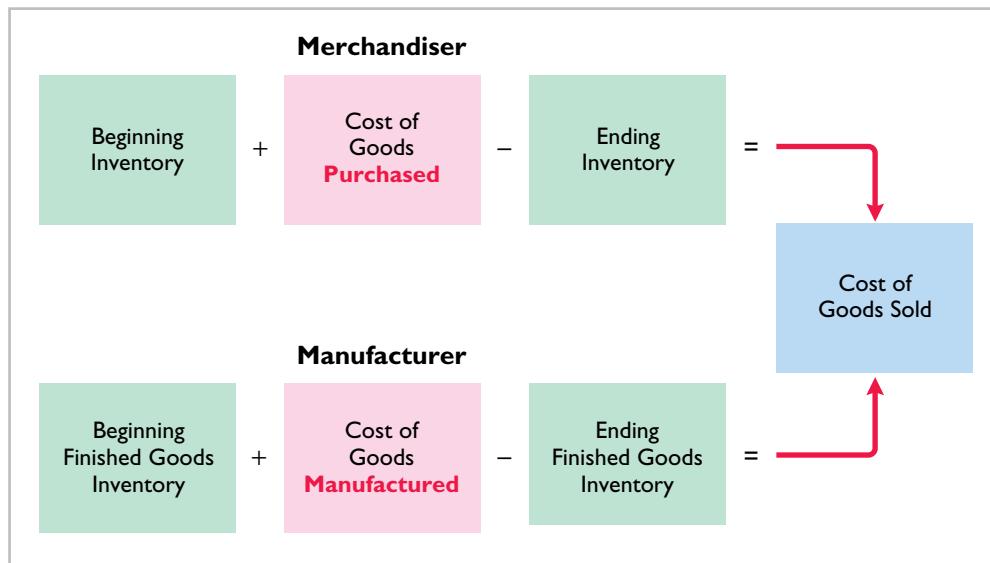

ILLUSTRATION 19.6
Cost of goods sold components

A number of accounts are involved in determining the cost of goods manufactured. To eliminate excessive detail, income statements typically show only the total cost of goods manufactured. A separate statement, called a Cost of Goods Manufactured Schedule, presents the details (see Illustration 19.9).

Illustration 19.7 shows the different presentations of the cost of goods sold sections for merchandising and manufacturing companies. The other sections of an income statement are similar for merchandisers and manufacturers.

ILLUSTRATION 19.7 Cost of goods sold sections of merchandising and manufacturing income statements

Merchandising Company	Manufacturing Company
Income Statement (partial)	
For the Year Ended December 31, 2020	
Cost of goods sold	Cost of goods sold
Inventory, Jan. 1	Finished goods inventory, Jan. 1
Cost of goods purchased	\$ 90,000
	<u>Cost of goods manufactured</u>
	(see Illustration 19.9)
<u>Cost of goods available for sale</u>	<u>460,000</u>
Less: Inventory, Dec. 31	370,000
Cost of goods sold	Cost of goods sold
	<u>80,000</u>
	<u>\$380,000</u>
Cost of goods sold	
Inventory, Jan. 1	\$ 70,000
Cost of goods purchased	<u>650,000</u>
Cost of goods available for sale	720,000
Less: Inventory, Dec. 31	<u>400,000</u>
Cost of goods sold	<u>\$320,000</u>

Cost of Goods Manufactured

An example may help show how companies determine the cost of goods manufactured. Assume that on January 1, **Current Designs** has a number of kayaks in various stages of production. In total, these partially completed manufactured units are called **beginning work in process inventory**. These are kayaks that were worked on during the prior year but were not completed. As a result, these kayaks will be completed during the current year. The cost of beginning work in process inventory is based on the **manufacturing costs incurred in the prior period**.

Current Designs first incurs manufacturing costs in the current year to complete the kayaks that were in process on January 1. It then incurs manufacturing costs for production of new orders. The sum of the direct materials costs, direct labor costs, and manufacturing overhead incurred in the current year is the **total manufacturing costs** for the current period.

We now have two cost amounts: (1) the cost of the beginning work in process and (2) the total manufacturing costs for the current period. The sum of these costs is the **total cost of work in process** for the year.

At the end of the year, Current Designs may have some kayaks that are only partially completed. The costs of these units become the cost of the **ending work in process inventory**. To find the **cost of goods manufactured**, we subtract this cost from the total cost of work in process. **Illustration 19.8** shows the formula for determining the cost of goods manufactured.

ILLUSTRATION 19.8

Cost of goods manufactured formula

Beginning Work in Process Inventory	+	Total Manufacturing Costs	=	Total Cost of Work in Process
↓				
Total Cost of Work in Process	-	Ending Work in Process Inventory	=	Cost of Goods Manufactured

Cost of Goods Manufactured Schedule

The **cost of goods manufactured schedule** reports cost elements used in calculating cost of goods manufactured. **Illustration 19.9** shows the schedule for Current Designs (using assumed data). The schedule presents detailed data for direct materials and for manufacturing overhead.

You should be able to distinguish between “Total manufacturing costs” and “Cost of goods manufactured.” As Illustration 19.9 shows, total manufacturing costs is the sum of all manufacturing costs (direct materials, direct labor, and manufacturing overhead) **incurred during the period**. Cost of goods manufactured is the cost of those goods that were **completed during the period**. If we add beginning work in process inventory to the total manufacturing costs incurred during the period and then subtract the ending work in process inventory (the formula given in Illustration 19.8), we arrive at the cost of goods manufactured during the period.

ILLUSTRATION 19.9

Cost of goods manufactured schedule

Current Designs Cost of Goods Manufactured Schedule For the Year Ended December 31, 2020		
Work in process, January 1		\$ 18,400
Direct materials		
Raw materials inventory, January 1	\$ 16,700	
Raw materials purchases	152,500	
	<hr/>	
Total raw materials available for use	169,200	
Less: Raw materials inventory, December 31	22,800	
	<hr/>	
Direct materials used	\$146,400	
	<hr/>	
Direct labor		175,600
Manufacturing overhead		
Indirect labor	14,300	
Factory repairs	12,600	
Factory utilities	10,100	
Factory depreciation	9,440	
Factory insurance	8,360	
	<hr/>	
Total manufacturing overhead	54,800	
	<hr/>	
Total manufacturing costs		376,800
Total cost of work in process		395,200
Less: Work in process, December 31		25,200
	<hr/>	
Cost of goods manufactured		\$370,000

Balance Sheet

The balance sheet for a merchandising company shows just one category of inventory. In contrast, the balance sheet for a manufacturer may have three inventory accounts, as shown in **Illustration 19.10** for Current Designs' kayak inventory.

Raw Materials Inventory	Work in Process Inventory	Finished Goods Inventory
		
Shows the cost of raw materials on hand.	Shows the cost applicable to units that have been started into production but are only partially completed.	Shows the cost of completed goods on hand.

ILLUSTRATION 19.10

Inventory accounts for a manufacturer

Finished Goods Inventory is to a manufacturer what Inventory is to a merchandiser. Each of these classifications represents the goods that the company has available for sale. The current assets sections presented in **Illustration 19.11** contrast the presentations of inventories for merchandising and manufacturing companies. The remainder of the balance sheet is similar for the two types of companies.

ILLUSTRATION 19.11 Current assets sections of merchandising and manufacturing balance sheets

Merchandising Company Balance Sheet December 31, 2020		Manufacturing Company Balance Sheet December 31, 2020	
Current assets		Current assets	
Cash	\$100,000	Cash	\$180,000
Accounts receivable (net)	210,000	Accounts receivable (net)	210,000
Inventory	400,000	Inventory	80,000
Prepaid expenses	22,000	Finished goods	25,200
Total current assets	<u><u>\$732,000</u></u>	Work in process	<u><u>22,800</u></u>
		Raw materials	128,000
		Prepaid expenses	18,000
		Total current assets	<u><u>\$536,000</u></u>

Each step in the accounting cycle for a merchandiser applies to a manufacturer. For example, prior to preparing financial statements, manufacturers make adjusting entries. The adjusting entries are essentially the same as those of a merchandiser. The closing entries are also similar for manufacturers and merchandisers.

DO IT! 3 | Cost of Goods Manufactured

The following information is available for Keystone Company.

	<u>March 1</u>	<u>March 31</u>
Raw materials inventory	\$12,000	\$10,000
Work in process inventory	2,500	4,000
Materials purchased in March	\$ 90,000	
Direct labor in March	75,000	
Manufacturing overhead in March	220,000	

Prepare the cost of goods manufactured schedule for the month of March 2020.

ACTION PLAN

- Start with beginning work in process as the first item in the cost of goods manufactured schedule.
- Sum direct materials used, direct labor, and manufacturing overhead to determine total manufacturing costs.

Solution

Keystone Company Cost of Goods Manufactured Schedule For the Month Ended March 31, 2020	
Work in process, March 1	\$ 2,500
Direct materials	
Raw materials, March 1	\$ 12,000
Raw materials purchases	90,000
	<u>102,000</u>
Total raw materials available for use	102,000
Less: Raw materials, March 31	<u>10,000</u>
Direct materials used	\$ 92,000
Direct labor	75,000
Manufacturing overhead	<u>220,000</u>
Total manufacturing costs	<u>387,000</u>
Total cost of work in process	389,500
Less: Work in process, March 31	<u>4,000</u>
Cost of goods manufactured	<u><u>\$385,500</u></u>

ACTION PLAN (cont.)

- Sum beginning work in process and total manufacturing costs to determine total cost of work in process.
- Cost of goods manufactured is the total cost of work in process less ending work in process.

Related exercise material: BE19.7, BE19.8, BE19.9, BE19.10, DO IT! 19.3, E19.8, E19.9, E19.10, E19.11, E19.12, E19.13, E19.14, E19.15, E19.16, and E19.17.

Managerial Accounting Today

LEARNING OBJECTIVE 4

Discuss trends in managerial accounting.

The business environment never stands still. Regulations are always changing, global competition continues to intensify, and technology is a source of constant upheaval. In this rapidly changing world, managerial accounting needs to continue to innovate in order to provide managers with the information they need.

Service Industries

Much of the U.S. economy has shifted toward an emphasis on services. Today, more than 50% of U.S. workers are employed by service companies. Airlines, marketing agencies, cable companies, and governmental agencies are just a few examples of service companies. How do service companies differ from manufacturing companies? One difference is that services are consumed immediately by customers. For example, when a restaurant produces a meal, that meal is not put in inventory but is instead consumed immediately. An airline uses special equipment to provide its product, but again, the output of that equipment is consumed immediately by the customer in the form of a flight. And a marketing agency performs services for its clients that are immediately consumed by the customer in the form of a marketing plan. For a manufacturing company, like **Boeing**, it often has a long lead time before its airplane is used or consumed by the customer.

This chapter's examples featured manufacturing companies because accounting for the manufacturing environment requires the use of the broadest range of accounts. That is, the accounts used by service companies represent a subset of those used by manufacturers because service companies are not producing inventory. Neither the restaurant, the airline, or the marketing agency discussed above produces an inventoriable product. However, just like a manufacturer, each needs to keep track of the costs of its services in order to know whether it is generating a profit (see **Ethics Note**). A successful restaurateur needs to know the cost of each offering on the menu, an airline needs to know the cost of flight service to each destination,

ETHICS NOTE

Do telecommunications companies have an obligation to provide service to remote or low-user areas for a fee that may be less than the cost of the service?

and a marketing agency needs to know the cost to develop a marketing plan. Thus, the techniques shown in this chapter, to accumulate manufacturing costs to determine manufacturing inventory, are equally useful for determining the costs of performing services.

For example, let's consider the costs that **Hewlett-Packard (HP)** might incur on a consulting engagement. A significant portion of its costs would be salaries of consulting personnel. It might also incur travel costs, materials, software costs, and depreciation charges on equipment. In the same way that it needs to keep track of the cost of manufacturing its computers and printers, HP needs to know what its costs are on each consulting job. It could prepare a cost of services performed schedule similar to the cost of goods manufactured schedule in Illustration 19.9. The structure would be essentially the same as the cost of goods manufactured schedule, but section headings would be reflective of the costs of the particular service organization.

Many of the examples we present in subsequent chapters will be based on service companies, as well as a number of end-of-chapter materials.

Service Company Insight Allegiant Airlines

© Stephen Strathdee/iStockphoto

Low Fares but Decent Profits

When other airlines were cutting flight service due to recession, **Allegiant Airlines** increased capacity by 21%. Sounds crazy, doesn't it? But it must know something because while the other airlines were losing money, it was generating profits. In fact, it often has the industry's highest profit margins. Consider also that its average one-way fare is only \$83. So how does it make money? As a low-budget airline, it focuses on controlling costs.

Allegiant purchases used planes for \$3 million each rather than new planes for \$40 million. It flies out of small towns, so

wages are low and competition is nonexistent. It minimizes hotel costs by having its flight crews finish their day in their home cities. The company also only flies a route if its 150-passenger planes are nearly full (it averages about 90% of capacity). The bottom line is that Allegiant knows its costs to the penny. Knowing what your costs are might not be glamorous, but it sure beats losing money.

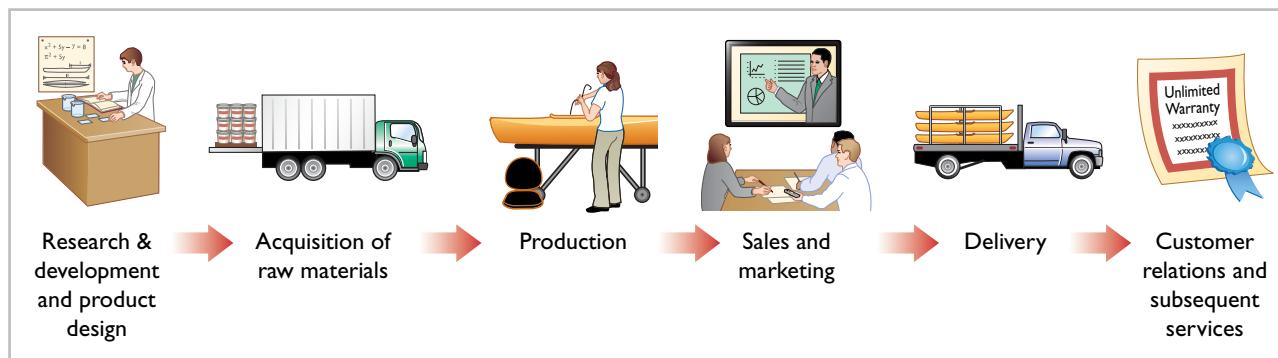

Sources: Susan Carey, "For Allegiant, Getaways Mean Profits," *Wall Street Journal Online* (February 18, 2009); and Scott Mayerowitz, "Tiny Allegiant Air Thrives on Low Costs, High Fees," <http://bigstory.ap.org> (June 28, 2013).

What are some of the line items that would appear in the cost of services performed schedule of an airline? (Go to WileyPLUS for this answer and additional questions.)

Focus on the Value Chain

The **value chain** refers to all business processes associated with providing a product or performing a service. **Illustration 19.12** depicts the value chain for a manufacturer. Many of the most significant business innovations in recent years have resulted either directly, or indirectly, from a focus on the value chain. For example, so-called **lean manufacturing**, originally pioneered by Japanese automobile manufacturer **Toyota** but now widely practiced, reviews all business processes in an effort to increase productivity and eliminate waste, all while continually trying to improve quality.

ILLUSTRATION 19.12 A manufacturer's value chain

Just-in-time (JIT) inventory methods, which have significantly lowered inventory levels and costs for many companies, are one innovation that resulted from the focus on the value chain. Under the JIT inventory method, goods are manufactured or purchased just in time for sale. For example, **Dell** can produce and deliver a custom computer within 48 hours of a customer's order. However, JIT also necessitates increased emphasis on product quality. Because JIT companies do not have excess inventory on hand, they cannot afford to stop production because of defects or machine breakdowns. If they stop production, deliveries will be delayed and customers will be unhappy. For example, a design flaw in an **Intel** computer chip was estimated to cost the company \$1 billion in repairs and reduced revenue.

As a consequence, many companies now focus on **total quality management (TQM)** to reduce defects in finished products, with the goal of zero defects. **Toyota** was one of the pioneers of TQM processes as early as the 1940s. Some of the largest companies in the world, including **Ford** and **ExxonMobil**, have benefitted from these practices.

Another innovation, the **theory of constraints**, involves identification of “bottlenecks”—constraints within the value chain that limit a company’s profitability. Once a major constraint has been identified and eliminated, the company moves on to fix the next most significant constraint. **General Motors** found that by applying the theory of constraints to its distribution system, it could more effectively meet the demands of its dealers and minimize the amount of excess inventory in its distribution system. This also reduced its need for overtime labor.

Technology has played a big role in the focus on the value chain and the implementation of lean manufacturing. For example, **enterprise resource planning (ERP) systems**, such as those provided by **SAP**, provide a comprehensive, centralized, integrated source of information to manage all major business processes—from purchasing, to manufacturing, to sales, to human resources. ERP systems have, in some large companies, replaced as many as 200 individual software packages. In addition, the focus on improving efficiency in the value chain has also resulted in adoption of automated manufacturing processes. Many companies now use computer-integrated manufacturing. These systems often reduce the reliance on manual labor by using robotic equipment. This increases overhead costs as a percentage of total product costs.

As overhead costs have increased because of factory automation, the accuracy of overhead cost allocation to specific products has become more important. Managerial accounting devised an approach, called **activity-based costing (ABC)**, which allocates overhead based on each product’s use of particular activities in making the product. In addition to providing more accurate product costing, ABC also can contribute to increased efficiency in the value chain. For example, suppose one of a company’s overhead pools is allocated based on the number of setups that each product requires. If a particular product’s cost is high because it is allocated a lot of overhead due to a high number of setups, management will be motivated to try to reduce the number of setups and thus reduce its overhead allocation.

Management Insight Inditex SA

Miguel Vidali/REUTERS/Alamy Stock Photo

Supplying Today’s (Not Yesterday’s) Fashions

In terms of total sales dollars, **Inditex SA** is the planet’s largest fashion retailer. What does it do differently than its competitors? How did it double its sales over a recent seven-year period while com-

petitors such as **Gap Inc.** stumbled badly? Inditex distinguishes itself in its value chain’s ability to react quickly to constantly changing customer tastes. First, designers and commercial staff sit side by side in a massive, open workspace facility, taking direct input from sales staff around the world regarding new product ideas. Manufacturing facilities are located relatively near to company headquarters, allowing more direct input and oversight into production. Also, all goods (other than online sales)

are shipped straight from the production facility to stores, rather than warehouses. As a result of its unique approach to how it designs, manufactures and distributes its goods, Inditex can actually sometimes get a new product from initial idea to the store shelf in two weeks rather than the industry norm of two to eight months. And because Inditex provides customers with designs that competitors don’t have yet, it can charge higher prices while also continuing to look for ways to increase efficiency and thus cut costs.

Source: Patricia Kowsmann, “Fast Fashion: How a Zara Coat Went from Design to Fifth Avenue in 25 Days,” *Wall Street Journal* (December 6, 2016).

What steps has Inditex taken that make its value chain unique? (Go to WileyPLUS for this answer and additional questions).

Balanced Scorecard

As companies implement various business practice innovations, managers sometimes focus too enthusiastically on the latest innovation, to the detriment of other areas of the business. For example, by focusing on total quality management, companies sometimes lose sight of cost/benefit considerations. Similarly, in focusing on reducing inventory levels through just-in-time inventory methods, companies sometimes lose sales due to inventory shortages. The **balanced scorecard** corrects for this limited perspective: This approach uses both financial and nonfinancial measures to evaluate all aspects of a company's operations in an integrated fashion. The performance measures are linked in a cause-and-effect fashion to ensure that they all tie to the company's overall objectives. For example, to increase return on assets, the company could try to increase sales. To increase sales, the company could try to increase customer satisfaction. To increase customer satisfaction, the company could try to reduce product defects. Finally, to reduce product defects, the company could increase employee training. The balanced scorecard, which is discussed further in Chapter 26, is now used by many companies, including **Hilton Hotels, Wal-Mart Stores, Inc., and HP**.

Business Ethics

All employees within an organization are expected to act ethically in their business activities. Given the importance of ethical behavior to corporations and their owners (stockholders), an increasing number of organizations provide codes of business ethics for their employees.

Creating Proper Incentives

Companies like **Amazon.com, IBM, and Nike** use complex systems to monitor, control, and evaluate the actions of managers. Unfortunately, these systems and controls sometimes unwittingly create incentives for managers to take unethical actions. For example, because budgets are also used as an evaluation tool, some managers try to "game" the budgeting process by underestimating their division's predicted performance so that it will be easier to meet their performance targets. On the other hand, if budgets are set at unattainable levels, managers sometimes take unethical actions to meet the targets in order to receive higher compensation or, in some cases, to keep their jobs.

For example, at one time, airline manufacturer **Boeing** was plagued by a series of scandals including charges of over-billing, corporate espionage, and illegal conflicts of interest. Some long-time employees of Boeing blamed the decline in ethics on a change in the corporate culture that took place after Boeing merged with **McDonnell Douglas**. They suggested that evaluation systems implemented after the merger to evaluate employee performance gave employees the impression that they needed to succeed no matter what actions were required to do so.

In a recent example, the largest bank in the United States, **Wells Fargo**, admitted that it had fired 5,300 employees for opening more than 2 million accounts without customer approval or knowledge. According to the director of the Consumer Financial Protection Bureau, "Wells Fargo employees secretly opened unauthorized accounts to hit sales targets and receive bonuses."

Code of Ethical Standards

In response to corporate scandals, the U.S. Congress enacted the **Sarbanes-Oxley Act (SOX)** to help prevent lapses in internal control. One result of SOX was to clarify top management's responsibility for the company's financial statements. CEOs and CFOs are now required to certify that financial statements give a fair presentation of the company's operating results and its financial condition. In addition, top managers must certify that the company maintains an adequate system of internal controls to safeguard the company's assets and ensure accurate financial reports.

Another result of SOX is that companies now pay more attention to the composition of the board of directors. In particular, the audit committee of the board of directors must be comprised entirely of independent members (that is, non-employees) and must contain at least one financial expert. Finally, the law substantially increases the penalties for misconduct.

To provide guidance for managerial accountants, the Institute of Management Accountants (IMA) has developed a code of ethical standards, entitled *IMA Statement of Ethical Professional Practice*. Management accountants should not commit acts in violation of these standards. Nor should they condone such acts by others within their organizations. Throughout the textbook, we will address various ethical issues managers face.

Corporate Social Responsibility

The balanced scorecard attempts to take a broader, more inclusive view of corporate profitability measures. Many companies, however, have begun to evaluate not just corporate profitability but also **corporate social responsibility**. In addition to profitability, corporate social responsibility considers a company's efforts to employ sustainable business practices with regard to its employees, society, and the environment. This is sometimes referred to as the **triple bottom line** because it evaluates a company's performance with regard to **people, planet, and profit**. Recent reports indicate that over 50% of the 500 largest U.S. companies provide sustainability reports. Make no mistake, these companies are still striving to maximize profits—in a competitive world, they won't survive long if they don't. In fact, you might recognize a few of the names on a recent list (published by Corporate Knights) of the 100 most sustainable companies in the world. Are you surprised that **General Electric, adidas, BMW, Coca-Cola, or Apple** made the list? These companies have learned that with a long-term, sustainable approach, they can maximize profits while also acting in the best interest of their employees, their communities, and the environment. In fact, a monetary bonus was provided by 87% of the companies on the list to managers that met sustainability goals. At various points within this textbook, we will discuss situations where real companies use the very skills that you are learning to evaluate decisions from a sustainable perspective, such as in the following Insight box.

People, Planet, and Profit Insight Phantom Tac

Geanina Bechea/Shutterstock

People Matter

Many clothing factories in developing countries are known for unsafe buildings, poor working conditions, and wage and labor violations. One of the owners of **Phantom Tac**, a clothing manufacturer in Bangladesh, did make efforts to develop sustainable business practices. This owner, David Mayor, provided funding for a training program for female workers. He also developed a website to educate customers about the workers' conditions. But Phantom Tac also had to make a profit. Things got tight when one of its customers canceled orders because Phantom Tac failed a social compliance audit. The company had to quit funding the training program and the website.

Recently, Bangladesh's textile industry has seen some significant improvements in working conditions and safety standards. As Brad Adams, Asia director of **Human Rights Watch**, notes, "The (Dhaka) government has belatedly begun to register unions, which is an important first step, but it now needs to ensure that factory owners stop persecuting their leaders and actually allow them to function."

Sources: Jim Yardley, "Clothing Brands Sidestep Blame for Safety Lapses," *The New York Times Online* (December 30, 2013); and Palash Ghosh, "Despite Low Pay, Poor Work Conditions, Garment Factories Empowering Millions of Bangladeshi Women," *International Business Times* (March 25, 2014).

What are some of the common problems for many clothing factories in developing countries? (Go to WileyPLUS for this answer and additional questions.)

Sustainable business practices present numerous issues for management and managerial accountants. First, companies need to decide what items need to be measured, generally those that are of utmost importance to its stakeholders. For example, a particular company might be most concerned with minimizing water pollution or maximizing employee safety. Then, for each item identified, the company determines measurable attributes that provide relevant information regarding the company's performance with regard to that item, such as the amount of waste released into public waterways or the number of accidents per 1,000 hours worked. Finally, the company needs to consider the materiality of the item, the cost of measuring these attributes, and the reliability of the measurements. If the company uses this information to make decisions, then accuracy is critical. Of particular concern is whether the measurements can be verified by an outside third party.

Unlike financial reporting, which is overseen by the Financial Accounting Standards Board, the reporting of sustainable business practices currently has no agreed-upon

standard-setter. A number of organizations have, however, published guidelines. The guidelines published by the **Global Reporting Initiative** are among the most widely recognized and followed. **Illustration 19.13** provides a list of major categories provided by the Global Reporting Initiative for sustainability reporting and a sample of aspects that companies might consider within each category.

ILLUSTRATION 19.13 Sample categories in Global Reporting Initiative guidelines

		Social			
Economic	Environmental	Labor Practices and Decent Work	Human Rights	Society	Product Responsibility
Economic performance	Energy Biodiversity	Occupational health and safety	Non-discrimination Child labor	Anti-corruption Anti-competitive behavior	Customer health and safety
Market presence	Effluents and waste	Training and education	Indigenous rights Supplier human rights assessment	Supplier assessment for impacts on society	Product and service labeling
Indirect economic impacts	Compliance	Diversity and equal opportunity	Grievance mechanisms	Marketing communications	Marketing communications
Procurement practices		Labor practices grievance mechanisms	for impacts on society	Customer privacy

DO IT! 4 | Trends in Managerial Accounting

Match the descriptions that follow with the corresponding terms.

Descriptions:

1. _____ All activities associated with providing a product or performing a service.
2. _____ A method of allocating overhead based on each product's use of activities in making the product.
3. _____ Systems implemented to reduce defects in finished products with the goal of achieving zero defects.
4. _____ A performance-measurement approach that uses both financial and nonfinancial measures, tied to company objectives, to evaluate a company's operations in an integrated fashion.
5. _____ Inventory system in which goods are manufactured or purchased just as they are needed for use.
6. _____ A company's efforts to employ sustainable business practices with regards to its employees, society, and the environment.
7. _____ A code of ethical standards developed by the Institute of Management Accountants.

Terms:

- a. Activity-based costing
- b. Balanced scorecard
- c. Corporate social responsibility
- d. Just-in-time (JIT) inventory
- e. Total quality management (TQM)
- f. Statement of Ethical Professional Practice
- g. Value chain

ACTION PLAN

- Develop a forward-looking view, in order to advise and provide information to various members of the organization.
- Understand current business trends and issues.

Solution

1. g
2. a
3. e
4. b
5. d
6. c
7. f

Review and Practice

Learning Objectives Review

1 Identify the features of managerial accounting and the functions of management.

The *primary users* of managerial accounting reports, issued as frequently as needed, are internal users, who are officers, department heads, managers, and supervisors in the company. The purpose of these reports is to provide special-purpose information for a particular user for a specific decision. The content of managerial accounting reports pertains to subunits of the business. It may be very detailed, and may extend beyond the double-entry accounting system. The reporting standard is relevance to the decision being made. No independent audits are required in managerial accounting.

The functions of management are planning, directing, and controlling. Planning requires management to look ahead and to establish objectives. Directing involves coordinating the diverse activities and human resources of a company to produce a smooth-running operation. Controlling is the process of keeping the activities on track.

2 Describe the classes of manufacturing costs and the differences between product and period costs.

Manufacturing costs are typically classified as either (1) direct materials, (2) direct labor, or (3) manufacturing overhead. Raw materials that can be physically and directly associated with the finished product during the manufacturing process are called direct materials. The work of factory employees that can be physically and directly associated with converting raw materials into finished goods is considered direct labor. Manufacturing overhead consists of costs that are indirectly associated with the manufacture of the finished product.

Product costs are costs that are a necessary and integral part of producing the finished product. Product costs are also called *inventoriable costs*. These costs do not become expenses until the company sells the finished goods inventory. Period costs are costs

that are identified with a specific time period rather than with a salable product. These costs relate to nonmanufacturing costs and therefore are not inventoriable costs.

3 Demonstrate how to compute cost of goods manufactured and prepare financial statements for a manufacturer.

Companies add the cost of the beginning work in process to the total manufacturing costs for the current year to arrive at the total cost of work in process for the year. They then subtract the ending work in process from the total cost of work in process to arrive at the cost of goods manufactured.

The difference between a merchandising and a manufacturing income statement is in the cost of goods sold section. A manufacturing cost of goods sold section shows beginning and ending finished goods inventories and the cost of goods manufactured.

The difference between a merchandising and a manufacturing balance sheet is in the current assets section. The current assets section of a manufacturing company's balance sheet presents three inventory accounts: finished goods inventory, work in process inventory, and raw materials inventory.

4 Discuss trends in managerial accounting.

Managerial accounting has experienced many changes in recent years, including a shift toward service companies as well as an emphasis on ethical behavior. Improved practices include a focus on managing the value chain through techniques such as just-in-time inventory, total quality management, activity-based costing, and theory of constraints. The balanced scorecard is now used by many companies in order to attain a more comprehensive view of the company's operations. Finally, companies are now evaluating their performance with regard to their corporate social responsibility.

Glossary Review

Activity-based costing (ABC) A method of allocating overhead based on each product's use of activities in making the product. (p. 19-16).

Balanced scorecard A performance-measurement approach that uses both financial and nonfinancial measures, tied to company objectives, to evaluate a company's operations in an integrated fashion. (p. 19-17).

Board of directors The group of officials elected by the stockholders of a corporation to formulate operating policies and select officers who will manage the company. (p. 19-5).

Chief executive officer (CEO) Corporate officer who has overall responsibility for managing the business and delegates responsibilities to other corporate officers. (p. 19-5).

Chief financial officer (CFO) Corporate officer who is responsible for all of the accounting and finance issues of the company. (p. 19-5).

Controller Financial officer responsible for a company's accounting records, system of internal control, and preparation of financial statements, tax returns, and internal reports. (p. 19-5).

Corporate social responsibility The efforts of a company to employ sustainable business practices with regard to its employees, society, and the environment. (p. 19-18).

Cost of goods manufactured Total cost of work in process less the cost of the ending work in process inventory. (p. 19-12).

Direct labor The work of factory employees that can be physically and directly associated with converting raw materials into finished goods. (p. 19-7).

Direct materials Raw materials that can be physically and directly associated with manufacturing the finished product. (p. 19-7).

Enterprise resource planning (ERP) system Software that provides a comprehensive, centralized, integrated source of information used to manage all major business processes. (p. 19-16).

Indirect labor Work of factory employees that has no physical association with the finished product or for which it is impractical to trace the costs to the goods produced. (p. 19-7).

Indirect materials Raw materials that do not physically become part of the finished product or for which it is impractical to trace to the finished product because their physical association with the finished product is too small. (p. 19-7).

Just-in-time (JIT) inventory Inventory system in which goods are manufactured or purchased just in time for sale. (p. 19-16).

Line positions Jobs that are directly involved in a company's primary revenue-generating operating activities. (p. 19-5).

Managerial accounting A field of accounting that provides economic and financial information for managers and other internal users. (p. 19-3).

Manufacturing overhead Manufacturing costs that are indirectly associated with the manufacture of the finished product. (p. 19-8).

Period costs Costs that are matched with the revenue of a specific time period and charged to expense as incurred. (p. 19-8).

Product costs Costs that are a necessary and integral part of producing the finished product. (p. 19-8).

Sarbanes-Oxley Act (SOX) Law passed by Congress intended to reduce unethical corporate behavior. (p. 19-17).

Staff positions Jobs that support the efforts of line employees. (p. 19-5).

Theory of constraints A specific approach used to identify and manage constraints in order to achieve the company's goals. (p. 19-16).

Total cost of work in process Cost of the beginning work in process plus total manufacturing costs for the current period. (p. 19-12).

Total manufacturing costs The sum of direct materials, direct labor, and manufacturing overhead incurred in the current period. (p. 19-10).

Total quality management (TQM) Systems implemented to reduce defects in finished products with the goal of achieving zero defects. (p. 19-16).

Treasurer Financial officer responsible for custody of a company's funds and for maintaining its cash position. (p. 19-5).

Triple bottom line The evaluation of a company's social responsibility performance with regard to people, planet, and profit. (p. 19-18).

Value chain All business processes associated with providing a product or performing a service. (p. 19-15).

Work in process inventory Partially completed manufactured units. (p. 19-11).

Practice Multiple-Choice Questions

1. (LO 1) Managerial accounting:

- a. is governed by generally accepted accounting principles.
- b. places emphasis on special-purpose information.
- c. pertains to the entity as a whole and is highly aggregated.
- d. is limited to cost data.

2. (LO 1) The management of an organization performs several broad functions. They are:

- a. planning, directing, and selling.
- b. planning, directing, and controlling.
- c. planning, manufacturing, and controlling.
- d. directing, manufacturing, and controlling.

3. (LO 2) Direct materials are a:

Product Cost	Manufacturing Overhead Cost	Period Cost
a. Yes	Yes	No
b. Yes	No	No
c. Yes	Yes	Yes
d. No	No	No

4. (LO 2) Which of the following costs would a computer manufacturer include in manufacturing overhead?

- a. The cost of the disk drives.
- b. The wages earned by computer assemblers.
- c. The cost of the memory chips.
- d. Depreciation on testing equipment.

5. (LO 2) Which of the following is **not** an element of manufacturing overhead?

- a. Sales manager's salary.
- b. Plant manager's salary.

c. Factory repairman's wages.

d. Product inspector's salary.

6. (LO 2) Indirect labor is a:

- a. nonmanufacturing cost.
- b. raw material cost.
- c. product cost.
- d. period cost.

7. (LO 2) Which of the following costs are classified as a period cost?

- a. Wages paid to a factory custodian.
- b. Wages paid to a production department supervisor.
- c. Wages paid to a cost accounting department supervisor.
- d. Wages paid to an assembly worker.

8. (LO 3) For the year, Redder Company has cost of goods manufactured of \$600,000, beginning finished goods inventory of \$200,000, and ending finished goods inventory of \$250,000. The cost of goods sold is:

- a. \$450,000.
- b. \$500,000.
- c. \$550,000.
- d. \$600,000.

9. (LO 3) Cost of goods available for sale is a step in the calculation of cost of goods sold of:

- a. a merchandising company but not a manufacturing company.
- b. a manufacturing company but not a merchandising company.
- c. a merchandising company and a manufacturing company.
- d. neither a manufacturing company nor a merchandising company.

10. (LO 3) A cost of goods manufactured schedule shows beginning and ending inventories for:

- a. raw materials and work in process only.
- b. work in process only.
- c. raw materials only.
- d. raw materials, work in process, and finished goods.

- 11. (LO 3)** The formula to determine the cost of goods manufactured is:
- Beginning raw materials inventory + Total manufacturing costs – Ending work in process inventory.
 - Beginning work in process inventory + Total manufacturing costs – Ending finished goods inventory.
 - Beginning finished goods inventory + Total manufacturing costs – Ending finished goods inventory.
 - Beginning work in process inventory + Total manufacturing costs – Ending work in process inventory.
- 12. (LO 4)** After passage of the Sarbanes-Oxley Act:
- reports prepared by managerial accountants must be audited by CPAs.
 - CEOs and CFOs must certify that financial statements give a fair presentation of the company's operating results.
 - the audit committee, rather than top management, is responsible for the company's financial statements.
 - reports prepared by managerial accountants must comply with generally accepted accounting principles (GAAP).
- 13. (LO 4)** Which of the following managerial accounting techniques attempts to allocate manufacturing overhead in a more meaningful fashion?
- Just-in-time inventory.
 - Total quality management.
 - Balanced scorecard.
 - Activity-based costing.
- 14. (LO 4)** Corporate social responsibility refers to:
- the practice by management of reviewing all business processes in an effort to increase productivity and eliminate waste.
 - an approach used to allocate overhead based on each product's use of activities.
 - the attempt by management to identify and eliminate constraints within the value chain.
 - efforts by companies to employ sustainable business practices with regard to employees and the environment.

Solutions

1. b. Managerial accounting emphasizes special-purpose information. The other choices are incorrect because (a) financial accounting is governed by generally accepted accounting principles, (c) financial accounting pertains to the entity as a whole and is highly aggregated, and (d) cost accounting and cost data are a subset of management accounting.

2. b. Planning, directing, and controlling are the broad functions performed by the management of an organization. The other choices are incorrect because (a) selling is performed by the sales group in the organization, not by management; (c) manufacturing is performed by the manufacturing group in the organization, not by management; and (d) manufacturing is performed by the manufacturing group in the organization, not by management.

3. b. Direct materials are a product cost only. Therefore, choices (a), (c), and (d) are incorrect as direct materials are not manufacturing overhead or a period cost.

4. d. Depreciation on testing equipment would be included in manufacturing overhead because it is indirectly associated with the finished product. The other choices are incorrect because (a) disk drives would be direct materials, (b) computer assembler wages would be direct labor, and (c) memory chips would be direct materials.

5. a. The sales manager's salary is not directly or indirectly associated with the manufacture of the finished product. The other choices are incorrect because (b) the plant manager's salary, (c) the factory repairman's wages, and (d) the product inspector's salary are all elements of manufacturing overhead.

6. c. Indirect labor is a product cost because it is part of the effort required to produce a product. The other choices are incorrect because (a) indirect labor is a manufacturing cost because it is part of the effort required to produce a product, (b) indirect labor is not a raw material cost because raw material costs only include direct materials and indirect materials, and (d) indirect labor is not a period cost because it is part of the effort required to produce a product.

7. c. Wages paid to a cost accounting department supervisor would be included in administrative expenses and classified as a period cost. The other choices are incorrect because (a) factory custodian wages

are indirect labor which is manufacturing overhead and a product cost, (b) production department supervisor wages are indirect labor which is manufacturing overhead and a product cost, and (d) assembly worker wages is direct labor and is a product cost.

8. c. Cost of goods sold is computed as Beginning finished goods inventory (\$200,000) + Cost of goods manufactured (\$600,000) – Ending finished goods inventory (\$250,000), or \$200,000 + \$600,000 – \$250,000 = \$550,000. Therefore, choices (a) \$450,000, (b) \$500,000, and (d) \$600,000 are incorrect.

9. c. Both a merchandising company and a manufacturing company use cost of goods available for sale to calculate cost of goods sold. Therefore, choices (a) only a merchandising company, (b) only a manufacturing company, and (d) neither a manufacturing company or a merchandising company are incorrect.

10. a. A cost of goods manufactured schedule shows beginning and ending inventories for raw materials and work in process only. Therefore, choices (b) work in process only and (c) raw materials only are incorrect. Choice (d) is incorrect because the schedule does not include finished goods.

11. d. The formula to determine the cost of goods manufactured is Beginning work in process inventory + Total manufacturing costs – Ending work in process inventory. The other choices are incorrect because (a) raw materials inventory, (b) ending finished goods inventory, and (c) beginning finished goods inventory and ending finished goods inventory are not part of the computation.

12. b. CEOs and CFOs must certify that financial statements give a fair presentation of the company's operating results. The other choices are incorrect because (a) reports prepared by financial (not managerial) accountants must be audited by CPAs; (c) SOX clarifies that top management, not the audit committee, is responsible for the company's financial statements; and (d) reports by financial (not managerial) accountants must comply with GAAP.

13. d. Activity-based costing attempts to allocate manufacturing overhead in a more meaningful fashion. Therefore, choices (a) just-in-time inventory, (b) total quality management, and (c) balanced scorecard are incorrect.

- 14. d.** Corporate social responsibility refers to efforts by companies to employ sustainable business practices with regard to employees and the environment. The other choices are incorrect because (a) defines lean manufacturing, (b) refers to activity-based costing, and (c) describes the theory of constraints.

Practice Brief Exercises

- 1. (LO 1)** The following are selected data for Lopez Furniture:

Classify manufacturing costs.

Utilities for manufacturing equipment	\$120,000
Wood	850,000
Depreciation on factory building	220,000
Wages for production workers	391,000
Fabric	313,000
Delivery expense	144,000
Property taxes on factory	70,000

Using the selected data above, determine total (a) direct materials, (b) direct labor, (c) manufacturing overhead, (d) product costs, and (e) period costs.

Solution

- a.** Wood (\$850,000) + Fabric (\$313,000) = \$1,163,000
- b.** Wages for production workers, \$391,000
- c.** Utilities (\$120,000) + Depreciation (\$220,000) + Property taxes (\$70,000) = \$410,000
- d.** Direct materials (\$1,163,000) + Direct labor (\$391,000) + Manufacturing overhead (\$410,000) = \$1,964,000
- e.** Delivery expense, \$144,000

- 2. (LO 3)** Cody Cellular has the following data: direct labor \$100,000, direct materials used \$90,000, total manufacturing overhead \$110,000, beginning work in process \$15,000, and ending work-in-process \$24,000. Compute (a) total manufacturing costs, (b) total cost of work in process, and (c) cost of goods manufactured.

Compute total manufacturing costs and total cost of work in process.

Solution

a. Direct materials use	\$ 90,000
Direct labor	100,000
Total manufacturing overhead	<u>110,000</u>
Total manufacturing costs	<u>\$300,000</u>
b. Beginning work in process	\$ 15,000
Total manufacturing costs	300,000
Total cost of work in process	<u>\$315,000</u>
c. Total cost of work in process	\$315,000
Less ending work in process	(24,000)
Cost of goods manufactured	<u>\$291,000</u>

- 3. (LO 3)** The following are current asset items in alphabetical order for Asche Company's balance sheet at December 31, 2020. Prepare the current assets section (including a complete heading).

Prepare current assets section.

Accounts receivable	\$100,000
Cash	29,000
Finished goods	47,000
Prepaid expenses	20,000
Raw materials	39,000
Short-term investments	51,000
Work in process	44,000

Solution**3.**
**Asche Company
Balance Sheet
December 31, 2020**

Current assets		
Cash	\$ 29,000	
Short-term investments	51,000	
Accounts receivable	100,000	
Inventories		
Finished goods	\$47,000	
Work in process	44,000	
Raw materials	39,000	130,000
Prepaid expenses		20,000
Total current assets		\$330,000

Practice Exercises

Determine the total amount of various types of costs.

- 1. (LO 2)** Fredricks Company reports the following costs and expenses in May.

Factory utilities	\$ 15,600	Direct labor	\$89,100
Depreciation on factory equipment		Sales salaries	46,400
12,650		Property taxes on factory building	2,500
Depreciation on delivery trucks	8,800	Repairs to office equipment	2,300
Indirect factory labor	48,900	Factory repairs	2,000
Indirect materials	80,800	Advertising	18,000
Direct materials used	137,600	Office supplies used	5,640
Factory manager's salary	13,000		

Instructions

From the information, determine the total amount of:

- a. Manufacturing overhead.
- b. Product costs.
- c. Period costs.

Solution

1. a. Factory utilities	\$ 15,600
Depreciation on factory equipment	12,650
Indirect factory labor	48,900
Indirect materials	80,800
Factory manager's salary	13,000
Property taxes on factory building	2,500
Factory repairs	2,000
Manufacturing overhead	\$175,450
	<u><u>\$175,450</u></u>
b. Direct materials	\$137,600
Direct labor	89,100
Manufacturing overhead	175,450
Product costs	\$402,150
	<u><u>\$402,150</u></u>
c. Depreciation on delivery trucks	\$ 8,800
Sales salaries	46,400
Repairs to office equipment	2,300
Advertising	18,000
Office supplies used	5,640
Period costs	\$ 81,140
	<u><u>\$ 81,140</u></u>

- 2. (LO 3)** Tommi Corporation incurred the following costs while manufacturing its product.

Materials used in production	\$120,000	Advertising expense	\$45,000
Depreciation on plant	60,000	Property taxes on plant	19,000
Property taxes on store	7,500	Delivery expense	21,000
Labor costs of assembly-line workers	110,000	Sales commissions	35,000
Factory supplies used	25,000	Salaries paid to sales clerks	50,000

Work-in-process inventory was \$10,000 at January 1 and \$14,000 at December 31. Finished goods inventory was \$60,500 at January 1 and \$50,600 at December 31. (Assume all materials were direct.)

Instructions

- Compute cost of goods manufactured.
- Compute cost of goods sold.

Solution

2. a. Work-in-process, 1/1			\$ 10,000
Direct materials used		\$120,000	
Direct labor		110,000	
Manufacturing overhead			
Depreciation on plant	\$60,000		
Factory supplies used	25,000		
Property taxes on plant	19,000		
Total manufacturing overhead		104,000	
Total manufacturing costs			334,000
Total cost of work-in-process			344,000
Less: Ending work-in-process			14,000
Cost of goods manufactured			\$330,000
b. Finished goods, 1/1			\$ 60,500
Cost of goods manufactured			330,000
Cost of goods available for sale			390,500
Less: Finished goods, 12/31			50,600
Cost of goods sold			\$339,900

Practice Problem

- (LO 3)** Superior Company has the following cost and expense data for the year ending December 31, 2020.

Raw materials, 1/1/20	\$ 30,000	Property taxes, factory building	\$ 6,000
Raw materials, 12/31/20	20,000	Sales revenue	1,500,000
Raw materials purchases	205,000	Delivery expenses	100,000
Work in process, 1/1/20	80,000	Sales commissions	150,000
Work in process, 12/31/20	50,000	Indirect labor	105,000
Finished goods, 1/1/20	110,000	Factory machinery rent	40,000
Finished goods, 12/31/20	120,000	Factory utilities	65,000
Direct labor	350,000	Depreciation, factory building	24,000
Factory manager's salary	35,000	Administrative expenses	300,000
Insurance, factory	14,000		

Prepare a cost of goods manufactured schedule, an income statement, and a partial balance sheet.

Instructions

- Prepare a cost of goods manufactured schedule for Superior Company for 2020. (Assume that all raw materials used were direct materials.)
- Prepare an income statement for Superior Company for 2020.
- Assume that Superior Company's accounting records show the balances of the following current asset accounts: Cash \$17,000, Accounts Receivable (net) \$120,000, Prepaid Expenses \$13,000, and Short-Term Investments \$26,000. Prepare the current assets section of the balance sheet for Superior Company as of December 31, 2020.

Solution**a.**

Superior Company
Cost of Goods Manufactured Schedule
For the Year Ended December 31, 2020

Work in process, 1/1	\$ 80,000
Direct materials	
Raw materials inventory, 1/1	\$ 30,000
Raw materials purchases	<u>205,000</u>
Total raw materials available for use	235,000
Less: Raw materials inventory, 12/31	<u>20,000</u>
Direct materials used	\$215,000
Direct labor	350,000
Manufacturing overhead	
Indirect labor	\$105,000
Factory utilities	65,000
Factory machinery rent	40,000
Factory manager's salary	35,000
Depreciation, factory building	24,000
Insurance, factory	14,000
Property taxes, factory building	<u>6,000</u>
Total manufacturing overhead	<u>289,000</u>
Total manufacturing costs	<u>854,000</u>
Total cost of work in process	<u>934,000</u>
Less: Work in process, 12/31	<u>50,000</u>
Cost of goods manufactured	<u><u>\$ 884,000</u></u>

b.

Superior Company
Income Statement
For the Year Ended December 31, 2020

Sales revenue	\$1,500,000
Cost of goods sold	
Finished goods inventory, January 1	\$110,000
Cost of goods manufactured	<u>884,000</u>
Cost of goods available for sale	994,000
Less: Finished goods inventory, December 31	<u>120,000</u>
Cost of goods sold	<u>874,000</u>
Gross profit	<u>626,000</u>
Operating expenses	
Administrative expenses	300,000
Sales commissions	150,000
Delivery expenses	<u>100,000</u>
Total operating expenses	<u>550,000</u>
Net income	<u><u>\$ 76,000</u></u>

c.

Superior Company
Balance Sheet (partial)
December 31, 2020

Current assets	
Cash	\$ 17,000
Short-term investments	26,000
Accounts receivable (net)	120,000
Inventory	
Finished goods	\$120,000
Work in process	50,000
Raw materials	<u>20,000</u>
Prepaid expenses	<u>13,000</u>
Total current assets	<u><u>\$366,000</u></u>

WileyPLUS

Brief Exercises, DO IT! Exercises, Exercises, Problems, and many additional resources are available for practice in WileyPLUS.

Questions

- 1.** **a.** “Managerial accounting is a field of accounting that provides economic information for all interested parties.” Do you agree? Explain.
- b.** Joe Delong believes that managerial accounting serves only manufacturing firms. Is Joe correct? Explain.
- 2.** Distinguish between managerial and financial accounting as to (a) primary users of reports, (b) types and frequency of reports, and (c) purpose of reports.
- 3.** How do the content of reports and the verification of reports differ between managerial and financial accounting?
- 4.** Linda Olsen is studying for the next accounting mid-term examination. Summarize for Linda what she should know about management functions.
- 5.** “Decision-making is management’s most important function.” Do you agree? Why or why not?
- 6.** Explain the primary difference between line positions and staff positions, and give examples of each.
- 7.** Jerry Lang is unclear as to the difference between the balance sheets of a merchandising company and a manufacturing company. Explain the difference to Jerry.
- 8.** How are manufacturing costs classified?
- 9.** Mel Finney claims that the distinction between direct and indirect materials is based entirely on physical association with the product. Is Mel correct? Why?
- 10.** Tina Burke is confused about the differences between a product cost and a period cost. Explain the differences to Tina.
- 11.** Identify the differences in the cost of goods sold section of an income statement between a merchandising company and a manufacturing company.
- 12.** The determination of the cost of goods manufactured involves the following factors: (A) beginning work in process inventory, (B) total manufacturing costs, and (C) ending work in process inventory. Identify the meaning of x in the following formulas:
 - a.** $A + B = x$
 - b.** $A + B - C = x$
- 13.** Sealy Company has beginning raw materials inventory \$12,000, ending raw materials inventory \$15,000, and raw materials purchases \$170,000. What is the cost of direct materials used?
- 14.** Tate Inc. has beginning work in process \$26,000, direct materials used \$240,000, direct labor \$220,000, total manufacturing overhead \$180,000, and ending work in process \$32,000. What are the total manufacturing costs?
- 15.** Using the data in Question 14, what are (a) the total cost of work in process and (b) the cost of goods manufactured?
- 16.** In what order should manufacturing inventories be listed in a balance sheet?
- 17.** How does the output of manufacturing operations differ from that of service operations?
- 18.** Discuss whether the product costing techniques discussed in this chapter apply equally well to manufacturers and service companies.
- 19.** What is the value chain? Describe, in sequence, the main components of a manufacturer’s value chain.
- 20.** What is an enterprise resource planning (ERP) system? What are its primary benefits?
- 21.** Why is product quality important for companies that implement a just-in-time inventory system?
- 22.** Explain what is meant by “balanced” in the balanced scorecard approach.
- 23.** In what ways can the budgeting process create incentives for unethical behavior?
- 24.** What rules were enacted under the Sarbanes-Oxley Act to address unethical accounting practices?
- 25.** What is activity-based costing, and what are its potential benefits?

Brief Exercises

BE19.1 (LO 1) Complete the following comparison table between managerial and financial accounting.

Distinguish between managerial and financial accounting.

	<u>Financial Accounting</u>	<u>Managerial Accounting</u>
Primary users of reports		
Types of reports		
Frequency of reports		
Purpose of reports		
Content of reports		
Verification process		

Identify the three management functions.

BE19.2 (LO 1) Listed below are the three functions of the management of an organization.

1. Planning
2. Directing
3. Controlling

Identify which of the following statements best describes each of the above functions.

- a. _____ requires management to look ahead and to establish objectives. A key objective of management is to add value to the business.
- b. _____ involves coordinating the diverse activities and human resources of a company to produce a smooth-running operation. This function relates to the implementation of planned objectives.
- c. _____ is the process of keeping the activities on track. Management determines whether goals are being met and what changes are necessary when there are deviations.

Classify manufacturing costs.

BE19.3 (LO 2) Determine whether each of the following costs should be classified as direct materials (DM), direct labor (DL), or manufacturing overhead (MO).

- a. _____ Frames and tires used in manufacturing bicycles.
- b. _____ Wages paid to production workers.
- c. _____ Insurance on factory equipment and machinery.
- d. _____ Depreciation on factory equipment.

Classify manufacturing costs.

BE19.4 (LO 2) Indicate whether each of the following costs of an automobile manufacturer would be classified as direct materials, direct labor, or manufacturing overhead.

- | | |
|---|---|
| a. _____ Windshield. | e. _____ Factory machinery lubricants. |
| b. _____ Engine. | f. _____ Tires. |
| c. _____ Wages of assembly line worker. | g. _____ Steering wheel. |
| d. _____ Depreciation of factory machinery. | h. _____ Salary of painting supervisor. |

Identify product and period costs.

BE19.5 (LO 2) Identify whether each of the following costs should be classified as product costs or period costs.

- | | |
|-----------------------------------|--------------------------------|
| a. _____ Manufacturing overhead. | d. _____ Advertising expenses. |
| b. _____ Selling expenses. | e. _____ Direct labor. |
| c. _____ Administrative expenses. | f. _____ Direct materials. |

Classify manufacturing costs.

BE19.6 (LO 2) Presented below are Rook Company's monthly manufacturing cost data related to its tablet computer product.

- | | |
|---|-----------|
| a. Utilities for manufacturing equipment | \$116,000 |
| b. Raw materials (CPU, chips, etc.) | \$ 85,000 |
| c. Depreciation on manufacturing building | \$880,000 |
| d. Wages for production workers | \$191,000 |

Enter each cost item in the following table, placing an "X" under the appropriate headings.

Product Costs		
Direct Materials	Direct Labor	Factory Overhead
a.		
b.		
c.		
d.		

Compute total manufacturing costs and total cost of work in process.

BE19.7 (LO 3) Francum Company has the following data: direct labor \$209,000, direct materials used \$180,000, total manufacturing overhead \$208,000, and beginning work in process \$25,000. Compute (a) total manufacturing costs and (b) total cost of work in process.

Prepare current assets section.

BE19.8 (LO 3) In alphabetical order below are current asset items for Roland Company's balance sheet at December 31, 2020. Prepare the current assets section (including a complete heading).

Accounts receivable	\$200,000
Cash	62,000
Finished goods	91,000
Prepaid expenses	38,000
Raw materials	83,000
Work in process	87,000

BE19.9 (LO 3) Presented below are incomplete manufacturing cost data. Determine the missing amounts for three different situations.

	Direct Materials Used	Direct Labor Used	Factory Overhead	Total Manufacturing Costs
1.	\$40,000	\$61,000	\$ 50,000	?
2.	?	\$75,000	\$140,000	\$296,000
3.	\$55,000	?	\$111,000	\$310,000

Determine missing amounts in computing total manufacturing costs.

BE19.10 (LO 3) Use the same data from BE19.9 above and the data below. Determine the missing amounts.

	Total Manufacturing Costs	Work in Process (1/1)	Work in Process (12/31)	Cost of Goods Manufactured
1.	?	\$120,000	\$82,000	?
2.	\$296,000	?	\$98,000	\$331,000
3.	\$310,000	\$463,000	?	\$715,000

Determine missing amounts in computing cost of goods manufactured.

BE19.11 (LO 4) The Sarbanes-Oxley Act (SOX) has important implications for the financial community. Explain two implications of SOX.

Identify important regulatory changes.

DO IT! Exercises

DO IT! 19.1 (LO 1) Indicate whether the following statements are true or false.

Identify managerial accounting concepts.

- Managerial accounting reports focus on manufacturing and nonmanufacturing costs.
- Financial accounting reports pertain to subunits of the business and are very detailed.
- Managerial accounting reports must follow GAAP and are audited by CPAs.
- Managers' activities and responsibilities can be classified into three broad functions: planning, directing, and controlling.

DO IT! 19.2 (LO 2) A music company has these costs:

Advertising	Paper inserts for CD cases
Blank CDs	CD plastic cases
Depreciation of CD image burner	Salaries of sales representatives
Salary of factory manager	Salaries of factory maintenance employees
Factory supplies used	Salaries of employees who burn music onto CDs

Identify managerial cost classifications.

Classify each cost as a period or a product cost. Within the product cost category, indicate if the cost is part of direct materials (DM), direct labor (DL), or manufacturing overhead (MO).

Prepare cost of goods manufactured schedule.

DO IT! 19.3 (LO 3) The following information is available for Tomlin Company.

	April 1	April 30
Raw materials inventory	\$10,000	\$14,000
Work in process inventory	5,000	3,500
Materials purchased in April	\$ 98,000	
Direct labor in April	80,000	
Manufacturing overhead in April	160,000	

Prepare the cost of goods manufactured schedule for the month of April.

Identify trends in managerial accounting.

DO IT! 19.4 (LO 4) Match the descriptions that follow with the corresponding terms.

Descriptions:

- Inventory system in which goods are manufactured or purchased just as they are needed for sale.
- A method of allocating overhead based on each product's use of activities in making the product.
- Systems that are especially important to firms adopting just-in-time inventory methods.
- Provides guidelines for companies to describe their sustainable business practices to external parties.

5. _____ Part of the value chain for a manufacturing company.
6. _____ The U.S. economy is trending toward this.
7. _____ A performance-measurement approach that uses both financial and nonfinancial measures, tied to company objectives, to evaluate a company's operations in an integrated fashion.
8. _____ Requires that top managers certify that the company maintains an adequate system of internal controls.

Terms:

- | | |
|---|---------------------------------|
| a. Activity-based costing | e. Service industries |
| b. Balanced scorecard | f. Just-in-time (JIT) inventory |
| c. Total quality management (TQM) | g. Sarbanes-Oxley Act (SOX) |
| d. Research and development, and product design | h. Global Reporting Initiative |

Exercises

Identify distinguishing features of managerial accounting.

E19.1 (LO 1) Justin Bleeber has prepared the following list of statements about managerial accounting, financial accounting, and the functions of management.

1. Financial accounting focuses on providing information to internal users.
2. Staff positions are directly involved in the company's primary revenue-generating activities.
3. Preparation of budgets is part of financial accounting.
4. Managerial accounting applies only to merchandising and manufacturing companies.
5. Both managerial accounting and financial accounting deal with many of the same economic events.
6. Managerial accounting reports are prepared only quarterly and annually.
7. Financial accounting reports are general-purpose reports.
8. Managerial accounting reports pertain to subunits of the business.
9. Managerial accounting reports must comply with generally accepted accounting principles.
10. The company treasurer reports directly to the vice president of operations.

Instructions

Identify each statement as true or false. If false, indicate how to correct the statement.

Classify costs into three classes of manufacturing costs.

E19.2 (LO 2) Presented below is a list of costs and expenses usually incurred by Barnum Corporation, a manufacturer of furniture, in its factory.

1. Salaries for assembly line inspectors.
2. Insurance on factory machines.
3. Property taxes on the factory building.
4. Factory repairs.
5. Upholstery used in manufacturing furniture.
6. Wages paid to assembly line workers.
7. Factory machinery depreciation.
8. Glue, nails, paint, and other small parts used in production.
9. Factory supervisors' salaries.
10. Wood used in manufacturing furniture.

Instructions

Classify the above items into the following categories: (a) direct materials, (b) direct labor, and (c) manufacturing overhead.

Identify types of cost and explain their accounting.

E19.3 (LO 2) Trak Corporation incurred the following costs while manufacturing its bicycles.

Bicycle components	\$100,000	Advertising expense	\$45,000
Depreciation on plant	60,000	Property taxes on plant	14,000
Property taxes on store	7,500	Delivery expense	21,000
Labor costs of assembly-line workers	110,000	Sales commissions	35,000
Factory supplies used	13,000	Salaries paid to sales clerks	50,000

Instructions

- a. Identify each of the above costs as direct materials, direct labor, manufacturing overhead, or period costs.
- b. Explain the basic difference in accounting for product costs and period costs.

E19.4 (LO 2) Knight Company reports the following costs and expenses in May.

Factory utilities	\$ 15,500	Direct labor	\$69,100
Depreciation on factory equipment	12,650	Sales salaries	46,400
Depreciation on delivery trucks	3,800	Property taxes on factory building	2,500
Indirect factory labor	48,900	Repairs to office equipment	1,300
Indirect materials	80,800	Factory repairs	2,000
Direct materials used	137,600	Advertising	15,000
Factory manager's salary	8,000	Office supplies used	2,640

Determine the total amount of various types of costs.

**Instructions**

From the information, determine the total amount of:

- a. Manufacturing overhead.
- b. Product costs.
- c. Period costs.

E19.5 (LO 2) Gala Company is a manufacturer of laptop computers. Various costs and expenses associated with its operations are as follows.

Classify various costs into different cost categories.

1. Property taxes on the factory building.
2. Production superintendents' salaries.
3. Memory boards and chips used in assembling computers.
4. Depreciation on the factory equipment.
5. Salaries for assembly-line quality control inspectors.
6. Sales commissions paid to sell laptop computers.
7. Electrical components used in assembling computers.
8. Wages of workers assembling laptop computers.
9. Soldering materials used on factory assembly lines.
10. Salaries for the night security guards for the factory building.

The company intends to classify these costs and expenses into the following categories: (a) direct materials, (b) direct labor, (c) manufacturing overhead, and (d) period costs.

Instructions

List the items (1) through (10). For each item, indicate the cost category to which it belongs.

E19.6 (LO 2) Service The administrators of Crawford County's Memorial Hospital are interested in identifying the various costs and expenses that are incurred in producing a patient's X-ray. A list of such costs and expenses is presented below.

Classify various costs into different cost categories.

1. Salaries for the X-ray machine technicians.
2. Wages for the hospital janitorial personnel.
3. Film costs for the X-ray machines.
4. Property taxes on the hospital building.
5. Salary of the X-ray technicians' supervisor.
6. Electricity costs for the X-ray department.
7. Maintenance and repairs on the X-ray machines.
8. X-ray department supplies.
9. Depreciation on the X-ray department equipment.
10. Depreciation on the hospital building.

The administrators want these costs and expenses classified as (a) direct materials, (b) direct labor, or (c) service overhead.

Instructions

List the items (1) through (10). For each item, indicate the cost category to which the item belongs.

E19.7 (LO 2) Service National Express reports the following costs and expenses in June 2020 for its delivery service.

Classify various costs into different cost categories.

Indirect materials	\$ 6,400	Drivers' salaries	\$16,000
Depreciation on delivery equipment	11,200	Advertising	4,600
Dispatcher's salary	5,000	Delivery equipment repairs	300
Property taxes on office building	870	Office supplies	650
CEO's salary	12,000	Office utilities	990
Gas and oil for delivery trucks	2,200	Repairs on office equipment	180

Instructions

Determine the total amount of (a) delivery service (product) costs and (b) period costs.

Compute cost of goods manufactured and sold.

E19.8 (LO 3) Lopez Corporation incurred the following costs while manufacturing its product.

Materials used in product	\$120,000	Advertising expense	\$45,000
Depreciation on plant	60,000	Property taxes on plant	14,000
Property taxes on store	7,500	Delivery expense	21,000
Labor costs of assembly-line workers	110,000	Sales commissions	35,000
Factory supplies used	23,000	Salaries paid to sales clerks	50,000

Work in process inventory was \$12,000 at January 1 and \$15,500 at December 31. Finished goods inventory was \$60,000 at January 1 and \$45,600 at December 31.

Instructions

- a. Compute cost of goods manufactured.
- b. Compute cost of goods sold.

Determine missing amounts in cost of goods manufactured schedule.

E19.9 (LO 3) An incomplete cost of goods manufactured schedule is presented below.

Hobbit Company
Cost of Goods Manufactured Schedule
For the Year Ended December 31, 2020

Work in process (1/1)		\$210,000
Direct materials		
Raw materials inventory (1/1)	\$?	
Add: Raw materials purchases	<u>158,000</u>	
Total raw materials available for use	? <u> </u>	
Less: Raw materials inventory (12/31)	<u>22,500</u>	
Direct materials used		\$180,000
Direct labor		?
Manufacturing overhead		
Indirect labor	18,000	
Factory depreciation	36,000	
Factory utilities	<u>68,000</u>	
Total overhead		<u>122,000</u>
Total manufacturing costs		?
Total cost of work in process		?
Less: Work in process (12/31)		<u>81,000</u>
Cost of goods manufactured		<u>\$540,000</u>

Instructions

Complete the cost of goods manufactured schedule for Hobbit Company.

Determine the missing amount of different cost items.

E19.10 (LO 3) Manufacturing cost data for Copa Company are presented below.

	Case A	Case B	Case C
Direct materials used	\$ (a)	\$68,400	\$130,000
Direct labor	57,000	86,000	(g)
Manufacturing overhead	46,500	81,600	102,000
Total manufacturing costs	195,650	(d)	253,700
Work in process 1/1/20	(b)	16,500	(h)
Total cost of work in process	221,500	(e)	337,000
Work in process 12/31/20	(c)	11,000	70,000
Cost of goods manufactured	185,275	(f)	(i)

Instructions

Indicate the missing amount for each letter (a) through (i).

E19.11 (LO 3) Incomplete manufacturing cost data for Horizon Company for 2020 are presented as follows for four different situations.

	Direct Materials Used	Direct Labor Used	Manufacturing Overhead	Total Manufacturing Costs	Work in Process 1/1	Work in Process 12/31	Cost of Goods Manufactured
(1)	\$117,000	\$140,000	\$ 87,000	\$ (a)	\$33,000	\$ (b)	\$360,000
(2)	(c)	200,000	132,000	450,000	(d)	40,000	470,000
(3)	80,000	100,000	(e)	265,000	60,000	80,000	(f)
(4)	70,000	(g)	75,000	288,000	45,000	(h)	270,000

Determine the missing amount of different cost items, and prepare a condensed cost of goods manufactured schedule.

Instructions

- a. Indicate the missing amount for each letter.
- b. Prepare a condensed cost of goods manufactured schedule for situation (1) for the year ended December 31, 2020.

E19.12 (LO 3) Cepeda Corporation has the following cost records for June 2020.

Indirect factory labor	\$ 4,500	Factory utilities	\$ 400
Direct materials used	20,000	Depreciation, factory equipment	1,400
Work in process, 6/1/20	3,000	Direct labor	40,000
Work in process, 6/30/20	3,800	Maintenance, factory equipment	1,800
Finished goods, 6/1/20	5,000	Indirect materials	2,200
Finished goods, 6/30/20	7,500	Factory manager's salary	3,000

Prepare a cost of goods manufactured schedule and a partial income statement.

Instructions

- a. Prepare a cost of goods manufactured schedule for June 2020.
- b. Prepare an income statement through gross profit for June 2020 assuming sales revenue is \$92,100.

E19.13 (LO 2, 3) Service Keisha Tombert, the bookkeeper for Washington Consulting, a political consulting firm, has recently completed a managerial accounting course at her local college. One of the topics covered in the course was the cost of goods manufactured schedule. Keisha wondered if such a schedule could be prepared for her firm. She realized that, as a service-oriented company, it would have no work in process inventory to consider.

Classify various costs into different categories and prepare cost of services performed schedule.

Listed below are the costs her firm incurred for the month ended August 31, 2020.

Supplies used on consulting contracts	\$ 1,700
Supplies used in the administrative offices	1,500
Depreciation on equipment used for contract work	900
Depreciation used on administrative office equipment	1,050
Salaries of professionals working on contracts	15,600
Salaries of administrative office personnel	7,700
Janitorial services for professional offices	700
Janitorial services for administrative offices	500
Insurance on contract operations	800
Insurance on administrative operations	900
Utilities for contract operations	1,400
Utilities for administrative offices	1,300

Instructions

- a. Prepare a schedule of cost of contract services performed (similar to a cost of goods manufactured schedule) for the month.
- b. For those costs not included in (a), explain how they would be classified and reported in the financial statements.

Prepare a cost of goods manufactured schedule and a partial income statement.

E19.14 (LO 3) The following information is available for Aikman Company.

	<u>January 1, 2020</u>	<u>2020</u>	<u>December 31, 2020</u>
Raw materials inventory	\$21,000		\$30,000
Work in process inventory	13,500		17,200
Finished goods inventory	27,000		21,000
Materials purchased		\$150,000	
Direct labor		220,000	
Manufacturing overhead		180,000	
Sales revenue		910,000	

Instructions

- Compute cost of goods manufactured.
- Prepare an income statement through gross profit.
- Show the presentation of the ending inventories on the December 31, 2020, balance sheet.
- How would the income statement and balance sheet of a merchandising company be different from Aikman's financial statements?

Indicate in which schedule or financial statement(s) different cost items will appear.

E19.15 (LO 3) University Company produces collegiate apparel. From its accounting records, it prepares the following schedule and financial statements on a yearly basis.

- Cost of goods manufactured schedule.
- Income statement.
- Balance sheet.

The following items are found in its ledger and accompanying data.

1. Direct labor
2. Raw materials inventory, 1/1
3. Work in process inventory, 12/31
4. Finished goods inventory, 1/1
5. Indirect labor
6. Depreciation on factory machinery
7. Work in process, 1/1
8. Finished goods inventory, 12/31
9. Factory maintenance salaries
10. Cost of goods manufactured
11. Depreciation on delivery equipment
12. Cost of goods available for sale
13. Direct materials used
14. Heat and electricity for factory
15. Repairs to roof of factory building
16. Cost of raw materials purchases

Instructions

List the items (1)–(16). For each item, indicate by using the appropriate letter or letters, the schedule and/or financial statement(s) in which the item will appear.

Prepare a cost of goods manufactured schedule, and present the ending inventories on the balance sheet.

E19.16 (LO 3) An analysis of the accounts of Roberts Company reveals the following manufacturing cost data for the month ended June 30, 2020.

<u>Inventory</u>	<u>Beginning</u>	<u>Ending</u>
Raw materials	\$9,000	\$13,100
Work in process	5,000	7,000
Finished goods	9,000	8,000

Costs incurred: raw materials purchases \$54,000, direct labor \$47,000, manufacturing overhead \$19,900. The specific overhead costs were: indirect labor \$5,500, factory insurance \$4,000, machinery depreciation

\$4,000, machinery repairs \$1,800, factory utilities \$3,100, and miscellaneous factory costs \$1,500. Assume that all raw materials used were direct materials.

Instructions

- Prepare the cost of goods manufactured schedule for the month ended June 30, 2020.
- Show the presentation of the ending inventories on the June 30, 2020, balance sheet.

E19.17 (LO 3) Writing McQueen Motor Company manufactures automobiles. During September 2020, the company purchased 5,000 head lamps at a cost of \$15 per lamp. Fifty of these lamps were used to replace the head lamps in autos used by traveling sales staff, and 4,600 lamps were put in autos manufactured during the month.

Of the autos put into production during September 2020, 90% were completed and transferred to the company's storage lot. Of the cars completed during the month, 70% were sold by September 30.

Determine the amount of cost to appear in various accounts, and indicate in which financial statements these accounts would appear.

Instructions

- Determine the cost of head lamps that would appear in each of the following accounts at September 30, 2020: Raw Materials, Work in Process, Finished Goods, Cost of Goods Sold, and Selling Expenses.
- Write a short memo to the chief accountant, indicating whether and where each of the accounts in (a) would appear on the income statement or on the balance sheet at September 30, 2020.

E19.18 (LO 4) The following is a list of terms related to managerial accounting practices.

Identify various managerial accounting practices.

- Activity-based costing.
- Just-in-time inventory.
- Balanced scorecard.
- Value chain.

Instructions

Match each of the terms with the statement below that best describes the term.

- _____ A performance-measurement technique that attempts to consider and evaluate all aspects of performance using financial and nonfinancial measures in an integrated fashion.
- _____ The group of activities associated with providing a product or performing a service.
- _____ An approach used to reduce the cost associated with handling and holding inventory by reducing the amount of inventory on hand.
- _____ A method used to allocate overhead to products based on each product's use of the activities that cause the incurrence of the overhead cost.

Problems: Set A

P19.1A (LO 2) Ohno Company specializes in manufacturing a unique model of bicycle helmet. The model is well accepted by consumers, and the company has enough orders to keep the factory production at 10,000 helmets per month (80% of its full capacity). Ohno's monthly manufacturing cost and other expense data are as follows.

Classify manufacturing costs into different categories and compute the unit cost.

Rent on factory equipment	\$11,000
Insurance on factory building	1,500
Raw materials (plastics, polystyrene, etc.)	75,000
Utility costs for factory	900
Supplies for general office	300
Wages for assembly line workers	58,000
Depreciation on office equipment	800
Miscellaneous materials (glue, thread, etc.)	1,100
Factory manager's salary	5,700
Property taxes on factory building	400
Advertising for helmets	14,000
Sales commissions	10,000
Depreciation on factory building	1,500

Instructions

- a. DM \$75,000
DL \$58,000
MO \$22,100
PC \$25,100

Product Costs				Period Costs
Cost Item	Direct Materials	Direct Labor	Manufacturing Overhead	

Enter each cost item on your answer sheet, placing the dollar amount under the appropriate headings. Total the dollar amounts in each of the columns.

- b. Compute the cost to produce one helmet.

Classify manufacturing costs into different categories and compute the unit cost.

P19.2A (LO 2) Bell Company, a manufacturer of audio systems, started its production in October 2020. For the preceding 3 years, Bell had been a retailer of audio systems. After a thorough survey of audio system markets, Bell decided to turn its retail store into an audio equipment factory.

Raw material costs for an audio system will total \$74 per unit. Workers on the production lines are on average paid \$12 per hour. An audio system usually takes 5 hours to complete. In addition, the rent on the equipment used to assemble audio systems amounts to \$4,900 per month. Indirect materials cost \$5 per system. A supervisor was hired to oversee production; her monthly salary is \$3,000.

Factory janitorial costs are \$1,300 monthly. Advertising costs for the audio system will be \$9,500 per month. The factory building depreciation expense is \$7,800 per year. Property taxes on the factory building will be \$9,000 per year.

Instructions

- a. DM \$111,000
DL \$ 90,000
MO \$ 18,100
PC \$ 9,500

Product Costs				Period Costs
Cost Item	Direct Materials	Direct Labor	Manufacturing Overhead	

Assuming that Bell manufactures, on average, 1,500 audio systems per month, enter each cost item on your answer sheet, placing the dollar amount per month under the appropriate headings. Total the dollar amounts in each of the columns.

- b. Compute the cost to produce one audio system.

Indicate the missing amount of different cost items, and prepare a condensed cost of goods manufactured schedule, an income statement, and a partial balance sheet.

P19.3A (LO 3) Incomplete manufacturing costs, expenses, and selling data for two different cases are as follows.

	Case	
	1	2
Direct materials used	\$ 9,600	\$ (g)
Direct labor	5,000	8,000
Manufacturing overhead	8,000	4,000
Total manufacturing costs	(a)	16,000
Beginning work in process inventory	1,000	(h)
Ending work in process inventory	(b)	3,000
Sales revenue	24,500	(i)
Sales discounts	2,500	1,400
Cost of goods manufactured	17,000	24,000
Beginning finished goods inventory	(c)	3,300
Cost of goods available for sale	22,000	(j)
Cost of goods sold	(d)	(k)
Ending finished goods inventory	3,400	2,500
Gross profit	(e)	7,000
Operating expenses	2,500	(l)
Net income	(f)	5,000

Instructions

- a. Indicate the missing amount for each letter.
 b. Ending WIP \$ 6,600
 c. Current assets \$29,000
 d. Prepare a condensed cost of goods manufactured schedule for Case 1.
 e. Prepare an income statement and the current assets section of the balance sheet for Case 1. Assume that in Case 1 the other items in the current assets section are as follows: Cash \$3,000, Receivables (net) \$15,000, Raw Materials \$600, and Prepaid Expenses \$400.

P19.4A (LO 3) The following data were taken from the records of Clarkson Company for the fiscal year ended June 30, 2020.

Raw Materials		Factory Insurance	\$ 4,600
Inventory 7/1/19	\$ 48,000	Factory Machinery	16,000
Raw Materials		Depreciation	27,600
Inventory 6/30/20	39,600	Factory Utilities	8,650
Finished Goods		Office Utilities Expense	534,000
Inventory 7/1/19	96,000	Sales Revenue	58,000
Finished Goods		Sales Discounts	9,600
Inventory 6/30/20	75,900	Plant Manager's Salary	1,400
Work in Process		Factory Property Taxes	96,400
Inventory 7/1/19	19,800	Factory Repairs	32,000
Work in Process		Raw Materials Purchases	
Inventory 6/30/20	18,600	Cash	
Direct Labor	139,250		
Indirect Labor	24,460		
Accounts Receivable	27,000		

Instructions

- a. Prepare a cost of goods manufactured schedule. (Assume all raw materials used were direct materials.)
- b. Prepare an income statement through gross profit.
- c. Prepare the current assets section of the balance sheet at June 30, 2020.

Prepare a cost of goods manufactured schedule, a partial income statement, and a partial balance sheet.

P19.5A (LO 3) Empire Company is a manufacturer of smart phones. Its controller resigned in October 2020. An inexperienced assistant accountant has prepared the following income statement for the month of October 2020.

Prepare a cost of goods manufactured schedule and a correct income statement.

Empire Company Income Statement For the Month Ended October 31, 2020

Sales revenue	\$780,000
Less: Operating expenses	
Raw materials purchases	\$264,000
Direct labor cost	190,000
Advertising expense	90,000
Selling and administrative salaries	75,000
Rent on factory facilities	60,000
Depreciation on sales equipment	45,000
Depreciation on factory equipment	31,000
Indirect labor cost	28,000
Utilities expense	12,000
Insurance expense	8,000
Net loss	<u>\$ (23,000)</u>

Prior to October 2020, the company had been profitable every month. The company's president is concerned about the accuracy of the income statement. As her friend, you have been asked to review the income statement and make necessary corrections. After examining other manufacturing cost data, you have acquired additional information as follows.

1. Inventory balances at the beginning and end of October were:

	<u>October 1</u>	<u>October 31</u>
Raw materials	\$18,000	\$29,000
Work in process	20,000	14,000
Finished goods	30,000	50,000

2. Only 75% of the utilities expense and 60% of the insurance expense apply to factory operations. The remaining amounts should be charged to selling and administrative activities.

Instructions

- a. Prepare a schedule of cost of goods manufactured for October 2020.
- b. Prepare a correct income statement for October 2020.

Continuing Cases

Chapters 19–27 include a hypothetical case featuring **Current Designs**, the company described at the beginning of this chapter. Students can also work through this case following an **Excel tutorial** available in **WileyPLUS**. Each chapter's tutorial focuses on a different Excel function or feature.

Current Designs

CD19 Mike Cichanowski founded **Wenonah Canoe** and later purchased **Current Designs**, a company that designs and manufactures kayaks. The kayak-manufacturing facility is located just a few minutes from the canoe company's headquarters in Winona, Minnesota.

Current Designs makes kayaks using two different processes. The rotational molding process uses high temperature to melt polyethylene powder in a closed rotating metal mold to produce a complete kayak hull and deck in a single piece. These kayaks are less labor-intensive and less expensive for the company to produce and sell.

Its other kayaks use the vacuum-bagged composite lamination process (which we will refer to as the composite process). Layers of fiberglass or Kevlar® are carefully placed by hand in a mold and are bonded with resin. Then, a high-pressure vacuum is used to eliminate any excess resin that would otherwise add weight and reduce strength of the finished kayak. These kayaks require a great deal of skilled labor as each boat is individually finished. The exquisite finish of the vacuum-bagged composite kayaks gave rise to Current Designs' tag line, "A work of art, made for life."

Current Designs has the following managers:

Mike Cichanowski, CEO
 Diane Buswell, Controller
 Deb Welch, Purchasing Manager
 Bill Johnson, Sales Manager
 Dave Thill, Kayak Plant Manager
 Rick Thrune, Production Manager for Composite Kayaks

Current Designs						
	A	B	C	D	E	
1						
2						
3	Payee	Purpose	Product Costs		Period Costs	Amount
4	Winona Agency	Property insurance for the manufacturing plant				3,200
5	Bill Johnson (sales manager)	Payroll check—payment to sales manager				1,700
6	Xcel Energy	Electricity for manufacturing plant				450
7	Winona Printing	Price lists for salespeople				85
8	Jim Kaiser (sales representative)	Sales commissions				1,250
9	Dave Thill (plant manager)	Payroll check—payment to plant manager				1,450
10	Dana Schultz (kayak assembler)	Payroll check—payment to kayak assembler				760
11	Composite One	Bagging film used when kayaks are assembled; it is discarded after use				260
12	Fastenal	Shop supplies—brooms, paper towels, etc.				890
13	Ravago	Polyethylene powder which is the main ingredient for the rotational molded kayaks				3,170
14	Winona County	Property taxes on manufacturing plant				5,480
15	North American Composites	Kevlar® fabric for composite kayaks				4,930
16	Waste Management	Trash disposal for the company office building				660
17	None	Journal entry to record depreciation of manufacturing equipment				4,540

Instructions

- a. What are the primary information needs of each manager?
- b. Name one special-purpose management accounting report that could be designed for each manager. Include the name of the report, the information it would contain, and how frequently it should be issued.
- c. When Diane Buswell, controller for Current Designs, reviewed the accounting records for a recent period, she noted the cost items and amounts shown above (amounts are assumed). Enter the amount for each item in the appropriate cost category. Then sum the amounts in each cost category column.

The Waterways case starts in this chapter and continues in every remaining chapter. You will find the complete case for each chapter in WileyPLUS.

Waterways

WP19 Waterways Corporation is a private corporation formed for the purpose of providing the products and the services needed to irrigate farms, parks, commercial projects, and private lawns. It has a centrally located factory in a U.S. city that manufactures the products it markets to retail outlets across the nation. It also maintains a division that performs installation and warranty servicing in six metropolitan areas.

The mission of Waterways is to manufacture quality parts that can be used for effective irrigation projects that also conserve water. By that effort, the company hopes to satisfy its customers, perform rapid and responsible service, and serve the community and the employees who represent them in each community.

The company has been growing rapidly, so management is considering new ideas to help the company continue its growth and maintain the high quality of its products.

Waterways was founded by Will Winkman, who is the company president and chief executive officer (CEO). Working with him from the company's inception is Will's brother, Ben, whose sprinkler designs and ideas about the installation of proper systems have been a major basis of the company's success. Ben is the vice president who oversees all aspects of design and production in the company.

The factory itself is managed by Todd Senter who hires his line managers to supervise the factory employees. The factory makes all of the parts for the irrigation systems. The purchasing department is managed by Helen Hines.

The installation and training division is overseen by vice president Henry Writer, who supervises the managers of the six local installation operations. Each of these local managers hires his or her own local service people. These service employees are trained by the home office under Henry Writer's direction because of the uniqueness of the company's products.

There is a small human resources department under the direction of Sally Fenton, a vice president who handles the employee paperwork, though hiring is actually performed by the separate departments. Teresa Totter is the vice president who heads the sales and marketing area; she oversees 10 well-trained salespeople.

The accounting and finance division of the company is run by Ann Headman, who is the chief financial officer (CFO) and a company vice president. She is a member of the Institute of Management Accountants and holds a certificate in management accounting. She has a small staff of accountants, including a controller and a treasurer, and a staff of accounting input operators who maintain the financial records.

A partial list of Waterways' accounts and their balances for the month of November follows.

Accounts Receivable	\$ 275,000
Advertising Expenses	54,000
Cash	260,000
Depreciation—Factory Equipment	16,800
Depreciation—Office Equipment	2,400
Direct Labor	42,000
Factory Supplies Used	16,800
Factory Utilities	10,200
Finished Goods Inventory, November 30	68,800
Finished Goods Inventory, October 31	72,550
Indirect Labor	48,000
Office Supplies Expense	1,600
Other Administrative Expenses	72,000
Prepaid Expenses	41,250
Raw Materials Inventory, November 30	52,700
Raw Materials Inventory, October 31	38,000
Raw Materials Purchases	184,500
Rent—Factory Equipment	47,000
Repairs—Factory Equipment	4,500

Salaries	325,000
Sales Revenue	1,350,000
Sales Commissions	40,500
Work in Process Inventory, October 31	52,700
Work in Process Inventory, November 30	42,000

Instructions

- a. Based on the information given, construct an organizational chart of Waterways Corporation.
- b. A list of accounts and their values are given above. From this information, prepare a cost of goods manufactured schedule, an income statement, and a partial balance sheet for Waterways Corporation for the month of November.

Expand Your Critical Thinking

Decision-Making Across the Organization

CT19.1 Wendall Company specializes in producing fashion outfits. On July 31, 2020, a tornado touched down at its factory and general office. The inventories in the warehouse and the factory were completely destroyed as was the general office nearby. Next morning, through a careful search of the disaster site, however, Bill Francis, the company's controller, and Elizabeth Walton, the cost accountant, were able to recover a small part of manufacturing cost data for the current month.

“What a horrible experience,” sighed Bill “And the worst part is that we may not have enough records to use in filing an insurance claim.”

“It was terrible,” replied Elizabeth. “However, I managed to recover some of the manufacturing cost data that I was working on yesterday afternoon. The data indicate that our direct labor cost in July totaled \$250,000 and that we had purchased \$365,000 of raw materials. Also, I recall that the amount of raw materials used for July was \$350,000. But I’m not sure this information will help. The rest of our records are blown away.”

“Well, not exactly,” said Bill. “I was working on the year-to-date income statement when the tornado warning was announced. My recollection is that our sales in July were \$1,240,000 and our gross profit ratio has been 40% of sales. Also, I can remember that our cost of goods available for sale was \$770,000 for July.”

“Maybe we can work something out from this information!” exclaimed Elizabeth. “My experience tells me that our manufacturing overhead is usually 60% of direct labor.”

“Hey, look what I just found,” cried Elizabeth. “It’s a copy of this June’s balance sheet, and it shows that our inventories as of June 30 are Finished goods \$38,000, Work in process \$25,000, and Raw materials \$19,000.”

“Super,” yelled Bill. “Let’s go work something out.”

In order to file an insurance claim, Wendall Company needs to determine the amount of its inventories as of July 31, 2020, the date of the tornado touchdown.

Instructions

With the class divided into groups, determine the amount of cost in the Raw Materials, Work in Process, and Finished Goods inventory accounts as of the date of the tornado touchdown.

Managerial Analysis

CT19.2 Tenrack is a fairly large manufacturing company located in the southern United States. The company manufactures tennis rackets, tennis balls, tennis clothing, and tennis shoes, all bearing the company’s distinctive logo, a large green question mark on a white flocked tennis ball. The company’s sales have been increasing over the past 10 years.

The tennis racket division has recently implemented several advanced manufacturing techniques. Robot arms hold the tennis rackets in place while glue dries, and machine vision systems check for defects. The engineering and design team uses computerized drafting and testing of new products. The following managers work in the tennis racket division:

Jason Dennis, Sales Manager (supervises all sales representatives)

Peggy Groneman, Technical Specialist (supervises computer programmers)

Dave Marley, Cost Accounting Manager (supervises cost accountants)

Kevin Carson, Production Supervisor (supervises all manufacturing employees)

Sally Renner, Engineer (supervises all new-product design teams)

Instructions

- a. What are the primary information needs of each manager?
- b. Which, if any, financial accounting report(s) is each likely to use?
- c. Name one special-purpose management accounting report that could be designed for each manager. Include the name of the report, the information it would contain, and how frequently it should be issued.

Real-World Focus

CT19.3 The Institute of Management Accountants (IMA) is an organization dedicated to excellence in the practice of management accounting and financial management.

Instructions

Go to the IMA's website to locate the answers to the following questions.

- a. How many members does the IMA have, and what are their job titles?
- b. What are some of the benefits of joining the IMA as a student?
- c. Use the chapter locator function to locate the IMA chapter nearest you, and find the name of the chapter president.

Communication Activity

CT19.4 Refer to P19.5A and add the following requirement.

Prepare a letter to the president of the company, Shelly Phillips, describing the changes you made. Explain clearly why net income is different after the changes. Keep the following points in mind as you compose your letter.

1. This is a letter to the president of a company, who is your friend. The style should be generally formal, but you may relax some requirements. For example, you may call the president by her first name.
2. Executives are very busy. Your letter should tell the president your main results first (for example, the amount of net income).
3. You should include brief explanations so that the president can understand the changes you made in the calculations.

Ethics Case

CT19.5 Steve Morgan, controller for Newton Industries, was reviewing production cost reports for the year. One amount in these reports continued to bother him—advertising. During the year, the company had instituted an expensive advertising campaign to sell some of its slower-moving products. It was still too early to tell whether the advertising campaign was successful.

There had been much internal debate as how to report advertising cost. The vice president of finance argued that advertising costs should be reported as a cost of production, just like direct materials and direct labor. He therefore recommended that this cost be identified as manufacturing overhead and reported as part of inventory costs until sold. Others disagreed. Morgan believed that this cost should be reported as an expense of the current period, so as not to overstate net income. Others argued that it should be reported as prepaid advertising and reported as a current asset.

The president finally had to decide the issue. He argued that these costs should be reported as inventory. His arguments were practical ones. He noted that the company was experiencing financial difficulty and expensing this amount in the current period might jeopardize a planned bond offering. Also, by reporting the advertising costs as inventory rather than as prepaid advertising, less attention would be directed to it by the financial community.

Instructions

- a. Who are the stakeholders in this situation?
- b. What are the ethical issues involved in this situation?
- c. What would you do if you were Steve Morgan?

All About You

CT19.6 The primary purpose of managerial accounting is to provide information useful for management decisions. Many of the managerial accounting techniques that you learn in this course will be useful for decisions you make in your everyday life.

Instructions

For each of the following managerial accounting techniques, read the definition provided and then provide an example of a personal situation that would benefit from use of this technique.

- a. Break-even point (Chapter 22).
- b. Budget (Chapter 24).
- c. Balanced scorecard (Chapter 26).
- d. Capital budgeting (Chapter 27).

Considering Your Costs and Benefits

CT19.7 As noted in this chapter, because of global competition, companies have become increasingly focused on reducing costs. To reduce costs and remain competitive, many companies are turning to outsourcing. Outsourcing means hiring an outside supplier to provide elements of a product or service rather than producing them internally.

Suppose you are the managing partner in a CPA firm with 30 full-time staff. Larger firms in your community have begun to outsource basic tax-return preparation work to India. Should you outsource your basic tax-return work to India as well? You estimate that you would have to lay off six staff members if you outsource the work. The basic arguments for and against are as follows.

YES: The wages paid to Indian accountants are very low relative to U.S. wages. You will not be able to compete unless you outsource.

NO: Tax-return data is highly sensitive. Many customers will be upset to learn that their data is being emailed around the world.

Instructions

Write a response indicating your position regarding this situation. Provide support for your view.

© Pictorial Press Ltd/Alamy

Job Order Costing

Chapter Preview

The following Feature Story about **Disney** describes how important accurate costing is to movie studios. In order to submit accurate bids on new film projects and to know whether it profited from past films, the company needs a good costing system. This chapter illustrates how costs are assigned to specific jobs, such as the production of *The Avengers 3*. We begin the discussion in this chapter with an overview of the flow of costs in a job order cost accounting system. We then use a case study to explain and illustrate the documents, entries, and accounts in this type of cost accounting system.

Feature Story

Profiting from the Silver Screen

Have you ever had the chance to tour a movie studio? There's a lot going on! Lots of equipment and lots of people with a variety of talents. Running a film studio, whether as an independent company or part of a major corporation, is a complex and risky business. Consider **Disney**, which has produced such

classics as *Snow White and the Seven Dwarfs* and such colossal successes as *Frozen*. The movie studio has, however, also seen its share of losses. Disney's *Lone Ranger* movie brought in revenues of \$260 million, but its production and marketing costs were a combined \$375 million—a loss of \$115 million.

Every time Disney or another movie studio makes a new movie, it is creating a unique product. Ideally, each new movie should be able to stand on its own, that is, the film should generate revenues that exceed its costs. In order to know

whether a particular movie is profitable, the studio must keep track of all of the costs incurred to make and market the film. These costs include such items as salaries of the writers, actors, director, producer, and production team (e.g., film crew); licensing costs; depreciation on equipment; music; studio rental; and marketing and distribution costs. If you've ever watched the credits at the end of a movie, you know the list goes on and on.

The movie studio isn't the only one with an interest in knowing a particular project's profitability. Many of the people involved in making the movie, such as the screenwriters, actors, and producers, have at least part of their compensation tied to its profitability. As such, complaints about inaccurate accounting are common in the movie industry.

In particular, a few well-known and widely attended movies reported low profits, or even losses, once the accountants got done with them. How can this be? The issue is that a large portion of a movie's costs are overhead costs that can't be directly traced to a film, such as depreciation of film equipment and sets, facility maintenance costs, and executives' salaries. Actors and others often complain that these overhead costs are overallocated to their movie and therefore negatively affect their compensation.

To reduce the risk of financial flops, many of the big studios now focus on making sequels of previous hits. This might explain why, shortly after losing money on the *Lone Ranger*, Disney decided to make *The Avengers 2* and is now working on *The Avengers 3*—much safer bets.

Watch the *Making a Hollywood Movie* video in WileyPLUS to learn more about job order costing in the real world.

Cost Accounting Systems

LEARNING OBJECTIVE 1

Describe cost systems and the flow of costs in a job order system.

Cost accounting involves measuring, recording, and reporting product and service costs. Companies determine both the total cost and the unit cost of each product. The accuracy of the product cost information is critical to the success of the company. Companies use this information to determine which products to produce, what prices to charge, and how many units to produce. Accurate product cost information is also vital for effective evaluation of employee performance.

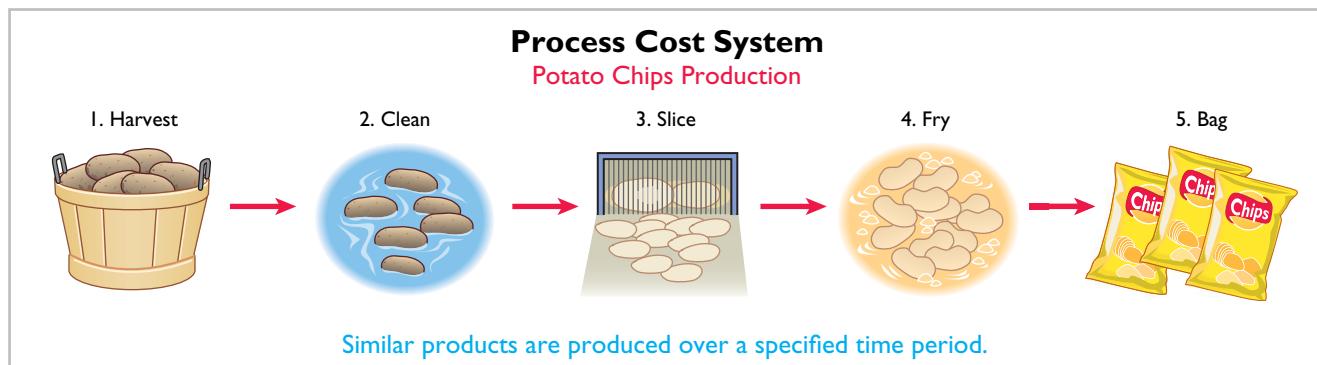

A **cost accounting system** consists of accounts for the various manufacturing and service costs. These accounts are fully integrated into the general ledger of a company. An important feature of a cost accounting system is the use of a **perpetual inventory system**. Such a system **provides immediate, up-to-date information on the cost of a product**.

There are two basic types of cost accounting systems: (1) a process cost system and (2) a job order cost system. Although cost accounting systems differ widely from company to company, most involve one of these two traditional product costing systems.

Process Cost System

A company uses a **process cost system** when it manufactures a large volume of similar products. Production is continuous. Examples of a process cost system are the manufacture of cereal by **Kellogg**, the refining of petroleum by **ExxonMobil**, and the production of ice cream by **Ben & Jerry's**. Process costing accumulates product-related costs **for a period of time** (such as a week or a month) instead of assigning costs to specific products or job orders. In process costing, companies assign the costs to departments or processes for the specified period of time. **Illustration 20.1** shows examples of the use of a process cost system. We will discuss the process cost system further in Chapter 21.

ILLUSTRATION 20.1 Process cost system

Job Order Cost System

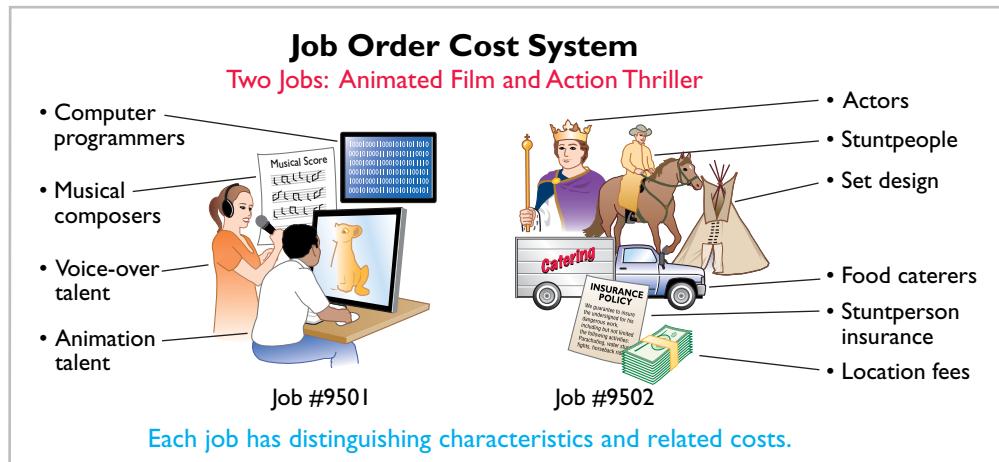

Under a **job order cost system**, the company assigns costs to each **job** or to each **batch** of goods. An example of a job is the manufacture of a jet by **Boeing**, the production of a movie by **Disney**, or the making of a fire truck by **American LaFrance**. An example of a batch is the printing of 225 wedding invitations by a local print shop, or the printing of a weekly issue of **Fortune** magazine by a high-tech printer such as **Quad Graphics**.

An important feature of job order costing is that each job or batch has its own distinguishing characteristics. For example, each house is custom built, each consulting engagement by a CPA firm is unique, and each printing job is different. **The objective is to compute the cost**

per job. At each point in manufacturing a product or performing a service, the company can identify the job and its associated costs. A job order cost system measures costs for each job, rather than for set time periods. **Illustration 20.2** shows the recording of costs in a job order cost system for Disney as it produced two different films at the same time: an animated film and an action thriller.

ILLUSTRATION 20.2

Job order cost system for Disney

Can a company use both job order and process cost systems? Yes. For example, **General Motors** uses process cost accounting for its standard model cars, such as Malibus and Corvettes, and job order cost accounting for a custom-made limousine for the President of the United States.

The objective of both cost accounting systems is to provide unit cost information for product pricing, cost control, inventory valuation, and financial statement presentation.

Management Insight

Jobs Won, Money Lost

Many companies suffer from poor cost accounting. As a result, they sometimes make products they should not be selling at all, or they buy product components that they could more profitably make themselves. Also, inaccurate cost data leads companies to misallocate capital and frustrates efforts of efficiency.

by plant managers to improve efficiency.

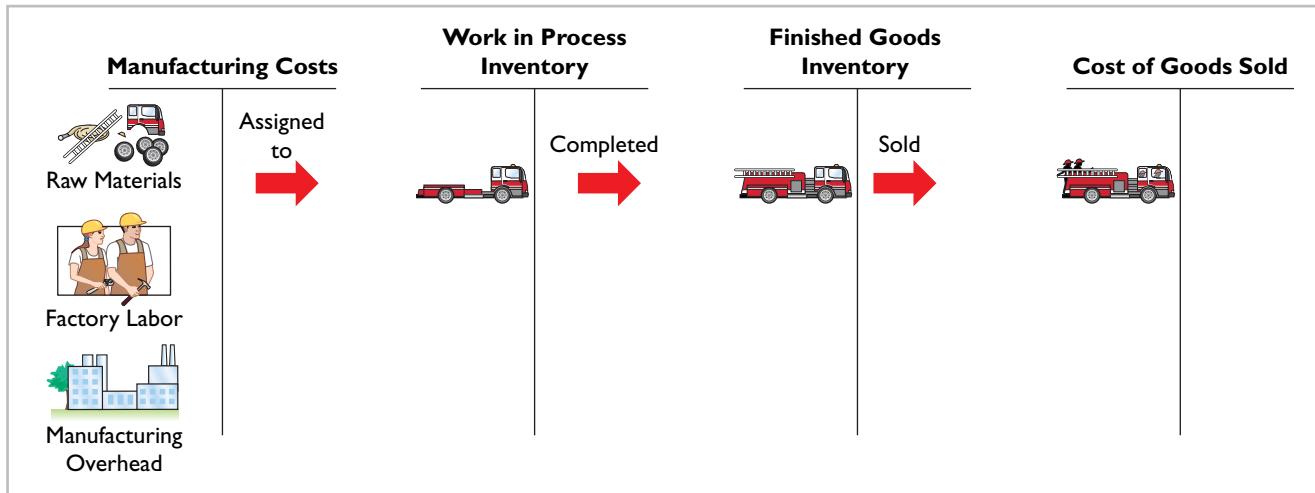

For example, consider the case of a diversified company in the business of rebuilding diesel locomotives. The managers thought they were making money, but a consulting firm found that the company had seriously underestimated costs. The company bailed out of the business and not a moment too soon. Says the consultant who advised the company, “The more contracts it won, the more money it lost.” Given that situation, a company cannot stay in business very long!

What type of costs do you think the company had been underestimating? (Go to WileyPLUS for this answer and additional questions).

Job Order Cost Flow

We first address the flow of costs for a manufacturer (service company costs are addressed in a later section). The flow of costs (direct materials, direct labor, and manufacturing overhead) in job order cost accounting parallels the physical flow of the materials as they are converted into finished goods and then sold. As shown in **Illustration 20.3**, companies first **accumulate** manufacturing costs in the form of raw materials, factory labor, or manufacturing overhead. They then **assign** manufacturing costs to the Work in Process Inventory account. When a job is completed, the company transfers the cost of the job to Finished Goods Inventory. Later when the goods are sold, the company transfers their cost to Cost of Goods Sold.

Illustration 20.3 provides a basic overview of the flow of costs in a manufacturing setting for production of a fire truck. A more detailed presentation of the flow of costs is summarized near the end of this chapter in Illustration 20.15. There are two major steps in the flow of costs: (1) *accumulating* the manufacturing costs incurred, and (2) *assigning* the accumulated costs

ILLUSTRATION 20.3 Flow of costs in job order costing

to the work done. The following discussion shows that the company accumulates manufacturing costs incurred by debits to Raw Materials Inventory, Factory Labor, and Manufacturing Overhead. When the company incurs these costs, it does not attempt to associate the costs with specific jobs. The company makes additional entries to assign manufacturing costs incurred to specific jobs. In the remainder of this chapter, we will use a case study to explain how a job order cost system operates.

Accumulating Manufacturing Costs

To illustrate a job order cost system, we will use the January transactions of Wallace Company, which makes custom electronic sensors for corporate safety applications (such as fire and carbon monoxide) and security applications (such as theft and corporate espionage).

Raw Materials Costs

When Wallace receives the raw materials (both direct and indirect) it has purchased from a supplier, **it debits the cost of the materials to Raw Materials Inventory**. The company debits this account for the invoice cost of the raw materials and freight costs chargeable to the purchaser. It credits the account for purchase discounts taken and purchase returns and allowances. Wallace makes **no effort at this point to associate the cost of materials with specific jobs or orders**.

To illustrate, assume that Wallace purchases 2,000 lithium batteries (Stock No. AA2746) at \$5 per unit (\$10,000) and 800 electronic modules (Stock No. AA2850) at \$40 per unit (\$32,000) for a total cost of \$42,000 (\$10,000 + \$32,000). The entry to record this purchase on January 4 is:

			Raw Materials Inventory	
Jan. 4	Raw Materials Inventory Accounts Payable (Purchase of raw materials on account)	(1) ¹	42,000	42,000

At this point, Raw Materials Inventory has a balance of \$42,000, as shown in the T-account. As we will explain later in the chapter, the company subsequently assigns direct raw materials inventory to work in process and indirect raw materials inventory to manufacturing overhead.

¹The numbers placed above the entries for Wallace Company are used for reference purposes in the summary provided in Illustration 20.15.

Factory Labor Costs

Some of a company's employees are involved in the manufacturing process, while others are not. As discussed in Chapter 19, wages and salaries of nonmanufacturing employees are expensed as period costs (e.g., Salaries and Wages Expense). Costs related to manufacturing employees are accumulated in Factory Labor to ensure their treatment as product costs. Factory labor consists of three costs: (1) wages payable related to factory workers, (2) employer payroll taxes on these wages, and (3) fringe benefits (such as sick pay, pensions, and vacation pay) incurred by the employer. **Companies debit labor costs to Factory Labor as they incur those costs.**

To illustrate, assume that Wallace incurs \$32,000 of factory labor costs. Of that amount, \$27,000 relates to wages payable and \$5,000 relates to payroll taxes payable in February. The entry to record factory labor (both direct and indirect) for the month is:

Factory Labor		(2)	
32,000			
	Jan. 31	Factory Labor	32,000
		Factory Wages Payable	27,000
		Employer Payroll Taxes Payable	5,000
		(To record factory labor costs)	

At this point, Factory Labor has a balance of \$32,000, as shown in the T-account. The company subsequently assigns direct factory labor to work in process and indirect factory labor to manufacturing overhead.

Manufacturing Overhead Costs

A company has many types of overhead costs. If these overhead costs, such as property taxes, depreciation, insurance, and repairs, relate to overhead costs of a nonmanufacturing facility, such as an office building, then these costs are expensed as period costs (e.g., Property Tax Expense, Depreciation Expense, Insurance Expense, and Maintenance and Repairs Expense). If the costs relate to the manufacturing process, then they are accumulated in Manufacturing Overhead to ensure their treatment as product costs.

Using assumed data, the summary entry for manufacturing overhead (other than indirect materials and indirect labor) in Wallace Company is:

Manufacturing Overhead		(3)	
13,800			
	Jan. 31	Manufacturing Overhead	13,800
		Utilities Payable	4,800
		Prepaid Insurance	2,000
		Accounts Payable (for repairs)	2,600
		Accumulated Depreciation	3,000
		Property Taxes Payable	1,400
		(To record overhead costs)	

At this point, Manufacturing Overhead has a balance of \$13,800, as shown in the T-account. The company subsequently assigns manufacturing overhead to work in process.

DO IT! 1 | Accumulating Manufacturing Costs

During the current month, Ringling Company incurs the following manufacturing costs:

- Raw material purchases of \$4,200 on account.
- Factory labor of \$18,000. Of that amount, \$15,000 relates to wages payable and \$3,000 relates to payroll taxes payable.
- Factory utilities of \$2,200 are payable, prepaid factory insurance of \$1,800 has expired, and depreciation on the factory building is \$3,500.

Prepare journal entries for each type of manufacturing cost.

ACTION PLAN

- In accumulating manufacturing costs, debit at least one of three accounts: Raw Materials Inventory, Factory Labor, and Manufacturing Overhead.

Solution

a. Raw Materials Inventory	4,200	4,200
Accounts Payable		
(Purchases of raw materials on account)		
b. Factory Labor	18,000	15,000
Factory Wages Payable		3,000
Employer Payroll Taxes Payable		
(To record factory labor costs)		
c. Manufacturing Overhead	7,500	2,200
Utilities Payable		1,800
Prepaid Insurance		
Accumulated Depreciation		3,500
(To record overhead costs)		

ACTION PLAN (cont.)

- Manufacturing overhead costs may be recognized daily. Or, manufacturing overhead may be recorded periodically through a summary entry.

Related exercise material: BE20.1, BE20.2, DO IT! 20.1, E20.1, E20.7, E20.8, and E20.11.

Assigning Manufacturing Costs

LEARNING OBJECTIVE 2

Use a job cost sheet to assign costs to work in process.

Assigning manufacturing costs to work in process results in the following entries.

1. Debits made to Work in Process Inventory.
2. Credits made to Raw Materials Inventory, Factory Labor, and Manufacturing Overhead.

An essential accounting record in assigning costs to jobs is a **job cost sheet**, as shown in **Illustration 20.4**. A **job cost sheet** is a form used to record the costs chargeable to a specific job and to determine the total and unit costs of the completed job.

ILLUSTRATION 20.4

Job cost sheet

Job Cost Sheet			
Job No. _____	Quantity _____		
Item _____	Date Requested _____		
For _____	Date Completed _____		
Date	Direct Materials	Direct Labor	Manufacturing Overhead
Cost of completed job Direct materials \$ _____ Direct labor _____ Manufacturing overhead _____ Total cost \$ _____ Unit cost (total dollars ÷ quantity) \$ _____			

Companies keep a separate job cost sheet for each job, typically as a computer file. The job cost sheets constitute the subsidiary ledger for the Work in Process Inventory control account in the general ledger. A **subsidiary ledger** consists of individual records for each individual item—in this case, each job. The Work in Process account is referred to as a **control account** because it summarizes the detailed data regarding specific jobs contained in the job cost sheets. **Each entry to Work in Process Inventory must be accompanied by a corresponding posting to one or more job cost sheets.**

Raw Materials Costs

ETHICS NOTE

Approvals are an important internal control feature of a requisition slip because they establish individual accountability over inventory.

Companies assign raw materials costs to jobs when their materials storeroom issues the materials in response to requests. Requests for issuing raw materials are made by production department personnel on a prenumbered **materials requisition slip**. The materials issued may be used directly on a job, or they may be considered indirect materials. As **Illustration 20.5** shows, the requisition should indicate the quantity and type of materials withdrawn and the account to be charged (see **Ethics Note**). Note in Illustration 20.5 the specific job to be charged (Job No. 101) as well as the internal control of prenumbering (R247) to enhance accountability. The company will charge direct materials to Work in Process Inventory, and indirect materials to Manufacturing Overhead.

ILLUSTRATION 20.5

Materials requisition slip

Wallace Company Materials Requisition Slip				
Deliver to:	Assembly Department		Req. No.	R247
Charge to:	Work in Process—Job No. 101		Date:	1/6/20
Quantity	Description	Stock No.	Cost per Unit	Total
200	Lithium batteries	AA2746	\$5.00	\$1,000

Requested by Bruce Howard Received by Herb Crowley
 Approved by Kap Shin Costed by Heather Remmers

The company may use any of the inventory costing methods (FIFO, LIFO, or average-cost) in costing the requisitions **to the individual job cost sheets**. In an automated system, the requisition is entered electronically. Once approved and delivered to production, the materials are charged automatically to an electronic job cost record.

Periodically, the company journalizes the requisitions. For example, if Wallace uses \$24,000 of direct materials and \$6,000 of indirect materials in January, the entry on January 31 is:

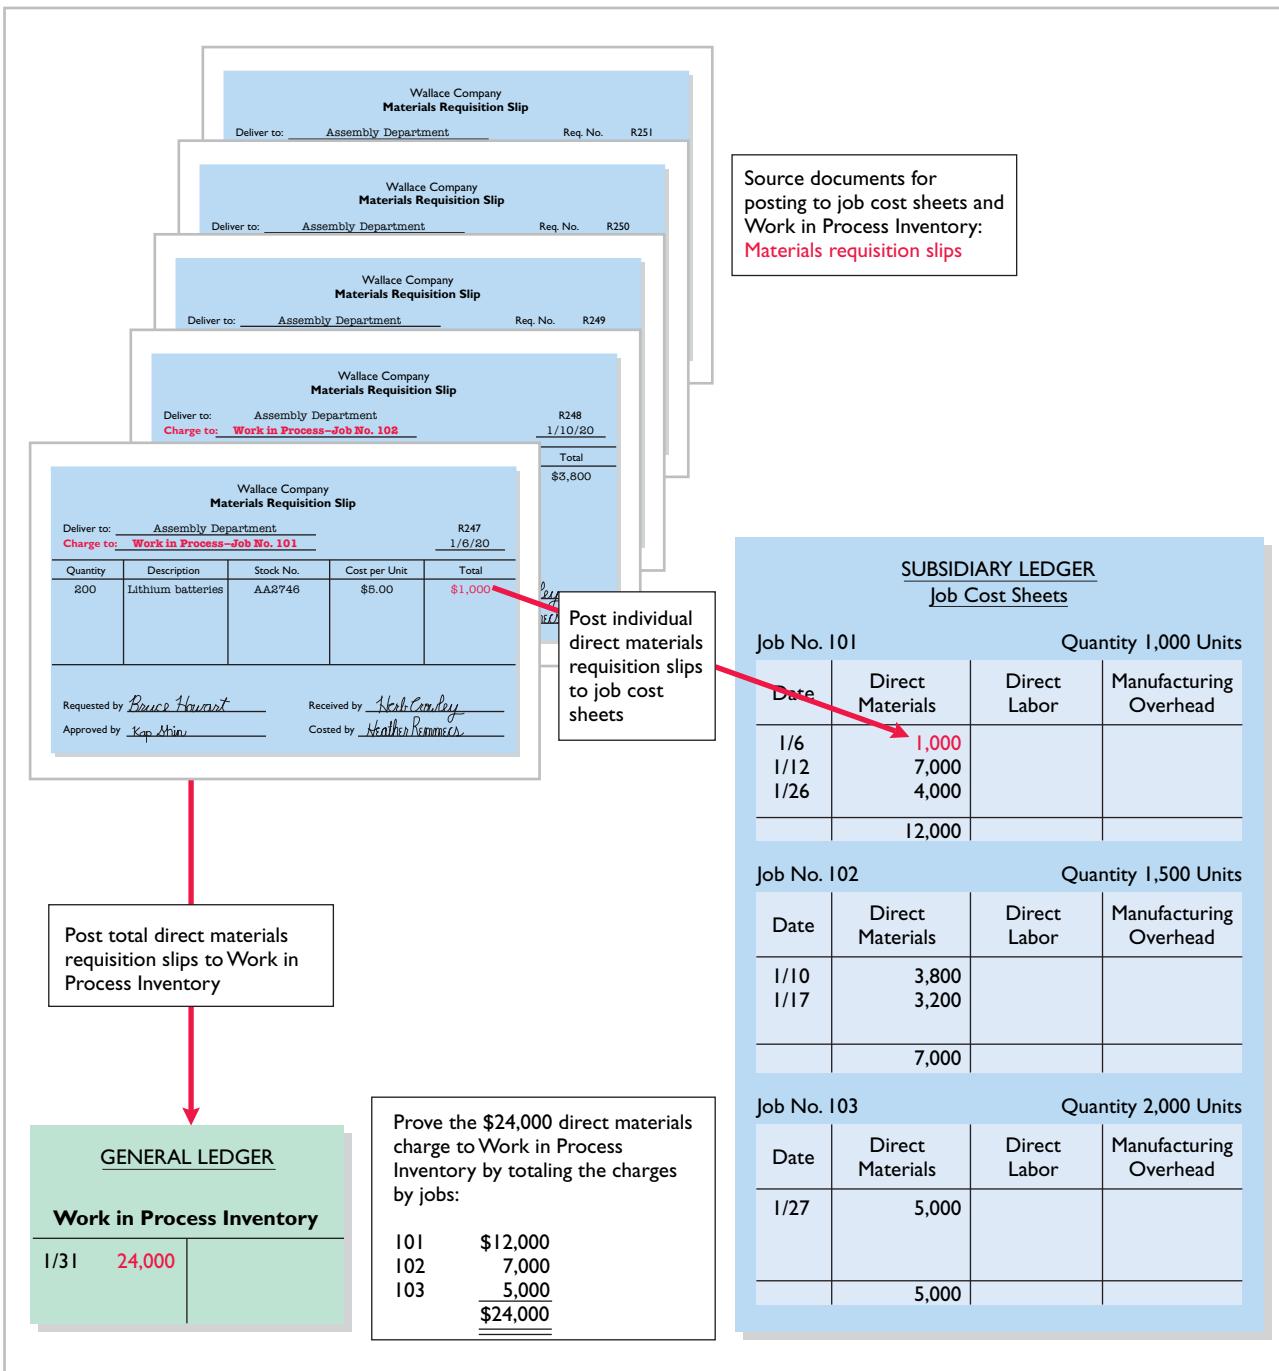

(4)			
Jan. 31	Work in Process Inventory		24,000
	Manufacturing Overhead		6,000
	Raw Materials Inventory (To assign materials to jobs and overhead)		30,000

This entry reduces Raw Materials Inventory by \$30,000, increases Work in Process Inventory by \$24,000 as the direct costs are assigned to jobs, and increases Manufacturing Overhead by \$6,000, as the following shows.

		Work in Process Inventory
Raw Materials Inventory	42,000	24,000
	30,000	
		24,000
		Manufacturing Overhead
	13,800	6,000
		6,000

Illustration 20.6 shows the posting of requisition slip R247 to Job No. 101 for \$1,000 and other assumed postings to the job cost sheets for materials. The requisition slips provide the basis for total direct materials costs of \$12,000 for Job No. 101, \$7,000 for Job No. 102, and

ILLUSTRATION 20.6 Job cost sheets—posting of direct materials

\$5,000 for Job No. 103. After the company has completed all postings, the sum of the direct materials columns of the job cost sheets (the **subsidiary** account amounts of \$12,000, \$7,000, and \$5,000) should equal the direct materials debited to Work in Process Inventory (the **control** account amount of \$24,000).

The Cost of an iPhone? Just Tear One Apart

All companies need to know what it costs to make their own products—but a lot of companies would also like to know the cost of their competitors' products as well. That's where **IHS** steps in. IHS tears apart sophisticated electronic devices to tell you what it would cost to replicate.

In the case of smartphones, which often have more than 1,000

tiny components, that is no small feat. For example, consider that the components of a recent iPhone model cost about \$221. Assembly adds only about another \$5. However, the difference between what you pay (almost triple the total component cost) and the “cost” is not all profit. You also have to consider the additional nonproduction costs of research, design, marketing, patent fees, and selling costs.

Source: 2016 IHS Markit; <https://9to5mac.com/2016/09/20/649-iphone-7-estimated-to-cost-apple-220-heres-the-component-breakdown>.

What type of costs are marketing and selling costs, and how are they treated for accounting purposes? (Go to WileyPLUS for this answer and additional questions).

Factory Labor Costs

Companies assign factory labor costs to jobs on the basis of time tickets prepared when the work is performed. The **time ticket** indicates the employee, the hours worked, the account and job to be charged, and the total labor cost. Many companies accumulate these data through the use of bar coding and scanning devices. When they start and end work, employees scan bar codes on their identification badges and bar codes associated with each job they work on. When direct labor is involved, the time ticket must indicate the job number, as shown in **Illustration 20.7**. The employee's supervisor should approve all time tickets.

ILLUSTRATION 20.7

Time ticket

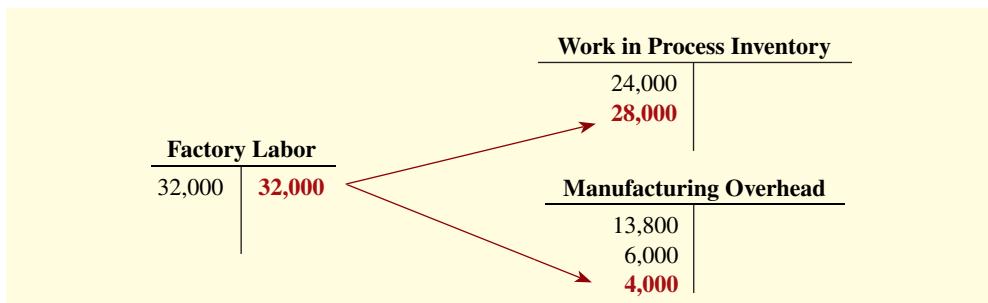

Wallace Company Time Ticket				
Employee	John Nash			Date: 1/6/20
Charge to:	Work in Process			Employee No. 124
			Job No. 101	
Time			Hourly Rate	Total Cost
Start	Stop	Total Hours		
0800	1200	4	10.00	40.00
Approved by <u>Bob Kader</u>			Costed by <u>M. Chen</u>	

In an automated system, after factory employees scan their identification codes, labor costs are automatically posted to specific jobs at the appropriate pay scale. The time tickets are later sent to the payroll department, which applies the employee's hourly wage rate plus fringe benefits and computes the total labor cost. Finally, the company journalizes the time tickets. It debits the

account Work in Process Inventory for direct labor and debits Manufacturing Overhead for indirect labor. For example, if the \$32,000 total factory labor cost consists of \$28,000 of direct labor and \$4,000 of indirect labor, the entry is:

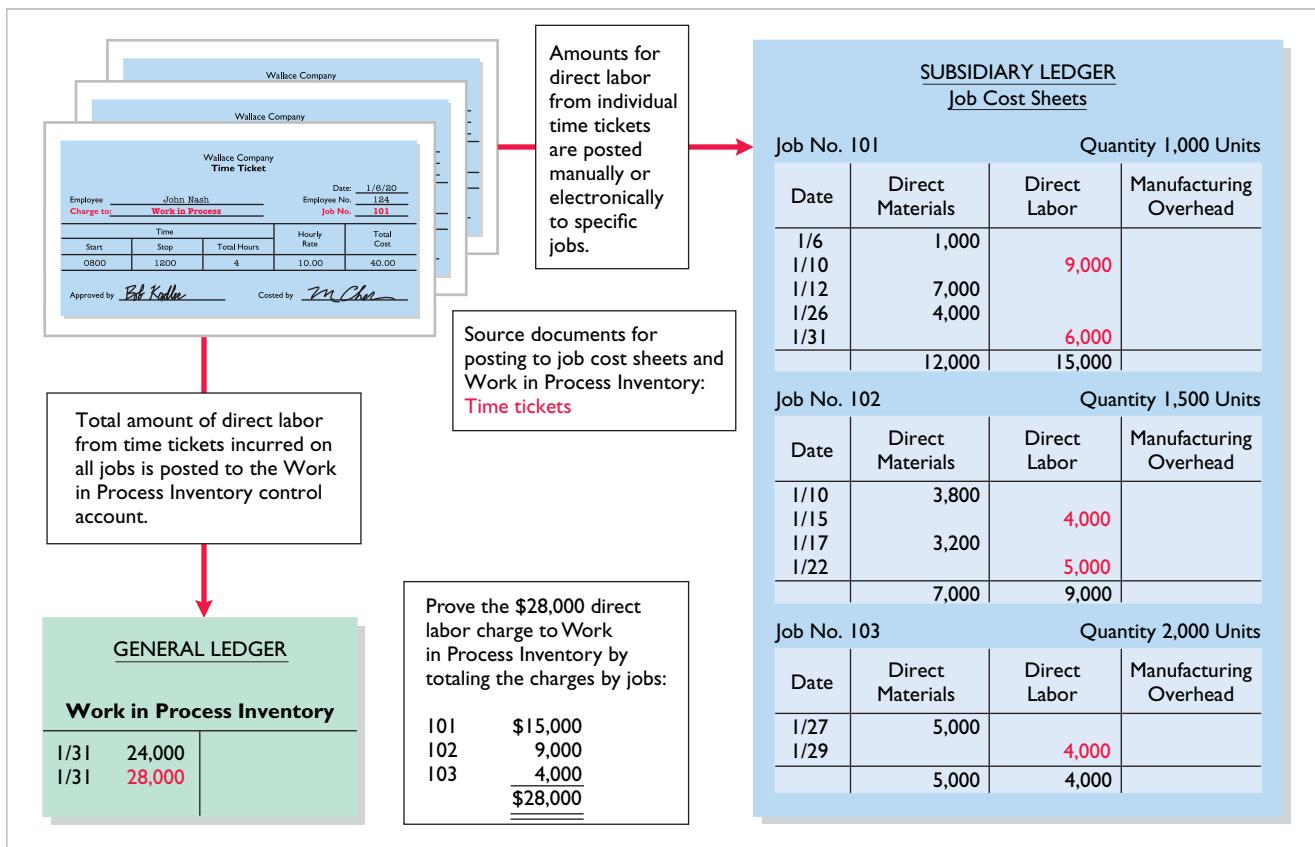

(5)			
Jan. 31	Work in Process Inventory	28,000	
	Manufacturing Overhead	4,000	
	Factory Labor		32,000
	(To assign labor to jobs and overhead)		

As a result of this entry, Factory Labor is reduced by \$32,000 so it has a zero balance, and labor costs are assigned to the appropriate manufacturing accounts. The entry increases Work in Process Inventory by \$28,000 and increases Manufacturing Overhead by \$4,000, as shown below.

Let's assume that the labor costs chargeable to Wallace's three jobs are \$15,000, \$9,000, and \$4,000. **Illustration 20.8** shows the Work in Process Inventory and job cost sheets after

ILLUSTRATION 20.8 Job cost sheets—direct labor

posting. As in the case of direct materials, the sum of the postings to the direct labor columns of the job cost sheets (subsidiary accounts Job 101 \$15,000, Job 102 \$9,000, and Job 103 \$4,000) should equal the posting of direct labor to the Work in Process Inventory control account (\$28,000). Also, time card and job ticket hours should be periodically reconciled as an internal control.

DO IT! 2 | Work in Process

Danielle Company is working on two job orders. The job cost sheets show the following:

Direct materials—Job 120 \$6,000; Job 121 \$3,600
 Direct labor—Job 120 \$4,000; Job 121 \$2,000
 Manufacturing overhead—Job 120 \$5,000; Job 121 \$2,500

Prepare the three summary entries to record the assignment of costs to Work in Process from the data on the job cost sheets.

Solution

The three summary entries are:

Work in Process Inventory (\$6,000 + \$3,600) Raw Materials Inventory (To assign materials to jobs)	9,600 9,600
Work in Process Inventory (\$4,000 + \$2,000) Factory Labor (To assign labor to jobs)	6,000 6,000
Work in Process Inventory (\$5,000 + \$2,500) Manufacturing Overhead (To assign overhead to jobs)	7,500 7,500

Related exercise material: **BE20.3, BE20.4, BE20.5, DO IT! 20.2, E20.2, E20.7, and E20.8.**

ACTION PLAN

- Recognize that Work in Process Inventory is the control account for all unfinished job cost sheets.
- Debit Work in Process Inventory for the materials, labor, and overhead charged to the job cost sheets.
- Credit the accounts that were debited when the manufacturing costs were accumulated.

Predetermined Overhead Rates

LEARNING OBJECTIVE 3

Demonstrate how to determine and use the predetermined overhead rate.

Companies charge the actual costs of direct materials and direct labor to specific jobs because these costs can be directly traced to specific jobs. In contrast, manufacturing **overhead** relates to production operations **as a whole**. As a result, overhead costs cannot be assigned to specific jobs on the basis of actual costs incurred because these costs cannot be traced to (identified with) specific jobs. Instead, companies assign manufacturing overhead to work in process and to specific jobs **on an estimated basis through the use of a predetermined overhead rate**.

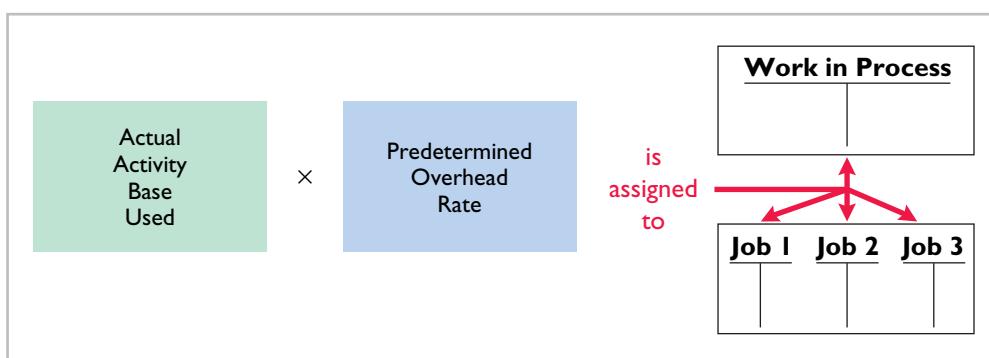

The **predetermined overhead rate** is based on the relationship between estimated annual overhead costs and estimated annual operating activity, expressed in terms of a common **activity base**. The company may state the activity in terms of direct labor costs, direct labor hours, machine hours, or any other measure that will provide an equitable basis for applying overhead costs to jobs. Companies establish the predetermined overhead rate at the beginning of the year. Small companies often use a single, company-wide predetermined overhead rate. Large companies often use rates that vary from department to department. The formula for a predetermined overhead rate is shown in **Illustration 20.9**.

$$\text{Estimated Annual Overhead Costs} \div \text{Estimated Annual Operating Activity} = \text{Predetermined Overhead Rate}$$

ILLUSTRATION 20.9

Formula for predetermined overhead rate

Overhead consists only of indirect costs and relates to production operations as a whole. To know what “the whole” is, it might seem that the logical thing is to wait until the end of the year’s operations. At that time, the company knows all of its actual costs for the period. As a practical matter, though, managers cannot wait until the end of the year. To price products effectively as they are completed, managers need information about product costs of specific jobs completed during the year. Using an estimated predetermined overhead rate enables a cost to be determined for the job immediately and identifies when actual costs may be different than planned. **Illustration 20.10** indicates how manufacturing overhead is assigned to work in process.

**ILLUSTRATION 20.10**

Using predetermined overhead rates

Wallace Company uses direct labor cost as the activity base. Assuming that the company estimates annual overhead costs to be \$280,000 and direct labor costs for the year to be \$350,000, the overhead rate is 80%, computed as shown in **Illustration 20.11**.

$$\text{Estimated Annual Overhead Costs} \div \text{Estimated Direct Labor Cost} = \text{Predetermined Overhead Rate}$$

$$\$280,000 \div \$350,000 = 80\%$$

ILLUSTRATION 20.11

Calculation of predetermined overhead rate

This means that for every dollar of direct labor, Wallace will assign 80 cents of manufacturing overhead to a job. The use of a predetermined overhead rate enables the company to determine the approximate total cost of each job **when it completes the job**.

Historically, companies used direct labor costs or direct labor hours as the activity base. The reason was the relatively high correlation between direct labor and manufacturing overhead. Today, more companies are using **machine hours as the activity base, due to increased reliance on automation in manufacturing operations**. Or, as mentioned in Chapter 19, many companies now use activity-based costing to more accurately assign overhead costs based on the activities that give rise to the costs.

A company may use more than one activity base. For example, if a job is manufactured in more than one factory department, each department may have its own overhead rate. In the Feature Story, **Disney** might use two bases in assigning overhead to film jobs: direct materials dollars for indirect materials, and direct labor hours for such costs as insurance and supervisor salaries.

Wallace Company applies manufacturing overhead to work in process after it assigns direct labor costs. It also applies manufacturing overhead to specific jobs at that time. For January, Wallace applied overhead of \$22,400 in response to its assignment of \$28,000

of direct labor costs (direct labor cost of $\$28,000 \times 80\%$). The following entry records this application.

(6)			
Jan. 31	Work in Process Inventory Manufacturing Overhead (To assign overhead to jobs)	22,400	22,400

This entry reduces the balance in Manufacturing Overhead and increases Work in Process Inventory by \$22,400, as shown below.

Manufacturing Overhead		Work in Process Inventory	
13,800	22,400	24,000	
6,000		28,000	
4,000			22,400
1,400			

The overhead that Wallace applies to each job will be 80% of the direct labor cost of the job for the month. **Illustration 20.12** shows the Work in Process Inventory account and the job cost sheets after posting. Note that the debit of \$22,400 to Work in Process Inventory equals the sum of the overhead applied to jobs: Job No. 101 \$12,000 1 Job No. 102 \$7,200 1 Job No. 103 \$3,200.

ILLUSTRATION 20.12 Job cost sheets—manufacturing overhead applied

SUBSIDIARY LEDGER <u>Job Cost Sheets</u>					
Job No. 101		Quantity 1,000 Units			
Date	Direct Materials	Direct Labor	Manufacturing Overhead	Total	
1/6	1,000	9,000	7,200		
1/10					
1/12	7,000				
1/26	4,000				
1/31		6,000	4,800		
	12,000	15,000	12,000	39,000	
Job No. 102		Quantity 1,500 Units			
Date	Direct Materials	Direct Labor	Manufacturing Overhead	Total	
1/10	3,800	4,000	3,200		
1/15	3,200				
1/17		5,000	4,000		
1/22					
	7,000	9,000	7,200	23,200	
Job No. 103		Quantity 2,000 Units			
Date	Direct Materials	Direct Labor	Manufacturing Overhead	Total	
1/27	5,000	4,000	3,200		
1/29					
	5,000	4,000	3,200	12,200	

Post manufacturing overhead to each job at the time direct labor is posted using the predetermined rate:
80% of direct labor cost
(e.g., $\$9,000 \times .80 = \$7,200$)

Post manufacturing overhead to Work in Process Inventory using predetermined rate:
80% of direct labor cost
(e.g., $\$28,000 \times .80 = \$22,400$)

GENERAL LEDGER

Work in Process Inventory

1/31	24,000	
1/31	28,000	
1/31	22,400	

After posting the credit of \$22,400 to manufacturing overhead, a debit balance remains. This means that the overhead applied to jobs using the predetermined rate was less than the actual amount of overhead incurred during the period. This situation is referred to as under-applied overhead. We address the treatment of under- and overapplied overhead in a later section.

At the end of each month, the **balance in Work in Process Inventory should equal the sum of the costs shown on the job cost sheets of unfinished jobs**. **Illustration 20.13** presents proof of the agreement of the control and subsidiary accounts in Wallace. (It assumes that all jobs are still in process.)

Work in Process Inventory		Job Cost Sheets	
Jan. 31	24,000	No. 101	\$ 39,000
31	28,000	102	23,200
31	22,400	103	12,200
	74,400		\$74,400

ILLUSTRATION 20.13

Proof of job cost sheets to work in process inventory

DO IT! 3 | Predetermined Overhead Rate

Stanley Company produces specialized safety devices. For the year, manufacturing overhead costs are estimated to be \$160,000. Estimated machine usage is 40,000 hours. The company assigns overhead based on machine hours. Job No. 302 used 2,000 machine hours.

Compute the predetermined overhead rate, determine the amount of overhead to apply to Job No. 302, and prepare the entry to apply overhead to Job No. 302 on March 31.

Solution

Predetermined overhead rate = $\$160,000 \div 40,000 \text{ hours} = \$4.00 \text{ per machine hour}$

Amount of overhead applied to Job No. 302 = 2,000 hours $\times \$4.00 = \$8,000$

The entry to record the application of overhead to Job No. 302 on March 31 is:

Work in Process Inventory	8,000	
Manufacturing Overhead (To assign overhead to jobs)		8,000

Related exercise material: BE20.6, BE20.7, DO IT! 20.3, E20.5, and E20.6.

ACTION PLAN

- The predetermined overhead rate is estimated annual overhead cost divided by estimated annual operating activity.
- Assignment of overhead to jobs is determined by multiplying the actual activity base used by the predetermined overhead rate.
- The entry to record the assignment of overhead transfers an amount out of Manufacturing Overhead into Work in Process Inventory.

Entries for Jobs Completed and Sold

LEARNING OBJECTIVE 4

Prepare entries for manufacturing and service jobs completed and sold.

Assigning Costs to Finished Goods

When a job is completed, Wallace Company summarizes the costs and completes the lower portion of the applicable job cost sheet. For example, if we assume that Wallace completes Job No. 101, a batch of electronic sensors, on January 31, the job cost sheet appears as shown in **Illustration 20.14**.

ILLUSTRATION 20.14**Completed job cost sheet**

Job Cost Sheet			
Job No.	101	Quantity	1,000
Item	Electronic Sensors	Date Requested	January 5
For	Tanner Company	Date Completed	January 31
Date	Direct Materials	Direct Labor	Manufacturing Overhead
1/6	\$ 1,000		
1/10		\$ 9,000	\$ 7,200
1/12	7,000		
1/26	4,000		
1/31		6,000	4,800
	\$12,000	\$15,000	\$12,000
Cost of completed job			
Direct materials			\$ 12,000
Direct labor			15,000
Manufacturing overhead			12,000
Total cost			\$ 39,000
Unit cost (\$39,000 ÷ 1,000)			\$ 39.00

When a job is finished, Wallace makes an entry to transfer its total cost to finished goods inventory. The entry is as follows.

(7)			
Jan. 31	Finished Goods Inventory Work in Process Inventory (To record completion of Job No. 101)		39,000 39,000

This entry increases Finished Goods Inventory and reduces Work in Process Inventory by \$39,000, as shown in the T-accounts below.

Work in Process Inventory		Finished Goods Inventory
24,000	39,000	
28,000		→ 39,000
22,400		

Finished Goods Inventory is a control account. It controls individual finished goods records in a finished goods subsidiary ledger.

Assigning Costs to Cost of Goods Sold

Companies recognize cost of goods sold when each sale occurs. To illustrate the entries a company makes when it sells a completed job, assume that on January 31 Wallace Company sells on account Job No. 101. The job cost \$39,000, and it sold for \$50,000. The entries to record the sale and recognize cost of goods sold are:

(8)			
Jan. 31	Accounts Receivable Sales Revenue (To record sale of Job No. 101)		50,000 50,000
31	Cost of Goods Sold Finished Goods Inventory (To record cost of Job No. 101)		39,000 39,000

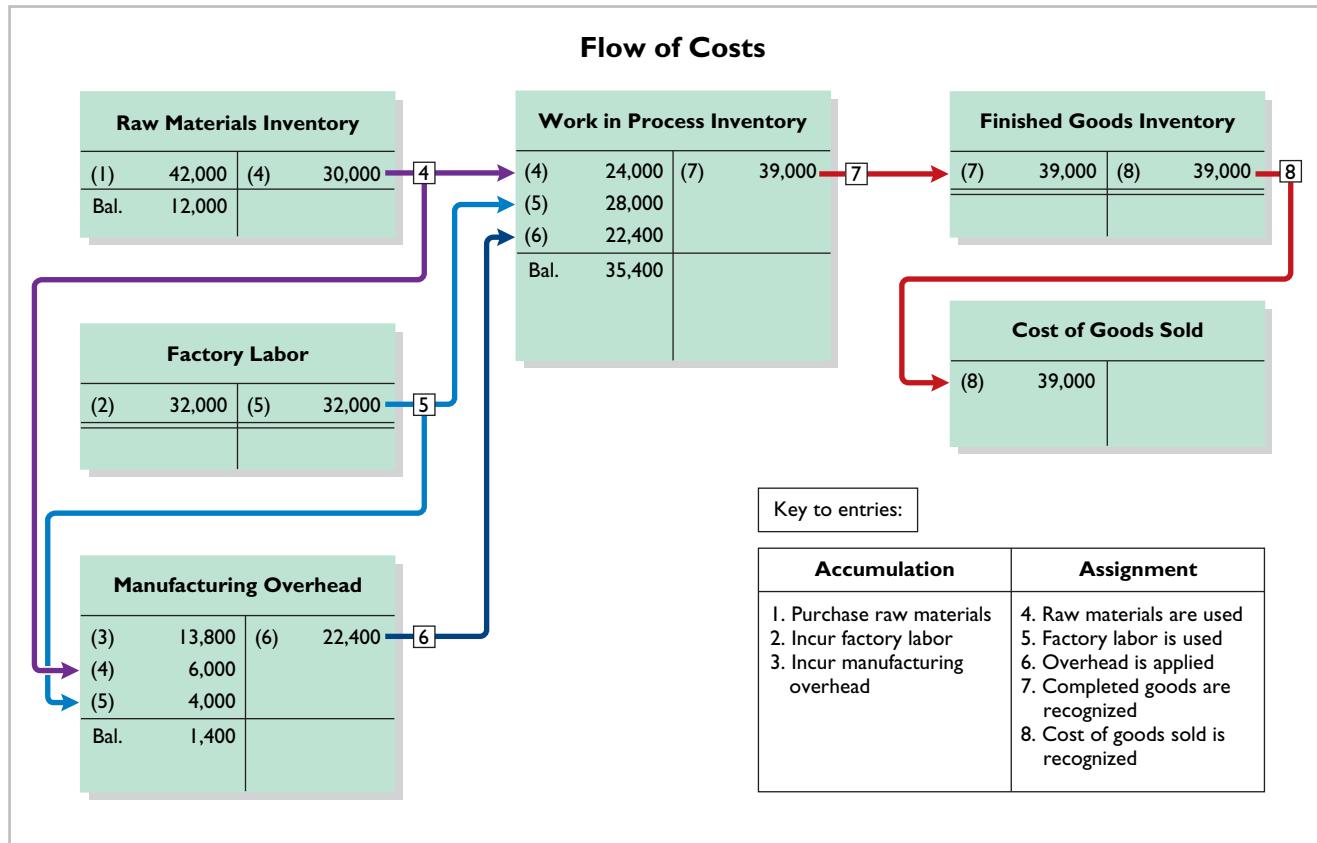

This entry increases Cost of Goods Sold and reduces Finished Goods Inventory by \$39,000, as shown in the T-accounts below.

Finished Goods Inventory	Cost of Goods Sold
39,000	39,000

Summary of Job Order Cost Flows

Illustration 20.15 shows a completed flowchart for a job order cost accounting system. All postings are keyed to entries 1–8 in the example presented in the previous pages for Wallace Company.

ILLUSTRATION 20.15 Flow of costs in a job order cost system

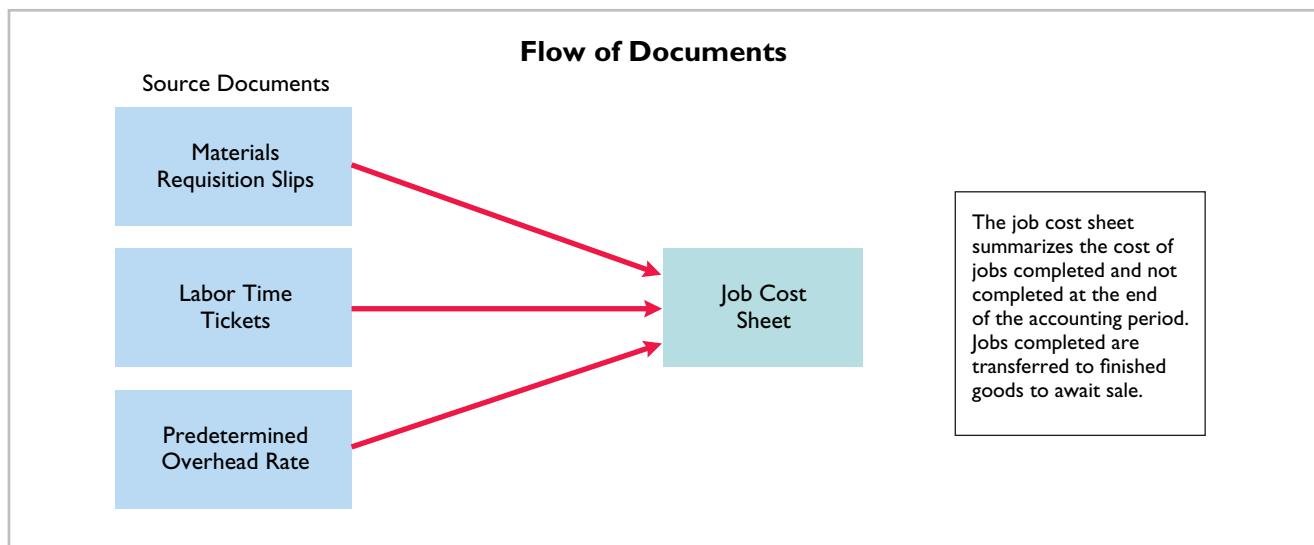

The cost flows in the diagram can be categorized as one of four types:

- **Accumulation.** The company first accumulates costs by (1) purchasing raw materials, (2) incurring labor costs, and (3) incurring manufacturing overhead costs.
- **Assignment to jobs.** Once the company has incurred manufacturing costs, it must assign them to specific jobs. For example, as it uses raw materials on specific jobs (4), the company assigns them to work in process or treats them as manufacturing overhead if the raw materials cannot be associated with a specific job. Similarly, the company either assigns factory labor (5) to work in process or treats it as manufacturing overhead if the factory labor cannot be associated with a specific job. Finally, the company assigns manufacturing overhead (6) to work in process using a *predetermined overhead rate*. This deserves emphasis: **Do not assign overhead using actual overhead costs but instead apply overhead using a predetermined rate.**
- **Completed jobs.** As jobs are completed (7), the company transfers the cost of the completed job out of work in process inventory into finished goods inventory.
- **When goods are sold.** As specific items are sold (8), the company transfers their cost out of finished goods inventory into cost of goods sold.

Illustration 20.16 summarizes the flow of documents in a job order cost system.

ILLUSTRATION 20.16 Flow of documents in a job order cost system

Job Order Costing for Service Companies

Our extended job order costing example focuses on a manufacturer so that you see the flow of costs through the inventory accounts. It is important to understand, however, that job order costing is also commonly used by service companies. While service companies do not have inventory, the techniques of job order costing are still quite useful in many service-industry environments. Consider, for example, the **Mayo Clinic** (healthcare), **Pricewaterhouse Coopers** (accounting), and **Goldman Sachs** (investment banking). These companies need to keep track of the cost of jobs performed for specific customers to evaluate the profitability of medical treatments, audits, or investment banking engagements.

Many service organizations bill their customers using cost-plus contracts. Cost-plus contracts mean that the customer's bill is the sum of the costs incurred on the job, plus a profit amount that is calculated as a percentage of the costs incurred. In order to minimize conflict with customers and reduce potential contract disputes, service companies that use cost-plus contracts must maintain accurate and up-to-date costing records. Up-to-date cost records enable a service company to immediately notify a customer of cost overruns due to customer requests for changes to the original plan or unexpected complications. Timely recordkeeping allows the contractor and customer to consider alternatives before it is too late.

A service company that uses a job order cost system does not have inventory accounts. It does, however, use an account similar to Work in Process Inventory, referred to here as Service Contracts in Process, to record job costs prior to completion. To illustrate the journal entries for a service company under a job order cost system, consider the following transactions for Dorm Decor, an interior design company. The entry to record the assignment of \$9,000 of supplies to projects (\$7,000 direct and \$2,000 indirect) is:

Service Contracts in Process	7,000
Operating Overhead	2,000
Supplies	
(To assign supplies to projects)	9,000

The entry to record the assignment of service salaries and wages of \$100,000 (\$84,000 direct and \$16,000 indirect) is:

Service Contracts in Process	84,000
Operating Overhead	16,000
Service Salaries and Wages	
(To assign personnel costs to projects)	100,000

Dorm Decor applies operating overhead at a rate of 50% of direct labor costs. The entry to record the application of overhead ($\$84,000 \times 50\%$) based on the \$84,000 of direct labor costs is:

Service Contracts in Process	42,000	
Operating Overhead (To assign operating overhead to projects)		42,000

Upon completion of a design project (for State University) the job cost sheet shows a total cost of \$34,000. The entry to record completion of this project is:

Cost of Completed Service Contracts	34,000	
Service Contracts in Process (To record completion of State University project)		34,000

Job cost sheets for a service company keep track of materials, labor, and overhead used on a particular job similar to a manufacturer. Several exercises at the end of this chapter apply job order costing to service companies.

Service Company Insight General Electric

© Christian Lagereek/iStockphoto

Sales Are Nice, but Service Revenue Pays the Bills

Jet engines are one of the many products made by the industrial operations division of **General Electric (GE)**. At prices as high as \$30 million per engine, you can bet that GE does its best to keep track of costs. It might surprise you that GE doesn't make much profit on the sale of each engine. So why does it bother making them? For the service revenue. During one recent year, about 75% of the division's revenues came from servicing its own products.

One estimate is that the \$13 billion in aircraft engines sold during a recent three-year period will generate about \$90 billion in service

revenue over the 30-year life of the engines. It hopes to have 44,000 engines in service by 2020.

Because of the high product costs, both the engines themselves and the subsequent service are most likely accounted for using job order costing. Accurate service cost records are important because GE needs to generate high profit margins (estimated to be 30%) on its service jobs to make up for the low margins on the original sale. It also needs good cost records for its service jobs in order to control its costs. Otherwise, a competitor, such as **Pratt and Whitney**, might submit lower bids for service contracts and take lucrative service jobs away from GE.

Sources: Paul Glader, "GE's Focus on Services Faces Test," *Wall Street Journal Online* (March 3, 2009); and Steve Heller, "General Electric's Untapped Opportunity in Aviation," *The Motley Fool* (August 27, 2016).

Explain why GE would use job order costing to keep track of the cost of repairing a malfunctioning engine for a major airline. (Go to WileyPLUS for this answer and additional questions.)

Advantages and Disadvantages of Job Order Costing

Job order costing is more precise in the assignment of costs to projects than process costing. For example, assume that a construction company, Juan Company, builds 10 custom homes a year at a total cost of \$2,000,000. One way to determine the cost of the homes is to divide the total construction cost incurred during the year by the number of homes produced during the year. For Juan Company, an average cost of \$200,000 ($\$2,000,000 \div 10$) is computed. If the homes are nearly identical, then this approach is adequate for purposes of determining profit per home. But if the homes vary in terms of size, style, and material types, using the average cost of \$200,000 to determine profit per home is inappropriate. Instead, Juan Company should use a job order cost system to determine the specific cost incurred to build each home and the amount of profit made on each. Thus, job order costing provides more useful information for determining the profitability of particular projects and for estimating costs when preparing bids on future jobs.

However, job order costing requires a significant amount of data entry. For Juan Company, it is much easier to simply keep track of total costs incurred during the year than it is to keep track of the costs incurred on each job (home built). Recording this information is time-consuming, and if the data is not entered accurately, then the product costs are incorrect. In recent years, technological advances, such as bar-coding devices for both labor costs and materials, have increased the accuracy and reduced the effort needed to record costs on specific jobs. These innovations expand the opportunities to apply job order costing in a wider variety of business settings, thus improving management's ability to control costs and make better informed decisions.

A common problem of all costing systems is how to assign overhead to the finished product. Overhead often represents more than 50% of a product's cost, and this cost is often difficult to assign meaningfully to the product. How, for example, is the salary of a project manager at Juan Company assigned to the various homes, which may differ in size, style, and cost of materials used? The accuracy of the job order cost system is largely dependent on the accuracy of the overhead allocation process. Even if the company does a good job of keeping track of the specific amounts of materials and labor used on each job, if the overhead costs are not assigned to individual jobs in a meaningful way, the product costing information is not useful.

DO IT! 4 | Completion and Sale of Jobs

During the current month, Onyx Corporation completed Job 109 and Job 112. Job 109 cost \$19,000 and Job 112 cost \$27,000. Job 112 was sold on account for \$42,000. Journalize the entries for the completion of the two jobs and the sale of Job 112.

ACTION PLAN

- Debit Finished Goods Inventory for the cost of completed jobs.
- Debit Cost of Goods Sold for the cost of jobs sold.

Solution

Finished Goods Inventory		46,000	
Work in Process Inventory			46,000
(To record completion of Job 109, costing \$19,000 and Job 112, costing \$27,000)			
Accounts Receivable		42,000	
Sales Revenue			42,000
(To record sale of Job 112)			
Cost of Goods Sold		27,000	
Finished Goods Inventory			27,000
(To record cost of goods sold for Job 112)

Applied Manufacturing Overhead

LEARNING OBJECTIVE 5

Distinguish between under- and overapplied manufacturing overhead.

At the end of a period, companies prepare financial statements that present aggregate data on all jobs manufactured and sold. The cost of goods manufactured schedule in job order costing is the same as in Chapter 19 with one exception: **The schedule shows manufacturing overhead applied, rather than actual overhead costs. The company adds this amount to direct materials and direct labor to determine total manufacturing costs.**

Companies prepare the cost of goods manufactured schedule directly from the Work in Process Inventory account (see **Helpful Hint**). **Illustration 20.17** shows a condensed schedule for Wallace Company for January.

Wallace Company Cost of Goods Manufactured Schedule For the Month Ending January 31, 2020		
Work in process, January 1		\$ -0-
Direct materials used	\$24,000	
Direct labor	28,000	
Manufacturing overhead applied	22,400	
Total manufacturing costs		74,400
Total cost of work in process		\$74,400
Less: Work in process, January 31		35,400
Cost of goods manufactured		<u><u>\$39,000</u></u>

ILLUSTRATION 20.17

Cost of goods manufactured schedule

HELPFUL HINT

Companies usually prepare monthly financial statements for management use only.

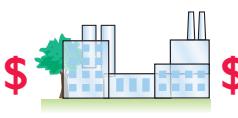

Note that the cost of goods manufactured (\$39,000) agrees with the amount transferred from Work in Process Inventory to Finished Goods Inventory in journal entry No. 7 in Illustration 20.15.

Under- or Overapplied Manufacturing Overhead

Recall that overhead is applied based on an estimate of total annual overhead costs. This estimate will rarely be exactly equal to actual overhead incurred. Therefore, at the end of the year, after overhead has been applied to specific jobs, the Manufacturing Overhead account will likely have a remaining balance.

When Manufacturing Overhead has a **debit balance**, overhead is said to be underapplied. **Underapplied overhead** means that the overhead applied to work in process is less than the overhead incurred. Conversely, when manufacturing overhead has a **credit balance**, overhead is overapplied. **Overapplied overhead** means that the overhead applied to work in process is greater than the overhead incurred. **Illustration 20.18** shows these concepts.

ILLUSTRATION 20.18 Under- and overapplied overhead

 Manufacturing Overhead	<table border="1" style="width: 100%; border-collapse: collapse;"> <thead> <tr> <th colspan="2" style="text-align: center;">Manufacturing Overhead</th></tr> <tr> <th style="text-align: center;">Actual (Costs incurred)</th><th style="text-align: center;">Applied (Costs assigned)</th></tr> </thead> <tbody> <tr> <td style="text-align: center;">\$</td><td style="text-align: center;">\$</td></tr> </tbody> </table>	Manufacturing Overhead		Actual (Costs incurred)	Applied (Costs assigned)	\$	\$	<p>If applied is less than actual, manufacturing overhead is underapplied.</p> <p>If applied is greater than actual, manufacturing overhead is overapplied.</p>
Manufacturing Overhead								
Actual (Costs incurred)	Applied (Costs assigned)							
\$	\$							

Year-End Balance

At the end of the year, all manufacturing overhead transactions are complete. There is no further opportunity for offsetting events to occur. At this point, Wallace Company eliminates any balance in Manufacturing Overhead by an adjusting entry. It considers under- or overapplied overhead to be an **adjustment to cost of goods sold**. Thus, Wallace **debits underapplied overhead to Cost of Goods Sold**. It **credits overapplied overhead to Cost of Goods Sold**.

To illustrate, as noted earlier in the chapter and shown below, after overhead of \$22,400, Wallace has a \$1,400 debit balance in Manufacturing Overhead at December 31. This occurred because the amount of overhead applied was less than the amount incurred during the period.

Manufacturing Overhead	
Incurred	13,800
	6,000
	4,000
	1,400
	22,400]- Applied

The adjusting entry for the underapplied overhead is:

Dec. 31	Cost of Goods Sold	1,400	
	Manufacturing Overhead (To transfer underapplied overhead to cost of goods sold)		1,400

After Wallace posts this entry, Manufacturing Overhead has a zero balance. In preparing an income statement for the year, Wallace reports cost of goods sold **after adjusting it** for either under- or overapplied overhead.

Illustration 20.19 presents an income statement for Wallace after adjusting for the \$1,400 of underapplied overhead.

ILLUSTRATION 20.19
Partial income statement

Wallace Company
Income Statement (partial)
For the Month Ending January 31, 2020

Sales revenue	\$50,000
Cost of goods sold	
Finished goods inventory, January 1	\$ -0-
Cost of goods manufactured (see Illustration 20.17)	39,000
Cost of goods available for sale	39,000
Less: Finished goods inventory, January 31	-0-
Cost of goods sold—unadjusted	39,000
Add: Adjustment for underapplied overhead	1,400
Cost of goods sold—adjusted	40,400
Gross profit	\$ 9,600

For more accurate costing, significant under- or overapplied overhead at the end of the year should be allocated among ending work in process, finished goods, and cost of goods sold. The discussion of this allocation approach is left to more advanced courses.

DO IT! 5 | Applied Manufacturing Overhead

For Karr Company, the predetermined overhead rate is 140% of direct labor cost. During the month, Karr incurred \$90,000 of factory labor costs, of which \$80,000 is direct labor and \$10,000 is indirect labor. Actual overhead incurred (including indirect labor) was \$119,000.

Compute the amount of manufacturing overhead applied during the month. Determine the amount of under- or overapplied manufacturing overhead.

Solution

$$\begin{aligned}\text{Manufacturing overhead applied} &= (140\% \times \$80,000) = \$112,000 \\ \text{Underapplied manufacturing overhead} &= (\$119,000 - \$112,000) = \$7,000\end{aligned}$$

Related exercise material: BE20.10, DO IT! 20.5, E20.4, E20.5, E20.9, and E20.13.

ACTION PLAN

- Calculate the amount of overhead applied by multiplying the predetermined overhead rate by actual activity.
- If applied overhead is less than actual, overhead is underapplied.
- If applied overhead is greater than actual, overhead is overapplied.

Review and Practice

Learning Objectives Review

1 Describe cost systems and the flow of costs in a job order system.

Cost accounting involves the procedures for measuring, recording, and reporting product costs. From the data accumulated, companies determine the total cost and the unit cost of each product. The two basic types of cost accounting systems are process cost and job order cost.

In job order costing, companies first accumulate manufacturing costs in three accounts: Raw Materials Inventory, Factory Labor, and Manufacturing Overhead. They then assign the accumulated costs to Work in Process Inventory and eventually to Finished Goods Inventory and Cost of Goods Sold.

2 Use a job cost sheet to assign costs to work in process.

A job cost sheet is a form used to record the costs chargeable to a specific job and to determine the total and unit costs of the completed job. Job cost sheets constitute the subsidiary ledger for the Work in Process Inventory control account.

3 Demonstrate how to determine and use the predetermined overhead rate.

The predetermined overhead rate is based on the relationship between estimated annual overhead costs and estimated annual operating activity. This is expressed in terms of a common activity base, such as direct labor cost. Companies use this rate to assign overhead costs to work in process and to specific jobs.

4 Prepare entries for manufacturing and service jobs completed and sold.

When jobs are completed, companies debit the cost to Finished Goods Inventory and credit it to Work in Process Inventory. When a job is sold, the entries are (a) debit Cash or Accounts Receivable and credit Sales Revenue for the selling price, and (b) debit Cost of Goods Sold and credit Finished Goods Inventory for the cost of the goods.

5 Distinguish between under- and overapplied manufacturing overhead.

Underapplied manufacturing overhead indicates that the overhead assigned to work in process is less than the overhead incurred. Overapplied overhead indicates that the overhead assigned to work in process is greater than the overhead incurred.

Glossary Review

Cost accounting An area of accounting that involves measuring, recording, and reporting product and service costs. (p. 20-3).

Cost accounting system Manufacturing and service cost accounts that are fully integrated into the general ledger of a company. (p. 20-3).

Job cost sheet A form used to record the costs chargeable to a specific job and to determine the total and unit costs of the completed job. (p. 20-7).

Job order cost system A cost accounting system in which costs are assigned to each job or batch. (p. 20-3).

Materials requisition slip A document authorizing the issuance of raw materials from the storeroom to production. (p. 20-8).

Overapplied overhead A situation in which overhead applied to work in process is greater than the overhead incurred. (p. 20-21).

Predetermined overhead rate A rate based on the relationship between estimated annual overhead costs and estimated annual operating activity, expressed in terms of a common activity base. (p. 20-12).

Process cost system A cost accounting system used when a company manufactures a large volume of similar products. (p. 20-3).

Time ticket A document that indicates the employee, the hours worked, the account and job to be charged, and the total labor cost. (p. 20-10).

Underapplied overhead A situation in which overhead applied to work in process is less than the overhead incurred. (p. 20-21).

Practice Multiple-Choice Questions

1. (LO 1) Cost accounting involves the measuring, recording, and reporting of:

- a. product and service costs.
- b. future costs.

c. manufacturing processes.

d. managerial accounting decisions.

2. (LO 1) A company is more likely to use a job order cost system if:

- a. it manufactures a large volume of similar products.

- b. its production is continuous.
- c. it manufactures products with unique characteristics.
- d. it uses a periodic inventory system.

3. (LO 1) In accumulating raw materials costs, companies debit the cost of raw materials purchased in a perpetual system to:

- a. Raw Materials Purchases.
- b. Raw Materials Inventory.
- c. Purchases.
- d. Work in Process.

4. (LO 1) When incurred, factory labor costs are debited to:

- a. Work in Process.
- b. Factory Wages Expense.
- c. Factory Labor.
- d. Factory Wages Payable.

5. (LO 1) The flow of costs in job order costing:

- a. begins with work in process inventory and ends with finished goods inventory.
- b. begins as soon as a sale occurs.
- c. parallels the physical flow of materials as they are converted into finished goods and then sold.
- d. is necessary to prepare the cost of goods manufactured schedule.

6. (LO 2) Raw materials are assigned to a job when:

- a. the job is sold.
- b. the materials are purchased.
- c. the materials are received from the vendor.
- d. the materials are issued by the materials storeroom.

7. (LO 2) The source of information for assigning costs to job cost sheets are:

- a. invoices, time tickets, and the predetermined overhead rate.
- b. materials requisition slips, time tickets, and the actual overhead costs.
- c. materials requisition slips, payroll register, and the predetermined overhead rate.
- d. materials requisition slips, time tickets, and the predetermined overhead rate.

8. (LO 2) In recording the issuance of raw materials in a job order cost system, it would be **incorrect** to:

- a. debit Work in Process Inventory.
- b. debit Finished Goods Inventory.
- c. debit Manufacturing Overhead.
- d. credit Raw Materials Inventory.

9. (LO 2) The entry when direct factory labor is assigned to jobs is a debit to:

- a. Work in Process Inventory and a credit to Factory Labor.
- b. Manufacturing Overhead and a credit to Factory Labor.
- c. Factory Labor and a credit to Manufacturing Overhead.
- d. Factory Labor and a credit to Work in Process Inventory.

10. (LO 3) The formula for computing the predetermined manufacturing overhead rate is estimated annual overhead costs divided by estimated annual operating activity, expressed as:

- a. direct labor cost.
- b. direct labor hours.
- c. machine hours.
- d. Any of the above.

11. (LO 3) In Crawford Company, the predetermined overhead rate is 80% of direct labor cost. During the month, Crawford incurs \$210,000 of factory labor costs, of which \$180,000 is direct labor and \$30,000 is indirect labor. Actual overhead incurred was \$200,000. The amount of overhead debited to Work in Process Inventory should be:

- a. \$200,000.
- b. \$144,000.
- c. \$168,000.
- d. \$160,000.

12. (LO 4) Mynex Company completes Job No. 26 at a cost of \$4,500 and later sells it for \$7,000 cash. A **correct** entry is:

- a. debit Finished Goods Inventory \$7,000 and credit Work in Process Inventory \$7,000.
- b. debit Cost of Goods Sold \$7,000 and credit Finished Goods Inventory \$7,000.
- c. debit Finished Goods Inventory \$4,500 and credit Work in Process Inventory \$4,500.
- d. debit Accounts Receivable \$7,000 and credit Sales Revenue \$7,000.

13. (LO 5) At the end of an accounting period, a company using a job order cost system calculates the cost of goods manufactured:

- a. from the job cost sheet.
- b. from the Work in Process Inventory account.
- c. by adding direct materials used, direct labor incurred, and manufacturing overhead incurred.
- d. from the Cost of Goods Sold account.

14. (LO 4) Which of the following statements is **true**?

- a. Job order costing requires less data entry than process costing.
- b. Allocation of overhead is easier under job order costing than process costing.
- c. Job order costing provides more precise costing for custom jobs than process costing.
- d. The use of job order costing has declined because more companies have adopted automated accounting systems.

15. (LO 5) At end of the year, a company has a \$1,200 debit balance in Manufacturing Overhead. The company:

- a. makes an adjusting entry by debiting Manufacturing Overhead Applied for \$1,200 and crediting Manufacturing Overhead for \$1,200.
- b. makes an adjusting entry by debiting Manufacturing Overhead Expense for \$1,200 and crediting Manufacturing Overhead for \$1,200.

- c. makes an adjusting entry by debiting Cost of Goods Sold for \$1,200 and crediting Manufacturing Overhead for \$1,200.
- d. makes no adjusting entry because differences between actual overhead and the amount applied are a normal part of job order costing and will average out over the next year.

- 16. (LO 5)** Manufacturing overhead is underapplied if:
- a. actual overhead is less than applied.
 - b. actual overhead is greater than applied.
 - c. the predetermined rate equals the actual rate.
 - d. actual overhead equals applied overhead.

Solutions

- 1. a.** Cost accounting involves the measuring, recording, and reporting of product and service costs, not (b) future costs, (c) manufacturing processes, or (d) managerial accounting decisions.
- 2. c.** A job costing system is more likely for products with unique characteristics. The other choices are incorrect because a process cost system is more likely for (a) large volumes of similar products or (b) if production is continuous. (d) is incorrect because the choice of a costing system is not dependent on whether a periodic or perpetual inventory system is used.
- 3. b.** In a perpetual system, purchases of raw materials are debited to Raw Materials Inventory, not (a) Raw Materials Purchases, (c) Purchases, or (d) Work in Process.
- 4. c.** When factory labor costs are incurred, they are debited to Factory Labor, not (a) Work in Process, (b) Factory Wages Expense, or (d) Factory Wages Payable (they are debited to Factory Labor and credited to Factory Wages Payable).
- 5. c.** Job order costing parallels the physical flow of materials as they are converted into finished goods. The other choices are incorrect because job order costing begins (a) with raw materials, not work in process, and ends with cost of goods sold; and (b) as soon as raw materials are purchased, not when the sale occurs. (d) is incorrect because the cost of goods manufactured schedule is prepared from the Work in Process account and is only a portion of the costs in a job order system.
- 6. d.** Raw materials are assigned to a job when the materials are issued by the materials storeroom, not when (a) the job is sold, (b) the materials are purchased, or (c) the materials are received from the vendor.
- 7. d.** Materials requisition slips are used to assign direct materials, time tickets are used to assign direct labor, and the predetermined overhead rate is used to assign manufacturing overhead to job cost sheets. The other choices are incorrect because (a) materials requisition slips, not invoices, are used to assign direct materials; (b) the predetermined overhead rate, not the actual overhead costs, is used to assign manufacturing overhead; and (c) time tickets, not the payroll register, are used to assign direct labor.
- 8. b.** Finished Goods Inventory is debited when goods are transferred from work in process to finished goods, not when raw materials are issued for a job. Choices (a), (c), and (d) are true statements.
- 9. a.** When direct factory labor is assigned to jobs, the entry is a debit to Work in Process Inventory and a credit to Factory Labor. The other choices are incorrect because (b) Work in Process Inventory, not Manufacturing Overhead, is debited; (c) Work in Process Inventory,
- not Factory Labor, is debited and Factory Labor, not Manufacturing Overhead, is credited; and (d) Work in Process Inventory, not Factory Labor, is debited and Factory Labor, not Work in Process Inventory, is credited.
- 10. d.** Any of the activity measures mentioned can be used in computing the predetermined manufacturing overhead rate. Choices (a) direct labor cost, (b) direct labor hours, and (c) machine hours can all be used in computing the predetermined manufacturing overhead rate, but (d) is the best answer.
- 11. b.** Work in Process Inventory should be debited for \$144,000 ($\$180,000 \times 80\%$), the amount of manufacturing overhead applied, not (a) \$200,000, (c) \$168,000, or (d) \$160,000.
- 12. c.** When a job costing \$4,500 is completed, Finished Goods Inventory is debited and Work in Process Inventory is credited for \$4,500. Choices (a) and (b) are incorrect because the amounts should be for the cost of the job (\$4,500), not the sale amount (\$7,000). Choice (d) is incorrect because the debit should be to Cash, not Accounts Receivable.
- 13. b.** At the end of an accounting period, a company using a job costing system prepares the cost of goods manufactured from the Work in Process Inventory account, not (a) the job cost sheet; (c) by adding direct materials used, direct labor incurred, and manufacturing overhead incurred; or (d) from the Cost of Goods Sold Account.
- 14. c.** Job order costing provides more precise costing for custom jobs than process costing. The other choices are incorrect because (a) job order costing often requires significant data entry, (b) overhead allocation is a problem for all costing systems, and (d) the use of job order costing has increased due to automated accounting systems.
- 15. c.** The company would make an adjusting entry for the underapplied overhead by debiting Cost of Goods Sold for \$1,200 and crediting Manufacturing Overhead for \$1,200, not by debiting (a) Manufacturing Overhead Applied for \$1,200 or (b) Manufacturing Overhead Expense for \$1,200. Choice (d) is incorrect because at the end of the year, a company makes an entry to eliminate any balance in Manufacturing Overhead.
- 16. b.** Manufacturing overhead is underapplied if actual overhead is greater than applied overhead. The other choices are incorrect because (a) if actual overhead is less than applied, then manufacturing overhead is overapplied; (c) if the predetermined rate equals the actual rate, the actual overhead costs incurred equal the overhead costs applied, neither over- nor underapplied; and (d) if the actual overhead equals the applied overhead, neither over- nor underapplied occurs.

Practice Brief Exercises

Prepare entries to record factory labor.

- 1. (LO 2)** During January, its first month of operations, Swarzak Company had factory labor of \$9,000, of which \$7,500 relates to factory wages payable and \$1,500 relates to payroll taxes payable. Time tickets show that the factory labor of \$9,000 was used as follows: Job 1 \$3,200, Job 2 \$2,600, Job 3 \$2,200, and general factory use \$1,000. Prepare summary journal entries to record factory labor.

Solution

1. Jan. 31	Factory Labor Factory Wages Payable Employer Payroll Taxes Payable	9,000	7,500 1,500
Jan. 31	Work in Process Inventory Manufacturing Overhead Factory Labor	8,000 1,000	9,000

Assign manufacturing overhead to production.

- 2. (LO 3)** Brock Company estimates that annual manufacturing overhead costs will be \$950,000. Annual direct labor cost is the base used to apply overhead, and it is estimated to be \$500,000. During January, Brock incurred direct labor costs of \$40,000. Prepare the entry to assign overhead to production.

Solution

2. Overhead rate based on direct labor cost = $(\$950,000 \div \$500,000) = 190\%$.

Jan. 31	Work in Process Inventory Manufacturing Overhead ($\$40,000 \times 190\%$)	76,000	76,000
---------	---	--------	--------

Prepare entries for completion and sale of jobs.

- 3. (LO 4)** In May, Huntzinger Company completes Jobs 14, 15, and 16. Job 14 cost \$40,000, Job 15 \$70,000, and Job 16 \$35,000. On May 31, Job 14 is sold to a customer on account for \$72,000. Journalize the entries for the completion of the three jobs and the sale of Job 14.

Solution

3. May 31	Finished Goods Inventory Work in Process Inventory	145,000	145,000
31	Accounts Receivable Sales Revenue	72,000	72,000
31	Cost of Goods Sold Finished Goods Inventory	40,000	40,000

Prepare adjusting entries for under- and overapplied overhead.

- 4. (LO 5)** At December 31, balances in Manufacturing Overhead are Alex Company—debit \$2,200, Katz Company—credit \$1,900. Prepare the adjusting entry for each company at December 31, assuming the adjustment is made to cost of goods sold.

Solution

- 4.

Dec. 31	Cost of Goods Sold Manufacturing Overhead	Alex Company	2,200	2,200
Dec. 31	Manufacturing Overhead Cost of Goods Sold	Katz Company	1,900	1,900

Practice Exercises

- 1. (LO 1, 2, 3, 4)** A job order cost sheet for Michaels Company is shown below.

Analyze a job cost sheet and prepare entries for manufacturing costs.

Job No. 92		For 2,000 Units		
Date		Direct Materials	Direct Labor	Manufacturing Overhead
Beg. bal. Jan.	1	3,925	6,000	4,200
	8	6,000		
	12		8,500	6,375
	25	2,000		
	27		4,000	3,000
		11,925	18,500	13,575
Cost of completed job:				
Direct materials				\$11,925
Direct labor				18,500
Manufacturing overhead				<u>13,575</u>
Total cost				<u>\$44,000</u>
Unit cost ($\$44,000 \div 2,000$)				<u><u>\$ 22.00</u></u>

Instructions

- Answer the following questions.
 - What was the balance in Work in Process Inventory on January 1 if this was the only unfinished job?
 - If manufacturing overhead is applied on the basis of direct labor cost, what overhead rate was used in each year?
- Prepare summary entries at January 31 to record the current year's transactions pertaining to Job No. 92.

Solution

1. \$14,125, or $(\$3,925 + \$6,000 + \$4,200)$.
2. Last year 70%, or $(\$4,200 \div \$6,000)$; this year 75% (either $\$6,375 \div \$8,500$ or $\$3,000 \div \$4,000$).

b.	Jan. 31	Work in Process Inventory	8,000	
		Raw Materials Inventory		8,000
		(\$6,000 + \$2,000)		
	31	Work in Process Inventory	12,500	
		Factory Labor		12,500
		(\$8,500 + \$4,000)		
	31	Work in Process Inventory	9,375	
		Manufacturing Overhead		9,375
		(\$6,375 + \$3,000)		
	31	Finished Goods Inventory	44,000	
		Work in Process Inventory		44,000

- (LO 3, 5) Kwik Kopy Company applies operating overhead to photocopying jobs on the basis of machine hours used. Overhead costs are estimated to total \$290,000 for the year, and machine usage is estimated at 125,000 hours.

Compute the overhead rate and under- or overapplied overhead.

For the year, \$295,000 of overhead costs are incurred and 130,000 hours are used.

Instructions

- Compute the service overhead rate for the year.
- What is the amount of under- or overapplied overhead at December 31?
- Assuming the under- or overapplied overhead for the year is not allocated to inventory accounts, prepare the adjusting entry to assign the amount to cost of jobs finished.

Solution

2. a. \$2.32 per machine hour ($\$290,000 \div 125,000$).

b. $(\$295,000) - (\$2.32 \times 130,000 \text{ machine hours})$
 $\$295,000 - \$301,600 = \$6,600 \text{ overapplied}$

c. Operating Overhead
Cost of Goods Sold

	6,600		6,600
--	-------	--	-------

Practice Problem

Compute predetermined overhead rate, apply overhead, and calculate under- or overapplied overhead.

(LO 3, 5) Cardella Company applies overhead on the basis of direct labor costs. The company estimates annual overhead costs will be \$760,000 and annual direct labor costs will be \$950,000. During February, Cardella works on two jobs: A16 and B17. Summary data concerning these jobs are as follows.

Manufacturing Costs Incurred

Purchased \$54,000 of raw materials on account.

Factory labor \$76,000, plus \$4,000 employer payroll taxes.

Manufacturing overhead incurred exclusive of indirect materials and indirect labor \$59,800.

Assignment of Costs

Direct materials: Job A16 \$27,000, Job B17 \$21,000

Indirect materials: \$3,000

Direct labor: Job A16 \$52,000, Job B17 \$26,000

Indirect labor: \$2,000

By the end of February, the company completed Job A16 and sold it on account for \$150,000. Job B17 was only partially completed.

Instructions

- Compute the predetermined overhead rate.
- Journalize the February transactions in the sequence followed in the chapter.
- What was the amount of under- or overapplied manufacturing overhead?

Solution

a. Estimated annual overhead costs \div Estimated annual operating activity = Predetermined overhead rate
 $\$760,000 \div \$950,000 = 80\%$

b.

(1)			
Feb. 28	Raw Materials Inventory Accounts Payable (Purchase of raw materials on account)	54,000	54,000

(2)

28	Factory Labor Factory Wages Payable Employer Payroll Taxes Payable (To record factory labor costs)	80,000	76,000 4,000
----	---	--------	-----------------

	(3)		
28	Manufacturing Overhead Accounts Payable, Accumulated Depreciation, and Prepaid Insurance (To record overhead costs)	59,800	59,800
	(4)		
28	Work in Process Inventory Manufacturing Overhead Raw Materials Inventory (To assign raw materials to production)	48,000 3,000	51,000
	(5)		
28	Work in Process Inventory Manufacturing Overhead Factory Labor (To assign factory labor to production)	78,000 2,000	80,000
	(6)		
28	Work in Process Inventory Manufacturing Overhead (To assign overhead to jobs— $80\% \times \$78,000$)	62,400	62,400
	(7)		
28	Finished Goods Inventory Work in Process Inventory (To record completion of Job A16: direct materials \$27,000, direct labor \$52,000, and manufacturing overhead \$41,600)	120,600	120,600
	(8)		
28	Accounts Receivable Sales Revenue (To record sale of Job A16)	150,000	150,000
28	Cost of Goods Sold Finished Goods Inventory (To record cost of sale for Job A16)	120,600	120,600

c. Manufacturing Overhead has a debit balance of \$2,400 as shown below.

Manufacturing Overhead			
(3)	59,800	(6)	62,400
(4)	3,000		
(5)	2,000		
Bal.	2,400		

Thus, manufacturing overhead is underapplied for the month.

WileyPLUS

Brief Exercises, DO IT! Exercises, Exercises, Problems, and many additional resources are available for practice in WileyPLUS.

Questions

1. a. Mary Barrett is not sure about the difference between cost accounting and a cost accounting system. Explain the difference to Mary.
 2. a. Distinguish between the two types of cost accounting systems.
b. Can a company use both types of cost accounting systems?
 3. What type of industry is likely to use a job order cost system? Give some examples.
- b. What is an important feature of a cost accounting system?

4. What type of industry is likely to use a process cost system? Give some examples.
5. Your roommate asks your help in understanding the major steps in the flow of costs in a job order cost system. Identify the steps for your roommate.
6. There are three inventory control accounts in a job order system. Identify the control accounts and their subsidiary ledgers.
7. What source documents are used in accumulating direct labor costs?
8. “Entries to Manufacturing Overhead normally are only made daily.” Do you agree? Explain.
9. Stan Kaiser is confused about the source documents used in assigning materials and labor costs. Identify the documents and give the entry for each document.
10. What is the purpose of a job cost sheet?
11. Indicate the source documents that are used in charging costs to specific jobs.
12. Explain the purpose and use of a “materials requisition slip” as used in a job order cost system.
13. Sam Bowden believes actual manufacturing overhead should be charged to jobs. Do you agree? Why or why not?
14. What elements are involved in computing a predetermined overhead rate?
15. How can the agreement of Work in Process Inventory and job cost sheets be verified?
16. Jane Neff believes that the cost of goods manufactured schedule in job order cost accounting is the same as shown in Chapter 19. Is Jane correct? Explain.
17. Matt Litke is confused about under- and overapplied manufacturing overhead. Define the terms for Matt, and indicate the balance in the manufacturing overhead account applicable to each term.
18. “At the end of the year, under- or overapplied overhead is closed to Income Summary.” Is this correct? If not, indicate the customary treatment of this amount.

Brief Exercises

Prepare a flowchart of a job order cost accounting system and identify transactions.

Prepare entries in accumulating manufacturing costs.

Prepare entry for the assignment of raw materials costs.

Prepare entry for the assignment of factory labor costs.

Prepare job cost sheets.

Compute predetermined overhead rates.

Assign manufacturing overhead to production.

Prepare entries for completion and sale of completed jobs.

Prepare entries for service salaries and wages and operating overhead.

Prepare adjusting entries for under- and overapplied overhead.

BE20.1 (LO 1) Dieker Company begins operations on January 1. Because all work is done to customer specifications, the company decides to use a job order cost system. Prepare a flowchart of a typical job order system with arrows showing the flow of costs. Identify the eight transactions.

BE20.2 (LO 1) During January, its first month of operations, Dieker Company accumulated the following manufacturing costs: raw materials purchased \$4,000 on account, factory labor incurred \$6,000 of which \$5,200 relates to factory wages payable and \$800 relates to payroll taxes payable, and factory utilities payable \$2,000. Prepare separate journal entries for each type of manufacturing cost.

BE20.3 (LO 2) In January, Dieker Company requisitions raw materials for production as follows: Job 1 \$900, Job 2 \$1,200, Job 3 \$700, and general factory use \$600. Prepare a summary journal entry to record raw materials used.

BE20.4 (LO 2) Factory labor data for Dieker Company is given in BE20.2. During January, time tickets show that the factory labor of \$6,000 was used as follows: Job 1 \$2,200, Job 2 \$1,600, Job 3 \$1,400, and general factory use \$800. Prepare a summary journal entry to record factory labor used.

BE20.5 (LO 2) Data pertaining to job cost sheets for Dieker Company are given in BE20.3 and BE20.4. Prepare the job cost sheets for each of the three jobs using the format shown in Illustration 20.8. (*Note:* You may omit the column for Manufacturing Overhead.)

BE20.6 (LO 3) Marquis Company estimates that annual manufacturing overhead costs will be \$900,000. Estimated annual operating activity bases are direct labor cost \$500,000, direct labor hours 50,000, and machine hours 100,000. Compute the predetermined overhead rate for each activity base.

BE20.7 (LO 3) During the first quarter, Francum Company incurs the following direct labor costs: January \$40,000, February \$30,000, and March \$50,000. For each month, prepare the entry to assign overhead to production using a predetermined rate of 70% of direct labor cost.

BE20.8 (LO 4) In March, Stinson Company completes Jobs 10 and 11. Job 10 cost \$20,000 and Job 11 \$30,000. On March 31, Job 10 is sold to the customer for \$35,000 in cash. Journalize the entries for the completion of the two jobs and the sale of Job 10.

BE20.9 (LO 4) Ruiz Engineering Contractors incurred service salaries and wages of \$36,000 (\$28,000 direct and \$8,000 indirect) on an engineering project. The company applies overhead at a rate of 25% of direct labor. Record the entries to assign service salaries and wages and to apply overhead.

BE20.10 (LO 5) At December 31, balances in Manufacturing Overhead are Shimeca Company—debit \$1,200, Garcia Company—credit \$900. Prepare the adjusting entry for each company at December 31, assuming the adjustment is made to cost of goods sold.

DO IT! Exercises

DO IT! 20.1 (LO 1) During the current month, Wacholz Company incurs the following manufacturing costs.

- Purchased raw materials of \$18,000 on account.
- Incurred factory labor of \$40,000. Of that amount, \$31,000 relates to wages payable and \$9,000 relates to payroll taxes payable.
- Factory utilities of \$3,100 are payable, prepaid factory property taxes of \$2,700 have expired, and depreciation on the factory building is \$9,500.

Prepare journal entries for each type of manufacturing cost. (Use a summary entry to record manufacturing overhead.)

DO IT! 20.2 (LO 2) Milner Company is working on two job orders. The job cost sheets show the following.

	<u>Job 201</u>	<u>Job 202</u>
Direct materials	\$7,200	\$9,000
Direct labor	4,000	8,000
Manufacturing overhead	5,200	9,800

Prepare the three summary entries to record the assignment of costs to Work in Process from the data on the job cost sheets.

DO IT! 20.3 (LO 3) Washburn Company produces earbuds. During the year, manufacturing overhead costs are estimated to be \$200,000. Estimated machine usage is 2,500 hours. The company assigns overhead based on machine hours. Job No. 551 used 90 machine hours. Compute the predetermined overhead rate, determine the amount of overhead to apply to Job No. 551, and prepare the entry to apply overhead to Job No. 551 on January 15.

DO IT! 20.4 (LO 4) During the current month, Standard Corporation completed Job 310 and Job 312. Job 310 cost \$70,000 and Job 312 cost \$50,000. Job 312 was sold on account for \$90,000. Journalize the entries for the completion of the two jobs and the sale of Job 312.

DO IT! 20.5 (LO 5) For Eckstein Company, the predetermined overhead rate is 130% of direct labor cost. During the month, Eckstein incurred \$100,000 of factory labor costs, of which \$85,000 is direct labor and \$15,000 is indirect labor. Actual overhead incurred was \$115,000. Compute the amount of manufacturing overhead applied during the month. Determine the amount of under- or overapplied manufacturing overhead.

Prepare journal entries for manufacturing costs.

Assign costs to work in process.

Compute and apply the predetermined overhead rate.

Prepare entries for completion and sale of jobs.

Apply manufacturing overhead and determine under- or overapplication.

Exercises

E20.1 (LO 1, 2) The wages payable related to the factory workers for Larkin Company during the month of January are \$76,000. The employer's payroll taxes for the factory payroll are \$8,000. The fringe benefits to be paid by the employer on this payroll are \$6,000. Of the total accumulated cost of factory labor, 85% is related to direct labor and 15% is attributable to indirect labor.

Prepare entries for factory labor.

Instructions

- Prepare the entry to record the factory labor costs for the month of January.
- Prepare the entry to assign factory labor to production.

E20.2 (LO 1, 2, 3, 4) Stine Company uses a job order cost system. On May 1, the company has a balance in Work in Process Inventory of \$3,500 and two jobs in process: Job No. 429 \$2,000, and Job No. 430 \$1,500. During May, a summary of source documents reveals the following.

Prepare journal entries for manufacturing costs.

Job Number	Materials		Labor	
	Requisition Slips		Time Tickets	
429	\$2,500		\$1,900	
430	3,500		3,000	
431	4,400	\$10,400	7,600	\$12,500
General use		800		1,200
		<u><u>\$11,200</u></u>		<u><u>\$13,700</u></u>

Stine Company applies manufacturing overhead to jobs at an overhead rate of 60% of direct labor cost. Job No. 429 is completed during the month.

Instructions

- Prepare summary journal entries to record (1) the requisition slips, (2) the time tickets, (3) the assignment of manufacturing overhead to jobs, and (4) the completion of Job No. 429.
- Post the entries to Work in Process Inventory, and prove the agreement of the control account with the job cost sheets. (Use a T-account.)

Analyze a job cost sheet and prepare entries for manufacturing costs.

E20.3 (LO 1, 2, 3, 4) A job order cost sheet for Ryan Company is shown below.

Job No. 92		For 2,000 Units		
Date		Direct Materials	Direct Labor	Manufacturing Overhead
Beg. bal. Jan.	1	5,000	6,000	4,200
	8	6,000		
	12		8,000	6,400
	25	2,000		
	27		4,000	3,200
		13,000	18,000	13,800
Cost of completed job:				
Direct materials				
Direct labor				
Manufacturing overhead				
Total cost				
Unit cost ($\$44,800 \div 2,000$)				

Instructions

- On the basis of the foregoing data, answer the following questions.
 - What was the balance in Work in Process Inventory on January 1 if this was the only unfinished job?
 - If manufacturing overhead is applied on the basis of direct labor cost, what overhead rate was used in each year?
- Prepare summary entries at January 31 to record the current year's transactions pertaining to Job No. 92.

Analyze costs of manufacturing and determine missing amounts.

E20.4 (LO 1, 5) Manufacturing cost data for Orlando Company, which uses a job order cost system, are presented below.

	Case A	Case B
Direct materials used	\$ (a)	\$ 83,000
Direct labor	50,000	140,000
Manufacturing overhead applied	42,500	(d)
Total manufacturing costs	145,650	(e)
Work in process 1/1/20	(b)	15,500
Total cost of work in process	201,500	(f)
Work in process 12/31/20	(c)	11,800
Cost of goods manufactured	192,300	(g)

Instructions

Indicate the missing amount for each letter. Assume that in all cases manufacturing overhead is applied on the basis of direct labor cost and the rate is the same.

E20.5 (LO 3, 5) Ikerd Company applies manufacturing overhead to jobs on the basis of machine hours used. Overhead costs are estimated to total \$300,000 for the year, and machine usage is estimated at 125,000 hours.

For the year, \$322,000 of overhead costs are incurred and 130,000 hours are used.

Compute the manufacturing overhead rate and under- or overapplied overhead.

Instructions

- Compute the manufacturing overhead rate for the year.
- What is the amount of under- or overapplied overhead at December 31?
- Prepare the adjusting entry to assign the under- or overapplied overhead for the year to cost of goods sold.

E20.6 (LO 1, 2, 3, 4) A job cost sheet of Sandoval Company is given below.

Analyze job cost sheet and prepare entry for completed job.

Job Cost Sheet			
JOB NO. 469		Quantity 2,500	
ITEM White Lion Cages		Date Requested 7/2	
FOR Todd Company		Date Completed 7/31	
Date	Direct Materials	Direct Labor	Manufacturing Overhead
7/10	700		
12	900		
15		440	550
22		380	475
24	1,600		
27	1,500		
31		540	675
Cost of completed job:			
Direct materials			=====
Direct labor			=====
Manufacturing overhead			=====
Total cost			=====
Unit cost			=====

Instructions

- Answer the following questions.
- What are the source documents for direct materials, direct labor, and manufacturing overhead costs assigned to this job?
 - Overhead is applied on the basis of direct labor cost. What is the predetermined manufacturing overhead rate?
 - What are the total cost and the unit cost of the completed job? (Round unit cost to nearest cent.)
- Prepare the entry to record the completion of the job.

E20.7 (LO 1, 2, 3, 4) Crawford Corporation incurred the following transactions.

Prepare entries for manufacturing and nonmanufacturing costs.

- Purchased raw materials on account \$46,300.
- Raw materials of \$36,000 were requisitioned to the factory. An analysis of the materials requisition slips indicated that \$6,800 was classified as indirect materials.
- Factory labor costs incurred were \$59,900, of which \$51,000 pertained to factory wages payable and \$8,900 pertained to employer payroll taxes payable.
- Time tickets indicated that \$54,000 was direct labor and \$5,900 was indirect labor.
- Manufacturing overhead costs incurred on account were \$80,500.
- Depreciation on the company's office building was \$8,100.
- Manufacturing overhead was applied at the rate of 150% of direct labor cost.
- Goods costing \$88,000 were completed and transferred to finished goods.
- Finished goods costing \$75,000 to manufacture were sold on account for \$103,000.

Instructions

Journalize the transactions. (Omit explanations.)

Prepare entries for manufacturing and nonmanufacturing costs.

E20.8 (LO 1, 2, 3, 4) Enos Printing Corp. uses a job order cost system. The following data summarize the operations related to the first quarter's production.

1. Materials purchased on account \$192,000, and factory wages incurred \$87,300.
2. Materials requisitioned and factory labor used by job:

Job Number	Materials	Factory Labor
A20	\$ 35,240	\$18,000
A21	42,920	22,000
A22	36,100	15,000
A23	39,270	25,000
General factory use	4,470	7,300
	<u>\$158,000</u>	<u>\$87,300</u>

3. Manufacturing overhead costs incurred on account \$49,500.
4. Depreciation on factory equipment \$14,550.
5. Depreciation on the company's office building was \$14,300.
6. Manufacturing overhead rate is 90% of direct labor cost.
7. Jobs completed during the quarter: A20, A21, and A23.

Instructions

Prepare entries to record the operations summarized above. Prepare a schedule showing the individual cost elements and total cost for each job in item 7.

Prepare a cost of goods manufactured schedule and partial financial statements.

E20.9 (LO 1, 5) At May 31, 2020, the accounts of Lopez Company show the following.

1. May 1 inventories—finished goods \$12,600, work in process \$14,700, and raw materials \$8,200.
2. May 31 inventories—finished goods \$9,500, work in process \$15,900, and raw materials \$7,100.
3. Debit postings to work in process were direct materials \$62,400, direct labor \$50,000, and manufacturing overhead applied \$40,000. (Assume that overhead applied was equal to overhead incurred.)
4. Sales revenue totaled \$215,000.

Instructions

- a. Prepare a condensed cost of goods manufactured schedule for May 2020.
- b. Prepare an income statement for May 2020 through gross profit.
- c. Indicate the balance sheet presentation of the manufacturing inventories at May 31, 2020.

Compute work in process and finished goods from job cost sheets.

E20.10 (LO 2, 4) Tierney Company begins operations on April 1. Information from job cost sheets shows the following.

Job Number	Manufacturing Costs Assigned				Month Completed
	April	May	June		
10	\$5,200	\$4,400			May
11	4,100	3,900	\$2,000		June
12	1,200				April
13		4,700	4,500		June
14		5,900	3,600		Not complete

Job 12 was completed in April. Job 10 was completed in May. Jobs 11 and 13 were completed in June. Each job was sold for 25% above its cost in the month following completion.

Instructions

- a. What is the balance in Work in Process Inventory at the end of each month?
- b. What is the balance in Finished Goods Inventory at the end of each month?
- c. What is the gross profit for May, June, and July?

E20.11 (LO 1, 3, 4) Service The following are the job cost related accounts for the law firm of Colaw Associates and their manufacturing equivalents:

Prepare entries for costs of services provided.

Law Firm Accounts	Manufacturing Firm Accounts
Supplies	Raw Materials
Salaries and Wages Payable	Factory Wages Payable
Operating Overhead	Manufacturing Overhead
Service Contracts in Process	Work in Process
Cost of Completed Service Contracts	Cost of Goods Sold

Cost data for the month of March follow.

1. Purchased supplies on account \$1,800.
2. Issued supplies \$1,200 (60% direct and 40% indirect).
3. Assigned labor costs based on time cards for the month which indicated labor costs of \$70,000 (80% direct and 20% indirect).
4. Operating overhead costs incurred for cash totaled \$40,000.
5. Operating overhead is applied at a rate of 90% of direct labor cost.
6. Work completed totaled \$75,000.

Instructions

- a. Journalize the transactions for March. (Omit explanations.)
- b. Determine the balance of the Service Contracts in Process account. (Use a T-account.)

E20.12 (LO 2, 3, 4) Service Don Lieberman and Associates, a CPA firm, uses job order costing to capture the costs of its audit jobs. There were no audit jobs in process at the beginning of November. Listed below are data concerning the three audit jobs conducted during November.

Determine cost of jobs and ending balance in work in process and overhead accounts.

	Waters Inc.	Renolds Inc.	Bayfield Inc.
Direct materials	\$600	\$400	\$200
Auditor labor costs	\$5,400	\$6,600	\$3,375
Auditor hours	72	88	45

Overhead costs are applied to jobs on the basis of auditor hours, and the predetermined overhead rate is \$50 per auditor hour. The Waters Inc. job is the only incomplete job at the end of November. Actual overhead for the month was \$11,000.

Instructions

- a. Determine the cost of each job.
- b. Indicate the balance of the Service Contracts in Process account at the end of November.
- c. Calculate the ending balance of the Operating Overhead account for November.

E20.13 (LO 3, 5) Service Tombert Decorating uses a job order cost system to collect the costs of its interior decorating business. Each client's consultation is treated as a separate job. Overhead is applied to each job based on the number of decorator hours incurred. Listed below are data for the current year.

Determine predetermined overhead rate, apply overhead, and determine whether balance under- or overapplied.

Estimated overhead	\$960,000
Actual overhead	\$982,800
Estimated decorator hours	40,000
Actual decorator hours	40,500

The company uses Operating Overhead in place of Manufacturing Overhead.

Instructions

- a. Compute the predetermined overhead rate.
- b. Prepare the entry to apply the overhead for the year.
- c. Determine whether the overhead was under- or overapplied and by how much.

Problems: Set A

Prepare entries in a job order cost system and job cost sheets.

P20.1A (LO 1, 2, 3, 4, 5) Lott Company uses a job order cost system and applies overhead to production on the basis of direct labor costs. On January 1, 2020, Job 50 was the only job in process. The costs incurred prior to January 1 on this job were as follows: direct materials \$20,000, direct labor \$12,000, and manufacturing overhead \$16,000. As of January 1, Job 49 had been completed at a cost of \$90,000 and was part of finished goods inventory. There was a \$15,000 balance in the Raw Materials Inventory account.

During the month of January, Lott Company began production on Jobs 51 and 52, and completed Jobs 50 and 51. Jobs 49 and 50 were also sold on account during the month for \$122,000 and \$158,000, respectively. The following additional events occurred during the month.

1. Purchased additional raw materials of \$90,000 on account.
2. Incurred factory labor costs of \$70,000. Of this amount \$16,000 related to employer payroll taxes.
3. Incurred manufacturing overhead costs as follows: indirect materials \$17,000, indirect labor \$20,000, depreciation expense on equipment \$12,000, and various other manufacturing overhead costs on account \$16,000.
4. Assigned direct materials and direct labor to jobs as follows.

Job No.	Direct Materials	Direct Labor
50	\$10,000	\$ 5,000
51	39,000	25,000
52	30,000	20,000

Instructions

- a. Calculate the predetermined overhead rate for 2020, assuming Lott Company estimates total manufacturing overhead costs of \$840,000, direct labor costs of \$700,000, and direct labor hours of 20,000 for the year.
 - b. Open job cost sheets for Jobs 50, 51, and 52. Enter the January 1 balances on the job cost sheet for Job 50.
 - c. Prepare the journal entries to record the purchase of raw materials, the factory labor costs incurred, and the manufacturing overhead costs incurred during the month of January.
 - d. Prepare the journal entries to record the assignment of direct materials, direct labor, and manufacturing overhead costs to production. In assigning manufacturing overhead costs, use the overhead rate calculated in (a). Post all costs to the job cost sheets as necessary.
 - e. Total the job cost sheets for any job(s) completed during the month. Prepare the journal entry (or entries) to record the completion of any job(s) during the month.
 - f. Prepare the journal entry (or entries) to record the sale of any job(s) during the month.
 - g. What is the balance in the Finished Goods Inventory account at the end of the month? What does this balance consist of?
 - h. What is the amount of over- or underapplied overhead?
- e. Job 50, \$69,000
Job 51, \$94,000**

Prepare entries in a job order cost system and partial income statement.

P20.2A (LO 1, 2, 3, 4, 5) For the year ended December 31, 2020, the job cost sheets of Cinta Company contained the following data.

Job Number	Explanation	Direct Materials	Direct Labor	Manufacturing Overhead	Total Costs
7640	Balance 1/1	\$25,000	\$24,000	\$28,800	\$ 77,800
	Current year's costs	30,000	36,000	43,200	109,200
7641	Balance 1/1	11,000	18,000	21,600	50,600
	Current year's costs	43,000	48,000	57,600	148,600
7642	Current year's costs	58,000	55,000	66,000	179,000

Other data:

1. Raw materials inventory totaled \$15,000 on January 1. During the year, \$140,000 of raw materials were purchased on account.
2. Finished goods on January 1 consisted of Job No. 7638 for \$87,000 and Job No. 7639 for \$92,000.

3. Job No. 7640 and Job No. 7641 were completed during the year.
4. Job Nos. 7638, 7639, and 7641 were sold on account for \$530,000.
5. Manufacturing overhead incurred on account totaled \$120,000.
6. Other manufacturing overhead consisted of indirect materials \$14,000, indirect labor \$18,000, and depreciation on factory machinery \$8,000.

Instructions

- a. Prove the agreement of Work in Process Inventory with job cost sheets pertaining to unfinished work. (*Hint:* Use a single T-account for Work in Process Inventory.) Calculate each of the following, then post each to the T-account: (1) beginning balance, (2) direct materials, (3) direct labor, (4) manufacturing overhead, and (5) completed jobs.
- b. Prepare the adjusting entry for manufacturing overhead, assuming the balance is allocated entirely to Cost of Goods Sold.
- c. Determine the gross profit to be reported for 2020.

P20.3A (LO 1, 2, 3, 4, 5) Case Inc. is a construction company specializing in custom patios. The patios are constructed of concrete, brick, fiberglass, and lumber, depending upon customer preference. On June 1, 2020, the general ledger for Case Inc. contains the following data.

Raw Materials Inventory	\$4,200	Manufacturing Overhead Applied	\$32,640
Work in Process Inventory	\$5,540	Manufacturing Overhead Incurred	\$31,650

Subsidiary data for Work in Process Inventory on June 1 are as follows.

Job Cost Sheets

Cost Element	Customer Job		
	Rodgers	Stevens	Linton
Direct materials	\$ 600	\$ 800	\$ 900
Direct labor	320	540	580
Manufacturing overhead	400	675	725
	<u><u>\$1,320</u></u>	<u><u>\$2,015</u></u>	<u><u>\$2,205</u></u>

During June, raw materials purchased on account were \$4,900, and all wages were paid. Additional overhead costs consisted of depreciation on equipment \$900 and miscellaneous costs of \$400 incurred on account.

A summary of materials requisition slips and time tickets for June shows the following.

Customer Job	Materials Requisition Slips	Time Tickets
Rodgers	\$ 800	\$ 850
Koss	2,000	800
Stevens	500	360
Linton	1,300	1,200
Rodgers	300	390
	<u><u>4,900</u></u>	<u><u>3,600</u></u>
General use	<u><u>1,500</u></u>	<u><u>1,200</u></u>
	<u><u>\$6,400</u></u>	<u><u>\$4,800</u></u>

Overhead was charged to jobs at the same rate of \$1.25 per dollar of direct labor cost. The patios for customers Rodgers, Stevens, and Linton were completed during June and sold for a total of \$18,900. Each customer paid in full.

Instructions

- a. Journalize the June transactions: (1) for purchase of raw materials, factory labor costs incurred, and manufacturing overhead costs incurred; (2) assignment of direct materials, labor, and overhead to production; and (3) completion of jobs and sale of goods.
- b. Post the entries to Work in Process Inventory.
- c. Reconcile the balance in Work in Process Inventory with the costs of unfinished jobs.
- d. Prepare a cost of goods manufactured schedule for June.

a. \$179,000; Job 7642:
\$179,000

b. Amount = \$6,800

c. \$158,600

Prepare entries in a job order cost system and cost of goods manufactured schedule.

Compute predetermined overhead rates, apply overhead, and calculate under- or overapplied overhead.

P20.4A (LO 3, 5) Agassi Company uses a job order cost system in each of its three manufacturing departments. Manufacturing overhead is applied to jobs on the basis of direct labor cost in Department D, direct labor hours in Department E, and machine hours in Department K.

In establishing the predetermined overhead rates for 2020, the following estimates were made for the year.

	Department		
	D	E	K
Manufacturing overhead	\$1,200,000	\$1,500,000	\$900,000
Direct labor costs	\$1,500,000	\$1,250,000	\$450,000
Direct labor hours	100,000	125,000	40,000
Machine hours	400,000	500,000	120,000

During January, the job cost sheets showed the following costs and production data.

	Department		
	D	E	K
Direct materials used	\$140,000	\$126,000	\$78,000
Direct labor costs	\$120,000	\$110,000	\$37,500
Manufacturing overhead incurred	\$ 99,000	\$124,000	\$79,000
Direct labor hours	8,000	11,000	3,500
Machine hours	34,000	45,000	10,400

- a. 80%, \$12, \$7.50
- b. \$356,000, \$368,000, \$193,500
- c. \$3,000, \$(8,000), \$1,000

Analyze manufacturing accounts and determine missing amounts.

P20.5A (LO 1, 2, 3, 4, 5) Phillips Corporation's fiscal year ends on November 30. The following accounts are found in its job order cost accounting system for the first month of the new fiscal year.

Raw Materials Inventory			
Dec. 1 Beginning balance	(a)	Dec. 31 Requisitions	16,850
31 Purchases	17,225		
Dec. 31 Ending balance	7,975		

Work in Process Inventory			
Dec. 1 Beginning balance	(b)	Dec. 31 Jobs completed	(f)
31 Direct materials	(c)		
31 Direct labor	8,400		
31 Overhead	(d)		
Dec. 31 Ending balance	(e)		

Finished Goods Inventory			
Dec. 1 Beginning balance	(g)	Dec. 31 Cost of goods sold	(i)
31 Completed jobs	(h)		
Dec. 31 Ending balance	(j)		

Factory Labor			
Dec. 31 Factory wages	12,025	Dec. 31 Wages assigned	(k)

Manufacturing Overhead			
Dec. 31 Indirect materials	2,900	Dec. 31 Overhead applied	(m)
31 Indirect labor	(l)		
31 Other overhead	1,245		

Other data:

1. On December 1, two jobs were in process: Job No. 154 and Job No. 155. These jobs had combined direct materials costs of \$9,750 and direct labor costs of \$15,000. Overhead was applied at a rate that was 75% of direct labor cost.
2. During December, Job Nos. 156, 157, and 158 were started. On December 31, Job No. 158 was unfinished. This job had charges for direct materials \$3,800 and direct labor \$4,800, plus manufacturing overhead. All jobs, except for Job No. 158, were completed in December.
3. On December 1, Job No. 153 was in the finished goods warehouse. It had a total cost of \$5,000. On December 31, Job No. 157 was the only job finished that was not sold. It had a cost of \$4,000.
4. Manufacturing overhead was \$1,470 underapplied in December.

c. \$13,950

f. \$52,450

i. \$53,450

Instructions

List the letters (a) through (m) and indicate the amount pertaining to each letter.

Continuing Cases

Current Designs

CD20 Huegel Hollow Resort has ordered 20 rotomolded kayaks from **Current Designs**. Each kayak will be formed in the rotomolded oven, cooled, and then the excess plastic trimmed away. Then, the hatches, seat, ropes, and bungees will be attached to the kayak.

Dave Thill, the kayak plant manager, knows that manufacturing each kayak requires 54 pounds of polyethylene powder and a finishing kit (rope, seat, hardware, etc.). The polyethylene powder used in these kayaks costs \$1.50 per pound, and the finishing kits cost \$170 each. Each kayak will use two kinds of labor: 2 hours of more-skilled type I labor from people who run the oven and trim the plastic, and 3 hours of less-skilled type II labor from people who attach the hatches and seat and other hardware. The type I employees are paid \$15 per hour, and the type II employees are paid \$12 per hour. For purposes of this problem, assume that overhead is applied to all jobs at a rate of 150% of direct labor costs.

Instructions

Determine the total cost of the Huegel Hollow order and the cost of each individual kayak in the order. Identify costs as direct materials, direct labor, or manufacturing overhead.

Waterways

(Note: This is a continuation of the Waterways case from Chapter 19.)

WP20 Waterways has two major public-park projects to provide with comprehensive irrigation in one of its service locations this month. Job J57 and Job K52 involve 15 acres of landscaped terrain which will require special-order sprinkler heads to meet the specifications of the project. This problem asks you to help Waterways use a job order cost system to account for production of these parts.

Go to **WileyPLUS** for complete case details and instructions.

Comprehensive Case

Greetings Inc., a nationally recognized retailer of greeting cards and small gift items, decides to employ Internet technology to expand its sales opportunities. For this case, you will employ traditional job order costing techniques and then evaluate the resulting product costs.

Go to **WileyPLUS** for complete case details and instructions.

Comprehensive Cases present realistic business situations that require students to apply topics learned in this and previous chapters.

Expand Your Critical Thinking

Decision-Making Across the Organization

CT20.1 Khan Products Company uses a job order cost system. For a number of months, there has been an ongoing rift between the sales department and the production department concerning a special-order product, TC-1. TC-1 is a seasonal product that is manufactured in batches of 1,000 units. TC-1 is sold at cost plus a markup of 40% of cost.

The sales department is unhappy because fluctuating unit production costs significantly affect selling prices. Sales personnel complain that this has caused excessive customer complaints and the loss of considerable orders for TC-1.

The production department maintains that each job order must be fully costed on the basis of the costs incurred during the period in which the goods are produced. Production personnel maintain that the only real solution is for the sales department to increase sales in the slack periods.

Andrea Parley, president of the company, asks you as the company accountant to collect quarterly data for the past year on TC-1. From the cost accounting system, you accumulate the following production quantity and cost data.

Costs	Quarter			
	1	2	3	4
Direct materials	\$100,000	\$220,000	\$ 80,000	\$200,000
Direct labor	60,000	132,000	48,000	120,000
Manufacturing overhead	105,000	153,000	97,000	125,000
Total	<u><u>\$265,000</u></u>	<u><u>\$505,000</u></u>	<u><u>\$225,000</u></u>	<u><u>\$445,000</u></u>
Production in batches	5	11	4	10
Unit cost (per batch)	<u><u>\$ 53,000</u></u>	<u><u>\$ 45,909</u></u>	<u><u>\$ 56,250</u></u>	<u><u>\$ 44,500</u></u>

Instructions

With the class divided into groups, answer the following questions.

- What manufacturing cost element is responsible for the fluctuating unit costs? Why?
- What is your recommended solution to the problem of fluctuating unit cost?
- Restate the quarterly data on the basis of your recommended solution.

Managerial Analysis

CT20.2 In the course of routine checking of all journal entries prior to preparing year-end reports, Betty Eller discovered several strange entries. She recalled that the president's son Joe had come in to help out during an especially busy time and that he had recorded some journal entries. She was relieved that there were only a few of his entries, and even more relieved that he had included rather lengthy explanations. The entries Joe made were:

(1)		
Work in Process Inventory		25,000
Cash		25,000

(This is for materials put into process. I don't find the record that we paid for these, so I'm crediting Cash because I know we'll have to pay for them sooner or later.)

(2)		
Manufacturing Overhead		12,000
Cash		12,000

(This is for bonuses paid to salespeople. I know they're part of overhead, and I can't find an account called "Non-Factory Overhead" or "Other Overhead" so I'm putting it in Manufacturing Overhead. I have the check stubs, so I know we paid these.)

(3)		
Wages Expense		120,000
Cash		120,000

(This is for the factory workers' wages. I have a note that employer payroll taxes are \$18,000. I still think that's part of wages expense and that we'll have to pay it all in cash sooner or later, so I credited Cash for the wages and the taxes.)

(4)		
Work in Process Inventory	3,000	
Raw Materials Inventory		3,000

(This is for the glue used in the factory. I know we used this to make the products, even though we didn't use very much on any one of the products. I got it out of inventory, so I credited an inventory account.)

Instructions

- a. How should Joe have recorded each of the four events?
- b. If the entry was not corrected, which financial statements (income statement or balance sheet) would be affected? What balances would be overstated or understated?

Real-World Focus

CT20.3 The **Institute of Management Accountants (IMA)** sponsors a certification for management accountants, allowing them to obtain the title of Certified Management Accountant.

Instructions

Go to the IMA website, choose **About IMA**, choose **CMA Certification**, and then **Getting Started**. Answer part (a) below. Next, choose **CMA Certification**, then **Current CMAs**, then **Maintain Your Certification**, and then click on **Download the CPE Requirements and Rules**. Answer part (b) below.

- a. What is the experience qualification requirement?
- b. How many hours of continuing education are required, and what types of courses qualify?

Communication Activity

CT20.4 You are the management accountant for Williams Company. Your company does custom carpentry work and uses a job order cost system. Williams sends detailed job cost sheets to its customers, along with an invoice. The job cost sheets show the date materials were used, the dollar cost of materials, and the hours and cost of labor. A predetermined overhead application rate is used, and the total overhead applied is also listed.

Nancy Kopay is a customer who recently had custom cabinets installed. Along with her check in payment for the work done, she included a letter. She thanked the company for including the detailed cost information but questioned why overhead was estimated. She stated that she would be interested in knowing exactly what costs were included in overhead, and she thought that other customers would, too.

Instructions

Prepare a letter to Ms. Kopay (address: 123 Cedar Lane, Altoona, KS 66651) and tell her why you did not send her information on exact costs of overhead included in her job. Respond to her suggestion that you provide this information.

Ethics Case

CT20.5 Service LRF Printing provides printing services to many different corporate clients. Although LRF bids most jobs, some jobs, particularly new ones, are negotiated on a "cost-plus" basis. Cost-plus means that the buyer is willing to pay the actual cost plus a return (profit) on these costs to LRF.

Alice Reiley, controller for LRF, has recently returned from a meeting where LRF's president stated that he wanted her to find a way to charge more costs to any project that was on a cost-plus basis. The president noted that the company needed more profits to meet its stated goals this period. By charging more costs to the cost-plus projects and therefore fewer costs to the jobs that were bid, the company should be able to increase its profit for the current year.

Alice knew why the president wanted to take this action. Rumors were that he was looking for a new position and if the company reported strong profits, the president's opportunities would be enhanced. Alice also recognized that she could probably increase the cost of certain jobs by changing the basis used to assign manufacturing overhead.

Instructions

- a. Who are the stakeholders in this situation?
- b. What are the ethical issues in this situation?
- c. What would you do if you were Alice Reiley?

All About You

CT20.6 Many of you will work for a small business. Some of you will even own your own business. In order to operate a small business, you will need a good understanding of managerial accounting, as well as many other skills. Much information is available to assist people who are interested in starting a new business. A great place to start is the website provided by the **Small Business Administration**, which is an agency of the federal government whose purpose is to support small businesses.

Instructions

Go to the Small Business Administration website, search “Is entrepreneurship for you,” and then answer part (a) below. Next, search “10 steps to starting a business” and then answer part (b) below.

- a. What are some of the characteristics required of a small business owner?
- b. What are the 10 steps for starting a business?

Considering Your Costs and Benefits

CT20.7 After graduating, you might decide to start a small business. As discussed in this chapter, owners of any business need to know how to calculate the cost of their products. In fact, many small businesses fail because they don’t accurately calculate their product costs, so they don’t know if they are making a profit or losing money—until it’s too late.

Suppose that you decide to start a landscape business. You use an old pickup truck that you’ve fully paid for. You store the truck and other equipment in your parents’ barn, and you store trees and shrubs on their land. Your parents will not charge you for the use of these facilities for the first two years, but beginning in the third year they will charge a reasonable rent. Your mother helps you by answering phone calls and providing customers with information. She doesn’t charge you for this service, but she plans on doing it for only your first two years in business. In pricing your services, should you include charges for the truck, the barn, the land, and your mother’s services when calculating your product cost? The basic arguments for and against are as follows.

YES: If you don’t include charges for these costs, your costs are understated and your profitability is overstated.

NO: At this point, you are not actually incurring costs related to these activities; therefore, you shouldn’t record charges.

Instructions

Write a response indicating your position regarding this situation. Provide support for your view.

Elaine Thompson/AP Photo

Process Costing

Chapter Preview

As the following Feature Story describes, the cost accounting system used by companies such as **Jones Soda** is **process cost accounting**. In contrast to job order cost accounting, which focuses on the individual job, process cost accounting focuses on the *processes* involved in mass-producing products that are identical or very similar in nature. The primary objective of this chapter is to explain and illustrate process costing.

Feature Story

The Little Guy Who Could

It isn't easy for a small company to get a foothold in the bottled beverage business. The giants, **The Coca-Cola Company** and **PepsiCo Inc.**, vigilantly defend their turf, constantly watching for new trends and opportunities. It is nearly impossible to get shelf space in stores, and consumer tastes can change faster than a bottle of soda can lose its fizz. But **Jones Soda Co.**, headquartered in Seattle,

has overcome these and other obstacles to make a name for itself. Its corporate motto is, "Run with the little guy . . . create some change."

The company started as a Canadian distributor of other companies' beverages. Soon, it decided to make its own products under the corporate name Urban Juice and Soda Company. Eventually, its name changed to Jones Soda—the name of its most popular product. From the very start, Jones Soda was different. It sold soda from machines placed in tattoo parlors and piercing shops, and it sponsored a punk rock band as well as surfers and snowboarders. At one time,

the company's product was the official drink at the **Seattle Seahawks'** stadium and was served on **Alaskan Airlines**.

Today, Jones Soda makes a wide variety of products: soda-flavored candy, energy drinks, and product-promoting gear that includes t-shirts, sweatshirts, caps, shorts, and calendars. Its most profitable product is still its multi-flavored, pure cane soda with its creative labeling. If you've seen Jones Soda on a store shelf, then you know that it appears to have an infinite variety of labels. The bottle labels are actually created by customers and submitted on the company's website. If you would like some soda with a custom label of your own, you can design and submit a label and order a 12-pack.

Because Jones Soda has a dizzying array of product variations, keeping track of costs is of vital importance. Recently, management developed a reorganization plan that involved cost-cutting from top to bottom and eliminating unprofitable products. No matter how good your products are, if you don't keep your costs under control, you are likely to fail. Jones Soda's managers need accurate cost information regarding each primary product and each variation to ensure profitability. So while its marketing approach differs dramatically from the giants, Jones Soda needs the same kind of cost information as the big guys.

Watch the Jones Soda video in WileyPLUS to learn more about process costing in the real world.

Chapter Outline

LEARNING OBJECTIVES

LO 1 Discuss the uses of a process cost system and how it compares to a job order system.

- Uses of process cost systems
- Process costing for service companies
- Comparing job order and process cost systems

Overview of Process Cost Systems

LEARNING OBJECTIVE 1

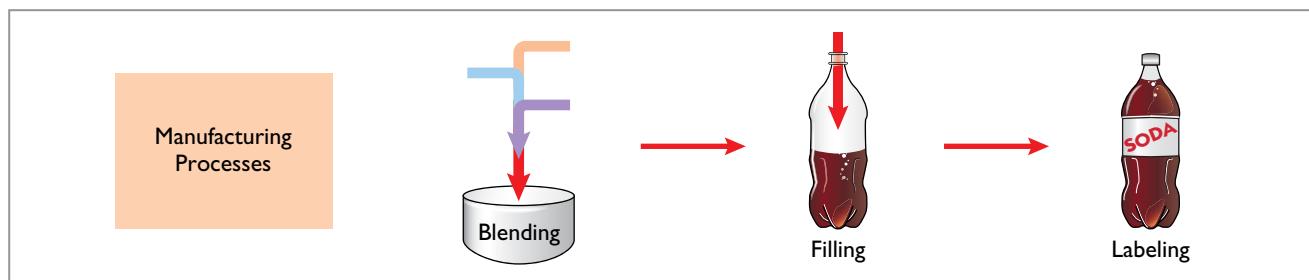

Discuss the uses of a process cost system and how it compares to a job order system.

Uses of Process Cost Systems

Companies use **process cost systems** to apply costs to similar products that are mass-produced in a continuous fashion. **Jones Soda Co.** uses a process cost system: Production of the soda, once it begins, continues until the completed bottles of soda emerge. The processing is the same for the entire production run—with precisely the same amount of materials, labor, and overhead. Each finished bottle of soda is indistinguishable from another.

A company such as **USX** uses process costing in the manufacturing of steel. **Kellogg** and **General Mills** use process costing for cereal production; **ExxonMobil** uses process costing for its oil refining. **Sherwin Williams** uses process costing for its paint products. At a bottling company like Jones Soda, the manufacturing process begins with the blending of ingredients. Next, automated machinery moves the bottles into position and fills them. The production process then caps, labels, packages, and forwards the bottles to the finished goods warehouse. **Illustration 21.1** shows this process.

ILLUSTRATION 21.1 Manufacturing processes

For Jones Soda, as well as the other companies just mentioned, once production begins, it continues until the finished product emerges. Each unit of finished product is like every other unit.

In comparison, a job order cost system assigns costs to a *specific job*. Examples are the construction of a customized home, the making of a movie, or the manufacturing of a specialized machine. **Illustration 21.2** provides examples of companies that primarily use either a process cost system or a job order cost system.

ILLUSTRATION 21.2 Process cost and job order cost companies and products

Process Cost System Company	Product	Job Order Cost System Company	Product
Jones Soda, PepsiCo	Soft drinks	Young & Rubicam, J. Walter Thompson	Advertising
ExxonMobil, Royal Dutch Shell	Oil	Disney, Warner Brothers	Movies
Intel, Advanced Micro Devices	Computer chips	Center Ice Consultants, Ice Pro	Ice rinks
Dow Chemical, DuPont	Chemicals	Kaiser, Mayo Clinic	Patient health care

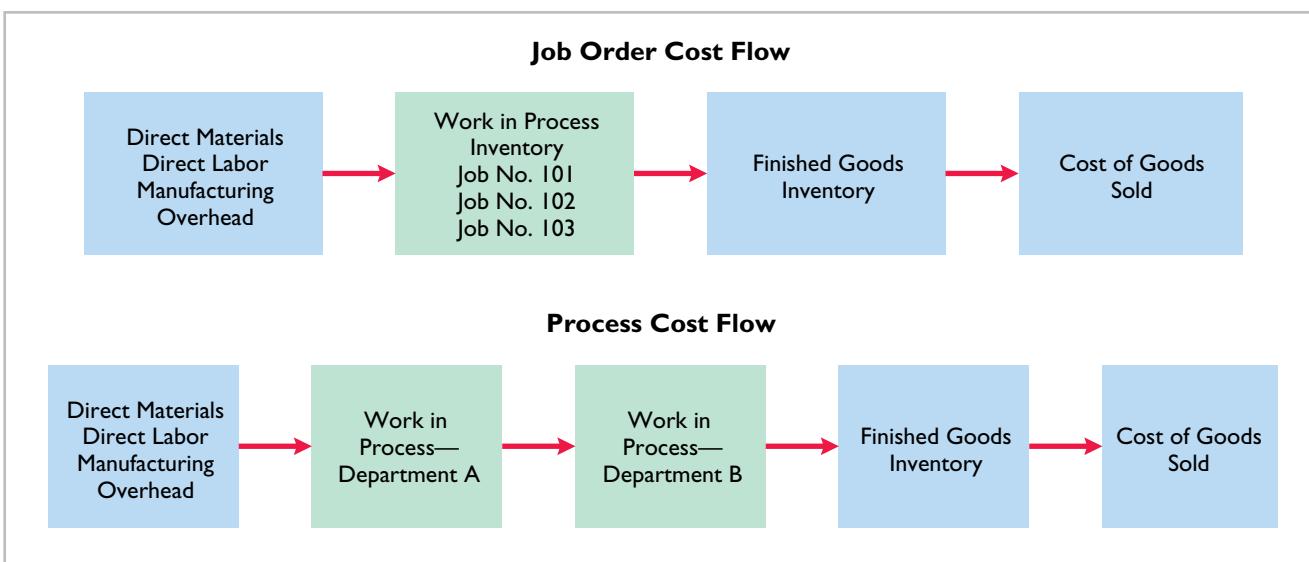

Process Costing for Service Companies

When considering service companies, you might initially think of specific, nonroutine tasks, such as rebuilding an automobile engine, consulting on a business acquisition, or defending a major lawsuit. However, many service companies perform repetitive, routine work. For example, **Jiffy Lube** regularly performs oil changes. **H&R Block** focuses on the routine aspects of basic tax practice. Service companies that perform individualized, nonroutine services will probably benefit from using a job order cost system. Those that perform routine, repetitive services will probably prefer a process cost system.

Similarities and Differences Between Job Order Cost and Process Cost Systems

In a job order cost system, companies assign costs to each job. In a process cost system, companies track costs through a series of connected manufacturing processes or departments, rather than by individual jobs. Thus, companies use process cost systems when they produce a large volume of uniform or relatively homogeneous products. **Illustration 21.3** shows the basic flow of costs in these two systems.

ILLUSTRATION 21.3 Job order cost and process cost flow

The following analysis highlights the basic similarities and differences between these two systems.

Similarities

Job order cost and process cost systems are similar in three ways:

- The manufacturing cost elements.** Both costing systems track three manufacturing cost elements—direct materials, direct labor, and manufacturing overhead.
- The accumulation of the costs of materials, labor, and overhead.** Both costing systems record the acquisition of raw materials as a debit to Raw Materials Inventory, incurred factory labor as a debit to Factory Labor, and manufacturing overhead costs as debits to Manufacturing Overhead.

- 3. The flow of costs.** As noted above, both systems accumulate all manufacturing costs by debits to Raw Materials Inventory, Factory Labor, and Manufacturing Overhead. Both systems then assign these costs to the same accounts—Work in Process, Finished Goods Inventory, and Cost of Goods Sold. **The methods of assigning costs, however, differ significantly.** These differences are explained and illustrated later in the chapter.

Differences

The differences between a job order cost and a process cost system are as follows.

- 1. The number of work in process accounts used.** A job order cost system uses only one work in process account. A process cost system uses multiple work in process accounts.
- 2. Documents used to track costs.** A job order cost system charges costs to individual jobs and summarizes them in a job cost sheet. A process cost system summarizes costs in a production cost report for each department.
- 3. The point at which costs are totaled.** A job order cost system totals costs when the job is completed. A process cost system totals costs at the end of a period of time.
- 4. Unit cost computations.** In a job order cost system, the unit cost is the total cost per job divided by the units produced for that job. In a process cost system, the unit cost is total manufacturing costs for the period divided by the equivalent units produced during the period.

Illustration 21.4 summarizes the major differences between a job order cost and a process cost system.

Feature	Job Order Cost System	Process Cost System
Work in process accounts	One work in process account	Multiple work in process accounts
Documents used	Job cost sheets	Production cost reports
Determination of total manufacturing costs	Each job	Each period
Unit-cost computations	Cost of each job ÷ Units produced for the job	Total manufacturing costs ÷ Equivalent units produced during the period

ILLUSTRATION 21.4

Job order versus process cost systems

DO IT! 1 | Compare Job Order and Process Cost Systems

Indicate whether each of the following statements is true or false.

1. A law firm is likely to use process costing for major lawsuits.
2. A manufacturer of paintballs is likely to use process costing.
3. Both job order and process costing determine product costs at the end of a period of time, rather than when a product is completed.
4. Process costing does not keep track of manufacturing overhead.

Solution

1. False.
2. True.
3. False.
4. False.

ACTION PLAN

- Use job order costing in situations where unit costs are high, unit volume is low, and products are unique.
- Use process costing when there is a large volume of relatively homogeneous products.

Process Cost Flow and Assigning Costs

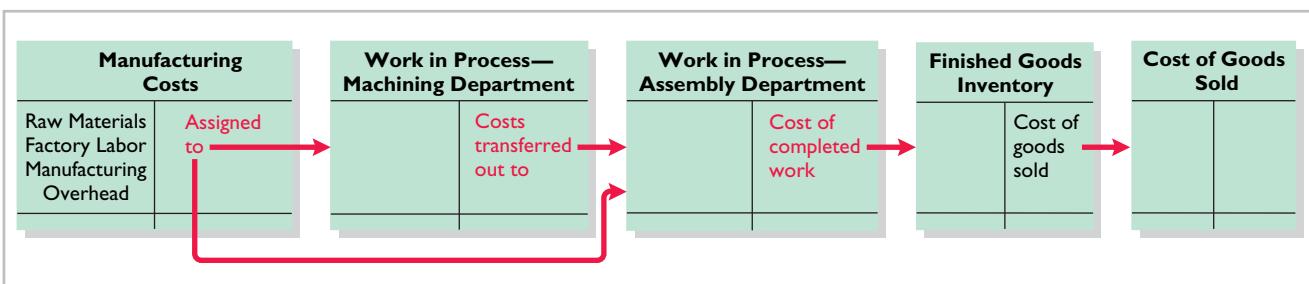

LEARNING OBJECTIVE 2

Explain the flow of costs in a process cost system and the journal entries to assign manufacturing costs.

Process Cost Flow

Illustration 21.5 shows the flow of costs in the process cost system for Tyler Company. Tyler manufactures roller blade and skateboard wheels that it sells to manufacturers and retail outlets. Manufacturing consists of two processes: machining and assembly. The Machining Department shapes, hones, and drills the raw materials. The Assembly Department assembles and packages the wheels.

ILLUSTRATION 21.5 Flow of costs in process cost system

As the flow of costs indicates, the company can add materials, labor, and manufacturing overhead in both the Machining and Assembly Departments. When it finishes its work, the Machining Department transfers the partially completed units to the Assembly Department. The Assembly Department finishes the goods and then transfers them to the finished goods inventory. Upon sale, Tyler removes the goods from the finished goods inventory. Within each department, a similar set of activities is performed on each unit processed.

Assigning Manufacturing Costs—Journal Entries

As indicated, the accumulation of the costs of materials, labor, and manufacturing overhead is the same in a process cost system as in a job order cost system. That is, both systems follow these procedures:

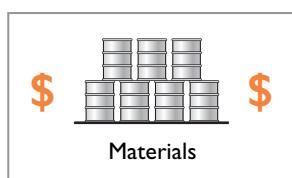

- Debit all raw materials acquired to Raw Materials Inventory at the time of purchase.
- Debit all factory labor to Factory Labor as labor costs are incurred.
- Debit overhead costs to Manufacturing Overhead as these costs are incurred.

However, the assignment of the three manufacturing cost elements to Work in Process in a process cost system is different from a job order cost system. Here we'll look at how companies assign these manufacturing cost elements in a process cost system.

Materials Costs

All raw materials issued for production are a materials cost to the producing department. A process cost system may use materials requisition slips, but **it generally requires fewer requisitions than in a job order cost system. The materials are used for processes rather than for specific jobs** and therefore typically are for larger quantities.

At the beginning of the first process, a company usually adds most of the materials needed for production. However, other materials may be added at various points. For example, in the manufacture of **Hershey** candy bars, the chocolate and other ingredients are added at the

beginning of the first process, and the wrappers and cartons are added at the end of the packaging process. Tyler Company adds materials at the beginning of each process. Suppose at the beginning of the current period that Tyler adds \$50,000 of direct materials to the machining process and \$20,000 of direct materials to the assembly process. Tyler makes the following entry to record the materials used.

Work in Process—Machining	50,000	
Work in Process—Assembly	20,000	
Raw Materials Inventory (To record materials used)		70,000

Factory Labor Costs

In a process cost system, as in a job order cost system, companies may use time tickets to determine the cost of labor assignable to production departments. Since they assign labor costs to a process rather than a job, they can obtain, from the payroll register or departmental payroll summaries, the labor cost chargeable to a process.

Suppose that Tyler Company incurs factory labor charges of \$20,000 in the machining process and \$13,000 in the assembly process. The entry to assign labor costs to machining and assembly for Tyler is:

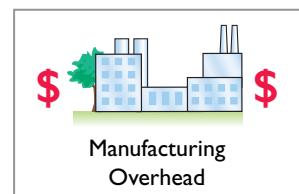

Work in Process—Machining	20,000	
Work in Process—Assembly	13,000	
Factory Labor (To assign factory labor to production)		33,000

Manufacturing Overhead Costs

The objective in assigning overhead in a process cost system is to allocate the overhead costs to the production departments on an objective and equitable basis. That basis is the activity that “drives” or causes the costs. A primary driver of overhead costs in continuous manufacturing operations is **machine time used**, not direct labor. Thus, companies **widely use machine hours** in allocating manufacturing overhead costs using predetermined overhead rates. Assume that based on machine hours that Tyler Company allocates overhead of \$45,000 to the machining process and \$17,000 to the assembly process. Tyler’s entry to allocate overhead to the two processes is:

Work in Process—Machining	45,000	
Work in Process—Assembly	17,000	
Manufacturing Overhead (To assign overhead to production)		62,000

Management Insight Caterpillar

© SweetyMommy/iStockphoto

Choosing a Cost Driver

In one of its automated cost centers, **Caterpillar** inputs work into the cost center, where robotic machines process it and transfer the finished job to the next cost center without human intervention. One person tends all

of the machines and spends more time maintaining machines than operating them. In such cases, overhead rates based on direct labor hours may be misleading. Surprisingly, some companies continue to assign manufacturing overhead on the basis of direct labor despite the fact that there is no cause-and-effect relationship between labor and overhead.

What is the result if a company uses the wrong “cost driver” to assign manufacturing overhead? (Go to WileyPLUS for this answer and additional questions.)

Transfer to Next Department

At the end of the month, Tyler Company needs an entry to record the cost of the goods transferred out of the Machining Department. In this case, the transfer is to the Assembly Department. Suppose Tyler transferred goods with a recorded cost of \$87,000 from machining to assembly. Tyler makes the following entry.

Work in Process—Assembly	87,000	
Work in Process—Machining		87,000
(To record transfer of units to the Assembly Department)		

Transfer to Finished Goods

Suppose the Assembly Department completes units with a recorded cost of \$114,000 and then transfers them to the finished goods warehouse. The entry for this transfer is as follows.

Finished Goods Inventory	114,000	
Work in Process—Assembly		114,000
(To record transfer of units to finished goods)		

Transfer to Cost of Goods Sold

Suppose Tyler Company sells finished good with a recorded cost of \$27,000. It records the cost of goods sold as follows.

Cost of Goods Sold	27,000	
Finished Goods Inventory		27,000
(To record cost of units sold)		

DO IT! 2 | Manufacturing Costs in Process Costing

Ruth Company manufactures ZEBO through two processes: blending and bottling. In June, raw materials used were Blending \$18,000 and Bottling \$4,000. Factory labor costs were Blending \$12,000 and Bottling \$5,000. Manufacturing overhead costs assigned were Blending \$6,000 and Bottling \$2,500. The company transfers units completed at a cost of \$19,000 in the Blending Department to the Bottling Department. The Bottling Department transfers units completed at a cost of \$11,000 to Finished Goods. Journalize the assignment of these costs to the two processes and the transfer of units as appropriate.

Solution

The entries are:

Work in Process—Blending	18,000	
Work in Process—Bottling	4,000	22,000
Raw Materials Inventory		
(To record materials used)		
Work in Process—Blending	12,000	
Work in Process—Bottling	5,000	17,000
Factory Labor		
(To assign factory labor to production)		
Work in Process—Blending	6,000	
Work in Process—Bottling	2,500	8,500
Manufacturing Overhead		
(To assign overhead to production)		
Work in Process—Bottling	19,000	
Work in Process—Blending		19,000
(To record transfer of units to the Bottling Department)		

ACTION PLAN

- In process cost accounting, keep separate work in process accounts for each process.
- When the costs are assigned to production, debit the separate work in process accounts.
- Transfer cost of completed units to the next process or to Finished Goods.

Finished Goods Inventory	11,000	
Work in Process—Bottling		11,000
(To record transfer of units to finished goods)

Equivalent Units

LEARNING OBJECTIVE 3

Compute equivalent units.

Suppose you have a work-study job in the office of your college's president, and she asks you to compute the cost of instruction per full-time equivalent student at your college. The college's vice president for finance provides the information shown in **Illustration 21.6**.

Costs:	
Total cost of instruction	<u>\$9,000,000</u>
Student population:	
Full-time students	900
Part-time students	1,000

ILLUSTRATION 21.6

Information for full-time student example

Part-time students take 60% of the classes of a full-time student during the year. **Illustration 21.7** shows how to compute the number of full-time equivalent students per year.

Full-Time Students	+	Equivalent Units of Part-Time Students	=	Full-Time Equivalent Students
900	+	(1,000 × 60%)	=	1,500

ILLUSTRATION 21.7

Full-time equivalent unit computation

The cost of instruction per full-time equivalent student is therefore the total cost of instruction (\$9,000,000) divided by the number of full-time equivalent students (1,500), which is \$6,000 (\$9,000,000 ÷ 1,500).

A process cost system uses the same idea, called equivalent units of production. **Equivalent units of production** measure the work done during the period, expressed in fully completed units. Companies use this measure to determine the cost per unit of completed product.

Weighted-Average Method

The formula to compute equivalent units of production is shown in **Illustration 21.8**.

Units Completed and Transferred out	+	Equivalent Units of Ending Work in Process	=	Equivalent Units of Production
--	----------	---	----------	---------------------------------------

ILLUSTRATION 21.8

Equivalent units of production formula

To better understand this concept of equivalent units, consider the following two separate examples.

Example 1. In a specific period, the entire output of Sullivan Company's Blending Department consists of ending work in process of 4,000 units which are 60% complete

as to materials, labor, and overhead. The equivalent units of production for the Blending Department are therefore 2,400 units ($4,000 \times 60\%$).

Example 2. The output of Kori Company's Packaging Department during the period consists of 10,000 units completed and transferred out, and 5,000 units in ending work in process which are 70% completed. The equivalent units of production are therefore 13,500 [$10,000 + (5,000 \times 70\%)$].

This method of computing equivalent units is referred to as the **weighted-average method**. It considers the degree of completion (weighting) of the units completed and transferred out and the ending work in process.

Refinements on the Weighted-Average Method

Kellogg Company has produced Eggo® Waffles since 1970. Three departments produce these waffles: Mixing, Baking, and Freezing/Packaging. The Mixing Department combines dry ingredients, including flour, salt, and baking powder, with liquid ingredients, including eggs and vegetable oil, to make waffle batter. **Illustration 21.9** provides information related to the Mixing Department at the end of June. Note that separate unit cost computations are needed for materials and conversion costs whenever the two types of costs do not occur in the process at the same time.

ILLUSTRATION 21.9

Information for Mixing Department

Mixing Department			
	Physical Units	Percentage Complete	
		Materials	Conversion Costs
Work in process, June 1	100,000	100%	70%
Started into production	800,000		
Total units to be accounted for	900,000		
Units transferred out	700,000		
Work in process, June 30	200,000	100%	60%
Total units accounted for	900,000		

ETHICS NOTE

An unethical manager might use incorrect completion percentages when determining equivalent units. This results in either raising or lowering costs. Since completion percentages are somewhat subjective, this form of income manipulation can be difficult to detect.

Illustration 21.9 indicates that the beginning work in process is 100% complete as to materials cost and 70% complete as to conversion costs (see **Ethics Note**). **Conversion costs are the sum of labor costs and overhead costs.** In other words, Kellogg adds both the dry and liquid ingredients (materials) at the beginning of the waffle-making process, and the conversion costs (labor and overhead) related to the mixing of these ingredients are incurred uniformly and are 70% complete. The ending work in process is 100% complete as to materials cost and 60% complete as to conversion costs.

We then use the Mixing Department information to determine equivalent units. **In computing equivalent units, the beginning work in process is not part of the equivalent-units-of-production formula.** The units transferred out to the Baking Department are fully complete as to both materials and conversion costs. The ending work in process is fully complete as to materials, but only 60% complete as to conversion costs. We therefore need to make **two equivalent unit computations:** one for materials, and the other for conversion costs. **Illustration 21.10** shows these computations.

ILLUSTRATION 21.10

Computation of equivalent units—Mixing Department

Mixing Department		
	Equivalent Units	
	Materials	Conversion Costs
Units transferred out	700,000	700,000
Work in process, June 30		
$200,000 \times 100\%$	200,000	
$200,000 \times 60\%$		120,000
Total equivalent units	900,000	820,000

We can refine the earlier formula used to compute equivalent units of production (Illustration 21.8) to show the computations for materials and for conversion costs, as shown in **Illustration 21.11**.

Units Completed and Transferred Out—Materials	+	Equivalent Units of Ending Work in Process—Materials	=	Equivalent Units of Production—Materials
Units Completed and Transferred Out—Conversion Costs	+	Equivalent Units of Ending Work in Process—Conversion Costs	=	Equivalent Units of Production—Conversion Costs

ILLUSTRATION 21.11

Refined equivalent units of production formula

People, Planet, and Profit Insight General Electric

© Nicole Hofmann/iStockphoto

Haven't I Seen That Before?

For a variety of reasons, many companies, including **General Electric**, are making a big push to remanufacture goods that have been thrown away. Items getting a second chance include cell phones, computers, home appliances, car parts, vacuum cleaners, and medical equipment. Businesses have figured out that profit margins on remanufactured goods are significantly higher than on new goods. As commodity prices such as copper and steel increase, reusing parts makes more sense. Also, as more local governments initiate laws requiring that electronics and appliances be recycled

rather than thrown away, the cost of remanufacturing declines because the gathering of used goods becomes far more efficient. Besides benefitting the manufacturer, remanufacturing provides goods at a much lower price to consumers, reduces waste going to landfills, saves energy, reuses scarce resources, and reduces emissions. For example, it was estimated that a remanufactured car starter results in about 50% less carbon dioxide emissions than making a new one.

Source: James R. Hagerty and Paul Glader, "From Trash Heap to Store Shelf," *Wall Street Journal Online* (January 24, 2011).

In what ways might the relative composition (materials, labor, and overhead) of a remanufactured product's cost differ from that of a newly made product? (Go to WileyPLUS for this answer and additional questions.)

DO IT! 3 | Equivalent Units

The Fabricating Department for Outdoor Essentials has the following production and cost data for the current month.

Beginning Work in Process	Units Transferred Out	Ending Work in Process
-0-	15,000	10,000

Materials are entered at the beginning of the process. The ending work in process units are 30% complete as to conversion costs. Compute the equivalent units of production for (a) materials and (b) conversion costs.

Solution

- Since materials are entered at the beginning of the process, the equivalent units of ending work in process are 10,000. Thus, $15,000 \text{ units} + 10,000 \text{ units} = 25,000$ equivalent units of production for materials.
- Since ending work in process is only 30% complete as to conversion costs, the equivalent units of ending work in process are 3,000 ($10,000 \text{ units} \times 30\%$). Thus, $15,000 \text{ units} + 3,000 \text{ units} = 18,000$ equivalent units of production for conversion costs.

ACTION PLAN

- To measure the work done during the period, expressed in fully completed units, compute equivalent units of production.
- Use the appropriate formula: $\text{Units completed and transferred out} + \text{Equivalent units of ending work in process} = \text{Equivalent units of production}$.

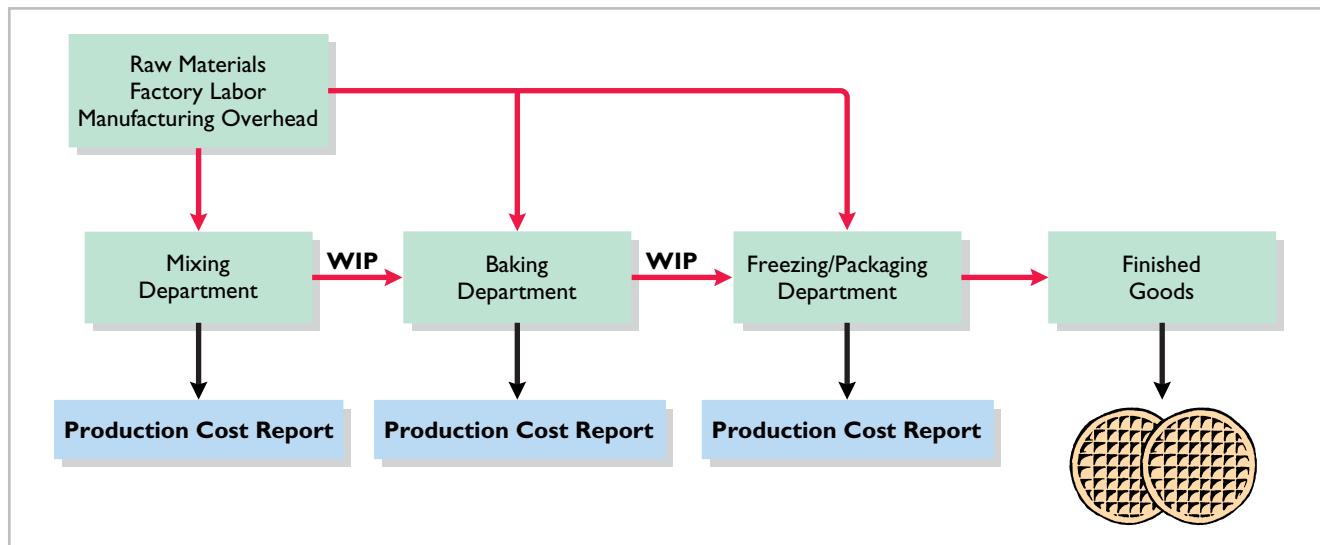

The Production Cost Report

LEARNING OBJECTIVE 4

Complete the four steps to prepare a production cost report.

As mentioned earlier, companies prepare a production cost report for each department. A **production cost report** is the key document that management uses to understand the activities in a department; it shows the production quantity and cost data related to that department. For example, in producing Eggo® Waffles, **Kellogg Company** uses three production cost reports: Mixing, Baking, and Freezing/Packaging. **Illustration 21.12** shows the flow of costs to make an Eggo® Waffle and the related production cost reports for each department.

ILLUSTRATION 21.12 Flow of costs in making Eggo® Waffles

In order to complete a production cost report, the company must perform four steps, which as a whole make up the process cost system.

1. Compute the physical unit flow.
2. Compute the equivalent units of production.
3. Compute unit production costs.
4. Prepare a cost reconciliation schedule.

Illustration 21.13 shows assumed data for the Mixing Department at **Kellogg Company** for the month of June. We will use this information to complete a production cost report for the Mixing Department.

ILLUSTRATION 21.13
Unit and cost data—Mixing Department

Mixing Department

Units

Work in process, June 1	100,000
Direct materials: 100% complete	
Conversion costs: 70% complete	
Units started into production during June	800,000
Units completed and transferred out to Baking Department	700,000
Work in process, June 30	200,000
Direct materials: 100% complete	
Conversion costs: 60% complete	

Costs

Work in process, June 1	
Direct materials: 100% complete	\$ 50,000
Conversion costs: 70% complete	35,000
Cost of work in process, June 1	<u><u>\$ 85,000</u></u>
Costs incurred during production in June	
Direct materials	\$400,000
Conversion costs	170,000
Costs incurred in June	<u><u>\$570,000</u></u>

ILLUSTRATION 21.13

(continued)

Compute the Physical Unit Flow (Step 1)

Physical units are the actual units to be accounted for during a period, irrespective of any work performed. To keep track of these units, add the units started (or transferred) into production during the period to the units in process at the beginning of the period. This amount is referred to as the **total units to be accounted for**.

The total units then are accounted for by the output of the period. The output consists of units transferred out during the period and any units in process at the end of the period. This amount is referred to as the **total units accounted for**. **Illustration 21.14** shows the flow of physical units for Kellogg's Mixing Department for the month of June.

Mixing Department

Physical Units

Units to be accounted for	
Work in process, June 1	100,000
Started (transferred) into production	800,000
Total units	<u><u>900,000</u></u>
Units accounted for	
Completed and transferred out	700,000
Work in process, June 30	200,000
Total units	<u><u>900,000</u></u>

ILLUSTRATION 21.14**Physical unit flow—Mixing Department**

The records indicate that the Mixing Department must account for 900,000 units. Of this sum, 700,000 units were transferred to the Baking Department and 200,000 units were still in process.

Compute the Equivalent Units of Production (Step 2)

Once the physical flow of the units is established, Kellogg must measure the Mixing Department's productivity in terms of equivalent units of production. The Mixing Department adds materials at the beginning of the process, and it incurs conversion costs uniformly during the process (see **Helpful Hint**). Thus, we need two computations of equivalent units: one for materials and one for conversion costs. The equivalent unit computation is shown in **Illustration 21.15**. Recall that this computation ignores beginning work in process.

HELPFUL HINT

Materials are not always added at the beginning of the process. For example, materials are sometimes added uniformly during the process.

ILLUSTRATION 21.15**Computation of equivalent units—Mixing Department**

	Equivalent Units	
	<u>Materials</u>	<u>Conversion Costs</u>
Units transferred out	700,000	700,000
Work in process, June 30		
$200,000 \times 100\%$	200,000	
$200,000 \times 60\%$		120,000
Total equivalent units	<u>900,000</u>	<u>820,000</u>

Compute Unit Production Costs (Step 3)

Armed with the knowledge of the equivalent units of production, we can now compute the unit production costs. **Unit production costs** are costs expressed in terms of equivalent units of production. When equivalent units of production are different for materials and conversion costs, we compute three unit costs: (1) materials, (2) conversion, and (3) total manufacturing.

The computation of total materials cost related to Eggo® Waffles is shown in **Illustration 21.16**.

ILLUSTRATION 21.16**Total materials cost computation**

Work in process, June 1		
Direct materials cost		\$ 50,000
Costs added to production during June		
Direct materials cost		400,000
Total materials cost		<u>\$450,000</u>

Illustration 21.17 shows the computation of unit materials cost.

ILLUSTRATION 21.17**Unit materials cost computation**

Total Materials Cost	÷	Equivalent Units of Materials	=	Unit Materials Cost
\$450,000	÷	900,000	=	\$0.50

Illustration 21.18 shows the computation of total conversion costs.

ILLUSTRATION 21.18**Total conversion costs computation**

Work in process, June 1		
Conversion costs		\$ 35,000
Costs added to production during June		
Conversion costs		170,000
Total conversion costs		<u>\$205,000</u>

The computation of unit conversion cost is shown in **Illustration 21.19**.

ILLUSTRATION 21.19**Unit conversion cost computation**

Total Conversion Costs	÷	Equivalent Units of Conversion Costs	=	Unit Conversion Cost
\$205,000	÷	820,000	=	\$0.25

Total manufacturing cost per unit is therefore computed as shown in **Illustration 21.20**.

Unit Materials Cost	+	Unit Conversion Cost	=	Total Manufacturing Cost per Unit
\$0.50	+	\$0.25	=	\$0.75

ILLUSTRATION 21.20

Total manufacturing cost per unit

Prepare a Cost Reconciliation Schedule (Step 4)

We are now ready to determine the cost of goods transferred out of the Mixing Department to the Baking Department and the costs in ending work in process. Kellogg charged total costs of \$655,000 to the Mixing Department in June, calculated as shown in **Illustration 21.21**.

Costs to be accounted for	
Work in process, June 1	\$ 85,000
Started into production	570,000
Total costs	\$655,000

ILLUSTRATION 21.21

Costs charged to Mixing Department

The company then prepares a cost reconciliation schedule (see **Illustration 21.22**) to assign these costs to (a) units transferred out to the Baking Department and (b) ending work in process.

Mixing Department Cost Reconciliation Schedule

Costs accounted for		
Transferred out ($700,000 \times \$0.75$)		\$525,000
Work in process, June 30		
Materials ($200,000 \times \$0.50$)	\$100,000	
Conversion costs ($120,000 \times \$0.25$)	30,000	130,000
Total costs		\$655,000

ILLUSTRATION 21.22

Cost reconciliation schedule—Mixing Department

Kellogg uses the total manufacturing cost per unit, \$0.75, in costing the **units completed** and transferred to the Baking Department. In contrast, the unit cost of materials and the unit cost of conversion are needed in costing **units in process**. The **cost reconciliation schedule** shows that the **total costs accounted for** (Illustration 21.22) equal the **total costs to be accounted for** (Illustration 21.21).

Preparing the Production Cost Report

At this point, Kellogg is ready to prepare the production cost report for the Mixing Department. As indicated earlier, this report is an internal document for management that shows production quantity and cost data for a production department. **Illustration 21.23** shows the completed production cost report for the Mixing Department and identifies the four steps used in preparing it (see **Helpful Hint**).

Production cost reports provide a basis for evaluating the productivity of a department. In addition, managers can use the cost data to assess whether unit costs and total costs are reasonable. By comparing the quantity and cost data with predetermined goals, top management can also judge whether current performance is meeting planned objectives.

HELPFUL HINT

The four steps in preparing a production cost report:

1. Compute the physical unit flow.
2. Compute the equivalent units of production.
3. Compute unit production costs.
4. Prepare a cost reconciliation schedule.

Costing Systems—Final Comments

Companies often use a combination of a process cost and a job order cost system. Called **operations costing**, this hybrid system is similar to process costing in its assumption that standardized methods are used to manufacture the product. At the same time, the product may have some customized, individual features that require the use of a job order cost system.

Consider, for example, **Ford Motor Company**. Each vehicle at a given plant goes through the same assembly line, but Ford uses different materials (such as seat coverings, paint, and tinted glass) for different vehicles. Similarly, **Kellogg's** Pop-Tarts® toaster pastries go through numerous standardized processes—mixing, filling, baking, frosting, and packaging. The pastry dough, though, comes in different flavors—plain, chocolate, and graham—and fillings include Smucker's® real fruit, chocolate fudge, vanilla creme, brown sugar cinnamon, and s'mores.

A cost-benefit trade-off occurs as a company decides which costing system to use. A job order cost system, for example, provides detailed information related to the cost of the product. Because each job has its own distinguishing characteristics, the system can provide an accurate cost per job. This information is useful in controlling costs and pricing products. However, the cost of implementing a job order cost system is often expensive because of the accounting costs involved.

On the other hand, for a company like **Intel**, is there a benefit in knowing whether the cost of the one-hundredth computer chip produced is different from the one-thousandth chip produced? Probably not. An average cost of the product will suffice for control and pricing purposes.

In summary, when deciding to use one of these systems or a combination system, a company must weigh the costs of implementing the system against the benefits from the additional information provided.

DO IT! 4 | Cost Reconciliation Schedule

In March, Rodayo Manufacturing had the following unit production costs: materials \$6 and conversion costs \$9. On March 1, it had no work in process. During March, Rodayo transferred out 12,000 units. As of March 31, 800 units that were 25% complete as to conversion costs and 100% complete as to materials were in ending work in process. Assign the costs to the units transferred out and in process.

Solution

The assignment of costs is as follows.

Costs accounted for		
Transferred out ($12,000 \times \$15$)		\$180,000
Work in process, March 31		
Materials ($800 \times \$6$)	\$4,800	
Conversion costs ($200^* \times \$9$)	1,800	6,600
Total costs		<u><u>\$186,600</u></u>

* $800 \times 25\%$

Related exercise material: **BE21.6, BE21.7, BE21.8, BE21.9, DO IT! 21.4, E21.3, E21.5, E21.6, E21.7, E21.8, E21.9, E21.10, E21.11, E21.13, E21.14, and E21.15.**

ACTION PLAN

- Assign the total manufacturing cost of \$15 per unit to the 12,000 units transferred out.
- Assign the materials cost and conversion costs based on equivalent units of production to units in ending work in process.

Appendix 21A

FIFO Method for Equivalent Units

LEARNING OBJECTIVE *5

Compute equivalent units using the FIFO method.

In this chapter, we demonstrated the weighted-average method of computing equivalent units. Some companies use a different method, referred to as the **first-in, first-out (FIFO) method**, to compute equivalent units. The purpose of this appendix is to illustrate how companies use the FIFO method to prepare a production cost report.

Equivalent Units Under FIFO

Under the FIFO method, companies compute equivalent units on a first-in, first-out basis. Some companies favor the FIFO method because the FIFO cost assumption usually corresponds to the actual physical flow of the goods. Under the FIFO method, companies therefore assume that the beginning work in process is completed before new work is started.

Using the FIFO method, equivalent units are the sum of the work performed to:

1. Finish the units of beginning work in process inventory.
2. Complete the units started into production during the period (referred to as the **units started and completed**).
3. Start, but only partially complete, the units in ending work in process inventory.

Normally, in a process cost system, some units will always be in process at both the beginning and end of the period.

Illustration

Illustration 21A.1 shows the physical flow of units for the Assembly Department of Shutters Inc. In addition, it indicates the degree of completion of the work in process accounts in regard to conversion costs.

ILLUSTRATION 21A.1

Physical unit flow—Assembly Department

Assembly Department		<u>Physical Units</u>
Units to be accounted for		
Work in process, June 1 (40% complete)	500	
Started (transferred) into production	8,000	
Total units	8,500	
Units accounted for		
Completed and transferred out	8,100	
Work in process, June 30 (75% complete)	400	
Total units	8,500	

In Illustration 21A.1, the units completed and transferred out (8,100) plus the units in ending work in process (400) equal the total units to be accounted for (8,500). Using FIFO, we then compute equivalent units for conversion costs as follows.

1. The 500 units of beginning work in process were 40% complete. Thus, 300 equivalent units ($500 \text{ units} \times 60\%$) were required to complete the beginning inventory.
2. The units started and completed during the current month are **the units transferred out minus the units in beginning work in process**. For the Assembly Department, units started and completed are 7,600 ($8,100 - 500$).
3. The 400 units of ending work in process were 75% complete. Thus, equivalent units were 300 ($400 \times 75\%$).

Equivalent units for conversion costs for the Assembly Department are 8,200, computed as shown in **Illustration 21A.2**.

ILLUSTRATION 21A.2

Computation of equivalent units—FIFO method

Assembly Department			
Production Data	Work Added Physical Units	Equivalent This Period	Units
Work in process, June 1	500	60%	300
Started and completed	7,600	100%	7,600
Work in process, June 30	400	75%	300
Total	8,500		8,200

Comprehensive Example

To provide a complete illustration of the FIFO method, we will use the data for the Mixing Department at **Kellogg Company** for the month of June, as shown in **Illustration 21A.3**.

Mixing Department

Units

Work in process, June 1	100,000
Direct materials: 100% complete	
Conversion costs: 70% complete	
Units started into production during June	800,000
Units completed and transferred out to Baking Department	700,000
Work in process, June 30	200,000
Direct materials: 100% complete	
Conversion costs: 60% complete	

Costs

Work in process, June 1	\$ 50,000
Direct materials: 100% complete	
Conversion costs: 70% complete	
Cost of work in process, June 1	\$ 85,000
Costs incurred during production in June	
Direct materials	\$400,000
Conversion costs	170,000
Costs incurred in June	\$570,000

Compute the Physical Unit Flow (Step 1)

Illustration 21A.4 shows the physical flow of units for Kellogg's Mixing Department for the month of June.

Mixing Department

Physical Units

Units to be accounted for	
Work in process, June 1	100,000
Started (transferred) into production	<u>800,000</u>
Total units	900,000
Units accounted for	
Completed and transferred out	700,000
Work in process, June 30	<u>200,000</u>
Total units	900,000

ILLUSTRATION 21A.4

Physical unit flow—Mixing Department

Mixing Department

Physical Units

Units to be accounted for	
Work in process, June 1	100,000
Started (transferred) into production	<u>800,000</u>
Total units	900,000
Units accounted for	
Completed and transferred out	
Work in process, June 1	100,000
Started and completed	600,000
	700,000
Work in process, June 30	<u>200,000</u>
Total units	900,000

ILLUSTRATION 21A.5

Physical unit flow (FIFO)—Mixing Department

The records indicate that the Mixing Department must account for 900,000 units. Of this sum, 700,000 units were transferred to the Baking Department and 200,000 units were still in process.

Compute Equivalent Units of Production (Step 2)

HELPFUL HINT

As noted earlier, materials are not always added at the beginning of the process. For example, companies sometimes add materials uniformly during the process.

As with the method presented in the chapter, once they determine the physical flow of the units, companies need to determine equivalent units of production. The Mixing Department adds materials at the beginning of the process, and it incurs conversion costs uniformly during the process (see **Helpful Hint**). Thus, Kellogg must make two computations of equivalent units: one for materials and one for conversion costs.

Equivalent Units for Materials. Since Kellogg adds materials at the beginning of the process, no additional materials costs are required to complete the beginning work in process. In addition, 100% of the materials costs has been incurred on the ending work in process. **Illustration 21A.6** shows the computation of equivalent units for materials.

ILLUSTRATION 21A.6

Computation of equivalent units—materials

Mixing Department—Materials			
Production Data	Physical Units	Materials Added This Period	Equivalent Units
Work in process, June 1	100,000	–0–	–0–
Started and finished	600,000	100%	600,000
Work in process, June 30	200,000	100%	200,000
Total	<u>900,000</u>		<u>800,000</u>

Equivalent Units for Conversion Costs. The 100,000 units of beginning work in process were 70% complete in terms of conversion costs. Thus, the Mixing Department required 30,000 equivalent units ($100,000 \text{ units} \times 30\%$) of conversion costs to complete the beginning inventory. In addition, the 200,000 units of ending work in process were 60% complete in terms of conversion costs. Thus, the equivalent units for conversion costs is 750,000, computed as shown in **Illustration 21A.7**.

ILLUSTRATION 21A.7

Computation of equivalent units—conversion costs

Mixing Department—Conversion Costs			
Production Data	Physical Units	Work Added This Period	Equivalent Units
Work in process, June 1	100,000	30%	30,000
Started and finished	600,000	100%	600,000
Work in process, June 30	200,000	60%	120,000
Total	<u>900,000</u>		<u>750,000</u>

Compute Unit Production Costs (Step 3)

Armed with the knowledge of the equivalent units of production, Kellogg can now compute the unit production costs. Unit production costs are costs expressed in terms of equivalent units of production. When equivalent units of production are different for materials and conversion costs, companies compute three unit costs: (1) materials, (2) conversion, and (3) total manufacturing.

Under the FIFO method, the unit costs of production are based entirely on the production costs incurred during the month. Thus, the costs in the beginning work in process are not relevant, because they were incurred on work done in the preceding month. As Illustration 21A.3 indicated, the costs incurred during production in June were as shown in **Illustration 21A.8**.

Direct materials	\$400,000
Conversion costs	170,000
Total costs	<u><u>\$570,000</u></u>

ILLUSTRATION 21A.8

Costs incurred during production in June

Illustration 21A.9 shows the computation of unit materials cost, unit conversion costs, and total unit cost related to Eggo® Waffles.

(1)	Total Materials Cost	÷	Equivalent Units of Materials	=	Unit Materials Cost
	\$400,000	÷	800,000	=	\$0.50
(2)	Total Conversion Costs	÷	Equivalent Units of Conversion Costs	=	Unit Conversion Cost
	\$170,000	÷	750,000	=	\$0.227 (rounded)*
(3)	Unit Materials Cost	+	Unit Conversion Cost	=	Total Manufacturing Cost per Unit
	\$0.50	+	\$0.227	=	\$0.727

*For homework problems, round unit costs to three decimal places.

ILLUSTRATION 21A.9

Unit cost formulas and computations—Mixing Department

As shown, the unit costs are \$0.50 for materials, \$0.227 for conversion costs, and \$0.727 for total manufacturing costs.

Prepare a Cost Reconciliation Schedule (Step 4)

Kellogg is now ready to determine the cost of goods transferred out of the Mixing Department to the Baking Department and the costs in ending work in process. The total costs charged to the Mixing Department in June are \$655,000, calculated as shown in **Illustration 21A.10** (see Illustration 21A.3 for further detail).

Costs to be accounted for	
Work in process, June 1	\$ 85,000
Started into production	570,000
Total costs	<u><u>\$655,000</u></u>

ILLUSTRATION 21A.10

Costs charged to Mixing Department

Kellogg next prepares a cost reconciliation schedule to assign these costs to (1) units transferred out to the Baking Department and (2) ending work in process. Under the FIFO method, the first goods to be completed during the period are the units in beginning work in process. Thus, the cost of the beginning work in process is always assigned to the goods transferred to the next department (or finished goods, if processing is complete). Under the FIFO method, ending work in process also will be assigned only the production costs incurred in the current period. **Illustration 21A.11** shows a cost reconciliation schedule for the Mixing Department.

ILLUSTRATION 21A.11
Cost reconciliation report

Mixing Department Cost Reconciliation Schedule		
Costs accounted for		
Transferred out		
Work in process, June 1	\$ 85,000	
Costs to complete beginning work in process		
Conversion costs ($30,000 \times \$0.227$)	6,810	
Total costs	91,810	
Units started and completed ($600,000 \times \$0.727$)	435,950*	
Total costs transferred out	527,760	
Work in process, June 30		
Materials ($200,000 \times \$0.50$)	\$100,000	
Conversion costs ($120,000 \times \$0.227$)	27,240	127,240
Total costs		\$655,000

*Any rounding errors should be adjusted in the “Units started and completed” calculation.

As you can see, the total costs accounted for (\$655,000 from Illustration 21A.11) equal the total costs to be accounted for (\$655,000 from Illustration 21A.10).

Preparing the Production Cost Report

At this point, Kellogg is ready to prepare the production cost report for the Mixing Department. This report is an internal document for management that shows production quantity and cost data for a production department.

As discussed previously, there are four steps in preparing a production cost report:

1. Compute the physical unit flow.
2. Compute the equivalent units of production.
3. Compute unit production costs.
4. Prepare a cost reconciliation schedule.

Illustration 21A.12 shows the production cost report for the Mixing Department, with the four steps identified in the report.

As indicated in the chapter, production cost reports provide a basis for evaluating the productivity of a department (see **Helpful Hint**). In addition, managers can use the cost data to assess whether unit costs and total costs are reasonable. By comparing the quantity and cost data with predetermined goals, top management can also judge whether current performance is meeting planned objectives.

HELPFUL HINT

The two self-checks in the report are (1) total physical units accounted for must equal the total units to be accounted for, and (2) total costs accounted for must equal the total costs to be accounted for.

FIFO and Weighted-Average

The weighted-average method of computing equivalent units has **one major advantage**: It is simple to understand and apply. In cases where prices do not fluctuate significantly from period to period, the weighted-average method will be very similar to the FIFO method. In addition, companies that have been using just-in-time procedures effectively for inventory control purposes will have minimal inventory balances. Therefore, differences between the weighted-average and the FIFO methods will not be material.

Conceptually, the FIFO method is superior to the weighted-average method because it measures **current performance** using only costs incurred in the current period. Managers are, therefore, not held responsible for costs from prior periods over which they may not have had control. In addition, the FIFO method **provides current cost information**, which the

company can use to establish **more accurate pricing strategies** for goods manufactured and sold in the current period.

Review and Practice

Learning Objectives Review

1 Discuss the uses of a process cost system and how it compares to a job order system.

Companies that mass-produce similar products in a continuous fashion use process cost systems. Once production begins, it continues until the finished product emerges. Each unit of finished product is indistinguishable from every other unit.

Job order cost systems are similar to process cost systems in three ways. (1) Both systems track the same cost elements—direct materials, direct labor, and manufacturing overhead. (2) Both accumulate costs in the same accounts—Raw Materials Inventory, Factory Labor, and Manufacturing Overhead. (3) Both assign accumulated costs to the same accounts—Work in Process, Finished Goods Inventory, and Cost of Goods Sold. However, the methods used to assign costs differ significantly.

There are four main differences between the two cost systems. (1) A process cost system uses separate Work in Process accounts for each department or manufacturing process, rather than only one work in process account used in a job order cost system. (2) A process cost system summarizes costs in a production cost report for each department. A job order cost system charges costs to individual jobs and summarizes them in a job cost sheet. (3) Costs are totaled at the end of a time period in a process cost system but at the completion of a job in a job order cost system. (4) A process cost system calculates unit cost as Total manufacturing costs for the period \div Units produced during the period. A job order cost system calculates unit cost as Total cost per job \div Units produced.

2 Explain the flow of costs in a process cost system and the journal entries to assign manufacturing costs.

A process cost system assigns manufacturing costs for raw materials, labor, and overhead to work in process accounts for various departments or manufacturing processes. It transfers the costs of partially completed units from one department to another as those units move through the manufacturing process. The system transfers the costs of completed work to Finished Goods Inventory. Finally, when inventory is sold, the system transfers the costs to Cost of Goods Sold.

Entries to assign the costs of raw materials, labor, and overhead consist of a credit to Raw Materials Inventory, Factory Labor, and Manufacturing Overhead, and a debit to Work in Process for

each department. Entries to record the cost of goods transferred to another department are a credit to Work in Process for the department whose work is finished and a debit to Work in Process for the department to which the goods are transferred. The entry to record units completed and transferred to the warehouse is a credit to Work in Process for the department whose work is finished and a debit to Finished Goods Inventory. The entry to record the sale of goods is a credit to Finished Goods Inventory and a debit to Cost of Goods Sold.

3 Compute equivalent units.

Equivalent units of production measure work done during a period, expressed in fully completed units. Companies use this measure to determine the cost per unit of completed product. Equivalent units are the sum of units completed and transferred out plus equivalent units of ending work in process.

4 Complete the four steps to prepare a production cost report.

The four steps to complete a production cost report are as follows. (1) Compute the physical unit flow—that is, the total units to be accounted for. (2) Compute the equivalent units of production separately for direct materials and conversion costs. (3) Compute the unit production costs, expressed in terms of equivalent units of production. (4) Prepare a cost reconciliation schedule, which shows that the total costs accounted for equal the total costs to be accounted for.

The production cost report contains both quantity and cost data for a production department. There are four sections in the report: (1) number of physical units, (2) equivalent units determination, (3) unit costs, and (4) cost reconciliation schedule.

***5 Compute equivalent units using the FIFO method.**

Equivalent units under the FIFO method are the sum of the work performed to (1) finish the units of beginning work in process inventory, if any; (2) complete the units started into production during the period; and (3) start, but only partially complete, the units in ending work in process inventory.

Glossary Review

Conversion costs The sum of labor costs and overhead costs. (p. 21-10).

Cost reconciliation schedule A schedule that shows that the total costs accounted for equal the total costs to be accounted for. (p. 21-15).

Equivalent units of production A measure of the work done during the period, expressed in fully completed units. (p. 21-9).

Operations costing A combination of a process cost and a job order cost system in which products are manufactured primarily by standardized methods, with some customization. (p. 21-16).

Physical units Actual units to be accounted for during a period, irrespective of any work performed. (p. 21-13).

Process cost system An accounting system used to apply costs to similar products that are mass-produced in a continuous fashion. (p. 21-3).

Production cost report An internal report for management that shows both production quantity and cost data for a production department. (p. 21-12).

Total units (costs) accounted for The sum of the units (costs) transferred out during the period plus the units (costs) in process at the end of the period. (p. 21-13).

Total units (costs) to be accounted for The sum of the units (costs) started (or transferred) into production during the period plus the units (costs) in process at the beginning of the period. (p. 21-13).

Unit production costs Costs expressed in terms of equivalent units of production. (p. 21-14).

Weighted-average method Method of computing equivalent units of production which considers the degree of completion (weighting) of the units completed and transferred out and the ending work in process. (p. 21-10).

Practice Multiple-Choice Questions

1. **(LO 1)** Which of the following items is not characteristic of a process cost system?
 - a. Once production begins, it continues until the finished product emerges.
 - b. The products produced are heterogeneous in nature.
 - c. The focus is on continually producing homogeneous products.
 - d. When the finished product emerges, all units have precisely the same amount of materials, labor, and overhead.

2. **(LO 1)** Indicate which of the following statements is **not** correct.
 - a. Both a job order and a process cost system track the same three manufacturing cost elements—direct materials, direct labor, and manufacturing overhead.
 - b. A job order cost system uses only one work in process account, whereas a process cost system uses multiple work in process accounts.
 - c. Manufacturing costs are accumulated the same way in a job order and in a process cost system.
 - d. Manufacturing costs are assigned the same way in a job order and in a process cost system.

3. **(LO 2)** In a process cost system, the flow of costs is:
 - a. work in process, cost of goods sold, finished goods.
 - b. finished goods, work in process, cost of goods sold.
 - c. finished goods, cost of goods sold, work in process.
 - d. work in process, finished goods, cost of goods sold.

4. **(LO 2)** In making journal entries to assign raw materials costs, a company using process costing:
 - a. debits Finished Goods Inventory.
 - b. often debits two or more work in process accounts.
 - c. generally credits two or more work in process accounts.
 - d. credits Finished Goods Inventory.

5. **(LO 2)** In a process cost system, manufacturing overhead:
 - a. is assigned to finished goods at the end of each accounting period.
 - b. is assigned to a work in process account for each job as the job is completed.
 - c. is assigned to a work in process account for each production department on the basis of a predetermined overhead rate.
 - d. is assigned to a work in process account for each production department as overhead costs are incurred.

6. **(LO 3)** Conversion costs are the sum of:
 - a. fixed and variable overhead costs.
 - b. direct labor costs and overhead costs.
 - c. direct material costs and overhead costs.
 - d. direct labor and indirect labor costs.

7. **(LO 3)** The Mixing Department's output during the period consists of 20,000 units completed and transferred out, and 5,000 units in ending work in process 60% complete as to materials and conversion costs. Beginning inventory is 1,000 units, 40% complete as to materials and conversion costs. The equivalent units of production are:

a. 22,600.	c. 24,000.
b. 23,000.	d. 25,000.

8. **(LO 3)** In RYZ Company, there are zero units in beginning work in process, 7,000 units started into production, and 500 units in ending work in process 20% completed. The physical units to be accounted for are:

a. 7,000.	c. 7,500.
b. 7,360.	d. 7,340.

9. **(LO 3)** Mora Company has 2,000 units in beginning work in process, 20% complete as to conversion costs, 23,000 units transferred out to finished goods, and 3,000 units in ending work in process $33\frac{1}{3}\%$ complete as to conversion costs.

The beginning and ending inventory is fully complete as to materials costs. Equivalent units for materials and conversion costs are, respectively:

a. 22,000, 24,000.	c. 24,000, 26,000.
b. 24,000, 26,000.	d. 26,000, 24,000.
c. 26,000, 24,000.	d. 26,000, 26,000.

10. **(LO 4)** Fortner Company has no beginning work in process; 9,000 units are transferred out and 3,000 units in ending work in process are one-third finished as to conversion costs and fully complete as to materials cost. If total materials cost is \$60,000, the unit materials cost is:

a. \$5.00.	c. \$6.00.
b. \$5.45 rounded.	d. No correct answer is given.

11. (LO 4) Largo Company has unit costs of \$10 for materials and \$30 for conversion costs. If there are 2,500 units in ending work in process, 40% complete as to conversion costs, and fully complete as to materials cost, the total cost assignable to the ending work in process inventory is:

- a. \$45,000.
- b. \$55,000.
- c. \$75,000.
- d. \$100,000.

12. (LO 4) A production cost report:

- a. is an external report.
- b. shows both the production quantity and cost data related to a department.
- c. shows equivalent units of production but not physical units.
- d. contains six sections.

13. (LO 4) In a production cost report, units to be accounted for are calculated as:

- a. Units started into production + Units in ending work in process.
- b. Units started into production – Units in beginning work in process.
- c. Units transferred out + Units in beginning work in process.
- d. Units started into production + Units in beginning work in process.

***14. (LO 5)** Hollins Company uses the FIFO method to compute equivalent units. It has 2,000 units in beginning work in process, 20% complete as to conversion costs, 25,000 units started and completed, and 3,000 units in ending work in process, 30% complete

as to conversion costs. All units are 100% complete as to materials. Equivalent units for materials and conversion costs are, respectively:

- a. 28,000 and 26,600.
- b. 28,000 and 27,500.
- c. 27,000 and 26,200.
- d. 27,000 and 29,600.

***15. (LO 5)** KLM Company uses the FIFO method to compute equivalent units. It has no beginning work in process; 9,000 units are started and completed and 3,000 units in ending work in process are one-third completed. All material is added at the beginning of the process. If total materials cost is \$60,000, the unit materials cost is:

- a. \$5.00.
- b. \$6.00.
- c. \$6.67 (rounded).
- d. No correct answer is given.

***16. (LO 5)** Toney Company uses the FIFO method to compute equivalent units. It has unit costs of \$10 for materials and \$30 for conversion costs. If there are 2,500 units in ending work in process, 100% complete as to materials and 40% complete as to conversion costs, the total cost assignable to the ending work in process inventory is:

- a. \$45,000.
- b. \$55,000.
- c. \$75,000.
- d. \$100,000.

Solutions

1. b. The products produced are homogeneous, not heterogeneous, in nature. Choices (a), (c), and (d) are incorrect because they all represent characteristics of a process cost system.

2. d. Manufacturing costs are not assigned the same way in a job order and in a process cost system. Choices (a), (b), and (c) are true statements.

3. d. In a process cost system, the flow of costs is work in process, finished goods, cost of goods sold. Therefore, choices (a), (b), and (c) are incorrect.

4. b. The debit is often to two or more work in process accounts, not (a) a debit to Finished Goods Inventory, (c) credits to two or more work in process accounts, or (d) a credit to Finished Goods Inventory.

5. c. In a process cost system, manufacturing overhead is assigned to a work in process account for each production department on the basis of a predetermined overhead rate, not (a) to a finished goods account, (b) as the job is completed, or (d) as overhead costs are incurred.

6. b. Conversion costs are the sum of labor costs and overhead costs, not (a) the sum of fixed and variable overhead costs, (c) direct material costs and overhead costs, or (d) direct labor and indirect labor costs.

7. b. The equivalent units of production is the sum of units completed and transferred out (20,000) and the equivalent units of ending work in process inventory ($5,000 \text{ units} \times 60\%$), or $20,000 + 3,000 = 23,000$ units, not (a) 22,600 units, (c) 24,000 units, or (d) 25,000 units.

8. a. There are 7,000 physical units to be accounted for (0 units in beginning inventory + 7,000 units started), not (b) 7,360, (c) 7,500, or (d) 7,340.

9. c. The equivalent units for materials are 26,000 (23,000 units transferred out plus 3,000 in ending work in process inventory). The equivalent units for conversion costs are 24,000 (23,000 transferred out plus $33\frac{1}{3}\%$ of the ending work in process inventory or 1,000). Therefore, choices (a) 22,000, 24,000; (b) 24,000, 26,000; and (d) 26,000, 26,000 are incorrect.

10. a. $\$60,000 \div (9,000 + 3,000 \text{ units}) = \5.00 per unit , not (b) \$5.45 (rounded), (c) \$6.00, or (d) no correct answer is given.

11. b. $[(2,500 \text{ units} \times 100\% \text{ complete}) \times \$10] + [(2,500 \text{ units} \times 40\% \text{ complete}) \times \$30] \text{ or } \$25,000 + \$30,000 = \$55,000$, not (a) \$45,000, (c) \$75,000, or (d) \$100,000.

12. b. A production cost report shows costs charged to a department and costs accounted for as well as the production quantity. The other choices are incorrect because a production cost report (a) is an internal, not external, report; (c) does show physical units; and (d) is prepared in four steps and does not contain six sections.

13. d. In a production cost report, units to be accounted for are calculated as Units started in production + Units in beginning work in process, not (a) Units in ending work in process, (b) minus Units in beginning work in process, or (c) Units transferred out.

***14. b.** The equivalent units for materials are 28,000 [25,000 started and completed + ($3,000 \times 100\%$)]. The equivalent units for conversion costs are 27,500 [$(2,000 \times 80\%) + 25,000 + (3,000 \times 30\%)$]. Therefore, choices (a) 28,000, 26,600; (c) 27,000, 26,200; and (d) 27,000, 29,600 are incorrect.

*15. a. Unit materials cost is \$5.00 [$\$60,000 \div (9,000 + 3,000)$]. Therefore, choices (b) \$6.00, (c) \$6.67 (rounded), and (d) no correct answer are incorrect.

*16. b. The total cost assignable to the ending work in process is \$55,000 [$(\$10 \times 2,500) + (\$30 \times 2,500 \times 40\%)$]. Therefore, choices (a) \$45,000, (c) \$75,000, and (d) \$100,000 are incorrect.

Practice Brief Exercises

1. (LO 2) Jeremiah Industries purchased \$70,000 of raw materials on account. Supporting records show that the Assembly Department used \$43,000 of the raw materials and the Finishing Department used the remainder. Prepare the journal entries relating to raw materials.

Journalize the assignment of materials.

Solution

1. Raw Materials Inventory	70,000	
Accounts Payable		70,000
Work in Process—Assembly Department	43,000	
Work in Process—Finishing Department	27,000	
Raw Materials Inventory		70,000

2. (LO 3) The Cooking Department of Caleb Foods has the following production data for October: beginning work in process 3,000 units that are 100% complete as to materials and 30% complete as to conversion costs; units transferred out 10,000 units; and ending work in process 6,000 units that are 100% complete as to materials and 60% complete as to conversion costs. Compute the equivalent units of production for (a) materials and (b) conversion costs for the month of October.

Compute equivalent units of production.

Solution

2.		(a) Materials	(b) Conversion Costs
Units transferred out		10,000	10,000
Work in process, November 30			
Materials ($6,000 \times 100\%$)	6,000		
Conversion costs ($6,000 \times 60\%$)		3,600	
Total equivalent units	<u>16,000</u>	<u>13,600</u>	

3. (LO 4) Smith Company has the following production data for April: units transferred out 50,000, and ending work in process 8,000 units that are 100% complete for materials and 30% complete for conversion costs. If unit materials cost is \$3 and unit conversion cost is \$8, determine the costs to be assigned to the units transferred out and the units in ending work in process.

Compute costs to units transferred out and in process.

Solution

3. Assignment of Costs	<u>Equivalent Units</u>	<u>Unit Cost</u>	
<u>Transferred out</u>			
Transferred out	50,000	\$11	\$550,000
<u>Work in process, 4/30</u>			
Materials	8,000	3	\$24,000
Conversion costs	2,400	8	<u>19,200</u>
Total costs			<u>43,200</u>
			<u>\$593,200</u>

4. (LO 4) Production costs chargeable to the Finishing Department in July in Lethbridge-Stewart Manufacturing are materials \$60,000, labor \$29,500, and overhead \$11,000. Equivalent units of production are materials 30,000 and conversion costs 27,000. Production records indicate that 25,000 units were transferred out, and 5,000 units in ending work in process were 40% complete as to conversion costs and 100% complete as to materials.

Prepare unit costs and cost reconciliation schedule.

- a. Compute the unit costs for materials and conversion costs.
- b. Prepare a cost reconciliation schedule.

Solution**4. a.**

Total materials costs \$60,000	÷	Equivalent units of materials 30,000	=	Unit materials cost \$2.00
-----------------------------------	---	---	---	-------------------------------

Total conversion costs* \$40,500	÷	Equivalent units of conversion costs 27,000	=	Unit conversion cost \$1.50
-------------------------------------	---	--	---	--------------------------------

* $\$29,500 + \$11,000$ **b. Costs accounted for:**

Transferred out	(25,000 × \$3.50)	\$87,500
Work in process		
Materials	(5,000 × \$2.00)	\$10,000
Conversion costs	(2,000* × \$1.50)	3,000
Total costs		<u>13,000</u>
		<u>\$100,500</u>

* $5,000 \times 40\%$ **Practice Exercises***Journalize transactions.*

- 1. (LO 2)** Armando Company manufactures pizza sauce through two production departments: Cooking and Canning. In each process, materials and conversion costs are incurred evenly throughout the process. For the month of April, the work in process accounts show the following debits.

	Cooking	Canning
Beginning work in process	\$ -0-	\$ 4,000
Materials	25,000	8,000
Labor	8,500	7,500
Overhead	29,000	25,800
Costs transferred in		55,000

Instructions

Journalize the April transactions.

Solution

1. April 30	Work in Process—Cooking	25,000	33,000
	Work in Process—Canning	8,000	
	Raw Materials Inventory		
30	Work in Process—Cooking	8,500	16,000
	Work in Process—Canning	7,500	
	Factory Labor		
30	Work in Process—Cooking	29,000	54,800
	Work in Process—Canning	25,800	
	Manufacturing Overhead		
30	Work in Process—Canning	55,000	55,000
	Work in Process—Cooking		

Prepare a production cost report.

- 2. (LO 3, 4)** The Sanding Department of Jo Furniture Company has the following production and manufacturing cost data for March 2020, the first month of operation.

Production: 11,000 units finished and transferred out; 4,000 units started that are 100% complete as to materials and 25% complete as to conversion costs.

Manufacturing costs: Materials \$48,000; labor \$42,000; and overhead \$36,000.

Instructions

Prepare a production cost report.

Solution

2.

Jo Furniture Company
Sanding Department
Production Cost Report
For the Month Ended March 31, 2020

Quantities	Equivalent Units		
	Physical Units	Materials	Conversion Costs
Units to be accounted for			
Work in process, March 1	0		
Started into production	<u>15,000</u>		
Total units	<u><u>15,000</u></u>		
Units accounted for			
Transferred out	11,000	11,000	11,000
Work in process, March 31	<u>4,000</u>	<u>4,000</u>	1,000
Total units	<u><u>15,000</u></u>	<u><u>15,000</u></u>	12,000

Costs	Conversion Costs			Total
	Materials	Conversion Costs	Total	
Unit costs				
Costs in March	<u>\$48,000</u>	<u>\$78,000*</u>	<u>\$126,000</u>	
Equivalent units	<u>15,000</u>	<u>12,000</u>		
Unit costs [(a) + (b)]	<u><u>\$3.20</u></u>	<u><u>\$6.50</u></u>	<u><u>\$9.70</u></u>	
Costs to be accounted for				
Work in process, March 1				\$ 0
Started into production				<u>126,000</u>
Total costs				<u><u>\$126,000</u></u>

Cost Reconciliation Schedule

Costs accounted for			
Transferred out ($11,000 \times \$9.70$)			\$106,700
Work in process, March 31			
Materials ($4,000 \times \$3.20$)	\$12,800		
Conversion costs ($1,000 \times \$6.50$)	<u>6,500</u>	19,300	
Total costs			<u><u>\$126,000</u></u>

* $\$42,000 + \$36,000$ **Practice Problem**

(LO 3, 4) Karlene Industries produces plastic ice cube trays in two processes: heating and stamping. All materials are added at the beginning of the Heating Department process. Karlene uses the weighted-average method to compute equivalent units.

Prepare a production cost report and journalize.

On November 1, the Heating Department had in process 1,000 trays that were 70% complete. During November, it started into production 12,000 trays. On November 30, 2020, 2,000 trays that were 60% complete were in process.

The following cost information for the Heating Department was also available.

Work in process, November 1:		Costs incurred in November:	
Materials	\$ 640	Material	\$3,000
Conversion costs	<u>360</u>	Labor	2,300
Cost of work in process, Nov. 1	<u><u>\$1,000</u></u>	Overhead	4,050

Instructions

- Prepare a production cost report for the Heating Department for the month of November 2020, using the weighted-average method.
- Journalize the transfer of costs to the Stamping Department.

Solution

a.

Karlene Industries
Heating Department
Production Cost Report
For the Month Ended November 30, 2020

Quantities	Physical Units [Step 1]	Equivalent Units	
		Materials	Conversion Costs [Step 2]
Units to be accounted for			
Work in process, November 1	1,000		
Started into production	12,000		
Total units	13,000		
Units accounted for			
Transferred out	11,000	11,000	11,000
Work in process, November 30	2,000	2,000	1,200
Total units	13,000	13,000	12,200
Costs			Conversion
Unit costs [Step 3]		Materials	Costs
	(a)	\$ 3,640*	\$ 6,710**
Total cost			
Equivalent units	(b)	13,000	12,200
Unit costs [(a) ÷ (b)]		\$0.28	\$0.55
Costs to be accounted for			
Work in process, November 1			\$ 1,000
Started into production			9,350
Total costs			\$10,350
*\$640 + \$3,000			
**\$360 + \$2,300 + \$4,050			
Cost Reconciliation Schedule [Step 4]			
Costs accounted for			
Transferred out (11,000 × \$0.83)			\$ 9,130
Work in process, November 30			
Materials (2,000 × \$0.28)		\$560	
Conversion costs (1,200 × \$0.55)		660	1,220
Total costs			\$10,350
b. Work in Process—Stamping		9,130	
Work in Process—Heating			9,130
(To record transfer of units to the Stamping Department)			

WileyPLUS

Brief Exercises, DO IT! Exercises, Exercises, Problems, and many additional resources are available for practice in WileyPLUS.

Note: All asterisked Questions, Exercises, and Problems relate to material in the appendix to this chapter.

Questions

1. Identify which costing system—job order or process cost—the following companies would primarily use: (a) **Quaker Oats**, (b) **Jif Peanut Butter**, (c) **Gulf Craft** (luxury yachts), and (d) **Warner Bros. Motion Pictures**.

- 2.** Contrast the primary focus of job order cost accounting and of process cost accounting.
- 3.** What are the similarities between a job order and a process cost system?
- 4.** Your roommate is confused about the features of process cost accounting. Identify and explain the distinctive features for your roommate.
- 5.** Sam Bowyer believes there are no significant differences in the flow of costs between job order cost accounting and process cost accounting. Is Bowyer correct? Explain.
- 6. a.** What source documents are used in assigning (1) materials and (2) labor to production in a process cost system?
- b.** What criterion and basis are commonly used in allocating overhead to processes?
- 7.** At Ely Company, overhead is assigned to production departments at the rate of \$5 per machine hour. In July, machine hours were 3,000 in the Machining Department and 2,400 in the Assembly Department. Prepare the entry to assign overhead to production.
- 8.** Mark Haley is uncertain about the steps used to prepare a production cost report. State the procedures that are required in the sequence in which they are performed.
- 9.** John Harbeck is confused about computing physical units. Explain to John how physical units to be accounted for and physical units accounted for are determined.
- 10.** What is meant by the term “equivalent units of production”?
- 11.** How are equivalent units of production computed?
- 12.** Coats Company had zero units of beginning work in process. During the period, 9,000 units were completed, and there were 600 units of ending work in process. How many units were started into production?
- 13.** Sanchez Co. has zero units of beginning work in process. During the period, 12,000 units were completed, and there were 500 units of ending work in process one-fifth complete as to conversion cost and 100% complete as to materials cost. What were the equivalent units of production for (a) materials and (b) conversion costs?
- 14.** Hindi Co. started 3,000 units during the period. Its beginning inventory is 500 units one-fourth complete as to conversion costs and 100% complete as to materials costs. Its ending inventory is 300 units one-fifth complete as to conversion costs and 100% complete as to materials costs. How many units were transferred out this period?
- 15.** Clauss Company transfers out 14,000 units and has 2,000 units of ending work in process that are 25% complete. Materials are entered at the beginning of the process and there is no beginning work in process. Assuming unit materials costs of \$3 and unit conversion costs of \$5, what are the costs to be assigned to units (a) transferred out and (b) in ending work in process?
- 16. a.** Ann Quinn believes the production cost report is an external report for stockholders. Is Ann correct? Explain.
- b.** Identify the sections in a production cost report.
- 17.** What purposes are served by a production cost report?
- 18.** At Trent Company, there are 800 units of ending work in process that are 100% complete as to materials and 40% complete as to conversion costs. If the unit cost of materials is \$3 and the total costs assigned to the 800 units is \$6,000, what is the per unit conversion cost?
- 19.** What is the difference between operations costing and a process cost system?
- 20.** How does a company decide whether to use a job order or a process cost system?
- *21.** Soria Co. started and completed 2,000 units for the period. Its beginning inventory is 800 units 25% complete and its ending inventory is 400 units 20% complete. Soria uses the FIFO method to compute equivalent units. How many units were transferred out this period?
- *22.** Reyes Company transfers out 12,000 units and has 2,000 units of ending work in process that are 25% complete. Materials are entered at the beginning of the process and there is no beginning work in process. Reyes uses the FIFO method to compute equivalent units. Assuming unit materials costs of \$3 and unit conversion costs of \$7, what are the costs to be assigned to units (a) transferred out and (b) in ending work in process?

Brief Exercises

BE21.1 (LO 2) Warner Company purchases \$50,000 of raw materials on account, and it incurs \$60,000 of factory labor costs. Journalize the two transactions on March 31, assuming the labor costs are not paid until April.

Journalize entries for accumulating costs.

BE21.2 (LO 2) Data for Warner Company are given in BE21.1. Supporting records show that (a) the Assembly Department used \$24,000 of the raw materials and \$35,000 of the factory labor, and (b) the Finishing Department used the remainder. Journalize the assignment of the costs to the processing departments on March 31.

Journalize the assignment of materials and labor costs.

BE21.3 (LO 2) Factory labor data for Warner Company are given in BE21.2. Manufacturing overhead is assigned to departments on the basis of 160% of labor costs. Journalize the assignment of overhead to the Assembly and Finishing Departments.

Journalize the assignment of overhead costs.

BE21.4 (LO 3) Goode Company has the following production data for selected months.

Compute equivalent units of production.

Month	Beginning Work in Process	Units Transferred Out	Ending Work in Process	
			Units	% Complete as to Conversion Cost
January	-0-	35,000	10,000	40%
March	-0-	40,000	8,000	75
July	-0-	45,000	16,000	25

Compute equivalent units of production.

Compute equivalent units of production for materials and conversion costs, assuming materials are entered at the beginning of the process.

BE21.5 (LO 3) The Smelting Department of Kiner Company has the following production data for November.

Beginning work in process 2,000 units that are 100% complete as to materials and 20% complete as to conversion costs; units transferred out 9,000 units; and ending work in process 7,000 units that are 100% complete as to materials and 40% complete as to conversion costs.

Compute the equivalent units of production for (a) materials and (b) conversion costs for the month of November.

Compute unit costs of production.

BE21.6 (LO 4) In Mordica Company, total materials costs are \$33,000, and total conversion costs are \$54,000. Equivalent units of production are materials 10,000 and conversion costs 12,000. Compute the unit costs for materials, conversion costs, and total manufacturing costs.

Assign costs to units transferred out and in process.

BE21.7 (LO 4) Trek Company has the following production data for April: units transferred out 40,000, and ending work in process 5,000 units that are 100% complete for materials and 40% complete for conversion costs. If unit materials cost is \$4 and unit conversion cost is \$7, determine the costs to be assigned to the units transferred out and the units in ending work in process.

Compute unit costs.

BE21.8 (LO 4) Production costs chargeable to the Finishing Department in June in Hollins Company are materials \$12,000, labor \$29,500, and overhead \$18,000. Equivalent units of production are materials 20,000 and conversion costs 19,000. Compute the unit costs for materials and conversion costs.

Prepare cost reconciliation schedule.

BE21.9 (LO 4) Data for Hollins Company are given in BE21.8. Production records indicate that 18,000 units were transferred out, and 2,000 units in ending work in process were 50% complete as to conversion costs and 100% complete as to materials. Prepare a cost reconciliation schedule.

Assign costs to units transferred out and in process.

***BE21.10 (LO 5)** Pix Company has the following production data for March: no beginning work in process, units started and completed 30,000, and ending work in process 5,000 units that are 100% complete for materials and 40% complete for conversion costs. Pix uses the FIFO method to compute equivalent units. If unit materials cost is \$6 and unit conversion cost is \$10, determine the costs to be assigned to the units transferred out and the units in ending work in process. The total costs to be assigned are \$530,000.

Prepare a partial production cost report using the FIFO approach.

***BE21.11 (LO 5)** Using the data in BE21.10, prepare the cost section of the production cost report for Pix Company using the FIFO approach.

Compute unit costs.

***BE21.12 (LO 5)** Production costs chargeable to the Finishing Department in May at Kim Company are materials \$8,000, labor \$20,000, overhead \$18,000, and transferred-in costs \$67,000. Equivalent units of production are materials 20,000 and conversion costs 19,000. Kim uses the FIFO method to compute equivalent units. Compute the unit costs for materials and conversion costs. Transferred-in costs are considered materials costs.

DO IT! Exercises

Compare job order and process cost systems.

DO IT! 21.1 (LO 1) Indicate whether each of the following statements is true or false.

1. Many hospitals use job order costing for small, routine medical procedures.
2. A manufacturer of computer flash drives would use a job order cost system.
3. A process cost system uses multiple work in process accounts.
4. A process cost system keeps track of costs on job cost sheets.

Assign and journalize manufacturing costs.

DO IT! 21.2 (LO 2) Kopa Company manufactures CH-21 through two processes: mixing and packaging. In July, the following costs were incurred.

	<u>Mixing</u>	<u>Packaging</u>
Raw materials used	\$10,000	\$28,000
Factory labor costs	8,000	36,000
Manufacturing overhead costs	12,000	54,000

Units completed at a cost of \$21,000 in the Mixing Department are transferred to the Packaging Department. Units completed at a cost of \$106,000 in the Packaging Department are transferred to Finished Goods. Journalize the assignment of these costs to the two processes and the transfer of units as appropriate.

DO IT! 21.3 (LO 3) The Assembly Department for Right pens has the following production data for the current month.

<u>Beginning Work in Process</u>	<u>Units Transferred Out</u>	<u>Ending Work in Process</u>
-0-	20,000	10,000

Materials are entered at the beginning of the process. The ending work in process units are 70% complete as to conversion costs. Compute the equivalent units of production for (a) materials and (b) conversion costs.

DO IT! 21.4 (LO 4) In March, Kelly Company had the following unit production costs: materials \$10 and conversion costs \$8. On March 1, it had no work in process. During March, Kelly transferred out 22,000 units. As of March 31, 4,000 units that were 40% complete as to conversion costs and 100% complete as to materials were in ending work in process.

Compute equivalent units.

Prepare cost reconciliation schedule.

- a. Compute the total units to be accounted for.
- b. Compute the equivalent units of production.
- c. Prepare a cost reconciliation schedule, including the costs of materials transferred out and the costs of materials in process.

Exercises

E21.1 (LO 1) Robert Wilkins has prepared the following list of statements about process cost accounting.

Understand process cost accounting.

1. Process cost systems are used to apply costs to similar products that are mass-produced in a continuous fashion.
2. A process cost system is used when each finished unit is indistinguishable from another.
3. Companies that produce soft drinks, movies, and computer chips would all use process cost accounting.
4. In a process cost system, costs are tracked by individual jobs.
5. Job order costing and process costing track different manufacturing cost elements.
6. Both job order costing and process costing account for direct materials, direct labor, and manufacturing overhead.
7. Costs flow through the accounts in the same basic way for both job order costing and process costing.
8. In a process cost system, only one work in process account is used.
9. In a process cost system, costs are summarized in a job cost sheet.
10. In a process cost system, the unit cost is total manufacturing costs for the period divided by the equivalent units produced during the period.

Instructions

Identify each statement as true or false. If false, indicate how to correct the statement.

E21.2 (LO 2) Harrelson Company manufactures pizza sauce through two production departments: Cooking and Canning. In each process, materials and conversion costs are incurred evenly throughout the process. For the month of April, the work in process accounts show the following debits.

Journalize transactions.

	<u>Cooking</u>	<u>Canning</u>
Beginning work in process	\$ -0-	\$ 4,000
Materials	21,000	9,000
Labor	8,500	7,000
Overhead	31,500	25,800
Costs transferred in		53,000

Instructions

Journalize the April transactions.

Answer questions on costs and production.

E21.3 (LO 2, 3, 4) The ledger of American Company has the following work in process account.

Work in Process—Painting					
5/1	Balance	3,590	5/31	Transferred out	?
5/31	Materials	5,160			
5/31	Labor	2,530			
5/31	Overhead	1,380			
5/31	Balance	?			

Production records show that there were 400 units in the beginning inventory, 30% complete, 1,600 units started, and 1,700 units transferred out. The beginning work in process had materials cost of \$2,040 and conversion costs of \$1,550. The units in ending inventory were 40% complete. Materials are entered at the beginning of the painting process.

Instructions

- How many units are in process at May 31?
- What is the unit materials cost for May?
- What is the unit conversion cost for May?
- What is the total cost of units transferred out in May?
- What is the cost of the May 31 inventory?

Journalize transactions for two processes.

E21.4 (LO 2) Schrager Company has two production departments: Cutting and Assembly. July 1 inventories are Raw Materials \$4,200, Work in Process—Cutting \$2,900, Work in Process—Assembly \$10,600, and Finished Goods \$31,000. During July, the following transactions occurred.

- Purchased \$62,500 of raw materials on account.
- Incurred \$60,000 of factory labor. (Credit Wages Payable.)
- Incurred \$70,000 of manufacturing overhead; \$40,000 was paid and the remainder is unpaid.
- Requisitioned materials for Cutting \$15,700 and Assembly \$8,900.
- Used factory labor for Cutting \$33,000 and Assembly \$27,000.
- Applied overhead at the rate of \$18 per machine hour. Machine hours were Cutting 1,680 and Assembly 1,720.
- Transferred goods costing \$67,600 from the Cutting Department to the Assembly Department.
- Transferred goods costing \$134,900 from Assembly to Finished Goods.
- Sold goods costing \$150,000 for \$200,000 on account.

Instructions

Journalize the transactions. (Omit explanations.)

Compute physical units and equivalent units of production.

E21.5 (LO 3, 4) In Shady Company, materials are entered at the beginning of each process. Work in process inventories, with the percentage of work done on conversion costs, and production data for its Sterilizing Department in selected months during 2020 are as follows.

Month	Beginning Work in Process		Units Transferred Out	Ending Work in Process	
	Units	Conversion Cost%		Units	Conversion Cost%
January	—0—	—	11,000	2,000	60
March	—0—	—	12,000	3,000	30
May	—0—	—	14,000	7,000	80
July	—0—	—	10,000	1,500	40

Instructions

- Compute the physical units for January and May.
- Compute the equivalent units of production for (1) materials and (2) conversion costs for each month.

E21.6 (LO 3, 4) The Cutting Department of Cassel Company has the following production and cost data for July.

Determine equivalent units, unit costs, and assignment of costs.

Production	Costs
1. Transferred out 12,000 units.	Beginning work in process \$ -0-
2. Started 3,000 units that are 60% complete as to conversion costs and 100% complete as to materials at July 31.	Materials 45,000
	Labor 16,200
	Manufacturing overhead 18,300

Materials are entered at the beginning of the process. Conversion costs are incurred uniformly during the process.

Instructions

- a. Determine the equivalent units of production for (1) materials and (2) conversion costs.
- b. Compute unit costs and prepare a cost reconciliation schedule.

E21.7 (LO 3, 4) The Sanding Department of Quik Furniture Company has the following production and manufacturing cost data for March 2020, the first month of operation.

Prepare a production cost report.

Production: 7,000 units finished and transferred out; 3,000 units started that are 100% complete as to materials and 20% complete as to conversion costs.

Manufacturing costs: Materials \$33,000; labor \$21,000; and overhead \$36,000.

Instructions

Prepare a production cost report.

E21.8 (LO 3, 4) The Blending Department of Luongo Company has the following cost and production data for the month of April.

Determine equivalent units, unit costs, and assignment of costs.

Costs:	
Work in process, April 1	
Direct materials: 100% complete	\$100,000
Conversion costs: 20% complete	70,000
Cost of work in process, April 1	<u><u>\$170,000</u></u>
Costs incurred during production in April	
Direct materials	\$ 800,000
Conversion costs	365,000
Costs incurred in April	<u><u>\$1,165,000</u></u>

Units transferred out totaled 17,000. Ending work in process was 1,000 units that are 100% complete as to materials and 40% complete as to conversion costs.

Instructions

- a. Compute the equivalent units of production for (1) materials and (2) conversion costs for the month of April.
- b. Compute the unit costs for the month.
- c. Determine the costs to be assigned to the units transferred out and in ending work in process.

E21.9 (LO 3, 4) Baden Company has gathered the following information.

Determine equivalent units, unit costs, and assignment of costs.

Units in beginning work in process	-0-
Units started into production	36,000
Units in ending work in process	6,000
Percent complete in ending work in process:	
Conversion costs	40%
Materials	100%
Costs incurred:	
Direct materials	\$72,000
Direct labor	\$61,000
Overhead	\$101,000

Instructions

- Compute equivalent units of production for materials and for conversion costs.
- Determine the unit costs of production.
- Show the assignment of costs to units transferred out and in process.

Determine equivalent units, unit costs, and assignment of costs.

E21.10 (LO 3, 4) Overton Company has gathered the following information.

Units in beginning work in process	20,000
Units started into production	164,000
Units in ending work in process	24,000
Percent complete in ending work in process:	
Conversion costs	60%
Materials	100%
Costs incurred:	
Direct materials	\$101,200
Direct labor	\$164,800
Overhead	\$184,000

Instructions

- Compute equivalent units of production for materials and for conversion costs.
- Determine the unit costs of production.
- Show the assignment of costs to units transferred out and in process.

Compute equivalent units, unit costs, and costs assigned.

E21.11 (LO 3, 4) The Polishing Department of Major Company has the following production and manufacturing cost data for September. Materials are entered at the beginning of the process.

Production: Beginning inventory 1,600 units that are 100% complete as to materials and 30% complete as to conversion costs; units started during the period are 42,900; ending inventory of 5,000 units 10% complete as to conversion costs.

Manufacturing costs: Beginning inventory costs, comprised of \$20,000 of materials and \$43,180 of conversion costs; materials costs added in Polishing during the month, \$175,800; labor and overhead applied in Polishing during the month, \$125,680 and \$257,140, respectively.

Instructions

- Compute the equivalent units of production for materials and conversion costs for the month of September.
- Compute the unit costs for materials and conversion costs for the month.
- Determine the costs to be assigned to the units transferred out and in process.

Explain the production cost report.

E21.12 (LO 4) Writing David Skaros has recently been promoted to production manager. He has just started to receive various managerial reports, including the production cost report that you prepared. It showed that his department had 2,000 equivalent units in ending inventory. His department has had a history of not keeping enough inventory on hand to meet demand. He has come to you, very angry, and wants to know why you credited him with only 2,000 units when he knows he had at least twice that many on hand.

Instructions

Explain to him why his production cost report showed only 2,000 equivalent units in ending inventory. Write an informal memo. Be kind and explain very clearly why he is mistaken.

Prepare a production cost report.

E21.13 (LO 3, 4) The Welding Department of Healthy Company has the following production and manufacturing cost data for February 2020. All materials are added at the beginning of the process.

Manufacturing Costs			Production Data	
Beginning work in process			Beginning work in process	15,000 units
Materials	\$18,000			1/10 complete
Conversion costs	14,175	\$ 32,175	Units transferred out	55,000
Materials		180,000	Units started	51,000
Labor		67,380	Ending work in process	11,000 units
Overhead		61,445		1/5 complete

Instructions

Prepare a production cost report for the Welding Department for the month of February.

E21.14 (LO 3, 4) Service Remington Inc. is contemplating the use of process costing to track the costs of its operations. The operation consists of three segments (departments): Receiving, Shipping, and Delivery. Containers are received at Remington's docks and sorted according to the ship they will be carried on. The containers are loaded onto a ship, which carries them to the appropriate port of destination. The containers are then off-loaded and delivered to the Receiving Department.

Remington wants to begin using process costing in the Shipping Department. Direct materials represent the fuel costs to run the ship, and "Containers in transit" represents work in process. Listed below is information about the Shipping Department's first month's activity.

Containers in transit, April 1	0
Containers loaded	1,200
Containers in transit, April 30	350, 40% of direct materials and 20% of conversion costs

Compute physical units and equivalent units of production.

Instructions

- Determine the physical flow of containers for the month.
- Calculate the equivalent units for direct materials and conversion costs.

E21.15 (LO 3, 4) Service Santana Mortgage Company uses a process cost system to accumulate costs in its Application Department. When an application is completed, it is forwarded to the Loan Department for final processing. The following processing and cost data pertain to September.

- Applications in process on September 1: 100.
- Applications started in September: 1,000.
- Completed applications during September: 800.
- Applications still in process at September 30: 100% complete as to materials (forms) and 60% complete as to conversion costs.

Beginning WIP:	
Direct materials	\$ 1,000
Conversion costs	3,960
September costs:	
Direct materials	\$ 4,500
Direct labor	12,000
Overhead	9,520

Determine equivalent units, unit costs, and assignment of costs.

Materials are the forms used in the application process, and these costs are incurred at the beginning of the process. Conversion costs are incurred uniformly during the process.

Instructions

- Determine the equivalent units of service (production) for materials and conversion costs.
- Compute the unit costs and prepare a cost reconciliation schedule.

***E21.16 (LO 5) Service** Using the data in E21.15, assume Santana Mortgage Company uses the FIFO method. Also, assume that the applications in process on September 1 were 100% complete as to materials (application forms) and 40% complete as to conversion costs. Assume overhead costs were \$9,620 instead of \$9,520.

Compute equivalent units, unit costs, and costs assigned.

Instructions

- Determine the equivalent units of service (production) for materials and conversion costs.
- Compute the unit costs and prepare a cost reconciliation schedule.

***E21.17 (LO 5)** The Cutting Department of Lasso Company has the following production and cost data for August.

Determine equivalent units, unit costs, and assignment of costs.

Production	Costs
1. Started and completed 10,000 units.	Beginning work in process \$ -0-
2. Started 2,000 units that are 40% completed at August 31.	Materials 45,000
	Labor 13,600
	Manufacturing overhead 16,100

Materials are entered at the beginning of the process. Conversion costs are incurred uniformly during the process. Lasso Company uses the FIFO method to compute equivalent units.

Instructions

- Determine the equivalent units of production for (1) materials and (2) conversion costs.
- Compute unit costs and show the assignment of manufacturing costs to units transferred out and in work in process.

Compute equivalent units, unit costs, and costs assigned.

***E21.18 (LO 5)** The Smelting Department of Polzin Company has the following production and cost data for September.

Production: Beginning work in process 2,000 units that are 100% complete as to materials and 20% complete as to conversion costs; units started and finished 9,000 units; and ending work in process 1,000 units that are 100% complete as to materials and 40% complete as to conversion costs.

Manufacturing costs: Work in process, September 1, \$15,200; materials added \$60,000; labor and overhead \$132,000.

Polzin uses the FIFO method to compute equivalent units.

Instructions

- Compute the equivalent units of production for (1) materials and (2) conversion costs for the month of September.
- Compute the unit costs for the month.
- Determine the costs to be assigned to the units transferred out and in process.

Answer questions on costs and production.

***E21.19 (LO 5)** The ledger of Hasgrove Company has the following work in process account.

Work in Process—Painting				
3/1	Balance	3,680	3/31	Transferred out ?
3/31	Materials	6,600		
3/31	Labor	2,400		
3/31	Overhead	1,150		
3/31	Balance	?		

Production records show that there were 800 units in the beginning inventory, 30% complete, 1,100 units started, and 1,500 units transferred out. The units in ending inventory were 40% complete. Materials are entered at the beginning of the painting process. Hasgrove uses the FIFO method to compute equivalent units.

Instructions

Answer the following questions.

- How many units are in process at March 31?
- What is the unit materials cost for March?
- What is the unit conversion cost for March?
- What is the total cost of units started in February and completed in March?
- What is the total cost of units started and finished in March?
- What is the cost of the March 31 inventory?

Prepare a production cost report for a second process.

***E21.20 (LO 5)** The Welding Department of Majestic Company has the following production and manufacturing cost data for February 2020. All materials are added at the beginning of the process. Majestic uses the FIFO method to compute equivalent units.

Manufacturing Costs		Production Data	
Beginning work in process	\$ 32,175	Beginning work in process	15,000 units,
Costs transferred in	135,000		10% complete
Materials	57,000	Units transferred out	54,000
Labor	35,100	Units transferred in	64,000
Overhead	68,400	Ending work in process	25,000 units
			20% complete

Instructions

Prepare a production cost report for the Welding Department for the month of February. Transferred-in costs are considered materials costs.

Problems: Set A

P21.1A (LO 2) Fire Out Company manufactures its product, Vitadrink, through two manufacturing processes: Mixing and Packaging. All materials are entered at the beginning of each process. On October 1, 2020, inventories consisted of Raw Materials \$26,000, Work in Process—Mixing \$0, Work in Process—Packaging \$250,000, and Finished Goods \$289,000. The beginning inventory for Packaging consisted of 10,000 units that were 50% complete as to conversion costs and fully complete as to materials. During October, 50,000 units were started into production in the Mixing Department and the following transactions were completed.

Journalize transactions.

1. Purchased \$300,000 of raw materials on account.
2. Issued raw materials for production: Mixing \$210,000 and Packaging \$45,000.
3. Incurred labor costs of \$278,900.
4. Used factory labor: Mixing \$182,500 and Packaging \$96,400.
5. Incurred \$810,000 of manufacturing overhead on account.
6. Applied manufacturing overhead on the basis of \$23 per machine hour. Machine hours were 28,000 in Mixing and 6,000 in Packaging.
7. Transferred 45,000 units from Mixing to Packaging at a cost of \$979,000.
8. Transferred 53,000 units from Packaging to Finished Goods at a cost of \$1,315,000.
9. Sold goods costing \$1,604,000 for \$2,500,000 on account.

Instructions

Journalize the October transactions.

P21.2A (LO 3, 4) Rosenthal Company manufactures bowling balls through two processes: Molding and Packaging. In the Molding Department, the urethane, rubber, plastics, and other materials are molded into bowling balls. In the Packaging Department, the balls are placed in cartons and sent to the finished goods warehouse. All materials are entered at the beginning of each process. Labor and manufacturing overhead are incurred uniformly throughout each process. Production and cost data for the Molding Department during June 2020 are presented below.

Complete four steps necessary to prepare a production cost report.

Production Data	June
Beginning work in process units	—0—
Units started into production	22,000
Ending work in process units	2,000
Percent complete—ending inventory	40%
Cost Data	
Materials	\$198,000
Labor	53,600
Overhead	<u>112,800</u>
Total	<u>\$364,400</u>

Instructions

- a. Prepare a schedule showing physical units of production.
- b. Determine the equivalent units of production for materials and conversion costs.
- c. Compute the unit costs of production.
- d. Determine the costs to be assigned to the units transferred out and in process for June.
- e. Prepare a production cost report for the Molding Department for the month of June.

c. Materials	\$9.00
CC	\$8.00
d. Transferred	
out	\$340,000
WIP	\$ 24,400

P21.3A (LO 3, 4) Thakin Industries Inc. manufactures dorm furniture in separate processes. In each process, materials are entered at the beginning, and conversion costs are incurred uniformly. Production and cost data for the first process in making a product are as follows.

Complete four steps necessary to prepare a production cost report.

Production Data—July	Cutting Department T12-Tables
Work in process units, July 1	—0—
Units started into production	20,000
Work in process units, July 31	3,000
Work in process percent complete	60

Cost Data—July	
Work in process, July 1	\$ 0-
Materials	380,000
Labor	234,400
Overhead	104,000
Total	<u><u>\$718,400</u></u>

Instructions

a. 3. Materials	\$19
CC	\$18
4. Transferred out	\$629,000
WIP	\$ 89,400

Assign costs and prepare production cost report.

- Compute the physical units of production.
- Compute equivalent units of production for materials and for conversion costs.
- Determine the unit costs of production.
- Show the assignment of costs to units transferred out and in process.
- Prepare the production cost report for July 2020.

P21.4A (LO 3, 4) Rivera Company has several processing departments. Costs charged to the Assembly Department for November 2020 totaled \$2,280,000 as follows.

Work in process, November 1	
Materials	\$79,000
Conversion costs	<u>48,150</u>
	\$ 127,150
Materials added	1,589,000
Labor	225,920
Overhead	337,930

Production records show that 35,000 units were in beginning work in process 30% complete as to conversion costs, 660,000 units were started into production, and 25,000 units were in ending work in process 40% complete as to conversion costs. Materials are entered at the beginning of each process.

Instructions

b. Transferred out	\$2,211,000
WIP	\$ 69,000

Determine equivalent units and unit costs and assign costs.

- Determine the equivalent units of production and the unit production costs for the Assembly Department.
- Determine the assignment of costs to goods transferred out and in process.
- Prepare a production cost report for the Assembly Department.

P21.5A (LO 3, 4) Polk Company manufactures basketballs. Materials are added at the beginning of the production process and conversion costs are incurred uniformly. Production and cost data for the month of July 2020 are as follows.

Production Data—Basketballs	Units	Percentage Complete
Work in process units, July 1	500	60%
Units started into production	1,000	
Work in process units, July 31	600	40%

Cost Data—Basketballs		
Work in process, July 1		
Materials	\$750	
Conversion costs	<u>600</u>	\$1,350
Direct materials		2,400
Direct labor		1,580
Manufacturing overhead		1,240

Instructions

a. 2. Materials	\$2.10
3. Transferred out	\$4,590
WIP	\$1,980

- Calculate the following.
 - The equivalent units of production for materials and conversion costs.
 - The unit costs of production for materials and conversion costs.
 - The assignment of costs to units transferred out and in process at the end of the accounting period.
 - Prepare a production cost report for the month of July for the basketballs.

P21.6A (LO 3, 4) Hamilton Processing Company uses a weighted-average process cost system and manufactures a single product—an industrial carpet shampoo and cleaner used by many universities. The manufacturing activity for the month of October has just been completed. A partially completed production cost report for the month of October for the Mixing and Cooking Department is shown as follows.

Compute equivalent units and complete production cost report.

Hamilton Processing Company
Mixing and Cooking Department
Production Cost Report
For the Month Ended October 31

Quantities	Equivalent Units		
	Physical Units	Materials	Conversion Costs
Units to be accounted for			
Work in process, October 1 (all materials, 70% conversion costs)	20,000		
Started into production	150,000		
Total units	<u>170,000</u>		
Units accounted for			
Transferred out	120,000	?	?
Work in process, October 31 (60% materials, 40% conversion costs)	50,000	?	?
Total units accounted for	<u>170,000</u>	<u>?</u>	<u>?</u>
Costs			
Unit costs			
Materials			Conversion Costs
Total cost	<u>\$240,000</u>		<u>\$105,000</u>
Equivalent units	<u>?</u>		<u>?</u>
Unit costs	<u>\$?</u>	+ <u>\$?</u>	= <u>\$?</u>
Costs to be accounted for			
Work in process, October 1			\$ 30,000
Started into production			315,000
Total costs			<u>\$345,000</u>
Cost Reconciliation Schedule			
Costs accounted for			
Transferred out			\$?
Work in process, October 31			
Materials	\$?		
Conversion costs	?		?
Total costs			<u>\$?</u>

Instructions

- Prepare a schedule that shows how the equivalent units were computed so that you can complete the “Quantities: Units accounted for” equivalent units section shown in the production cost report, and compute October unit costs.
- Complete the “Cost Reconciliation Schedule” part of the production cost report.

a. Materials	\$1.60
b. Transferred out	\$282,000
WIP	\$ 63,000

***P21.7A (LO 5)** Owen Company manufactures bicycles and tricycles. For both products, materials are added at the beginning of the production process, and conversion costs are incurred uniformly. Owen Company uses the FIFO method to compute equivalent units. Production and cost data for the month of March are as follows.

Determine equivalent units and unit costs and assign costs for processes; prepare production cost report.

Production Data—Bicycles	Units	Percentage Complete
Work in process units, March 1	200	80%
Units started into production	1,000	
Work in process units, March 31	300	40%

Cost Data—Bicycles	
Work in process, March 1	\$19,280
Direct materials	50,000
Direct labor	25,900
Manufacturing overhead	30,000

Production Data—Tricycles		Percentage Complete
	Units	
Work in process units, March 1	100	75%
Units started into production	1,000	
Work in process units, March 31	60	25%

Cost Data—Tricycles	
Work in process, March 1	\$ 6,125
Direct materials	30,000
Direct labor	14,300
Manufacturing overhead	20,000

Instructions

a. Bicycles:	
1. Materials	1,000
2. Materials	\$50
3. Transferred out	\$102,380
WIP	\$ 22,800

- a. Calculate the following for both the bicycles and the tricycles.
1. The equivalent units of production for materials and conversion costs.
 2. The unit costs of production for materials and conversion costs.
 3. The assignment of costs to units transferred out and in process at the end of the accounting period.
- b. Prepare a production cost report for the month of March for the bicycles only.

Continuing Cases

Current Designs

CD21 Building a kayak using the composite method is a very labor-intensive process. In the Fabrication Department, the kayaks go through several steps as employees carefully place layers of Kevlar® in a mold and then use resin to fuse together the layers. The excess resin is removed with a vacuum process, and the upper shell and lower shell are removed from the molds and assembled. The seat, hatch, and other components are added in the Finishing Department.

At the beginning of April, **Current Designs** had 30 kayaks in process in the Fabrication Department. Rick Thrune, the production manager, estimated that about 80% of the materials costs had been added to these boats, which were about 50% complete with respect to the conversion costs. The cost of this inventory had been calculated to be \$8,400 in materials and \$9,000 in conversion costs.

During April, 72 boats were started. At the end of the month, the 35 kayaks in the ending inventory had 20% of the materials and 40% of the conversion costs already added to them.

A review of the accounting records for April showed that materials with a cost of \$17,500 had been requisitioned by the Fabrication Department and that the conversion costs for the month were \$39,600.

Instructions

Complete a production cost report for April 2020 for the Fabrication Department using the weighted-average method.

Waterways

(Note: This is a continuation of the Waterways case from Chapters 19–20.)

WP21 Because most of the parts for its irrigation systems are standard, Waterways handles the majority of its manufacturing as a process cost system. There are multiple process departments. Three of these departments are the Molding, Cutting, and Welding Departments. All items eventually end up in the Packaging Department, which prepares items for sale in kits or individually. This problem asks you to help Waterways calculate equivalent units and prepare a production cost report.

Go to WileyPLUS for complete case details and instructions.

Expand Your Critical Thinking

Decision-Making Across the Organization

CT21.1 Florida Beach Company manufactures sunscreen, called NoTan, in 11-ounce plastic bottles. NoTan is sold in a competitive market. As a result, management is very cost-conscious. NoTan is manufactured through two processes: mixing and filling. Materials are entered at the beginning of each process, and labor and manufacturing overhead occur uniformly throughout each process. Unit costs are based on the cost per gallon of NoTan using the weighted-average costing approach.

On June 30, 2020, Mary Ritzman, the chief accountant for the past 20 years, opted to take early retirement. Her replacement, Joe Benili, had extensive accounting experience with motels in the area but only limited contact with manufacturing accounting. During July, Joe correctly accumulated the following production quantity and cost data for the Mixing Department.

Production quantities: Work in process, July 1, 8,000 gallons 75% complete; started into production 100,000 gallons; work in process, July 31, 5,000 gallons 20% complete. Materials are added at the beginning of the process.

Production costs: Beginning work in process \$88,000, comprised of \$21,000 of materials costs and \$67,000 of conversion costs; incurred in July: materials \$573,000, conversion costs \$765,000.

Joe then prepared a production cost report on the basis of physical units started into production. His report showed a production cost of \$14.26 per gallon of NoTan. The management of Florida Beach was surprised at the high unit cost. The president comes to you, as Mary's top assistant, to review Joe's report and prepare a correct report if necessary.

Instructions

With the class divided into groups, answer the following questions.

- Show how Joe arrived at the unit cost of \$14.26 per gallon of NoTan.
- What error(s) did Joe make in preparing his production cost report?
- Prepare a correct production cost report for July.

Managerial Analysis

CT21.2 Harris Furniture Company manufactures living room furniture through two departments: Framing and Upholstering. Materials are entered at the beginning of each process. For May, the following cost data are obtained from the two work in process accounts.

	Framing	Upholstering
Work in process, May 1	\$ -0-	\$?
Materials	450,000	?
Conversion costs	261,000	330,000
Costs transferred in	-0-	600,000
Costs transferred out	600,000	?
Work in process, May 31	111,000	?

Instructions

Answer the following questions.

- If 3,000 sofas were started into production on May 1 and 2,500 sofas were transferred to Upholstering, what was the unit cost of materials for May in the Framing Department?
- Using the data in (a) above, what was the per unit conversion cost of the sofas transferred to Upholstering?
- Continuing the assumptions in (a) above, what is the percentage of completion of the units in process at May 31 in the Framing Department?

Real-World Focus

CT21.3 Paintball is now played around the world. The process of making paintballs is actually quite similar to the process used to make certain medical pills. In fact, paintballs were previously often made at the same factories that made pharmaceuticals.

Instructions

Do an Internet search on “video of paintball production,” view that video, and then answer the following questions.

- Describe in sequence the primary steps used to manufacture paintballs.

- b. Explain the costs incurred by the company that would fall into each of the following categories: materials, labor, and overhead. Of these categories, which do you think would be the greatest cost in making paintballs?
- c. Discuss whether a paintball manufacturer would use job order costing or process costing.

Communication Activity

CT21.4 Diane Barone was a good friend of yours in high school and is from your home town. While you chose to major in accounting when you both went away to college, she majored in marketing and management. You are now the accounting manager for the Snack Foods Division of Melton Enterprises. Your friend Diane was promoted to regional sales manager for the same division of Melton. Diane recently telephoned you. She explained that she was familiar with job cost sheets, which had been used by the Special Projects Division where she had formerly worked. She was, however, very uncomfortable with the production cost reports prepared by your division. She emailed you a list of her particular questions:

1. Since Melton occasionally prepares snack foods for special orders in the Snack Foods Division, why don't we track costs of the orders separately?
2. What is an equivalent unit?
3. Why am I getting four production cost reports? Isn't there one work in process account?

Instructions

Prepare a memo to Diane. Answer her questions and include any additional information you think would be helpful. You may write informally but do use proper grammar and punctuation.

Ethics Case

CT21.5 R. B. Dillman Company manufactures a high-tech component used in Bluetooth speakers that passes through two production processing departments, Molding and Assembly. Department managers are partially compensated on the basis of units of product completed and transferred out relative to units of product put into production. This was intended as encouragement to be efficient and to minimize waste.

Jan Wooten is the department head in the Molding Department, and Tony Ferneti is her quality control inspector. During the month of June, Jan hired three new employees who were not yet technically skilled. As a result, many of the units produced in June had minor molding defects. In order to maintain the department's normal high rate of completion, Jan told Tony to pass through inspection and on to the Assembly Department all units that had defects nondetectable to the human eye. "Company and industry tolerances on this product are too high anyway," says Jan. "Less than 2% of the units we produce are subjected in the market to the stress tolerance we've designed into them. The odds of those 2% being any of this month's units are even less. Anyway, we're saving the company money."

Instructions

- a. Who are the potential stakeholders involved in this situation?
- b. What alternatives does Tony have in this situation? What might the company do to prevent this situation from occurring?

Considering People, Planet, and Profit

CT21.6 In a recent year, an oil refinery in Texas City, Texas, on the Houston Ship Channel exploded. The explosion killed 14 people and sent a plume of smoke hundreds of feet into the air. The blast started as a fire in the section of the plant that increased the octane of the gasoline that was produced at the refinery. The Houston Ship Channel is the main waterway that allows commerce to flow from the Gulf of Mexico into Houston.

The Texas Commission on Environmental Quality expressed concern about the release of nitrogen oxides, benzene, and other known carcinogens as a result of the blast. Neighbors of the plant complained that the plant had been emitting carcinogens for years and that the regulators had ignored their complaints about emissions and unsafe working conditions.

Instructions

Answer the following questions.

- a. Outline the costs that the company now faces as a result of the accident.
- b. How could the company have reduced the costs associated with the accident?

Eric Gerrard/iStockphoto

Cost-Volume-Profit

Chapter Preview

As the following Feature Story indicates, to manage any size business you must understand how costs respond to changes in sales volume and the effect of costs and revenues on profits. A prerequisite to understanding cost-volume-profit (CVP) relationships is knowledge of how costs behave. In this chapter, we first explain the considerations involved in cost behavior analysis. Then, we discuss and illustrate CVP analysis.

Feature Story

Don't Worry—Just Get Big

It wasn't that Jeff didn't have a good job. He was a vice president at a Wall Street firm. But, despite his good position, he quit his job, moved to Seattle, and started an online retailer, which he named **Amazon.com**. Like any good entrepreneur, Jeff Bezos strove to keep his initial investment small. Operations were run out of his garage. And, to avoid the need for a warehouse, he took orders for books and had them shipped from other distributors' warehouses.

By its fourth month, Amazon was selling 100 books a day. In its first full year, it had \$15.7 million in sales. The next year, sales increased eightfold. Two years later, sales were \$1.6 billion.

Although its sales growth was impressive, Amazon's ability to lose money was equally amazing. One analyst nicknamed it *Amazon.bomb*, while another, predicting its demise, called it *Amazon.toast*. Why was it losing money? The company used every available dollar to reinvest in itself. It built massive warehouses and bought increasingly sophisticated (and expensive) computers and equipment to improve its distribution system. This desire to grow as fast as possible was captured in a T-shirt

slogan at its company picnic, which read “Eat another hot dog, get big fast.” This buying binge was increasing the company’s fixed costs at a rate that exceeded its sales growth. Skeptics predicted that Amazon would soon run out of cash. It didn’t.

At the end of one year, even as it announced record profits, Amazon’s share price fell by 9%. Why? Because although the company was predicting that its sales revenue in the next quarter would increase by at least 28%, it predicted that its operating profit would fall by at least 2% and perhaps by as much as 34%. The company made no apologies. It explained that it was in the process of expanding from 39 distribution

centers to 52. As Amazon’s finance chief noted, “You’re not as productive on those assets for some time. I’m very pleased with the investments we’re making and we’ve shown over our history that we’ve been able to make great returns on the capital we invest in.” In other words, eat another hot dog.

Cost Behavior Analysis

LEARNING OBJECTIVE 1

Explain variable, fixed, and mixed costs and the relevant range.

Cost behavior analysis is the study of how specific costs respond to changes in the level of business activity. As you might expect, some costs change when activity changes and others remain the same. For example, for an airline company such as **Southwest** or **United**, the longer

the flight, the higher the fuel costs. On the other hand, **Massachusetts General Hospital**'s costs to staff the emergency room on any given night are relatively constant regardless of the number of patients treated. A knowledge of cost behavior helps management plan operations and decide between alternative courses of action. Cost behavior analysis applies to all types of entities.

The starting point in cost behavior analysis is measuring the key business activities. Activity levels may be expressed in terms of sales dollars (in a retail company), miles driven (in a trucking company), room occupancy (in a hotel), or dance classes taught (by a dance studio). Many companies use more than one measurement base. A manufacturer, for example, may use direct labor hours or units of output for manufacturing costs, and sales revenue or units sold for selling expenses.

For an activity level to be useful in cost behavior analysis, changes in the level or volume of activity should be correlated with changes in costs. The activity level selected is referred to as the activity index or driver. The **activity index** identifies the activity that causes changes in the behavior of costs. With an appropriate activity index, companies can classify the behavior of costs in response to changes in activity levels into three categories: variable, fixed, or mixed.

Variable Costs

Variable costs are costs that vary **in total** directly and proportionately with changes in the activity level. If the level increases 10%, total variable costs will increase 10%. If the level of activity decreases by 25%, variable costs will decrease 25%. Examples of variable costs include direct materials and direct labor for a manufacturer; cost of goods sold, sales commissions, and freight-out for a merchandiser; and gasoline in airline and trucking companies. A variable cost may also be defined as a cost that **remains the same per unit at every level of activity**.

To illustrate the behavior of a variable cost, assume that Damon Company manufactures tablet computers that contain cameras that cost \$10. The activity index is the number of tablet computers produced. As Damon manufactures each tablet, the total cost of cameras installed in tablets increases by \$10. As part (a) of **Illustration 22.1** shows, total cost of the cameras will be \$20,000 ($2,000 \times \10) if Damon produces 2,000 tablets, and \$100,000 when it produces 10,000 tablets. We also can see that a variable cost remains the same per unit as the level of activity changes. As part (b) of Illustration 22.1 shows, the unit cost of \$10 for the cameras is the same whether Damon produces 2,000 or 10,000 tablets.

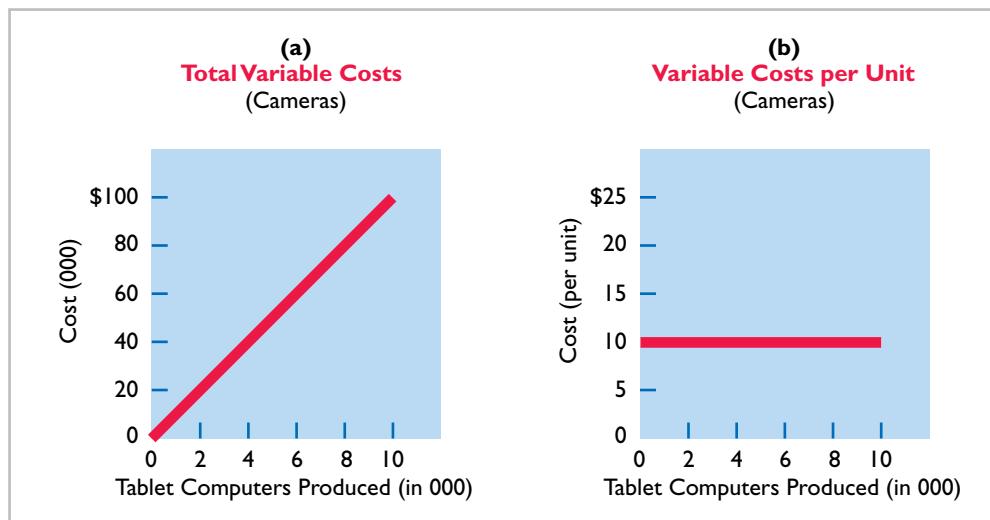

ILLUSTRATION 22.1

Behavior of total and unit variable costs; variable costs per unit remain constant

Companies that rely heavily on labor either to manufacture a product or perform a service, such as **Hilton** or **Marriott**, are likely to have a high percentage of variable costs. In contrast, companies that use a high proportion of machinery and equipment in producing revenue, such as **AT&T** or **Duke Energy Co.**, may have a lower percentage of variable costs.

Fixed Costs

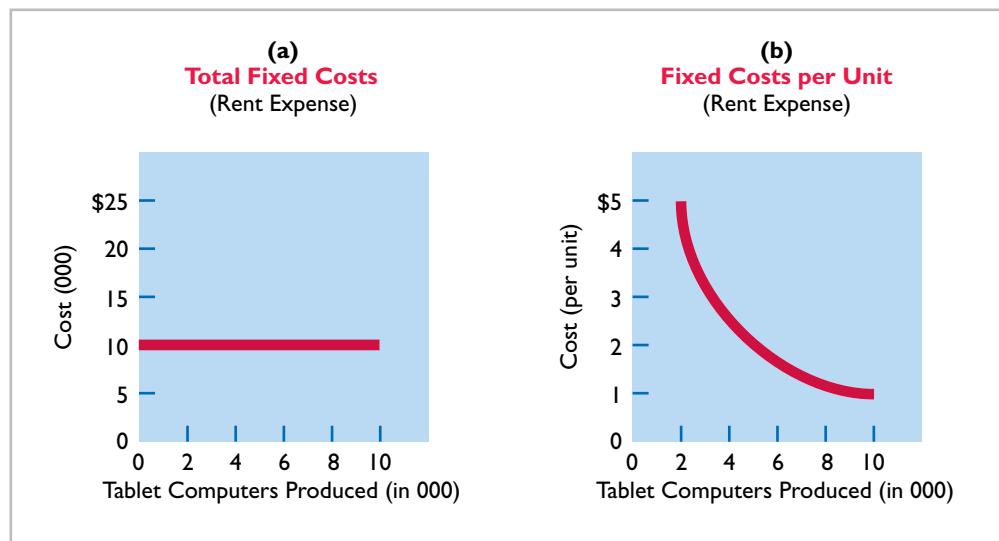

Fixed costs are costs that **remain the same in total** regardless of changes in the activity level. Examples include property taxes, insurance, rent, supervisory salaries, and depreciation

on buildings and equipment. Because total fixed costs remain constant as activity changes, it follows that **fixed costs per unit vary inversely with activity: As volume increases, unit cost declines, and vice versa.**

To illustrate the behavior of fixed costs, assume that Damon Company leases its productive facilities at a cost of \$10,000 per month. Total fixed costs of the facilities remain a constant \$10,000 at every level of activity, as part (a) of **Illustration 22.2** shows. But, **on a per unit basis, the cost of rent declines as activity increases**, as part (b) of Illustration 22.2 shows. At 2,000 units, the unit cost per tablet computer is \$5 ($\$10,000 \div 2,000$). When Damon produces 10,000 tablets, the unit cost of the rent is only \$1 per tablet ($\$10,000 \div 10,000$).

ILLUSTRATION 22.2

Behavior of total and unit fixed costs

The trend for many manufacturers is to have more fixed costs and fewer variable costs. This trend is the result of increased use of automation and less use of employee labor. As a result, depreciation and lease charges (fixed costs) increase, whereas direct labor costs (variable costs) decrease.

People, Planet, and Profit Insight BrightFarms

Gardens in the Sky

Because of population increases, the United Nations' Food and Agriculture Organization estimates that food production will need to increase by 70% by 2050. Also, by 2050, roughly 70% of people will live in cities, which means more food needs to be hauled further to get it to the consumer. To address the lack of farmable land and reduce the cost of transporting produce, some companies, such as New York-based **BrightFarms**, are building urban greenhouses.

This sounds great, but do the numbers work? Some variable costs would be reduced. For example, the use of pesticides, herbicides, fuel costs for shipping, and water would all drop. Soil erosion would

be a non-issue since plants would be grown hydroponically (in a solution of water and minerals), and land requirements would be reduced because of vertical structures. But, other costs would be higher. First, there is the cost of the building. Also, any multistory building would require artificial lighting for plants on lower floors.

Until these cost challenges can be overcome, it appears that these urban greenhouses may not break even. On the other hand, rooftop greenhouses on existing city structures already appear financially viable. For example, a 15,000 square-foot rooftop greenhouse in Brooklyn already produces roughly 30 tons of vegetables per year for local residents.

Sources: "Vertical Farming: Does It Really Stack Up?" *The Economist* (December 9, 2010); and Jane Black, "BrightFarms Idea: Greenhouses That Cut Short the Path from Plant to Grocery Shelf," *The Washington Post* (May 7, 2013).

What are some of the variable and fixed costs that are impacted by hydroponic farming? (Go to WileyPLUS for this answer and additional questions.)

Relevant Range

In Illustration 22.1 part (a), a straight line is drawn throughout the entire range of the activity index for total variable costs. In essence, the assumption is that the costs are **linear**. If a relationship is linear (that is, straight-line), then changes in the activity index will result in a direct, proportional change in the total variable cost. For example, if the activity level doubles, the cost doubles.

It is now necessary to ask: Is the straight-line relationship realistic? In most business situations, a straight-line relationship **does not exist** for variable costs throughout the entire range of possible activity. At abnormally low levels of activity, it may be impossible to be cost-efficient. Small-scale operations may not allow the company to obtain quantity discounts for raw materials or to use specialized labor. In contrast, at abnormally high levels of activity, labor costs may increase sharply because of overtime pay. Also, at high activity levels, materials costs may jump significantly because of excess spoilage caused by worker fatigue.

As a result, in the real world, the relationship between the behavior of a variable cost and changes in the activity level is often **curvilinear**, as shown in part (a) of **Illustration 22.3**. In the curved sections of the line, a change in the activity index will not result in a direct, proportional change in the variable cost. That is, a doubling of the activity index will not result in an exact doubling of the variable cost. The variable cost may more than double, or it may be less than double.

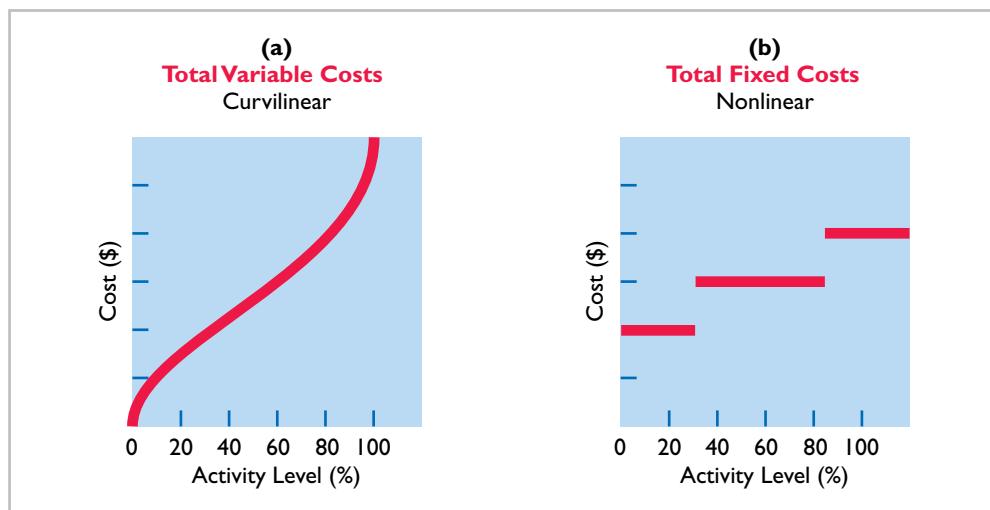

ILLUSTRATION 22.3

Nonlinear behavior of variable and fixed costs

Total fixed costs also do not have a straight-line relationship over the entire range of activity. Some fixed costs will not change. But it is possible for management to change other fixed costs (see **Helpful Hint**). For example, in some instances, salaried employees (fixed) are replaced with freelance workers (variable). Some costs are step costs. For example, once a company exceeds certain levels of activity, it may have to add an additional warehouse. Illustration 22.3, part (b), shows an example of step-cost behavior of total fixed costs through all potential levels of activity.

For most companies, operating at almost zero or at 100% capacity is the exception rather than the rule. Instead, companies often operate over a somewhat narrower range, such as 40–80% of capacity. The range over which a company expects to operate during a year is called the **relevant range** of the activity index (see **Alternative Terminology**). Within the relevant range, as both diagrams in **Illustration 22.4** show, a straight-line relationship generally exists for both variable and fixed costs between 40 and 80% of capacity.

HELPFUL HINT

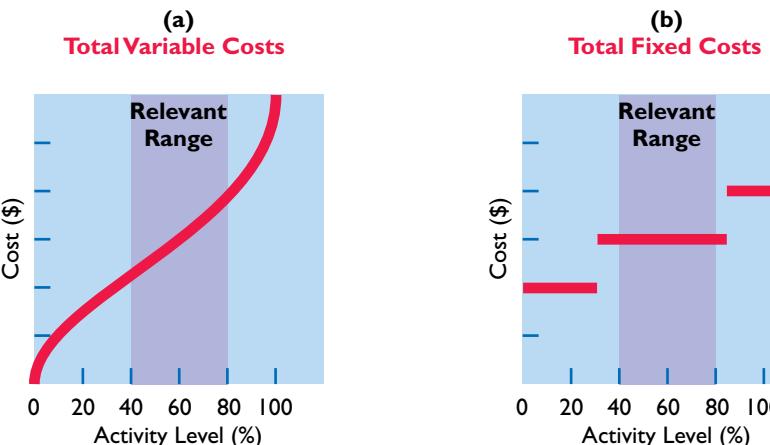

Fixed costs that may be changed by managers include research, such as new product development, and management training programs.

ALTERNATIVE TERMINOLOGY

The relevant range is also called the *normal* or *practical range*.

ILLUSTRATION 22.4

Linear behavior within relevant range

As you can see, although the linear (straight-line) relationship may not be completely realistic, the linear assumption produces useful data for CVP analysis as long as the level of activity remains within the relevant range.

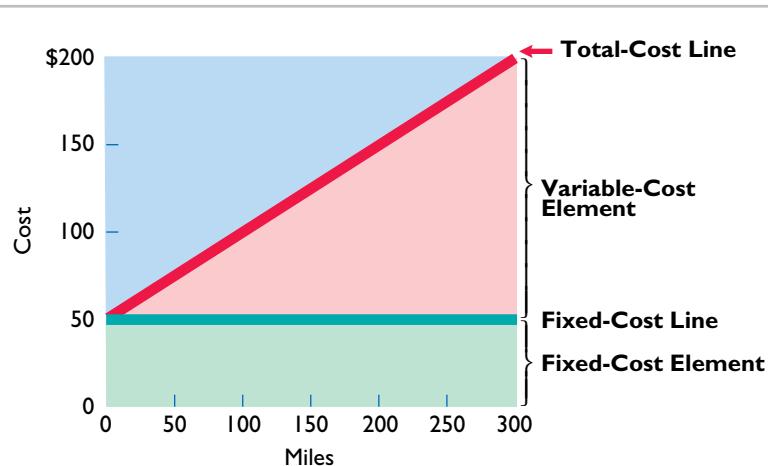

Mixed Costs

Mixed costs are costs that contain both a variable- and a fixed-cost element. Mixed costs, therefore, change in total but not proportionately with changes in the activity level.

The rental of a **U-Haul** truck is a good example of a mixed cost. Assume that local rental terms for a 17-foot truck, including insurance, are \$50 per day plus 50 cents per mile. When determining the cost of a one-day rental, the per day charge is a fixed cost (with respect to miles driven), whereas the mileage charge is a variable cost. The graphic presentation of the rental cost for a one-day rental is shown in **Illustration 22.5**.

ILLUSTRATION 22.5

Behavior of a mixed cost

In this case, the fixed-cost element is the cost of having the service available. The variable-cost element is the cost of actually using the service (miles driven). Utility costs such as electricity are another example of a mixed cost. Each month the electric bill includes a flat service fee plus a usage charge.

DO IT! 1 | Types of Costs

Helena Company reports the following total costs at two levels of production.

	<u>10,000 Units</u>	<u>20,000 Units</u>
Direct materials	\$20,000	\$40,000
Maintenance	8,000	10,000
Direct labor	17,000	34,000
Indirect materials	1,000	2,000
Depreciation	4,000	4,000
Utilities	3,000	5,000
Rent	6,000	6,000

Classify each cost as variable, fixed, or mixed.

ACTION PLAN

- Recall that a variable cost varies in total directly and proportionately with each change in activity level.
- Recall that a fixed cost remains the same in total with each change in activity level.
- Recall that a mixed cost changes in total but not proportionately with each change in activity level.

Solution

Direct materials, direct labor, and indirect materials are variable costs because the total cost doubles with the doubling in activity.

Depreciation and rent are fixed costs because the total cost does not vary with the change in activity. Maintenance and utilities are mixed costs because the total cost changes, but the change is not proportional to the change in activity.

Related exercise material: BE22.1, BE22.2, BE22.3, DO IT! 22.1, E22.1, E22.2, E22.4, and E22.6.

Mixed Costs Analysis

LEARNING OBJECTIVE 2

Apply the high-low method to determine the components of mixed costs.

For purposes of cost-volume-profit analysis, **mixed costs must be classified into their fixed and variable elements**. How does management make the classification? One possibility is to determine the variable and fixed components each time a mixed cost is incurred. But because of time and cost constraints, this approach is rarely followed. Instead, the usual approach is to collect data on the behavior of the mixed costs at various levels of activity. Analysts then identify the fixed- and variable-cost components. Companies use various types of analysis. One type of analysis, called the **high-low method**, is discussed next.

High-Low Method

The **high-low method** uses the total costs incurred at the high and low levels of activity to classify mixed costs into fixed and variable components. The difference in costs between the high and low levels represents variable costs, since only the variable-cost element can change as activity levels change.

The steps in computing fixed and variable costs under this method are as follows.

1. Determine variable cost per unit from the formula shown in **Illustration 22.6**. This is the slope of the cost function.

$$\frac{\text{Change in Total Costs at High versus Low Activity Level}}{\text{High minus Low Activity Level}} = \text{Variable Cost per Unit}$$

ILLUSTRATION 22.6

Formula for variable cost per unit using high-low method

To illustrate, assume that Metro Transit Company has the maintenance costs and mileage data for its fleet of buses over a 6-month period shown in **Illustration 22.7**.

ILLUSTRATION 22.7

Assumed maintenance costs and mileage data

Month	Miles Driven	Total Cost	Month	Miles Driven	Total Cost
January	20,000	\$30,000	April	50,000	\$63,000
February	40,000	48,000	May	30,000	42,000
March	35,000	49,000	June	43,000	61,000

The high and low levels of activity are 50,000 miles in April and 20,000 miles in January. The maintenance costs at these two levels are \$63,000 and \$30,000, respectively. The difference in maintenance costs is \$33,000 ($\$63,000 - \$30,000$), and the difference in miles is 30,000 ($50,000 - 20,000$). Therefore, for Metro Transit, variable cost per unit is \$1.10, computed as follows.

$$\$33,000 \div 30,000 = \$1.10$$

- Determine the total fixed costs by subtracting the total variable costs at either the high or the low activity level from the total cost at that activity level.

Illustration 22.8 shows the computations for Metro Transit.

ILLUSTRATION 22.8

High-low method computation of fixed costs

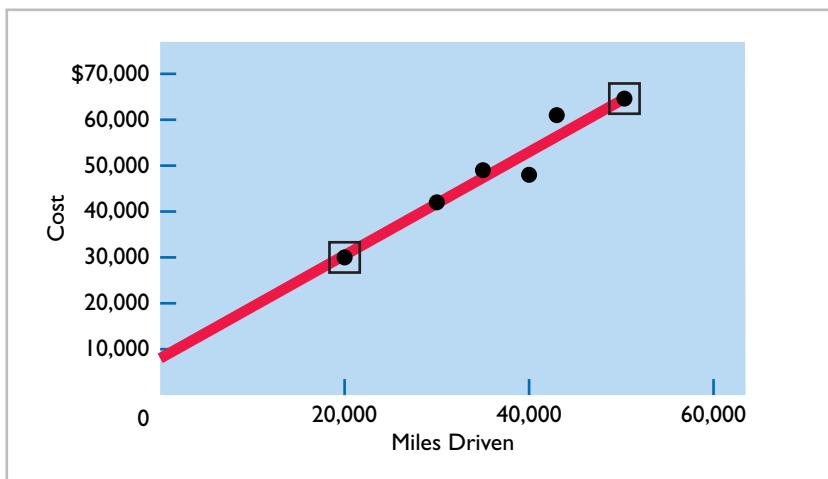

Metro Transit					
	A	B	C	D	
Metro Transit					
1					
2					Activity Level
3					High Low
4	Total cost				\$63,000 \$30,000
5	Less:	Variable costs			
6		$50,000 \times \$1.10$			55,000
7		$20,000 \times \$1.10$			22,000
8	Total fixed costs				\$ 8,000 \$ 8,000
9					
10					

Maintenance costs are therefore **\$8,000 per month of fixed costs plus \$1.10 per mile of variable costs**. This is represented by the following formula, referred to as the total cost equation.

$$\text{Maintenance costs} = \$8,000 + (\$1.10 \times \text{Miles driven})$$

For example, at 45,000 miles, estimated maintenance costs would be \$8,000 fixed and \$49,500 variable ($\$1.10 \times 45,000$) for a total of \$57,500.

The graph in **Illustration 22.9** plots the 6-month data for Metro Transit Company. The red line drawn in the graph connects the high and low data points (in squares) and therefore represents the equation that we just solved using the high-low method. The red, “high-low” line intersects the y-axis at \$8,000 (the fixed-cost level), and it rises by its slope of \$1.10 per unit (the variable cost per unit). Note that a completely different line would result if we chose any two of the other data points. That is, by choosing any two other data points, we would end up with a different estimate of fixed costs and a different variable cost per unit. Thus, from this scatter plot, we can see that while the high-low method is simple, the result is rather arbitrary. A better approach, which uses information from all the data points to estimate fixed and variable costs, is called *regression analysis*. A discussion of regression analysis is provided in Appendix 22A as well as in the Excel video available in WileyPLUS.

Are Robotic Workers More Humane?

Warehouse distribution centers for large retailers and grocers employ more than 800,000 people in the United States. But many companies, such as grocer

Kroger Co., have a hard time finding and retaining warehouse workers. One reason? Studies have shown that some warehouse workers walk up to 20 miles and lift 50,000 pounds during a single day. As a result, as the needs for storage increases and companies are faced with the proposition of building massive new warehouses, some are choosing instead to invest in robotic warehousing systems.

Robots can provide many advantages over their human counterparts. Robots need aisles that are less than 30 inches wide, as opposed to traditional warehouse aisles that are 10 to 12 feet wide. Moving at speeds of up to 25 miles per hour, robots can drop off and retrieve warehouse cases about five times as fast as a human. Robotic systems cut labor costs by about 80%, and they cut warehouse size anywhere from 25% to 40%. However, a fully automated system costs between \$40 to \$80 million, so the switch to robotic systems is not a trivial decision.

Source: Robbie Whelan, "Fully Autonomous Robots: The Warehouse Workers of the Near Future," *Wall Street Journal* (September 20, 2016).

How would a company's variable and fixed costs change if it adopts a robotic system? (Go to WileyPLUS for this answer and additional questions).

Importance of Identifying Variable and Fixed Costs

Why is it important to segregate mixed costs into variable and fixed elements? The answer may become apparent if we look at the following four business decisions.

1. If **American Airlines** is to make a profit when it reduces all domestic fares by 30%, what reduction in costs or increase in passengers will be required?

Answer: To make a profit when it cuts domestic fares by 30%, American Airlines will have to increase the number of passengers or cut its variable costs for those flights. Its fixed costs will not change.

2. If **Ford Motor Company** meets workers' demands for higher wages, what increase in sales revenue will be needed to maintain current profit levels?

Answer: Higher wages at Ford Motor Company will increase the variable costs of manufacturing automobiles. To maintain present profit levels, Ford will have to cut other variable or fixed costs, sell more automobiles, or increase the price of its automobiles.

3. If **United States Steel Corp.**'s program to modernize plant facilities through significant equipment purchases reduces the work force by 50%, what will be the effect on the cost of producing one ton of steel?

Answer: The modernizing of plant facilities at United States Steel Corp. changes the proportion of fixed and variable costs of producing one ton of steel. Fixed costs increase because of higher depreciation charges, whereas variable costs decrease due to the reduction in the number of steelworkers.

4. What happens if **Kellogg's** increases its advertising expenses but cannot increase prices because of competitive pressure?

Answer: Sales volume must be increased to cover the increase in fixed advertising costs.

DO IT! 2 | High-Low Method

Byrnes Company accumulates the following data concerning a mixed cost, using units produced as the activity level.

	Units Produced	Total Cost
March	9,800	\$14,740
April	8,500	13,250
May	7,000	11,100
June	7,600	12,000
July	8,100	12,460

- a. Compute the variable-cost and fixed-cost elements using the high-low method.
- b. Using the information from your answer to part (a), write the cost formula.
- c. Estimate the total cost if the company produces 8,000 units.

ACTION PLAN

- Determine the highest and lowest levels of activity.
- Compute variable cost per unit as $\text{Change in total costs} \div (\text{High} - \text{low activity level}) = \text{Variable cost per unit}$.
- Compute fixed cost as $\text{Total cost} - (\text{Variable cost per unit} \times \text{Units produced}) = \text{Total fixed cost}$.

Solution

- a. Variable cost: $(\$14,740 - \$11,100) \div (9,800 - 7,000) = \1.30 per unit
Fixed cost: $\$14,740 - (\$1.30 \times 9,800 \text{ units}) = \$2,000$
or $\$11,100 - (\$1.30 \times 7,000 \text{ units}) = \$2,000$
- b. Cost = $\$2,000 + (\$1.30 \times \text{units produced})$
- c. Total cost to produce 8,000 units: $\$2,000 + \$10,400 (\$1.30 \times 8,000 \text{ units}) = \$12,400$

Cost-Volume-Profit Analysis

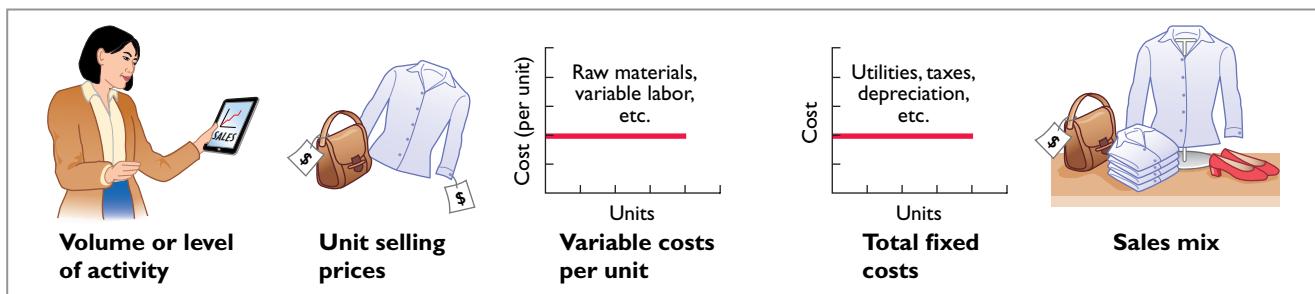

LEARNING OBJECTIVE 3

Prepare a CVP income statement to determine contribution margin.

Cost-volume-profit (CVP) analysis is the study of the effects of changes in costs and volume on a company's profits. CVP analysis is important in profit planning. It also is a critical factor in such management decisions as setting selling prices, determining product mix, and maximizing use of production facilities.

Basic Components

CVP analysis considers the interrelationships among the components shown in **Illustration 22.10**.

ILLUSTRATION 22.10 Components of CVP analysis

The following assumptions underlie each CVP analysis.

1. The behavior of both costs and revenues is linear throughout the relevant range of the activity index.
2. Costs can be classified accurately as either variable or fixed.
3. Changes in activity are the only factors that affect costs.
4. All units produced are sold.
5. When more than one type of product is sold, the sales mix will remain constant. That is, the percentage that each product represents of total sales will stay the same. Sales mix complicates CVP analysis because different products will have different cost relationships. In this chapter, we assume a single product.

When these assumptions are not valid, the CVP analysis may be inaccurate.

CVP Income Statement

Because CVP is so important for decision-making, management often wants this information reported in a **cost-volume-profit (CVP) income statement** format for internal use. The CVP income statement classifies costs as variable or fixed and computes a contribution margin. **Contribution margin (CM)** is the amount of revenue remaining after deducting variable costs. It is often stated both as a total amount and on a per unit basis.

We use Vargo Electronics Company to illustrate a CVP income statement. Vargo Electronics produces cell phones. **Illustration 22.11** presents relevant data for the cell phones sold by this company in June 2020.

Unit selling price of cell phone	\$500
Unit variable costs*	\$300
Total monthly fixed costs**	\$200,000
Units sold	1,600

*Includes variable manufacturing costs and variable selling and administrative expenses.

**Includes fixed manufacturing costs and fixed selling and administrative expenses.

ILLUSTRATION 22.11

Assumed selling and cost data for Vargo Electronics

Note that in Illustration 22.11, as well as in the applications and assignment material of CVP analysis that follow, **we assume that the term “cost” includes all costs and expenses related to production and sale of the product. That is, cost includes manufacturing costs plus selling and administrative expenses.**

The CVP income statement for Vargo would therefore be reported as shown in **Illustration 22.12**.

A traditional income statement and a CVP income statement both report the same net income of \$120,000. However, a traditional income statement does not classify costs as variable or fixed, and therefore it does not report a contribution margin. In addition, sometimes per unit amounts and percentage of sales amounts are shown in separate columns on a CVP income statement to facilitate CVP analysis. *Homework assignments specify which columns to present.*

ILLUSTRATION 22.12

CVP income statement, with net income

Vargo Electronics Company
CVP Income Statement
For the Month Ended June 30, 2020

	Total
Sales ($1,600 \times \$500$)	\$800,000
Variable costs ($1,600 \times \$300$)	<u>480,000</u>
Contribution margin	320,000
Fixed costs	200,000
Net income	\$120,000

Unit Contribution Margin

Illustration 22.13 shows the formula for **unit contribution margin** and the computation for Vargo Electronics.

ILLUSTRATION 22.13

Formula for unit contribution margin

Unit Selling Price	–	Unit Variable Costs	=	Unit Contribution Margin
\$500	–	\$300	=	\$200

Unit contribution margin indicates that for every cell phone sold, the selling price exceeds the variable costs by \$200. Vargo generates \$200 per unit sold to cover fixed costs and contribute to net income. Because Vargo has fixed costs of \$200,000, it must sell 1,000 cell phones ($\$200,000 \div \200) to cover its fixed costs.

At the point where total contribution margin exactly equals fixed costs, Vargo will report net income of zero. At this point, referred to as the **break-even point**, total costs (variable plus fixed) exactly equal total revenue. **Illustration 22.14** shows Vargo's CVP income statement at the point where net income equals zero. It shows a contribution margin of \$200,000, and a unit contribution margin of \$200 ($\$500 - \300).

ILLUSTRATION 22.14

CVP income statement, with zero net income

Vargo Electronics Company
CVP Income Statement
For the Month Ended June 30, 2020

	Total	Per Unit
Sales ($1,000 \times \$500$)	\$500,000	\$500
Variable costs ($1,000 \times \$300$)	<u>300,000</u>	300
Contribution margin	200,000	\$200
Fixed costs	200,000	
Net income	\$ –0–	

It follows that for every cell phone sold above the break-even point of 1,000 units, **net income increases by the amount of the unit contribution margin, \$200**. For example, assume that Vargo sold one more cell phone, for a total of 1,001 cell phones sold. In this case, Vargo reports net income of \$200, as shown in **Illustration 22.15**.

ILLUSTRATION 22.15

CVP income statement, with net income and per unit data

Vargo Electronics Company
CVP Income Statement
For the Month Ended June 30, 2020

	Total	Per Unit
Sales ($1,001 \times \$500$)	\$500,500	\$500
Variable costs ($1,001 \times \$300$)	<u>300,300</u>	300
Contribution margin	200,200	\$200
Fixed costs	200,000	
Net income	\$ 200	

Contribution Margin Ratio

Some managers prefer to use a contribution margin ratio in CVP analysis. The contribution margin ratio is the contribution margin expressed as a percentage of sales. Vargo Electronics has a contribution margin ratio of 40% (contribution margin of \$200,200 divided by sales of \$500,500), as shown in the percent of sales column in **Illustration 22.16**.

Vargo Electronics Company CVP Income Statement For the Month Ended June 30, 2020		
	Total	Percent of Sales
Sales (1,000 × \$500)	\$500,500	100%
Variable costs (1,000 × \$300)	300,300	60
Contribution margin	200,200	40%
Fixed costs	200,000	
Net income	\$ 200	

ILLUSTRATION 22.16

CVP income statement, with net income and percent of sales data

Alternatively, the **contribution margin ratio** can be determined by dividing the unit contribution margin by the unit selling price. **Illustration 22.17** shows the ratio for Vargo Electronics.

Unit Contribution Margin	÷	Unit Selling Price	=	Contribution Margin Ratio
\$200	÷	\$500	=	40%

ILLUSTRATION 22.17

Formula for contribution margin ratio

The contribution margin ratio of 40% means that Vargo generates 40 cents of contribution margin with each dollar of sales. That is, \$0.40 of each sales dollar ($40\% \times \$1$) is available to apply to fixed costs and to contribute to net income.

This expression of contribution margin is very helpful in determining the effect of changes in sales on net income. For example, if Vargo's sales increase \$100,000, net income will increase \$40,000 ($40\% \times \$100,000$). Thus, by using the contribution margin ratio, managers can quickly determine increases in net income from any change in sales.

We can also see this effect through a CVP income statement. Assume that Vargo's current sales are \$500,000 and it wants to know the effect of a \$100,000 (200-unit) increase in sales. Vargo prepares the comparative CVP income statement analysis shown in **Illustration 22.18**.

ILLUSTRATION 22.18 Comparative CVP income statements

Vargo Electronics Company CVP Income Statement For the Month Ended June 30, 2020						
	No Change	With \$100,000 Increase in Sales				
	Total	Per Unit	Percent of Sales	Total	Per Unit	Percent of Sales
Sales	\$500,000	\$500	100%	\$600,000	\$500	100%
Variable costs	300,000	300	60	360,000	300	60
Contribution margin	200,000	\$200	40%	240,000	\$200	40%
Fixed costs	200,000			200,000		
Net income	\$ -0-			\$ 40,000		

The \$40,000 increase in net income can be calculated on either a unit contribution margin basis (200 units × \$200 per unit) or using the contribution margin ratio times the increase in sales dollars ($40\% \times \$100,000$). Note that the unit contribution margin and contribution

margin as a percentage of sales (that is, the contribution margin ratio) remain unchanged by the increase in sales.

Study these CVP income statements carefully. The concepts presented in these statements are used extensively in this and later chapters.

DO IT! 3 | CVP Income Statement

Ampco Industries produces and sells a cell phone-operated thermostat. Information regarding the costs and sales of thermostats during September 2020 are provided below.

Unit selling price of thermostat	\$85
Unit variable costs	\$32
Total monthly fixed costs	\$190,000
Units sold	4,000

Prepare a CVP income statement for Ampco Industries for the month of September. Provide per unit values and total values.

Solution

Ampco Industries
CVP Income Statement
For the Month Ended September 30, 2020

	<u>Total</u>	<u>Per Unit</u>
Sales	\$340,000	\$85
Variable costs	<u>128,000</u>	<u>32</u>
Contribution margin	<u>212,000</u>	<u>\$53</u>
Fixed costs	<u>190,000</u>	
Net income	<u><u>\$ 22,000</u></u>	

Related exercise material: **BE22.6, BE22.7, DO IT! 22.3, and E22.7.**

ACTION PLAN

- Provide a heading with the name of the company, name of statement, and period covered.
- Subtract variable costs from sales to determine contribution margin. Subtract fixed costs from contribution margin to determine net income.
- Express sales, variable costs and contribution margin on a per unit basis.

Break-Even Analysis

LEARNING OBJECTIVE 4

Compute the break-even point using three approaches.

A key relationship in CVP analysis is the level of activity at which total revenues equal total costs (both fixed and variable)—the **break-even point**. At this volume of sales, the company will realize no income but will suffer no loss. The process of finding the break-even point is called **break-even analysis**. Knowledge of the break-even point is useful to management when it considers decisions such as whether to introduce new product lines, change sales prices on established products, or enter new market areas.

The break-even point can be:

1. Computed from a mathematical equation.
2. Computed by using contribution margin.
3. Derived from a cost-volume-profit (CVP) graph.

The break-even point can be expressed either in **sales units** or **sales dollars**.

Mathematical Equation

Illustration 22.19 shows a common profit equation used as the basis for CVP analysis. This equation expresses net income as sales minus variable and fixed costs. Sales is expressed as the unit selling price (\$500) times the number of units sold (Q). Variable costs are determined by multiplying the unit variable cost (\$300) by the number of units sold (Q). When net income is set to zero, as it is in this illustration, this equation can be used to calculate the break-even point.

Sales	-	Variable Costs	-	Fixed Costs	=	Net Income
\$500Q	-	\$300Q	-	\$200,000	=	\$0

ILLUSTRATION 22.19

Profit equation

As shown in Illustration 22.14, net income equals zero when the contribution margin (sales minus variable costs) is equal to fixed costs. To reflect this, **Illustration 22.20** rewrites the equation with contribution margin (sales minus variable costs) on the left side, and fixed costs and net income of zero on the right. We can then compute the break-even point **in units** by **using unit selling prices** and **unit variable costs** and solving for the quantity (Q).

Sales	-	Variable Costs	-	Fixed Costs	=	Net Income
\$500Q	-	\$300Q	-	\$200,000	=	\$0
\$500Q	-	\$300Q	=	\$200,000	+	\$0
\$200Q	=	\$200,000				
$Q = \frac{\$200,000}{\$200}$	=		Fixed Costs			
			Unit Contribution Margin			
$Q = 1,000$ units						
where						
Q = number of units sold						
\$500 = unit selling price						
\$300 = unit variable costs						
\$200,000 = total fixed costs						

ILLUSTRATION 22.20

Computation of break-even point in units

Thus, Vargo Electronics must sell 1,000 units to break even.

To find the amount of **sales dollars** required to break even, we multiply the units sold at the break-even point times the selling price per unit, as shown below.

$$1,000 \times \$500 = \$500,000 \text{ (break-even sales dollars)}$$

Contribution Margin Technique

Many managers employ the contribution margin to compute the break-even point.

Contribution Margin in Units

The final step in Illustration 22.20 divides fixed costs by the unit contribution margin (highlighted in red). Thus, rather than walk through all of the steps of the equation approach, we can simply employ this formula shown in **Illustration 22.21**.

Fixed Costs	÷	Unit Contribution Margin	=	Break-Even Point in Units
\$200,000	÷	\$200	=	1,000 units

ILLUSTRATION 22.21

Formula for break-even point in units using unit contribution margin

Why does this formula work? The unit contribution margin is the net amount by which each sale exceeds the variable costs per unit. Every sale generates this much to cover fixed costs. Consequently, if we divide fixed costs by the unit contribution margin, we know how many units we need to sell to break even.

Contribution Margin Ratio

When a company has numerous products, it is not practical to determine the unit contribution margin for each product. In this case, using the contribution margin ratio is very useful for determining the break-even point in total dollars (rather than units). Recall that the contribution margin ratio is the percentage of each dollar of sales that is available to cover fixed costs and generate net income. Therefore, **to determine the sales dollars needed to cover fixed costs**, we divide fixed costs by the contribution margin ratio, as shown in **Illustration 22.22**.

ILLUSTRATION 22.22

Formula for break-even point in dollars using contribution margin ratio

Fixed Costs	÷	Contribution Margin Ratio	=	Break-Even Point in Dollars
\$200,000	÷	40%	=	\$500,000

To apply this formula to Vargo Electronics, consider that its 40% contribution margin ratio means that for every dollar sold, it generates 40 cents of contribution margin. The question is, how many dollars of sales does Vargo need in order to generate total contribution margin of \$200,000 to pay off fixed costs? We divide the fixed costs of \$200,000 by the 40 cents of contribution margin generated by each dollar of sales to arrive at \$500,000 ($\$200,000 \div 40\%$). To prove this result, if we generate 40 cents of contribution margin for each dollar of sales, then the total contribution margin generated by \$500,000 in sales is \$200,000 ($\$500,000 \times 40\%$).

Service Company Insight Flightserve

Digital Vision/Getty Images

Charter Flights Offer a Good Deal

The Internet is wringing inefficiencies out of nearly every industry. While commercial aircraft spend roughly 4,000 hours a year in the air, chartered aircraft are flown only 500 hours annually. That means that they are sitting on the ground—not making any money—about 90% of the time.

One company, **Flightserve**, saw a business opportunity in that fact. For about the same cost as a first-class ticket, Flightserve matches up executives with charter flights in small “private jets.”

The executive gets a more comfortable ride and avoids the hassle of big airports. Flightserve noted that the average charter jet has eight seats. When all eight seats are full, the company has an 80% profit margin. It breaks even at an average of 3.3 full seats per flight. Another company, **NetJets**, uses an alternative approach to increase utilization of jets and thus reduce fixed costs. It offers shared ownership in private jets.

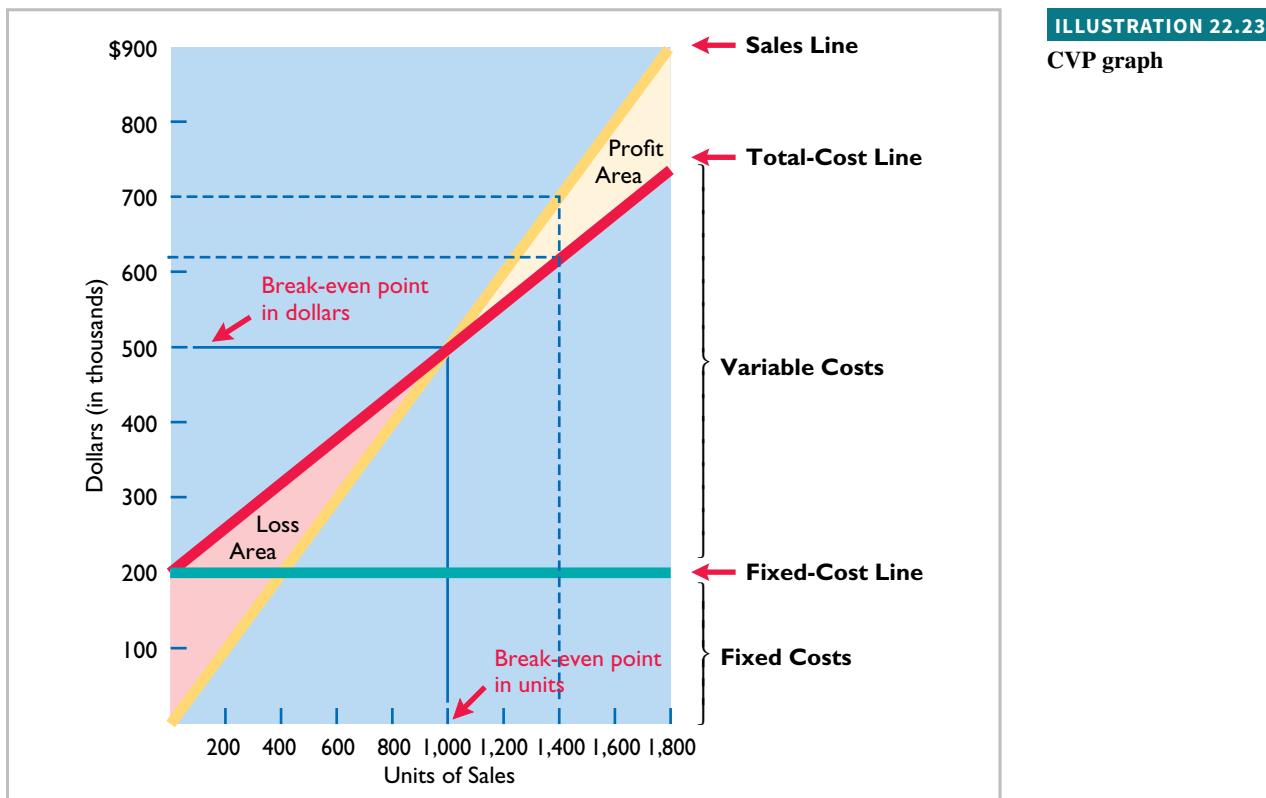

Sources: “Jet Set Go,” *The Economist* (March 18, 2000), p. 68; and Doug Gollan, “How NetJets’ Private Jet Service Is Making Itself Whole Again,” *Forbes* (June 3, 2015).

How did Flightserve determine that it would break even with 3.3 seats full per flight? (Go to WileyPLUS for this answer and additional questions.)

Graphic Presentation

An effective way to find the break-even point is to prepare a break-even graph. Because this graph also shows costs, volume, and profits, it is referred to as a **cost-volume-profit (CVP) graph**.

As the CVP graph in **Illustration 22.23** shows, sales volume is recorded along the horizontal axis. This axis should extend to the maximum level of expected sales. Both total revenues (sales) and total costs (fixed plus variable) are recorded on the vertical axis.

The construction of the graph, using the data for Vargo Electronics, is as follows.

1. Plot the sales line, starting at the zero activity level. For every cell phone sold, total revenue increases by \$500. For example, at 200 units, sales are \$100,000. At the upper level of activity (1,800 units), sales are \$900,000. The revenue line is assumed to be linear through the full range of activity.
2. Plot the total fixed costs using a horizontal line. For the cell phones, this line is plotted at \$200,000. The fixed costs are the same at every level of activity.
3. Plot the total-cost line. This starts at the fixed-cost line at zero activity. It increases by the variable costs at each level of activity. For each cell phone, variable costs are \$300. Thus, at 200 units, total variable costs are \$60,000 ($\300×200) and the total cost is \$260,000 ($\$60,000 + \$200,000$). At 1,800 units, total variable costs are \$540,000 ($\$300 \times 1,800$) and total cost is \$740,000 ($\$540,000 + \$200,000$). On the graph, the amount of the variable costs can be derived from the difference between the total-cost and fixed-cost lines at each level of activity.
4. Determine the break-even point from the intersection of the total-cost line and the sales line. The break-even point in dollars is found by drawing a horizontal line from the break-even point to the vertical axis. The break-even point in units is found by drawing a vertical line from the break-even point to the horizontal axis. For the cell phones, the break-even point is \$500,000 of sales, or 1,000 units. At this sales level, Vargo will cover costs but make no profit.

The CVP graph also shows both the net income and net loss areas. Thus, the amount of income or loss at each level of sales can be derived from the sales and total-cost lines.

A CVP graph is useful because the effects of a change in any element in the CVP analysis can be quickly seen. For example, a 10% increase in selling price will change the location of the sales line. Likewise, the effects on total costs of wage increases can be quickly observed.

DO IT! 4 | Break-Even Analysis

Lombardi Company has a unit selling price of \$400, variable costs per unit of \$240, and fixed costs of \$180,000. Compute the break-even point in units using (a) a mathematical equation and (b) unit contribution margin.

Solution

(a) The equation is $400Q - 240Q - 180,000 = \0 ; $(400Q - 240Q) = 180,000$. The break-even point in units is 1,125. (b) The unit contribution margin is \$160 ($400 - 240$). The formula therefore is $180,000 \div 160$, and the break-even point in units is 1,125.

Related exercise material: **BE22.8, BE22.9, DO IT! 22.4, E22.8, E22.9, E22.10, E22.11, E22.12, and E22.13.**

ACTION PLAN

- Apply the profit equation:
Sales – Variable costs – Fixed costs = Net income.
- Apply the break-even formula: Fixed costs ÷ Unit contribution margin = Break-even point in units.

Target Net Income and Margin of Safety

LEARNING OBJECTIVE 5

Determine the sales required to earn target net income and determine margin of safety.

Target Net Income

Rather than simply “breaking even,” management usually sets an income objective often called **target net income**. It then determines the sales necessary to achieve this specified level of income. Companies determine the sales necessary to achieve target net income by using one of the three approaches discussed earlier.

Mathematical Equation

We know that at the break-even point no profit or loss results for the company. By adding an amount for target net income to the same basic equation, we obtain the formula shown in **Illustration 22.24** for determining required sales.

ILLUSTRATION 22.24

Formula for sales to meet target net income

$$\text{Sales} - \text{Variable Costs} - \text{Fixed Costs} = \text{Target Net Income}$$

Recall that once the break-even point has been reached so that fixed costs are covered, each additional unit sold increases net income by the amount of the unit contribution margin. We can rewrite the equation with contribution margin (sales minus variable costs) on the left-hand side, and fixed costs and target net income on the right. Assuming that target net income is \$120,000 for Vargo Electronics, the computation of required sales in units is as shown in **Illustration 22.25**.

Sales	-	Variable Costs	-	Fixed Costs	=	Target Net Income
\$500Q	-	\$300Q	-	\$200,000	=	\$120,000
\$500Q	-	\$300Q	=	\$200,000	+	\$120,000
\$200Q	=	\$200,000 + \$120,000				
Q =		$\frac{\$200,000 + \$120,000}{\$200}$	=	$\frac{\text{Fixed Costs} + \text{Target Net Income}}{\text{Unit Contribution Margin}}$		
Q =		1,600				

where

Q = number of units sold
 \$500 = unit selling price
 \$300 = unit variable costs
 \$200,000 = total fixed costs
 \$120,000 = target net income

ILLUSTRATION 22.25

Computation of required sales

Vargo must sell 1,600 units to achieve target net income of \$120,000. The sales dollars required to achieve the target net income is found by multiplying the units sold by the unit selling price [(1,600 × \$500) = \$800,000].

Contribution Margin Technique

As in the case of break-even sales, we can compute in either units or dollars the sales required to meet target net income. The formula to compute required sales in units for Vargo Electronics using the unit contribution margin can be seen in the final step of the equation approach in Illustration 22.25 (shown in red). We simply divide the sum of fixed costs and target net income by the unit contribution margin. **Illustration 22.26** shows this for Vargo.

$(\text{Fixed Costs} + \text{Target Net Income})$	÷	Unit Contribution Margin	=	Sales in Units
$(\$200,000 + \$120,000)$	÷	\$200	=	1,600 units

ILLUSTRATION 22.26

Formula for sales in units using unit contribution margin

To achieve its desired target net income of \$120,000, Vargo must sell 1,600 cell phones.

Illustration 22.27 presents the formula to compute the required sales in dollars for Vargo using the contribution margin ratio.

$(\text{Fixed Costs} + \text{Target Net Income})$	÷	Contribution Margin Ratio	=	Sales in Dollars
$(\$200,000 + \$120,000)$	÷	40%	=	\$800,000

ILLUSTRATION 22.27

Formula for sales in dollars using contribution margin ratio

To achieve its desired target net income of \$120,000, Vargo must generate sales of \$800,000.

Graphic Presentation

We also can use the CVP graph in Illustration 22.23 to find the sales required to meet target net income. In the profit area of the graph, the distance between the sales line and the total-cost line at any point equals net income. We can find required sales by analyzing the differences between the two lines until the desired net income is found.

For example, suppose Vargo Electronics sells 1,400 cell phones. Illustration 22.23 shows that a vertical line drawn at 1,400 units intersects the sales line at \$700,000 and the total-cost line at \$620,000. The difference between the two amounts represents the net income (profit) of \$80,000.

Margin of Safety

Margin of safety is the difference between actual or expected sales and sales at the break-even point. It measures the “cushion” that a particular level of sales provides. It tells us how far sales could fall before the company begins operating at a loss. The margin of safety is expressed in dollars or as a ratio.

The formula for stating the **margin of safety in dollars** is actual (or expected) sales minus break-even sales. **Illustration 22.28** shows the computation for Vargo Electronics, assuming that actual (expected) sales are \$750,000.

ILLUSTRATION 22.28

Formula for margin of safety in dollars

Actual (Expected) Sales	—	Break-Even Sales	=	Margin of Safety in Dollars
\$750,000	—	\$500,000	=	\$250,000

Vargo’s margin of safety is \$250,000. Its sales could fall \$250,000 before it operates at a loss.

The **margin of safety ratio** is the margin of safety in dollars divided by actual (or expected) sales. **Illustration 22.29** shows the formula and computation for determining the margin of safety ratio.

ILLUSTRATION 22.29

Formula for margin of safety ratio

Margin of Safety in Dollars	÷	Actual (Expected) Sales	=	Margin of Safety Ratio
\$250,000	÷	\$750,000	=	33%

This means that the company’s sales could fall by 33% before it operates at a loss.

The **higher the margin of safety in dollars or the percentage, the lower the risk that the company will operate at a loss**. Management evaluates the adequacy of the margin of safety in terms of such factors as the vulnerability of the product to competitive pressures and to downturns in the economy.

Service Company Insight Rolling Stones

Yael/Retna

How a Rolling Stones’ Tour Makes Money

Computations of break-even and margin of safety are important for service companies. Consider how the promoter for the **Rolling Stones**’ tour used the break-even point and margin of safety. For example, say one outdoor show should bring 70,000 individuals for ticket sales of \$2.45 million. The promoter guarantees \$1.2 million to the

Rolling Stones. In addition, 20% of ticket sales goes to the stadium in which the performance is staged. Add another \$400,000 for other expenses such as ticket takers, parking attendants, advertising, and so on. The promoter also shares in sales of T-shirts and memorabilia for which the promoter will net over \$7 million during the tour. From a successful Rolling Stones’ tour, the promoter could make \$35 million!

What amount of sales dollars are required for the promoter to break even? (Go to WileyPLUS for this answer and additional questions.)

DO IT! 5 | Break-Even, Margin of Safety, and Target Net Income

Zootsuit Inc. makes travel bags that sell for \$56 each. For the coming year, management expects fixed costs to total \$320,000 and variable costs to be \$42 per unit. Compute the following: (a) break-even point in dollars using the contribution margin (CM) ratio; (b) the margin of safety and margin of safety ratio assuming actual sales are \$1,382,400; and (c) the sales dollars required to earn net income of \$410,000.

ACTION PLAN

- Apply the formula for the break-even point in dollars.
- Apply the formulas for the margin of safety in dollars and the margin of safety ratio.
- Apply the formula for the sales in dollars.

Solution

- Contribution margin ratio = $[(\$56 - \$42) \div \$56] = 25\%$
Break-even sales in dollars = $\$320,000 \div 25\% = \$1,280,000$
- Margin of safety = $\$1,382,400 - \$1,280,000 = \$102,400$
Margin of safety ratio = $\$102,400 \div \$1,382,400 = 7.4\%$
- Sales in dollars = $(\$320,000 + \$410,000) \div 25\% = \$2,920,000$

Appendix 22A

Regression Analysis

LEARNING OBJECTIVE *6

Describe how regression analysis is used to classify mixed costs.

The high-low method is often used to estimate fixed and variable costs for a mixed-cost situation. An advantage of the high-low method is that it is easy to apply. But, how accurate and reliable is the estimated cost equation that it produces? For example, consider the example shown in **Illustration 22A.1**, which indicates the cost equation line produced by the high-low method for Metro Transit Company's maintenance costs. How well does the high-low method represent the relationship between miles driven and total cost? This line is close to, and in some cases bisects, nearly all of the data points. Therefore, in this case, the high-low method provides a cost equation that is a very good fit for this data set. It identifies fixed and variable costs in an accurate and reliable way.

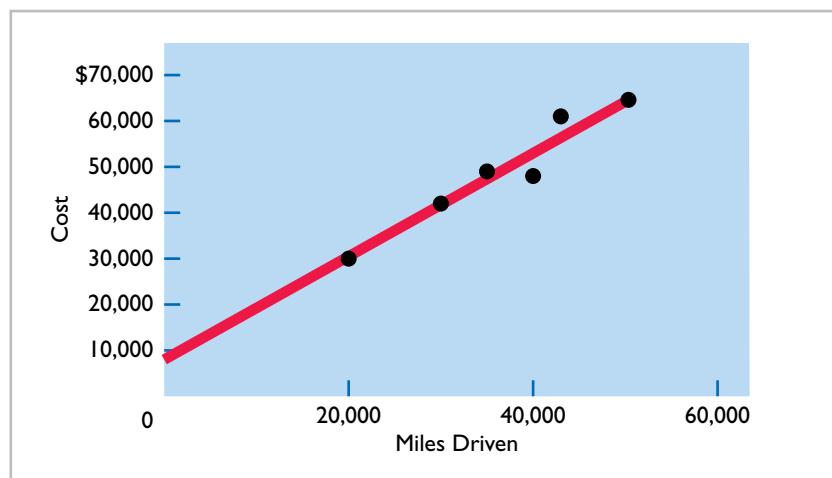

ILLUSTRATION 22A.1

Scatter plot for Metro Transit Company

While the high-low method works well for the Metro Transit data set, a weakness of this method is that it employs only two data points and ignores the rest. If those two data points are representative of the entire data set, then the high-low method provides reasonable results (as seen in Illustration 22A.1). But, if the high and low data points are not representative of the rest of the data set, then the results are misleading. To illustrate, assume that Hanson Trucking Company has 12 months of maintenance cost data, as shown in **Illustration 22A.2**.

ILLUSTRATION 22A.2

Maintenance costs and mileage data for Hanson Trucking Company

Month	Miles Driven	Total Cost	Month	Miles Driven	Total Cost
January	20,000	\$30,000	July	15,000	\$39,000
February	40,000	49,000	August	28,000	41,000
March	35,000	46,000	September	60,000	72,000
April	50,000	63,000	October	55,000	67,000
May	30,000	42,000	November	19,000	29,000
June	43,000	52,000	December	65,000	63,000

The high and low activities are 65,000 miles in December and 15,000 miles in July. The maintenance costs at these two levels are \$63,000 and \$39,000, respectively. The difference in maintenance costs is \$24,000 ($\$63,000 - \$39,000$), and the difference in miles is 50,000 ($65,000 - 15,000$). Therefore, for Hanson Trucking, variable cost per unit under the high-low method is \$0.48 ($\$24,000 \div 50,000$). To determine total variable cost, we multiply the number of miles by cost per mile. For example, at the low activity level of 15,000 miles, total variable cost is \$7,200 ($15,000 \times \0.48). To determine fixed costs, we subtract total variable costs at the low activity level from the total cost at the low activity level (\$39,000) as follows.

$$\text{Fixed costs} = \$39,000 - (\$0.48 \times 15,000) = \$31,800$$

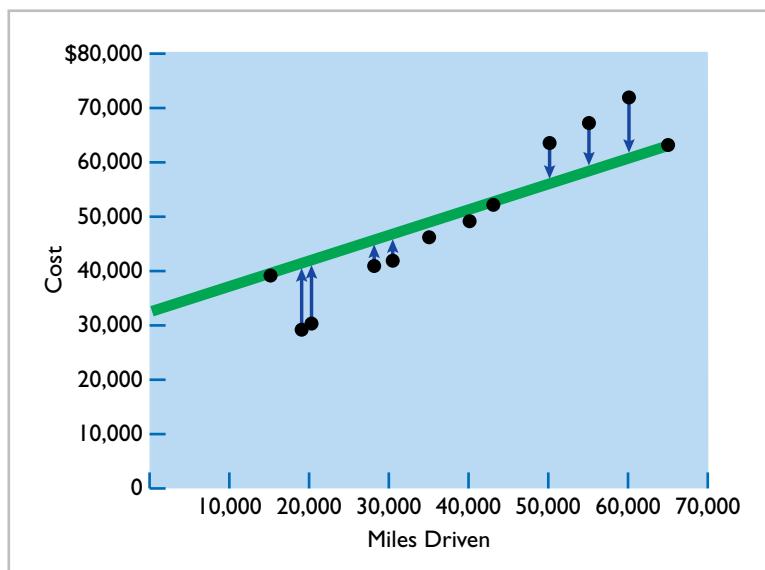

Therefore, the cost equation based on the high-low method for this data produces the following formula:

$$\begin{aligned} \text{Maintenance costs} &= \text{Intercept} + \text{Slope} \\ &= \$31,800 + (\$0.48 \times \text{Miles driven}) \end{aligned}$$

Illustration 22A.3 shows a scatter plot of the data with a line representing the high-low method cost equation. Note that most of the data points for Hanson Trucking are a significant distance from the line. For example, at 19,000 miles, the observed maintenance cost is \$29,000, but the equation predicts \$40,920 [$\$31,800 + (\$0.48 \times 19,000)$]. That is a difference of \$11,920 ($\$40,920 - \$29,000$). In this case, the high-low method cost equation does not provide a good representation of the relationship between miles driven and maintenance costs. To derive a more representative cost equation, the company should employ regression analysis.

ILLUSTRATION 22A.3

Scatter plot for Hanson Trucking Company

Regression analysis is a statistical approach that estimates the cost equation by employing information from all data points, not just the highest and lowest ones. While it involves mathematical analysis taught in statistics courses (which we will not address here), we can provide you with a basic understanding of how regression analysis works. Consider Illustration 22A.3, which highlights the distance that each data point is from the high-low cost equation line. What regression analysis does is to find a cost equation that results in a cost equation line that minimizes the sum of the (squared) distances from the line to the data points.

Many software packages perform regression analysis. In **Illustration 22A.4**, we use the **Intercept** and **Slope** functions in Excel to estimate the regression equation for the Hanson Trucking Company data.¹ The Excel video provided in WileyPLUS demonstrates the use of the Intercept and Slope functions.

Hanson Tracking			
	A	B	C
1	<u>Month</u>	<u>Miles Driven</u>	<u>Total Cost</u>
2	January	20,000	30,000
3	February	40,000	49,000
4	March	35,000	46,000
5	April	50,000	63,000
6	May	30,000	42,000
7	June	43,000	52,000
8	July	15,000	39,000
9	August	28,000	41,000
10	September	60,000	72,000
11	October	55,000	67,000
12	November	19,000	29,000
13	December	65,000	63,000
14			
15		Formula	
16	Intercept	=INTERCEPT(C2:C13,B2:B13)	18,502
17	Slope	=SLOPE(C2:C13,B2:B13)	0.81
18			

ILLUSTRATION 22A.4

Excel spreadsheet for Hanson Trucking Company

The resulting cost equation is:

$$\begin{aligned} \text{Maintenance costs} &= \text{Intercept} + \text{Slope} \\ &= \$18,502 + (\$0.81 \times \text{Miles driven}) \end{aligned}$$

Compare this to the high-low cost equation:

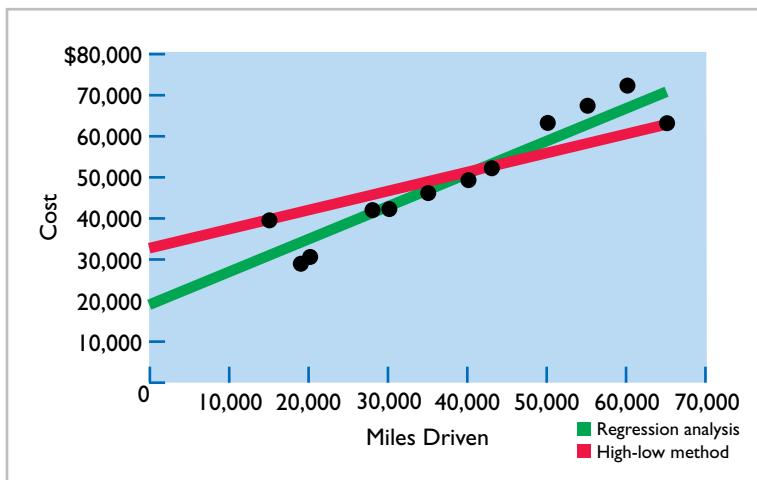

$$\begin{aligned} \text{Maintenance costs} &= \text{Intercept} + \text{Slope} \\ &= \$31,800 + (\$0.48 \times \text{Miles driven}) \end{aligned}$$

¹ To use the Intercept and Slope functions in Excel, enter your data in two columns in an Excel spreadsheet. The first column should be your “X” variable (miles driven, cells B2 to B13 in our example). The second column should be your “Y” variable (maintenance costs, cells C2 to C13 in our example). Next, in a separate cell, choosing from Excel’s statistical functions, enter =Intercept(C2:C13,B2:B13) and in a different cell enter =Slope(C2:C13,B2:B13).

As **Illustration 22A.5** shows, the intercept and slope differ significantly between the regression equation (green) and the high-low equation (red).² The regression cost equation line does not bisect the high and low data points but instead follows a path that minimizes the cumulative distance from all of the data points. By doing so, it provides a cost equation that is more representative of the relationship between miles driven and total maintenance costs than the high-low method.

ILLUSTRATION 22A.5

Scatter plot and cost equation lines

Why should managers care about the accuracy of the cost equation? Managers make many decisions that require that mixed costs be separated into fixed and variable components. Inaccurate classifications of these costs might cause a manager to make an inappropriate decision. For example, Hanson Trucking Company's break-even point differs significantly depending on which of these two cost equations was used. If Hanson Trucking relies on the high-low method, it would have a distorted view of the level of sales it would need in order to break even. In addition, misrepresentation for fixed and variable costs could result in inappropriate decisions, such as whether to discontinue a product line. It would also result in inaccurate product costing under activity-based costing.

While regression analysis usually provides more reliable estimates of the cost equation, it does have its limitations.

1. The regression approach that we applied above assumes a linear relationship between the variables (that is, an increase or decrease in one variable results in a proportional increase or decrease in the other). If the actual relationship differs significantly from linearity, then linear regression can provide misleading results. (Nonlinear regression is addressed in advanced statistics courses.)
2. Regression estimates can be severely influenced by “outliers”—data points that differ significantly from the rest of the observations. It is therefore good practice to plot data points in a scatter graph to identify outliers and then investigate the reasons why they differ. In some cases, outliers must be adjusted for or eliminated.
3. Regression estimation is most accurate when it is based on a large number of data points. However, collecting data can be time-consuming and costly. In some cases, there simply are not enough observable data points to arrive at a reliable estimate.

² To plot a scatter graph in Excel, highlight the data and then click on Scatter under the Insert tab. To draw the cost equation line, click on the scatter plot, then select Layout and Trendline. In order to get the cost equation line to intercept the Y axis, under Trendline Options in the Backward field, enter the lowest value of your X variable. For example, for Hanson Trucking, we entered 15,000.

Review and Practice

Learning Objectives Review

1 Explain variable, fixed, and mixed costs and the relevant range.

Variable costs are costs that vary in total directly and proportionately with changes in the activity index. Fixed costs are costs that remain the same in total regardless of changes in the activity index.

The relevant range is the range of activity in which a company expects to operate during a year. It is important in CVP analysis because the behavior of costs is assumed to be linear throughout the relevant range.

Mixed costs change in total but not proportionately with changes in the activity level. For purposes of CVP analysis, mixed costs must be classified into their fixed and variable elements.

2 Apply the high-low method to determine the components of mixed costs.

Determine the variable costs per unit by dividing the change in total costs at the highest and lowest levels of activity by the difference in activity at those levels. Then, determine fixed costs by subtracting total variable costs from the amount of total costs at either the highest or lowest level of activity.

3 Prepare a CVP income statement to determine contribution margin.

The five components of CVP analysis are (1) volume or level of activity, (2) unit selling prices, (3) variable costs per unit, (4) total fixed costs, and (5) sales mix. Contribution margin is the amount of revenue remaining after deducting variable costs. It is identified in a CVP income statement, which classifies costs as variable or fixed. It can be expressed as a total amount, as a per unit amount, or as a ratio.

4 Compute the break-even point using three approaches.

The break-even point can be (a) computed from a mathematical equation, (b) computed by using a contribution margin technique, and (c) derived from a CVP graph.

5 Determine the sales required to earn target net income and determine margin of safety.

The general formula for required sales is Sales – Variable costs – Fixed costs = Target net income. Two other formulas are (1) Sales in units = (Fixed costs + Target net income) ÷ Unit contribution margin, and (2) Sales in dollars = (Fixed costs + Target net income) ÷ Contribution margin ratio.

Margin of safety is the difference between actual or expected sales and sales at the break-even point. The formulas for margin of safety are (1) Actual (expected) sales – Break-even sales = Margin of safety in dollars, and (2) Margin of safety in dollars ÷ Actual (expected) sales = Margin of safety ratio.

***6 Describe how regression analysis is used to classify mixed costs.**

The high-low method provides a quick estimate of the cost equation for a mixed cost. However, the high-low method is based on only the highest and lowest data points. Regression analysis provides an estimate of the cost equation based on all data points. The cost equation line that results from regression analysis minimizes the sum of the (squared) distances of all of the data points from the cost equation line. Computer programs such as Excel enable easy estimation of the cost equation with regression.

Glossary Review

Activity index The activity that causes changes in the behavior of costs. (p. 22-3).

Break-even point The level of activity at which total revenue equals total costs. (p. 22-12).

Contribution margin (CM) The amount of revenue remaining after deducting variable costs. (p. 22-11).

Contribution margin ratio The percentage of each dollar of sales that is available to apply to fixed costs and contribute to net income; calculated as unit contribution margin divided by unit selling price. (p. 22-13).

Cost behavior analysis The study of how specific costs respond to changes in the level of business activity. (p. 22-2).

Cost-volume-profit (CVP) analysis The study of the effects of changes in costs and volume on a company's profits. (p. 22-10).

Cost-volume-profit (CVP) graph A graph showing the relationship between costs, volume, and profits. (p. 22-16).

Cost-volume-profit (CVP) income statement A statement for internal use that classifies costs as fixed or variable and reports contribution margin in the body of the statement. (p. 22-11).

Fixed costs Costs that remain the same in total regardless of changes in the activity level. (p. 22-3).

High-low method A mathematical method that uses the total costs incurred at the high and low levels of activity to classify mixed costs into fixed and variable components. (p. 22-7).

Margin of safety The difference between actual or expected sales and sales at the break-even point. (p. 22-20).

Mixed costs Costs that contain both a variable- and a fixed-cost element and change in total but not proportionately with changes in the activity level. (p. 22-6).

***Regression analysis** A statistical approach that estimates the cost equation by employing information from all data points to find the cost equation line that minimizes the sum of the squared distances from the line to the data points. (p. 22-23).

Relevant range The range of the activity index over which the company expects to operate during the year. (p. 22-5).

Target net income The income objective set by management. (p. 22-18).

Unit contribution margin The amount of revenue remaining per unit after deducting variable costs; calculated as unit selling price minus unit variable costs. (p. 22-12).

Variable costs Costs that vary in total directly and proportionately with changes in the activity level. (p. 22-3).

Practice Multiple-Choice Questions

1. **(LO 1)** Variable costs are costs that:
 - a. vary in total directly and proportionately with changes in the activity level.
 - b. remain the same per unit at every activity level.
 - c. Neither of the above.
 - d. Both (a) and (b) above.
2. **(LO 2)** The relevant range is:
 - a. the range of activity in which variable costs will be curvilinear.
 - b. the range of activity in which fixed costs will be curvilinear.
 - c. the range over which the company expects to operate during a year.
 - d. usually from zero to 100% of operating capacity.
3. **(LO 1, 2)** Mixed costs consist of a:
 - a. variable-cost element and a fixed-cost element.
 - b. fixed-cost element and a product-cost element.
 - c. period-cost element and a product-cost element.
 - d. variable-cost element and a period-cost element.
4. **(LO 1, 2)** Your cell phone service provider offers a plan that is classified as a mixed cost. The cost per month for 1,000 minutes is \$50. If you use 2,000 minutes this month, your cost will be:

a. \$50.	c. more than \$100.
b. \$100.	d. between \$50 and \$100.
5. **(LO 2)** Kendra Corporation's total utility costs during the past year were \$1,200 during its highest month and \$600 during its lowest month. These costs corresponded with 10,000 units of production during the high month and 2,000 units during the low month. What are the fixed and variable components of its utility costs using the high-low method?

a. \$0.075 variable and \$450 fixed.	c. \$0.300 variable and \$0 fixed.
b. \$0.120 variable and \$0 fixed.	d. \$0.060 variable and \$600 fixed.
6. **(LO 3)** Which of the following is **not** involved in CVP analysis?
 - a. Sales mix.
 - b. Unit selling prices.
 - c. Fixed costs per unit.
 - d. Volume or level of activity.
7. **(LO 3)** When comparing a traditional income statement to a CVP income statement:

a. net income will always be greater on the traditional statement.	c. net income will always be identical on both.
b. net income will always be less on the traditional statement.	d. net income will be greater or less depending on the sales volume.
8. **(LO 3)** Contribution margin:

a. is revenue remaining after deducting variable costs.	c. is selling price less cost of goods sold.
b. may be expressed as unit contribution margin.	d. Both (a) and (b) above.
9. **(LO 3)** Cournot Company sells 100,000 wrenches for \$12 a unit. Fixed costs are \$300,000, and net income is \$200,000. What should be reported as variable expenses in the CVP income statement?

a. \$700,000.	c. \$500,000.
b. \$900,000.	d. \$1,000,000.
10. **(LO 4)** Gossen Company is planning to sell 200,000 pliers for \$4 per unit. The contribution margin ratio is 25%. If Gossen will break even at this level of sales, what are the fixed costs?

a. \$100,000.	c. \$200,000.
b. \$160,000.	d. \$300,000.
11. **(LO 4)** Brownstone Company's contribution margin ratio is 30%. If Brownstone's sales revenue is \$100 greater than its break-even sales in dollars, its net income:

a. will be \$100.	c. will be \$30.
b. will be \$70.	d. cannot be determined without knowing fixed costs.
12. **(LO 5)** The mathematical equation for computing required sales to obtain target net income is Sales =

a. Variable costs + Target net income.	c. Fixed costs + Target net income.
b. Variable costs + Fixed costs + Target net income.	d. No correct answer is given.

13. (LO 5) Margin of safety is computed as:

- Actual sales – Break-even sales.
- Contribution margin – Fixed costs.
- Break-even sales – Variable costs.
- Actual sales – Contribution margin.

Solutions

1. d. Variable costs vary in total directly and proportionately with changes in the activity level and remain the same per unit at every activity level. Choices (a) and (b) are correct, but (d) is the better and more complete answer. Since (a) and (b) are both true statements, choice (c) is incorrect.

2. c. The relevant range is the range over which the company expects to operate during a year. The other choices are incorrect because the relevant range is the range over which (a) variable costs are expected to be linear, not curvilinear, and (b) the company expects fixed costs to remain the same. Choice (d) is incorrect because this answer does not specifically define relevant range.

3. a. Mixed costs consist of a variable-cost element and a fixed-cost element, not (b) a product-cost element, (c) a period-cost element or a product-cost element, or (d) a period-cost element.

4. d. Your cost will include the fixed-cost component (flat service fee) which does not increase plus the variable cost (usage charge) for the additional 1,000 minutes which will increase your cost to between \$50 and \$100. Therefore, choices (a) \$50, (b) \$100, and (c) more than \$100 are incorrect.

5. a. Variable is $\$0.075 [(\$1,200 - \$600) \div (10,000 - 2,000)]$ and fixed is $\$450 [(\$1,200 - (\$0.075 \times 10,000))]$. Therefore, choices (b) \$0.120 variable and \$0 fixed, (c) \$0.300 variable and \$0 fixed, and (d) \$0.060 variable and \$600 fixed are incorrect.

6. c. Total fixed costs, not fixed costs per unit, are involved in CVP analysis. Choices (a) sales mix, (b) unit selling prices, and (d) volume or level of activity are all involved in CVP analysis.

7. c. Net income will always be identical on both a traditional income statement and a CVP income statement. Therefore, choices (a), (b), and (d) are incorrect statements.

14. (LO 5) Marshall Company had actual sales of \$600,000 when break-even sales were \$420,000. What is the margin of safety ratio?

- 25%.
- 30%.
- 33½%.
- 45%.

8. d. Contribution margin is revenue remaining after deducting variable costs and it may be expressed on a per unit basis. Choices (a) and (b) are accurate, but (d) is a better answer. Choice (c) is incorrect because it defines gross margin, not contribution margin.

9. a. Contribution margin is equal to fixed costs plus net income ($\$300,000 + \$200,000 = \$500,000$). Since variable expenses are the difference between total sales (\$1,200,000) and contribution margin (\$500,000), \$700,000 must be the amount of variable expenses in the CVP income statement. Therefore, choices (b) \$900,000, (c) \$500,000, and (d) \$1,000,000 are incorrect.

10. c. Unit contribution margin is \$1 ($\$4 \times 25\%$). Fixed costs \div Unit contribution margin = Break-even point in units. Solving for fixed costs, $200,000 \text{ units} \times \$1 \text{ per unit} = \$200,000$, not (a) \$100,000, (b) \$160,000, or (d) \$300,000.

11. c. If Brownstone's sales revenue is \$100 greater than its break-even sales in dollars, its net income will be \$30 or ($\$100 \times 30\%$), not (a) \$100 or (b) \$70. Choice (d) is incorrect because net income can be determined without knowing fixed costs.

12. b. The correct equation is Sales = Variable costs + Fixed costs + Target net income. The other choices are incorrect because (a) needs fixed costs added, (b) needs variable costs added, and (d) there is a correct answer given (b).

13. a. Margin of safety is computed as Actual sales – Break-even sales. Therefore, choices (b) Contribution margin – Fixed costs, (c) Break-even sales – Variable costs, and (d) Actual sales – Contribution margin are incorrect.

14. b. The margin of safety ratio is computed by dividing the margin of safety in dollars of \$180,000 ($\$600,000 - \$420,000$) by actual sales of \$600,000. The result is 30% ($\$180,000 \div \$600,000$), not (a) 25%, (c) 33½%, or (d) 45%.

Practice Brief Exercises

1. (LO 2) Benji Company accumulates the following data concerning a mixed cost, using miles as the activity level.

Determine variable- and fixed-cost elements using the high-low method.

	Miles Driven	Total Cost		Miles Driven	Total Cost
January	7,500	\$20,000		March	8,500
February	8,200	21,100		April	8,300

Compute the variable- and fixed-cost elements using the high-low method.

Solution

1.

High	–	Low	=	Difference
\$22,000	–	\$20,000	=	\$2,000
8,500	–	7,500	=	1,000

Variable cost per mile = $\$2,000 \div 1,000 = \2.00 .

	High	Low
Total cost	\$22,000	\$20,000
Less: Variable costs		
$8,500 \times \$2.00$	17,000	
$7,500 \times \$2.00$		15,000
Total fixed costs	<u>\$ 5,000</u>	<u>\$ 5,000</u>

Mixed cost is \$5,000 plus \$2.00 per mile.

Determine missing amounts for contribution margin.

2. (LO 3) Determine the missing amounts.

Unit Selling Price	Unit Variable Costs	Unit Contribution Margin	Contribution Margin Ratio
\$800	\$520	(a)	(b)
500	(c)	\$200	(d)
(e)	(f)	450	45%

Solution

2. a. $(\$800 - \$520) = \$280$
- b. $(\$280 \div \$800) = 35\%$
- c. $(\$500 - \$200) = \$300$
- d. $(\$200 \div \$500) = 40\%$
- e. $(\$450 \div 45\%) = \$1,000$
- f. $(\$1,000 - \$450) = \$550$

Compute the break-even point.

3. (LO 4) Jacob Company has a unit selling price of \$600, variable costs per unit of \$216, and fixed costs of \$2,438,400. Compute the break-even point in units using (a) the mathematical equation and (b) unit contribution margin.

Solution

3. a. $\$600Q - \$216Q - \$2,438,400 = \0
 $384Q = \$2,438,400$
 $Q = 6,350$ units
- b. Contribution margin per unit = $(\$600 - \$216) = \$384$
 Unit contribution margin = $\$2,438,400 \div \$384 = 6,350$ units

Compute the margin of safety and margin of safety ratio.

4. (LO 5) For Posh Company, actual sales are \$1,500,000, and break-even sales are \$1,300,000. Compute (a) the margin of safety in dollars and (b) the margin of safety ratio.

Solution

4. a. Margin of safety = $\$1,500,000 - \$1,300,000 = \$200,000$
- b. Margin of safety ratio = $\$200,000 \div \$1,500,000 = 13.3\%$

Practice Exercises

Determine fixed and variable costs using the high-low method and prepare graph.

1. (LO 1, 2) The controller of Teton Industries has collected the following monthly expense data for use in analyzing the cost behavior of maintenance costs.

Month	Total Maintenance Costs	Total Machine Hours
January	\$2,900	300
February	3,000	400
March	3,600	600
April	4,300	790
May	3,200	500
June	4,500	800

Instructions

- Determine the fixed-cost and variable-cost components using the high-low method.
- Prepare a graph showing the behavior of maintenance costs, and identify the fixed-cost and variable-cost elements. Use 200 unit increments and \$1,000 cost increments.

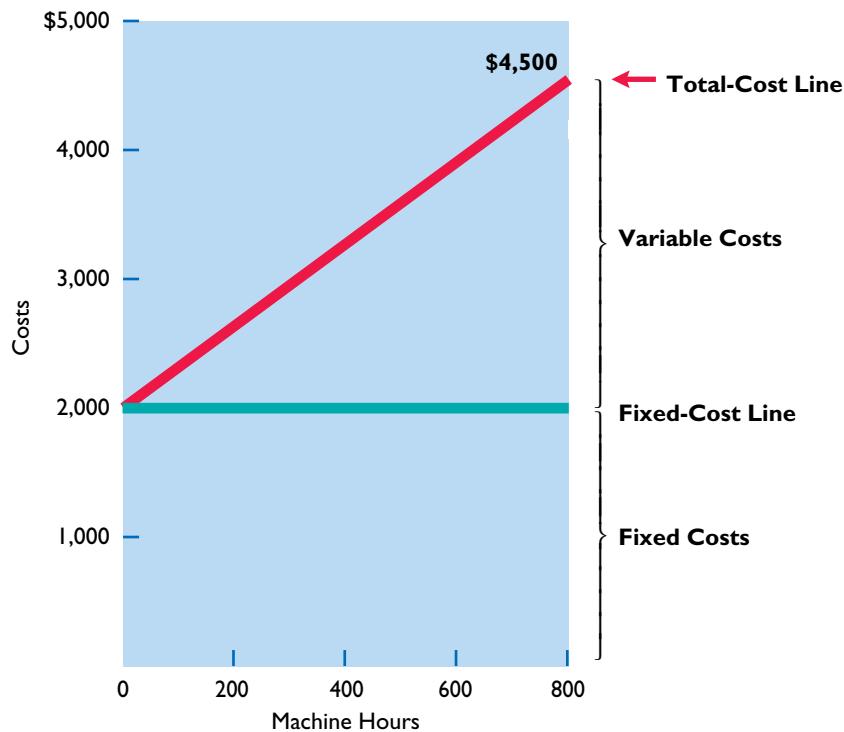

Solution**1. a. Maintenance Costs:**

$$\frac{\$4,500 - \$2,900}{800 - 300} = \frac{\$1,600}{500} = \$3.20 \text{ variable cost per machine hour}$$

	800 Machine Hours	300 Machine Hours
Total costs	\$4,500	\$2,900
Less: Variable costs		
$800 \times \$3.20$	2,560	
$300 \times \$3.20$		960
Total fixed costs	<u><u>\$1,940</u></u>	<u><u>\$1,940</u></u>

Thus, maintenance costs are \$1,940 per month plus \$3.20 per machine hour.

b.

**2. (LO 3, 4, 5)** Zion Seating Co., a manufacturer of chairs, had the following data for 2020:

Sales	2,400 units
Sales price	\$40 per unit
Variable costs	\$15 per unit
Fixed costs	\$19,500

Determine contribution margin ratio, break-even point in dollars, and margin of safety.

Instructions

- What is the contribution margin ratio?
- What is the break-even point in dollars?

- c. What is the margin of safety in dollars and the margin of safety ratio?
- d. If the company wishes to increase its total dollar contribution margin by 40% in 2021, by how much will it need to increase its sales if all other factors remain constant?

(CGA adapted)

Solution

2. a. Contribution margin ratio = Unit contribution margin ÷ Unit selling price
 $(\$40 - \$15) \div \$40 = 62.5\%$
- b. Break-even in dollars: $\$19,500 \div 62.5\% = \$31,200$
- c. Margin of safety in dollars = $(2,400 \times \$40) - \$31,200 = \$64,800$
Margin of safety ratio = $\$64,800 \div (2,400 \times \$40) = 67.5\%$
- d. Current contribution margin is $\$40 - \$15 = \$25$
Total contribution margin is $\$25 \times 2,400 = \$60,000$
40% increase in contribution margin is $\$60,000 \times 40\% = \$24,000$
Total increase in sales required is $\$24,000 \div 62.5\% = \$38,400$

Practice Problem

Compute break-even point, contribution margin ratio, margin of safety, and sales for target net income.

(LO 4, 5) Mabo Company makes calculators that sell for \$20 each. For the coming year, management expects fixed costs to total \$220,000 and variable costs to be \$9 per unit.

Instructions

- a. Compute break-even point in units using the mathematical equation.
- b. Compute break-even point in dollars using the contribution margin (CM) ratio.
- c. Compute the margin of safety percentage assuming actual sales are \$500,000.
- d. Compute the sales required in dollars to earn net income of \$165,000.

Solution

- a. Sales – Variable costs – Fixed costs = Net income
 $\$20Q - \$9Q - \$220,000 = \0
 $\$11Q = \$220,000$
 $Q = 20,000 \text{ units}$
- b. Unit contribution margin = Unit selling price – Unit variable costs
 $\$11 = \$20 - \$9$
Contribution margin ratio = Unit contribution margin ÷ Unit selling price
 $55\% = \$11 \div \20
Break-even point in dollars = Fixed costs ÷ Contribution margin ratio
 $= \$220,000 \div 55\%$
 $= \$400,000$
- c. Margin of safety = $\frac{\text{Actual sales} - \text{Break-even sales}}{\text{Actual sales}}$
 $= \frac{\$500,000 - \$400,000}{\$500,000}$
 $= 20\%$
- d. Sales – Variable costs – Fixed costs = Net income
 $\$20Q - \$9Q - \$220,000 = \$165,000$
 $\$11Q = \$385,000$
 $Q = 35,000 \text{ units}$

$$35,000 \text{ units} \times \$20 = \$700,000 \text{ required sales}$$

OR

$$(\text{Fixed costs} + \text{Target net income}) \div \text{Contribution margin ratio} = \text{Sales in dollars}$$

$$(\$220,000 + \$165,000) \div .55 = \$700,000$$

WileyPLUS

Brief Exercises, DO IT! Exercises, Exercises, Problems, and many additional resources are available for practice in WileyPLUS.

Note: All asterisked Questions, Exercises, and Problems relate to material in the appendix to this chapter.

Questions

1. a. What is cost behavior analysis?
b. Why is cost behavior analysis important to management?
2. a. Scott Winter asks your help in understanding the term “activity index.” Explain the meaning and importance of this term for Scott.
b. State the two ways that variable costs may be defined.
3. Contrast the effects of changes in the activity level on total fixed costs and on unit fixed costs.
4. J. P. Alexander claims that the relevant range concept is important only for variable costs.
a. Explain the relevant range concept.
b. Do you agree with J. P.’s claim? Explain.
5. “The relevant range is indispensable in cost behavior analysis.” Is this true? Why or why not?
6. Adam Antal is confused. He does not understand why rent on his apartment is a fixed cost and rent on a Hertz rental truck is a mixed cost. Explain the difference to Adam.
7. How should mixed costs be classified in CVP analysis? What approach is used to effect the appropriate classification?
8. At the high and low levels of activity during the month, direct labor hours are 90,000 and 40,000, respectively. The related costs are \$165,000 and \$100,000. What are the fixed and variable costs at each level of activity?
9. “Cost-volume-profit (CVP) analysis is based entirely on unit costs.” Do you agree? Explain.
10. Faye Dunn defines contribution margin as the amount of profit available to cover operating expenses. Is there any truth in this definition? Discuss.
11. Marshall Company’s GWhiz calculator sells for \$40. Variable costs per unit are estimated to be \$26. What are the unit contribution margin and the contribution margin ratio?
12. “Break-even analysis is of limited use to management because a company cannot survive by just breaking even.” Do you agree? Explain.
13. Total fixed costs are \$26,000 for Daz Inc. It has a unit contribution margin of \$15, and a contribution margin ratio of 25%. Compute the break-even sales in dollars.
14. Peggy Turnbull asks your help in constructing a CVP graph. Explain to Peggy (a) how the break-even point is plotted, and (b) how the level of activity and dollar sales at the break-even point are determined.
15. Define the term “margin of safety.” If Revere Company expects to sell 1,250 units of its product at \$12 per unit, and break-even sales for the product are \$13,200, what is the margin of safety ratio?
16. Huang Company’s break-even sales are \$500,000. Assuming fixed costs are \$180,000, what sales volume is needed to achieve a target net income of \$90,000?
17. The traditional income statement for Pace Company shows sales \$900,000, cost of goods sold \$600,000, and operating expenses \$200,000. Assuming all costs and expenses are 70% variable and 30% fixed, prepare a CVP income statement through contribution margin.
- *18. James Brooks estimated the variable and fixed components of his company’s utility costs using the high-low method. He is concerned that the cost equation that resulted from the high-low method might not provide an accurate representation of his company’s utility costs. What is the inherent weakness of the high-low method? What alternative approach might Brooks use, and what are its advantages?
- *19. Mary Webster owns and manages a company that provides trenching services. Her clients are companies that need to lay power lines, gas lines, and fiber optic cable. Because trenching machines require considerable maintenance due to the demanding nature of the work, Mary has created a scatter plot that displays her monthly maintenance costs. If Mary were to estimate a cost equation line using regression analysis for the data in her scatter plot, what primary characteristic would that line display?
- *20. What are some of the limitations of regression analysis?

Brief Exercises

BE22.1 (LO 1) Monthly production costs in Dilts Company for two levels of production are as follows.

Cost	2,000 Units	4,000 Units
Indirect labor	\$10,000	\$20,000
Supervisory salaries	5,000	5,000
Maintenance	4,000	6,000

Classify costs as variable, fixed, or mixed.

Indicate which costs are variable, fixed, and mixed, and give the reason for each answer.

Diagram the behavior of costs within the relevant range.

Diagram the behavior of a mixed cost.

Determine variable- and fixed-cost elements using the high-low method.

Determine variable- and fixed-cost elements using the high-low method.

Determine missing amounts for contribution margin.

Prepare CVP income statement.

Compute the break-even point.

Compute the break-even point.

Compute sales for target net income.

Compute the margin of safety and the margin of safety ratio.

Compute the required sales in units for target net income.

BE22.2 (LO 1) For Lodes Company, the relevant range of production is 40–80% of capacity. At 40% of capacity, a variable cost is \$4,000 and a fixed cost is \$6,000. Diagram the behavior of each cost within the relevant range assuming the behavior is linear.

BE22.3 (LO 1) For Wesland Company, a mixed cost is \$15,000 plus \$18 per direct labor hour. Diagram the behavior of the cost using increments of 500 hours up to 2,500 hours on the horizontal axis and increments of \$15,000 up to \$60,000 on the vertical axis.

BE22.4 (LO 2) Bruno Company accumulates the following data concerning a mixed cost, using miles as the activity level.

	Miles Driven	Total Cost		Miles Driven	Total Cost
January	8,000	\$14,150	March	8,500	\$15,000
February	7,500	13,500	April	8,200	14,490

Compute the variable- and fixed-cost elements using the high-low method.

BE22.5 (LO 2) Markowis Corp. has collected the following data concerning its maintenance costs for the past 6 months.

	Units Produced	Total Cost
July	18,000	\$36,000
August	32,000	48,000
September	36,000	55,000
October	22,000	38,000
November	40,000	74,500
December	38,000	62,000

Compute the variable- and fixed-cost elements using the high-low method.

BE22.6 (LO 3) Determine the missing amounts.

	Unit Selling Price	Unit Variable Costs	Unit Contribution Margin	Contribution Margin Ratio
1.	\$640	\$352	(a)	(b)
2.	\$300	(c)	\$93	(d)
3.	(e)	(f)	\$325	25%

Prepare CVP income statement.

BE22.7 (LO 3) Russell Inc. had sales of \$2,200,000 for the first quarter of 2020. In making the sales, the company incurred the following costs and expenses.

	Variable	Fixed
Cost of goods sold	\$920,000	\$440,000
Selling expenses	70,000	45,000
Administrative expenses	86,000	98,000

Prepare a CVP income statement for the quarter ended March 31, 2020.

BE22.8 (LO 4) Rice Company has a unit selling price of \$520, variable costs per unit of \$286, and fixed costs of \$163,800. Compute the break-even point in units using (a) the mathematical equation and (b) unit contribution margin.

BE22.9 (LO 4) Presto Corp. had total variable costs of \$180,000, total fixed costs of \$110,000, and total revenues of \$300,000. Compute the required sales in dollars to break even.

BE22.10 (LO 5) For Flynn Company, variable costs are 70% of sales, and fixed costs are \$195,000. Management's net income goal is \$75,000. Compute the required sales in dollars needed to achieve management's target net income of \$75,000. (Use the contribution margin approach.)

BE22.11 (LO 5) For Astoria Company, actual sales are \$1,000,000, and break-even sales are \$800,000. Compute (a) the margin of safety in dollars and (b) the margin of safety ratio.

BE22.12 (LO 5) Deines Corporation has fixed costs of \$480,000. It has a unit selling price of \$6, unit variable costs of \$4.40, and a target net income of \$1,500,000. Compute the required sales in units to achieve its target net income.

***BE22.13 (LO 6)** Data for Stiever Corporation's maintenance costs is shown below.

Compute variable and fixed cost elements using regression.

	<u>Units Produced</u>	<u>Total Cost</u>
July	18,000	\$32,000
August	32,000	48,000
September	36,000	55,000
October	22,000	38,000
November	40,000	66,100
December	38,000	62,000

Compute the variable- and fixed-cost elements using regression analysis. Present your solution in the form of a cost equation. (We recommend that you use the Intercept and Slope functions in Excel.)

DO IT! Exercises

DO IT! 22.1 (LO 1) Amanda Company reports the following total costs at two levels of production.

Classify types of costs.

	<u>5,000 Units</u>	<u>10,000 Units</u>
Indirect labor	\$ 3,000	\$ 6,000
Property taxes	7,000	7,000
Direct labor	28,000	56,000
Direct materials	22,000	44,000
Depreciation	4,000	4,000
Utilities	5,000	8,000
Maintenance	9,000	11,000

Classify each cost as variable, fixed, or mixed.

DO IT! 22.2 (LO 2) Westerville Company accumulates the following data concerning a mixed cost, using units produced as the activity level.

Compute costs using high-low method and estimate total cost.

	<u>Units Produced</u>	<u>Total Cost</u>
March	10,000	\$18,000
April	9,000	16,650
May	10,500	18,580
June	8,800	16,200
July	9,500	17,100

- Compute the variable- and fixed-cost elements using the high-low method.
- Using the information from your answer to part (a), write the cost formula.
- Estimate the total cost if the company produces 9,200 units.

DO IT! 22.3 (LO 3) Cedar Grove Industries produces and sells a cell phone-operated home security control. Information regarding the costs and sales of security controls during May 2020 are provided below.

Prepare CVP income statement.

Unit selling price of security control	\$45
Unit variable costs	\$22
Total monthly fixed costs	\$120,000
Units sold	8,000

Prepare a CVP income statement for Cedar Grove Industries for the month of May. Provide per unit values and total values.

DO IT! 22.4 (LO 4) Snow Cap Company has a unit selling price of \$250, variable costs per unit of \$170, and fixed costs of \$160,000. Compute the break-even point in units using (a) the mathematical equation and (b) unit contribution margin.

Compute break-even point in units.

Compute break-even point, margin of safety ratio, and sales for target net income.

DO IT! 22.5 (LO 5) Presto Company makes radios that sell for \$30 each. For the coming year, management expects fixed costs to total \$220,000 and variable costs to be \$18 per unit.

- Compute the break-even point in dollars using the contribution margin (CM) ratio.
- Compute the margin of safety ratio assuming actual sales are \$800,000.
- Compute the sales dollars required to earn net income of \$140,000.

Exercises

Define and classify variable, fixed, and mixed costs.

E22.1 (LO 1) Bonita Company manufactures a single product. Annual production costs incurred in the manufacturing process are shown below for two levels of production.

Production in Units	Costs Incurred			
	5,000		10,000	
	Total Cost	Cost/Unit	Total Cost	Cost/Unit
Production Costs				
Direct materials	\$8,000	\$1.60	\$16,000	\$1.60
Direct labor	9,500	1.90	19,000	1.90
Utilities	2,000	0.40	3,300	0.33
Rent	4,000	0.80	4,000	0.40
Maintenance	800	0.16	1,400	0.14
Supervisory salaries	1,000	0.20	1,000	0.10

Instructions

- Define the terms variable costs, fixed costs, and mixed costs.
- Classify each cost above as either variable, fixed, or mixed.

Diagram cost behavior, determine relevant range, and classify costs.

E22.2 (LO 1) Shingle Enterprises is considering manufacturing a new product. It projects the cost of direct materials and rent for a range of output as shown below.

Output in Units	Rent Expense	Direct Materials
1,000	\$ 5,000	\$ 4,000
2,000	5,000	7,200
3,000	8,000	9,000
4,000	8,000	12,000
5,000	8,000	15,000
6,000	8,000	18,000
7,000	8,000	21,000
8,000	8,000	24,000
9,000	10,000	29,300
10,000	10,000	35,000
11,000	10,000	44,000

Instructions

- Diagram the behavior of each cost for output ranging from 1,000 to 11,000 units.
- Determine the relevant range of activity for this product.
- Calculate the variable costs per unit within the relevant range.
- Indicate the fixed cost within the relevant range.

Determine fixed and variable costs using the high-low method and prepare graph.

E22.3 (LO 1, 2) The controller of Norton Industries has collected the following monthly expense data for use in analyzing the cost behavior of maintenance costs.

Month	Total Maintenance Costs	Total Machine Hours
January	\$2,700	300
February	3,000	350
March	3,600	500
April	4,500	690
May	3,200	400
June	5,500	700

Instructions

- Determine the fixed- and variable-cost components using the high-low method.
- Prepare a graph showing the behavior of maintenance costs, and identify the fixed- and variable-cost elements. Use 100-hour increments and \$1,000 cost increments.

E22.4 (LO 1) Family Furniture Corporation incurred the following costs.

- Wood used in the production of furniture.
- Fuel used in delivery trucks.
- Straight-line depreciation on factory building.
- Screws used in the production of furniture.
- Sales staff salaries.
- Sales commissions.
- Property taxes.
- Insurance on buildings.
- Hourly wages of furniture craftsmen.
- Salaries of factory supervisors.
- Utilities expense.
- Telephone bill.

*Classify variable, fixed, and mixed costs.***Instructions**

Identify the costs above as variable, fixed, or mixed.

E22.5 (LO 1, 2) The controller of Hall Industries has collected the following monthly expense data for use in analyzing the cost behavior of maintenance costs.*Determine fixed and variable costs using the high-low method and prepare graph.*

Month	Total Maintenance Costs	Total Machine Hours
January	\$2,640	3,500
February	3,000	4,000
March	3,600	6,000
April	4,500	7,900
May	3,200	5,000
June	4,620	8,000

Instructions

- Determine the fixed- and variable-cost components using the high-low method.
- Prepare a graph showing the behavior of maintenance costs and identify the fixed- and variable-cost elements. Use 2,000-hour increments and \$1,000 cost increments.

E22.6 (LO 1) PCB Corporation manufactures a single product. Monthly production costs incurred in the manufacturing process are shown below for the production of 3,000 units. The utilities and maintenance costs are mixed costs. The fixed portions of these costs are \$300 and \$200, respectively.*Determine fixed, variable, and mixed costs.*

Production in Units	3,000
Production Costs	
Direct materials	\$ 7,500
Direct labor	18,000
Utilities	2,100
Property taxes	1,000
Indirect labor	4,500
Supervisory salaries	1,900
Maintenance	1,100
Depreciation	2,400

Instructions

- Identify the above costs as variable, fixed, or mixed.
- Calculate the expected costs when production is 5,000 units.

E22.7 (LO 3) Writing Marty Moser wants Moser Company to use CVP analysis to study the effects of changes in costs and volume on the company. Marty has heard that certain assumptions must be valid in order for CVP analysis to be useful.*Explain assumptions underlying CVP analysis.*

Instructions

Prepare a memo to Marty Moser concerning the assumptions that underlie CVP analysis.

Compute break-even point in units and dollars.

E22.8 (LO 3, 4) Service All That Blooms provides environmentally friendly lawn services for homeowners. Its operating costs are as follows.

Depreciation	\$1,400 per month
Advertising	\$200 per month
Insurance	\$2,000 per month
Weed and feed materials	\$12 per lawn
Direct labor	\$10 per lawn
Fuel	\$2 per lawn

All That Blooms charges \$60 per treatment for the average single-family lawn.

Instructions

Determine the company's break-even point in (a) number of lawns serviced per month and (b) dollars.

Compute break-even point.

E22.9 (LO 3, 4) Service The Palmer Acres Inn is trying to determine its break-even point during its off-peak season. The inn has 50 rooms that it rents at \$60 a night. Operating costs are as follows.

Salaries	\$5,900 per month
Utilities	\$1,100 per month
Depreciation	\$1,000 per month
Maintenance	\$100 per month
Maid service	\$14 per room
Other costs	\$28 per room

Instructions

Determine the inn's break-even point in (a) number of rented rooms per month and (b) dollars.

Compute contribution margin and break-even point.

E22.10 (LO 3, 4) Service In the month of March, Style Salon services 560 clients at an average price of \$120. During the month, fixed costs were \$21,024 and variable costs were 60% of sales.

Instructions

- Determine the total contribution margin in dollars, the per unit contribution margin, and the contribution margin ratio.
- Using the contribution margin technique, compute the break-even point in dollars and in units.

Compute break-even point.

E22.11 (LO 3, 4) Service Spencer Kars provides shuttle service between four hotels near a medical center and an international airport. Spencer Kars uses two 10-passenger vans to offer 12 round trips per day. A recent month's activity in the form of a cost-volume-profit income statement is shown below.

Sales (1,500 passengers)	\$36,000
Variable costs	
Fuel	\$ 5,040
Tolls and parking	3,100
Maintenance	860
Contribution margin	<u> </u> 9,000
Fixed costs	
Salaries	15,700
Depreciation	1,300
Insurance	1,000
Net income	<u> </u> 18,000
	<u> </u> \$ 9,000

Instructions

- Calculate the break-even point in (1) dollars and (2) number of passengers.
- Without calculations, determine the contribution margin at the break-even point.

Compute variable costs per unit, contribution margin ratio, and increase in fixed costs.

E22.12 (LO 3, 4) In 2019, Manhoff Company had a break-even point of \$350,000 based on a selling price of \$5 per unit and fixed costs of \$112,000. In 2020, the selling price and the variable costs per unit did not change, but the break-even point increased to \$420,000.

Instructions

- Compute the variable costs per unit and the contribution margin ratio for 2019.
- Compute the increase in fixed costs for 2020.

E22.13 (LO 3, 4) Billings Company has the following information available for September 2020.

Prepare CVP income statements.

Unit selling price of video game consoles	\$ 400
Unit variable costs	\$ 280
Total fixed costs	\$54,000
Units sold	600

Instructions

- a. Compute the unit contribution margin.
- b. Prepare a CVP income statement that shows both total and per unit amounts.
- c. Compute Billings' break-even point in units.
- d. Prepare a CVP income statement for the break-even point that shows both total and per unit amounts.

E22.14 (LO 4, 5) Naylor Company had \$210,000 of net income in 2019 when the selling price per unit was \$150, the variable costs per unit were \$90, and the fixed costs were \$570,000. Management expects per unit data and total fixed costs to remain the same in 2020. The president of Naylor Company is under pressure from stockholders to increase net income by \$52,000 in 2020.

Compute various components to derive target net income under different assumptions.

Instructions

- a. Compute the number of units sold in 2019.
- b. Compute the number of units that would have to be sold in 2020 to reach the stockholders' desired profit level.
- c. Assume that Naylor Company sells the same number of units in 2020 as it did in 2019. What would the selling price have to be in order to reach the stockholders' desired profit level?

E22.15 (LO 5) Yams Company reports the following operating results for the month of August: sales \$400,000 (units 5,000), variable costs \$240,000, and fixed costs \$90,000. Management is considering the following independent courses of action to increase net income.

Compute net income under different alternatives.

1. Increase selling price by 10% with no change in total variable costs or units sold.
2. Reduce variable costs to 55% of sales.

Instructions

Compute the net income to be earned under each alternative. Which course of action will produce the higher net income?

E22.16 (LO 4, 5) Glacial Company estimates that variable costs will be 62.5% of sales, and fixed costs will total \$600,000. The selling price of the product is \$4.

Prepare a CVP graph and compute break-even point and margin of safety.

Instructions

- a. Compute the break-even point in (1) units and (2) dollars.
- b. Prepare a CVP graph, assuming maximum sales of \$3,200,000. (*Note:* Use \$400,000 increments for sales and costs and 100,000 increments for units.)
- c. Assuming actual sales are \$2 million, compute the margin of safety in (1) dollars and (2) as a ratio.

E22.17 (LO 3, 4, 5) Felde Bucket Co., a manufacturer of rain barrels, had the following data for 2019:

Sales	2,500 units
Sales price	\$40 per unit
Variable costs	\$24 per unit
Fixed costs	\$19,500

Determine contribution margin ratio, break-even point in dollars, and margin of safety.

Instructions

- a. What is the contribution margin ratio?
- b. What is the break-even point in dollars?
- c. What is the margin of safety in dollars and as a ratio?
- d. If the company wishes to increase its total dollar contribution margin by 30% in 2020, by how much will it need to increase its sales if all other factors remain constant?

Determine cost components using regression, prepare scatter plot, and estimate cost at particular level of activity.

***E22.18 (LO 6)** The controller of Standard Industries has collected the following monthly expense data for analyzing the cost behavior of electricity costs.

	Total Electricity Costs	Total Machine Hours
January	\$2,500	300
February	3,000	350
March	3,600	500
April	4,500	690
May	3,200	400
June	4,900	700
July	4,100	650
August	3,800	520
September	5,100	680
October	4,200	630
November	3,300	350
December	6,100	720

Instructions

- Determine the fixed- and variable-cost components using regression analysis (We recommend the use of Excel.)
- Prepare a scatter plot using Excel. Present the cost equation line estimated in part (a).
- What electricity cost does the cost equation estimate for a level of activity of 500 machine hours? By what amount does this differ from March's observed cost for 500 machine hours?

Problems: Set A

Determine cost components using high-low method, and estimate cost at particular level of activity.

P22.1A (LO 1, 2) The controller of Rather Production has collected the following monthly expense data for analyzing the cost behavior of electricity costs.

	Total Electricity Costs	Total Machine Hours
January	\$2,500	300
February	3,000	350
March	3,600	500
April	4,500	690
May	3,200	400
June	4,900	700
July	4,100	650
August	3,800	520
September	5,100	680
October	4,200	630
November	3,300	350
December	5,860	720

Instructions

- Determine the fixed- and variable-cost components using the high-low method.
- What electricity cost does the cost equation estimate for a level of activity of 500 machine hours? By what amount does this differ from March's observed cost for 500 machine hours?
- What electricity cost does the cost equation estimate for a level of activity of 700 machine hours? By what amount does this differ from June's observed cost for 700 machine hours?

Determine variable and fixed costs, compute break-even point, prepare a CVP graph, and determine net income.

P22.2A (LO 1, 2, 3, 4) Service Vin Diesel owns the Fredonia Barber Shop. He employs four barbers and pays each a base rate of \$1,250 per month. One of the barbers serves as the manager and receives an extra \$500 per month. In addition to the base rate, each barber also receives a commission of \$4.50 per haircut.

Other costs are as follows.

Advertising	\$200 per month
Rent	\$1,100 per month
Barber supplies	\$0.30 per haircut
Utilities	\$175 per month plus \$0.20 per haircut
Magazines	\$25 per month

Vin currently charges \$10 per haircut.

Instructions

- Determine the variable costs per haircut and the total monthly fixed costs.
- Compute the break-even point in units and dollars.
- Prepare a CVP graph, assuming a maximum of 1,800 haircuts in a month. Use increments of 300 haircuts on the horizontal axis and \$3,000 on the vertical axis.
- Determine net income, assuming 1,600 haircuts are given in a month.

a. VC \$5

P22.3A (LO 3, 4, 5) Jorge Company bottles and distributes B-Lite, a diet soft drink. The beverage is sold for 50 cents per 16-ounce bottle to retailers. For the year 2020, management estimates the following revenues and costs.

Sales	\$1,800,000	Selling expenses—variable	\$70,000
Direct materials	430,000	Selling expenses—fixed	65,000
Direct labor	360,000	Administrative expenses—	
Manufacturing overhead—		variable	20,000
variable	380,000	Administrative expenses—	
Manufacturing overhead—		fixed	60,000
fixed	280,000		

Prepare a CVP income statement, compute break-even point, contribution margin ratio, margin of safety ratio, and sales for target net income.

Instructions

- Prepare a CVP income statement for 2020 based on management's estimates. (Show column for total amounts only.)
- Compute the break-even point in (1) units and (2) dollars.
- Compute the contribution margin ratio and the margin of safety ratio. (Round to nearest full percent.)
- Determine the sales dollars required to earn net income of \$180,000.

b. (1) 2,700,000 units

c. CM ratio 30%

P22.4A (LO 4) Tanek Corp.'s sales slumped badly in 2020. For the first time in its history, it operated at a loss. The company's income statement showed the following results from selling 500,000 units of product: sales \$2,500,000, total costs and expenses \$2,600,000, and net loss \$100,000. Costs and expenses consisted of the amounts shown below.

	Total	Variable	Fixed
Cost of goods sold	\$2,140,000	\$1,590,000	\$550,000
Selling expenses	250,000	92,000	158,000
Administrative expenses	210,000	68,000	142,000
	<u><u>\$2,600,000</u></u>	<u><u>\$1,750,000</u></u>	<u><u>\$850,000</u></u>

Compute break-even point under alternative courses of action.

Management is considering the following independent alternatives for 2021.

- Increase unit selling price 20% with no change in costs, expenses, and sales volume.
- Change the compensation of salespersons from fixed annual salaries totaling \$150,000 to total salaries of \$60,000 plus a 5% commission on sales.

Instructions

- Compute the break-even point in dollars for 2020.
- Compute the break-even point in dollars under each of the alternative courses of action. (Round all ratios to nearest full percent.) Which course of action do you recommend?

b. Alternative 1 \$2,023,810

P22.5A (LO 3, 4, 5) Mary Willis is the advertising manager for Bargain Shoe Store. She is currently working on a major promotional campaign. Her ideas include the installation of a new lighting system and increased display space that will add \$24,000 in fixed costs to the \$270,000 currently spent. In addition, Mary is proposing that a 5% price decrease (\$40 to \$38) will produce a 20% increase in sales volume (20,000 to 24,000). Variable costs will remain at \$24 per pair of shoes. Management is impressed

Compute break-even point and margin of safety ratio, and prepare a CVP income statement before and after changes in business environment.

with Mary's ideas but concerned about the effects that these changes will have on the break-even point and the margin of safety.

Instructions

- b. Current margin of safety ratio 16%

- Compute the current break-even point in units, and compare it to the break-even point in units if Mary's ideas are used.
- Compute the margin of safety ratio for current operations and after Mary's changes are introduced. (Round to nearest full percent.)
- Prepare a CVP income statement for current operations and after Mary's changes are introduced. (Show column for total amounts only.) Would you make the changes suggested?

Compute contribution margin, fixed costs, break-even point, sales for target net income, and margin of safety ratio.

- b. 120,000 units

P22.6A (LO 3, 4, 5) Viejol Corporation has collected the following information after its first year of sales. Sales were \$1,600,000 on 100,000 units, selling expenses \$250,000 (40% variable and 60% fixed), direct materials \$490,000, direct labor \$290,000, administrative expenses \$270,000 (20% variable and 80% fixed), and manufacturing overhead \$380,000 (70% variable and 30% fixed). Top management has asked you to do a CVP analysis so that it can make plans for the coming year. It has projected that unit sales will increase by 10% next year.

Instructions

- Compute (1) the contribution margin for the current year and the projected year, and (2) the fixed costs for the current year. (Assume that fixed costs will remain the same in the projected year.)
- Compute the break-even point in units and sales dollars for the current year.
- The company has a target net income of \$200,000. What is the required sales in dollars for the company to meet its target?
- If the company meets its target net income number, by what percentage could its sales fall before it is operating at a loss? That is, what is its margin of safety ratio?

Determine variable and fixed costs.

- a. 2. \$70,000

P22.7A (LO 1, 3, 5) Kaiser Industries carries no inventories. Its product is manufactured only when a customer's order is received. It is then shipped immediately after it is made. For its fiscal year ended October 31, 2020, Kaiser's break-even point was \$1.3 million. On sales of \$1.2 million, its income statement showed a gross profit of \$180,000, direct materials cost of \$400,000, and direct labor costs of \$500,000. The contribution margin was \$144,000, and variable manufacturing overhead was \$50,000.

Instructions

- Calculate the following:
 - Variable selling and administrative expenses.
 - Fixed manufacturing overhead.
 - Fixed selling and administrative expenses.
- Ignoring your answer to part (a), assume that fixed manufacturing overhead was \$100,000 and the fixed selling and administrative expenses were \$80,000. The marketing vice president feels that if the company increased its advertising, sales could be increased by 25%. What is the maximum increased advertising cost the company can incur and still report the same income as before the advertising expenditure?

(CGA adapted)

Continuing Cases

Current Designs

CD22 Bill Johnson, sales manager, and Diane Buswell, controller, at Current Designs are beginning to analyze the cost considerations for one of the composite models of the kayak division. They have provided the following production and operational costs necessary to produce one composite kayak.

Current Designs			
	A	B	C
1	Kevlar®	\$250 per kayak	
2	Resin and supplies	\$100 per kayak	
3	Finishing kit (seat, rudder, ropes, etc.)	\$170 per kayak	
4	Labor	\$420 per kayak	
5	Selling and administrative expenses—variable	\$400 per kayak	
6	Selling and administrative expenses—fixed	\$119,700 per year	
7	Manufacturing overhead—fixed	\$240,000 per year	
8			

Bill and Diane have asked you to provide a cost-volume-profit analysis, to help them finalize the budget projections for the upcoming year. Bill has informed you that the selling price of the composite kayak will be \$2,000.

Instructions

- a. Calculate variable costs per unit.
- b. Determine the unit contribution margin.
- c. Using the unit contribution margin, determine the break-even point in units for this product line.
- d. Assume that Current Designs plans to earn net income of \$270,600 on this product line. Using the unit contribution margin, calculate the number of units that need to be sold to achieve this goal.
- e. Based on the most recent sales forecast, Current Designs plans to sell 1,000 units of this model. Using your results from part (c), calculate the margin of safety and the margin of safety ratio.

Waterways

(Note: This is a continuation of the Waterways case from Chapters 19–21.)

WP22 The Vice President for Sales and Marketing at Waterways Corporation is planning for production needs to meet sales demand in the coming year. He is also trying to determine how the company's profits might be increased in the coming year. This problem asks you to use cost-volume-profit concepts to help Waterways understand contribution margins of some of its products and decide whether to mass-produce any of them.

Go to **WileyPLUS** for complete case details and instructions.

Expand Your Critical Thinking

Decision-Making Across the Organization

CT22.1 Creative Ideas Company has decided to introduce a new product. The new product can be manufactured by either a capital-intensive method or a labor-intensive method. The manufacturing method will not affect the quality of the product. The estimated manufacturing costs by the two methods are as follows.

	Capital- Intensive	Labor- Intensive
Direct materials	\$5 per unit	\$5.50 per unit
Direct labor	\$6 per unit	\$8.00 per unit
Variable overhead	\$3 per unit	\$4.50 per unit
Fixed manufacturing costs	\$2,524,000	\$1,550,000

Creative Ideas' market research department has recommended an introductory unit sales price of \$32. The incremental selling expenses are estimated to be \$502,000 annually plus \$2 for each unit sold, regardless of manufacturing method.

Instructions

With the class divided into groups, answer the following.

- a. Calculate the estimated break-even point in annual unit sales of the new product if Creative Ideas Company uses the:
 1. Capital-intensive manufacturing method.
 2. Labor-intensive manufacturing method.
- b. Determine the annual unit sales volume at which Creative Ideas Company would be indifferent between the two manufacturing methods.
- c. Explain the circumstance under which Creative Ideas should employ each of the two manufacturing methods.

(CMA adapted)

Managerial Analysis

CT22.2 The condensed income statement for the Peri and Paul partnership for 2020 is as follows.

Peri and Paul Company		
Income Statement		
For the Year Ended December 31, 2020		
Sales (240,000 units)		\$1,200,000
Cost of goods sold		<u>800,000</u>
Gross profit		400,000
Operating expenses		
Selling	\$280,000	
Administrative	<u>150,000</u>	430,000
Net loss		<u><u>\$ (30,000)</u></u>

A cost behavior analysis indicates that 75% of the cost of goods sold are variable, 42% of the selling expenses are variable, and 40% of the administrative expenses are variable.

Instructions

(Round to nearest unit, dollar, and percentage, where necessary. Use the CVP income statement format in computing profits.)

- a. Compute the break-even point in total sales dollars and in units for 2020.
- b. Peri has proposed a plan to get the partnership “out of the red” and improve its profitability. She feels that the quality of the product could be substantially improved by spending \$0.25 more per unit on better raw materials. The selling price per unit could be increased to only \$5.25 because of competitive pressures. Peri estimates that sales volume will increase by 25%. What effect would Peri’s plan have on the profits and the break-even point in dollars of the partnership? (Round the contribution margin ratio to two decimal places.)
- c. Paul was a marketing major in college. He believes that sales volume can be increased only by intensive advertising and promotional campaigns. He therefore proposed the following plan as an alternative to Peri’s: (1) increase variable selling expenses to \$0.59 per unit, (2) lower the selling price per unit by \$0.25, and (3) increase fixed selling expenses by \$40,000. Paul quoted an old marketing research report that said that sales volume would increase by 60% if these changes were made. What effect would Paul’s plan have on the profits and the break-even point in dollars of the partnership?
- d. Which plan should be accepted? Explain your answer.

Real-World Focus

CT22.3 The Coca-Cola Company hardly needs an introduction. A line taken from the cover of a recent annual report says it all: If you measured time in servings of Coca-Cola, “a billion Coca-Cola’s ago was yesterday morning.” On average, every U.S. citizen drinks 363 8-ounce servings of Coca-Cola products each year. Coca-Cola’s primary line of business is the making and selling of syrup to bottlers. These bottlers then sell the finished bottles and cans of Coca-Cola to the consumer.

In the annual report of Coca-Cola, the information shown below was provided.

The Coca-Cola Company Management Discussion

Our gross margin declined to 61 percent this year from 62 percent in the prior year, primarily due to costs for materials such as sweeteners and packaging.

The increases [in selling expenses] in the last two years were primarily due to higher marketing expenditures in support of our Company's volume growth.

We measure our sales volume in two ways: (1) gallon shipments of concentrates and syrups and (2) unit cases of finished product (bottles and cans of Coke sold by bottlers).

Instructions

Answer the following questions.

- a. Are sweeteners and packaging a variable cost or a fixed cost? What is the impact on the contribution margin of an increase in the per unit cost of sweeteners or packaging? What are the implications for profitability?
- b. In your opinion, are Coca-Cola's marketing expenditures a fixed cost, variable cost, or mixed cost? Give justification for your answer.
- c. Which of the two measures cited for measuring volume represents the activity index as defined in this chapter? Why might Coca-Cola use two different measures?

Communication Activity

CT22.4 Your roommate asks for your help on the following questions about CVP analysis formulas.

- a. How can the mathematical equation for break-even sales show both sales units and sales dollars?
- b. How do the formulas differ for unit contribution margin and contribution margin ratio?
- c. How can contribution margin be used to determine break-even sales in units and in dollars?

Instructions

Write a memo to your roommate stating the relevant formulas and answering each question.

Ethics Case

CT22.5 Scott Bestor is an accountant for Westfield Company. Early this year, Scott made a highly favorable projection of sales and profits over the next 3 years for Westfield's hot-selling computer PLEX. As a result of the projections Scott presented to senior management, the company decided to expand production in this area. This decision led to dislocations of some plant personnel who were reassigned to one of the company's newer plants in another state. However, no one was fired, and in fact the company expanded its workforce slightly.

Unfortunately, Scott rechecked his projection computations a few months later and found that he had made an error that would have reduced his projections substantially. Luckily, sales of PLEX have exceeded projections so far, and management is satisfied with its decision. Scott, however, is not sure what to do. Should he confess his honest mistake and jeopardize his possible promotion? He suspects that no one will catch the error because PLEX sales have exceeded his projections, and it appears that profits will materialize close to his projections.

Instructions

- a. Who are the stakeholders in this situation?
- b. Identify the ethical issues involved in this situation.
- c. What are the possible alternative actions for Scott? What would you do in Scott's position?

All About You

CT22.6 Cost-volume-profit analysis can also be used in making personal financial decisions. For example, the purchase of a new car is one of your biggest personal expenditures. It is important that you carefully analyze your options.

Suppose that you are considering the purchase of a hybrid vehicle. Let's assume the following facts. The hybrid will initially cost an additional \$4,500 above the cost of a traditional vehicle. The hybrid will get 40 miles per gallon of gas, and the traditional car will get 30 miles per gallon. Also, assume that the cost of gas is \$3.60 per gallon.

Instructions

Using the facts above, answer the following questions.

- a. What is the variable gasoline cost of going one mile in the hybrid car? What is the variable cost of going one mile in the traditional car?
- b. Using the information in part (a), if "miles" is your unit of measure, what is the "contribution margin" of the hybrid vehicle relative to the traditional vehicle? That is, express the variable cost savings on a per-mile basis.
- c. How many miles would you have to drive in order to break even on your investment in the hybrid car?
- d. What other factors might you want to consider?

Gabriela Hasbun/Redux

Incremental Analysis

Chapter Preview

An important purpose of management accounting is to provide managers with relevant information for decision-making. Companies of all sorts must make product decisions. **Oral-B Laboratories** opted to produce a new, higher-priced toothbrush. **General Motors** announced the closure of its Oldsmobile Division. **Quaker Oats** decided to sell off a line of beverages, at a price more than \$1 billion less than it paid for that product line only a few years before.

This chapter explains management's decision-making process and a decision-making approach called incremental analysis. The use of incremental analysis is demonstrated in a variety of situations.

Feature Story

Keeping It Clean

When you think of new, fast-growing, San Francisco companies, you probably think of fun products like smartphones, social networks, and game apps. You don't tend to think of soap. In fact, given that some of the biggest, most powerful

companies in the world dominate the soap market (e.g., **Proctor & Gamble**, **Clorox**, and **Unilever**), starting a new soap company seems like an outrageously bad idea. But that didn't dissuade Adam Lowry and Eric Ryan from giving it a try. The long-time friends and former roommates combined their skills (Adam's chemical engineering and Eric's design and marketing) to start **Method Products**. Their goal: selling environmentally friendly soaps that actually remove dirt.

Within a year of its formation, the company had products on the shelves at **Target** stores. Within 5 years, Method was cited by numerous business publications as one of the fastest-growing companies in the country. It was easy—right? Wrong. Running a company is never easy, and given Method's commitment to sustainability, all of its business decisions are just a little more complex than usual. For example, the company wanted to use solar power to charge the batteries for the forklifts used in its factories. No problem, just put solar panels on the buildings. But because Method outsources its manufacturing, it doesn't actually own factory buildings. In fact, the company that does Method's manufacturing doesn't own the buildings either. Solution—Method parked old semi-trailers next to the factories and installed solar panels on those.

Since Method insists on using natural products and sustainable production practices, its production costs are higher than companies that don't adhere to these standards. Adam and Eric insist, however, that this actually benefits them because

they have to be far more careful about controlling costs and far more innovative in solving problems. Consider Method's most recently developed laundry detergent. It is 8 times stronger than normal detergent, so it can be sold in a substantially smaller package. This reduces both its packaging and shipping costs. In fact, when the cost of the raw materials used for soap production recently jumped by as much as 40%, Method actually viewed it as an opportunity to grab market share. It determined that it could offset the cost increases in other places in its supply chain, thus absorbing the cost much easier than its big competitors.

In these and other instances, Adam and Eric identified their alternative courses of action, determined what was relevant to each choice and what wasn't, and then carefully evaluated the incremental costs of each alternative. When you are small and your competitors have some of the biggest marketing budgets in the world, you can't afford to make very many mistakes.

Watch the *Method Products* video in WileyPLUS to learn more about incremental analysis in the real world.

Decision-Making and Incremental Analysis

LEARNING OBJECTIVE 1

Describe management's decision-making process and incremental analysis.

Making decisions is an important management function. Management's decision-making process does not always follow a set pattern because decisions vary significantly in their scope, urgency, and importance. It is possible, though, to identify some steps that are frequently involved in the process. These steps are shown in **Illustration 23.1**.

ILLUSTRATION 23.1 Management's decision-making process

Accounting's contribution to the decision-making process occurs primarily in Steps 2 and 4—evaluating possible courses of action and reviewing results. In Step 2, for each possible course of action, relevant revenue and cost data are provided. These show the expected overall effect on net income. In Step 4, internal reports are prepared that review the actual impact of the decision.

In making business decisions, management ordinarily considers both financial and non-financial information. **Financial** information is related to revenues and costs and their effect on the company's overall profitability. **Nonfinancial** information relates to such factors as the effect of the decision on employee turnover, the environment, or the overall image of the company in the community. (These are considerations that we touched on in our Chapter 19 discussion of corporate social responsibility.) Although nonfinancial information can be as important as financial information, we will focus primarily on financial information that is relevant to the decision.

Incremental Analysis Approach

Decisions involve a choice among alternative courses of action. Suppose you face the personal financial decision of whether to purchase or lease a car. The financial data relate to the cost of leasing versus the cost of purchasing. For example, leasing involves periodic lease payments; purchasing requires “up-front” payment of the purchase price. In other words, the financial information relevant to the decision are the data that vary in the future among the possible alternatives. The process used to identify the financial data that change under alternative courses of action is called **incremental analysis** (see **Alternative Terminology**). In some cases, you will find that when you use incremental analysis, both costs **and** revenues vary. In other cases, only costs **or** revenues vary.

Just as your decision to buy or lease a car affects your future financial situation, similar decisions, on a larger scale, affect a company's future. Incremental analysis identifies the probable effects of those decisions on future earnings. Such analysis inevitably involves estimates and uncertainty. Gathering data for incremental analyses may involve market analysts, engineers, and accountants. In quantifying the data, the accountant must produce the most reliable information available.

ALTERNATIVE TERMINOLOGY

Incremental analysis is also called *differential analysis* because the analysis focuses on differences.

How Incremental Analysis Works

The basic approach in incremental analysis is shown in [Illustration 23.2](#).

ILLUSTRATION 23.2 Basic approach in incremental analysis

Incremental Analysis				
	A	B	C	
1		Alternative A	Alternative B	Net Income Increase (Decrease)
2 Revenues		\$125,000	\$110,000	\$ (15,000)
3 Costs		100,000	80,000	20,000
4 Net income		\$ 25,000	\$ 30,000	\$ 5,000
5				

This example compares Alternative B with Alternative A. The net income column shows the differences between the alternatives. In this case, incremental revenue will be \$15,000 less under Alternative B than under Alternative A. But a \$20,000 incremental cost savings will be realized.¹ Thus, Alternative B will produce \$5,000 more net income than Alternative A.

In the following pages, you will encounter three important cost concepts used in incremental analysis, as defined and discussed in [Illustration 23.3](#).

ILLUSTRATION 23.3 Key cost concepts in incremental analysis

- **Relevant cost and revenues** In incremental analysis, the only factors to be considered are those costs and revenues that differ across alternatives. Those factors are called **relevant costs and revenues**. Costs and revenues that do not differ across alternatives can be ignored when trying to choose between alternatives.

- **Opportunity cost** Often in choosing one course of action, the company must give up the opportunity to benefit from some other course of action. For example, if a machine is used to make one type of product, the benefit of making another type of product with that machine is lost. This lost potential benefit is referred to as **opportunity cost**.

- **Sunk cost** Costs that have already been incurred and will not be changed or avoided by any present or future decisions are referred to as **sunk costs**. For example, the amount you spent in the past to purchase or repair a laptop should have no bearing on your decision whether to buy a new laptop. **Sunk costs are not relevant costs.**

¹Although income taxes are sometimes important in incremental analysis, they are ignored in the chapter for simplicity's sake.

Incremental analysis sometimes involves changes that at first glance might seem contrary to your intuition. For example, sometimes variable costs **do not change** under the alternative courses of action. Also, sometimes fixed costs **do change**. For example, direct labor, normally a variable cost, is not a relevant cost in deciding between the acquisition of two new factory machines if each asset requires the same amount of direct labor. In contrast, rent expense, normally a fixed cost, is a relevant cost in a decision whether to continue occupancy of a building or to purchase or lease a new building.

It is also important to understand that **the approaches to incremental analysis discussed in this chapter do not take into consideration the time value of money**. That is, amounts to be paid or received in future years are not discounted for the cost of interest in this chapter. Time value of money is addressed in Chapter 27 and Appendix G.

Service Company Insight American Express

Tina Spruce/iStockphoto

That Letter from AmEx Might Not Be a Bill

No doubt every one of you has received an invitation from a credit card company to open a new account—some of you have probably received three in one day. But how many of you have received an offer of \$300 to close out your credit card account? **American Express** decided to offer some of its

customers \$300 if they would give back their credit card. You could receive the \$300 even if you hadn't paid off your balance yet, as long as you agreed to give up your credit card. Apparently, these customers cost more than they are worth.

Source: Aparajita Saha-Bubna and Lauren Pollock, "AmEx Offers Some Holders \$300 to Pay and Leave," *Wall Street Journal Online* (February 23, 2009).

What are the relevant costs that American Express would need to know in order to determine to whom to make this offer? (Go to WileyPLUS for this answer and additional questions.)

Qualitative Factors

In this chapter, we focus primarily on the quantitative factors that affect a decision—those attributes that can be easily expressed in terms of numbers or dollars. However, many of the decisions involving incremental analysis have important qualitative features. Though not easily measured, they should not be ignored.

Consider, for example, the potential effects of the make-or-buy decision or of the decision to eliminate a line of business on existing employees and the community in which the plant is located. The cost savings that may be obtained from outsourcing or from eliminating a plant should be weighed against these qualitative attributes. One example would be the cost of lost morale that might result. Al "Chainsaw" Dunlap was a so-called "turnaround" artist who went into many companies, identified inefficiencies (using incremental analysis techniques), and tried to correct these problems to improve corporate profitability. Along the way, he laid off thousands of employees at numerous companies. As head of **Sunbeam**, it was Al Dunlap who lost his job because his Draconian approach failed to improve Sunbeam's profitability. It was reported that Sunbeam's employees openly rejoiced for days after his departure. Clearly, qualitative factors can matter.

Relationship of Incremental Analysis and Activity-Based Costing

Many companies have shifted to activity-based costing to allocate overhead costs to products. The primary reason for using activity-based costing is that it results in a more accurate allocation of overhead. The concepts presented in this chapter are completely consistent with the use of activity-based costing. In fact, activity-based costing results in better identification of relevant costs and, therefore, better incremental analysis.

Types of Incremental Analysis

A number of different types of decisions involve incremental analysis. The more common types of decisions are whether to:

1. Accept an order at a special price.
2. Make or buy component parts or finished products.
3. Sell products or process them further.
4. Repair, retain, or replace equipment.
5. Eliminate an unprofitable business segment or product.

We consider each of these types of decisions in the following pages.

DO IT! 1 | Incremental Analysis

Owen T Corporation is comparing two different options. The company currently operates under Option 1, with revenues of \$80,000 per year, maintenance expenses of \$5,000 per year, and operating expenses of \$38,000 per year. Option 2 provides revenues of \$80,000 per year, maintenance expenses of \$12,000 per year, and operating expenses of \$32,000 per year. Option 1 employs a piece of equipment that was upgraded 2 years ago at a cost of \$22,000. If Option 2 is chosen, it will free up resources that will increase revenues by \$3,000.

Complete the following table to show the change in income from choosing Option 2 versus Option 1. Designate any sunk costs with an “S.”

	<u>Option 1</u>	<u>Option 2</u>	<u>Net Income Increase (Decrease)</u>	<u>Sunk (\$)</u>
Revenues				
Maintenance expenses				
Operating expenses				
Equipment upgrade				
Opportunity cost				

ACTION PLAN

- Past costs that cannot be changed as a result of any present or future action are sunk costs.
- Benefits lost by choosing one option over another are opportunity costs.

Solution

	<u>Option 1</u>	<u>Option 2</u>	<u>Net Income Increase (Decrease)</u>	<u>Sunk (\$)</u>
Revenues	\$80,000	\$80,000	\$ 0	
Maintenance expenses	5,000	12,000	(7,000)	
Operating expenses	38,000	32,000	6,000	
Equipment upgrade	22,000	0	0	S
Opportunity cost	3,000	0	3,000	
			<u><u>\$ 2,000</u></u>	

Related exercise material: BE23.1, BE23.2, DO IT! 23.1, E23.1, and E23.18.

Special Orders

LEARNING OBJECTIVE 2

Analyze the relevant costs in accepting an order at a special price.

Sometimes a company has an opportunity to obtain additional business if it is willing to make a price concession to a specific customer. To illustrate, assume that Sunbelt Company produces 100,000 Smoothie blenders per month, which is 80% of plant capacity. Variable manufacturing

costs are \$8 per unit. Fixed manufacturing costs are \$400,000, or \$4 per unit. The Smoothie blenders are normally sold directly to retailers at \$20 each. Sunbelt has an offer from Kensington Co. (a foreign wholesaler) to purchase an additional 2,000 blenders at \$11 per unit. Acceptance of the offer would not affect normal sales of the product, and the additional units can be manufactured without increasing plant capacity. What should management do?

If management makes its decision on the basis of the total cost per unit of \$12 (\$8 variable + \$4 fixed), the order would be rejected because costs per unit (\$12) exceed revenues per unit (\$11) by \$1 per unit. However, since the units can be produced within existing plant capacity, the special order **will not increase fixed costs**. Let's identify the relevant data for the decision. First, the variable manufacturing costs increase \$16,000 ($\$8 \times 2,000$). Second, the expected revenue increases \$22,000 ($\$11 \times 2,000$). Thus, as shown in **Illustration 23.4**, Sunbelt increases its net income by \$6,000 by accepting this special order (see **Helpful Hint**).

HELPFUL HINT

This is a good example of different costs for different purposes. In the long run all costs are relevant, but for this decision only costs that change are relevant.

ILLUSTRATION 23.4 Incremental analysis—accepting an order at a special price

Incremental Analysis - Accepting an order at a special price			
	A	B	C
		Reject Order	Accept Order
1			Net Income Increase (Decrease)
2 Revenues		\$0	\$ 22,000
3 Costs		0	(16,000)
4 Net income		\$0	\$ 6,000
5			

Two points should be emphasized. First, we assume that sales of the product in other markets **would not be affected by this special order**. If other sales were affected, then Sunbelt would have to consider the change in profit due to lost sales in making the decision. Second, if Sunbelt is operating **at full capacity**, it is likely that the special order would be rejected. Under such circumstances, the company would have to expand plant capacity. In that case, the special order would have to absorb these additional fixed manufacturing costs, as well as the variable manufacturing costs.

DO IT! 2 | Special Orders

Cobb Company incurs costs of \$28 per unit (\$18 variable and \$10 fixed) to make a product that normally sells for \$42. A foreign wholesaler offers to buy 5,000 units at \$25 each. The special order results in additional shipping costs of \$1 per unit. Compute the increase or decrease in net income Cobb realizes by accepting the special order, assuming Cobb has excess operating capacity. Should Cobb Company accept the special order?

Solution

	Reject	Accept	Net Income Increase (Decrease)
Revenues	\$–0–	\$125,000*	\$125,000
Costs	–0–	95,000**	(95,000)
Net income	<u>\$–0–</u>	<u>\$ 30,000</u>	<u>\$ 30,000</u>

* $5,000 \times \$25$

** $(5,000 \times \$18) + (5,000 \times \$1)$

ACTION PLAN

- Identify all revenues that would change as a result of accepting the order.
- Identify all costs that would change as a result of accepting the order, and net this amount against the change in revenues.

The analysis indicates net income increases by \$30,000; therefore, Cobb Company should accept the special order.

Make or Buy

LEARNING OBJECTIVE 3

Analyze the relevant costs in a make-or-buy decision.

When a manufacturer assembles component parts in producing a finished product, management must decide whether to make or buy the components. The decision to buy parts or services is often referred to as outsourcing. For example, as discussed in the Feature Story, a company such as **Method Products** may either make or buy the soaps used in its products. Similarly, **Hewlett-Packard Corporation** may make or buy the electronic circuitry, cases, and printer heads for its printers. **Boeing** recently sold some of its commercial aircraft factories in an effort to cut production costs and focus on engineering and final assembly rather than manufacturing. The decision to make or buy components should be made on the basis of incremental analysis.

Baron Company makes motorcycles and scooters. **Illustration 23.5** shows the annual costs it incurs in producing 25,000 ignition switches for scooters.

ILLUSTRATION 23.5

Annual product cost data

Direct materials	\$ 50,000
Direct labor	75,000
Variable manufacturing overhead	40,000
Fixed manufacturing overhead	60,000
Total manufacturing costs	<u>\$225,000</u>
Total cost per unit (\$225,000 ÷ 25,000)	<u>\$9.00</u>

Instead of making its own switches, Baron Company might purchase the ignition switches from Ignition, Inc. at a price of \$8 per unit. What should management do?

At first glance, it appears that management should purchase the ignition switches for \$8 rather than make them at a cost of \$9. However, a review of operations indicates that if the ignition switches are purchased from Ignition, Inc., *all* of Baron's variable costs but only \$10,000 of its fixed manufacturing costs will be eliminated (avoided). Thus, \$50,000 of the fixed manufacturing costs remain if the ignition switches are purchased. The relevant costs for incremental analysis, therefore, are as shown in **Illustration 23.6**.

ILLUSTRATION 23.6 Incremental analysis—make or buy

Incremental Analysis - Make or buy				
	A	B	C	D
1		Make	Buy	Net Income Increase (Decrease)
2	Direct materials	\$ 50,000	\$ 0	\$ 50,000
3	Direct labor	75,000	0	75,000
4	Variable manufacturing costs	40,000	0	40,000
5	Fixed manufacturing costs	60,000	50,000	10,000
6	Purchase price (25,000 × \$8)	0	200,000	(200,000)
7	Total annual cost	\$225,000	\$250,000	\$ (25,000)
8				

This analysis indicates that Baron Company incurs \$25,000 of additional costs by buying the ignition switches rather than making them. Therefore, Baron should continue to make the ignition switches even though the total manufacturing cost is \$1 higher per unit than the purchase

price. The primary cause of this result is that, even if the company purchases the ignition switches, it will still have fixed costs of \$50,000 to absorb.

Opportunity Cost

The foregoing make-or-buy analysis is complete only if it is assumed that the productive capacity used to make the ignition switches cannot be converted to another purpose. If there is an opportunity to use this productive capacity in some other manner, then this opportunity cost must be considered. As indicated earlier, **opportunity cost** is the lost potential benefit that could have been obtained by following an alternative course of action (see **Ethics Note**).

To illustrate, assume that through buying the switches, Baron Company can use the released productive capacity to generate additional income of \$38,000 from producing a different product. This lost income is an additional cost of continuing to make the switches in the make-or-buy decision. This opportunity cost is therefore added to the “Make” column for comparison. As shown in **Illustration 23.7**, it is now advantageous to buy the ignition switches because the company’s income would increase by \$13,000.

ETHICS NOTE

In the make-or-buy decision, it is important for management to take into account the social impact of its choice. For instance, buying may be the most economically feasible solution, but such action could result in the closure of a manufacturing plant and laying off many good workers.

ILLUSTRATION 23.7 Incremental analysis—make or buy, with opportunity cost

Incremental Analysis - Make or buy with opportunity cost			
	A	B	C
1		Make	Buy
2 Total annual cost		\$225,000	\$250,000
3 Opportunity cost		38,000	0
4 Total cost		\$263,000	\$250,000
5			\$ 13,000

The qualitative factors in this decision include the possible loss of jobs for employees who produce the ignition switches. In addition, management must assess the supplier’s ability to satisfy the company’s quality control standards at the quoted price per unit on a timely basis.

Service Company Insight Amazon.com

iStockphoto

Giving Away the Store?

Amazon.com has experienced incredible growth. However, some analysts have questioned whether some of the methods that Amazon uses to increase its sales make good business sense. For example, a few years ago, Amazon initiated a “Prime” free-shipping subscription program. For a \$99 fee per year, Amazon’s customers get free shipping on as many goods as they want to buy. At the time, CEO Jeff Bezos promised that the program would be costly in the short-term but benefit the company in the long-term. Six years later, it was true that Amazon’s sales had

grown considerably. It was also estimated that its Prime customers buy two to three times as much as non-Prime customers. But, its shipping costs rose from 2.8% of sales to 4% of sales, which is remarkably similar to the drop in its gross margin from 24% to 22.3%. Amazon’s order fulfillment center uses 30,000 robots and more than 100 million square feet of space. It generates significant fees from merchants that sell on its site and rely on its fulfillment services.

Sources: Martin Peers, “Amazon’s Prime Numbers,” *Wall Street Journal Online* (February 3, 2011); and Evan Niu, “Ever Wonder How Amazon.com Pays for All of That Free Shipping?” *The Motley Fool* (October 26, 2015).

What are the relevant revenues and costs that Amazon should consider relative to the decision whether to offer the Prime free-shipping subscription? (Go to WileyPLUS for this answer and additional questions.)

DO IT! 3 | Make or Buy

Juanita Company must decide whether to make or buy some of its components for the appliances it produces. The costs of producing 166,000 electrical cords for its appliances are as follows.

Direct materials	\$90,000	Variable overhead	\$32,000
Direct labor	\$20,000	Fixed overhead	\$24,000

Instead of making the electrical cords at an average cost per unit of \$1.00 ($\$166,000 \div 166,000$), the company has an opportunity to buy the cords at \$0.90 per unit. If the company purchases the cords, all variable costs and one-fourth of the fixed costs are eliminated.

- Prepare an incremental analysis showing whether the company should make or buy the electrical cords.
- Will your answer be different if the released productive capacity of the production facility will generate additional income of \$5,000?

ACTION PLAN

- Look for the costs that change.
- Ignore the costs that do not change.
- Use the format in the chapter for your answer.
- Recognize that opportunity cost can make a difference.

Solution

a.

	Make	Buy	Net Income Increase (Decrease)
Direct materials	\$ 90,000	\$ -0-	\$ 90,000
Direct labor	20,000	-0-	20,000
Variable manufacturing costs	32,000	-0-	32,000
Fixed manufacturing costs	24,000	18,000*	6,000
Purchase price	-0-	149,400**	(149,400)
Total cost	<u><u>\$166,000</u></u>	<u><u>\$167,400</u></u>	<u><u>\$ (1,400)</u></u>

* $\$24,000 \times .75$

** $\$166,000 \times \0.90

This analysis indicates that Juanita Company will incur \$1,400 of additional costs if it buys the electrical cords rather than making them.

b.

	Make	Buy	Net Income Increase (Decrease)
Total cost	\$166,000	\$167,400	\$(1,400)
Opportunity cost	5,000	-0-	5,000
Total cost	<u><u>\$171,000</u></u>	<u><u>\$167,400</u></u>	<u><u>\$ 3,600</u></u>

Yes, the answer is different. The analysis shows that net income increases by \$3,600 if Juanita Company purchases the electrical cords rather than making them.

Sell or Process Further

LEARNING OBJECTIVE 4

Analyze the relevant costs and revenues in determining whether to sell or process materials further.

Many manufacturers have the option of selling products at a given point in the production cycle or continuing to process with the expectation of selling them at a later point at a higher price. For example, a bicycle manufacturer such as **Trek** could sell its bicycles to retailers either unassembled or assembled. A furniture manufacturer such as **IKEA** could sell its

furniture to stores either unfinished or finished. The sell-or-process-further decision should be made on the basis of incremental analysis. The basic decision rule is: **Process further as long as the incremental revenue from such processing exceeds the incremental processing costs.**

Single-Product Case

Assume, for example, that Woodmasters Inc. makes tables. It sells unfinished tables for \$50. The cost to manufacture an unfinished table is \$35, computed as shown in **Illustration 23.8**.

Direct materials	\$15
Direct labor	10
Variable manufacturing overhead	6
Fixed manufacturing overhead	4
Manufacturing cost per unit	\$35

ILLUSTRATION 23.8

Per unit cost of unfinished table

Woodmasters currently has unused productive capacity that is expected to continue indefinitely. Some of this capacity could be used to finish the tables and sell them at \$60 per unit. For a finished table, direct materials will increase \$2 and direct labor costs will increase \$4. Variable manufacturing overhead costs will increase by \$2.40 (60% of direct labor). No increase is anticipated in fixed manufacturing overhead.

Should the company sell the unfinished tables, or should it process them further (see **Helpful Hint**)? **Illustration 23.9** shows the incremental analysis on a per unit basis.

HELPFUL HINT

Current net income is known. Net income from processing further is an estimate. In making its decision, management could add a “risk” factor for the estimate.

ILLUSTRATION 23.9 Incremental analysis—sell or process further

Incremental Analysis - Sell or process further			
	A	B	C
		Sell Unfinished	Process Further
1			Net Income
2	Sales price per unit	\$50.00	\$60.00
3	Cost per unit		\$10.00
4	Direct materials	15.00	17.00
5	Direct labor	10.00	14.00
6	Variable manufacturing overhead	6.00	8.40
7	Fixed manufacturing overhead	4.00	4.00
8	Total	35.00	43.40
9	Net income per unit	\$15.00	\$16.60
10			\$ 1.60

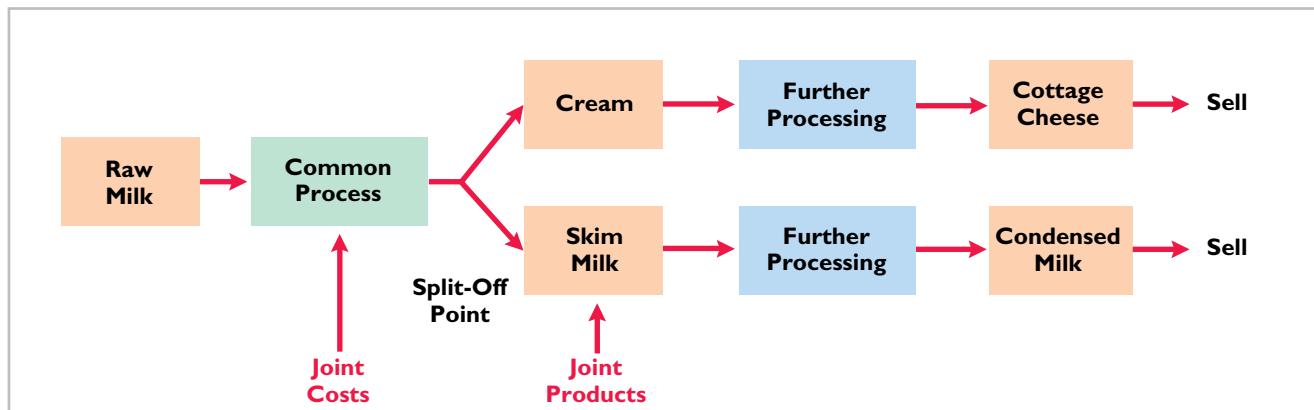

It would be advantageous for Woodmasters to process the tables further. The incremental revenue of \$10.00 from the additional processing is \$1.60 higher than the incremental processing costs of \$8.40.

Multiple-Product Case

Sell-or-process-further decisions are particularly applicable to processes that produce multiple products simultaneously. In many industries, a number of end-products are produced from a single raw material and a common production process. These multiple end-products are commonly referred to as **joint products**. For example, in the meat-packing industry, **Armour** processes a cow or pig into meat, internal organs, hides, bones, and fat products. In the petroleum industry, **ExxonMobil** refines crude oil to produce gasoline, lubricating oil, kerosene, paraffin, and ethylene.

Illustration 23.10 presents a joint product situation for Marais Creamery involving a decision to **sell or process further** cream and skim milk. Cream and skim milk are joint products that result from the processing of raw milk.

ILLUSTRATION 23.10 Joint production process—Creamery

Marais incurs many costs prior to the manufacture of the cream and skim milk. All costs incurred prior to the point at which the two products are separately identifiable (the **split-off point**) are called **joint costs**. For purposes of determining the cost of each product, joint product costs must be allocated to the individual products. This is frequently done based on the relative sales value of the joint products. While this allocation is important for determination of product cost, **it is irrelevant for any sell-or-process-further decisions**. The reason is that these **joint product costs** are **sunk costs**. That is, they have already been incurred, and they cannot be changed or avoided by any subsequent decision.

Illustration 23.11 provides the daily cost and revenue data for Marais Creamery related to cream and cottage cheese.

ILLUSTRATION 23.11

Cost and revenue data per day for cream

Costs (per day)	
Joint cost allocated to cream	\$ 9,000
Cost to process cream into cottage cheese	10,000
Revenues from Products (per day)	
Cream	\$19,000
Cottage cheese	27,000

From this information, we can determine whether the company should simply sell the cream or process it further into cottage cheese. **Illustration 23.12** shows the necessary analysis. Note that the joint cost that is allocated to the cream is not included in this decision. It is not relevant to the decision because it is a sunk cost. It has been incurred in the past and will remain the same no matter whether the cream is subsequently processed into cottage cheese or not.

ILLUSTRATION 23.12 Analysis of whether to sell cream or process into cottage cheese

Incremental Analysis - Sell or process further - Cream or cottage cheese				
	Home	Insert	Page Layout	Formulas
	Data	Review	View	
P18	<input type="button" value="fx"/>			
	A	B	C	D
1		Sell	Process Further	Net Income Increase (Decrease)
2	Sales per day	\$19,000	\$27,000	\$ 8,000
3	Cost per day to process cream into cottage cheese	0	10,000	(10,000)
4	Net income per day	\$19,000	\$17,000	\$ (2,000)
5				

From this analysis, we can see that Marais should not process the cream further because it will sustain an incremental loss of \$2,000.

Illustration 23.13 provides the daily cost and revenue data for the company related to skim milk and condensed milk.

Costs (per day)	
Joint cost allocated to skim milk	\$ 5,000
Cost to process skim milk into condensed milk	8,000
Revenues from Products (per day)	
Skim milk	\$11,000
Condensed milk	26,000

ILLUSTRATION 23.13

Cost and revenue data per day for skim milk

Illustration 23.14 shows that Marais Company should process the skim milk into condensed milk, as it will increase net income by \$7,000.

ILLUSTRATION 23.14 Analysis of whether to sell skim milk or process into condensed milk

Incremental Analysis - Sell or process further - Skim milk or condensed milk				
	A	B	C	D
1		Sell	Process Further	Net Income Increase (Decrease)
2	Sales per day	\$11,000	\$26,000	\$15,000
3	Cost per day to process skim milk into condensed milk	0	8,000	(8,000)
4	Net income per day	\$11,000	\$18,000	\$ 7,000
5				

Again, note that the \$5,000 of joint cost allocated to the skim milk is irrelevant in deciding whether to sell or process further. Why? The joint cost remains the same, whether or not further processing is performed.

These decisions need to be reevaluated as market conditions change. For example, if the price of skim milk increases relative to the price of condensed milk, it may become more profitable to sell the skim milk rather than process it into condensed milk. Consider also oil refineries. As market conditions change, the companies must constantly re-assess which products to produce from the oil they receive at their plants.

DO IT! 4 | Sell or Process Further

Easy Does It manufactures unpainted furniture for the do-it-yourself (DIY) market. It currently sells a child's rocking chair for \$25. Production costs per unit are \$12 variable and \$8 fixed. Easy Does It is considering painting the rocking chair and selling it for \$35. Variable costs to paint each chair are expected to be \$9, and fixed costs are expected to be \$2.

Prepare an analysis showing whether Easy Does It should sell unpainted or painted chairs.

Solution

	<u>Sell</u>	<u>Process Further</u>	<u>Net Income Increase (Decrease)</u>
Revenues	\$25	\$35	\$10
Variable costs	12	21 ^a	(9)
Fixed costs	8	10 ^b	(2)
Net income	<u>\$ 5</u>	<u>\$ 4</u>	<u>\$(1)</u>

^a\$12 + \$9 ^b\$8 + \$2

ACTION PLAN

- Identify the revenues that change as a result of painting the rocking chair.
- Identify all costs that change as a result of painting the rocking chair, and net the amount against the revenues.

The analysis indicates that the rocking chair should be sold unpainted because net income per chair will be \$1 greater.

Related exercise material: BE23.5, BE23.6, DO IT! 23.4, E23.9, E23.10, E23.11, and E23.12.

Repair, Retain, or Replace Equipment

LEARNING OBJECTIVE 5

Analyze the relevant costs to be considered in repairing, retaining, or replacing equipment.

Management often has to decide whether to continue using an asset, repair, or replace it. For example, **Delta Airlines** must decide whether to replace old jets with new, more fuel-efficient ones. To illustrate, assume that Jeffcoat Company has a factory machine that originally cost \$110,000. It has a balance in Accumulated Depreciation of \$70,000, so the machine's book value is \$40,000. It has a remaining useful life of four years. The company is considering replacing this machine with a new machine. A new machine is available that costs \$120,000. It is expected to have zero salvage value at the end of its four-year useful life. If the new machine is acquired, variable manufacturing costs are expected to decrease from \$160,000 to \$125,000 annually, and the old unit could be sold for \$5,000. **Illustration 23.15** shows the incremental analysis for the **four-year period**.

ILLUSTRATION 23.15 Incremental analysis—retain or replace equipment

Incremental Analysis - Retain or replace equipment					
	A	B	C	D	F
1		Retain Equipment	Replace Equipment		Net Income Increase (Decrease)
2	Variable manufacturing costs	\$640,000	a	\$500,000	b \$140,000
3	New machine cost			120,000	(120,000)
4	Sale of old machine			(5,000)	5,000
5	Total	\$640,000		\$615,000	\$ 25,000
6					
7	^a (4 years × \$160,000)				
8	^b (4 years × \$125,000)				
9					

In this case, it would be to the company's advantage to replace the equipment. The lower variable manufacturing costs due to replacement more than offset the cost of the new equipment. Note that the \$5,000 received from the sale of the old machine is relevant to the decision because it will only be received if the company chooses to replace its equipment. In general, any trade-in allowance or cash disposal value of existing assets is relevant to the decision to retain or replace equipment.

One other point should be mentioned regarding Jeffcoat's decision: **The book value of the old machine does not affect the decision.** Book value is a **sunk cost**, which is a cost that cannot be changed by any present or future decision. **Sunk costs are not relevant in incremental analysis.** In this example, if the asset is retained, book value will be depreciated over its remaining useful life. Or, if the new unit is acquired, book value will be recognized as a loss of the current period. Thus, the effect of book value on cumulative future earnings is the same regardless of the replacement decision.

Sometimes, decisions regarding whether to replace equipment are clouded by behavioral decision-making errors. For example, suppose a manager spent \$90,000 repairing a machine two months ago. Suppose that the machine now breaks down again. The manager might be inclined to think that because the company recently spent a large amount of money to repair the machine, the machine should be repaired again rather than replaced. However, the amount spent in the past to repair the machine is irrelevant to the current decision. It is a sunk cost.

Similarly, suppose a manager spent \$5,000,000 to purchase a machine. Six months later, a new machine comes on the market that is significantly more efficient than the one recently purchased. The manager might be inclined to think that he or she should not buy the new

machine because of the recent purchase. In fact, the manager might fear that buying a different machine so quickly might call into question the merit of the previous decision. Again, the fact that the company recently bought a machine is not relevant. Instead, the manager should use incremental analysis to determine whether the savings generated by the efficiencies of the new machine would justify its purchase.

DO IT! 5 | Repair or Replace Equipment

Rochester Roofing is faced with a decision. The company relies very heavily on the use of its 60-foot extension lift for work on large homes and commercial properties. Last year, the company spent \$60,000 refurbishing the lift. It has just determined that another \$40,000 of repair work is required. Alternatively, Rochester Roofing has found a newer used lift that is for sale for \$170,000. The company estimates that both the old and new lifts would have useful lives of 6 years. However, the new lift is more efficient and thus would reduce operating expenses by about \$20,000 per year. The company could also rent out the new lift for about \$2,000 per year. The old lift is not suitable for rental. The old lift could currently be sold for \$25,000 if the new lift is purchased. Prepare an incremental analysis that shows whether the company should repair or replace the equipment.

ACTION PLAN

- Those costs and revenues that differ across the alternatives are relevant to the decision.
- Past costs that cannot be changed are sunk costs.

Solution

	<u>Retain Equipment</u>	<u>Replace Equipment</u>	<u>Net Income Increase (Decrease)</u>
Operating expenses	\$120,000*		\$120,000
Repair costs	40,000		40,000
Rental revenue		\$(12,000)**	12,000
New machine cost		170,000	(170,000)
Sale of old machine		(25,000)	25,000
Total cost	<u>\$160,000</u>	<u>\$133,000</u>	<u>\$ 27,000</u>

*(6 years × \$20,000)
**(6 years × \$2,000)

The analysis indicates that purchasing the new machine would increase net income for the 6-year period by \$27,000.

Related exercise material: BE23.7, DO IT! 23.5, E23.13, and E23.14.

Eliminate Unprofitable Segment or Product

LEARNING OBJECTIVE 6

Analyze the relevant costs in deciding whether to eliminate an unprofitable segment or product.

Management sometimes must decide whether to eliminate an unprofitable business segment or product. For example, in recent years, many airlines quit servicing certain cities or cut back on the number of flights. **Goodyear** quit producing several brands in the low-end tire market. Again, the key is to **focus on the relevant costs—the data that change under the alternative courses of action** (see **Helpful Hint**). To illustrate, assume that Venus Company manufactures tennis racquets in three models: Pro, Master, and Champ. Pro and Master are profitable lines. Champ (highlighted in red in the table below) operates at a loss. Condensed income statement data are as shown in **Illustration 23.16**.

You might think that total net income will increase by \$20,000 to \$240,000 if the unprofitable Champ line of racquets is eliminated. However, **net income may actually decrease if the Champ line is discontinued**. The reason is that the company's total fixed costs will be the same whether or not the Champ line is discontinued. That is, the fixed costs allocated to the Champ racquets cannot be eliminated, so they will have to be absorbed by the other products.

HELPFUL HINT

A decision to discontinue a segment based solely on the bottom line—net loss—is inappropriate.

ILLUSTRATION 23.16**Segment income data**

	Pro	Master	Champ	Total
Sales	\$800,000	\$300,000	\$100,000	\$1,200,000
Variable costs	520,000	210,000	90,000	820,000
Contribution margin	280,000	90,000	10,000	380,000
Fixed costs	80,000	50,000	30,000	160,000
Net income	\$200,000	\$ 40,000	(\$20,000)	\$ 220,000

To illustrate, assume that the \$30,000 of fixed costs applicable to the unprofitable segment are instead allocated $\frac{2}{3}$ to the Pro model and $\frac{1}{3}$ to the Master model if the Champ model is eliminated. Fixed costs will increase to \$100,000 (\$80,000 + \$20,000) in the Pro line and to \$60,000 (\$50,000 + \$10,000) in the Master line. **Illustration 23.17** shows the revised income statement.

ILLUSTRATION 23.17**Income data after eliminating unprofitable product line**

	Pro	Master	Total
Sales	\$800,000	\$300,000	\$1,100,000
Variable costs	520,000	210,000	730,000
Contribution margin	280,000	90,000	370,000
Fixed costs	100,000	60,000	160,000
Net income	\$180,000	\$ 30,000	\$ 210,000

Total net income would decrease \$10,000 (\$220,000 – \$210,000). This result is also obtained in the incremental analysis of the Champ racquets shown in **Illustration 23.18**.

ILLUSTRATION 23.18 Incremental analysis—eliminating unprofitable segment with no reduction in fixed costs

Incremental Analysis - Eliminating an unprofitable segment				
	A	B	C	D
1		Continue	Eliminate	Net Income Increase (Decrease)
2	Sales	\$100,000	\$ 0	(\$100,000)
3	Variable costs	90,000	0	90,000
4	Contribution margin	10,000	0	(10,000)
5	Fixed costs	30,000	30,000	0
6	Net income	\$ (20,000)	\$ (30,000)	\$ (10,000)
7				

The loss in net income is attributable to the Champ line's \$10,000 contribution margin (\$220,000 – \$210,000) that will not be realized if the segment is discontinued.

Assume the same facts as above, except now assume that \$22,000 of the fixed costs attributed to the Champ line can be eliminated if the line is discontinued. **Illustration 23.19** presents the incremental analysis based on this revised assumption.

ILLUSTRATION 23.19 Incremental analysis—eliminating unprofitable segment with reduction in fixed costs

Incremental Analysis - Eliminating an unprofitable segment				
	A	B	C	D
1		Continue	Eliminate	Net Income Increase (Decrease)
2	Sales	\$100,000	\$ 0	(\$100,000)
3	Variable costs	90,000	0	90,000
4	Contribution margin	10,000	0	(10,000)
5	Fixed costs	30,000	8,000	22,000
6	Net income	\$ (20,000)	\$ (8,000)	\$ 12,000
7				

In this case, because the company is able to eliminate some of its fixed costs by eliminating the division, it can increase its net income by \$12,000. **This occurs because the \$22,000 savings that results from the eliminated fixed costs exceeds the \$10,000 in lost contribution margin by \$12,000 ($\$22,000 - \$10,000$).**

In deciding on the future status of an unprofitable segment, management should consider the effect of elimination on related product lines. It may be possible for continuing product lines to obtain some or all of the sales lost by the discontinued product line. In some businesses, services or products may be linked—for example, free checking accounts at a bank, or coffee at a donut shop. In addition, management should consider the effect of eliminating the product line on employees who may have to be discharged or retrained.

Management Insight

Batteries Are Included!

Top managers at every major car manufacturer face a massive “make or buy” decision. For example, consider the production of electric cars. By far, the most expensive component in an electric car is the battery, which costs about \$7,500. The battery is critical to vehicle performance since it determines both the power and range of the vehicle.

Mercedes and **Volkswagen** plan to make their own batteries, but **General Motors**, **BMW**, and **Renault** have decided to buy their batteries from suppliers such as Panasonic and Samsung.

It is not an easy decision. Battery production requires huge investments in plant assets and research and development. **Nissan**

learned the hard way that making your own batteries can be a risky venture. It made a big investment in battery production for its electric car, the Leaf, but then suffered huge losses when sales of the Leaf were far below projections. Alternatively, **Tesla**, which only makes electric cars, has fully committed to making its own batteries. In fact, it often describes itself as a battery company.

Source: Stephen Milmot, “Auto Companies: Better with Batteries Not Included,” *Wall Street Journal* (December 19, 2016).

What are the factors that companies must consider in deciding whether to make or to buy the batteries for their vehicles? (Go to WileyPLUS for this answer and additional questions.)

DO IT! 6 | Unprofitable Segments

Lambert, Inc. manufactures several types of accessories. For the year, the knit hats and scarves line had sales of \$400,000, variable expenses of \$310,000, and fixed expenses of \$120,000. Therefore, the knit hats and scarves line had a net loss of \$30,000. If Lambert eliminates the knit hats and scarves line, \$20,000 of fixed costs will remain. Prepare an analysis showing whether the company should eliminate the knit hats and scarves line.

Solution

	Continue	Eliminate	Net Income Increase (Decrease)
Sales	\$400,000	\$ 0	$\$(400,000)$
Variable costs	310,000	0	310,000
Contribution margin	90,000	0	(90,000)
Fixed costs	120,000	20,000	100,000
Net income	<u><u>$\\$(30,000)$</u></u>	<u><u>$\\$(20,000)$</u></u>	<u><u>\$ 10,000</u></u>

The analysis indicates that Lambert should eliminate the knit hats and scarves line because net income will increase \$10,000.

ACTION PLAN

- Identify the revenues that change as a result of eliminating a product line.
- Identify all costs that change as a result of eliminating a product line, and net the amount against the revenues.

Review and Practice

Learning Objectives Review

1 Describe management's decision-making process and incremental analysis.

Management's decision-making process consists of (a) identifying the problem and assigning responsibility for the decision, (b) determining and evaluating possible courses of action, (c) making the decision, and (d) reviewing the results of the decision. Incremental analysis identifies financial data that change under alternative courses of action. These data are relevant to the decision because they vary across the possible alternatives.

2 Analyze the relevant costs in accepting an order at a special price.

The relevant costs are those that change if the order is accepted. The relevant information in accepting an order at a special price is the difference between the variable manufacturing costs to produce the special order and expected revenues. Any changes in fixed costs, opportunity cost, or other incremental costs or savings (such as additional shipping) should be considered.

3 Analyze the relevant costs in a make-or-buy decision.

In a make-or-buy decision, the relevant costs are (a) the variable manufacturing costs that will be saved as well as changes to fixed

manufacturing costs, (b) the purchase price, and (c) opportunity cost.

4 Analyze the relevant costs and revenues in determining whether to sell or process materials further.

The decision rule for whether to sell or process materials further is: Process further as long as the incremental revenue from processing exceeds the incremental processing costs.

5 Analyze the relevant costs to be considered in repairing, retaining, or replacing equipment.

The relevant costs to be considered in determining whether equipment should be repaired, retained, or replaced are the effects on variable costs and the cost of the new equipment. Also, any disposal value of the existing asset must be considered.

6 Analyze the relevant costs in deciding whether to eliminate an unprofitable segment or product.

In deciding whether to eliminate an unprofitable segment or product, the relevant costs are the variable costs that drive the contribution margin, if any, produced by the segment or product. Opportunity cost and reduction of fixed expenses must also be considered.

Glossary Review

Incremental analysis The process of identifying the financial data that change under alternative courses of action. (p. 23-3).

Joint costs For joint products, all costs incurred prior to the point at which the two products are separately identifiable (known as the **split-off point**). (p. 23-12).

Joint products Multiple end-products produced from a single raw material and a common production process. (p. 23-11).

Opportunity cost The potential benefit that is lost when one course of action is chosen rather than an alternative course of action. (p. 23-4).

Relevant costs and revenues Those costs and revenues that differ across alternatives. (p. 23-4).

Sunk cost A cost incurred in the past that cannot be changed or avoided by any present or future decision. (p. 23-4).

Practice Multiple-Choice Questions

1. (LO 1) Three of the steps in management's decision-making process are (1) review results of decision, (2) determine and evaluate possible courses of action, and (3) make the decision. The steps are prepared in the following order:

- a. (1), (2), (3).
- b. (3), (2), (1).
- c. (2), (1), (3).
- d. (2), (3), (1).

2. (LO 1) Incremental analysis is the process of identifying the financial data that:

- a. do not change under alternative courses of action.
- b. change under alternative courses of action.
- c. are mixed under alternative courses of action.
- d. No correct answer is given.

3. (LO 1) In making business decisions, management ordinarily considers:

- a. quantitative factors but not qualitative factors.
- b. financial information only.
- c. both financial and nonfinancial information.
- d. relevant costs, opportunity cost, and sunk costs.

4. (LO 1) A company is considering the following alternatives:

	Alternative A	Alternative B
Revenues	\$50,000	\$50,000
Variable costs	24,000	24,000
Fixed costs	12,000	15,000

Which of the following are relevant in choosing between these alternatives?

- a. Revenues, variable costs, and fixed costs.
- b. Variable costs and fixed costs.
- c. Variable costs only.
- d. Fixed costs only.

5. (LO 2) It costs a company \$14 of variable costs and \$6 of fixed costs to produce product Z200 that sells for \$30. A foreign buyer offers to purchase 3,000 units at \$18 each. If the special offer is accepted and produced with unused capacity, net income will:

- a. decrease \$6,000.
- b. increase \$6,000.
- c. increase \$12,000.
- d. increase \$9,000.

6. (LO 2) It costs a company \$14 of variable costs and \$6 of fixed costs to produce product Z200. Product Z200 sells for \$30. A buyer offers to purchase 3,000 units at \$18 each. The seller will incur special shipping costs of \$5 per unit. If the special offer is accepted and produced with unused capacity, net income will:

- a. increase \$3,000.
- b. increase \$12,000.
- c. decrease \$12,000.
- d. decrease \$3,000.

7. (LO 3) Jobart Company is currently operating at full capacity. It is considering buying a part from an outside supplier rather than making it in-house. If Jobart purchases the part, it can use the released productive capacity to generate additional income of \$30,000 from producing a different product. When conducting incremental analysis in this make-or-buy decision, the company should:

- a. ignore the \$30,000.
- b. add \$30,000 to other costs in the "Make" column.
- c. add \$30,000 to other costs in the "Buy" column.
- d. subtract \$30,000 from the other costs in the "Make" column.

8. (LO 3) In a make-or-buy decision, relevant costs are:

- a. manufacturing costs that will be saved.
- b. the purchase price of the units.
- c. the opportunity cost.
- d. All of the above.

9. (LO 3) Derek is performing incremental analysis in a make-or-buy decision for Item X. If Derek buys Item X, he can use its released productive capacity to produce Item Z. Derek will sell Item Z for \$12,000 and incur production costs of \$8,000. Derek's incremental analysis should include an opportunity cost of:

- a. \$12,000.
- b. \$8,000.
- c. \$4,000.
- d. \$0.

10. (LO 4) The decision rule in a sell-or-process-further decision is: process further as long as the incremental revenue from processing exceeds:

- a. incremental processing costs.
- b. variable processing costs.
- c. fixed processing costs.
- d. No correct answer is given.

11. (LO 4) Walton, Inc. makes an unassembled product that it currently sells for \$55. Production costs are \$20. Walton is considering assembling the product and selling it for \$68. The cost to assemble the product is estimated at \$12. What decision should Walton make?

- a. Sell before assembly; net income per unit will be \$12 greater.
- b. Sell before assembly; net income per unit will be \$1 greater.
- c. Process further; net income per unit will be \$13 greater.
- d. Process further; net income per unit will be \$1 greater.

12. (LO 5) In a decision to retain or replace equipment, the book value of the old equipment is a (an):

- a. opportunity cost.
- b. sunk cost.
- c. incremental cost.
- d. marginal cost.

13. (LO 6) If an unprofitable segment is eliminated:

- a. net income will always increase.
- b. variable costs of the eliminated segment will have to be absorbed by other segments.
- c. fixed costs allocated to the eliminated segment will have to be absorbed by other segments.
- d. net income will always decrease.

14. (LO 6) A segment of Hazard Inc. has the following data.

Sales	\$200,000
Variable expenses	140,000
Fixed expenses	100,000

If this segment is eliminated, what will be the effect on the remaining company? Assume that 50% of the fixed expenses will be eliminated and the rest will be allocated to the segments of the remaining company.

- a. \$120,000 increase.
- b. \$10,000 decrease.
- c. \$50,000 increase.
- d. \$10,000 increase.

Solutions

1. d. The order of the steps in the decision process is (2) determine and evaluate possible courses of action, (3) make the decision, and (1) review the results of decision. Choices (a), (b), and (c) list the steps in the incorrect order.

2. b. Incremental analysis is the process of identifying the financial data that change under alternative courses of action, not the financial

data that (a) do not change or (c) are mixed. Choice (d) is wrong as there is a correct answer given.

3. c. Management ordinarily considers both financial and nonfinancial information in making business decisions. The other choices are incorrect because they are all limited to financial data and do not consider nonfinancial information.

- 4. d.** Fixed costs is the only relevant factor, that is, the only factor that differs across Alternatives A and B. The other choices are incorrect because they list either revenues, variable costs, or both, which are the same amounts for both alternatives.
- 5. c.** If the special offer is accepted and produced with unused capacity, variable cost per unit = \$14, income per unit = $(\$18 - \$14)$, so net income will increase by \$12,000 ($3,000 \times \4), not (a) decrease \$6,000, (b) increase \$6,000, or (d) increase \$9,000.
- 6. d.** If the special offer is accepted and produced with unused capacity, variable cost per unit = \$19 (\$14 variable + \$5 shipping costs), income per unit = $-\$1$ ($\$18 - \19), so net income will decrease by \$3,000 ($3,000 \times -\1), not (a) increase \$3,000, (b) increase \$12,000, or (c) decrease \$12,000.
- 7. b.** Jobart Company should add \$30,000 to other costs in the “Make” column as it represents lost income of continuing to make the part in-house. The other choices are incorrect because the \$30,000 (a) should not be ignored as it is an opportunity cost, (c) represents potential lost income if the company continues to make the part instead of buying it so therefore should not be placed in the “Buy” column, and (d) should be added to, not subtracted from, the other costs in the “Make” column.
- 8. d.** All the costs in choices (a), (b), and (c) are relevant in a make-or-buy decision. So although choices (a), (b), and (c) are true statements, choice (d) is a better answer.
- 9. c.** Derek’s opportunity cost in its make-or-buy decision is \$12,000 (revenue for Item Z) – \$8,000 (production costs for Item Z) = \$4,000, not (a) \$12,000, (b) \$8,000, or (d) \$0.
- 10. a.** The decision rule in a sell-or-process-further decision is to process further as long as the incremental revenue from such processing exceeds incremental processing costs, not (b) variable processing costs or (c) fixed processing costs. Choice (d) is wrong as there is a correct answer given.
- 11. d.** If Walton processes further, net income per unit will increase \$13 ($\$68 - \55), which is \$1 more than its additional production costs (\$12). The other choices are therefore incorrect.
- 12. b.** In the decision to retain or replace equipment, the book value of the old equipment is a sunk cost (it reflects the original cost less accumulated depreciation, neither of which is relevant to the decision), not (a) an opportunity cost, (c) an incremental cost, or (d) a marginal cost.
- 13. c.** Even though the segment is eliminated, the fixed costs allocated to that segment will still have to be covered. This is done by having other segments absorb the fixed costs of that segment. Choices (a) and (d) are incorrect because net income can either increase or decrease if a segment is eliminated. Choice (b) is incorrect because when a segment is eliminated, the variable costs of that segment will also be eliminated and will not need to be absorbed by other segments.
- 14. b.** If the segment continues, net income = $-\$40,000$ ($\$200,000 - \$140,000 - \$100,000$). If the segment is eliminated, the contribution margin will also be eliminated but $\$50,000$ ($\$100,000 \times .50$) of the fixed costs will remain. Therefore, the effect of eliminating the segment will be a \$10,000 decrease not (a) a \$120,000 increase, (c) a \$50,000 increase, or (d) a \$10,000 increase.

Practice Brief Exercises

Determine whether to make or buy a part.

- 1. (LO 3)** Flavia Industries incurs unit costs of \$24 (\$18 variable and \$6 fixed) in making an assembly part for its finished product. A supplier offers to make 20,000 units of the assembly part at \$17 per unit. If the offer is accepted, Flavia will save all variable costs but no fixed costs. Prepare an analysis showing the total cost saving, if any, Flavia will realize by buying the part.

Solution

1.

	<u>Make</u>	<u>Buy</u>	<u>Net Income Increase (Decrease)</u>
Variable manufacturing costs	\$360,000	\$ –0–	\$360,000
Fixed manufacturing costs	120,000	120,000	–0–
Purchase price	–0–	340,000	(340,000)
Total annual cost	<u>\$480,000</u>	<u>\$460,000</u>	<u>\$ 20,000</u>

The decision should be to buy the part.

Determine whether to sell or process further.

- 2. (LO 4)** Fast Speed Bicycle Inc. makes parts for unfinished bicycles that it sells for \$125. Production costs are \$40 variable and \$20 fixed. Because of unused capacity, Fast Speed is considering finishing the bicycles and selling them for \$200. Additional variable finishing costs are expected to be \$65 with no increase in fixed costs. Prepare an analysis on a per unit basis showing whether Fast Speed should sell unfinished or unfinished bicycles.

Solution

2.

	<u>Sell</u>	<u>Process Further</u>	<u>Net Income Increase (Decrease)</u>
Sales price per unit	\$125	\$200	\$75
Cost per unit			
Variable	40	105	(65)
Fixed	20	20	0
Total	60	125	(65)
Net income per unit	\$ 65	\$ 75	\$10

The bicycles should be processed further because the incremental revenues exceed incremental costs by \$10 per unit.

- 3. (LO 6)** Hava Racquets Company manufactures pickleball racquets in four different models. For the year, the SoftNet line had a net loss of \$40,000 from sales of \$250,000, variable costs of \$180,000 and fixed costs of \$110,000. If the SoftNet line is eliminated, \$30,000 of fixed costs will remain. Prepare an analysis showing whether the SoftNet Line should be eliminated.

Determine whether to eliminate an unprofitable segment.

Solution

3.

	<u>Continue</u>	<u>Eliminate</u>	<u>Net Income Increase (Decrease)</u>
Sales	\$250,000	\$ -0-	\$(250,000)
Variable costs	180,000	-0-	180,000
Contribution margin	70,000	-0-	(70,000)
Fixed costs	110,000	30,000	80,000
Net income	\$ (40,000)	<u><u>\$ (30,000)</u></u>	\$ 10,000

The SoftNet product line should be eliminated because \$80,000 of fixed cost is eliminated whereas only \$70,000 of contribution margin is realized if the line is continued. The \$70,000 related to the contribution margin is lower than the \$80,000 savings related to fixed costs and therefore a savings of \$10,000 results by eliminating SoftNet.

Practice Exercises

- 1. (LO 3)** Maningly Inc. has been manufacturing its own lampshades for its table lamps. The company is currently operating at 100% of capacity. Variable manufacturing overhead is charged to production at the rate of 50% of direct labor cost. The direct materials and direct labor cost per unit to make the lampshades are \$4 and \$6, respectively. Normal production is 50,000 table lamps per year.

Use incremental analysis for make-or-buy decision.

A supplier offers to make the lampshades at a price of \$13.50 per unit. If Maningly accepts the supplier's offer, all variable manufacturing costs will be eliminated, but the \$50,000 of fixed manufacturing overhead currently being charged to the lampshades will have to be absorbed by other products.

Instructions

- Prepare the incremental analysis for the decision to make or buy the lampshades.
- Should Maningly buy the lampshades?
- Would your answer be different in (b) if the productive capacity released by not making the lampshades could be used to produce income of \$40,000?

Solution**1. a.**

	Make	Buy	Net Income Increase (Decrease)
Direct materials ($50,000 \times \$4.00$)	\$200,000	\$ 0	\$ 200,000
Direct labor ($50,000 \times \$6.00$)	300,000	0	300,000
Variable manufacturing costs $(\$300,000 \times 50\%)$	150,000	0	150,000
Fixed manufacturing costs	50,000	50,000	0
Purchase price ($50,000 \times \$13.50$)	0	675,000	(675,000)
Total annual cost	\$700,000	\$725,000	\$ (25,000)

- b.** No, Maningly should not purchase the lampshades. As indicated by the incremental analysis, it would cost the company \$25,000 more to purchase the lampshades.
- c.** Yes, by purchasing the lampshades, a total cost saving of \$15,000 will result as shown below.

	Make	Buy	Net Income Increase (Decrease)
Total annual cost (from (a))	\$700,000	\$725,000	\$ (25,000)
Opportunity cost	40,000	0	40,000
Total cost	\$740,000	\$725,000	\$ 15,000

Use incremental analysis for whether to sell or process materials further.

- 2. (LO 4)** A company manufactures three products using same production process. The costs incurred up to the split-off point are \$200,000. These costs are allocated to the products on the basis of their sales value at the split-off point. The number of units produced, the selling prices per unit of the three products at the split-off point and after further processing, and the additional processing costs are as follows.

Product	Number of Units Produced	Selling Price at Split-Off	Selling Price after Processing	Additional Processing Costs
D	3,000	\$11.00	\$15.00	\$14,000
E	6,000	12.00	16.20	16,000
F	2,000	19.40	24.00	9,000

Instructions

- Which information is relevant to the decision on whether or not to process the products further? Explain why this information is relevant.
- Which product(s) should be processed further and which should be sold at the split-off point?
- Would your decision be different if the company was using the quantity of output to allocate joint costs? Explain.

(CGA adapted)

Solution

- 2. a.** The costs that are relevant in this decision are the incremental revenues and the incremental costs associated with processing the material past the split-off point. Any costs incurred up to the split-off point are sunk costs and therefore irrelevant to this decision.

b. Revenue after further processing:

Product D: \$45,000 (3,000 units \times \$15.00 per unit)

Product E: \$97,200 (6,000 units \times \$16.20 per unit)

Product F: \$48,000 (2,000 units \times \$24.00 per unit)

Revenue at split-off:

Product D: \$33,000 (3,000 units \times \$11.00 per unit)

Product E: \$72,000 (6,000 units \times \$12.00 per unit)

Product F: \$38,800 (2,000 units \times \$19.40 per unit)

	D	E	F
Incremental revenue	\$ 12,000 ^a	\$ 25,200 ^b	\$ 9,200 ^c
Incremental cost	(14,000)	(16,000)	(9,000)
Increase (decrease) in profit	<u><u>\$ (2,000)</u></u>	<u><u>\$ 9,200</u></u>	<u><u>\$ 200</u></u>

^a\$45,000 – \$33,000; ^b\$97,200 – \$72,000; ^c\$48,000 – \$38,800

Products E and F should be processed further, but Product D should not be processed further.

- c. The decision would remain the same. It does not matter how the joint costs are allocated because joint costs are irrelevant to this decision.

3. (LO 5) Tek Enterprises uses a computer to process its sales invoices. Lately, business has been so good that it takes an extra 3 hours per night, plus every third Saturday, to keep up with the volume of sales invoices. Management is considering updating its computer with a faster model that would eliminate all of the overtime processing.

Use incremental analysis for retaining or replacing equipment.

	Current Machine	New Machine
Original purchase cost	\$15,000	\$25,000
Accumulated depreciation	6,000	—
Estimated annual operating costs	25,000	20,000
Useful life	6 years	6 years

If sold now, the current machine would have a salvage value of \$5,000. If operated for the remainder of its useful life, the current machine would have zero salvage value. The new machine is expected to have zero salvage value after 6 years.

Instructions

Should the current machine be replaced? (Ignore the time value of money.)

Solution

3.

	Retain Machine	Replace Machine	Net Income Increase (Decrease)
Operating costs	\$150,000*	\$120,000**	\$30,000
New machine cost	0	25,000	(25,000)
Salvage value (old)	0	(5,000)	5,000
Total	<u><u>\$150,000</u></u>	<u><u>\$140,000</u></u>	<u><u>\$10,000</u></u>

*\$25,000 × 6

**\$20,000 × 6

The current machine should be replaced. The incremental analysis shows that net income for the 6-year period will be \$10,000 higher by replacing the current machine.

4. (LO 6) Benai Lorenzo, a recent graduate of Bonita's accounting program, evaluated the operating performance of Wasson Company's six divisions. Benai made the following presentation to the Wasson board of directors and suggested the Ortiz Division be eliminated. "If the Ortiz Division is eliminated," she said, "our total profits would increase by \$23,870."

Use incremental analysis for elimination of division.

	The Other Five Divisions	Ortiz Division	Total
Sales	\$ 1,664,200	\$ 96,200	\$ 1,760,400
Cost of goods sold	978,520	76,470	1,054,990
Gross profit	685,680	19,730	705,410
Operating expenses	527,940	43,600	571,540
Net income	<u><u>\$ 157,740</u></u>	<u><u>\$(23,870)</u></u>	<u><u>\$ 133,870</u></u>

In the Ortiz Division, cost of goods sold is \$70,000 variable and \$6,470 fixed, and operating expenses are \$15,000 variable and \$28,600 fixed. None of the Ortiz Division's fixed costs will be eliminated if the division is discontinued.

Instructions

Is Benai right about eliminating the Ortiz Division? Prepare an incremental analysis schedule to support your answer.

Solution

4.

	Continue	Eliminate	Net Income Increase (Decrease)
Sales	\$ 96,200	\$ 0	\$(96,200)
Variable expenses			
Cost of goods sold	70,000	0	70,000
Operating expenses	15,000	0	15,000
Total variable	85,000	0	85,000
Contribution margin	11,200	0	(11,200)
Fixed expenses			
Cost of goods sold	6,470	6,470	0
Operating expenses	28,600	28,600	0
Total fixed	35,070	35,070	0
Net income (loss)	<u><u>\$(23,870)</u></u>	<u><u>\$(35,070)</u></u>	<u><u>\$(11,200)</u></u>

Benai is incorrect. The incremental analysis shows that net income will be \$11,200 less if the Ortiz Division is eliminated. This amount equals the contribution margin that would be lost by discontinuing the division.

Practice Problem

Use incremental analysis for a special order.

(LO 2) Walston Company produces kitchen cabinets for homebuilders across the western United States. The cost of producing 5,000 cabinets is as follows.

Materials	\$ 500,000
Labor	250,000
Variable overhead	100,000
Fixed overhead	400,000
Total	<u><u>\$1,250,000</u></u>

Walston also incurs selling expenses of \$20 per cabinet. Wellington Corp. has offered Walston \$165 per cabinet for a special order of 1,000 cabinets. The cabinets would be sold to homebuilders in the eastern United States and thus would not conflict with Walston's current sales. Selling expenses per cabinet would be only \$5 per cabinet. Walston has available capacity to do the work.

Instructions

- Prepare an incremental analysis for the special order.
- Should Walston accept the special order? Why or why not?

Solution

- Relevant costs per unit would be:

Materials	\$500,000/5,000 = \$100
Labor	250,000/5,000 = 50
Variable overhead	100,000/5,000 = 20
Selling expenses	5
Total relevant cost per unit	<u><u>\$175</u></u>

	Reject Order	Accept Order	Net Income Increase (Decrease)
Revenues	\$0	\$165,000*	\$ 165,000
Costs	0	175,000**	(175,000)
Net income	<u><u>\$0</u></u>	<u><u>\$(10,000)</u></u>	<u><u>\$(10,000)</u></u>

*\$165 × 1,000; **\$175 × 1,000

- Walston should reject the offer. The incremental benefit of \$165 per cabinet is less than the incremental cost of \$175. By accepting the order, Walston's net income would actually decline by \$10,000.

WileyPLUS

Brief Exercises, DO IT! Exercises, Exercises, Problems, and many additional resources are available for practice in WileyPLUS.

Questions

1. What steps are frequently involved in management's decision-making process?
2. Your roommate, Anna Polis, contends that accounting contributes to most of the steps in management's decision-making process. Is your roommate correct? Explain.
3. "Incremental analysis involves the accumulation of information concerning a single course of action." Do you agree? Why?
4. Sydney Greene asks for your help concerning the relevance of variable and fixed costs in incremental analysis. Help Sydney with her problem.
5. What data are relevant in deciding whether to accept an order at a special price?
6. Emil Corporation has an opportunity to buy parts at \$9 each that currently cost \$12 to make. What manufacturing costs are relevant to this make-or-buy decision?
7. Define the term "opportunity cost." How may this cost be relevant in a make-or-buy decision?
8. What is the decision rule in deciding whether to sell a product or process it further?
9. What are joint products? What accounting issue results from the production process that creates joint products?
10. How are allocated joint costs treated when making a sell-or-process-further decision?
11. Your roommate, Gale Dunham, is confused about sunk costs. Explain to your roommate the meaning of sunk costs and their relevance to a decision to retain or replace equipment.
12. Huang Inc. has one product line that is unprofitable. What circumstances may cause overall company net income to be lower if the unprofitable product line is eliminated?

Brief Exercises

BE23.1 (LO 1) The steps in management's decision-making process are listed in random order below. Indicate the order in which the steps should be executed.

- | | | | |
|--------------------------|--|--------------------------|---|
| <input type="checkbox"/> | Make a decision | <input type="checkbox"/> | Review results of the decision |
| <input type="checkbox"/> | Identify the problem and assign responsibility | <input type="checkbox"/> | Determine and evaluate possible courses of action |

Identify the steps in management's decision-making process.

BE23.2 (LO 1) Bogart Company is considering two alternatives. Alternative A will have revenues of \$160,000 and costs of \$100,000. Alternative B will have revenues of \$180,000 and costs of \$125,000. Compare Alternative A to Alternative B showing incremental revenues, costs, and net income.

Determine incremental changes.

BE23.3 (LO 2) At Bargain Electronics, it costs \$30 per unit (\$20 variable and \$10 fixed) to make an MP3 player that normally sells for \$45. A foreign wholesaler offers to buy 3,000 units at \$25 each. Bargain Electronics will incur special shipping costs of \$3 per unit. Assuming that Bargain Electronics has excess operating capacity, indicate the net income (loss) Bargain Electronics would realize by accepting the special order.

Determine whether to accept a special order.

BE23.4 (LO 3) Manson Industries incurs unit costs of \$8 (\$5 variable and \$3 fixed) in making an assembly part for its finished product. A supplier offers to make 10,000 of the assembly part at \$6 per unit. If the offer is accepted, Manson will save all variable costs but no fixed costs. Prepare an analysis showing the total cost saving, if any, Manson will realize by buying the part.

Determine whether to make or buy a part.

BE23.5 (LO 4) Pine Street Inc. makes unfinished bookcases that it sells for \$62. Production costs are \$36 variable and \$10 fixed. Because it has unused capacity, Pine Street is considering finishing the bookcases and selling them for \$70. Variable finishing costs are expected to be \$6 per unit with no increase in fixed costs. Prepare an analysis on a per unit basis showing whether Pine Street should sell unfinished or finished bookcases.

Determine whether to sell or process further, joint products.

BE23.6 (LO 4) Each day, Adama Corporation processes 1 ton of a secret raw material into two resulting products, AB1 and XY1. When it processes 1 ton of the raw material, the company incurs joint

Determine whether to sell or process further, joint products.

processing costs of \$60,000. It allocates \$25,000 of these costs to AB1 and \$35,000 of these costs to XY1. The resulting AB1 can be sold for \$100,000. Alternatively, it can be processed further to make AB2 at an additional processing cost of \$45,000, and sold for \$150,000. Each day's batch of XY1 can be sold for \$95,000. Or, it can be processed further to create XY2, at an additional processing cost of \$50,000, and sold for \$130,000. Discuss what products Adama Corporation should make.

Determine whether to retain or replace equipment.

Determine whether to eliminate an unprofitable segment.

BE23.7 (LO 5) Bryant Company has a factory machine with a book value of \$90,000 and a remaining useful life of 5 years. It can be sold for \$30,000. A new machine is available at a cost of \$400,000. This machine will have a 5-year useful life with no salvage value. The new machine will lower annual variable manufacturing costs from \$600,000 to \$500,000. Prepare an analysis showing whether the old machine should be retained or replaced.

BE23.8 (LO 6) Lisah, Inc., manufactures golf clubs in three models. For the year, the Big Bart line has a net loss of \$10,000 from sales \$200,000, variable costs \$180,000, and fixed costs \$30,000. If the Big Bart line is eliminated, \$20,000 of fixed costs will remain. Prepare an analysis showing whether the Big Bart line should be eliminated.

DO IT! Exercises

Determine incremental costs.

DO IT! 23.1 (LO 1) Nathan T Corporation is comparing two different options. Nathan T currently uses Option 1, with revenues of \$65,000 per year, maintenance expenses of \$5,000 per year, and operating expenses of \$26,000 per year. Option 2 provides revenues of \$60,000 per year, maintenance expenses of \$5,000 per year, and operating expenses of \$22,000 per year. Option 1 employs a piece of equipment which was upgraded 2 years ago at a cost of \$17,000. If Option 2 is chosen, it will free up resources that will bring in an additional \$4,000 of revenue. Complete the following table to show the change in income from choosing Option 2 versus Option 1. Designate Sunk costs with an "S."

	<u>Option 1</u>	<u>Option 2</u>	Net Income Increase (Decrease)	<u>Sunk (S)</u>
Revenues				
Maintenance expenses				
Operating expenses				
Equipment upgrade				
Opportunity cost				

Evaluate special order.

DO IT! 23.2 (LO 2) Maize Company incurs a cost of \$35 per unit, of which \$20 is variable, to make a product that normally sells for \$58. A foreign wholesaler offers to buy 6,000 units at \$30 each. Maize will incur additional costs of \$4 per unit to imprint a logo and to pay for shipping. Compute the increase or decrease in net income Maize will realize by accepting the special order, assuming Maize has sufficient excess operating capacity. Should Maize Company accept the special order?

Evaluate make-or-buy opportunity.

DO IT! 23.3 (LO 3) Wilma Company must decide whether to make or buy some of its components. The costs of producing 60,000 switches for its generators are as follows.

Direct materials	\$30,000	Variable overhead	\$45,000
Direct labor	\$42,000	Fixed overhead	\$60,000

Instead of making the switches at an average cost of \$2.95 ($\$177,000 \div 60,000$), the company has an opportunity to buy the switches at \$2.70 per unit. If the company purchases the switches, all the variable costs and one-fourth of the fixed costs will be eliminated. (a) Prepare an incremental analysis showing whether the company should make or buy the switches. (b) Would your answer be different if the released productive capacity will generate additional income of \$34,000?

Sell or process further.

DO IT! 23.4 (LO 4) Mesa Verde manufactures unpainted furniture for the do-it-yourself (DIY) market. It currently sells a table for \$75. Production costs per unit are \$40 variable and \$10 fixed. Mesa Verde is considering staining and sealing the table to sell it for \$100. Variable costs per unit to finish each table are expected to be an additional \$19 per unit, and fixed costs are expected to be an additional \$3 per unit. Prepare an analysis showing whether Mesa Verde should sell unpainted or finished tables.

Repair or replace equipment.

DO IT! 23.5 (LO 5) Darcy Roofing is faced with a decision. The company relies very heavily on the use of its 60-foot extension lift for work on large homes and commercial properties. Last year, Darcy

Roofing spent \$60,000 refurbishing the lift. It has just determined that another \$40,000 of repair work is required. Alternatively, it has found a newer used lift that is for sale for \$170,000. The company estimates that both lifts would have useful lives of 6 years. The new lift is more efficient and thus would reduce operating expenses by about \$20,000 per year. Darcy Roofing could also rent out the new lift for about \$10,000 per year. The old lift is not suitable for rental. The old lift could currently be sold for \$25,000 if the new lift is purchased. Prepare an incremental analysis showing whether the company should repair or replace the equipment.

DO IT! 23.6 (LO 6) Gator Corporation manufactures several types of accessories. For the year, the gloves and mittens line had sales of \$500,000, variable expenses of \$370,000, and fixed expenses of \$150,000. Therefore, the gloves and mittens line had a net loss of \$20,000. If Gator eliminates the line, \$38,000 of fixed costs will remain. Prepare an analysis showing whether the company should eliminate the gloves and mittens line.

Analyze whether to eliminate unprofitable segment.

Exercises

E23.1 (LO 1) As a study aid, your classmate Pascal Adams has prepared the following list of statements about decision-making and incremental analysis.

Analyze statements about decision-making and incremental analysis.

1. The first step in management's decision-making process is, "Determine and evaluate possible courses of action."
2. The final step in management's decision-making process is to actually make the decision.
3. Accounting's contribution to management's decision-making process occurs primarily in evaluating possible courses of action and in reviewing the results.
4. In making business decisions, management ordinarily considers only financial information because it is objectively determined.
5. Decisions involve a choice among alternative courses of action.
6. The process used to identify the financial data that change under alternative courses of action is called incremental analysis.
7. Costs that are the same under all alternative courses of action sometimes affect the decision.
8. When using incremental analysis, some costs will always change under alternative courses of action, but revenues will not.
9. Variable costs will change under alternative courses of action, but fixed costs will not.

Instructions

Identify each statement as true or false. If false, indicate how to correct the statement.

E23.2 (LO 2) Gruden Company produces golf discs which it normally sells to retailers for \$7 each. The cost of manufacturing 20,000 golf discs is:

Use incremental analysis for special-order decision.

Materials	\$ 10,000
Labor	30,000
Variable overhead	20,000
Fixed overhead	40,000
Total	<u><u>\$100,000</u></u>

Gruden also incurs 5% sales commission (\$0.35) on each disc sold.

McGee Corporation offers Gruden \$4.80 per disc for 5,000 discs. McGee would sell the discs under its own brand name in foreign markets not yet served by Gruden. If Gruden accepts the offer, its fixed overhead will increase from \$40,000 to \$46,000 due to the purchase of a new imprinting machine. No sales commission will result from the special order.

Instructions

- Prepare an incremental analysis for the special order.
- Should Gruden accept the special order? Why or why not?
- What assumptions underlie the decision made in part (b)?

Use incremental analysis for special order.

E23.3 (LO 2) Moonbeam Company manufactures toasters. For the first 8 months of 2020, the company reported the following operating results while operating at 75% of plant capacity:

Sales (350,000 units)	\$4,375,000
Cost of goods sold	2,600,000
Gross profit	1,775,000
Operating expenses	840,000
Net income	<u><u>\$ 935,000</u></u>

Cost of goods sold was 70% variable and 30% fixed; operating expenses were 80% variable and 20% fixed.

In September, Moonbeam receives a special order for 15,000 toasters at \$7.60 each from Luna Company of Ciudad Juarez. Acceptance of the order would result in an additional \$3,000 of shipping costs but no increase in fixed costs.

Instructions

- Prepare an incremental analysis for the special order.
- Should Moonbeam accept the special order? Why or why not?

Use incremental analysis for special order.

E23.4 (LO 2) Klean Fiber Company is the creator of Y-Go, a technology that weaves silver into its fabrics to kill bacteria and odor on clothing while managing heat. Y-Go has become very popular in undergarments for sports activities. Operating at capacity, the company can produce 1,000,000 Y-Go undergarments a year. The per unit and the total costs for an individual garment when the company operates at full capacity are as follows.

	Per Undergarment	Total
Direct materials	\$2.00	\$2,000,000
Direct labor	0.75	750,000
Variable manufacturing overhead	1.00	1,000,000
Fixed manufacturing overhead	1.50	1,500,000
Variable selling expenses	0.25	250,000
Totals	\$5.50	\$5,500,000

The U.S. Army has approached Klean Fiber and expressed an interest in purchasing 250,000 Y-Go undergarments for soldiers in extremely warm climates. The Army would pay the unit cost for direct materials, direct labor, and variable manufacturing overhead costs. In addition, the Army has agreed to pay an additional \$1 per undergarment to cover all other costs and provide a profit. Presently, Klean Fiber is operating at 70% capacity and does not have any other potential buyers for Y-Go. If Klean Fiber accepts the Army's offer, it will not incur any variable selling expenses related to this order.

Instructions

Using incremental analysis, determine whether Klean Fiber should accept the Army's offer.

Use incremental analysis for make-or-buy decision.

E23.5 (LO 3) Pottery Ranch Inc. has been manufacturing its own finials for its curtain rods. The company is currently operating at 100% of capacity, and variable manufacturing overhead is charged to production at the rate of 70% of direct labor cost. The direct materials and direct labor cost per unit to make a pair of finials are \$4 and \$5, respectively. Normal production is 30,000 curtain rods per year.

A supplier offers to make a pair of finials at a price of \$12.95 per unit. If Pottery Ranch accepts the supplier's offer, all variable manufacturing costs will be eliminated, but the \$45,000 of fixed manufacturing overhead currently being charged to the finials will have to be absorbed by other products.

Instructions

- Prepare the incremental analysis for the decision to make or buy the finials.
- Should Pottery Ranch buy the finials?
- Would your answer be different in (b) if the productive capacity released by not making the finials could be used to produce income of \$20,000?

Use incremental analysis for make-or-buy decision.

E23.6 (LO 3) Jobs, Inc. has recently started the manufacture of Tri-Robo, a three-wheeled robot that can scan a home for fires and gas leaks and then transmit this information to a smartphone. The cost structure to manufacture 20,000 Tri-Robos is as follows.

	<u>Cost</u>
Direct materials (\$50 per robot)	\$1,000,000
Direct labor (\$40 per robot)	800,000
Variable overhead (\$6 per robot)	120,000
Allocated fixed overhead (\$30 per robot)	600,000
Total	<u>\$2,520,000</u>

Jobs is approached by Tienh Inc., which offers to make Tri-Robo for \$115 per unit or \$2,300,000.

Instructions

- a. Using incremental analysis, determine whether Jobs should accept this offer under each of the following independent assumptions.
 - 1. Assume that \$405,000 of the fixed overhead cost can be avoided.
 - 2. Assume that none of the fixed overhead can be avoided. However, if the robots are purchased from Tienh Inc., Jobs can use the released productive resources to generate additional income of \$375,000.
- b. Describe the qualitative factors that might affect the decision to purchase the robots from an outside supplier.

E23.7 (LO 3) Riggs Company purchases sails and produces sailboats. It currently produces 1,200 sailboats per year, operating at normal capacity, which is about 80% of full capacity. Riggs purchases sails at \$250 each, but the company is considering using the excess capacity to manufacture the sails instead. The manufacturing cost per sail would be \$100 for direct materials, \$80 for direct labor, and \$90 for overhead. The \$90 overhead is based on \$78,000 of annual fixed overhead that is allocated using normal capacity.

The president of Riggs has come to you for advice. "It would cost me \$270 to make the sails," she says, "but only \$250 to buy them. Should I continue buying them, or have I missed something?"

Prepare incremental analysis for make-or-buy decision.

Instructions

- a. Prepare a per unit analysis of the differential costs. Briefly explain whether Riggs should make or buy the sails.
- b. If Riggs suddenly finds an opportunity to rent out the unused capacity of its factory for \$77,000 per year, would your answer to part (a) change? Briefly explain.
- c. Identify three qualitative factors that should be considered by Riggs in this make-or-buy decision.

(CGA adapted)

E23.8 (LO 3) Innova uses 1,000 units of the component IMC2 every month to manufacture one of its products. The unit costs incurred to manufacture the component are as follows.

Direct materials	\$ 65.00
Direct labor	45.00
Overhead	126.50
Total	<u>\$236.50</u>

Overhead costs include variable material handling costs of \$6.50, which are applied to products on the basis of direct material costs. The remainder of the overhead costs are applied on the basis of direct labor dollars and consist of 60% variable costs and 40% fixed costs.

A vendor has offered to supply the IMC2 component at a price of \$200 per unit.

Prepare incremental analysis concerning make-or-buy decision.

Instructions

- a. Should Innova purchase the component from the outside vendor if Innova's capacity remains idle?
- b. Should Innova purchase the component from the outside vendor if it can use its facilities to manufacture another product? What information will Innova need to make an accurate decision? Show your calculations.
- c. What are the qualitative factors that Innova will have to consider when making this decision?

(CGA adapted)

E23.9 (LO 4) Anna Garden recently opened her own basketweaving studio. She sells finished baskets in addition to selling the raw materials needed by customers to weave baskets of their own. Unfortunately, owing to space limitations, Anna is unable to carry all varieties of kits originally assembled and must choose between two basic packages.

Use incremental analysis for further processing of materials decision.

The Basic Kit includes undyed, uncut reeds (with dye included) for weaving one basket. This basic package costs Anna \$16 and sells for \$30. The second kit, called Stage 2, includes cut reeds that have already been dyed. With this kit the customer need only soak the reeds and weave the basket. Anna produces the Stage 2 kit by using the materials included in the Basic Kit. Because she is more efficient at cutting and dyeing reeds than her average customer, Anna is able to produce two Stage 2 kits in one hour from one Basic Kit. (She values her time at \$18 per hour.) The Stage 2 kit sells for \$36.

Instructions

Determine whether Anna's basketweaving studio should carry the Basic Kit with undyed and uncut reeds or the Stage 2 kit with reeds already dyed and cut. Prepare an incremental analysis to support your answer.

Determine whether to sell or process further, joint products.

E23.10 (LO 4) Stahl Inc. produces three separate products from a common process costing \$100,000. Each of the products can be sold at the split-off point or can be processed further and then sold for a higher price. Shown below are cost and selling price data for a recent period.

	Sales Value at Split-Off Point	Cost to Process Further	Sales Value after Further Processing
Product 10	\$60,000	\$100,000	\$190,000
Product 12	15,000	30,000	35,000
Product 14	55,000	150,000	215,000

Instructions

- Determine total net income if all products are sold at the split-off point.
- Determine total net income if all products are sold after further processing.
- Using incremental analysis, determine which products should be sold at the split-off point and which should be processed further.
- Determine total net income using the results from (c) and explain why the net income is different from that determined in (b).

Determine whether to sell or process further, joint products.

E23.11 (LO 4) Kirk Minerals processes materials extracted from mines. The most common raw material that it processes results in three joint products: Spock, Uhura, and Sulu. Each of these products can be sold as is, or each can be processed further and sold for a higher price. The company incurs joint costs of \$180,000 to process one batch of the raw material that produces the three joint products. The following cost and sales information is available for one batch of each product.

	Sales Value at Split-Off Point	Allocated Joint Costs	Cost to Process Further	Sales Value of Processed Product
Spock	\$210,000	\$40,000	\$110,000	\$300,000
Uhura	300,000	60,000	85,000	400,000
Sulu	455,000	80,000	250,000	800,000

Instructions

Determine whether each of the three joint products should be sold as is, or processed further.

Prepare incremental analysis for whether to sell or process materials further.

E23.12 (LO 4) A company manufactures three products using the same production process. The costs incurred up to the split-off point are \$200,000. These costs are allocated to the products on the basis of their sales value at the split-off point. The number of units produced, the selling prices per unit of the three products at the split-off point and after further processing, and the additional processing costs are as follows.

Product	Number of Units Produced	Selling Price at Split-Off	Selling Price after Processing	Additional Processing Costs
D	4,000	\$10.00	\$15.00	\$14,000
E	6,000	11.60	16.20	20,000
F	2,000	19.40	22.60	9,000

Instructions

- Which information is relevant to the decision on whether or not to process the products further? Explain why this information is relevant.

- b. Which product(s) should be processed further and which should be sold at the split-off point?
- c. Would your decision be different if the company was using the quantity of output to allocate joint costs? Explain.

(CGA adapted)

E23.13 (LO 5) Service On January 2, 2019, Twilight Hospital purchased a \$100,000 special radiology scanner from Bella Inc. The scanner had a useful life of 4 years and was estimated to have no disposal value at the end of its useful life. The straight-line method of depreciation is used on this scanner. Annual operating costs with this scanner are \$105,000.

Use incremental analysis for retaining or replacing equipment decision.

Approximately one year later, the hospital is approached by Dyno Technology salesperson, Jacob Cullen, who indicated that purchasing the scanner in 2019 from Bella Inc. was a mistake. He points out that Dyno has a scanner that will save Twilight Hospital \$25,000 a year in operating expenses over its 3-year useful life. Jacob notes that the new scanner will cost \$110,000 and has the same capabilities as the scanner purchased last year. The hospital agrees that both scanners are of equal quality. The new scanner will have no disposal value. Jacob agrees to buy the old scanner from Twilight Hospital for \$50,000.

Instructions

- a. If Twilight Hospital sells its old scanner on January 2, 2020, compute the gain or loss on the sale.
- b. Using incremental analysis, determine if Twilight Hospital should purchase the new scanner on January 2, 2020.
- c. Explain why Twilight Hospital might be reluctant to purchase the new scanner, regardless of the results indicated by the incremental analysis in (b).

E23.14 (LO 5) Johnson Enterprises uses a computer to handle its sales invoices. Lately, business has been so good that it takes an extra 3 hours per night, plus every third Saturday, to keep up with the volume of sales invoices. Management is considering updating its computer with a faster model that would eliminate all of the overtime processing.

Use incremental analysis for retaining or replacing equipment decision.

	Current Machine	New Machine
Original purchase cost	\$15,000	\$25,000
Accumulated depreciation	\$ 6,000	—
Estimated annual operating costs	\$25,000	\$20,000
Remaining useful life	5 years	5 years

If sold now, the current machine would have a salvage value of \$6,000. If operated for the remainder of its useful life, the current machine would have zero salvage value. The new machine is expected to have zero salvage value after 5 years.

Instructions

Prepare an incremental analysis to determine whether the current machine should be replaced.

E23.15 (LO 6) Veronica Mars, a recent graduate of Bell's accounting program, evaluated the operating performance of Dunn Company's six divisions. Veronica made the following presentation to Dunn's board of directors and suggested the Percy Division be eliminated. "If the Percy Division is eliminated," she said, "our total profits would increase by \$26,000."

Use incremental analysis concerning elimination of division.

	The Other	Percy	Total
	Five Divisions	Division	
Sales	\$1,664,200	\$100,000	\$1,764,200
Cost of goods sold	<u>978,520</u>	<u>76,000</u>	<u>1,054,520</u>
Gross profit	685,680	24,000	709,680
Operating expenses	<u>527,940</u>	<u>50,000</u>	<u>577,940</u>
Net income	<u><u>\$ 157,740</u></u>	<u><u>(\$ 26,000)</u></u>	<u><u>\$ 131,740</u></u>

In the Percy Division, cost of goods sold is \$61,000 variable and \$15,000 fixed, and operating expenses are \$30,000 variable and \$20,000 fixed. None of the Percy Division's fixed costs will be eliminated if the division is discontinued.

Instructions

Is Veronica right about eliminating the Percy Division? Prepare a schedule to support your answer.

Use incremental analysis for elimination of a product line.

E23.16 (LO 6) Cawley Company makes three models of tasers. Information on the three products is given below.

	Tingler	Shocker	Stunner
Sales	\$300,000	\$500,000	\$200,000
Variable expenses	150,000	200,000	145,000
Contribution margin	150,000	300,000	55,000
Fixed expenses	120,000	230,000	95,000
Net income	\$ 30,000	\$ 70,000	\$ (40,000)

Fixed expenses consist of \$300,000 of common costs allocated to the three products based on relative sales, as well as direct fixed expenses unique to each model of \$30,000 (Tingler), \$80,000 (Shocker), and \$35,000 (Stunner). The common costs will be incurred regardless of how many models are produced. The direct fixed expenses would be eliminated if that model is phased out.

James Watt, an executive with the company, feels the Stunner line should be discontinued to increase the company's net income.

Instructions

- Compute current net income for Cawley Company.
- Compute net income by product line and in total for Cawley Company if the company discontinues the Stunner product line. (*Hint:* Allocate the \$300,000 common costs to the two remaining product lines based on their relative sales.)
- Should Cawley eliminate the Stunner product line? Why or why not?

Prepare incremental analysis concerning keeping or dropping a product to maximize operating income.

E23.17 (LO 6) Tharp Company operates a small factory in which it manufactures two products: C and D. Production and sales results for last year were as follows.

	C	D
Units sold	9,000	20,000
Selling price per unit	\$95	\$75
Variable cost per unit	50	40
Fixed cost per unit	24	24

For purposes of simplicity, the firm averages total fixed costs over the total number of units of C and D produced and sold.

The research department has developed a new product (E) as a replacement for product D. Market studies show that Tharp Company could sell 10,000 units of E next year at a price of \$115; the variable cost per unit of E is \$45. The introduction of product E will lead to a 10% increase in demand for product C and discontinuation of product D. If the company does not introduce the new product, it expects next year's results to be the same as last year's.

Instructions

Should Tharp Company introduce product E next year? Explain why or why not. Show calculations to support your decision.

(CMA-Canada adapted)

Identify relevant costs for different decisions.

E23.18 (LO 1, 2, 3, 4, 5, 6) The costs listed below relate to a variety of different decision situations.

Cost	Decision
1. Unavoidable fixed overhead	Eliminate an unprofitable segment
2. Direct labor	Make or buy
3. Original cost of old equipment	Equipment replacement
4. Joint production costs	Sell or process further
5. Opportunity cost	Accepting a special order
6. Segment manager's salary	Eliminate an unprofitable segment (manager will be terminated)
7. Cost of new equipment	Equipment replacement
8. Incremental production costs	Sell or process further
9. Direct materials	Equipment replacement (the amount of materials required does not change)
10. Rent expense	Purchase or lease a building

Instructions

For each cost listed above, indicate if it is relevant or not to the related decision. For those costs determined to be irrelevant, briefly explain why.

Problems: Set A

P23.1A (LO 2) Writing ThreePoint Sports Inc. manufactures basketballs for the Women's National Basketball Association (WNBA). For the first 6 months of 2020, the company reported the following operating results while operating at 80% of plant capacity and producing 120,000 units.

Use incremental analysis for special order and identify nonfinancial factors in the decision.

	<u>Amount</u>
Sales	\$4,800,000
Cost of goods sold	3,600,000
Selling and administrative expenses	<u>405,000</u>
Net income	<u><u>\$ 795,000</u></u>

Fixed costs for the period were cost of goods sold \$960,000, and selling and administrative expenses \$225,000.

In July, normally a slack manufacturing month, ThreePoint Sports receives a special order for 10,000 basketballs at \$28 each from the Greek Basketball Association (GBA). Acceptance of the order would increase variable selling and administrative expenses \$0.75 per unit because of shipping costs but would not increase fixed costs and expenses.

Instructions

- a. Prepare an incremental analysis for the special order.
- b. Should ThreePoint Sports Inc. accept the special order? Explain your answer.
- c. What is the minimum selling price on the special order to produce net income of \$5.00 per ball?
- d. What nonfinancial factors should management consider in making its decision?

a. NI increase \$37,500

P23.2A (LO 3) Writing The management of Shatner Manufacturing Company is trying to decide whether to continue manufacturing a part or to buy it from an outside supplier. The part, called CISCO, is a component of the company's finished product.

Use incremental analysis related to make or buy, consider opportunity cost, and identify nonfinancial factors.

The following information was collected from the accounting records and production data for the year ending December 31, 2020.

1. 8,000 units of CISCO were produced in the Machining Department.
2. Variable manufacturing costs applicable to the production of each CISCO unit were: direct materials \$4.80, direct labor \$4.30, indirect labor \$0.43, utilities \$0.40.
3. Fixed manufacturing costs applicable to the production of CISCO were:

<u>Cost Item</u>	<u>Direct</u>	<u>Allocated</u>
Depreciation	\$2,100	\$ 900
Property taxes	500	200
Insurance	900	600
	<u><u>\$3,500</u></u>	<u><u>\$1,700</u></u>

All variable manufacturing and direct fixed costs will be eliminated if CISCO is purchased. Allocated costs will not be eliminated if CISCO is purchased. So if CISCO is purchased, the fixed manufacturing costs allocated to CISCO will have to be absorbed by other production departments.

4. The lowest quotation for 8,000 CISCO units from a supplier is \$80,000.
5. If CISCO units are purchased, freight and inspection costs would be \$0.35 per unit, and receiving costs totaling \$1,300 per year would be incurred by the Machining Department.

- a. NI (decrease) \$(1,160)
- c. NI increase \$1,840

Determine if product should be sold or processed further.

Instructions

- Prepare an incremental analysis for CISCO. Your analysis should have columns for (1) Make CISCO, (2) Buy CISCO, and (3) Net Income Increase/(Decrease).
- Based on your analysis, what decision should management make?
- Would the decision be different if Shatner Company has the opportunity to produce \$3,000 of net income with the facilities currently being used to manufacture CISCO? Show computations.
- What nonfinancial factors should management consider in making its decision?

P23.3A (LO 4) Thompson Industrial Products Inc. (TIPI) is a diversified industrial-cleaner processing company. The company's Dargan plant produces two products: a table cleaner and a floor cleaner from a common set of chemical inputs (CDG). Each week, 900,000 ounces of chemical input are processed at a cost of \$210,000 into 600,000 ounces of floor cleaner and 300,000 ounces of table cleaner. The floor cleaner has no market value until it is converted into a polish with the trade name FloorShine. The additional processing costs for this conversion amount to \$240,000.

FloorShine sells at \$20 per 30-ounce bottle. The table cleaner can be sold for \$17 per 25-ounce bottle. However, the table cleaner can be converted into two other products by adding 300,000 ounces of another compound (TCP) to the 300,000 ounces of table cleaner. This joint process will yield 300,000 ounces each of table stain remover (TSR) and table polish (TP). The additional processing costs for this process amount to \$100,000. Both table products can be sold for \$14 per 25-ounce bottle.

The company decided not to process the table cleaner into TSR and TP based on the following analysis.

	Process Further			
	Table Cleaner	Table Stain Remover (TSR)	Table Polish (TP)	Total
Production in ounces	300,000	300,000	300,000	
Revenues	\$204,000	\$168,000	\$168,000	\$336,000
Costs:				
CDG costs	70,000*	52,500	52,500	105,000**
TCP costs	0	50,000	50,000	100,000
Total costs	70,000	102,500	102,500	205,000
Weekly gross profit	\$134,000	\$ 65,500	\$ 65,500	\$131,000

*If table cleaner is not processed further, it is allocated 1/3 of the \$210,000 of CDG cost, which is equal to 1/3 of the total physical output.

**If table cleaner is processed further, total physical output is 1,200,000 ounces. TSR and TP combined account for 50% of the total physical output and are each allocated 25% of the CDG cost.

Instructions

- Determine if management made the correct decision to not process the table cleaner further by doing the following.
 - Calculate the company's total weekly gross profit assuming the table cleaner is not processed further.
 - Calculate the company's total weekly gross profit assuming the table cleaner is processed further.
 - Compare the resulting net incomes and comment on management's decision.
- Using incremental analysis, determine if the table cleaner should be processed further.

(CMA adapted)

Compute gain or loss, and determine if equipment should be replaced.

P23.4A (LO 5) Service Writing At the beginning of last year (2019), Richter Condos installed a mechanized elevator for its tenants. The owner of the company, Ron Richter, recently returned from an industry equipment exhibition where he watched a computerized elevator demonstrated. He was impressed with the elevator's speed, comfort of ride, and cost efficiency. Upon returning from the exhibition, he asked his purchasing agent to collect price and operating cost data on the new elevator. In addition, he asked

the company's accountant to provide him with cost data on the company's elevator. This information is presented below.

	<u>Old Elevator</u>	<u>New Elevator</u>
Purchase price	\$120,000	\$160,000
Estimated salvage value	0	0
Estimated useful life	5 years	4 years
Depreciation method	Straight-line	Straight-line
Annual operating costs other than depreciation:		
Variable	\$ 35,000	\$ 10,000
Fixed	23,000	8,500

Annual revenues are \$240,000, and selling and administrative expenses are \$29,000, regardless of which elevator is used. If the old elevator is replaced now, at the beginning of 2020, Richter Condos will be able to sell it for \$25,000.

Instructions

- Determine any gain or loss if the old elevator is replaced.
- Prepare a 4-year summarized income statement for each of the following assumptions:
 1. The old elevator is retained.
 2. The old elevator is replaced.
 - Using incremental analysis, determine if the old elevator should be replaced.
 - Write a memo to Ron Richter explaining why any gain or loss should be ignored in the decision to replace the old elevator.

P23.5A (LO 6) Brislin Company has four operating divisions. During the first quarter of 2020, the company reported aggregate income from operations of \$213,000 and the following divisional results.

Prepare incremental analysis concerning elimination of divisions.

	<u>Division</u>			
	<u>I</u>	<u>II</u>	<u>III</u>	<u>IV</u>
Sales	\$250,000	\$200,000	\$500,000	\$450,000
Cost of goods sold	200,000	192,000	300,000	250,000
Selling and administrative expenses	75,000	60,000	60,000	50,000
Income (loss) from operations	<u><u>\$ (25,000)</u></u>	<u><u>\$ (52,000)</u></u>	<u><u>\$140,000</u></u>	<u><u>\$150,000</u></u>

Analysis reveals the following percentages of variable costs in each division.

	<u>I</u>	<u>II</u>	<u>III</u>	<u>IV</u>
Cost of goods sold	70%	90%	80%	75%
Selling and administrative expenses	40	60	50	60

Discontinuance of any division would save 50% of the fixed costs and expenses for that division.

Top management is very concerned about the unprofitable divisions (I and II). Consensus is that one or both of the divisions should be discontinued.

Instructions

- Compute the contribution margin for Divisions I and II.
- Prepare an incremental analysis concerning the possible discontinuance of (1) Division I and (2) Division II. What course of action do you recommend for each division?
- Prepare a columnar condensed income statement for Brislin Company, assuming Division II is eliminated. (Use the CVP format.) Division II's unavoidable fixed costs are allocated equally to the continuing divisions.
- Reconcile the total income from operations (\$213,000) with the total income from operations without Division II.
- Contribution margin I \$80,000
- Income III \$132,800

Continuing Cases

Current Designs

CD23 Current Designs faces a number of important decisions that require incremental analysis. Consider each of the following situations independently.

Situation 1

Recently, Mike Cichanowski, owner and CEO of Current Designs, received a phone call from the president of a brewing company. He was calling to inquire about the possibility of Current Designs producing “floating coolers” for a promotion his company was planning. These coolers resemble a kayak but are about one-third the size. They are used to float food and beverages while paddling down the river on a weekend leisure trip. The company would be interested in purchasing 100 coolers for the upcoming summer. It is willing to pay \$250 per cooler. The brewing company would pick up the coolers upon completion of the order.

Mike met with Diane Buswell, controller, to identify how much it would cost Current Designs to produce the coolers. After careful analysis, the following costs were identified.

Direct materials	\$80/unit	Variable overhead	\$20/unit
Direct labor	\$60/unit	Fixed overhead	\$1,000

Current Designs would be able to modify an existing mold to produce the coolers. The cost of these modifications would be approximately \$2,000.

Instructions

- Prepare an incremental analysis to determine whether Current Designs should accept this special order to produce the coolers.
- Discuss additional factors that Mike and Diane should consider if Current Designs is currently operating at full capacity.

Situation 2

Current Designs is always working to identify ways to increase efficiency while becoming more environmentally conscious. During a recent brainstorming session, one employee suggested to Diane Buswell, controller, that the company should consider replacing the current rotomold oven as a way to realize savings from reduced energy consumption. The oven operates on natural gas, using 17,000 therms of natural gas for an entire year. A new, energy-efficient rotomold oven would operate on 15,000 therms of natural gas for an entire year. After seeking out price quotes from a few suppliers, Diane determined that it would cost approximately \$250,000 to purchase a new, energy-efficient rotomold oven. She determines that the expected useful life of the new oven would be 10 years, and it would have no salvage value at the end of its useful life. Current Designs would be able to sell the current oven for \$10,000.

Instructions

- Prepare an incremental analysis to determine if Current Designs should purchase the new rotomold oven, assuming that the average price for natural gas over the next 10 years will be \$0.65 per therm.
- Diane is concerned that natural gas prices might increase at a faster rate over the next 10 years. If the company projects that the average natural gas price of the next 10 years could be as high as \$0.85 per therm, discuss how that might change your conclusion in (a).

Situation 3

One of Current Designs’ competitive advantages is found in the ingenuity of its owner and CEO, Mike Cichanowski. His involvement in the design of kayak molds and production techniques has led to Current Designs being recognized as an industry leader in the design and production of kayaks. This ingenuity was evident in an improved design of one of the most important components of a kayak, the seat. The “Revolution Seating System” is a one-of-a-kind, rotating axis seat that gives unmatched, full-contact, under-leg support. It is quickly adjustable with a lever-lock system that allows for a customizable seat position that maximizes comfort for the rider.

Having just designed the “Revolution Seating System,” Current Designs must now decide whether to produce the seats internally or buy them from an outside supplier. The costs for Current Designs to produce the seats are as follows.

Direct materials	\$20/unit	Direct labor	\$15/unit
Variable overhead	\$12/unit	Fixed overhead	\$20,000

Current Designs will need to produce 3,000 seats this year; 25% of the fixed overhead will be avoided if the seats are purchased from an outside vendor. After soliciting prices from outside suppliers, the company determined that it will cost \$50 to purchase a seat from an outside vendor.

Instructions

- a. Prepare an incremental analysis showing whether Current Designs should make or buy the “Revolution Seating System.”
- b. Would your answer in (a) change if the productive capacity released by not making the seats could be used to produce income of \$20,000?

Waterways

(Note: This is a continuation of the Waterways case from Chapters 19–22.)

WP23 Waterways Corporation is considering various business opportunities. It wants to make the best use of its production facilities to maximize income. This problem asks you to help Waterways do incremental analysis on these various opportunities.

Go to **WileyPLUS** for complete case details and instructions.

Expand Your Critical Thinking

Decision-Making Across the Organization

CT23.1 Aurora Company is considering the purchase of a new machine. The invoice price of the machine is \$140,000, freight charges are estimated to be \$4,000, and installation costs are expected to be \$6,000. Salvage value of the new equipment is expected to be zero after a useful life of 5 years. Existing equipment could be retained and used for an additional 5 years if the new machine is not purchased. At that time, the salvage value of the equipment would be zero. If the new machine is purchased now, the existing machine would have to be scrapped. Aurora's accountant, Lisah Huang, has accumulated the following data regarding annual sales and expenses with and without the new machine.

1. Without the new machine, Aurora can sell 12,000 units of product annually at a per unit selling price of \$100. If the new machine is purchased, the number of units produced and sold would increase by 10%, and the selling price would remain the same.
2. The new machine is faster than the old machine, and it is more efficient in its usage of materials. With the old machine the gross profit rate will be 25% of sales, whereas the rate will be 30% of sales with the new machine.
3. Annual selling expenses are \$180,000 with the current equipment. Because the new equipment would produce a greater number of units to be sold, annual selling expenses are expected to increase by 10% if it is purchased.
4. Annual administrative expenses are expected to be \$100,000 with the old machine, and \$113,000 with the new machine.
5. The current book value of the existing machine is \$36,000. Aurora uses straight-line depreciation.

Instructions

With the class divided into groups, prepare an incremental analysis for the 5 years showing whether Aurora should keep the existing machine or buy the new machine. (Ignore income tax effects.)

Managerial Analysis

CT23.2 MiniTek manufactures private-label small electronic products, such as alarm clocks, calculators, kitchen timers, stopwatches, and automatic pencil sharpeners. Some of the products are sold as sets, and others are sold individually. Products are studied as to their sales potential, and then cost estimates are made. The Engineering Department develops production plans, and then production begins. The company has generally had very successful product introductions. Only two products introduced by the company have been discontinued.

One of the products currently sold is a multi-alarm clock. The clock has four alarms that can be programmed to sound at various times and for varying lengths of time. The company has experienced

a great deal of difficulty in making the circuit boards for the clocks. The production process has never operated smoothly. The product is unprofitable at the present time, primarily because of warranty repairs and product recalls. Two models of the clocks were recalled, for example, because they sometimes caused an electric shock when the alarms were being shut off. The Engineering Department is attempting to revise the manufacturing process, but the revision will take another 6 months at least.

The clocks were very popular when they were introduced, and since they are private-label, the company has not suffered much from the recalls. Presently, the company has a very large order for several items from **Kmart Stores**. The order includes 5,000 of the multi-alarm clocks. When the company suggested that Kmart purchase the clocks from another manufacturer, Kmart threatened to rescind the entire order unless the clocks were included.

The company has therefore investigated the possibility of having another company make the clocks for them. The clocks were bid for the Kmart order based on an estimated \$6.90 cost to manufacture:

Circuit board, 1 each @ \$2.00	\$2.00
Plastic case, 1 each @ \$0.80	0.80
Alarms, 4 @ \$0.15 each	0.60
Labor, 15 minutes @ \$12/hour	3.00
Overhead, \$2.00 per labor hour	0.50

MiniTek could purchase clocks to fill the Kmart order for \$10 from Trans-Tech Asia, a Korean manufacturer with a very good quality record. Trans-Tech has offered to reduce the price to \$7.50 after MiniTek has been a customer for 6 months, placing an order of at least 1,000 units per month. If MiniTek becomes a “preferred customer” by purchasing 15,000 units per year, the price would be reduced still further to \$4.50.

Omega Products, a local manufacturer, has also offered to make clocks for MiniTek. They have offered to sell 5,000 clocks for \$5 each. However, Omega Products has been in business for only 6 months. They have experienced significant turnover in their labor force, and the local press has reported that the owners may face tax evasion charges soon. The owner of Omega Products is an electronic engineer, however, and the quality of the clocks is likely to be good.

If MiniTek decides to purchase the clocks from either Trans-Tech or Omega, all the costs to manufacture could be avoided, except a total of \$1,000 in overhead costs for machine depreciation. The machinery is fairly new, and has no alternate use.

Instructions

- What is the difference in profit under each of the alternatives if the clocks are to be sold for \$14.50 each to Kmart?
- What are the most important nonfinancial factors that MiniTek should consider when making this decision?
- What do you think MiniTek should do in regard to the Kmart order? What should it do in regard to continuing to manufacture the multi-alarm clocks? Be prepared to defend your answer.

Real-World Focus

CT23.3 Founded in 1983 and foreclosed in 1996 **Beverly Hills Fan Company** was located in Woodland Hills, California. With 23 employees and sales of less than \$10 million, the company was relatively small. Management felt that there was potential for growth in the upscale market for ceiling fans and lighting. They were particularly optimistic about growth in Mexican and Canadian markets.

Presented below is information from the president's letter in one of the company's last annual reports.

Beverly Hills Fan Company President's Letter

An aggressive product development program was initiated during the past year resulting in new ceiling fan models planned for introduction this year. Award winning industrial designer Ron Rezek created several new fan models for the Beverly Hills Fan and L.A. Fan lines, including a new Showroom Collection, designed specifically for the architectural and designer markets. Each of these models has received critical acclaim, and order commitments for this year have been outstanding. Additionally, our Custom Color and special order fans continued to enjoy increasing popularity and sales gains as more and more customers desire fans that match their specific interior decors. Currently, Beverly Hills Fan Company offers a product line of over 100 models of contemporary, traditional, and transitional ceiling fans.

Instructions

- a. What points did the company management need to consider before deciding to offer the special-order fans to customers?
- b. How would have incremental analysis been employed to assist in this decision?

Communication Activity

CT23.4 Hank Jewell is a production manager at a metal fabricating plant. Last night, he read an article about a new piece of equipment that would dramatically reduce his division's costs. Hank was very excited about the prospect, and the first thing he did this morning was to bring the article to his supervisor, Preston Thiese, the plant manager. The following conversation occurred:

- Hank: Preston, I thought you would like to see this article on the new PDD1130; they've made some fantastic changes that could save us millions of dollars.
- Preston: I appreciate your interest, Hank, but I actually have been aware of the new machine for two months. The problem is that we just bought a new machine last year. We spent \$2 million on that machine, and it was supposed to last us 12 years. If we replace it now, we would have to write its book value off of the books for a huge loss. If I go to top management now and say that I want a new machine, they will fire me. I think we should use our existing machine for a couple of years, and then when it becomes obvious that we have to have a new machine, I will make the proposal.

Instructions

Hank just completed a course in managerial accounting, and he believes that Preston is making a big mistake. Write a memo from Hank to Preston explaining Preston's decision-making error.

Ethics Case

CT23.5 Blake Romney became Chief Executive Officer of Peters Inc. two years ago. At the time, the company was reporting lagging profits, and Blake was brought in to "stir things up." The company has three divisions, electronics, fiber optics, and plumbing supplies. Blake has no interest in plumbing supplies, and one of the first things he did was to put pressure on his accountants to reallocate some of the company's fixed costs away from the other two divisions to the plumbing division. This had the effect of causing the plumbing division to report losses during the last two years; in the past it had always reported low, but acceptable, net income. Blake felt that this reallocation would shine a favorable light on him in front of the board of directors because it meant that the electronics and fiber optics divisions would look like they were improving. Given that these are "businesses of the future," he believed that the stock market would react favorably to these increases, while not penalizing the poor results of the plumbing division. Without this shift in the allocation of fixed costs, the profits of the electronics and fiber optics divisions would not have improved. But now the board of directors has suggested that the plumbing division be closed because it is reporting losses. This would mean that nearly 500 employees, many of whom have worked for Peters their whole lives, would lose their jobs.

Instructions

- a. If a division is reporting losses, does that necessarily mean that it should be closed?
- b. Was the reallocation of fixed costs across divisions unethical?
- c. What should Blake do?

All About You

CT23.6 Managerial accounting techniques can be used in a wide variety of settings. As we have frequently pointed out, you can use them in many personal situations. They also can be useful in trying to find solutions for societal issues that appear to be hard to solve.

Instructions

Read the *Fortune* article, "The Toughest Customers: How Hardheaded Business Metrics Can Help the Hard-Core Homeless," by Cait Murphy (do an Internet search on the title), and then answer the following questions.

- a. How does the article define "chronic" homelessness?
- b. In what ways does homelessness cost a city money? What are the estimated costs of a chronic homeless person to various cities?

- c. What are the steps suggested to address the problem?
- d. What is the estimated cost of implementing this program in New York? What results have been seen?
- e. In terms of incremental analysis, frame the relevant costs in this situation.

Considering Your Costs and Benefits

CT23.7 School costs money. Is this an expenditure that you should have avoided? A year of tuition at a public four-year college costs about \$8,655, and a year of tuition at a public two-year college costs about \$1,359. If you did not go to college, you might avoid mountains of school-related debt. In fact, each year, about 600,000 students decide to drop out of school. Many of them never return. Suppose that you are working two jobs and going to college, and that you are not making ends meet. Your grades are suffering due to your lack of available study time. You feel depressed. Should you drop out of school?

YES: You can always go back to school. If your grades are bad and you are depressed, what good is school doing you anyway?

NO: Once you drop out, it is very hard to get enough momentum to go back. Dropping out will dramatically reduce your long-term opportunities. It is better to stay in school, even if you take only one class per semester. While you cannot go back and redo your initial decision, you can look at some facts to evaluate the wisdom of your decision.

Instructions

Write a response indicating your position regarding this situation. Provide support for your view.

Deidre Schoo/The New York Times/Redux Pictures

Budgetary Planning

Chapter Preview

As the following Feature Story about **BabyCakes NYC** indicates, budgeting is critical to financial well-being. As a student, you budget your study time and your money. Families budget income and expenses. Governmental agencies budget revenues and expenditures. Businesses use budgets in planning and controlling their operations.

Our primary focus in this chapter is budgeting—specifically, how budgeting is used as a planning tool by management. Through budgeting, it should be possible for management to maintain enough cash to pay creditors as well as have sufficient raw materials to meet production requirements and adequate finished goods to meet expected sales.

Feature Story

What's in Your Cupcake?

The best business plans often result from meeting a basic human need. Many people would argue that cupcakes aren't necessarily essential to support life. But if you found out that allergies were going to deprive you forever of cupcakes,

you might view baked goods in a whole new light. Such was the dilemma faced by Erin McKenna. When she found that her wheat allergies prevented her from consuming most baked sweets, she decided to open a bakery that met her needs. Her vegan and kosher bakery, **BabyCakes NYC**, advertises that it is refined-sugar-free, gluten-free, wheat-free, soy-free, dairy-free, and egg-free. So if you're one of the more than 10 million Americans with a food allergy or

some other dietary constraint, this is probably the bakery for you.

Those of you that have spent a little time in the kitchen might wonder what kind of ingredients BabyCakes uses. To avoid the gluten in wheat, the company uses **Bob's Red Mill** rice flour, a garbanzo/fava bean mix, or oat flours. How does BabyCakes get all those great frosting colors without artificial dyes? The company achieves pink with beets, green with chlorophyll, yellow with turmeric, and blue/purple with red cabbage. To eliminate dairy and soy, the bakers use rice and coconut milk. And finally, to accomplish over-the-top deliciousness without refined sugar, BabyCakes uses agave nectar (a sweetener derived from cactus) and evaporated cane juice (often referred to as organic or unrefined sugar).

With cupcakes priced at over \$3 per item and a brisk business, you might think that making money is easy for BabyCakes. But all of these specialty ingredients don't come cheap. In addition, BabyCakes' shops are located in Manhattan, Los Angeles, and Orlando, so rent isn't exactly inexpensive either. Despite these costs, Erin's first store made a profit its first year and did even better in later years. To achieve this profitability, Erin relies on careful budgeting. First, she needs to estimate how many items she will sell. Then, she determines her needs for materials, labor, and overhead. Prices for raw materials can fluctuate significantly, so Erin needs to update her budget accordingly. Finally, she has to budget for other products such as her cookbooks, baking kits, and T-shirts. Without a budget, Erin's business might not be so sweet.

Watch the *BabyCakes NYC* video in WileyPLUS to learn more about real-world budgetary planning.

Effective Budgeting and the Master Budget

LEARNING OBJECTIVE 1

State the essentials of effective budgeting and the components of the master budget.

Planning is one of management's major responsibilities. As explained in Chapter 19, **planning** is the process of establishing company-wide objectives. A successful organization makes both long-term and short-term plans. These plans establish the objectives of the company and the proposed approach to accomplish them.

A **budget** is a formal written statement of management's plans for a specified future time period, expressed in financial terms. It represents the primary method of communicating agreed-upon objectives throughout the organization. Once adopted, a budget becomes an important basis for evaluating performance. It promotes efficiency and serves as a deterrent to waste and inefficiency. We consider the role of budgeting as a **control device** in Chapter 25.

Budgeting and Accounting

Accounting information makes major contributions to the budgeting process. From the accounting records, companies obtain historical data on revenues, costs, and expenses. These data are helpful in formulating future budget goals.

Accountants are responsible for presenting management's budgeting goals in financial terms. In this role, they translate management's plans and communicate the budget to employees throughout the company. They prepare periodic budget reports that provide the basis for measuring performance and comparing actual results with planned objectives. The budget itself and the administration of the budget, however, are entirely management responsibilities.

The Benefits of Budgeting

The primary benefits of budgeting are as follows.

1. It requires all levels of management to **plan ahead** and to formalize goals on a recurring basis.
2. It provides **definite objectives** for evaluating performance at each level of responsibility.
3. It creates an **early warning system** for potential problems so that management can make changes before things get out of hand.
4. It facilitates the **coordination of activities** within the business. It does this by correlating the goals of each segment with overall company objectives. Thus, the company can integrate production and sales promotion with expected sales.
5. It results in greater **management awareness** of the entity's overall operations and the impact on operations of external factors, such as economic trends.
6. It **motivates personnel** throughout the organization to meet planned objectives.

A budget is an aid to management; it is not a *substitute* for management. A budget cannot operate or enforce itself. Companies can realize the benefits of budgeting only when managers carefully administer budgets.

Essentials of Effective Budgeting

Effective budgeting depends on a **sound organizational structure**. In such a structure, authority and responsibility for all phases of operations are clearly defined. Budgets based on **research and analysis** are more likely to result in realistic goals that will contribute to the

growth and profitability of a company. And, the effectiveness of a budget program is directly related to its **acceptance by all levels of management**.

Once adopted, the budget is an important tool for evaluating performance. Managers should systematically and periodically review variations between actual and expected results to determine their cause(s). However, individuals should not be held responsible for variations that are beyond their control.

Length of the Budget Period

The budget period is not necessarily one year in length. A **budget may be prepared for any period of time**. Various factors influence the length of the budget period. These factors include the type of budget, the nature of the organization, the need for periodic appraisal, and prevailing business conditions.

The budget period should be long enough to provide an attainable goal under normal business conditions. Ideally, the time period should minimize the impact of seasonal or cyclical fluctuations. On the other hand, the budget period should not be so long that reliable estimates are impossible.

The **most common budget period is one year**. The annual budget, in turn, is often supplemented by monthly and quarterly budgets. Many companies use **continuous 12-month budgets**. These budgets drop the month just ended and add a future month. One benefit of continuous budgeting is that it keeps management planning a full year ahead.

Accounting Across the Organization

Thinkstock/Comstock/Getty Images, Inc.

Businesses Often Feel Too Busy to Plan for the Future

A study by Willard & Shullman Group Ltd. found that fewer than 14% of businesses with less than 500 employees do an annual budget or have a written business plan. For many small businesses, the basic assumption is that, "As long as I sell as much as I can, and keep my

employees paid, I'm doing OK." A few small business owners even say that they see no need for budgeting and planning. Most small business owners, though, say that they understand that budgeting and planning are critical for survival and growth. But given the long hours that they already work addressing day-to-day challenges, they also say that they are "just too busy to plan for the future."

Describe a situation in which a business "sells as much as it can" but cannot "keep its employees paid." (Go to WileyPLUS for this answer and additional questions.)

The Budgeting Process

The development of the budget for the coming year generally starts several months before the end of the current year. The budgeting process usually begins with the collection of data from each organizational unit of the company. Past performance is often the starting point from which future budget goals are formulated.

The budget is developed within the framework of a **sales forecast**. This forecast shows potential sales for the industry and the company's expected share of such sales. Sales forecasting involves a consideration of various factors: (1) general economic conditions, (2) industry trends, (3) market research studies, (4) anticipated advertising and promotion, (5) previous market share, (6) changes in prices, and (7) technological developments. The input of sales personnel and top management is essential to the sales forecast.

In small companies like **BabyCakes NYC**, the budgeting process is often informal. In larger companies, a **budget committee** has responsibility for coordinating the preparation

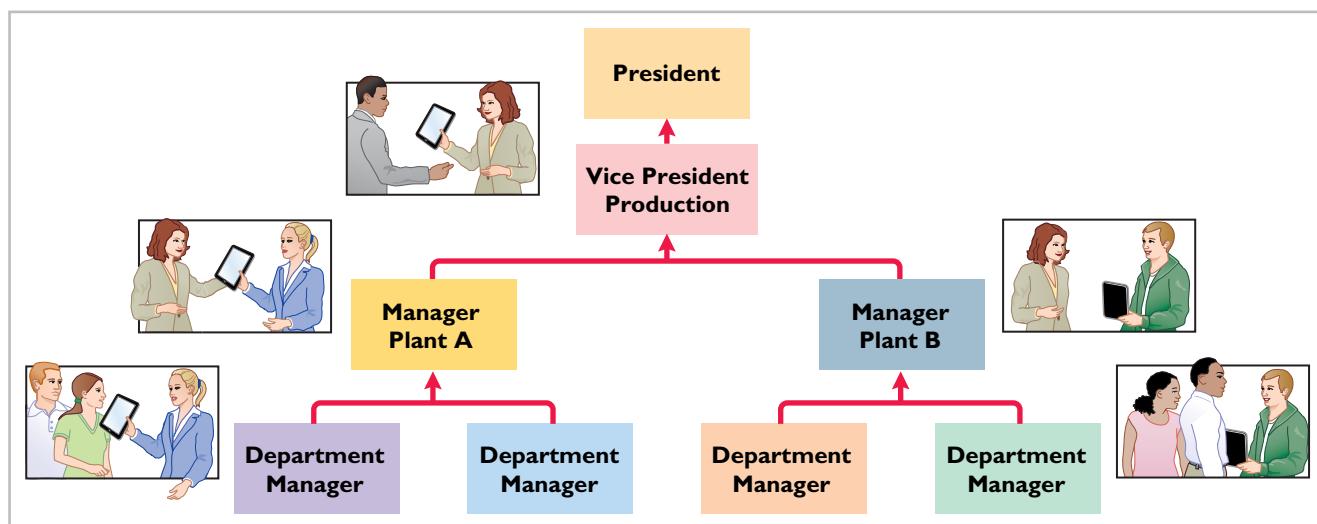

of the budget. The committee ordinarily includes the president, treasurer, chief accountant (controller), and management personnel from each of the major areas of the company, such as sales, production, and research. The budget committee serves as a review board where managers can defend their budget goals and requests. Differences are reviewed, modified if necessary, and reconciled. The budget is then put in its final form by the budget committee, approved, and distributed.

Budgeting and Human Behavior

A budget can have a significant impact on human behavior. If done well, it can inspire managers to higher levels of performance. However, if done poorly, budgets can discourage additional effort and pull down the morale of managers. Why do these diverse effects occur? The answer is found in how the budget is developed and administered.

In developing the budget, each level of management should be invited to participate. This “bottom-to-top” approach is referred to as **participative budgeting**. One benefit of participative budgeting is that lower-level managers have more detailed knowledge of their specific area and thus are able to provide more accurate budgetary estimates. Also, when lower-level managers participate in the budgeting process, they are more likely to perceive the resulting budget as fair. The overall goal is to reach agreement on a budget that the managers consider fair and achievable, but which also meets the corporate goals set by top management. When this goal is met, the budget will provide positive motivation for the managers. In contrast, if managers view the budget as unfair and unrealistic, they may feel discouraged and uncommitted to budget goals. The risk of having unrealistic budgets is generally greater when the budget is developed from top management down to lower management than vice versa. **Illustration 24.1** graphically displays the flow of budget data from bottom to top under participative budgeting.

ILLUSTRATION 24.1 Flow of budget data under participative budgeting

For example, at one time, in an effort to revive its plummeting stock price, **Time Warner**'s top management determined and publicly announced bold new financial goals for the coming year. Unfortunately, these goals were not reached. The next year, the company got a new CEO who said the company would now actually set reasonable goals that it could meet. The new budgets were developed with each operating unit setting what it felt were optimistic but attainable goals. In the words of one manager, using this approach created a sense of teamwork.

Participative budgeting does, however, have potential disadvantages. First, the “give and take” of participative budgeting is time-consuming (and thus more costly). Under a “top-down” approach, the budget is simply developed by top management and then dictated to lower-level managers. A second disadvantage is that participative budgeting can foster budgetary “gaming” through budgetary slack. **Budgetary slack** occurs when managers intentionally underestimate budgeted revenues or overestimate budgeted expenses in order to make it easier to achieve budgetary goals for their division. To minimize budgetary slack, higher-level managers must carefully review and thoroughly question the budget projections provided to them by employees whom they supervise.

ETHICS NOTE

Unrealistic budgets can lead to unethical employee behavior such as cutting corners on the job or distorting internal financial reports.

For the budget to be effective, top management must completely support the budget. The budget is an important tool for evaluating performance. It also can be used as a positive aid in achieving projected goals. The effect of an evaluation is positive when top management tempers criticism with advice and assistance. In contrast, a manager is likely to respond negatively if top management uses the budget exclusively to assess blame. A budget should not be used as a pressure device to force improved performance (see **Ethics Note**). In sum, a budget can be a manager’s friend or foe.

Budgeting and Long-Range Planning

HELPFUL HINT

A budget has more detail and is more concerned with short-term goals than a long-range plan.

Budgeting and long-range planning are not the same. One important difference is the **time period involved**. The maximum length of a budget is usually one year, and budgets are often prepared for shorter periods of time, such as a month or a quarter. In contrast, long-range planning usually encompasses a period of at least five years (see **Helpful Hint**).

A second significant difference is in **emphasis**. Budgeting focuses on achieving specific short-term goals, such as meeting annual profit objectives. **Long-range planning**, on the other hand, identifies long-term goals, selects strategies to achieve those goals, and develops policies and plans to implement the strategies. In long-range planning, management also considers anticipated trends in the economic and political environment and how the company should cope with them.

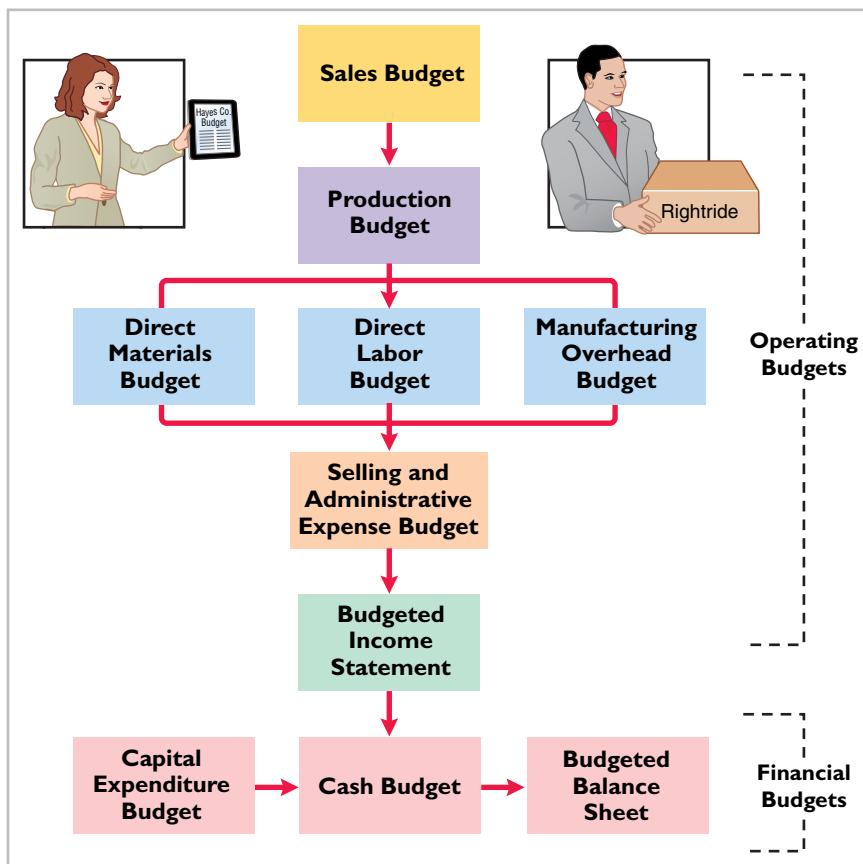

The final difference between budgeting and long-range planning relates to the **amount of detail presented**. Budgets, as you will see in this chapter, can be very detailed. Long-range plans contain considerably less detail. The data in long-range plans are intended more for a review of progress toward long-term goals than as a basis of control for achieving specific results. The primary objective of long-range planning is to develop the best strategy to maximize the company’s performance over an extended future period.

The Master Budget

The term “budget” is actually a shorthand term to describe a variety of budget documents. All of these documents are combined into a master budget. The **master budget** is a set of interrelated budgets that constitutes a plan of action for a specified time period.

The master budget contains two classes of budgets. **Operating budgets** are the individual budgets that result in the preparation of the budgeted income statement. These budgets establish goals for the company’s sales and production personnel. In contrast, **financial budgets** focus primarily on the cash resources needed to fund expected operations and planned capital expenditures. Financial budgets include the capital expenditure budget, the cash budget, and the budgeted balance sheet.

Illustration 24.2 shows the individual budgets included in a master budget, and the sequence in which they are prepared. The company first develops the operating budgets, beginning with the sales budget. Then, it prepares the financial budgets. We will explain and illustrate each budget shown in Illustration 24.2 except the capital expenditure budget. That budget is discussed under the topic of capital budgeting in Chapter 27.

**ILLUSTRATION 24.2**

Components of the master budget

DO IT! 1 | Budget Terminology

Use this list of terms to complete the sentences that follow.

Long-range planning	Participative budgeting
Sales forecast	Operating budgets
Master budget	Financial budgets

1. A _____ shows potential sales for the industry and a company's expected share of such sales.
2. _____ are used as the basis for the preparation of the budgeted income statement.
3. The _____ is a set of interrelated budgets that constitutes a plan of action for a specified time period.
4. _____ identifies long-term goals, selects strategies to achieve these goals, and develops policies and plans to implement the strategies.
5. Lower-level managers are more likely to perceive results as fair and achievable under a _____ approach.
6. _____ focus primarily on the cash resources needed to fund expected operations and planned capital expenditures.

ACTION PLAN

- Understand the budgeting process, including the importance of the sales forecast.
- Understand the difference between an operating budget and a financial budget.
- Differentiate budgeting from long-range planning.
- Realize that the master budget is a set of interrelated budgets.

Solution

1. Sales forecast.
2. Operating budgets.
3. Master budget.
4. Long-range planning.
5. Participative budgeting.
6. Financial budgets.

Sales, Production, and Direct Materials Budgets

LEARNING OBJECTIVE 2

Prepare budgets for sales, production, and direct materials.

We use a case study of Hayes Company in preparing the operating budgets. Hayes manufactures and sells an ergonomically designed bike seat with multiple customizable adjustments, called the Rightride. The budgets are prepared by quarters for the year ending December 31, 2020. Hayes Company begins its annual budgeting process on September 1, 2019, and it completes the budget for 2020 by December 1, 2019. The company begins by preparing the budgets for sales, production, and direct materials.

Sales Budget

HELPFUL HINT

For a retail or manufacturing company, the sales budget is the starting point for the master budget. It sets the level of activity for other functions such as production and purchasing.

As shown in the master budget in Illustration 24.2, **the sales budget is prepared first**. Each of the other budgets depends on the sales budget (see **Helpful Hint**). The **sales budget** is derived from the sales forecast. It represents management's best estimate of sales revenue for the budget period. An inaccurate sales budget may adversely affect net income. For example, an overly optimistic sales budget may result in excessive inventories that may have to be sold at reduced prices. In contrast, an unduly pessimistic sales budget may result in loss of sales revenue due to inventory shortages.

For example, at one time **Amazon.com** significantly underestimated demand for its e-book reader, the Kindle. As a consequence, it did not produce enough Kindles and was completely sold out well before the holiday shopping season. Not only did this represent a huge lost opportunity for Amazon, but it exposed the company to potential competitors, who were eager to provide customers with alternatives to the Kindle.

Forecasting sales is challenging. For example, consider the forecasting challenges faced by major sports arenas, whose revenues depend on the success of the home team. **Madison Square Garden**'s revenues from April to June were \$193 million during a year when the Knicks made the NBA playoffs. But revenues were only \$133.2 million a couple of years later when the team did not make the playoffs. Or, consider the challenges faced by Hollywood movie producers in predicting the complicated revenue stream produced by a new movie. Movie theater ticket sales represent only 20% of total revenue. The bulk of revenue comes from global sales, DVDs, video-on-demand, merchandising products, and videogames, all of which are difficult to forecast.

The sales budget is prepared by multiplying the expected unit sales volume for each product by its anticipated unit selling price. Hayes Company expects sales volume to be 3,000 units in the first quarter, with 500-unit increases in each succeeding quarter. **Illustration 24.3** shows the sales budget for the year, by quarter, based on a sales price of \$60 per unit.

ILLUSTRATION 24.3

4		Quarter				
5			1	2	3	4
6	Expected sales units		3,000	3,500	4,000	4,500
7	Unit selling price		× \$60	× \$60	× \$60	× \$60
8	Total sales		\$180,000	\$210,000	\$240,000	\$270,000
			\$900,000			

Some companies classify the anticipated sales revenue as cash or credit sales and by geographic regions, territories, or salespersons.

Service Company Insight

Marcela Barsse/iStockphoto

The Implications of Budgetary Optimism

Companies aren't the only ones that have to estimate revenues. Governments at all levels (e.g., local, state or federal) prepare annual budgets. Most are required to submit balanced budgets, that is, estimated revenues are supposed to cover anticipated expenditures. Unfortunately, estimating government revenues can be as difficult as, or even more difficult than, estimating company revenues. For example, during a recent year, the median state

government overestimated revenues by 10.2%, with four state governments missing by more than 25%.

What makes estimation so difficult for these governments? Most states rely on income taxes, which fluctuate widely with economic gyrations. Some states rely on sales taxes, which are problematic because the laws regarding sales taxes haven't adjusted for the shift from manufacturing to service companies and from brick-and-mortar stores to online sales.

Source: Conor Dougherty, "States Fumble Revenue Forecasts," *Wall Street Journal Online* (March 2, 2011).

Why is it important that government budgets accurately estimate future revenues during economic downturns? (Go to WileyPLUS for this answer and additional questions.)

Production Budget

The **production budget** shows the number of units of a product to produce to meet anticipated sales demand. Production requirements are determined from the formula shown in **Illustration 24.4**.¹

Expected Sales Units	+	Desired Ending Finished Goods Units	-	Beginning Finished Goods Units	=	Required Production Units
---------------------------------	---	--	---	---	---	--

ILLUSTRATION 24.4

Production requirements formula

Illustration 24.5 shows the production budget for Hayes Company, which is based on the formula shown in Illustration 24.4. For example, in the first quarter, expected sales are 3,000 units. Hayes Company believes it can meet future sales requirements by maintaining an ending inventory equal to 20% of the next quarter's budgeted sales volume. The ending finished goods inventory for the first quarter is 700 units (.20 × anticipated second-quarter sales of 3,500 units). If we then subtract the beginning finished goods units of 600 units (20% of first-quarter sales), we arrive at required production of 3,100 units. Illustration 24.5 shows the production budget.

A realistic estimate of ending inventory is essential in scheduling production requirements. Excessive inventories in one quarter may lead to cutbacks in production and employee layoffs in a subsequent quarter. On the other hand, inadequate inventories may result either in added costs for overtime work or in lost sales.

The production budget, in turn, provides the basis for the budgeted costs for each manufacturing cost element, as explained in the following discussion.

¹This formula ignores any work in process inventories, which are assumed to be nonexistent in Hayes Company.

ILLUSTRATION 24.5 Production budget

Hayes Company Production Budget

4		1	2	3	4					
5	Expected sales units (Illustration 24.3)	3,000	3,500	4,000	4,500					
6	Add: Desired ending finished goods units ^a	700	800	900	1,000 ^b					
7	Total required units	3,700	4,300	4,900	5,500					
8	Less: Beginning finished goods units ^c	600	700	800	900					
9	Required production units	3,100	3,600	4,100	4,600	15,400				
10										
11										
12	^a 20% of next quarter's sales									
13	^b Expected 2021 first-quarter sales, 5,000 units × .20									
14	^c 20% of estimated first-quarter 2020 sales units									

Direct Materials Budget

The **direct materials budget** shows both the quantity and cost of direct materials to be purchased. The first step toward computing the cost of direct materials purchases is to compute the direct materials units required for production. **Illustration 24.6** shows the formula for this amount.

ILLUSTRATION 24.6

Formula for direct materials units required for production

$\begin{array}{ccc} \text{Units} & \text{Direct Materials Units} & \text{Direct Materials} \\ \text{to Be} & \times & \text{Units Required} \\ \text{produced} & & \text{for Production} \end{array}$

Employing this formula, Illustration 24.9 shows that for Hayes Company's first quarter of production, there are 3,100 units to be produced, and each unit produced requires two pounds of raw materials. Therefore, the units of direct materials required for production is 6,200 pounds ($3,100 \times 2$).

Next we can compute the direct materials units to be purchased using the formula shown in **Illustration 24.7**.

ILLUSTRATION 24.7

Formula for direct materials units to be purchased

$\begin{array}{ccccc} \text{Direct} & & \text{Desired Ending} & \text{Beginning} & \text{Direct Materials} \\ \text{Materials Units} & + & \text{Direct} & \text{Direct} & \text{Units to} \\ \text{Required for} & & \text{Materials Units} & \text{Materials Units} & \text{Be Purchased} \\ \text{Production} & & & - & \\ & & & = & \\ & & & & \end{array}$

Employing this formula, Illustration 24.9 shows that for Hayes Company's first quarter of production, the direct materials units required for production is 6,200 pounds (computed above). To that we add the desired ending direct materials units. For Hayes, this is assumed to be 10% of the next quarter's production requirements, or 720 pounds ($.10 \times 7,200$). Then, we subtract the beginning direct materials units of 620 pounds (10% of this quarter's production requirements of 6,200) to arrive at the direct materials units to be purchased of 6,300 pounds.

Finally, to arrive at the cost of direct materials purchases, we employ the formula shown in **Illustration 24.8**.

Direct Materials	Cost per	Cost of Direct
Units to Be Purchased	Direct Materials Unit	Materials Purchases

ILLUSTRATION 24.8

Formula for cost of direct materials purchases

Employing this formula, **Illustration 24.9** shows that for Hayes Company's first quarter of production, the cost of direct materials purchases is computed by multiplying the units to be purchased of 6,300 pounds by the cost per direct materials unit of \$4 per pound, to arrive at \$25,200 ($6,300 \times \4).

ILLUSTRATION 24.9 Direct materials budget

Hayes Company Direct Materials Budget					
	Quarter				Year
	1	2	3	4	
6 Units to be produced (Illustration 24.5)	3,100	3,600	4,100	4,600	
7 Direct materials units per unit produced	× 2	× 2	× 2	× 2	
8 Direct materials units required for production	6,200	7,200	8,200	9,200	
9 Add: Desired ending direct materials (pounds) ^a	720	820	920	1,020 ^c	
10 Total materials required	6,920	8,020	9,120	10,220	
11 Less: Beginning direct materials (pounds)	620 ^b	720	820	920	
12 Direct materials units to be purchased (pounds)	6,300	7,300	8,300	9,300	
13 Cost per pound	× \$4	× \$4	× \$4	× \$4	
14 Cost of direct materials purchases	\$25,200	\$29,200	\$33,200	\$37,200	\$124,800

16 ^a10% of next quarter's production requirements
 17 ^b10% of estimated first-quarter pounds needed for production
 18 ^cTotal pounds needed for production is assumed to be 10,200 for the first quarter of 2021

The desired ending inventory is again a key component in the budgeting process. For example, inadequate inventories could result in temporary shutdowns of production. Because of its close proximity to suppliers, Hayes Company maintains an ending inventory of raw materials equal to 10% of the next quarter's production requirements.

Management Insight

Betting That Prices Won't Fall

Sometimes things happen that cause managers to reevaluate their normal purchasing patterns. Consider, for example, the predicament that businesses faced when the price of many raw materials skyrocketed. Rubber, cotton, oil, corn, wheat, steel, copper, and spices—prices for seemingly everything were going straight up. Anticipating

that prices might continue to go up, many managers decided to stockpile much larger quantities of raw materials to avoid paying even higher prices in the future. For example, after cotton prices rose 92%, one manager of a printed T-shirt manufacturer decided to stockpile a huge supply of plain T-shirts in anticipation of additional price increases. While he normally has about 30 boxes of T-shirts in inventory, he purchased 2,500 boxes.

Source: Liam Pleven and Matt Wirz, "Companies Stock Up as Commodities Prices Rise," *Wall Street Journal Online* (February 3, 2011).

What are the potential downsides of stockpiling a huge amount of raw materials? (Go to WileyPLUS for this answer and additional questions.)

DO IT! 2 | Sales, Production, and Direct Materials Budgets

Soriano Company is preparing its master budget for 2020. Relevant data pertaining to its sales, production, and direct materials budgets are as follows.

Sales. Sales for the year are expected to total 1,200,000 units. Quarterly sales, as a percentage of total sales, are 20%, 25%, 30%, and 25%, respectively. The sales price is expected to be \$50 per unit for the first three quarters and \$55 per unit beginning in the fourth quarter. Sales in the first quarter of 2021 are expected to be 10% higher than the budgeted sales for the first quarter of 2020.

Production. Management desires to maintain the ending finished goods inventories at 25% of the next quarter's budgeted sales volume.

Direct materials. Each unit requires 3 pounds of raw materials at a cost of \$5 per pound. Management desires to maintain raw materials inventories at 5% of the next quarter's production requirements. Assume the production requirements for the first quarter of 2021 are 810,000 pounds.

Prepare the sales, production, and direct materials budgets by quarters for 2020.

ACTION PLAN

- Know the form and content of the sales budget.
- Prepare the sales budget first, as the basis for the other budgets.
- Determine the units that must be produced to meet anticipated sales.
- Know how to compute the beginning and ending finished goods units.
- Determine the materials required to meet production needs.
- Know how to compute the beginning and ending direct materials units.

Direct Labor, Manufacturing Overhead, and S&A Expense Budgets

LEARNING OBJECTIVE 3

Prepare budgets for direct labor, manufacturing overhead, and selling and administrative expenses, and a budgeted income statement.

As shown in Illustration 24.2, the operating budgets culminate with preparation of the budgeted income statement. Before we can do that, we need to prepare budgets for direct labor, manufacturing overhead, and selling and administrative expenses.

Direct Labor Budget

Like the direct materials budget, the **direct labor budget** contains the quantity (hours) and cost of direct labor necessary to meet production requirements. The total direct labor cost is derived from the formula shown in **Illustration 24.10**.

Units to Be Produced	×	Direct Labor Hours per Unit	×	Direct Labor Cost per Hour	=	Total Direct Labor Cost
-------------------------------------	----------	--	----------	---	----------	------------------------------------

ILLUSTRATION 24.10

Formula for direct labor cost

Direct labor hours are determined from the production budget. At Hayes Company, two hours of direct labor are required to produce each unit of finished goods. The anticipated hourly wage rate is \$10. **Illustration 24.11** employs the formula in Illustration 24.10 using these data. For example, in the first quarter, 3,100 units are to be produced requiring two hours of labor per unit, for a total of 6,200 hours ($3,100 \times \$2$). Each hour of labor costs \$10, for a total cost of \$62,000 ($6,200 \times \10).

ILLUSTRATION 24.11 Direct labor budget

7	Direct labor time (hours) per unit	× 2	× 2	× 2	× 2	
8	Total required direct labor hours	6,200	7,200	8,200	9,200	
9	Direct labor cost per hour	× \$10	× \$10	× \$10	× \$10	
10	Total direct labor cost	\$62,000	\$72,000	\$82,000	\$92,000	\$308,000
11						

HELPFUL HINT

An important assumption in Illustration 24.11 is that the company can add to and subtract from its work force as needed so that the \$10 per hour labor cost applies to a wide range of possible production activity.

The direct labor budget is critical in maintaining a labor force that can meet the expected levels of production (see **Helpful Hint**).

Manufacturing Overhead Budget

The **manufacturing overhead budget** shows the expected manufacturing overhead costs for the budget period. As **Illustration 24.12** shows, **this budget distinguishes between**

ILLUSTRATION 24.12

12	Total variable costs	18,600	21,600	24,600	27,600	92,400
13	Fixed costs					
14	Supervisory salaries	20,000	20,000	20,000	20,000	80,000
15	Depreciation	3,800	3,800	3,800	3,800	15,200
16	Property taxes and insurance	9,000	9,000	9,000	9,000	36,000
17	Maintenance	5,700	5,700	5,700	5,700	22,800
18	Total fixed costs	38,500	38,500	38,500	38,500	154,000
19	Total manufacturing overhead	\$57,100	\$60,100	\$63,100	\$66,100	\$246,400
20	Manufacturing overhead rate per direct labor hour (\$246,400 ÷ 30,800)					\$8
21						

variable and fixed overhead costs. Hayes Company expects variable costs to fluctuate with production volume on the basis of the following rates per direct labor hour: indirect materials \$1.00, indirect labor \$1.40, utilities \$0.40, and maintenance \$0.20. Thus, for the 6,200 direct labor hours to produce 3,100 units, budgeted indirect materials are \$6,200 ($6,200 \times \1), and budgeted indirect labor is \$8,680 ($6,200 \times \1.40). Hayes also recognizes that some maintenance is fixed. The amounts reported for fixed costs are assumed for our example. The accuracy of budgeted overhead cost estimates can be greatly improved by employing activity-based costing (discussed in Appendix H).

At Hayes Company, overhead is applied to production on the basis of direct labor hours. Thus, as Illustration 24.12 shows, the budgeted annual rate is \$8 per hour ($\$246,400 \div 30,800$).

Selling and Administrative Expense Budget

Hayes Company combines its operating expenses into one budget, the **selling and administrative expense budget**. This budget projects anticipated selling and administrative expenses for the budget period. This budget (Illustration 24.13) also classifies expenses as either variable or fixed. In this case, the variable expense rates per unit of sales are sales commissions \$3 and freight-out \$1. Variable expenses per quarter are based on the unit sales from the sales budget (see Illustration 24.3). For example, Hayes expects sales in the first quarter to be 3,000 units. Thus, sales commissions expense is \$9,000 ($3,000 \times \3), and freight-out is \$3,000 ($3,000 \times \1). Fixed expenses are based on assumed data.

ILLUSTRATION 24.13 Selling and administrative expense budget

19						

Budgeted Income Statement

The **budgeted income statement** is the important end-product of the operating budgets. This budget indicates the expected profitability of operations for the budget period. The budgeted income statement provides the basis for evaluating company performance. Budgeted income statements often act as a call to action. For example, a board member at **XM Satellite Radio Holdings** felt that budgeted costs were too high relative to budgeted revenues. When

management refused to cut its marketing and programming costs, the board member resigned. He felt that without the cuts, the company risked financial crisis.

As you would expect, the budgeted income statement is prepared from the various operating budgets. For example, to find the cost of goods sold, Hayes Company must first determine the total unit cost of producing one Rightride bicycle seat, as shown in **Illustration 24.14**.

ILLUSTRATION 24.14
Computation of total unit cost

Cost Element	Cost of One Rightride			
	Illustration	Quantity	Unit Cost	Total
Direct materials	24.9	2 pounds	\$ 4.00	\$ 8.00
Direct labor	24.11	2 hours	\$10.00	20.00
Manufacturing overhead	24.12	2 hours	\$ 8.00	16.00
Total unit cost				\$44.00

Hayes then determines cost of goods sold by multiplying the units sold by the unit cost. Its budgeted cost of goods sold is \$660,000 ($15,000 \times \44). All data for the income statement come from the individual operating budgets except the following: (1) interest expense is expected to be \$100, and (2) income taxes are estimated to be \$12,000. **Illustration 24.15** shows the budgeted multiple-step income statement.

ILLUSTRATION 24.15
Budgeted multiple-step income statement

Hayes Company	
Budgeted Income Statement	
For the Year Ending December 31, 2020	
Sales (Illustration 24.3)	\$900,000
Cost of goods sold ($15,000 \times \$44$)	<u>660,000</u>
Gross profit	240,000
Selling and administrative expenses (Illustration 24.13)	<u>180,000</u>
Income from operations	60,000
Interest expense	<u>100</u>
Income before income taxes	59,900
Income tax expense	<u>12,000</u>
Net income	\$ 47,900

DO IT! 3 | Budgeted Income Statement

Soriano Company is preparing its budgeted income statement for 2020. Relevant data pertaining to its sales, production, and direct materials budgets can be found in **DO IT! 2**.

In addition, Soriano budgets 0.5 hours of direct labor per unit, labor costs at \$15 per hour, and manufacturing overhead at \$25 per direct labor hour. Its budgeted selling and administrative expenses for 2020 are \$12,000,000.

- (a) Calculate the budgeted total unit cost. (b) Prepare the budgeted multiple-step income statement for 2020. (Ignore income taxes.)

Solution

a.

Cost Element	Quantity	Unit Cost	Total
Direct materials	3.0 pounds	\$ 5	\$15.00
Direct labor	0.5 hours	\$15	7.50
Manufacturing overhead	0.5 hours	\$25	12.50
Total unit cost			\$35.00

ACTION PLAN

- Recall that total unit cost consists of direct materials, direct labor, and manufacturing overhead.
- Recall that direct materials costs are included in the direct materials budget.
- Know the form and content of the income statement.
- Use the total unit sales information from the sales budget to compute annual sales and cost of goods sold.

b.

Soriano Company
Budgeted Income Statement
For the Year Ending December 31, 2020

Sales (1,200,000 units from sales budget)	\$61,500,000
Cost of goods sold (1,200,000 × \$35.00/unit)	42,000,000
Gross profit	19,500,000
Selling and administrative expenses	12,000,000
Net income	<u><u>\$ 7,500,000</u></u>

Cash Budget and Budgeted Balance Sheet

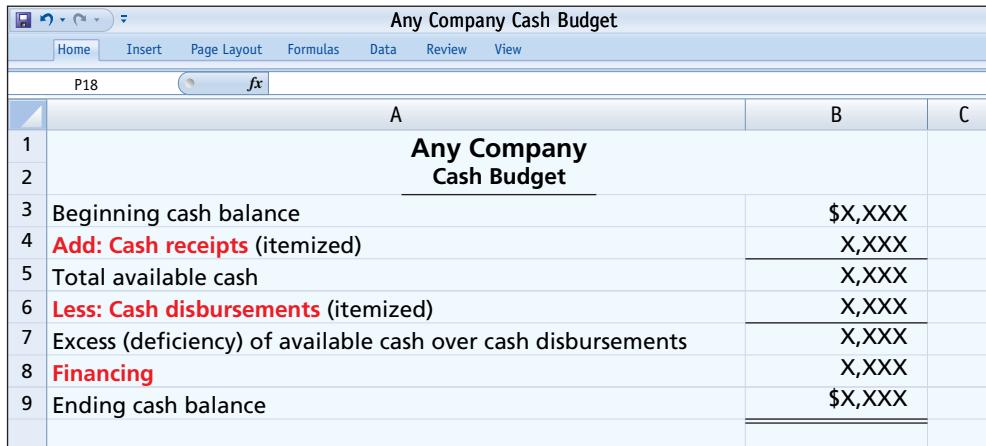

LEARNING OBJECTIVE 4

Prepare a cash budget and a budgeted balance sheet.

As shown in Illustration 24.2, the financial budgets consist of the capital expenditure budget, the cash budget, and the budgeted balance sheet. We will discuss the capital expenditure budget in Chapter 27.

Cash Budget

The **cash budget** shows anticipated cash flows. Because cash is so vital, this budget is often considered to be the most important financial budget. The cash budget contains three sections (cash receipts, cash disbursements, and financing) and the beginning and ending cash balances, as shown in **Illustration 24.16** (see **Helpful Hint**).

The screenshot shows a Microsoft Excel spreadsheet with the title "Any Company Cash Budget" at the top. The table has columns labeled A, B, and C. Row 1 contains the header "Any Company Cash Budget". Row 2 is blank. Row 3 contains "Beginning cash balance" with "\$X,XXX" in column C. Row 4 contains "Add: Cash receipts (itemized)" with "X,XXX" in column C. Row 5 contains "Total available cash" with "X,XXX" in column C. Row 6 contains "Less: Cash disbursements (itemized)" with "X,XXX" in column C. Row 7 contains "Excess (deficiency) of available cash over cash disbursements" with "X,XXX" in column C. Row 8 contains "Financing" with "X,XXX" in column C. Row 9 contains "Ending cash balance" with "\$X,XXX" in column C. The rows are numbered 1 through 9.

The **cash receipts section** includes expected receipts from the company's principal source(s) of revenue. These are usually cash sales and collections from customers on credit sales. This section also shows anticipated receipts of interest and dividends, and proceeds from planned sales of investments, plant assets, and the company's capital stock.

The **cash disbursements section** shows expected cash payments. Such payments include direct materials, direct labor, manufacturing overhead, and selling and administrative expenses. This section also includes projected payments for income taxes, dividends, investments, and plant assets.

The **financing section** shows expected borrowings and the repayment of the borrowed funds plus interest. Companies need this section when there is a cash deficiency or when the cash balance is below management's minimum required balance.

ILLUSTRATION 24.16

Basic form of a cash budget

HELPFUL HINT

The cash budget is prepared after the other budgets because the information generated by the other budgets dictates the expected inflows and outflows of cash.

Data in the cash budget are prepared in sequence. The ending cash balance of one period becomes the beginning cash balance for the next period. Companies obtain data for preparing the cash budget from other budgets and from information provided by management. In practice, cash budgets are often prepared for the year on a monthly basis.

To minimize detail, we assume that Hayes Company prepares an annual cash budget by quarters. To prepare the cash budget, it is useful to prepare a schedule for collections from customers. This schedule is based on the following assumption.

1. Sales (Illustration 24.3): 60% are collected in the quarter sold and 40% are collected in the following quarter. Accounts receivable of \$60,000 at December 31, 2019, are expected to be collected in full in the first quarter of 2020.

The schedule of cash collections from customers in **Illustration 24.17** applies this assumption. For example, in the first quarter, Hayes collects the \$60,000 that was outstanding at the beginning of the quarter, as well as an additional \$108,000 ($.60 \times \$180,000$), which is 60% of the first-quarter sales of \$180,000. Total receipts in the first quarter are \$168,000 (\$60,000 + \$108,000). In the second quarter, the company collects the remaining 40% of first-quarter sales of \$72,000 ($.40 \times \$180,000$) as well as \$126,000 ($.60 \times \$210,000$), which is 60% of second-quarter sales of \$210,000. Second-quarter receipts are \$198,000 (\$72,000 + \$126,000).

ILLUSTRATION 24.17

Collections from customers

Hayes Company						
	A	B	C	D	E	F
1	Hayes Company					
2	Schedule of Expected Collections from Customers					
3	Collections by Quarter					
4		Sales ^a	1	2	3	4
5	Accounts receivable, 12/31/19		\$ 60,000			
6	First quarter	\$180,000	108,000 ^b	\$ 72,000 ^c		
7	Second quarter	210,000		126,000	\$ 84,000	
8	Third quarter	240,000			144,000	\$ 96,000
9	Fourth quarter	270,000				162,000
10	Total collections		\$168,000	\$198,000	\$228,000	\$258,000
11						
12	^a Per Illustration 24.3; ^b \$180,000 × .60; ^c \$180,000 × .40					
13						

Next, it is useful to prepare a schedule of expected cash payments for direct materials, based on this second assumption:

2. Direct materials (Illustration 24.9): 50% are paid in the quarter purchased and 50% are paid in the following quarter. Accounts payable of \$10,600 at December 31, 2019, are expected to be paid in full in the first quarter of 2020.

The schedule of cash payments for direct materials in **Illustration 24.18** applies this second assumption. For example, in the first quarter, Hayes pays the balance of its beginning accounts payable balance of \$10,600 as well as pays \$12,600, which is 50% of its first-quarter purchases of \$25,200. The total payments in the first quarter are \$23,200 (\$10,600 + \$12,600). In the second quarter, it pays \$12,600 ($.50 \times \$25,200$) for the remaining 50% of its first-quarter purchases as well as \$14,600 ($.50 \times \$29,200$) for 50% of the second-quarter purchases. Total payments in the second quarter are \$27,200 (\$12,600 + \$14,600).

The preparation of Hayes Company's cash budget is based on the following additional assumptions.

3. The January 1, 2020, cash balance is expected to be \$38,000. Hayes wishes to maintain a balance of at least \$15,000.
4. Short-term investment securities are expected to be sold for \$2,000 cash in the first quarter.
5. Direct labor (Illustration 24.11): 100% is paid in the quarter incurred.
6. Manufacturing overhead (Illustration 24.12) and selling and administrative expenses (Illustration 24.13): All items except depreciation are paid in the quarter incurred.
7. Management plans to purchase a truck in the second quarter for \$10,000 cash.

19 Total disbursements			182,500	211,500	220,500	239,500
Excess (deficiency) of available cash over cash disbursements			25,500	12,000	22,500	37,900
21 Financing						
22 Add: Borrowings			0	3,000	0	0
23 Less: Repayments including interest		9	0	0	3,100	0
24 Ending cash balance		3	\$ 25,500	\$ 15,000	\$ 19,400	\$ 37,900
25						
26	^a \$57,100 – \$3,800 depreciation					
27	^b \$42,000 – \$1,000 depreciation					

balance of \$15,000. Since there is an excess of available cash over disbursements of \$22,500 at the end of the third quarter, the borrowing, plus \$100 interest, is repaid in this quarter.

A cash budget contributes to more effective cash management. It shows managers when additional financing is necessary well before the actual need arises. And, it indicates when excess cash is available for investments or other purposes.

Management Insight

Violka08/iStock/Getty Images

Kraft Heinz

Starting from Scratch

Recently an increasing number of companies, including the giant food company **Kraft Heinz**, have adopted “zero-based budgeting.” This budgeting approach requires that the budgeting process starts from scratch, rather than using the previous year’s

budget as a starting point. Every proposed cost must be justified and not just the large expenses. For example, **Pilgrim Pride Corp.**, “scrutinized how much paper it used to print documents, how much soap employees used to wash their hands, and how much Gatorade hourly employees at one processing facility drank during breaks.” The move toward zero-based budgeting is due in part to pressure by shareholders to increase company performance,

as well as management fear that if a company’s operations aren’t lean, it will be taken over by outside investors. Proponents point toward zero-based budgeting’s ability to reduce wasteful spending practices such as first-class plane flights. But critics suggest that it often results in significant layoffs, destroys employee morale, and potentially reduces a company’s ability to pursue growth opportunities. **Coca-Cola** recently implemented zero-based budgeting but calls it “zero-based work” to try to disassociate its efforts from some of the negative connotations associated with zero-based budgeting.

Source: David Kesmodel and Annie Gasparro, “Kraft-Heinz Deal Shows Brazilian Buyout Firm’s Cost-Cutting Recipe,” *Wall Street Journal* (March 2015).

What are some of the pros and cons of zero-based budgeting? (Go to WileyPLUS for this answer and additional questions.)

Budgeted Balance Sheet

The **budgeted balance sheet** is a projection of financial position at the end of the budget period. This budget is developed from the budgeted balance sheet for the preceding year and the budgets for the current year. Pertinent data from the budgeted balance sheet at December 31, 2019, are as follows.

Buildings and equipment	\$182,000	Common stock	\$225,000
Accumulated depreciation	\$ 28,800	Retained earnings	\$ 46,480

Illustration 24.20 shows Hayes Company’s budgeted classified balance sheet at December 31, 2020.

ILLUSTRATION 24.20

Budgeted classified balance sheet

Hayes Company Budgeted Balance Sheet December 31, 2020

<u>Assets</u>	
Current assets	
Cash	\$ 37,900
Accounts receivable	108,000
Finished goods inventory	44,000
Raw materials inventory	4,080
Total current assets	193,980
Property, plant, and equipment	
Buildings and equipment	\$192,000
Less: Accumulated depreciation	48,000
Total assets	\$337,980

Liabilities and Stockholders' Equity

Liabilities	
Accounts payable	\$ 18,600
Stockholders' equity	
Common stock	\$225,000
Retained earnings	94,380
Total stockholders' equity	<u>319,380</u>
Total liabilities and stockholders' equity	<u>\$337,980</u>

ILLUSTRATION 24.20

(continued)

The computations and sources of the amounts are explained below.

Cash: Ending cash balance \$37,900, shown in the cash budget (Illustration 24.19).

Accounts receivable: 40% of fourth-quarter sales \$270,000, shown in the schedule of expected collections from customers (Illustration 24.17).

Finished goods inventory: Desired ending inventory 1,000 units, shown in the production budget (Illustration 24.5) times the total unit cost \$44 (shown in Illustration 24.14).

Raw materials inventory: Desired ending inventory 1,020 pounds, times the cost per pound \$4, shown in the direct materials budget (Illustration 24.9).

Buildings and equipment: December 31, 2019, balance \$182,000, plus purchase of truck for \$10,000 (Illustration 24.19).

Accumulated depreciation: December 31, 2019, balance \$28,800, plus \$15,200 depreciation shown in manufacturing overhead budget (Illustration 24.12) and \$4,000 depreciation shown in selling and administrative expense budget (Illustration 24.13).

Accounts payable: 50% of fourth-quarter purchases \$37,200, shown in schedule of expected payments for direct materials (Illustration 24.18).

Common stock: Unchanged from the beginning of the year.

Retained earnings: December 31, 2019, balance \$46,480, plus net income \$47,900, shown in budgeted income statement (Illustration 24.15).

After budget data are entered into the computer, Hayes prepares the various budgets (sales, cash, etc.), as well as the budgeted financial statements. Using spreadsheets, management can also perform “what if” (sensitivity) analyses based on different hypothetical assumptions. For example, suppose that sales managers project that sales will be 10% higher in the coming quarter. What impact does this change have on the rest of the budgeting process and the financing needs of the business? The impact of the various assumptions on the budget is quickly determined by the spreadsheet. Armed with these analyses, managers make more informed decisions about the impact of various projects. They also anticipate future problems and business opportunities. As seen in this chapter, budgeting is an excellent use of computer spreadsheets.

DO IT! 4 | Cash Budget

Martian Company management wants to maintain a minimum monthly cash balance of \$15,000. At the beginning of March, the cash balance is \$16,500, expected cash receipts for March are \$210,000, and cash disbursements are expected to be \$220,000. How much cash, if any, must be borrowed to maintain the desired minimum monthly balance?

Solution

Martian Company Cash Budget		
	A	B
1	Martian Company Cash Budget	
2	For the Month Ending March 31, 2020	
4	Beginning cash balance	\$ 16,500
5	Add: Cash receipts for March	210,000
6	Total available cash	226,500
7	Less: Cash disbursements for March	220,000
8	Excess (deficiency) of available cash over cash disbursements	6,500
9	Financing	8,500
10	Ending cash balance	\$ 15,000
11		

ACTION PLAN

- Write down the basic form of the cash budget, starting with the beginning cash balance, adding cash receipts for the period, deducting cash disbursements, and identifying the needed financing to achieve the desired minimum ending cash balance.
- Insert the data given into the outlined form of the cash budget.

To maintain the desired minimum cash balance of \$15,000, Martian Company must borrow \$8,500 of cash.

Budgeting in Nonmanufacturing Companies

LEARNING OBJECTIVE 5

Apply budgeting principles to nonmanufacturing companies.

Budgeting is not limited to manufacturers. Budgets are also used by merchandisers, service companies, and not-for-profit organizations.

Merchandisers

As in manufacturing operations, the sales budget for a merchandiser is both the starting point and the key factor in the development of the master budget. The major differences between the master budgets of a merchandiser and a manufacturer are as follows.

1. A merchandiser **uses a merchandise purchases budget instead of a production budget**.
2. A merchandiser **does not use the manufacturing budgets (direct materials, direct labor, and manufacturing overhead)**.

The **merchandise purchases budget** shows the estimated cost of goods to be purchased to meet expected sales. The formula for determining budgeted merchandise purchases is as shown in **Illustration 24.21**.

ILLUSTRATION 24.21

Merchandise purchases formula

$$\begin{array}{r} \text{Budgeted} \\ \text{Cost of} \\ \text{Goods Sold} \end{array} + \begin{array}{r} \text{Desired Ending} \\ \text{Merchandise} \\ \text{Inventory} \end{array} - \begin{array}{r} \text{Beginning} \\ \text{Merchandise} \\ \text{Inventory} \end{array} = \begin{array}{r} \text{Required} \\ \text{Merchandise} \\ \text{Purchases} \end{array}$$

To illustrate, assume that the budget committee of Lima Company is preparing the merchandise purchases budget for July 2020. It estimates that budgeted sales will be \$300,000 in July and \$320,000 in August. Cost of goods sold is expected to be 70% of sales—that is, \$210,000 in July ($.70 \times \$300,000$) and \$224,000 in August ($.70 \times \$320,000$). The company's desired ending inventory is 30% of the following month's cost of goods sold. Required merchandise purchases for July are \$214,200, computed as shown in **Illustration 24.22**.

Lima Company Merchandise Purchases Budget		
	A	B
1	Lima Company	
2	Merchandise Purchases Budget	
3	For the Month Ending July 31, 2020	
4	Budgeted cost of goods sold ($\$300,000 \times .70$)	\$210,000
5	Add: Desired ending merchandise inventory ($\$224,000 \times .30$)	67,200
6	Total	277,200
7	Less: Beginning merchandise inventory ($\$210,000 \times .30$)	63,000
8	Required merchandise purchases for July	\$214,200

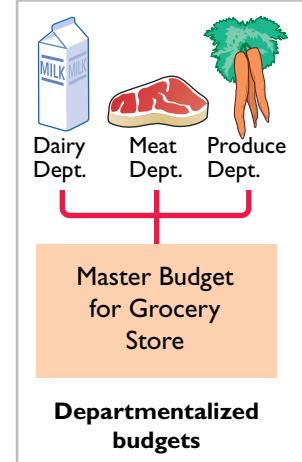

When a merchandiser is departmentalized, it prepares separate budgets for each department (see infographic). For example, a grocery store prepares sales budgets and purchases budgets for each of its major departments, such as meats, dairy, and produce. The store then combines these budgets into a master budget for the store. When a retailer has branch stores, it prepares separate master budgets for each store. Then, it incorporates these budgets into master budgets for the company as a whole.

Service Companies

In a service company, such as a public accounting firm, a law office, or a medical practice, the critical factor in budgeting is **coordinating professional staff needs with anticipated services**. If a firm is overstaffed, several problems may result: Labor costs are disproportionately high. Profits are lower because of the additional salaries. Staff turnover sometimes increases because of lack of challenging work. In contrast, if a service company is understaffed, it may lose revenue because existing and prospective client needs for service cannot be met. Also, professional staff may seek other jobs because of excessive work loads.

Suppose that Stephan Lawn and Plowing Service estimates that it will service 300 small lawns, 200 medium lawns, and 100 large lawns during the month of July. It estimates its direct labor needs as 1 hour per small lawn, 1.75 hours for a medium lawn, and 2.75 hours for a large lawn. Its average cost for direct labor is \$15 per hour. Stephan prepares a direct labor budget as shown in **Illustration 24.23**.

ILLUSTRATION 24.22
Merchandise purchases budget

Stephan Lawn and Plowing Service Direct Labor Budget					
	A	B	C	D	
1	Stephan Lawn and Plowing Service				
2	Direct Labor Budget				
3	For the Month Ending July 31, 2020				
4		Small	Medium	Large	Total
5	Lawns to be serviced	300	200	100	
6	Direct labor time (hours) per lawn	× 1	× 1.75	× 2.75	
7	Total required direct labor hours	300	350	275	
8	Direct labor cost per hour	× \$15	× \$15	× \$15	
9	Total direct labor cost	\$4,500	\$5,250	\$4,125	\$13,875

ILLUSTRATION 24.23
Direct labor budget for service company

Service companies can obtain budget data for service revenue from **expected output** or **expected input**. When output is used, it is necessary to determine the expected billings of clients for services performed. In a public accounting firm, for example, output is the sum of its billings in auditing, tax, and consulting services. When input data are used, each professional staff member projects his or her billable time. The firm then applies billing rates to billable time to produce expected service revenue.

Not-for-Profit Organizations

Budgeting is just as important for not-for-profit organizations as for profit-oriented businesses. The budget process, however, is different. In most cases, not-for-profit entities budget **on the basis of cash flows (expenditures and receipts), rather than on a revenue and expense basis**. Further, the starting point in the process is usually expenditures, not receipts. For the not-for-profit entity, management's task generally is to find the receipts needed to support the planned expenditures. The activity index is also likely to be significantly different. For example, in a not-for-profit entity, such as a university, budgeted faculty positions may be based on full-time equivalent students or credit hours expected to be taught in a department.

For some governmental units, voters approve the budget. In other cases, such as state governments and the federal government, legislative approval is required. After the budget is adopted, it must be followed. Overspending is often illegal. In governmental budgets, authorizations tend to be on a line-by-line basis. That is, the budget for a municipality may have a specified authorization for police and fire protection, garbage collection, street paving, and so on. The line-item authorization of governmental budgets significantly limits the amount of discretion management can exercise. The city manager often cannot use savings from one line item, such as street paving, to cover increased spending in another line item, such as snow removal.

Service Company Insight Museum of Contemporary Art

©ZUMA Press/Newscom/NewsCom

Budget Shortfalls as Far as the Eye Can See

All organizations need to stick to budgets. The **Museum of Contemporary Art** in Los Angeles learned this the hard way. Over a 10-year period, its endowment shrunk from \$50 million to \$6 million as its newly hired director strove to build the museum's reputation through spending. The director consistently ran budget deficits, which eventually threatened the museum's survival.

The most recent recession created budgeting challenges for nearly all governmental agencies. Tax revenues dropped rapidly as earnings declined and unemployment skyrocketed. At the same

time, sources of debt financing dried up. Even **Princeton University**, with the largest endowment per student of any U.S. university (\$2 million per student), experienced a 25% drop in the value of its endowment when the financial markets plunged. Because the endowment supports 45% of the university's \$1.25 billion budget, when the endowment fell the university had to make cuts. Many raises were capped at \$2,000, administrative budgets were cut by 5%, and major construction projects were put on hold.

Sources: Edward Wyatt and Jori Finkel, "Soaring in Art, Museum Trips Over Finances," *Wall Street Journal Online* (December 4, 2008); Stu Woo, "California's Plans to Close Gap Become More Drastic," *Wall Street Journal Online* (January 8, 2009); and John Hechinger, "Princeton Cuts Budget as Endowment Slides," *Wall Street Journal Online* (January 9, 2009).

Why would a university's budgeted scholarships probably fall when the stock market suffers a serious drop? (Go to WileyPLUS for this answer and additional questions.)

DO IT! 5 | Merchandise Purchases Budget

Becker Company estimates that 2020 sales will be \$15,000 in quarter 1, \$20,000 in quarter 2, and \$25,000 in quarter 3. Cost of goods sold is 80% of sales. Management desires to have ending finished goods inventory equal to 15% of the next quarter's expected cost of goods sold. Prepare a merchandise purchases budget by quarter for the first six months of 2020.

Solution

Becker Company Merchandise Purchases Budget				
	A	B	C	D
1	Becker Company Merchandise Purchases Budget For the Six Months Ending June 30, 2020			
4		Quarter		
5		1	2	Six Months
6	Budgeted cost of goods sold (sales × .80)	\$12,000	\$16,000	
7	Add: Desired ending merchandise inventory (15% of next quarter's cost of goods sold)	2,400	3,000	
8	Total	14,400	19,000	
9	Less: Beginning merchandise inventory (15% this quarter's cost of goods sold)	1,800	2,400	
10	Required merchandise purchases	\$12,600	\$16,600	\$29,200

Related exercise material: BE24.10, DO IT! 24.5, E24.19, E24.20, and E24.21.

ACTION PLAN

- Begin with budgeted cost of goods sold.
- Add desired ending merchandise inventory.
- Subtract beginning merchandise inventory.

Review and Practice

Learning Objectives Review

1 State the essentials of effective budgeting and the components of the master budget.

The primary benefits of budgeting are that it (a) requires management to plan ahead, (b) provides definite objectives for evaluating performance, (c) creates an early warning system for potential problems, (d) facilitates coordination of activities, (e) results in greater management awareness, and (f) motivates personnel to meet planned objectives. The essentials of effective budgeting are (a) sound organizational structure, (b) research and analysis, and (c) acceptance by all levels of management.

The master budget consists of the following budgets: (a) sales, (b) production, (c) direct materials, (d) direct labor, (e) manufacturing overhead, (f) selling and administrative expense, (g) budgeted income statement, (h) capital expenditure budget, (i) cash budget, and (j) budgeted balance sheet.

2 Prepare budgets for sales, production, and direct materials.

The sales budget is derived from sales forecasts. The production budget starts with budgeted sales units, adds desired ending finished goods inventory, and subtracts beginning finished goods inventory

to arrive at the required number of units to be produced. The direct materials budget starts with the direct materials units (e.g., pounds) required for budgeted production, adds desired ending direct materials units, and subtracts beginning direct materials units to arrive at required direct materials units to be purchased. This amount is multiplied by the direct materials cost (e.g., cost per pound) to arrive at the total cost of direct materials purchases.

3 Prepare budgets for direct labor, manufacturing overhead, and selling and administrative expenses, and a budgeted income statement.

The direct labor budget starts with the units to be produced as determined in the production budget. This amount is multiplied by the direct labor hours per unit and the direct labor cost per hour to arrive at the total direct labor cost. The manufacturing overhead budget lists all of the individual types of overhead costs, distinguishing between fixed and variable costs. The selling and administrative expense budget lists all of the individual types of selling and administrative expense items, distinguishing between fixed and variable costs. The budgeted income statement is prepared from the various operating budgets. Cost of goods sold is determined by calculating the budgeted cost to produce one unit, then multiplying this amount by the number of units sold.

4 Prepare a cash budget and a budgeted balance sheet.

The cash budget has three sections (receipts, disbursements, and financing) and the beginning and ending cash balances. Receipts and payments sections are determined after preparing separate schedules for collections from customers and payments to suppliers. The budgeted balance sheet is developed from the budgeted balance sheet from the preceding year and the various budgets for the current year.

5 Apply budgeting principles to nonmanufacturing companies.

Budgeting may be used by merchandisers for development of a merchandise purchases budget. In service companies, budgeting is a critical factor in coordinating staff needs with anticipated services. In not-for-profit organizations, the starting point in budgeting is usually expenditures, not receipts.

Glossary Review

Budget A formal written statement of management's plans for a specified future time period, expressed in financial terms. (p. 24-3).

Budgetary slack The amount by which a manager intentionally underestimates budgeted revenues or overestimates budgeted expenses in order to make it easier to achieve budgetary goals. (p. 24-6).

Budget committee A group responsible for coordinating the preparation of the budget. (p. 24-4).

Budgeted balance sheet A projection of financial position at the end of the budget period. (p. 24-20).

Budgeted income statement An estimate of the expected profitability of operations for the budget period. (p. 24-15).

Cash budget A projection of anticipated cash flows. (p. 24-17).

Direct labor budget A projection of the quantity and cost of direct labor necessary to meet production requirements. (p. 24-13).

Direct materials budget An estimate of the quantity and cost of direct materials to be purchased. (p. 24-10).

Financial budgets Individual budgets that focus primarily on the cash resources needed to fund expected operations and planned capital expenditures. (p. 24-6).

Long-range planning A formalized process of identifying long-term goals, selecting strategies to achieve those goals, and developing policies and plans to implement the strategies. (p. 24-6).

Manufacturing overhead budget An estimate of expected manufacturing overhead costs for the budget period. (p. 24-14).

Master budget A set of interrelated budgets that constitutes a plan of action for a specific time period. (p. 24-6).

Merchandise purchases budget The estimated cost of goods to be purchased by a merchandiser to meet expected sales. (p. 24-22).

Operating budgets Individual budgets that result in a budgeted income statement. (p. 24-6).

Participative budgeting A budgetary approach that starts with input from lower-level managers and works upward so that managers at all levels participate. (p. 24-5).

Production budget A projection of the units that must be produced to meet anticipated sales. (p. 24-9).

Sales budget An estimate of expected sales revenue for the budget period. (p. 24-8).

Sales forecast The projection of potential sales for the industry and the company's expected share of such sales. (p. 24-4).

Selling and administrative expense budget A projection of anticipated selling and administrative expenses for the budget period. (p. 24-15).

Practice Multiple-Choice Questions

1. **(LO 1)** Which of the following is **not** a benefit of budgeting?
 - a. Management can plan ahead.
 - b. An early warning system is provided for potential problems.
 - c. It enables disciplinary action to be taken at every level of responsibility.
 - d. The coordination of activities is facilitated.

2. **(LO 1)** A budget:
 - a. is the responsibility of management accountants.
 - b. is the primary method of communicating agreed-upon objectives throughout an organization.
 - c. ignores past performance because it represents management's plans for a future time period.
 - d. may promote efficiency but has no role in evaluating performance.

3. **(LO 1)** The essentials of effective budgeting do **not** include:
 - a. top-down budgeting.
 - b. management acceptance.
 - c. research and analysis.
 - d. sound organizational structure.
4. **(LO 1)** Compared to budgeting, long-range planning generally has the:

a. same amount of detail.	c. same emphasis.
b. longer time period.	d. same time period.
5. **(LO 2)** A sales budget is:
 - a. derived from the production budget.
 - b. management's best estimate of sales revenue for the year.
 - c. not the starting point for the master budget.
 - d. prepared only for credit sales.

- 6. (LO 2)** The formula for the production budget is budgeted sales in units plus:
- desired ending merchandise inventory less beginning merchandise inventory.
 - beginning finished goods units less desired ending finished goods units.
 - desired ending direct materials units less beginning direct materials units.
 - desired ending finished goods units less beginning finished goods units.
- 7. (LO 2)** Direct materials inventories are kept in pounds in Byrd Company, and the total pounds of direct materials needed for production is 9,500. If the beginning inventory is 1,000 pounds and the desired ending inventory is 2,200 pounds, the total pounds to be purchased is:
- 9,400.
 - 9,500.
 - 9,700.
 - 10,700.
- 8. (LO 3)** The formula for computing the direct labor budget is to multiply the direct labor cost per hour by the:
- total required direct labor hours.
 - physical units to be produced.
 - equivalent units to be produced.
 - No correct answer is given.
- 9. (LO 3)** Each of the following budgets is used in preparing the budgeted income statement **except** the:
- sales budget.
 - selling and administrative expense budget.
 - capital expenditure budget.
 - direct labor budget.
- 10. (LO 3)** The budgeted income statement is:
- the end-product of the operating budgets.
 - the end-product of the financial budgets.
 - the starting point of the master budget.
 - dependent on cash receipts and cash disbursements.
- 11. (LO 4)** The budgeted balance sheet is:
- developed from the budgeted balance sheet for the preceding year and the budgets for the current year.
- b. the last operating budget prepared.**
- c. used to prepare the cash budget.**
- d. All of the above.**
- 12. (LO 4)** The format of a cash budget is:
- Beginning cash balance + Cash receipts + Cash from financing – Cash disbursements = Ending cash balance.
 - Beginning cash balance + Cash receipts – Cash disbursements +/- Financing = Ending cash balance.
 - Beginning cash balance + Net income – Cash dividends = Ending cash balance.
 - Beginning cash balance + Cash revenues – Cash expenses = Ending cash balance.
- 13. (LO 4)** Expected direct materials purchases in Read Company are \$70,000 in the first quarter and \$90,000 in the second quarter. Forty percent of the purchases are paid in cash as incurred, and the balance is paid in the following quarter. The budgeted cash payments for purchases in the second quarter are:
- \$96,000.
 - \$90,000.
 - \$78,000.
 - \$72,000.
- 14. (LO 5)** The budget for a merchandiser differs from a budget for a manufacturer because:
- a merchandise purchases budget replaces the production budget.
 - the manufacturing budgets are not applicable.
 - None of the above.
 - Both (a) and (b) above.
- 15. (LO 5)** In most cases, not-for-profit entities:
- prepare budgets using the same steps as those used by profit-oriented businesses.
 - know budgeted cash receipts at the beginning of a time period, so they budget only for expenditures.
 - begin the budgeting process by budgeting expenditures rather than receipts.
 - can ignore budgets because they are not expected to generate net income.

Solutions

- 1. c.** Budgeting does not necessarily enable disciplinary action to be taken at every level of responsibility. The other choices are all benefits of budgeting.
- 2. b.** A budget is the primary method of communicating agreed-upon objectives throughout an organization. The other choices are incorrect because (a) a budget is the responsibility of all levels of management, not management accountants; (c) past performance is not ignored in the budgeting process but instead is the starting point from which future budget goals are formulated; and (d) the budget not only may promote efficiency but is an important tool for evaluating performance.
- 3. a.** Top-down budgeting is not one of the essentials of effective budgeting. The other choices are true statements.
- 4. b.** Long-range planning generally encompasses a period of at least 5 years whereas budgeting usually covers a period of 1 year.
- The other choices are incorrect because budgeting and long-range planning (a) do not have the same amount of detail, (c) do not have the same emphasis, and (d) do not cover the same time period.
- 5. b.** A sales budget is management's best estimate of sales revenue for the year. The other choices are incorrect because a sales budget (a) is the first budget prepared and is the one budget that is not derived from any other budget, (c) is the starting point for the master budget, and (d) is prepared for both cash and credit sales.
- 6. d.** The formula for the production budget is budgeted sales in units plus desired ending finished goods units less beginning finished goods units. The other choices are therefore incorrect.
- 7. d.** Pounds to be purchased = Amount needed for production (9,500) + Desired ending inventory (2,200) – Beginning inventory (1,000) = 10,700, not (a) 9,400, (b) 9,500, or (c) 9,700.
- 8. a.** Direct labor cost = Direct labor cost per hour × Total required direct labor hours. The other choices are therefore incorrect.

- 9. c.** The capital expenditure budget is not used in preparing the budgeted income statement. The other choices are true statements.
- 10. a.** The budgeted income statement is the end-product of the operating budgets, not (b) the financial budgets, (c) the starting point of the master budget, or (d) dependent on cash receipts and cash disbursements.
- 11. a.** The budgeted balance sheet is developed from the budgeted balance sheet for the preceding year and the budgets for the current year. The other choices are therefore incorrect.
- 12. b.** The format of a cash budget is Beginning cash balance + Cash receipts – Cash disbursements +/- Financing = Ending cash balance. The other choices are therefore incorrect.
- 13. c.** Budgeted cash payments for the second quarter = Purchases for the first quarter (\$42,000; \$70,000 × .60) + 40% of the purchases for the second quarter (\$36,000; \$90,000 × .40) = \$78,000, not (a) \$96,000, (b) \$90,000, or (d) \$72,000.
- 14. d.** The budget for a merchandiser uses a merchandise purchases budget in place of a production budget, and the manufacturing budgets are not applicable for a merchandiser. Therefore, as both choices (a) and (b) are correct, choice (d) is the best answer.
- 15. c.** In most cases, not-for-profit entities begin the budgeting process by budgeting expenditures rather than receipts. The other choices are incorrect because in most cases not-for-profit entities (a) prepare budgets using different, not the same, steps as those used by profit-oriented enterprises; (b) budget for both expenditures and receipts; and (d) cannot ignore budgets.

Practice Brief Exercises

Prepare a production budget for two quarters.

- 1. (LO 2)** Romana Company estimates that unit sales will be 20,000 in quarter 1, 24,000 in quarter 2, 27,000 in quarter 3, and 33,000 in quarter 4. Management desires to have an ending finished goods inventory equal to 20% of the next quarter's expected unit sales. Prepare a production budget by quarters for the first 6 months of 2020.

Solution

1.

**Romana Company
Production Budget**
For the Six Months Ending June 30, 2020

	Quarter	Six Months
	1	2
Expected unit sales	20,000	24,000
Add: Desired ending finished goods	<u>4,800^a</u>	<u>5,400^c</u>
Total required units	24,800	29,400
Less: Beginning finished goods inventory	<u>4,000^b</u>	<u>4,800</u>
Required production units	<u>20,800</u>	<u>24,600</u>
		<u>45,400</u>

^a24,000 × .2 ^b20,000 × .2 ^c27,000 × .2

Prepare a direct labor budget for 2 quarters.

- 2. (LO 3)** For Jovanka Company, units to be produced are 7,000 in quarter 1 and 9,800 in quarter 2. It takes 2.2 hours to make a finished unit, and the expected hourly wage rate is \$20 per hour. Prepare a direct labor budget by quarters for the 6 months ending June 30, 2020.

Solution

2.

**Jovanka Company
Direct Labor Budget**
For the Six Months Ending June 30, 2020

	Quarter	Six Months
	1	2
Units to be produced	7,000	9,800
Direct labor time (hours) per unit	<u>× 2.2</u>	<u>× 2.2</u>
Total required direct labor hours	<u>15,400</u>	<u>21,560</u>
Direct labor cost per hour	<u>× \$20</u>	<u>× \$20</u>
Total direct labor cost	<u>\$308,000</u>	<u>\$431,200</u>
		<u>\$739,200</u>

3. (LO 4) Vislor Industries expects credit sales for January, February, and March to be \$165,000, \$200,000, and \$220,000, respectively. It is expected that 70% of the sales will be collected in the month of sale, and 30% will be collected in the following month. Compute cash collections from customers for each month.

Prepare data for a cash budget.

Solution

3.

Credit Sales	Collections from Customers		
	January	February	March
January, \$165,000	\$115,500	\$ 49,500	
February, \$200,000		140,000	\$ 60,000
March, \$220,000			154,000
	<u><u>\$115,500</u></u>	<u><u>\$189,500</u></u>	<u><u>\$214,000</u></u>

4. (LO 5) Turlough Wholesalers is preparing its merchandise purchases budget. Budgeted sales are \$300,000 for June and \$380,000 for July. Cost of goods sold is expected to be 60% of sales. The company's desired ending inventory is 25% of the following month's cost of goods sold. Compute the required purchases for June.

Determine required merchandise purchases for 1 month.

Solution

4.

Budgeted cost of goods sold ($\$300,000 \times 60\%$)	\$180,000
Add: Desired ending inventory ($\$380,000 \times 60\% \times 25\%$)	<u>57,000</u>
Total inventory required	237,000
Less: Beginning inventory ($\$300,000 \times 60\% \times 25\%$)	<u>45,000</u>
Required merchandise purchases for April	<u><u>\$192,000</u></u>

Practice Exercises

1. (LO 2) On January 1, 2020, the Heche Company budget committee has reached agreement on the following data for the 6 months ending June 30, 2020.

Prepare production and direct materials budgets by quarter for 6 months.

Sales units:	First quarter 5,000; second quarter 6,000; third quarter 7,000
Ending raw materials inventory:	40% of the next quarter's production requirements
Ending finished goods inventory:	30% of the next quarter's expected sales units
Third-quarter 2020 production:	7,500 units

The ending raw materials and finished goods inventories at December 31, 2019, follow the same percentage relationships to production and sales that occur in 2020. Two pounds of raw materials are required to make each unit of finished goods. Raw materials purchased are expected to cost \$5 per pound.

Instructions

- Prepare a production budget by quarters for the 6-month period ended June 30, 2020.
- Prepare a direct materials budget by quarters for the 6-month period ended June 30, 2020.

Solution**1. a.**

Heche Company Production Budget						
	A	B	C	D	E	F
1	Heche Company Production Budget For the Six Months Ending June 30, 2020

14	Total cost of direct materials purchase	\$57,000			\$67,800	\$124,800
15						
16	(¹).40 × 12,600; (²)7,500 × (2 × .40); (³).40 × 10,600					
17						

Prepare a cash budget for 2 months.

2. (LO 4) Jake Company expects to have a cash balance of \$45,000 on January 1, 2020. Relevant monthly budget data for the first 2 months of 2020 are as follows.

Collections from customers: January \$100,000, February \$160,000.

Payments for direct materials: January \$60,000, February \$80,000.

Direct labor: January \$30,000, February \$45,000. Wages are paid in the month they are incurred.

Manufacturing overhead: January \$26,000, February \$31,000. These costs include depreciation of \$1,000 per month. All other overhead costs are paid as incurred.

Selling and administrative expenses: January \$15,000, February \$20,000. These costs are exclusive of depreciation. They are paid as incurred.

Sales of marketable securities in January are expected to realize \$10,000 in cash. Jake Company has a line of credit at a local bank that enables it to borrow up to \$25,000. The company wants to maintain a minimum monthly cash balance of \$25,000.

Instructions

Prepare a cash budget for January and February.

Solution

2.

Jake Company Cash Budget		
	January	February
1 Beginning cash balance	\$ 45,000	\$ 25,000
2 Add: Receipts		
3 Collections from customers	100,000	160,000
4 Sale of marketable securities	10,000	0
5 Total receipts	110,000	160,000
6 Total available cash	155,000	185,000
7 Less: Disbursements		
8 Direct materials	60,000	80,000
9 Direct labor	30,000	45,000
10 Manufacturing overhead	25,000*	30,000
11 Selling and administrative expenses	15,000	20,000
12 Total disbursements	130,000	175,000
13 Excess (deficiency) of available cash over cash		
14 Disbursements	25,000	10,000
15 Financing		
16 Borrowings	0	15,000
17 Repayments	0	0
18 Ending cash balance	\$ 25,000	\$ 25,000
19 *\$26,000 – \$1,000		

Practice Problems

1. (LO 2) Asheville Company is preparing its master budget for 2020. Relevant data pertaining to its sales and production budgets are as follows.

Prepare sales and production budgets.

Sales. Sales for the year are expected to total 2,100,000 units. Quarterly sales, as a percentage of total sales, are 15%, 25%, 35%, and 25%, respectively. The sales price is expected to be \$70 per unit for the first three quarters and \$75 per unit beginning in the fourth quarter. Sales in the first quarter of 2021 are expected to be 10% higher than the budgeted sales volume for the first quarter of 2020.

Production. Management desires to maintain ending finished goods inventories at 20% of the next quarter's budgeted sales volume.

Instructions

Prepare the sales budget and production budget by quarters for 2020.

Solution

1.

Asheville Company Sales Budget and Production Budget						
	A	B	C	D	E	F
1						H
Asheville Company For the Year Ending December 31, 2020 Sales Budget						
		Quarter				
		1	2	3	4	Year
6	Expected unit sales ^a	315,000	525,000	735,000	525,000	2,100,000
7	Unit selling price	× \$70	× \$70	× \$70	× \$75	
8	Total sales	<u>\$22,050,000</u>	<u>\$36,750,000</u>	<u>\$51,450,000</u>	<u>\$39,375,000</u>	<u>\$149,625,000</u>
Production Budget						
11	Expected unit sales	315,000	525,000	735,000	525,000	
11	Add: Desired ending finished goods units	105,000	147,000	105,000	69,300 ^b	
12	Total required units	420,000	672,000	840,000	594,300	
13	Less: Beginning finished goods units	63,000 ^c	105,000	147,000	105,000	
14	Required production units	357,000	567,000	693,000	489,300	2,106,300
16	^a Expected first-quarter unit sales $2,100,000 \times .15$; second and fourth quarters $2,100,000 \times .25$;					
17	^b Estimated first-quarter 2021 sales volume $315,000 + (315,000 \times .10) = 346,500$; $346,500 \times .20$					
19	^c 20% of estimated first-quarter 2020 sales units ($315,000 \times .20$)					

Prepare budgeted cost of goods sold, income statement, and balance sheet.

2. (LO 3, 4) Barrett Company has completed all operating budgets other than the income statement for 2020. Selected data from these budgets follow.

Sales: \$300,000

Purchases of raw materials: \$145,000

Ending inventory of raw materials: \$15,000

Direct labor: \$40,000

Manufacturing overhead: \$73,000, including \$3,000 of depreciation expense

Selling and administrative expenses: \$36,000 including depreciation expense of \$1,000

Interest expense: \$1,000

Principal payment on note: \$2,000

Dividends declared: \$2,000

Income tax rate: 30%

Other information:

Assume that the number of units produced equals the number sold.

Year-end accounts receivable: 4% of 2020 sales.

Year-end accounts payable: 50% of ending inventory of raw materials.

Interest, direct labor, manufacturing overhead, and selling and administrative expenses other than depreciation are paid as incurred.

Dividends declared and income taxes for 2020 will not be paid until 2021.

Barrett Company		
Balance Sheet		
December 31, 2019		
Assets		
Current assets		
Cash		\$20,000
Raw materials inventory		<u>10,000</u>
Total current assets		<u>30,000</u>
Property, plant, and equipment		
Equipment	\$40,000	
Less: Accumulated depreciation	<u>4,000</u>	<u>36,000</u>
Total assets		<u><u>\$66,000</u></u>

Liabilities		
Accounts payable	\$ 5,000	
Notes payable	<u>22,000</u>	
Total liabilities		<u>\$27,000</u>
Stockholders' equity		
Common stock	25,000	
Retained earnings	<u>14,000</u>	
Total stockholders' equity		<u>39,000</u>
Total liabilities and stockholders' equity		<u><u>\$66,000</u></u>

Instructions

- Calculate budgeted cost of goods sold.
- Prepare a budgeted multiple-step income statement for the year ending December 31, 2020.
- Prepare a budgeted classified balance sheet as of December 31, 2020.

Solution

2. a. Beginning raw materials + Purchases – Ending raw materials = Cost of direct materials used
(\$10,000 + \$145,000 – \$15,000 = \$140,000)
Direct materials used + Direct labor + Manufacturing overhead = Cost of goods sold (\$140,000 + \$40,000 + \$73,000 = \$253,000)

b. **Barrett Company**
Budgeted Income Statement

Brief Exercises, DO IT! Exercises, Exercises, Problems, and many additional resources are available for practice in WileyPLUS.

Questions

1. a. What is a budget?
b. How does a budget contribute to good management?
2. Kate Cey and Joe Coulter are discussing the benefits of budgeting. They ask you to identify the primary benefits of budgeting. Comply with their request.

- 3.** Jane Gilligan asks your help in understanding the essentials of effective budgeting. Identify the essentials for Jane.
- 4. a.** "Accounting plays a relatively unimportant role in budgeting." Do you agree? Explain.
- b.** What responsibilities does management have in budgeting?
- 5.** What criteria are helpful in determining the length of the budget period? What is the most common budget period?
- 6.** Lori Wilkins maintains that the only difference between budgeting and long-range planning is time. Do you agree? Why or why not?
- 7.** What is participative budgeting? What are its potential benefits? What are its potential disadvantages?
- 8.** What is budgetary slack? What incentive do managers have to create budgetary slack?
- 9.** Distinguish between a master budget and a sales forecast.
- 10.** What budget is the starting point in preparing the master budget? What may result if this budget is inaccurate?
- 11.** "The production budget shows both unit production data and unit cost data." Is this true? Explain.
- 12.** Alou Company has 20,000 beginning finished goods units. Budgeted sales units are 160,000. If management desires 15,000 ending finished goods units, what are the required units of production?
- 13.** In preparing the direct materials budget for Quan Company, management concludes that required purchases are 64,000 units. If 52,000 direct materials units are required in production and there are 9,000 units of beginning direct materials, what is the desired units of ending direct materials?
- 14.** The production budget of Justus Company calls for 80,000 units to be produced. If it takes 45 minutes to make one unit and the direct labor rate is \$16 per hour, what is the total budgeted direct labor cost?
- 15.** Ortiz Company's manufacturing overhead budget shows total variable costs of \$198,000 and total fixed costs of \$162,000. Total production in units is expected to be 150,000. It takes 20 minutes to make one unit, and the direct labor rate is \$15 per hour. Express the manufacturing overhead rate as (a) a percentage of direct labor cost, and (b) an amount per direct labor hour.
- 16.** Everly Company's variable selling and administrative expenses are 12% of net sales. Fixed expenses are \$50,000 per quarter. The sales budget shows expected sales of \$200,000 and \$240,000 in the first and second quarters, respectively. What are the total budgeted selling and administrative expenses for each quarter?
- 17.** For Goody Company, the budgeted cost for one unit of product is direct materials \$10, direct labor \$20, and manufacturing overhead 80% of direct labor cost. If 25,000 units are expected to be sold at \$65 each, what is the budgeted gross profit?
- 18.** Indicate the supporting schedules used in preparing a budgeted income statement through gross profit for a manufacturer.
- 19.** Identify the three sections of a cash budget. What balances are also shown in this budget?
- 20.** Noterman Company has credit sales of \$600,000 in January. Past experience suggests that 40% is collected in the month of sale, 50% in the month following the sale, and 10% in the second month following the sale. Compute the cash collections from January sales in January, February, and March.
- 21.** What is the formula for determining required merchandise purchases for a merchandiser?
- 22.** How may expected revenues in a service company be computed?

Brief Exercises

BE24.1 (LO 1) Maris Company uses the following budgets: balance sheet, capital expenditure, cash, direct labor, direct materials, income statement, manufacturing overhead, production, sales, and selling and administrative expense. Prepare a diagram of the interrelationships of the budgets in the master budget. Indicate whether each budget is an operating or a financial budget.

Prepare a diagram of a master budget.

BE24.2 (LO 2) Paige Company estimates that unit sales will be 10,000 in quarter 1, 14,000 in quarter 2, 15,000 in quarter 3, and 18,000 in quarter 4. Using a sales price of \$70 per unit, prepare the sales budget by quarters for the year ending December 31, 2020.

Prepare a sales budget.

BE24.3 (LO 2) Sales budget data for Paige Company are given in BE24.2. Management desires to have an ending finished goods inventory equal to 25% of the next quarter's expected unit sales. Prepare a production budget by quarters for the first 6 months of 2020.

Prepare a production budget for 2 quarters.

BE24.4 (LO 2) Perine Company has 2,000 pounds of raw materials in its December 31, 2019, ending inventory. Required production for January and February of 2020 are 4,000 and 5,000 units, respectively. Two pounds of raw materials are needed for each unit, and the estimated cost per pound is \$6. Management desires an ending inventory equal to 25% of next month's materials requirements. Prepare the direct materials budget for January.

Prepare a direct materials budget for 1 month.

BE24.5 (LO 3) For Gundy Company, units to be produced are 5,000 in quarter 1 and 7,000 in quarter 2. It takes 1.6 hours to make a finished unit, and the expected hourly wage rate is \$15 per hour. Prepare a direct labor budget by quarters for the 6 months ending June 30, 2020.

Prepare a direct labor budget for 2 quarters.

BE24.6 (LO 3) For Roche Inc., variable manufacturing overhead costs are expected to be \$20,000 in the first quarter of 2020, with \$5,000 increments in each of the remaining three quarters. Fixed overhead costs are estimated to be \$40,000 in each quarter. Prepare the manufacturing overhead budget by quarters and in total for the year.

Prepare a manufacturing overhead budget.

Prepare a selling and administrative expense budget.

BE24.7 (LO 3) Elbert Company classifies its selling and administrative expense budget into variable and fixed components. Variable expenses are expected to be \$24,000 in the first quarter, and \$4,000 increments are expected in the remaining quarters of 2020. Fixed expenses are expected to be \$40,000 in each quarter. Prepare the selling and administrative expense budget by quarters and in total for 2020.

Prepare a budgeted income statement for the year.

BE24.8 (LO 3) North Company has completed all of its operating budgets. The sales budget for the year shows 50,000 units and total sales of \$2,250,000. The total unit cost of making one unit of sales is \$25. Selling and administrative expenses are expected to be \$300,000. Interest is estimated to be \$10,000. Income taxes are estimated to be \$200,000. Prepare a budgeted multiple-step income statement for the year ending December 31, 2020.

Prepare data for a cash budget.

BE24.9 (LO 4) Kaspar Industries expects credit sales for January, February, and March to be \$220,000, \$260,000, and \$300,000, respectively. It is expected that 75% of the sales will be collected in the month of sale, and 25% will be collected in the following month. Compute cash collections from customers for each month.

Determine required merchandise purchases for 1 month.

BE24.10 (LO 5) Moore Wholesalers is preparing its merchandise purchases budget. Budgeted sales are \$400,000 for April and \$480,000 for May. Cost of goods sold is expected to be 65% of sales. The company's desired ending inventory is 20% of the following month's cost of goods sold. Compute the required purchases for April.

DO IT! Exercises

Identify budget terminology.

DO IT! 24.1 (LO 1) Use this list of terms to complete the sentences that follow.

Long-range plans	Participative budgeting
Sales forecast	Operating budgets
Master budget	Financial budgets

1. _____ establish goals for the company's sales and production personnel.
2. The _____ is a set of interrelated budgets that constitutes a plan of action for a specified time period.
3. _____ reduces the risk of having unrealistic budgets.
4. _____ include the cash budget and the budgeted balance sheet.
5. The budget is formed within the framework of a _____.
6. _____ contain considerably less detail than budgets.

Prepare sales, production, and direct materials budgets.

DO IT! 24.2 (LO 2) Pargo Company is preparing its master budget for 2020. Relevant data pertaining to its sales, production, and direct materials budgets are as follows.

Sales. Sales for the year are expected to total 1,000,000 units. Quarterly sales are 20%, 25%, 25%, and 30%, respectively. The sales price is expected to be \$40 per unit for the first three quarters and \$45 per unit beginning in the fourth quarter. Sales in the first quarter of 2021 are expected to be 20% higher than the budgeted sales for the first quarter of 2020.

Production. Management desires to maintain the ending finished goods inventories at 25% of the next quarter's budgeted sales volume.

Direct materials. Each unit requires 2 pounds of raw materials at a cost of \$12 per pound. Management desires to maintain raw materials inventories at 10% of the next quarter's production requirements. Assume the production requirements for first quarter of 2021 are 450,000 pounds.

Prepare the sales, production, and direct materials budgets by quarters for 2020.

Calculate budgeted total unit cost and prepare budgeted income statement.

DO IT! 24.3 (LO 3) Pargo Company is preparing its budgeted income statement for 2020. Relevant data pertaining to its sales, production, and direct materials budgets can be found in **DO IT! 24.2**.

In addition, Pargo budgets 0.3 hours of direct labor per unit, labor costs at \$15 per hour, and manufacturing overhead at \$20 per direct labor hour. Its budgeted selling and administrative expenses for 2020 are \$6,000,000.

- a. Calculate the budgeted total unit cost.
- b. Prepare the budgeted multiple-step income statement for 2020. (Ignore income taxes.)

Determine amount of financing needed.

DO IT! 24.4 (LO 4) Batista Company management wants to maintain a minimum monthly cash balance of \$25,000. At the beginning of April, the cash balance is \$25,000, expected cash receipts for

April are \$245,000, and cash disbursements are expected to be \$255,000. How much cash, if any, must be borrowed to maintain the desired minimum monthly balance?

DO IT! 24.5 (LO 5) Zeller Company estimates that 2020 sales will be \$40,000 in quarter 1, \$48,000 in quarter 2, and \$58,000 in quarter 3. Cost of goods sold is 50% of sales. Management desires to have ending finished goods inventory equal to 10% of the next quarter's expected cost of goods sold. Prepare a merchandise purchases budget by quarter for the first 6 months of 2020.

Prepare merchandise purchases budget.

Exercises

E24.1 (LO 1) Writing Trusler Company has always done some planning for the future, but the company has never prepared a formal budget. Now that the company is growing larger, it is considering preparing a budget.

Explain the concept of budgeting.

Instructions

Write a memo to Jim Dixon, the president of Trusler Company, in which you define budgeting, identify the budgets that comprise the master budget, identify the primary benefits of budgeting, and discuss the essentials of effective budgeting.

E24.2 (LO 2) Edington Electronics Inc. produces and sells two models of calculators, XQ-103 and XQ-104. The calculators sell for \$15 and \$25, respectively. Because of the intense competition Edington faces, management budgets sales semiannually. Its projections for the first 2 quarters of 2020 are as follows.

Prepare a sales budget for 2 quarters.

Product	Unit Sales	
	Quarter 1	Quarter 2
XQ-103	20,000	22,000
XQ-104	12,000	15,000

No changes in selling prices are anticipated.

Instructions

Prepare a sales budget for the 2 quarters ending June 30, 2020. List the products and show for each quarter and for the 6 months, units, selling price, and total sales by product and in total.

E24.3 (LO 2) Service Thome and Crede, CPAs, are preparing their service revenue (sales) budget for the coming year (2020). The practice is divided into three departments: auditing, tax, and consulting. Billable hours for each department, by quarter, are provided below.

Prepare a sales budget for 4 quarters.

Department	Quarter 1	Quarter 2	Quarter 3	Quarter 4
Auditing	2,300	1,600	2,000	2,400
Tax	3,000	2,200	2,000	2,500
Consulting	1,500	1,500	1,500	1,500

Average hourly billing rates are auditing \$80, tax \$90, and consulting \$110.

Instructions

Prepare the service revenue (sales) budget for 2020 by listing the departments and showing for each quarter and the year in total, billable hours, billable rate, and total revenue.

E24.4 (LO 2) Turney Company produces and sells automobile batteries, the heavy-duty HD-240. The 2020 sales forecast is as follows.

Prepare quarterly production budgets.

Quarter	HD-240
1	5,000
2	7,000
3	8,000
4	10,000

The January 1, 2020, inventory of HD-240 is 2,000 units. Management desires an ending inventory each quarter equal to 40% of the next quarter's sales. Sales in the first quarter of 2021 are expected to be 25% higher than sales in the same quarter in 2020.

Instructions

Prepare quarterly production budgets for each quarter and in total for 2020.

Prepare a direct materials purchases budget.

E24.5 (LO 2) DeWitt Industries has adopted the following production budget for the first 4 months of 2020.

<u>Month</u>	<u>Units</u>	<u>Month</u>	<u>Units</u>
January	10,000	March	5,000
February	8,000	April	4,000

Each unit requires 2 pounds of raw materials costing \$3 per pound. On December 31, 2019, the ending raw materials inventory was 4,000 pounds. Management wants to have a raw materials inventory at the end of the month equal to 20% of next month's production requirements.

Instructions

Prepare a direct materials purchases budget by month for the first quarter.

Prepare production and direct materials budgets by quarters for 6 months.

E24.6 (LO 2) On January 1, 2020, the Hardin Company budget committee has reached agreement on the following data for the 6 months ending June 30, 2020.

Sales units: First quarter 5,000; second quarter 6,000; third quarter 7,000.

Ending raw materials inventory: 40% of the next quarter's production requirements.

Ending finished goods inventory: 25% of the next quarter's expected sales units.

Third-quarter production: 7,200 units.

The ending raw materials and finished goods inventories at December 31, 2019, follow the same percentage relationships to production and sales that occur in 2020. Three pounds of raw materials are required to make each unit of finished goods. Raw materials purchased are expected to cost \$4 per pound.

Instructions

- Prepare a production budget by quarters for the 6-month period ended June 30, 2020.
- Prepare a direct materials budget by quarters for the 6-month period ended June 30, 2020.

Calculate raw materials purchases in dollars.

E24.7 (LO 2) Rensing Ltd. estimates sales for the second quarter of 2020 will be as follows.

<u>Month</u>	<u>Units</u>
April	2,550
May	2,675
June	2,390

The target ending inventory of finished products is as follows.

March 31	2,000
April 30	2,230
May 31	2,200
June 30	2,310

Two units of materials are required for each unit of finished product. Production for July is estimated at 2,700 units to start building inventory for the fall sales period. Rensing's policy is to have an inventory of raw materials at the end of each month equal to 50% of the following month's production requirements.

Raw materials are expected to cost \$4 per unit throughout the period.

Instructions

Calculate the May raw materials purchases in dollars.

(CGA adapted)

Prepare a production and a direct materials budget.

E24.8 (LO 2) Fuqua Company's sales budget projects unit sales of part 198Z of 10,000 units in January, 12,000 units in February, and 13,000 units in March. Each unit of part 198Z requires 4 pounds of materials, which cost \$2 per pound. Fuqua Company desires its ending raw materials inventory to equal 40% of the next month's production requirements, and its ending finished goods inventory to equal 20% of the next month's expected unit sales. These goals were met at December 31, 2019.

Instructions

- a. Prepare a production budget for January and February 2020.
- b. Prepare a direct materials budget for January 2020.

E24.9 (LO 3) Rodriguez, Inc., is preparing its direct labor budget for 2020 from the following production budget based on a calendar year.

Prepare a direct labor budget.

<u>Quarter</u>	<u>Units</u>	<u>Quarter</u>	<u>Units</u>
1	20,000	3	35,000
2	25,000	4	30,000

Each unit requires 1.5 hours of direct labor.

Instructions

Prepare a direct labor budget for 2020. Wage rates are expected to be \$16 for the first 2 quarters and \$18 for quarters 3 and 4.

E24.10 (LO 2, 3) Lowell Company makes and sells artistic frames for pictures. The controller is responsible for preparing the master budget and has accumulated the following information for 2020.

Prepare production and direct labor budgets.

	<u>January</u>	<u>February</u>	<u>March</u>	<u>April</u>	<u>May</u>
Estimated unit sales	12,000	14,000	13,000	11,000	11,000
Sales price per unit	\$50.00	\$47.50	\$47.50	\$47.50	\$47.50
Direct labor hours per unit	2.0	2.0	1.5	1.5	1.5
Wage per direct labor hour	\$8.00	\$8.00	\$8.00	\$9.00	\$9.00

Lowell has a labor contract that calls for a wage increase to \$9.00 per hour on April 1. New labor-saving machinery has been installed and will be fully operational by March 1.

Lowell expects to begin the year with 17,600 frames on hand and has a policy of carrying an end-of-month inventory of 100% of the following month's sales, plus 40% of the second following month's sales.

Instructions

Prepare a production budget and a direct labor budget for Lowell Company by month and for the first quarter of the year. The direct labor budget should include direct labor hours.

(CMA-Canada adapted)

E24.11 (LO 3) Atlanta Company is preparing its manufacturing overhead budget for 2020. Relevant data consist of the following.

Prepare a manufacturing overhead budget for the year.

Units to be produced (by quarters): 10,000, 12,000, 14,000, 16,000.

Direct labor: time is 1.5 hours per unit.

Variable overhead costs per direct labor hour: indirect materials \$0.80; indirect labor \$1.20; and maintenance \$0.50.

Fixed overhead costs per quarter: supervisory salaries \$35,000; depreciation \$15,000; and maintenance \$12,000.

Instructions

Prepare the manufacturing overhead budget for the year, showing quarterly data.

E24.12 (LO 3) Kirkland Company combines its operating expenses for budget purposes in a selling and administrative expense budget. For the first 6 months of 2020, the following data are available.

Prepare a selling and administrative expense budget for 2 quarters.

1. Sales: 20,000 units quarter 1; 22,000 units quarter 2.
2. Variable costs per dollar of sales: sales commissions 5%, delivery expense 2%, and advertising 3%.
3. Fixed costs per quarter: sales salaries \$12,000, office salaries \$8,000, depreciation \$4,200, insurance \$1,500, utilities \$800, and repairs expense \$500.
4. Unit selling price: \$20.

Instructions

Prepare a selling and administrative expense budget by quarters for the first 6 months of 2020.

Prepare a budgeted income statement for the year.

E24.13 (LO 3) Fultz Company has accumulated the following budget data for the year 2020.

1. Sales: 30,000 units, unit selling price \$85.
2. Cost of one unit of finished goods: direct materials 1 pound at \$5 per pound, direct labor 3 hours at \$15 per hour, and manufacturing overhead \$5 per direct labor hour.
3. Inventories (raw materials only): beginning, 10,000 pounds; ending, 15,000 pounds.
4. Selling and administrative expenses: \$170,000; interest expense: \$30,000.
5. Income taxes: 30% of income before income taxes.

Instructions

- a. Prepare a schedule showing the computation of cost of goods sold for 2020.
- b. Prepare a budgeted multiple-step income statement for 2020.

Prepare a cash budget for 2 months.

E24.14 (LO 4) Danner Company expects to have a cash balance of \$45,000 on January 1, 2020. Relevant monthly budget data for the first 2 months of 2020 are as follows.

Collections from customers: January \$85,000, February \$150,000.

Payments for direct materials: January \$50,000, February \$75,000.

Direct labor: January \$30,000, February \$45,000. Wages are paid in the month they are incurred.

Manufacturing overhead: January \$21,000, February \$25,000. These costs include depreciation of \$1,500 per month. All other overhead costs are paid as incurred.

Selling and administrative expenses: January \$15,000, February \$20,000. These costs are exclusive of depreciation. They are paid as incurred.

Sales of marketable securities in January are expected to realize \$12,000 in cash. Danner Company has a line of credit at a local bank that enables it to borrow up to \$25,000. The company wants to maintain a minimum monthly cash balance of \$20,000.

Instructions

Prepare a cash budget for January and February.

Prepare a cash budget.

E24.15 (LO 4) Deitz Corporation is projecting a cash balance of \$30,000 in its December 31, 2019, balance sheet. Deitz's schedule of expected collections from customers for the first quarter of 2020 shows total collections of \$185,000. The schedule of expected payments for direct materials for the first quarter of 2020 shows total payments of \$43,000. Other information gathered for the first quarter of 2020 is sale of equipment \$3,000, direct labor \$70,000, manufacturing overhead \$35,000, selling and administrative expenses \$45,000, and purchase of securities \$14,000. Deitz wants to maintain a balance of at least \$25,000 cash at the end of each quarter.

Instructions

Prepare a cash budget for the first quarter.

Prepare cash budget for a month.

E24.16 (LO 4) The controller of Trenshaw Company wants to improve the company's control system by preparing a month-by-month cash budget. The following information is for the month ending July 31, 2020.

June 30, 2020, cash balance	\$45,000
Dividends to be declared on July 15*	12,000
Cash expenditures to be paid in July for operating expenses	40,800
Amortization expense in July	4,500
Cash collections to be received in July	90,000
Merchandise purchases to be paid in cash in July	56,200
Equipment to be purchased for cash in July	20,000

*Dividends are payable 30 days after declaration to shareholders of record on the declaration date.

Trenshaw Company wants to keep a minimum cash balance of \$25,000.

Instructions

- a. Prepare a cash budget for the month ended July 31, 2020, and indicate how much money, if any, Trenshaw Company will need to borrow to meet its minimum cash requirement.
- b. Explain how cash budgeting can reduce the cost of short-term borrowing.

E24.17 (LO 4) Nieto Company's budgeted sales and direct materials purchases are as follows.

Prepare schedules of expected collections and payments.

	Budgeted Sales	Budgeted D.M. Purchases
January	\$200,000	\$30,000
February	220,000	36,000
March	250,000	38,000

Nieto's sales are 30% cash and 70% credit. Credit sales are collected 10% in the month of sale, 50% in the month following sale, and 36% in the second month following sale; 4% are uncollectible. Nieto's purchases are 50% cash and 50% on account. Purchases on account are paid 40% in the month of purchase, and 60% in the month following purchase.

Instructions

- Prepare a schedule of expected collections from customers for March.
- Prepare a schedule of expected payments for direct materials for March.

E24.18 (LO 4) Service Green Landscaping Inc. is preparing its budget for the first quarter of 2020. The next step in the budgeting process is to prepare a cash receipts schedule and a cash payments schedule. To that end the following information has been collected.

Prepare schedules for cash receipts and cash payments, and determine ending balances for balance sheet.

Clients usually pay 60% of their fee in the month that service is performed, 30% the month after, and 10% the second month after receiving service.

Actual service revenue for 2019 and expected service revenues for 2020 are November 2019, \$80,000; December 2019, \$90,000; January 2020, \$100,000; February 2020, \$120,000; and March 2020, \$140,000.

Purchases of landscaping supplies (direct materials) are paid 60% in the month of purchase and 40% the following month. Actual purchases for 2019 and expected purchases for 2020 are December 2019, \$14,000; January 2020, \$12,000; February 2020, \$15,000; and March 2020, \$18,000.

Instructions

- Prepare the following schedules for each month in the first quarter of 2020 and for the quarter in total:
 - Expected collections from clients.
 - Expected payments for landscaping supplies.
- Determine the following balances at March 31, 2020:
 - Accounts receivable.
 - Accounts payable.

E24.19 (LO 4, 5) Service Pletcher Dental Clinic is a medium-sized dental service specializing in family dental care. The clinic is currently preparing the master budget for the first 2 quarters of 2020. All that remains in this process is the cash budget. The following information has been collected from other portions of the master budget and elsewhere.

Prepare a cash budget for 2 quarters.

Beginning cash balance	\$ 30,000
Required minimum cash balance	25,000
Payment of income taxes (2nd quarter)	4,000
Professional salaries:	
1st quarter	140,000
2nd quarter	140,000
Interest from investments (2nd quarter)	7,000
Overhead costs:	
1st quarter	77,000
2nd quarter	100,000
Selling and administrative costs, including \$2,000 depreciation:	
1st quarter	50,000
2nd quarter	70,000
Purchase of equipment (2nd quarter)	50,000
Sale of equipment (1st quarter)	12,000
Collections from patients:	
1st quarter	235,000
2nd quarter	380,000
Interest payments (2nd quarter)	200

Prepare a purchases budget and budgeted income statement for a merchandiser.

Instructions

Prepare a cash budget for each of the first two quarters of 2020.

E24.20 (LO 5) Service In May 2020, the budget committee of Grand Stores assembles the following data in preparation of budgeted merchandise purchases for the month of June.

1. Expected sales: June \$500,000, July \$600,000.
2. Cost of goods sold is expected to be 75% of sales.
3. Desired ending merchandise inventory is 30% of the following (next) month's cost of goods sold.
4. The beginning inventory at June 1 will be the desired amount.

Instructions

- a. Compute the budgeted merchandise purchases for June.
- b. Prepare the budgeted multiple-step income statement for June through gross profit.

Prepare a direct labor budget for a service company.

E24.21 (LO 5) Emeric and Ellie's Painting Service estimates that it will paint 10 small homes, 5 medium homes, and 2 large homes during the month of June 2020. The company estimates its direct labor needs as 40 hours per small home, 70 hours for a medium home, and 120 hours for a large home. Its average cost for direct labor is \$18 per hour.

Instructions

Prepare a direct labor budget for Emeric and Ellie's Painting Service for June 2020.

Problems: Set A

Prepare budgeted income statement and supporting budgets.

P24.1A (LO 2, 3) Cook Farm Supply Company manufactures and sells a pesticide called Snare. The following data are available for preparing budgets for Snare for the first 2 quarters of 2020.

1. Sales: quarter 1, 40,000 bags; quarter 2, 56,000 bags. Selling price is \$60 per bag.
2. Direct materials: each bag of Snare requires 4 pounds of Gumm at a cost of \$3.80 per pound and 6 pounds of Tarr at \$1.50 per pound.
3. Desired inventory levels:

Type of Inventory	January 1	April 1	July 1
Snare (bags)	8,000	15,000	18,000
Gumm (pounds)	9,000	10,000	13,000
Tarr (pounds)	14,000	20,000	25,000

4. Direct labor: direct labor time is 15 minutes per bag at an hourly rate of \$16 per hour.
5. Selling and administrative expenses are expected to be 15% of sales plus \$175,000 per quarter.
6. Interest expense is \$100,000 for the two quarters.
7. Income taxes are expected to be 30% of income before income taxes.

Your assistant has prepared two budgets: (1) the manufacturing overhead budget shows expected costs to be 125% of direct labor cost, and (2) the direct materials budget for Tarr shows the cost of Tarr purchases to be \$297,000 in quarter 1 and \$439,500 in quarter 2.

Instructions

*Net income \$881,160
Cost per bag \$33.20*

Prepare the budgeted multiple-step income statement for the first 6 months and all required operating budgets by quarters. (*Note:* Use variable and fixed in the selling and administrative expense budget.) Do not prepare the manufacturing overhead budget or the direct materials budget for Tarr.

Prepare sales, production, direct materials, direct labor, and income statement budgets.

P24.2A (LO 2, 3) Deleon Inc. is preparing its annual budgets for the year ending December 31, 2020. Accounting assistants furnish the data shown below.

	Product JB 50	Product JB 60
Sales budget:		
Anticipated volume in units	400,000	200,000
Unit selling price	\$20	\$25

	Product JB 50	Product JB 60
Production budget:		
Desired ending finished goods units	30,000	15,000
Beginning finished goods units	25,000	10,000
Direct materials budget:		
Direct materials per unit (pounds)	2	3
Desired ending direct materials pounds	30,000	10,000
Beginning direct materials pounds	40,000	15,000
Cost per pound	\$3	\$4
Direct labor budget:		
Direct labor time per unit	0.4	0.6
Direct labor rate per hour	\$12	\$12
Budgeted income statement:		
Total unit cost	\$13	\$20

An accounting assistant has prepared the detailed manufacturing overhead budget and the selling and administrative expense budget. The latter shows selling expenses of \$560,000 for product JB 50 and \$360,000 for product JB 60, and administrative expenses of \$540,000 for product JB 50 and \$340,000 for product JB 60. Interest expense is \$150,000 (not allocated to products). Income taxes are expected to be 30%.

Instructions

Prepare the following budgets for the year. Show data for each product. Quarterly budgets should not be prepared.

- a. Sales.
- b. Production.
- c. Direct materials.
- d. Direct labor.
- e. Multiple-step income statement (*Note:* income taxes are not allocated to the products).

P24.3A (LO 2) Hill Industries had sales in 2019 of \$6,800,000 and gross profit of \$1,100,000. Management is considering two alternative budget plans to increase its gross profit in 2020.

Plan A would increase the selling price per unit from \$8.00 to \$8.40. Sales volume would decrease by 10% from its 2019 level. Plan B would decrease the selling price per unit by \$0.50. The marketing department expects that the sales volume would increase by 100,000 units.

At the end of 2019, Hill has 40,000 units of inventory on hand. If Plan A is accepted, the 2020 ending inventory should be equal to 5% of the 2020 sales. If Plan B is accepted, the ending inventory should be equal to 60,000 units. Each unit produced will cost \$1.80 in direct labor, \$1.40 in direct materials, and \$1.20 in variable overhead. The fixed overhead for 2020 should be \$1,895,000.

Instructions

- a. Prepare a sales budget for 2020 under each plan.
- b. Prepare a production budget for 2020 under each plan.
- c. Compute the production cost per unit under each plan. Why is the cost per unit different for each of the two plans? (Round to two decimals.)
- d. Which plan should be accepted? (*Hint:* Compute the gross profit under each plan.)

P24.4A (LO 4) Colter Company prepares monthly cash budgets. Relevant data from operating budgets for 2020 are as follows.

	January	February
Sales	\$360,000	\$400,000
Direct materials purchases	120,000	125,000
Direct labor	90,000	100,000
Manufacturing overhead	70,000	75,000
Selling and administrative expenses	79,000	85,000

All sales are on account. Collections are expected to be 50% in the month of sale, 30% in the first month following the sale, and 20% in the second month following the sale. Sixty percent (60%) of direct materials purchases are paid in cash in the month of purchase, and the balance due is paid in the month following the purchase. All other items above are paid in the month incurred except for selling and administrative expenses that include \$1,000 of depreciation per month.

Other data:

1. Credit sales: November 2019, \$250,000; December 2019, \$320,000.
2. Purchases of direct materials: December 2019, \$100,000.
3. Other receipts: January—collection of December 31, 2019, notes receivable \$15,000; February—proceeds from sale of securities \$6,000.
4. Other disbursements: February—payment of \$6,000 cash dividend.

- a. Total sales \$13,000,000
- b. Required production units: JB 50, 405,000
JB 60, 205,000
- c. Total cost of direct materials purchases \$4,840,000
- d. Total direct labor cost \$3,420,000
- e. Net income \$1,295,000

Prepare sales and production budgets and compute cost per unit under two plans.

- c. Unit cost: Plan A \$6.88
Plan B \$6.35
- d. Gross profit:
Plan A \$1,162,800
Plan B \$1,092,500

Prepare cash budget for 2 months.

- a. January: collections \$326,000; payments \$112,000
 b. Ending cash balance: January \$51,000 February \$50,000

Prepare purchases and income statement budgets for a merchandiser.

The company's cash balance on January 1, 2020, is expected to be \$60,000. The company wants to maintain a minimum cash balance of \$50,000.

Instructions

- Prepare schedules for (1) expected collections from customers and (2) expected payments for direct materials purchases for January and February.
- Prepare a cash budget for January and February in columnar form.

P24.5A (LO 5) The budget committee of Suppar Company collects the following data for its San Miguel Store in preparing budgeted income statements for May and June 2020.

- Sales for May are expected to be \$800,000. Sales in June and July are expected to be 5% higher than the preceding month.
- Cost of goods sold is expected to be 75% of sales.
- Company policy is to maintain ending merchandise inventory at 10% of the following month's cost of goods sold.
- Operating expenses are estimated to be as follows:

Sales salaries	\$35,000 per month
Advertising	6% of monthly sales
Delivery expense	2% of monthly sales
Sales commissions	5% of monthly sales
Rent expense	\$5,000 per month
Depreciation	\$800 per month
Utilities	\$600 per month
Insurance	\$500 per month

- a. Purchases:
 May \$603,000
 June \$633,150

- b. Net income:
 May \$36,470
 June \$39,830

Prepare budgeted cost of goods sold, income statement, retained earnings, and balance sheet.

Instructions

- Prepare the merchandise purchases budget for each month in columnar form.
- Prepare budgeted multiple-step income statements for each month in columnar form. Show in the statements the details of cost of goods sold.

P24.6A (LO 3, 4) Krause Industries' balance sheet at December 31, 2019, is presented below.

Krause Industries		
Balance Sheet		
December 31, 2019		
Assets		
Current assets		
Cash		\$ 7,500
Accounts receivable		73,500
Finished goods inventory (1,500 units)		<u>24,000</u>
Total current assets		105,000
Property, plant, and equipment		
Equipment		\$40,000
Less: Accumulated depreciation		<u>10,000</u>
Total assets		30,000
		<u>\$135,000</u>
Liabilities and Stockholders' Equity		
Liabilities		
Notes payable		\$ 25,000
Accounts payable		<u>45,000</u>
Total liabilities		70,000
Stockholders' equity		
Common stock		\$40,000
Retained earnings		<u>25,000</u>
Total stockholders' equity		65,000
		<u>\$135,000</u>

Budgeted data for the year 2020 include the following.

	2020	
	Quarter 4	Total
Sales budget (8,000 units at \$32)	\$76,800	\$256,000
Direct materials used	17,000	62,500
Direct labor	12,500	50,900
Manufacturing overhead applied	10,000	48,600
Selling and administrative expenses	18,000	75,000

To meet sales requirements and to have 2,500 units of finished goods on hand at December 31, 2020, the production budget shows 9,000 required units of output. The total unit cost of production is expected to be \$18. Krause uses the first-in, first-out (FIFO) inventory costing method. Interest expense is expected to be \$3,500 for the year. Income taxes are expected to be 40% of income before income taxes. In 2020, the company expects to declare and pay an \$8,000 cash dividend.

The company's cash budget shows an expected cash balance of \$5,880 at December 31, 2020. All sales and purchases are on account. It is expected that 60% of quarterly sales are collected in cash within the quarter and the remainder is collected in the following quarter. Direct materials purchased from suppliers are paid 50% in the quarter incurred and the remainder in the following quarter. Purchases in the fourth quarter were the same as the materials used. In 2020, the company expects to purchase additional equipment costing \$9,000. \$4,000 of depreciation expense on equipment is included in the budget data and split equally between manufacturing overhead and selling and administrative expenses. Krause expects to pay \$8,000 on the outstanding notes payable balance plus all interest due and payable to December 31 (included in interest expense \$3,500, above). Accounts payable at December 31, 2020, includes amounts due suppliers (see above) plus other accounts payable relating to manufacturing overhead of \$7,200. Unpaid income taxes at December 31 will be \$5,000.

Instructions

Prepare a budgeted statement of cost of goods sold, budgeted multiple-step income statement and retained earnings statement for 2020, and a budgeted classified balance sheet at December 31, 2020.

Net income \$21,900
Total assets \$116,600

Continuing Cases

Current Designs

CD24 Diane Buswell is preparing the 2020 budget for one of **Current Designs'** rotomolded kayaks. Extensive meetings with members of the sales department and executive team have resulted in the following unit sales projections for 2020.

Quarter 1	1,000 kayaks
Quarter 2	1,500 kayaks
Quarter 3	750 kayaks
Quarter 4	750 kayaks

Current Designs' policy is to have finished goods ending inventory in a quarter equal to 20% of the next quarter's anticipated sales. Preliminary sales projections for 2021 are 1,100 units for the first quarter and 1,500 units for the second quarter. Ending inventory of finished goods at December 31, 2019, will be 200 rotomolded kayaks.

Production of each kayak requires 54 pounds of polyethylene powder and a finishing kit (rope, seat, hardware, etc.). Company policy is that the ending inventory of polyethylene powder should be 25% of the amount needed for production in the next quarter. Assume that the ending inventory of polyethylene powder on December 31, 2019, is 19,400 pounds. The finishing kits can be assembled as they are needed. As a result, Current Designs does not maintain a significant inventory of the finishing kits.

The polyethylene powder used in these kayaks costs \$1.50 per pound, and the finishing kits cost \$170 each. Production of a single kayak requires 2 hours of time by more experienced, type I employees and 3 hours of finishing time by type II employees. The type I employees are paid \$15 per hour, and the type II employees are paid \$12 per hour.

Selling and administrative expenses for this line are expected to be \$45 per unit sold plus \$7,500 per quarter. Manufacturing overhead is assigned at 150% of labor costs.

Instructions

Prepare the production budget, direct materials budget, direct labor budget, manufacturing overhead budget, and selling and administrative budget for this product line by quarter and in total for 2020.

Waterways

(Note: This is a continuation of the Waterways case from Chapters 19–23.)

WP24 Waterways Corporation is preparing its budget for the coming year, 2020. The first step is to plan for the first quarter of that coming year. The company has gathered information from its managers in preparation of the budgeting process. This problem asks you to prepare the various budgets that comprise the master budget for 2020.

Go to WileyPLUS for complete case details and instructions.

Comprehensive Case

CC24.1 Service Auburn Circular Club is planning a major fundraiser that it hopes will become a successful annual event: sponsoring a professional rodeo. For this case, you will encounter many managerial accounting issues that would be common for a start-up business, such as CVP analysis (Chapter 22), incremental analysis (Chapter 23), and budgetary planning (Chapter 24).

CC24.2 Sweats Galore is a new business venture that will make custom sweatshirts using a silk-screen process. In helping the company's owner, Michael Woods, set up his business, you will have the opportunity to apply your understanding of CVP relationships (Chapter 22) and budgetary planning (Chapter 24).

Go to WileyPLUS for complete details and instructions for both cases.

Expand Your Critical Thinking

Decision-Making Across the Organization

CT24.1 Palmer Corporation operates on a calendar-year basis. It begins the annual budgeting process in late August when the president establishes targets for the total dollar sales and net income before taxes for the next year.

The sales target is given first to the marketing department. The marketing manager formulates a sales budget by product line in both units and dollars. From this budget, sales quotas by product line in units and dollars are established for each of the corporation's sales districts. The marketing manager also estimates the cost of the marketing activities required to support the target sales volume and prepares a tentative marketing expense budget.

The executive vice president uses the sales and profit targets, the sales budget by product line, and the tentative marketing expense budget to determine the dollar amounts that can be devoted to manufacturing and corporate office expense. The executive vice president prepares the budget for corporate expenses. She then forwards to the production department the product-line sales budget in units and the total dollar amount that can be devoted to manufacturing.

The production manager meets with the factory managers to develop a manufacturing plan that will produce the required units when needed within the cost constraints set by the executive vice president. The budgeting process usually comes to a halt at this point because the production department does not consider the financial resources allocated to be adequate.

When this standstill occurs, the vice president of finance, the executive vice president, the marketing manager, and the production manager meet together to determine the final budgets for each of the areas. This normally results in a modest increase in the total amount available for manufacturing costs and cuts in the marketing expense and corporate office expense budgets. The total sales and net income figures proposed by the president are seldom changed. Although the participants are seldom pleased with the compromise, these budgets are final. Each executive then develops a new detailed budget for the operations in his or her area.

None of the areas has achieved its budget in recent years. Sales often run below the target. When budgeted sales are not achieved, each area is expected to cut costs so that the president's profit target can be met. However, the profit target is seldom met because costs are not cut enough. In fact, costs often run above the original budget in all functional areas (marketing, production, and corporate office).

The president is disturbed that Palmer has not been able to meet the sales and profit targets. He hired a consultant with considerable experience with companies in Palmer's industry. The consultant reviewed the budgets for the past 4 years. He concluded that the product line sales budgets were reasonable and that the cost and expense budgets were adequate for the budgeted sales and production levels.

Instructions

With the class divided into groups, answer the following.

- a. Discuss how the budgeting process employed by Palmer Corporation contributes to the failure to achieve the president's sales and profit targets.
- b. Suggest how Palmer Corporation's budgeting process could be revised to correct the problems.
- c. Should the functional areas be expected to cut their costs when sales volume falls below budget? Explain your answer.

(CMA adapted)

Managerial Analysis

CT24.2 Elliot & Hesse Inc. manufactures ergonomic devices for computer users. Some of its more popular products include anti-glare filters and privacy filters (for computer monitors) and keyboard stands with wrist rests. Over the past 5 years, it experienced rapid growth, with sales of all products increasing 20% to 50% each year.

Last year, some of the primary manufacturers of computers began introducing new products with some of the ergonomic designs, such as anti-glare filters and wrist rests, already built in. As a result, sales of Elliot & Hesse's accessory devices have declined somewhat. The company believes that the privacy filters will probably continue to show growth, but that the other products will probably continue to decline. When the next year's budget was prepared, increases were built into research and development so that replacement products could be developed or the company could expand into some other product line. Some product lines being considered are general-purpose ergonomic devices including back supports, foot rests, and sloped writing pads.

The most recent results have shown that sales decreased more than was expected for the anti-glare filters. As a result, the company may have a shortage of funds. Top management has therefore asked that all expenses be reduced 10% to compensate for these reduced sales. Summary budget information is as follows.

Direct materials	\$240,000
Direct labor	110,000
Insurance	50,000
Depreciation	90,000
Machine repairs	30,000
Sales salaries	50,000
Office salaries	80,000
Factory salaries (indirect labor)	50,000
Total	<u><u>\$700,000</u></u>

Instructions

Using the information above, answer the following questions.

- a. What are the implications of reducing each of the costs? For example, if the company reduces direct materials costs, it may have to do so by purchasing lower-quality materials. This may affect sales in the long run.
- b. Based on your analysis in (a), what do you think is the best way to obtain the \$70,000 in cost savings requested? Be specific. Are there any costs that cannot or should not be reduced? Why?

Real-World Focus

CT24.3 Information regarding many approaches to budgeting can be found online. The following activity investigates the merits of "zero-based" budgeting, as discussed by Michael LaFaive, Director of Fiscal Policy of the **Mackinac Center for Public Policy**.

Instructions

Read the article at the Mackinac website and answer the following questions.

- a. How does zero-based budgeting differ from standard budgeting procedures?
- b. What are some potential advantages of zero-based budgeting?
- c. What are some potential disadvantages of zero-based budgeting?
- d. How often do departments in Oklahoma undergo zero-based budgeting?

Communication Activity

CT24.4 Service In order to better serve their rural patients, Drs. Joe and Rick Parcells (brothers) began giving safety seminars. Especially popular were their “emergency-preparedness” talks given to farmers. Many people asked whether the “kit” of materials the doctors recommended for common farm emergencies was commercially available.

After checking with several suppliers, the doctors realized that no other company offered the supplies they recommended in their seminars, packaged in the way they described. Their wives, Megan and Sue, agreed to make a test package by ordering supplies from various medical supply companies and assembling them into a “kit” that could be sold at the seminars. When these kits proved a runaway success, the sisters-in-law decided to market them. At the advice of their accountant, they organized this venture as a separate company, called Life Protection Products (LPP), with Megan Parcells as CEO and Sue Parcells as Secretary-Treasurer.

LPP soon started receiving requests for the kits from all over the country, as word spread about their availability. Even without advertising, LPP was able to sell its full inventory every month. However, the company was becoming financially strained. Megan and Sue had about \$100,000 in savings, and they invested about half that amount initially. They believed that this venture would allow them to make money. However, at the present time, only about \$30,000 of the cash remains, and the company is constantly short of cash.

Megan has come to you for advice. She does not understand why the company is having cash flow problems. She and Sue have not even been withdrawing salaries. However, they have rented a local building and have hired two more full-time workers to help them cope with the increasing demand. They do not think they could handle the demand without this additional help.

Megan is also worried that the cash problems mean that the company may not be able to support itself. She has prepared the cash budget shown below. All seminar customers pay for their products in full at the time of purchase. In addition, several large companies have ordered the kits for use by employees who work in remote sites. They have requested credit terms and have been allowed to pay in the month following the sale. These large purchasers amount to about 25% of the sales at the present time. LPP purchases the materials for the kits about 2 months ahead of time. Megan and Sue are considering slowing the growth of the company by simply purchasing less materials, which will mean selling fewer kits.

The workers are paid weekly. Megan and Sue need about \$15,000 cash on hand at the beginning of the month to pay for purchases of raw materials. Right now they have been using cash from their savings, but as noted, only \$30,000 is left.

**Life Protection Products
Cash Budget
For the Quarter Ending June 30, 2020**

	April	May	June
Cash balance, beginning	\$15,000	\$15,000	\$15,000
Cash received			
From prior month sales	5,000	7,500	12,500
From current sales	15,000	22,500	37,500
Total cash on hand	35,000	45,000	65,000
Cash payments			
To employees	3,000	3,000	3,000
For products	25,000	35,000	45,000
Miscellaneous expenses	5,000	6,000	7,000
Postage	1,000	1,000	1,000
Total cash payments	34,000	45,000	56,000
Cash balance	\$ 1,000	\$ 0	\$ 9,000
Borrow from savings	\$14,000	\$15,000	\$ 1,000
Borrow from bank?	\$ 0	\$ 0	\$ 5,000

Instructions

Write a response to Megan Parcells. Explain why LPP is short of cash. Will this company be able to support itself? Explain your answer. Make any recommendations you deem appropriate.

Ethics Case

CT24.5 You are an accountant in the budgetary, projections, and special projects department of Fernetti Conductor, Inc., a large manufacturing company. The president, Richard Brown, asks you on very short notice to prepare some sales and income projections covering the next 2 years of the company's much heralded new product lines. He wants these projections for a series of speeches he is making while on a 2-week trip to eight East Coast brokerage firms. The president hopes to bolster Fernetti's stock sales and price.

You work 23 hours in 2 days to compile the projections, hand-deliver them to the president, and are swiftly but graciously thanked as he departs. A week later, you find time to go over some of your computations and discover a miscalculation that makes the projections grossly overstated. You quickly inquire about the president's itinerary and learn that he has made half of his speeches and has half yet to make. You are in a quandary as to what to do.

Instructions

- a. What are the consequences of telling the president of your gross miscalculations?
- b. What are the consequences of not telling the president of your gross miscalculations?
- c. What are the ethical considerations to you and the president in this situation?

All About You

CT24.6 In order to get your personal finances under control, you need to prepare a personal budget. Assume that you have compiled the following information regarding your expected cash flows for a typical month.

Rent payment	\$ 500	Miscellaneous costs	\$210
Interest income	50	Savings	50
Income tax withheld	300	Eating out	150
Electricity bill	85	Telephone and Internet costs	125
Groceries	100	Student loan payments	375
Wages earned	2,500	Entertainment costs	250
Insurance	100	Transportation costs	150

Instructions

Using the information above, prepare a personal budget. In preparing this budget, use the format included in the “Steps to Creating a Household Budget” article available at **the balance**’s website (go to the site and do a search for the article). Just skip any unused line items.

Considering Your Costs and Benefits

CT24.7 You might hear people say that they “need to learn to live within a budget.” The funny thing is that most people who say this haven’t actually prepared a personal budget, nor do they intend to. Instead, what they are referring to is a vaguely defined, poorly specified collection of rough ideas of how much they should spend on various aspects of their lives. However, you can’t live within or even outside of something that doesn’t exist. With that in mind, let’s take a look at one aspect of personal-budget templates.

Many personal-budget worksheet templates that are provided for college students treat student loans as an income source. See, for example, the template included in the “Steps to Creating a Household Budget” article available at **the balance**’s website. Based on your knowledge of accounting, is this correct?

YES: Student loans provide a source of cash, which can be used to pay costs. As the saying goes, “It all spends the same.” Therefore, student loans are income.

NO: Student loans must eventually be repaid; therefore, they are not income. As the name indicates, they are loans.

Instructions

Write a response indicating your position regarding this situation. Provide support for your view.

Budgetary Control and Responsibility Accounting

Chapter Preview

In Chapter 24, we discussed the use of budgets for planning. We now consider how budgets are used by management to control operations. In the following Feature Story on the **Tribeca Grand Hotel**, we see that management uses the budget to adapt to the business environment. This chapter focuses on two aspects of management control: (1) budgetary control and (2) responsibility accounting.

Feature Story

Pumpkin Madeleines and a Movie

Perhaps no place in the world has a wider variety of distinctive, high-end accommodations than New York City. It's tough

to set yourself apart in the Big Apple, but unique is what the **Tribeca Grand Hotel** is all about.

When you walk through the doors of this triangular-shaped building, nestled in one of Manhattan's most affluent neighborhoods, you immediately encounter a striking eight-story atrium. Although the hotel was completely renovated, it still

maintains its funky mid-century charm. Just consider the always hip Church Bar. Besides serving up cocktails until 2 a.m., Church's also provides food. These are not the run-of-the-mill, chain hotel, borderline edibles. Church's chef is famous for tantalizing delectables such as duck rillettes, sea salt baked branzino, housemade pappardelle, and pumpkin madeleines.

Another thing that really sets the Tribeca Grand apart is its private screening room. As a guest, you can enjoy plush leather seating, state-of-the-art projection, and digital surround sound, all while viewing a cult classic from the hotel's film series. In fact, on Sundays, free screenings are available to guests and non-guests alike on a first-come-first-served basis.

To attract and satisfy a discerning clientele, the Tribeca Grand's management incurs higher and more unpredictable costs than those of a standard hotel. As fun as it might be to run a high-end hotel, management can't be cavalier about spending money. To maintain profitability, management closely monitors costs and revenues to make sure that they track with budgeted amounts. Further, because of unexpected fluctuations in demand for rooms (think hurricanes or bitterly cold winter weather), management must sometimes revise forecasts and budgets and adapt quickly. To evaluate performance and identify when changes need to be made, the budget needs to be flexible.

Watch the *Tribeca Grand* video in WileyPLUS to learn more about real-world budgeting.

Budgetary Control and Static Budget Reports

LEARNING OBJECTIVE 1

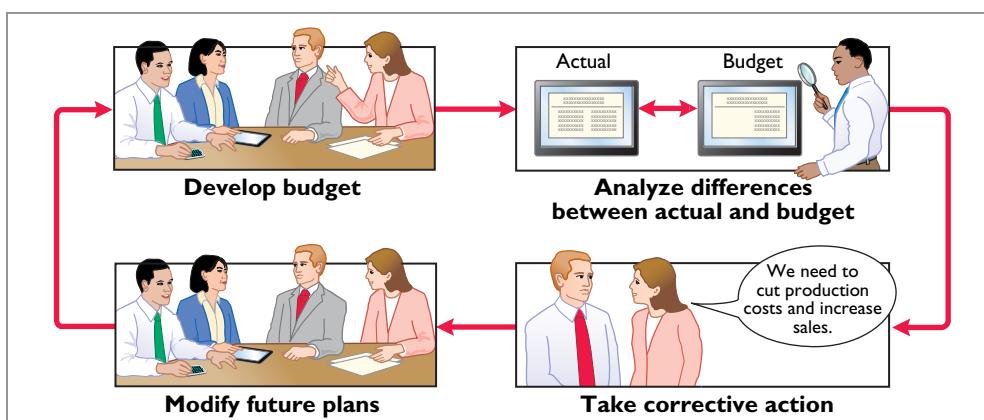

Describe budgetary control and static budget reports.

Budgetary Control

One of management's responsibilities is to control company operations. Control consists of the steps taken by management to see that planned objectives are met. We now ask: How do budgets contribute to control of operations?

The use of budgets in controlling operations is known as **budgetary control**. Such control takes place by means of **budget reports** that compare actual results with planned objectives. The use of budget reports is based on the belief that planned objectives lose much of their potential value without some monitoring of progress along the way. Just as your professors give midterm exams to evaluate your progress, top management requires periodic reports on the progress of department managers toward their planned objectives.

Budget reports provide management with feedback on operations. The feedback for a crucial objective, such as having enough cash on hand to pay bills, may be made daily. For other objectives, such as meeting budgeted annual sales and operating expenses, monthly budget reports may suffice. Budget reports are prepared as frequently as needed. From these reports, management analyzes any differences between actual and planned results and determines their causes. Management then takes corrective action, or it decides to modify future plans. Budgetary control involves the activities shown in **Illustration 25.1**.

Budgetary control works best when a company has a formalized reporting system. The reporting system does the following:

1. Identifies the name of the budget report, such as the sales budget or the manufacturing overhead budget.
2. States the frequency of the report, such as weekly or monthly.
3. Specifies the purpose of the report.
4. Indicates the primary recipient(s) of the report.

Illustration 25.2 provides a partial budgetary control system for a manufacturing company. Note the frequency of the reports and their emphasis on control. For example, there is a daily report on scrap and a weekly report on labor.

ILLUSTRATION 25.2 Budgetary control reporting system

Name of Report	Frequency	Purpose	Primary Recipient(s)
Sales	Weekly	Determine whether sales goals are met	Top management and sales manager
Labor	Weekly	Control direct and indirect labor costs	Vice president of production and production department managers
Scrap	Daily	Determine efficient use of materials	Production manager
Departmental overhead costs	Monthly	Control overhead costs	Department manager
Selling expenses	Monthly	Control selling expenses	Sales manager
Income statement	Monthly and quarterly	Determine whether income goals are met	Top management

Static Budget Reports

You learned in Chapter 24 that the master budget formalizes management's planned objectives for the coming year. When used in budgetary control, each budget included in the master budget is considered to be static. A **static budget** is a projection of budget data **at a single level of activity before actual activity occurs**. These budgets do not consider data for different levels of activity. As a result, companies always compare actual results with budget data at the activity level that was used in developing the master budget.

Examples

To illustrate the role of a static budget in budgetary control, we will use selected data prepared for Hayes Company in Chapter 24. **Illustration 25.3** provides budget and actual sales data for the Rightride product in the first and second quarters of 2020.

ILLUSTRATION 25.3**Budget and actual sales data**

Sales	First Quarter	Second Quarter	Total
Budgeted	\$180,000	\$210,000	\$390,000
Actual	179,000	199,500	378,500
Difference	\$ 1,000	\$ 10,500	\$ 11,500

ALTERNATIVE TERMINOLOGY

The difference between budget and actual is sometimes called a *budget variance*.

The sales budget report for Hayes' first quarter is shown in **Illustration 25.4**. The rightmost column reports the difference between the budgeted and actual amounts (see **Alternative Terminology**).

ILLUSTRATION 25.4**Sales budget report—first quarter**

Hayes Company Sales Budget Report			
P18			
	A	B	C
1			
2	Hayes Company		
3	Sales Budget Report		
4	For the Quarter Ended March 31, 2020		
5			Difference
6			Favorable F
7	Product Line	Budget	Actual
7	Rightride ^a	\$180,000	\$179,000
8			Unfavorable U
9	^a In practice, each product line would be included in the report.		

The report shows that sales are \$1,000 under budget—an unfavorable result. This difference is less than 1% of budgeted sales ($\$1,000 \div \$180,000 = .0056$). Top management's reaction to

differences is often influenced by the materiality (significance) of the difference. Since the difference of \$1,000 is immaterial in this case, we assume that Hayes management takes no specific corrective action.

Illustration 25.5 shows the sales budget report for the second quarter. It contains one new feature: cumulative year-to-date information. This report indicates that sales for the second quarter are \$10,500 below budget. This is 5% of budgeted sales ($\$10,500 \div \$210,000$). Top management may now conclude that the difference between budgeted and actual sales requires investigation.

ILLUSTRATION 25.5 Sales budget report—second quarter

Hayes Company Sales Budget Report							
	Home	Insert	Page Layout	Formulas	Data	Review	View
P18							
A	B	C	D	E	F	G	H
Hayes Company Sales Budget Report For the Quarter Ended June 30, 2020							
Second Quarter							
Difference				Year-to-Date			
Favorable F				Favorable F			
Product Line	Budget	Actual	Unfavorable U	Budget	Actual	Unfavorable U	
Rightride	\$210,000	\$199,500	\$10,500 U	\$390,000	\$378,500	\$11,500 U	

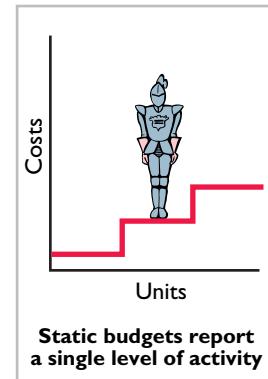

Management's analysis should start by asking the sales manager the cause(s) of the shortfall. Managers should consider the need for corrective action. For example, management may attempt to increase sales by offering sales incentives to customers or by increasing the advertising of Righrides. Or, if management concludes that a downturn in the economy is responsible for the lower sales, it may modify planned sales and profit goals for the remainder of the year.

Uses and Limitations

From these examples, you can see that a master sales budget is useful in evaluating the performance of a sales manager. It is now necessary to ask: Is the master budget appropriate for evaluating a manager's performance in controlling costs? Recall that in a static budget, data are not modified or adjusted, regardless of changes in activity. It follows, then, that a static budget is appropriate in evaluating a manager's effectiveness in controlling costs when:

1. The actual level of activity closely approximates the master budget activity level, and/or
2. The behavior of the costs in response to changes in activity is fixed.

A static budget report is, therefore, appropriate for **fixed manufacturing costs** and for **fixed selling and administrative expenses**. But, as you will see shortly, static budget reports may not be a proper basis for evaluating a manager's performance in controlling variable costs.

DO IT! 1 | Static Budget Reports

Lawler Company expects to produce 5,000 units of product CV93 during the current month. Budgeted variable manufacturing costs per unit are direct materials \$6, direct labor \$15, and overhead \$24. Monthly budgeted fixed manufacturing overhead costs are \$10,000 for depreciation and \$5,000 for supervision.

In the current month, Lawler actually produced 5,500 units and incurred the following costs: direct materials \$33,900, direct labor \$74,200, variable overhead \$120,500, depreciation \$10,000, and supervision \$5,000.

Prepare a static budget report. (*Hint:* The Budget column is based on estimated production of 5,000 units while the Actual column is the actual costs incurred during the period.) Were costs controlled? Discuss limitations of this budget.

ACTION PLAN

- Classify each cost as variable or fixed.
- Determine the difference as favorable or unfavorable.
- Determine the difference in total variable costs, total fixed costs, and total costs.

Solution

Lawler Company				
	A	B	C	D
1				Difference
2				Favorable - F Unfavorable - U
3	Budget	Actual		
4	Production in units	5,000	5,500	
5				
6	Variable costs			
7	Direct materials (\$6)	\$ 30,000	\$ 33,900	\$3,900
8	Direct labor (\$15)	75,000	74,200	800
9	Overhead (\$24)	120,000	120,500	500
10	Total variable costs	225,000	228,600	3,600
11				
12	Fixed costs			
13	Depreciation	10,000	10,000	0
14	Supervision	5,000	5,000	0
15	Total fixed costs	15,000	15,000	0
16	Total costs	\$240,000	\$243,600	\$3,600
17				
18				

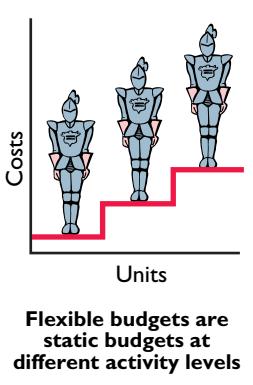

The static budget indicates that actual variable costs exceeded budgeted amounts by \$3,600. Fixed costs were exactly as budgeted. The static budget gives the impression that the company did not control its variable costs. However, the static budget does not give consideration to the fact that the company produced 500 more units than planned. As a result, the static budget is not a good tool to evaluate variable costs. It is, however, a good tool to evaluate fixed costs as those should not vary with changes in production volume.

Related exercise material: **BE25.1, BE25.2, DO IT! 25.1, E25.1, and E25.2.**

Flexible Budget Reports

LEARNING OBJECTIVE 2

Prepare flexible budget reports.

In contrast to a static budget, which is based on one level of activity, a **flexible budget** projects budget data for various levels of activity. In essence, **the flexible budget is a series of static budgets at different levels of activity**. The flexible budget recognizes that the budgetary process is more useful if it is adaptable to changed operating conditions.

Flexible budgets can be prepared for each of the types of budgets included in the master budget. For example, **Marriott Hotels** can budget revenues and net income on the basis of 60%, 80%, and 100% of room occupancy. Similarly, **American Van Lines** can budget its operating expenses on the basis of various levels of truck-miles driven. **Duke Energy** can budget revenue and net income on the basis of estimated billions of kwh (kilowatt hours) of residential, commercial, and industrial electricity generated. In the following pages, we will illustrate a flexible budget for manufacturing overhead.

Why Flexible Budgets?

Assume that you are the manager in charge of manufacturing overhead in the Assembly Department of Barton Robotics. In preparing the manufacturing overhead budget for 2020, you prepare the static budget shown in **Illustration 25.6** based on a production volume of 10,000 units of robotic controls (see **Helpful Hint**).

HELPFUL HINT

The master budget described in Chapter 24 is based on a static budget.

Barton Robotics		
	Home	Insert Page Layout Formulas Data Review View
P18	A	B
Barton Robotics		
Manufacturing Overhead Budget (Static)		
Assembly Department		
For the Year Ended December 31, 2020		
5	Budgeted production in units (robotic controls)	10,000
6		
7	Budgeted costs	
8	Indirect materials	\$ 250,000
9	Indirect labor	260,000
10	Utilities	190,000
11	Depreciation	280,000
12	Property taxes	70,000
13	Supervision	50,000
14		\$1,100,000
15		

Fortunately for the company, the demand for robotic controls has increased, and Barton produces and sells 12,000 units during the year rather than 10,000. You are elated! Increased sales means increased profitability, which should mean a bonus or a raise for you and the employees in your department. Unfortunately, a comparison of Assembly Department actual and budgeted costs has put you on the spot. **Illustration 25.7** shows the budget report.

Barton Robotics		
	Home	Insert Page Layout Formulas Data Review View
P18	A	B
Barton Robotics		
Manufacturing Overhead Static Budget Report		
For the Year Ended December 31, 2020		
Difference		
Favorable - F Unfavorable - U		
5	Budget	Actual
6	Production in units	10,000 12,000
7		
8	Costs	
9	Indirect materials	\$ 250,000 \$ 295,000 \$ 45,000 U
10	Indirect labor	260,000 312,000 52,000 U
11	Utilities	190,000 225,000 35,000 U
12	Depreciation	280,000 280,000 0
13	Property taxes	70,000 70,000 0
14	Supervision	50,000 50,000 0
15		\$1,100,000 \$1,232,000 \$132,000 U
16		

This comparison uses budgeted cost data based on the original activity level (10,000 robotic controls). It indicates that the costs incurred by the Assembly Department are significantly **over budget** for three of the six overhead costs. There is a total unfavorable difference of \$132,000, which is 12% over budget ($\$132,000 \div \$1,100,000$). Your supervisor is very unhappy. Instead of sharing in the company's success, you may find yourself looking for another job. What went wrong?

ILLUSTRATION 25.6

Static overhead budget

ILLUSTRATION 25.7

Overhead static budget report

HELPFUL HINT

A static budget is not useful for performance evaluation if a company has substantial variable costs.

When you calm down and carefully examine the manufacturing overhead budget, you identify the problem: The budget data are not relevant! At the time the budget was developed, the company anticipated that only 10,000 units would be produced. Instead, 12,000 units were actually produced. Comparing actual costs incurred at a production level of 12,000 units with budgeted variable costs at an expected production level of 10,000 units is meaningless (see **Helpful Hint**). As production increases, the budget allowances for variable costs should increase proportionately. The variable costs in this example are indirect materials, indirect labor, and utilities.

Analyzing the budget data for these costs at 10,000 units, you arrive at the per unit results shown in **Illustration 25.8**.

ILLUSTRATION 25.8**Variable costs per unit**

Item	Total Cost	Per Unit
Indirect materials	\$250,000	\$25
Indirect labor	260,000	26
Utilities	190,000	19
	\$700,000	\$70

Using these per unit costs, **Illustration 25.9** calculates the budgeted variable costs at 12,000 units.

ILLUSTRATION 25.9**Budgeted variable costs, 12,000 units**

Item	Computation	Total
Indirect materials	$\$25 \times 12,000$	\$300,000
Indirect labor	$26 \times 12,000$	312,000
Utilities	$19 \times 12,000$	228,000
		\$840,000

Because fixed costs do not change in total as activity changes, the budgeted amounts for these costs remain the same. **Illustration 25.10** shows the budget report based on the flexible budget for **12,000 units** of production. (Compare this with Illustration 25.7.)

20					

This flexible budget report indicates that the Assembly Department's costs are **under budget**—a favorable difference. Instead of worrying about being fired, you may be in line for a bonus or a raise after all! As this analysis shows, the only appropriate comparison is between actual costs at 12,000 units of production and budgeted costs at 12,000 units. Flexible budget reports provide this comparison.

Developing the Flexible Budget

The flexible budget uses the master budget as its basis. To develop the flexible budget, management uses the following steps.

1. Identify the activity index and the relevant range of activity.
2. Identify the variable costs, and determine the budgeted variable cost per unit of activity for each cost.
3. Identify the fixed costs, and determine the budgeted amount for each cost.
4. Prepare the budget for selected increments of activity within the relevant range.

The activity index chosen should significantly influence the costs being budgeted. For manufacturing overhead costs, for example, the activity index is usually the same as the index used in developing the predetermined overhead rate—that is, direct labor hours or machine hours. For selling and administrative expenses, the activity index usually is sales or net sales.

The choice of the increment of activity is largely a matter of judgment. For example, if the relevant range is 8,000 to 12,000 direct labor hours, increments of 1,000 hours may be selected. The flexible budget is then prepared for each increment within the relevant range.

Service Company Insight NBCUniversal

Fox Broadcasting Company/
Album/Newscom

Just What the Doctor Ordered?

Nobody is immune from the effects of declining revenues—not even movie stars. When the number of viewers of the television show “House,” a medical drama, declined by almost 20%, **Fox Broadcasting** said it wanted to cut the license fee that it paid to **NBCUniversal** by 20%. What would NBCUniversal do in response? It might cut the size of the show’s cast,

which would reduce the payroll costs associated with the show. Or, it could reduce the number of episodes that take advantage of the full cast. Alternatively, it might threaten to quit providing the show to Fox altogether and instead present the show on its own NBC-affiliated channels.

Source: Sam Schechner, “Media Business Shorts: NBCU, Fox Taking Scalpel to ‘House’,” *Wall Street Journal Online* (April 17, 2011).

Explain how the use of flexible budgets might help to identify the best solution to this problem. (Go to WileyPLUS for this answer and additional questions.)

Flexible Budget—A Case Study

To illustrate the flexible budget, we use Fox Company. Fox’s management uses a **flexible budget for monthly comparisons** of actual and budgeted manufacturing overhead costs of the Finishing Department. The master budget for the year ending December 31, 2020, shows expected **annual** operating capacity of 120,000 direct labor hours and the overhead costs shown in **Illustration 25.11**.

Variable Costs		Fixed Costs	
Indirect materials	\$180,000	Depreciation	\$180,000
Indirect labor	240,000	Supervision	120,000
Utilities	60,000	Property taxes	60,000
Total	<u><u>\$480,000</u></u>	Total	<u><u>\$360,000</u></u>

ILLUSTRATION 25.11

Master budget data

The four steps for developing the flexible budget are applied as follows.

Step 1. Identify the activity index and the relevant range of activity. The activity index is direct labor hours. The relevant range is 8,000–12,000 direct labor hours per month.

Step 2. Identify the variable costs, and determine the budgeted variable cost per unit of activity for each cost. A cost is variable if total costs vary directly as a result of a change in the activity index, which is direct labor in this case. In this example, indirect materials, indirect labor, and utilities are variable costs. The variable cost per unit is found by dividing each total budgeted cost by the direct labor hours used in preparing the annual master budget (120,000 hours). **Illustration 25.12** shows the computations for Fox Company.

ILLUSTRATION 25.12

Computation of variable cost per direct labor hour

Variable Costs	Computation	Variable Cost per Direct Labor Hour
Indirect materials	\$180,000 ÷ 120,000	\$1.50
Indirect labor	\$240,000 ÷ 120,000	2.00
Utilities	\$ 60,000 ÷ 120,000	0.50
Total		<u><u>\$4.00</u></u>

Step 3. Identify the fixed costs, and determine the budgeted amount for each cost. A cost is fixed if the total cost does not vary as a result of changes in the activity index. In this example, depreciation, supervision, and property taxes are fixed costs. Since Fox desires monthly budget data, it divides each annual budgeted cost by 12 to find the monthly amounts. Therefore, the monthly budgeted fixed costs are depreciation \$15,000, supervision \$10,000, and property taxes \$5,000.

Step 4. Prepare the budget for selected increments of activity within the relevant range. Management prepares the budget in increments of 1,000 direct labor hours.

Illustration 25.13 shows Fox's flexible budget.

16	Total fixed costs	30,000	30,000	30,000	30,000	30,000
17	Total costs	\$62,000	\$66,000	\$70,000	\$74,000	\$78,000
18						
19	^a Cost per direct labor hour; ^b 8,000 x \$1.50; ^c 8,000 x \$2.00; ^d 8,000 x \$0.50					

Fox uses the cost equation shown in **Illustration 25.14** to determine total budgeted costs at any level of activity.

$$\text{Fixed Costs} + \text{Variable Costs}^* = \text{Total Budgeted Costs}$$

*Total variable cost per unit of activity \times Activity level.

For Fox, fixed costs are \$30,000 per month, and total variable cost per direct labor hour is \$4 (\$1.50 + \$2.00 + \$0.50). At 9,000 direct labor hours, total budgeted costs are \$66,000 [$\$30,000 + (\$4 \times 9,000)$]. At 8,622 direct labor hours, total budgeted costs are \$64,488 [$\$30,000 + (\$4 \times 8,622)$] (see **Helpful Hint**).

Total budgeted costs can also be shown graphically, as in **Illustration 25.15**. In the graph, the horizontal axis represents the activity index, and costs are indicated on the vertical axis. The graph highlights two activity levels (10,000 and 12,000). As shown, total budgeted costs at these activity levels are \$70,000 [$\$30,000 + (\$4 \times 10,000)$] and \$78,000 [$\$30,000 + (\$4 \times 12,000)$], respectively.

ILLUSTRATION 25.14

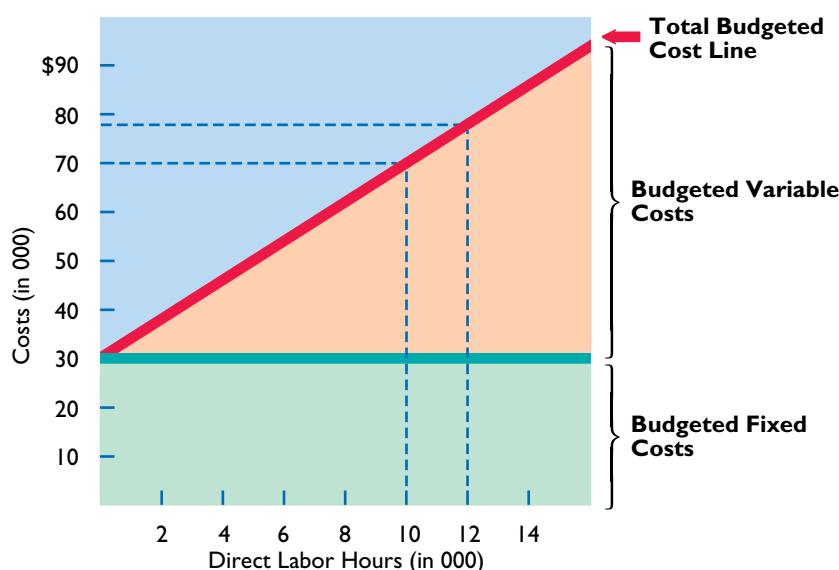

Cost equation for total budgeted costs

HELPFUL HINT

Using the data given for Fox, the amount of total costs to be budgeted for 10,600 direct labor hours would be \$30,000 fixed + \$42,400 variable ($10,600 \times \$4$) = \$72,400 total.

ILLUSTRATION 25.15

Graphic flexible budget data highlighting 10,000 and 12,000 activity levels

Flexible Budget Reports

Flexible budget reports are another type of internal report. The flexible budget report consists of two sections: (1) production data for a selected activity index, such as direct labor hours, and (2) cost data for variable and fixed costs. The report provides a basis for evaluating a manager's performance in two areas: production control and cost control. Flexible budget reports are widely used in production and service departments.

Illustration 25.16 shows a flexible budget report for the Finishing Department of Fox Company for the month of January. In this month, 9,000 hours are worked. The budget data are therefore based on the flexible budget for 9,000 hours in Illustration 25.13. The actual cost data are assumed.

How appropriate is this report in evaluating the Finishing Department manager's performance in controlling overhead costs? The report clearly provides a reliable basis. Both actual and budget costs are based on the activity level worked during January. Since variable costs generally are incurred directly by the department, the difference between the budget allowance for those hours and the actual costs is the responsibility of the department manager.

ILLUSTRATION 25.16

17	Supervision	10,000	10,000	0	
18	Property taxes	5,000	5,000	0	
19	Total fixed costs	30,000	30,000	0	
20	Total costs	\$66,000	\$65,600	\$ 400	F
21					
22	^a Cost per direct labor hour				

In subsequent months, Fox Company will prepare other flexible budget reports. For each month, the budget data are based on the actual activity level attained. In February that level may be 11,000 direct labor hours, in July 10,000, and so on.

Note that this flexible budget is based on a single cost driver. A more accurate budget often can be developed using activity-based costing concepts.

Service Company Insight San Diego Zoo

Eric Isselée/iStockphoto

Budgets and the Exotic Newcastle Disease

Exotic Newcastle Disease, one of the most infectious bird diseases in the world, kills so swiftly that many victims die before any symptoms appear. When it broke out in Southern California, it could have spelled disaster for the **San Diego Zoo**. “We have one of the most valuable collections of birds in the world, if not *the* most valuable,” says Paula Brock, CFO of the Zoological Society of San Diego, which operates the zoo.

Eric Isselée/iStockphoto

Bird exhibits were closed to the public for several months (the disease, which is harmless to humans, can be carried on clothes and shoes). The tires of arriving delivery trucks were sanitized, as were the shoes of anyone visiting the zoo's nonpublic areas. Zookeeper uniforms had to be changed and cleaned daily. And ultimately, the

zoo, with \$150 million in revenues, spent almost half a million dollars on quarantine measures.

It worked: No birds got sick. Better yet, the damage to the rest of the zoo's budget was minimized by another protective measure: the monthly budget reforecast. "When we get a hit like this, we still have to find a way to make our bottom line," says Brock. Thanks to a new planning process Brock had introduced a year earlier, the zoo's scientists were able to raise the financial alarm as they redirected resources to ward off the disease. "Because we had timely awareness," she says, "we were able to make adjustments to weather the storm."

What is the major benefit of tying a budget to the overall goals of the company? (Go to WileyPLUS for this answer and additional questions.)

DO IT! 2 | Flexible Budgets

In Strassel Company's flexible budget graph, the fixed cost line and the total budgeted cost line intersect the vertical axis at \$36,000. The total budgeted cost line is \$186,000 at an activity level of 50,000 direct labor hours. Compute total budgeted costs at 30,000 direct labor hours.

ACTION PLAN

- Apply the formula: Fixed costs + Variable costs
(Total variable cost per unit × Activity level) = Total budgeted costs.

Solution

Using the graph, fixed costs are \$36,000, and variable costs are \$3 per direct labor hour $[(\$186,000 - \$36,000) \div 50,000]$. Thus, at 30,000 direct labor hours, total budgeted costs are \$126,000 $[\$36,000 + (\$3 \times 30,000)]$.

Responsibility Accounting and Responsibility Centers

LEARNING OBJECTIVE 3

Apply responsibility accounting to cost and profit centers.

Like budgeting, responsibility accounting is an important part of management accounting. **Responsibility accounting** involves identifying and reporting costs (and revenues, where relevant) on the basis of the manager who has the authority to make the day-to-day decisions about the items. Under responsibility accounting, a manager's performance is evaluated on matters directly under that manager's control. Responsibility accounting can be used at every level of management in which the following conditions exist.

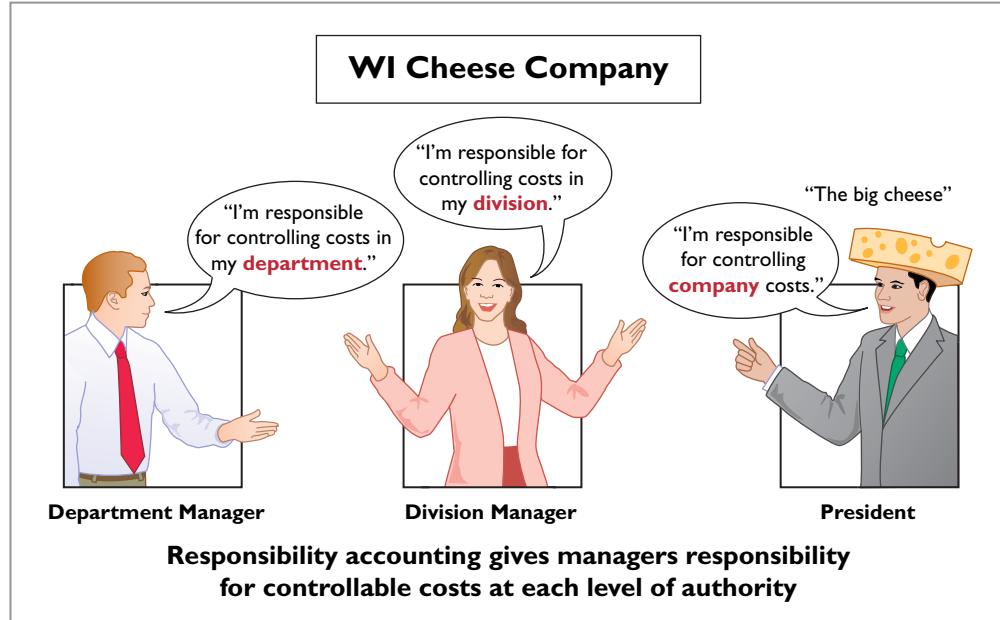

1. Costs and revenues can be directly associated with the specific level of management responsibility.

2. The costs and revenues can be controlled by employees at the level of responsibility with which they are associated.
3. Budget data can be developed for evaluating the manager's effectiveness in controlling the costs and revenues.

Illustration 25.17 depicts levels of responsibility for controlling costs.

ILLUSTRATION 25.17

Responsibility for controllable costs at varying levels of management

HELPFUL HINT

All companies use responsibility accounting. Without some form of responsibility accounting, there would be chaos in discharging management's control function.

Under responsibility accounting, any individual who controls a specified set of activities can be a responsibility center. Thus, responsibility accounting may extend from the lowest level of control to the top strata of management. Once responsibility is established, the company first measures and reports the effectiveness of the individual's performance for the specified activity. It then reports that measure upward throughout the organization (see **Helpful Hint**).

Responsibility accounting is especially valuable in a decentralized company. **Decentralization** means that the control of operations is delegated to many managers throughout the organization. The term **segment** (or **division**) is sometimes used to identify an area of responsibility in decentralized operations. Under responsibility accounting, companies prepare segment reports periodically, such as monthly, quarterly, and annually, to evaluate managers' performance.

Responsibility accounting is an essential part of any effective system of budgetary control. The reporting of costs and revenues under responsibility accounting differs from budgeting in two respects:

1. A distinction is made between controllable and noncontrollable items.
2. Performance reports either emphasize or include only items controllable by the individual manager.

Responsibility accounting applies to both profit and not-for-profit entities. For-profit entities seek to maximize net income. Not-for-profit entities wish to provide services as efficiently as possible.

Management Insight Procter & Gamble

Khuong Hoang/iStockphoto

Competition versus Collaboration

Many compensation and promotion programs encourage competition among employees for pay raises. To get ahead, you have to perform better than your fellow employees. While this may encourage hard work, it does not foster collaboration, and it can lead to distrust and disloyalty. Such negative effects have led some companies to believe that cooperation and collaboration, not competition, are essential in order to succeed in today's work environment.

As a consequence, many companies explicitly include measures of collaboration in their performance measures. For

example, **Procter & Gamble** measures collaboration in employees' annual performance reviews. At **Cisco Systems**, the assessment of an employee's teamwork can affect the annual bonus by as much as 20%. A recent concern is that employees have become swamped in a confusing array of collaboration tools from Box Inc., Slack Technologies, Microsoft, Alphabet, and Facebook. In response, companies are trying to simplify the collaboration process.

Sources: Carol Hymowitz, "Rewarding Competitors Over Collaboration No Longer Makes Sense," *Wall Street Journal* (February 13, 2006); and Jay Greene, "Beware Collaboration—Tool Overload," *Wall Street Journal* (March 12, 2017).

How might managers of separate divisions be able to reduce division costs through collaboration? (Go to WileyPLUS for this answer and additional questions.)

Controllable versus Noncontrollable Revenues and Costs

All costs and revenues are controllable at some level of responsibility within a company. This truth underscores the adage by the CEO of any organization that "the buck stops here" (see **Helpful Hint**). Under responsibility accounting, the critical issue is **whether the cost or revenue is controllable at the level of responsibility with which it is associated**. A cost over which a manager has control is called a **controllable cost**. From this definition, it follows that:

1. All costs are controllable by top management because of the broad range of its authority.
2. Fewer costs are controllable as one moves down to each lower level of managerial responsibility because of the manager's decreasing authority.

In general, **costs incurred directly by a level of responsibility are controllable at that level** (see **Helpful Hint**). In contrast, costs incurred indirectly and allocated to a responsibility level are **noncontrollable costs** at that level.

HELPFUL HINT

There are more, not fewer, controllable costs as you move to higher levels of management.

HELPFUL HINT

The longer the time span, the more likely that the cost becomes controllable.

Principles of Performance Evaluation

Performance evaluation is at the center of responsibility accounting. It is a management function that compares actual results with budget goals. It involves both behavioral and reporting principles.

Management by Exception

Management by exception means that top management's review of a budget report is focused either entirely or primarily on significant differences between actual results and planned objectives. This approach enables top management to focus on problem areas. For example, many companies now use online reporting systems for employees to file their travel and entertainment expense reports. In addition to cutting reporting time in half, the online system enables managers to quickly analyze variances from travel budgets. This cuts down on expense account "padding" such as spending too much on meals or falsifying documents for costs that were never actually incurred.

As noted above, under management by exception, top management does not investigate every difference. For this approach to be effective, there must be guidelines for identifying which differences to investigate. The usual criteria are materiality and controllability.

Materiality. Without quantitative guidelines, management would have to investigate every budget difference regardless of the amount. Materiality is usually expressed as a percentage difference from budget. For example, management may set the percentage difference at 5% for important items and 10% for other items. Managers will investigate all differences either over or under budget by the specified percentage. Costs over budget warrant investigation to determine why they were not controlled. Likewise, costs under budget merit investigation to determine whether costs critical to profitability are being curtailed. For example, if maintenance costs are budgeted at \$80,000 but only \$40,000 is spent, major unexpected breakdowns in productive facilities may occur in the future. Alternatively, as discussed in Chapter 24, cost might be under budget due to budgetary slack.

Alternatively, a company may specify a single percentage difference from budget for all items and supplement this guideline with a minimum dollar limit. For example, the exception criteria may be stated at 5% of budget or more than \$10,000.

Controllability of the Item. Exception guidelines are more restrictive for controllable items than for items the manager cannot control. In fact, there may be no guidelines for non-controllable items. For example, a large unfavorable difference between actual and budgeted property tax expense may not be flagged for investigation because the only possible causes are an unexpected increase in the tax rate or in the assessed value of the property. An investigation into the difference would be useless: The manager cannot control either cause.

Behavioral Principles

The human factor is critical in evaluating performance. Behavioral principles include the following.

1. **Managers of responsibility centers should have direct input into the process of establishing budget goals of their area of responsibility.** Without such input, managers may view the goals as unrealistic or arbitrarily set by top management. Such views adversely affect the managers' motivation to meet the targeted objectives.
2. **The evaluation of performance should be based entirely on matters that are controllable by the manager being evaluated.** Criticism of a manager on matters outside his or her control reduces the effectiveness of the evaluation process. It leads to negative reactions by a manager and to doubts about the fairness of the company's evaluation policies.
3. **Top management should support the evaluation process.** As explained earlier, the evaluation process begins at the lowest level of responsibility and extends upward to the highest level of management. Managers quickly lose faith in the process when top management ignores, overrules, or bypasses established procedures for evaluating a manager's performance.
4. **The evaluation process must allow managers to respond to their evaluations.** Evaluation is not a one-way street. Managers should have the opportunity to defend their performance. Evaluation without feedback is both impersonal and ineffective.
5. **The evaluation should identify both good and poor performance.** Praise for good performance is a powerful motivating factor for a manager. This is especially true when a manager's compensation includes rewards for meeting budget goals.

Reporting Principles

Performance evaluation under responsibility accounting should be based on certain reporting principles. These principles pertain primarily to the internal reports that provide the basis for evaluating performance. Performance reports should:

1. Contain only data that are controllable by the manager of the responsibility center.
2. Provide accurate and reliable budget data to measure performance.
3. Highlight significant differences between actual results and budget goals.
4. Be tailor-made for the intended evaluation by ensuring only controllable costs are included.
5. Be prepared at reasonable time intervals.

In recent years, companies have come under increasing pressure from influential shareholder groups to do a better job of linking executive pay to corporate performance. For example, software maker **Siebel Systems** unveiled an incentive plan after lengthy discussions with the California Public Employees' Retirement System. One unique feature of the plan is that managers' targets will be publicly disclosed at the beginning of each year for investors to evaluate.

Management Insight Honda

Kyodo/©AP/Wide World Photos

Flexible Manufacturing Requires Flexible Accounting

Flexible budgeting is useful because it enables managers to evaluate performance in light of changing conditions.

But the ability to react quickly to changing conditions is even more important. Among automobile manufacturing facilities in the U.S., few plants are more flexible than **Honda**.

The manufacturing facilities of some auto companies can make slight alterations to the features of a vehicle in response to changes in demand for particular features. But for most plants, to switch from production of one type of vehicle to a completely

different one typically takes months and costs hundreds of millions of dollars. At the Honda plant, however, the switch takes minutes. For example, it takes about five minutes to install different hand-like parts on the robots so they can switch from making Civic compacts to the longer, taller CR-V crossover. This ability to adjust quickly to changing demand gave Honda a huge advantage when gas prices surged and demand for more fuel-efficient cars increased quickly.

Source: Kate Linebaugh, "Honda's Flexible Plants Provide Edge," *Wall Street Journal Online* (September 23, 2008).

What implications do these improvements in production capabilities have for management accounting information and performance evaluation within the organization? (Go to WileyPLUS for this answer and additional questions.)

Responsibility Reporting System

A **responsibility reporting system** involves the preparation of a report for each level of responsibility in the company's organization chart. To illustrate such a system, we use the partial organization chart and production departments of Francis Chair Company in **Illustration 25.18**.

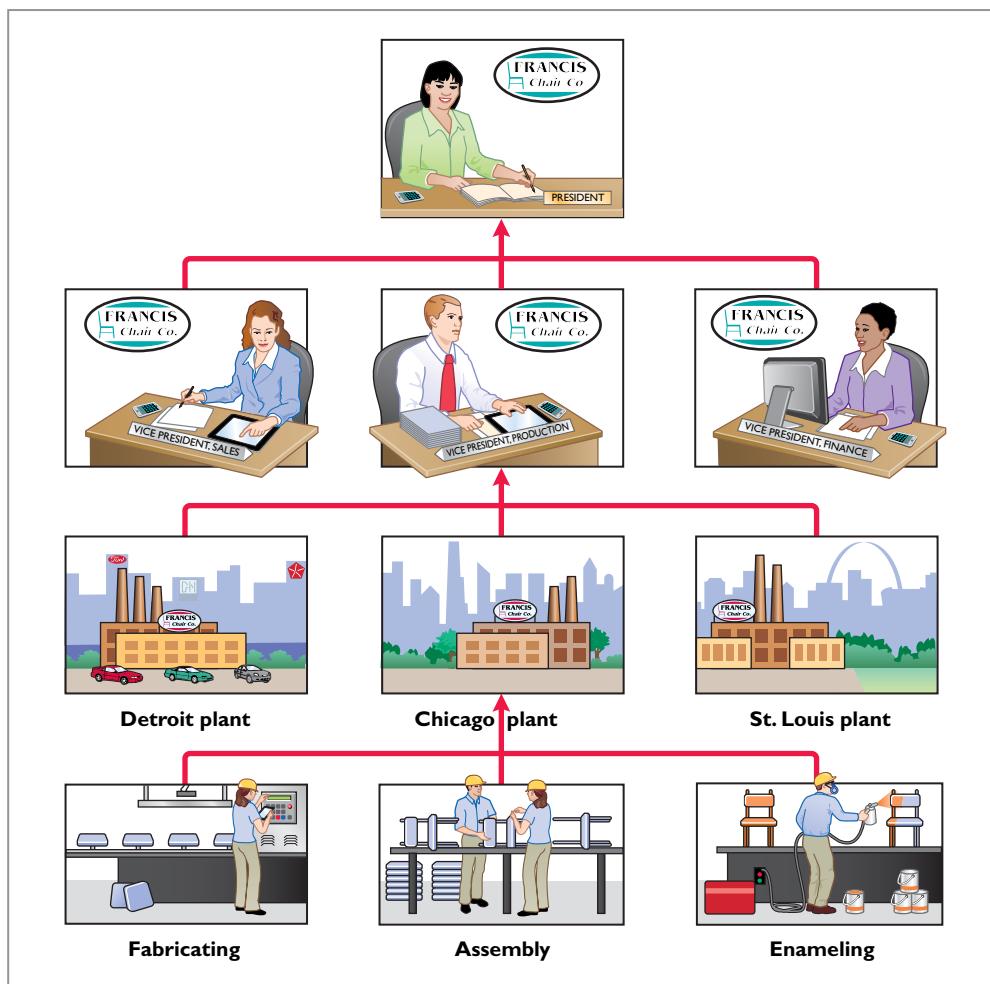

The responsibility reporting system begins with the lowest level of responsibility for controlling costs and moves upward to each higher level. **Illustration 25.19** details the connections between levels.

A brief description of the four reports for Francis Chair is as follows.

1. **Report D** is typical of reports that go to department managers. Similar reports are prepared for the managers of the Assembly and Enameling Departments.
2. **Report C** is an example of reports that are sent to plant managers. It shows the costs of the Chicago plant that are controllable at the second level of responsibility. In addition, Report C shows summary data for each department that is controlled by the plant manager. Similar reports are prepared for the Detroit and St. Louis plant managers.
3. **Report B** illustrates the reports at the third level of responsibility. It shows the controllable costs of the vice president of production and summary data on the three assembly plants for which this officer is responsible. Similar reports are prepared for the vice presidents of sales and finance.
4. **Report A** is typical of reports that go to the top level of responsibility—the president. It shows the controllable costs and expenses of this office and summary data on the vice presidents that are accountable to the president.

A responsibility reporting system permits management by exception at each level of responsibility. And, each higher level of responsibility can obtain the detailed report for each lower level of responsibility. For example, the vice president of production in Francis Chair may request the Chicago plant manager's report because this plant is \$5,300 over budget.

ILLUSTRATION 25.18 Partial organization chart

Report A
President sees summary data of vice presidents.

Report B
Vice president sees summary of controllable costs in his/her functional area.

Report C
Plant manager sees summary of controllable costs for each department in the plant.

Report D
Department manager sees controllable costs of his/her department.

This type of reporting system also permits comparative evaluations. In Illustration 25.19, the Chicago plant manager can easily rank the department managers' effectiveness in controlling manufacturing costs. Comparative rankings provide further incentive for a manager to control costs.

Types of Responsibility Centers

There are three basic types of responsibility centers: cost centers, profit centers, and investment centers. These classifications indicate the degree of responsibility the manager has for the performance of the center.

A **cost center** incurs costs (and expenses) but does not directly generate revenues. Managers of cost centers have the authority to incur costs. They are evaluated on their ability to control costs. **Cost centers are usually either production departments or service departments.** Production departments participate directly in making the product. Service departments provide only support services. In a **Ford Motor Company** automobile plant, the welding, painting, and assembling departments are production departments. Ford's maintenance, cafeteria, and human resources departments are service departments. All of them are cost centers.

A **profit center** incurs costs (and expenses) and also generates revenues. Managers of profit centers are judged on the profitability of their centers. Examples of profit centers include the individual departments of a retail store, such as clothing, furniture, and automotive products, and branch offices of banks (see **Helpful Hint**).

Like a profit center, an **investment center** incurs costs (and expenses) and generates revenues. In addition, an investment center has control over decisions regarding the assets

HELPFUL HINT

The jewelry department of **Macy's** department store is a profit center, while the makeup department of a movie studio is a cost center.

available for use. Investment center managers are evaluated on both the profitability of the center and the rate of return earned on the assets used. Investment centers are often associated with subsidiary companies. Utility **Duke Energy** has operating divisions such as electric utility, energy trading, and natural gas. Investment center managers control or significantly influence investment decisions related to such matters as plant expansion and entry into new market areas. **Illustration 25.20** depicts the three types of responsibility centers.

ILLUSTRATION 25.20 Types of responsibility centers

Responsibility Accounting for Cost Centers

The evaluation of a manager's performance for cost centers is based on his or her ability to meet budgeted goals for controllable costs. **Responsibility reports for cost centers compare actual controllable costs with flexible budget data.**

Illustration 25.21 shows a responsibility report. The report is adapted from the flexible budget report for Fox Company in Illustration 25.16. It assumes that the Finishing Department manager is able to control all manufacturing overhead costs except depreciation, property taxes, and his own monthly salary of \$6,000. The remaining \$4,000 (\$10,000 – \$6,000) of supervision costs are assumed to apply to other supervisory personnel within the Finishing Department, whose salaries are controllable by the manager.

ILLUSTRATION 25.21

Responsibility report for a cost center

Fox Company					
Finishing Department					
Responsibility Report					
For the Month Ended January 31, 2020					
			Difference		
			Favorable - F Unfavorable - U		
6	Controllable Costs	Budget	Actual		
7	Indirect materials	\$13,500	\$14,000	\$ 500	U
8	Indirect labor	18,000	17,000	1,000	F
9	Utilities	4,500	4,600	100	U
10	Supervision	4,000	4,000	0	
11	Total	\$40,000	\$39,600	\$ 400	F
12					

The report in Illustration 25.21 includes **only controllable costs**, and no distinction is made between variable and fixed costs. The responsibility report continues the concept of management by exception. In this case, top management may request an explanation of the \$1,000 favorable difference in indirect labor and/or the \$500 unfavorable difference in indirect materials if considered significant.

Responsibility Accounting for Profit Centers

To evaluate the performance of a profit center manager, upper management needs detailed information about both controllable revenues and controllable costs. The operating revenues earned by a profit center, such as sales, are controllable by the manager. All variable costs (and expenses) incurred by the center are also controllable by the manager because they vary with sales. However, to determine the controllability of fixed costs, it is necessary to distinguish between direct and indirect fixed costs.

Direct and Indirect Fixed Costs. A profit center may have both direct and indirect fixed costs. **Direct fixed costs** relate specifically to one center and are incurred for the sole benefit of that center. Examples of such costs include the salaries established by the profit center manager for supervisory personnel and the cost of a timekeeping department for the center's employees. Since these fixed costs can be traced directly to a center, they are also called **traceable costs**. **Most direct fixed costs are controllable by the profit center manager.**

In contrast, **indirect fixed costs** pertain to a company's overall operating activities and are incurred for the benefit of more than one profit center. Management allocates indirect fixed costs to profit centers on some type of equitable basis. For example, property taxes on a building occupied by more than one center may be allocated on the basis of square feet of floor space used by each center. Or, the costs of a company's human resources department may be allocated to profit centers on the basis of the number of employees in each center. Because these fixed costs apply to more than one center, they are also called **common costs**. **Most indirect fixed costs are not controllable by the profit center manager.**

Responsibility Report. The responsibility report for a profit center shows budgeted and actual **controllable revenues and costs**. The report is prepared using the cost-volume-profit income statement explained in Chapter 22 (see **Helpful Hint**). In the report:

1. Controllable fixed costs are deducted from contribution margin.
2. The excess of contribution margin over controllable fixed costs is identified as **controllable margin**.
3. Noncontrollable fixed costs are not reported.

Illustration 25.22 shows the responsibility report for the manager of the Marine Division, a profit center of Mantle Company. For the year, the Marine Division also had \$60,000 of indirect fixed costs that were not controllable by the profit center manager and therefore were omitted from the report.

HELPFUL HINT

Recognize that we are emphasizing *financial* measures of performance. Companies are now making an effort to also stress *nonfinancial* performance measures such as product quality, labor productivity, market growth, materials' yield, manufacturing flexibility, and technological capability.

ILLUSTRATION 25.22

16	Total	180,000	180,000	0	
17	Controllable margin	\$ 360,000	\$ 324,000	\$36,000	U
18					

Controllable margin is considered to be the best measure of the manager's performance **in controlling revenues and costs**. The report in Illustration 25.22 shows that the manager's performance was below budgeted expectations by 10% ($\$36,000 \div \$360,000$) of the budgeted controllable margin. Top management would likely investigate the causes of this unfavorable result. Note that the report does not show the Marine Division's noncontrollable indirect fixed costs of \$60,000. These costs would be included in a report on the profitability of the profit center.

Management also may choose to see **monthly** responsibility reports for profit centers. In addition, responsibility reports may include cumulative year-to-date results.

DO IT! 3 | Profit Center Responsibility Report

Midwest Division operates as a profit center. It reports the following for the year:

	Budget	Actual
Sales	\$1,500,000	\$1,700,000
Variable costs	700,000	800,000
Controllable fixed costs	400,000	400,000
Noncontrollable fixed costs	200,000	200,000

Prepare a responsibility report for the Midwest Division for December 31, 2020.

ACTION PLAN

- Deduct variable costs from sales to show contribution margin.
- Deduct controllable fixed costs from the contribution margin to show controllable margin.
- Do not report noncontrollable fixed costs.

Solution

Midwest Division Responsibility Report					
	A	B	C	D	E

Investment Centers

LEARNING OBJECTIVE 4

Evaluate performance in investment centers.

As explained earlier, an investment center manager can control or significantly influence the investment funds available for use. Thus, the primary basis for evaluating the performance of a manager of an investment center is **return on investment (ROI)**. The return on investment is considered to be a useful performance measurement because it shows the **effectiveness of the manager in utilizing the assets at his or her disposal**.

Return on Investment (ROI)

The formula for computing ROI for an investment center, together with assumed illustrative data, is shown in **Illustration 25.23**.

Controllable Margin	÷	Average Operating Assets	=	Return on Investment (ROI)
\$1,000,000	÷	\$5,000,000	=	20%

ILLUSTRATION 25.23

ROI formula

Both factors in the formula are controllable by the investment center manager. Operating assets consist of current assets and plant assets used in operations by the center and controlled by the manager. Nonoperating assets such as idle plant assets and land held for future use are excluded. Average operating assets are usually based on the cost or book value of the assets at the beginning and end of the year. Based on these assigned values, the ROI of 20% indicates that, on average, the segment generates 20 cents of profit for every dollar invested in assets.

Responsibility Report

The scope of the investment center manager's responsibility significantly affects the content of the performance report. Since an investment center is an independent entity for operating purposes, **all fixed costs are controllable by its manager**. For example, the manager is responsible for depreciation on investment center assets. Therefore, more fixed costs are identified as controllable in the performance report for an investment center manager than in a performance report for a profit center manager. The report also shows budgeted and actual ROI below controllable margin.

To illustrate this responsibility report, we will now assume that the Marine Division of Mantle Company is an investment center. It has budgeted and actual average operating assets of \$2,000,000. The manager can control \$60,000 of additional fixed costs that were not controllable when the division was a profit center. **Illustration 25.24** shows the division's responsibility report.

23					

ILLUSTRATION 25.24

Responsibility report for investment center

The report shows that the manager's performance based on ROI was below budget expectations by 1.8% (15.0% versus 13.2%). Top management would likely want explanations for this unfavorable result.

Judgmental Factors in ROI

The return on investment approach includes two judgmental factors:

- 1. Valuation of operating assets.** Operating assets may be valued at acquisition cost, book value, appraised value, or fair value. The first two bases are readily available from the accounting records.
- 2. Margin (income) measure.** This measure may be controllable margin, income from operations, or net income.

Each of the alternative values for operating assets can provide a reliable basis for evaluating a manager's performance as long as it is consistently applied between reporting periods. However, the use of income measures other than controllable margin will not result in a valid basis for evaluating the performance of an investment center manager.

Improving ROI

The manager of an investment center can improve ROI by increasing controllable margin, and/or reducing average operating assets. To illustrate, we use the assumed data for the Laser Division of Berra Company shown in [Illustration 25.25](#).

ILLUSTRATION 25.25

Assumed data for Laser Division

Sales	\$2,000,000
Variable costs	1,100,000
Contribution margin (45%)	900,000
Controllable fixed costs	300,000
Controllable margin (a)	\$ 600,000
Average operating assets (b)	\$5,000,000
Return on investment (a) ÷ (b)	12%

Increasing Controllable Margin

Controllable margin can be increased by increasing sales or by reducing variable and controllable fixed costs as follows.

- Increase sales 10%.** Sales will increase \$200,000 ($\$2,000,000 \times .10$). Assuming no change in the contribution margin percentage of 45% ($\$900,000 \div \$2,000,000$), contribution margin will increase \$90,000 ($\$200,000 \times .45$). Controllable margin will increase by the same amount because controllable fixed costs will not change. Thus, controllable margin becomes \$690,000 ($\$600,000 + \$90,000$). The new ROI is 13.8%, computed as shown in [Illustration 25.26](#).

ILLUSTRATION 25.26

ROI computation—increase in sales

$$\text{ROI} = \frac{\text{Controllable margin}}{\text{Average operating assets}} = \frac{\$690,000}{\$5,000,000} = \mathbf{13.8\%}$$

An increase in sales benefits both the investment center and the company if it results in new business. It would not benefit the company if the increase was achieved at the expense of other investment centers.

- Decrease variable and fixed costs 10%.** Total costs decrease \$140,000 [$(\$1,100,000 + \$300,000) \times .10$]. This reduction results in a corresponding increase in controllable margin. Thus, controllable margin becomes \$740,000 ($\$600,000 + \$140,000$). The new ROI is 14.8%, computed as shown in [Illustration 25.27](#).

$$\text{ROI} = \frac{\text{Controllable margin}}{\text{Average operating assets}} = \frac{\$740,000}{\$5,000,000} = 14.8\%$$

This course of action is clearly beneficial when the reduction in costs is the result of eliminating waste and inefficiency. But, a reduction in costs that results from cutting expenditures on vital activities, such as required maintenance and inspections, is not likely to be acceptable to top management.

Reducing Average Operating Assets

Assume that average operating assets are reduced 10% or \$500,000 ($\$5,000,000 \times .10$). Average operating assets become \$4,500,000 ($\$5,000,000 - \$500,000$). Since controllable margin remains unchanged at \$600,000, the new ROI is 13.3%, computed as shown in **Illustration 25.28**.

$$\text{ROI} = \frac{\text{Controllable margin}}{\text{Average operating assets}} = \frac{\$600,000}{\$4,500,000} = 13.3\%$$

Reductions in operating assets may or may not be prudent. It is beneficial to eliminate overinvestment in inventories and to dispose of excessive plant assets. However, it is unwise to reduce inventories below expected needs or to dispose of essential plant assets.

ILLUSTRATION 25.27

ROI computation—decrease in costs

ILLUSTRATION 25.28

ROI computation—decrease in operating assets

Management Insight

PeopleImages/Getty Images

Is Your Job a Game?

As discussed in this chapter, the things you are held accountable for depend on your job responsibilities. Similarly, the form of a company's incentive and compensation structure varies depending on your level within the organization. If you are the chief executive officer (CEO), it is likely that a significant portion of your pay (about 30%) will be in the form of a stock-based bonus. This bonus is usually tied to overall company performance, typically measured by earnings per share and shareholder returns. But if you are a lower-level employee, your raises and bonuses might be structured similar to the incentives in video games. This

so-called "gamification" has the ability to incentivize not just the most obvious aspect of your job but also many of the other functions that your manager deems important. For example, rather than just reward you for total sales made, your bonus under gamification might change if you "accurately enter their client's information into a sales tracker, assess the quality of sales leads or track how often they are going to sales meetings." It can also provide "points" for things like whether you lead a healthy lifestyle, collaborate with co-workers, and improve interpersonal skills.

Sources: Scott Thurm, "CEO Pay More Closely Matches Firms' Results," *Wall Street Journal* (September 11, 2013); and Farhad ManJoo, "The Gamification of the Office Approaches," *Wall Street Journal* (January 12, 2014).

Why is the reward system of top managers tied to different types of measures than those of lower-level managers? (Go to WileyPLUS for this answer and additional questions.)

DO IT! 4 | Performance Evaluation

The service division of Metro Industries reported the following results for 2020.

Sales	\$400,000
Variable costs	320,000
Controllable fixed costs	40,800
Average operating assets	280,000

Management is considering the following independent courses of action in 2021 in order to maximize the return on investment for this division.

1. Reduce average operating assets by \$80,000, with no change in controllable margin.
2. Increase sales \$80,000, with no change in the contribution margin percentage.
 - a. Compute the controllable margin and the return on investment for 2020.
 - b. Compute the controllable margin and the expected return on investment for 2021 for each proposed alternative.

ACTION PLAN

- Recall key formulas:
 $\text{Sales} - \text{Variable costs} = \text{Contribution margin}$.
- $\text{Contribution margin} - \text{Controllable fixed costs} = \text{Controllable margin}$.
- $\text{Return on investment} = \text{Controllable margin} \div \text{Average operating assets}$.

Solution

- a. Return on investment for 2020:

Sales	\$400,000
Variable costs	320,000
Contribution margin	80,000
Controllable fixed costs	40,800
Controllable margin	<u><u>\$ 39,200</u></u>
Return on investment	$\frac{\$39,200}{\$280,000} = 14\%$

- b. Expected return on investment for alternative 1:

$$\frac{\$39,200}{\$280,000 - \$80,000} = 19.6\%$$

Expected return on investment for alternative 2:

Sales (\$400,000 + \$80,000)	\$480,000
Variable costs (\$320,000/\$400,000 × \$480,000)	384,000
Contribution margin	96,000
Controllable fixed costs	40,800
Controllable margin	<u><u>\$ 55,200</u></u>
Return on investment	$\frac{\$55,200}{\$280,000} = 19.7\%$

Related exercise material: **BE25.8, BE25.9, BE25.10, DO IT! 25.4, E25.16, and E25.17.**

Appendix 25A**ROI vs. Residual Income****LEARNING OBJECTIVE *5**

Explain the difference between ROI and residual income.

Although most companies use ROI to evaluate investment performance, ROI has a significant disadvantage. To illustrate, let's look at the Electronics Division of Pujols Company. It has an ROI of 20%, computed as shown in **Illustration 25A.1**.

ILLUSTRATION 25A.1**ROI formula**

Controllable Margin	÷	Average Operating Assets	=	Return on Investment (ROI)
\$1,000,000	÷	\$5,000,000	=	20%

The Electronics Division is considering producing a new product, a GPS device (hereafter referred to as Tracker) for its boats. To produce Tracker, operating assets will have to increase \$2,000,000. Tracker is expected to generate an additional \$260,000 of controllable margin. **Illustration 25A.2** shows how Tracker will effect ROI.

ILLUSTRATION 25A.2**ROI comparison**

	Without Tracker	With Tracker
Controllable margin (a)	\$1,000,000	\$ 260,000
Average operating assets (b)	\$5,000,000	\$2,000,000
Return on investment [(a) ÷ (b)]	20%	13%
		18%

The investment in Tracker reduces ROI from 20% to 18%.

Let's suppose that you are the manager of the Electronics Division and must make the decision to produce or not produce Tracker. If you were evaluated using ROI, you probably would not produce Tracker because your ROI would drop from 20% to 18%. The problem with this ROI analysis is that it ignores an important variable: the minimum rate of return on a company's operating assets. The **minimum rate of return** is the rate at which the Electronics Division can cover its costs and earn a profit. Assuming that the Electronics Division has a minimum rate of return of 10%, it should invest in Tracker because its ROI of 13% is greater than 10%.

Residual Income Compared to ROI

To evaluate performance using the minimum rate of return, companies use the residual income approach. **Residual income** is the income that remains after subtracting from the controllable margin the minimum rate of return on a company's average operating assets. The residual income for Tracker would be computed as shown in **Illustration 25A.3**.

Controllable Margin	-	Minimum Rate of Return × Average Operating Assets	=	Residual Income
\$260,000	-	10% × \$2,000,000	=	\$60,000

ILLUSTRATION 25A.3
Residual income formula

As shown, the residual income related to the Tracker investment is \$60,000. **Illustration 25A.4** indicates how residual income changes as the additional investment is made.

	Without Tracker	Tracker	With Tracker
Controllable margin (a)	\$1,000,000	\$260,000	\$1,260,000
Average operating assets × 10% (b)	500,000	200,000	700,000
Residual income [(a) – (b)]	\$ 500,000	\$ 60,000	\$ 560,000

ILLUSTRATION 25A.4
Residual income comparison

This example illustrates how performance evaluation based on ROI can be misleading and can even cause managers to reject projects that would actually increase income for the company. As a result, many companies such as **Coca-Cola**, **Briggs and Stratton**, **Eli Lilly**, and **Siemens AG** use residual income (or a variant often referred to as economic value added) to evaluate investment alternatives and measure company performance.

Residual Income Weakness

It might appear from the above discussion that the goal of any company should be to maximize the total amount of residual income in each division. This goal, however, ignores the fact that one division might use substantially fewer assets to attain the same level of residual income as another division. For example, we know that to produce Tracker, the Electronics Division of Pujols Company used \$2,000,000 of average operating assets to generate \$260,000 of controllable margin. Now let's say a different division produced a product called SeaDog, which used \$4,000,000 to generate \$460,000 of controllable margin, as shown in **Illustration 25A.5**.

	Tracker	SeaDog
Controllable margin (a)	\$260,000	\$460,000
Average operating assets × 10% (b)	200,000	400,000
Residual income [(a) – (b)]	\$ 60,000	\$ 60,000

ILLUSTRATION 25A.5
Comparison of two products

If the performance of these two investments were evaluated using residual income, they would be considered equal: Both products have the same total residual income. This ignores, however, the fact that SeaDog required **twice** as many operating assets to achieve the same level of residual income.

Review and Practice

Learning Objectives Review

1 Describe budgetary control and static budget reports.

Budgetary control consists of (a) preparing periodic budget reports that compare actual results with planned objectives, (b) analyzing the differences to determine their causes, (c) taking appropriate corrective action, and (d) modifying future plans, if necessary.

Static budget reports are useful in evaluating the progress toward planned sales and profit goals. They are also appropriate in assessing a manager's effectiveness in controlling costs when (a) actual activity closely approximates the master budget activity level, and/or (b) the behavior of the costs in response to changes in activity is fixed.

2 Prepare flexible budget reports.

To develop the flexible budget it is necessary to: (a) Identify the activity index and the relevant range of activity. (b) Identify the variable costs, and determine the budgeted variable cost per unit of activity for each cost. (c) Identify the fixed costs, and determine the budgeted amount for each cost. (d) Prepare the budget for selected increments of activity within the relevant range. Flexible budget reports permit an evaluation of a manager's performance in controlling production and costs.

3 Apply responsibility accounting to cost and profit centers.

Responsibility accounting involves accumulating and reporting revenues and costs on the basis of the individual manager who has the

authority to make the day-to-day decisions about the items. The evaluation of a manager's performance is based on the matters directly under the manager's control. In responsibility accounting, it is necessary to distinguish between controllable and noncontrollable fixed costs and to identify three types of responsibility centers: cost, profit, and investment.

Responsibility reports for cost centers compare actual costs with flexible budget data. The reports show only controllable costs, and no distinction is made between variable and fixed costs. Responsibility reports show contribution margin, controllable fixed costs, and controllable margin for each profit center.

4 Evaluate performance in investment centers.

The primary basis for evaluating performance in investment centers is return on investment (ROI). The formula for computing ROI for investment centers is $\text{Controllable margin} \div \text{Average operating assets}$.

***5 Explain the difference between ROI and residual income.**

ROI is controllable margin divided by average operating assets. Residual income is the income that remains after subtracting the minimum rate of return on a company's average operating assets. ROI sometimes provides misleading results because profitable investments are often rejected when the investment reduces ROI but increases overall profitability.

Glossary Review

Budgetary control The use of budgets to control operations. (p. 25-3).

Controllable cost A cost over which a manager has control. (p. 25-15).

Controllable margin Contribution margin less controllable fixed costs. (p. 25-21).

Cost center A responsibility center that incurs costs but does not directly generate revenues. (p. 25-18).

Decentralization Control of operations is delegated to many managers throughout the organization. (p. 25-14).

Direct fixed costs Costs that relate specifically to a responsibility center and are incurred for the sole benefit of the center. (p. 25-21).

Flexible budget A projection of budget data for various levels of activity. (p. 25-6).

Indirect fixed costs Costs that are incurred for the benefit of more than one profit center. (p. 25-21).

Investment center A responsibility center that incurs costs, generates revenues, and has control over decisions regarding the assets available for use. (p. 25-18).

Management by exception The review of budget reports by top management focused entirely or primarily on significant differences between actual results and planned objectives. (p. 25-15).

Noncontrollable costs Costs incurred indirectly and allocated to a responsibility center that are not controllable at that level. (p. 25-15).

Profit center A responsibility center that incurs costs and also generates revenues. (p. 25-18).

***Residual income** The income that remains after subtracting from the controllable margin the minimum rate of return on a company's average operating assets. (p. 25-27).

Responsibility accounting A part of management accounting that involves identifying and reporting revenues and costs on the basis of the manager who has the authority to make the day-to-day decisions about the items. (p. 25-13).

Responsibility reporting system The preparation of reports for each level of responsibility in the company's organization chart. (p. 25-17).

Return on investment (ROI) A measure of management's effectiveness in utilizing assets at its disposal in an investment center. (p. 25-22).

Segment (or division) An area of responsibility in decentralized operations. (p. 25-14).

Static budget A projection of budget data at one level of activity. (p. 25-4).

Practice Multiple-Choice Questions

1. **(LO 1)** Budgetary control involves all but one of the following:

- a. modifying future plans.
- b. analyzing differences.
- c. using static budgets but **not** flexible budgets.
- d. determining differences between actual and planned results.

2. **(LO 1)** Depending on the nature of the report, budget reports are prepared:

- | | |
|------------|----------------------|
| a. daily. | c. monthly. |
| b. weekly. | d. All of the above. |

3. **(LO 1)** A production manager in a manufacturing company would most likely receive a:

- a. sales report.
- b. income statement.
- c. scrap report.
- d. shipping department overhead report.

4. **(LO 1)** A static budget is:

- a. a projection of budget data at several levels of activity within the relevant range of activity.
- b. a projection of budget data at a single level of activity.
- c. compared to a flexible budget in a budget report.
- d. never appropriate in evaluating a manager's effectiveness in controlling costs.

5. **(LO 1)** A static budget is useful in controlling costs when cost behavior is:

- | | |
|-----------|--------------|
| a. mixed. | c. variable. |
| b. fixed. | d. linear. |

6. **(LO 2)** At zero direct labor hours in a flexible budget graph, the total budgeted cost line intersects the vertical axis at \$30,000. At 10,000 direct labor hours, a horizontal line drawn from the total budgeted cost line intersects the vertical axis at \$90,000. Fixed and variable costs may be expressed as:

- a. \$30,000 fixed plus \$6 per direct labor hour variable.
- b. \$30,000 fixed plus \$9 per direct labor hour variable.
- c. \$60,000 fixed plus \$3 per direct labor hour variable.
- d. \$60,000 fixed plus \$6 per direct labor hour variable.

7. **(LO 2)** At 9,000 direct labor hours, the flexible budget for indirect materials (a variable cost) is \$27,000. If \$28,000 of indirect materials costs are incurred at 9,200 direct labor hours, the flexible budget report should show the following difference for indirect materials:

- | | |
|-------------------------|-----------------------|
| a. \$1,000 unfavorable. | c. \$400 favorable. |
| b. \$1,000 favorable. | d. \$400 unfavorable. |

8. **(LO 3)** Under responsibility accounting, the evaluation of a manager's performance is based on matters that the manager:

- a. directly controls.
- b. directly and indirectly controls.
- c. indirectly controls.
- d. has shared responsibility for with another manager.

9. **(LO 3)** Responsibility centers include:

- | | |
|--------------------|------------------------|
| a. cost centers. | c. investment centers. |
| b. profit centers. | d. All of the above. |

10. **(LO 3)** Responsibility reports for cost centers:

- a. distinguish between fixed and variable costs.
- b. use static budget data.
- c. include both controllable and noncontrollable costs.
- d. include only controllable costs.

11. **(LO 3)** The accounting department of a manufacturing company is an example of:

- | | |
|---------------------|---------------------------|
| a. a cost center. | c. an investment center. |
| b. a profit center. | d. a contribution center. |

12. **(LO 3)** To evaluate the performance of a profit center manager, upper management needs detailed information about:

- a. controllable costs.
- b. controllable revenues.
- c. controllable costs and revenues.
- d. controllable costs and revenues and average operating assets.

13. **(LO 3)** In a responsibility report for a profit center, controllable fixed costs are deducted from contribution margin to show:

- | | |
|--------------------------|----------------------------|
| a. profit center margin. | c. net income. |
| b. controllable margin. | d. income from operations. |

14. **(LO 4)** In the formula for return on investment (ROI), the factors for controllable margin and operating assets are, respectively:

- a. controllable margin percentage and total operating assets.
- b. controllable margin dollars and average operating assets.
- c. controllable margin dollars and total assets.
- d. controllable margin percentage and average operating assets.

15. **(LO 4)** A manager of an investment center can improve ROI by:

- a. increasing average operating assets.
- b. reducing sales.
- c. increasing variable costs.
- d. reducing variable and/or controllable fixed costs.

Solutions

- 1. c.** Budgetary control involves using flexible budgets and sometimes static budgets. The other choices are all part of budgetary control.
- 2. d.** Budget reports are prepared daily, weekly, or monthly. The other choices are correct, but choice (d) is the better answer.
- 3. c.** A production manager in a manufacturing company would most likely receive a scrap report. The other choices are incorrect because (a) top management or a sales manager would most likely receive a sales report, (b) top management would most likely receive an income statement, and (d) a department manager would most likely receive a shipping department overhead report.
- 4. b.** A static budget is a projection of budget data at a single level of activity. The other choices are incorrect because a static budget (a) is a projection of budget data at a single level of activity, not at several levels of activity within the relevant range of activity; (c) is not compared to a flexible budget in a budget report; and (d) is appropriate in evaluating a manager's effectiveness in controlling fixed costs.
- 5. b.** A static budget is useful for controlling fixed costs. The other choices are incorrect because a static budget is not useful for controlling (a) mixed costs, (c) variable costs, or (d) linear costs.
- 6. a.** The intersection point of \$90,000 is total budgeted costs, or budgeted fixed costs plus budgeted variable costs. Fixed costs are \$30,000 (amount at zero direct labor hours), so budgeted variable costs are \$60,000 [$\$90,000$ (Total costs) – \$30,000 (Fixed costs)]. Budgeted variable costs (\$60,000) divided by total activity level (10,000 direct labor hours) gives the variable cost per unit of \$6 per direct labor hour. The other choices are therefore incorrect.
- 7. d.** Budgeted indirect materials per direct labor hour (DLH) is \$3 ($\$27,000/9,000$). At an activity level of 9,200 direct labor hours, budgeted indirect materials are \$27,600 ($9,200 \times \3 per DLH) but actual indirect materials costs are \$28,000, resulting in a \$400 unfavorable difference. The other choices are therefore incorrect.
- 8. a.** The evaluation of a manager's performance is based only on matters that the manager directly controls. The other choices are therefore incorrect as they include indirect controls and shared responsibility.
- 9. d.** Cost centers, profit centers, and investment centers are all responsibility centers. The other choices are correct, but choice (d) is the better answer.
- 10. d.** Responsibility reports for cost centers report only controllable costs; they (a) do not distinguish between fixed and variable costs; (b) use flexible budget data, not static budget data; and (c) do not include noncontrollable costs.
- 11. a.** The accounting department of a manufacturing company is an example of a cost center, not (b) a profit center, (c) an investment center, or (d) contribution center.
- 12. c.** To evaluate the performance of a profit center manager, upper management needs detailed information about controllable costs and revenues, not just (a) controllable costs or (b) controllable revenues. Choice (d) is incorrect because upper management does not need information about average operating assets.
- 13. b.** Contribution margin less controllable fixed costs is the controllable margin, not (a) the profit center margin, (c) net income, or (d) income from operations.
- 14. b.** The factors in the formula for ROI are controllable margin dollars and average operating assets. The other choices are therefore incorrect.
- 15. d.** Reducing variable or controllable fixed costs will cause the controllable margin to increase, which is one way a manager of an investment center can improve ROI. The other choices are incorrect because (a) increasing average operating assets will lower ROI; (b) reducing sales will cause contribution margin to go down, thereby decreasing controllable margin since there will be less contribution margin to cover controllable fixed costs and resulting in lower ROI; and (c) increasing variable costs will cause the contribution margin to be lower, thereby decreasing controllable margin and resulting in lower ROI.

Practice Brief Exercises

Prepare a flexible budget for variable costs.

- 1. (LO 2)** Borusa Company expects to produce 600,000 units of its product Eldrad in 2020. Monthly production is expected to range from 40,000 to 60,000 units. Budgeted variable manufacturing costs per unit are direct materials \$4, direct labor \$5, and overhead \$8. Budgeted fixed manufacturing costs per unit are \$2 for depreciation and \$1.50 for supervision. Prepare a flexible manufacturing budget for the relevant range value using 10,000-unit increments.

Solution

1.

Borusa Company
Monthly Flexible Manufacturing Budget
For the Year 2020

Activity level	40,000	50,000	60,000
Finished units	<u>40,000</u>	<u>50,000</u>	<u>60,000</u>
Variable costs			
Direct materials (\$4)	\$160,000	\$ 200,000	\$ 240,000
Direct labor (\$5)	200,000	250,000	300,000
Overhead (\$8)	320,000	400,000	480,000
Total variable costs (\$17)	<u>\$680,000</u>	<u>\$ 850,000</u>	<u>\$1,020,000</u>
Fixed costs			
Depreciation*	100,000	100,000	100,000
Supervision**	75,000	75,000	75,000
Total fixed costs	<u>175,000</u>	<u>175,000</u>	<u>175,000</u>
Total costs	<u><u>\$855,000</u></u>	<u><u>\$1,025,000</u></u>	<u><u>\$1,195,000</u></u>

*($\$2 \times 600,000$) ÷ 12; **($\$1.50 \times 600,000$) ÷ 12

- 2. (LO 3)** Goth Company accumulates the following summary data for the year ending December 31, 2020, for its Chancellor Division, which it operates as a profit center: sales—\$2,000,000 budget, \$1,940,000 actual; variable costs—\$1,000,000 budget, \$980,000 actual; and controllable fixed costs—\$300,000 budget, \$317,000 actual. Prepare a responsibility report for the Chancellor Division.

Prepare a responsibility report for a profit center.

Solution

2.

Goth Company
Chancellor Division
Responsibility Report

For the Year Ended December 31, 2020

	Budget	Actual	Difference
			Favorable F Unfavorable U
Sales	\$2,000,000	\$1,940,000	\$60,000 U
Variable costs	1,000,000	980,000	20,000 F
Contribution margin	1,000,000	960,000	40,000 U
Controllable fixed costs	300,000	317,000	17,000 U
Controllable margin	<u>\$ 700,000</u>	<u>\$ 643,000</u>	<u>\$57,000 F</u>

- 3. (LO 4)** For its three investment centers, Usher Company accumulates the following data:

	I	II	III
Sales	\$2,000,000	\$4,000,000	\$4,000,000
Controllable margin	1,200,000	2,100,000	2,400,000
Average operating assets	4,000,000	7,000,000	9,600,000

Compute return on investment using the ROI formula.

Compute the return on investment (ROI) for each center.

Solution

3.

$$\begin{aligned} \text{I} & (\$1,200,000 \div \$4,000,000) = 30\% \\ \text{II} & (\$2,100,000 \div \$7,000,000) = 30\% \\ \text{III} & (\$2,400,000 \div \$9,600,000) = 25\% \end{aligned}$$

Practice Exercises

- 1. (LO 2)** Felix Company uses a flexible budget for manufacturing overhead based on direct labor hours. Variable manufacturing overhead costs per direct labor hour are as follows.

Prepare flexible manufacturing overhead budget.

Indirect labor	\$0.70
Indirect materials	0.50
Utilities	0.40

Budgeted fixed overhead costs per month are supervision \$4,000, depreciation \$3,000, and property taxes \$800. The company believes it will normally operate in a range of 7,000–10,000 direct labor hours per month.

Instructions

Prepare a monthly flexible manufacturing overhead budget for 2020 for the expected range of activity, using increments of 1,000 direct labor hours.

Solution**1.**

Felix Company
Monthly Flexible Manufacturing Overhead Budget
For the Year 2020

Activity level	7,000	8,000	9,000	10,000
Direct labor hours	<u>7,000</u>	<u>8,000</u>	<u>9,000</u>	<u>10,000</u>
Variable costs				
Indirect labor (\$.70)	\$ 4,900	\$ 5,600	\$ 6,300	\$ 7,000
Indirect materials (\$.50)	3,500	4,000	4,500	5,000
Utilities (\$.40)	2,800	3,200	3,600	4,000
Total variable costs (\$1.60)	<u>11,200</u>	<u>12,800</u>	<u>14,400</u>	<u>16,000</u>
Fixed costs				
Supervision	4,000	4,000	4,000	4,000
Depreciation	3,000	3,000	3,000	3,000
Property taxes	800	800	800	800
Total fixed costs	<u>7,800</u>	<u>7,800</u>	<u>7,800</u>	<u>7,800</u>
Total costs	<u><u>\$19,000</u></u>	<u><u>\$20,600</u></u>	<u><u>\$22,200</u></u>	<u><u>\$23,800</u></u>

Compute ROI for current year and for possible future changes.

- 2. (LO 4)** The White Division of Mesin Company reported the following data for the current year.

Sales	\$3,000,000
Variable costs	2,400,000
Controllable fixed costs	400,000
Average operating assets	5,000,000

Top management is unhappy with the investment center's return on investment (ROI). It asks the manager of the White Division to submit plans to improve ROI in the next year. The manager believes it is feasible to consider the following independent courses of action.

1. Increase sales by \$300,000 with no change in the contribution margin percentage.
2. Reduce variable costs by \$100,000.
3. Reduce average operating assets by 4%.

Instructions

- a. Compute the return on investment (ROI) for the current year.
- b. Using the ROI formula, compute the ROI under each of the proposed courses of action. (Round to one decimal.)

Solution

- 2. a.** Controllable margin = $(\$3,000,000 - \$2,400,000 - \$400,000) = \$200,000$
 $\text{ROI} = \$200,000 \div \$5,000,000 = 4\%$
- b.**
1. Contribution margin percentage is 20%, or $[(\$3,000,000 - \$2,400,000) \div \$3,000,000]$
 $\text{Increase in controllable margin} = \$300,000 \times 20\% = \$60,000$
 $\text{ROI} = (\$200,000 + \$60,000) \div \$5,000,000 = 5.2\%$
 2. $(\$200,000 + \$100,000) \div \$5,000,000 = 6\%$
 3. $\$200,000 \div [\$5,000,000 - (\$5,000,000 \times .04)] = 4.2\%$

Practice Problem

Prepare flexible budget report.

(LO 2) Glenda Company uses a flexible budget for manufacturing overhead based on direct labor hours. For 2020, the master overhead budget for the Packaging Department based on 300,000 direct labor hours was as follows.

Variable Costs		Fixed Costs	
Indirect labor	\$360,000	Supervision	\$ 60,000
Supplies and lubricants	150,000	Depreciation	24,000
Maintenance	210,000	Property taxes	18,000
Utilities	120,000	Insurance	12,000
	<u><u>\$840,000</u></u>		<u><u>\$114,000</u></u>

During July, 24,000 direct labor hours were worked. The company incurred the following variable costs in July: indirect labor \$30,200, supplies and lubricants \$11,600, maintenance \$17,500, and utilities \$9,200. Actual fixed overhead costs were the same as monthly budgeted fixed costs.

Instructions

Prepare a flexible budget report for the Packaging Department for July.

Solution

Glenda Company
Manufacturing Overhead Budget Report (Flexible)
Packaging Department
For the Month Ended July 31, 2020

Direct labor hours (DLH)	Budget	Actual Costs	Difference
	24,000 DLH	24,000 DLH	Favorable F Unfavorable U
Variable costs			
Indirect labor (\$1.20 ^a)	\$28,800	\$30,200	\$1,400 U
Supplies and lubricants (\$0.50 ^a)	12,000	11,600	400 F
Maintenance (\$0.70 ^a)	16,800	17,500	700 U
Utilities (\$0.40 ^a)	9,600	9,200	400 F
Total variable	<u>67,200</u>	<u>68,500</u>	<u>1,300</u> U
Fixed costs			
Supervision	\$ 5,000 ^b	\$ 5,000	-0-
Depreciation	2,000 ^b	2,000	-0-
Property taxes	1,500 ^b	1,500	-0-
Insurance	1,000 ^b	1,000	-0-
Total fixed	<u>9,500</u>	<u>9,500</u>	<u>-0-</u>
Total costs	<u><u>\$76,700</u></u>	<u><u>\$78,000</u></u>	<u><u>\$1,300</u></u> U

^a(\$360,000 ÷ 300,000; \$150,000 ÷ 300,000; \$210,000 ÷ 300,000; \$120,000 ÷ 300,000).

^bAnnual cost divided by 12.

WileyPLUS

Brief Exercises, DO IT! Exercises, Exercises, Problems, and many additional resources are available for practice in WileyPLUS.

Note: All asterisked Questions, Exercises, and Problems relate to material in the appendix to the chapter.

Questions

1. a. What is budgetary control?
 2. The following purposes are part of a budgetary reporting system:
 (a) Determine efficient use of materials. (b) Control overhead costs.
 (c) Determine whether income objectives are being met. For each
- b. Fred Barone is describing budgetary control. What steps should be included in Fred's description?

- purpose, indicate the name of the report, the frequency of the report, and the primary recipient(s) of the report.
3. How may a budget report for the second quarter differ from a budget report for the first quarter?
 4. Ken Bay questions the usefulness of a master sales budget in evaluating sales performance. Is there justification for Ken's concern? Explain.
 5. Under what circumstances may a static budget be an appropriate basis for evaluating a manager's effectiveness in controlling costs?
 6. "A flexible budget is really a series of static budgets." Is this true? Why?
 7. The static manufacturing overhead budget based on 40,000 direct labor hours shows budgeted indirect labor costs of \$54,000. During March, the department incurs \$64,000 of indirect labor while working 45,000 direct labor hours. Is this a favorable or unfavorable performance? Why?
 8. A static overhead budget based on 40,000 direct labor hours shows Factory Insurance \$6,500 as a fixed cost. At the 50,000 direct labor hours worked in March, factory insurance costs were \$6,300. Is this a favorable or unfavorable performance? Why?
 9. Megan Pedigo is confused about how a flexible budget is prepared. Identify the steps for Megan.
 10. Cali Company has prepared a graph of flexible budget data. At zero direct labor hours, the total budgeted cost line intersects the vertical axis at \$20,000. At 10,000 direct labor hours, the line drawn from the total budgeted cost line intersects the vertical axis at \$85,000. How may the fixed and variable costs be expressed?
 11. The flexible budget formula is fixed costs \$50,000 plus variable costs of \$4 per direct labor hour. What is the total budgeted cost at (a) 9,000 hours and (b) 12,345 hours?
 12. What is management by exception? What criteria may be used in identifying exceptions?
 13. What is responsibility accounting? Explain the purpose of responsibility accounting.
 14. Eve Rooney is studying for an accounting examination. Describe for Eve what conditions are necessary for responsibility accounting to be used effectively.
 15. Distinguish between controllable and noncontrollable costs.
 16. How do responsibility reports differ from budget reports?
 17. What is the relationship, if any, between a responsibility reporting system and a company's organization chart?
 18. Distinguish among the three types of responsibility centers.
 19. (a) What costs are included in a performance report for a cost center? (b) In the report, are variable and fixed costs identified?
 20. How do direct fixed costs differ from indirect fixed costs? Are both types of fixed costs controllable?
 21. Jane Nott is confused about controllable margin reported in an income statement for a profit center. How is this margin computed, and what is its primary purpose?
 22. What is the primary basis for evaluating the performance of the manager of an investment center? Indicate the formula for this basis.
 23. Explain the ways that ROI can be improved.
 24. Indicate two behavioral principles that pertain to (a) the manager being evaluated and (b) top management.
 - *25. What is a major disadvantage of using ROI to evaluate investment and company performance?
 - *26. What is residual income, and what is one of its major weaknesses?

Brief Exercises

Prepare static budget report.

BE25.1 (LO 1) For the quarter ended March 31, 2020, Croix Company accumulates the following sales data for its newest guitar, The Edge: \$315,000 budget; \$305,000 actual. Prepare a static budget report for the quarter.

Prepare static budget report for 2 quarters.

BE25.2 (LO 1) Data for Croix Company are given in BE25.1. In the second quarter, budgeted sales were \$380,000, and actual sales were \$384,000. Prepare a static budget report for the second quarter and for the year to date.

Show usefulness of flexible budgets in evaluating performance.

BE25.3 (LO 2) In Rooney Company, direct labor is \$20 per hour. The company expects to operate at 10,000 direct labor hours each month. In January 2020, direct labor totaling \$206,000 is incurred in working 10,400 hours. Prepare (a) a static budget report and (b) a flexible budget report. Evaluate the usefulness of each report.

Prepare a flexible budget for variable costs.

BE25.4 (LO 2) Gundy Company expects to produce 1,200,000 units of Product XX in 2020. Monthly production is expected to range from 80,000 to 120,000 units. Budgeted variable manufacturing costs per unit are direct materials \$5, direct labor \$6, and overhead \$8. Budgeted fixed manufacturing costs per unit for depreciation are \$2 and for supervision are \$1. Prepare a flexible manufacturing budget for the relevant range value using 20,000 unit increments.

Prepare flexible budget report.

BE25.5 (LO 2) Data for Gundy Company are given in BE25.4. In March 2020, the company incurs the following costs in producing 100,000 units: direct materials \$520,000, direct labor \$596,000, and variable overhead \$805,000. Actual fixed costs were equal to budgeted fixed costs. Prepare a flexible budget report for March. Were costs controlled?

BE25.6 (LO 3) In the Assembly Department of Hannon Company, budgeted and actual manufacturing overhead costs for the month of April 2020 were as follows.

	<u>Budget</u>	<u>Actual</u>
Indirect materials	\$16,000	\$14,300
Indirect labor	20,000	20,600
Utilities	10,000	10,850
Supervision	5,000	5,000

All costs are controllable by the department manager. Prepare a responsibility report for April for the cost center.

Prepare a responsibility report for a cost center.

BE25.7 (LO 3) Torres Company accumulates the following summary data for the year ending December 31, 2020, for its Water Division, which it operates as a profit center: sales—\$2,000,000 budget, \$2,080,000 actual; variable costs—\$1,000,000 budget, \$1,050,000 actual; and controllable fixed costs—\$300,000 budget, \$305,000 actual. Prepare a responsibility report for the Water Division for the year ending December 31, 2020.

Prepare a responsibility report for a profit center.

BE25.8 (LO 4) For the year ending December 31, 2020, Cobb Company accumulates the following data for the Plastics Division which it operates as an investment center: contribution margin—\$700,000 budget, \$710,000 actual; controllable fixed costs—\$300,000 budget, \$302,000 actual. Average operating assets for the year were \$2,000,000. Prepare a responsibility report for the Plastics Division beginning with contribution margin for the year ending December 31, 2020.

Prepare a responsibility report for an investment center.

BE25.9 (LO 4) For its three investment centers, Gerrard Company accumulates the following data:

	<u>I</u>	<u>II</u>	<u>III</u>
Sales	\$2,000,000	\$4,000,000	\$ 4,000,000
Controllable margin	1,400,000	2,000,000	3,600,000
Average operating assets	5,000,000	8,000,000	10,000,000

Compute the return on investment (ROI) for each center.

Compute return on investment using the ROI formula.

BE25.10 (LO 4) Data for the investment centers for Gerrard Company are given in BE25.9. The centers expect the following changes in the next year: (I) increase sales 15%, (II) decrease costs \$400,000, and (III) decrease average operating assets \$500,000. Compute the expected return on investment (ROI) for each center. Assume center I has a controllable margin percentage of 70%.

Compute return on investment under changed conditions.

***BE25.11 (LO 5)** Sterling, Inc. reports the following financial information for its sports clothing segment.

Average operating assets	\$3,000,000
Controllable margin	\$ 630,000
Minimum rate of return	10%

Compute the return on investment and the residual income for the segment.

Compute ROI and residual income.

***BE25.12 (LO 5)** Presented below is information related to the Southern Division of Lumber, Inc.

Compute ROI and residual income.

Contribution margin	\$1,200,000
Controllable margin	\$ 800,000
Average operating assets	\$4,000,000
Minimum rate of return	15%

Compute the Southern Division's return on investment and residual income.

DO IT! Exercises

DO IT! 25.1 (LO 1) Wade Company estimates that it will produce 6,000 units of product IOA during the current month. Budgeted variable manufacturing costs per unit are direct materials \$7, direct labor \$13, and overhead \$18. Monthly budgeted fixed manufacturing overhead costs are \$8,000 for depreciation and \$3,800 for supervision.

Prepare and evaluate a static budget report.

In the current month, Wade actually produced 6,500 units and incurred the following costs: direct materials \$38,850, direct labor \$76,440, variable overhead \$116,640, depreciation \$8,000, and supervision \$4,000.

Compute total budgeted costs in flexible budget.

Prepare a responsibility report.

Prepare a static budget report. *Hint:* The Budget column is based on estimated production while the Actual column is the actual cost incurred during the period. (*Note:* You do not need to prepare the heading.) Were costs controlled? Discuss limitations of the budget.

DO IT! 25.2 (LO 2) In Pargo Company's flexible budget graph, the fixed cost line and the total budgeted cost line intersect the vertical axis at \$90,000. The total budgeted cost line is \$350,000 at an activity level of 50,000 direct labor hours. Compute total budgeted costs at 65,000 direct labor hours.

DO IT! 25.3 (LO 3) The Rockies Division operates as a profit center. It reports the following for the year ending December 31, 2020.

	Budget	Actual
Sales	\$2,000,000	\$1,890,000
Variable costs	800,000	760,000
Controllable fixed costs	550,000	550,000
Noncontrollable fixed costs	250,000	250,000

Prepare a responsibility report for the Rockies Division at December 31, 2020.

Compute ROI and expected return on investments.

DO IT! 25.4 (LO 4) The service division of Raney Industries reported the following results for 2020.

Sales	\$500,000
Variable costs	300,000
Controllable fixed costs	75,000
Average operating assets	625,000

Management is considering the following independent courses of action in 2021 in order to maximize the return on investment for this division.

1. Reduce average operating assets by \$125,000, with no change in controllable margin.
2. Increase sales \$100,000, with no change in the contribution margin percentage.
 - a. Compute the controllable margin and the return on investment for 2020.
 - b. Compute the controllable margin and the expected return on investment for 2021 for each proposed alternative.

Exercises

Understand the concept of budgetary control.

E25.1 (LO 1, 2) Connie Rice has prepared the following list of statements about budgetary control.

1. Budget reports compare actual results with planned objectives.
2. All budget reports are prepared on a weekly basis.
3. Management uses budget reports to analyze differences between actual and planned results and to determine their causes.
4. As a result of analyzing budget reports, management may either take corrective action or modify future plans.
5. Budgetary control works best when a company has an informal reporting system.
6. The primary recipients of the sales report are the sales manager and the production supervisor.
7. The primary recipient of the scrap report is the production manager.
8. A static budget is a projection of budget data at a single level of activity.
9. Top management's reaction to unfavorable differences is not influenced by the materiality of the difference.
10. A static budget is not appropriate in evaluating a manager's effectiveness in controlling costs unless the actual activity level approximates the static budget activity level or the behavior of the costs is fixed.

Instructions

Identify each statement as true or false. If false, indicate how to correct the statement.

Prepare and evaluate static budget report.

E25.2 (LO 1) Crede Company budgeted selling expenses of \$30,000 in January, \$35,000 in February, and \$40,000 in March. Actual selling expenses were \$31,200 in January, \$34,525 in February, and \$46,000 in March. The company considers any difference that is less than 5% of the budgeted amount to be immaterial.

Instructions

- Prepare a selling expense report that compares budgeted and actual amounts by month and for the year to date.
- What is the purpose of the report prepared in (a), and who would be the primary recipient?
- What would be the likely result of management's analysis of the report?

E25.3 (LO 2) Myers Company uses a flexible budget for manufacturing overhead based on direct labor hours. Variable manufacturing overhead costs per direct labor hour are as follows.

Indirect labor	\$1.00
Indirect materials	0.70
Utilities	0.40

Fixed overhead costs per month are supervision \$4,000, depreciation \$1,200, and property taxes \$800. The company believes it will normally operate in a range of 7,000–10,000 direct labor hours per month.

Prepare flexible manufacturing overhead budget.

**Instructions**

Prepare a monthly manufacturing overhead flexible budget for 2020 for the expected range of activity, using increments of 1,000 direct labor hours.

E25.4 (LO 2) Writing Using the information in E25.3, assume that in July 2020, Myers Company incurs the following manufacturing overhead costs.

Prepare flexible budget reports for manufacturing overhead costs, and comment on findings.

Variable Costs		Fixed Costs	
Indirect labor	\$8,800	Supervision	\$4,000
Indirect materials	5,800	Depreciation	1,200
Utilities	3,200	Property taxes	800

**Instructions**

- Prepare a flexible budget performance report, assuming that the company worked 9,000 direct labor hours during the month.
- Prepare a flexible budget performance report, assuming that the company worked 8,500 direct labor hours during the month.
- Comment on your findings.

E25.5 (LO 2) Fallon Company uses flexible budgets to control its selling expenses. Monthly sales are expected to range from \$170,000 to \$200,000. Variable costs and their percentage relationship to sales are sales commissions 6%, advertising 4%, travel 3%, and delivery 2%. Fixed selling expenses will consist of sales salaries \$35,000, depreciation on delivery equipment \$7,000, and insurance on delivery equipment \$1,000.

Prepare flexible selling expense budget.

**Instructions**

Prepare a monthly selling expense flexible budget for each \$10,000 increment of sales within the relevant range for the year ending December 31, 2020.

E25.6 (LO 2) Writing The actual selling expenses incurred in March 2020 by Fallon Company are as follows.

Prepare flexible budget reports for selling expenses.

Variable Expenses		Fixed Expenses	
Sales commissions	\$11,000	Sales salaries	\$35,000
Advertising	6,900	Depreciation	7,000
Travel	5,100	Insurance	1,000
Delivery	3,450		

Instructions

- Prepare a flexible budget performance report for March using the budget data in E25.5, assuming that March sales were \$170,000.
- Prepare a flexible budget performance report, assuming that March sales were \$180,000.
- Comment on the importance of using flexible budgets in evaluating the performance of the sales manager.

E25.7 (LO 2) Appliance Possible Inc. (AP) is a manufacturer of toaster ovens. To improve control over operations, the president of AP wants to begin using a flexible budgeting system, rather than use only the current master budget. The following data are available for AP's expected costs at production levels of 90,000, 100,000, and 110,000 units.

Prepare flexible budget report.

Variable costs		
Manufacturing	\$6 per unit	
Administrative	\$4 per unit	
Selling	\$3 per unit	
Fixed costs		
Manufacturing	\$160,000	
Administrative	\$ 80,000	

Instructions

- Prepare a flexible budget for each of the possible production levels: 90,000, 100,000, and 110,000 units.
- If AP sells the toaster ovens for \$16 each, how many units will it have to sell to make a profit of \$60,000 before taxes?

(CGA adapted)

Prepare flexible budget report; compare flexible and static budgets.

E25.8 (LO 1, 2) Service Writing Rensing Groomers is in the dog-grooming business. Its operating costs are described by the following formulas:

Grooming supplies (variable)	$y = \$0 + \$5x$
Direct labor (variable)	$y = \$0 + \$14x$
Overhead (mixed)	$y = \$10,000 + \$1x$

Milo, the owner, has determined that direct labor is the cost driver for all three categories of costs.

Instructions

- Prepare a flexible budget for activity levels of 550, 600, and 700 direct labor hours.
- Explain why the flexible budget is more informative than the static budget.
- Calculate the total cost per direct labor hour at each of the activity levels specified in part (a).
- The groomers at Rensing normally work a total of 650 direct labor hours during each month. Each grooming job normally takes a groomer 1.3 hours. Milo wants to earn a profit equal to 40% of the costs incurred. Determine what he should charge each pet owner for grooming.

(CGA adapted)

Prepare flexible budget report, and answer question.

E25.9 (LO 1, 2) As sales manager, Joe Batista was given the following static budget report for selling expenses in the Clothing Department of Soria Company for the month of October.

Soria Company Clothing Department Budget Report			Difference
	Budget	Actual	Favorable F Unfavorable U
Sales in units	<u>8,000</u>	<u>10,000</u>	<u>2,000 F</u>
Variable expenses			
Sales commissions	\$ 2,400	\$ 2,600	\$ 200 U
Advertising expense	720	850	130 U
Travel expense	3,600	4,100	500 U
Free samples given out	1,600	1,400	200 F
Total variable	<u>8,320</u>	<u>8,950</u>	<u>630 U</u>
Fixed expenses			
Rent	1,500	1,500	-0-
Sales salaries	1,200	1,200	-0-
Office salaries	800	800	-0-
Depreciation—autos (sales staff)	500	500	-0-
Total fixed	<u>4,000</u>	<u>4,000</u>	<u>-0-</u>
Total expenses	<u>\$12,320</u>	<u>\$12,950</u>	<u>\$ 630 U</u>

As a result of this budget report, Joe was called into the president's office and congratulated on his fine sales performance. He was reprimanded, however, for allowing his costs to get out of control. Joe knew something was wrong with the performance report that he had been given. However, he was not sure what to do, and comes to you for advice.

Instructions

- Prepare a budget report based on flexible budget data to help Joe.
- Should Joe have been reprimanded? Explain.

E25.10 (LO 2, 3) Chubbs Inc.'s manufacturing overhead budget for the first quarter of 2020 contained the following data.

Prepare flexible budget and responsibility report for manufacturing overhead.

Variable Costs		Fixed Costs	
Indirect materials	\$12,000	Supervisory salaries	\$36,000
Indirect labor	10,000	Depreciation	7,000
Utilities	8,000	Property taxes and insurance	8,000
Maintenance	6,000	Maintenance	5,000

Actual variable costs were indirect materials \$13,500, indirect labor \$9,500, utilities \$8,700, and maintenance \$5,000. Actual fixed costs equaled budgeted costs except for property taxes and insurance, which were \$8,300. The actual activity level equaled the budgeted level.

All costs are considered controllable by the production department manager except for depreciation, and property taxes and insurance.

Instructions

- Prepare a manufacturing overhead flexible budget report for the first quarter.
- Prepare a responsibility report for the first quarter.

E25.11 (LO 2, 3) Service Writing UrLink Company is a newly formed company specializing in high-speed Internet service for home and business. The owner, Lenny Kirkland, had divided the company into two segments: Home Internet Service and Business Internet Service. Each segment is run by its own supervisor, while basic selling and administrative services are shared by both segments.

Prepare and discuss a responsibility report.

Lenny has asked you to help him create a performance reporting system that will allow him to measure each segment's performance in terms of its profitability. To that end, the following information has been collected on the Home Internet Service segment for the first quarter of 2020.

	Budget	Actual
Service revenue	\$25,000	\$26,200
Allocated portion of:		
Building depreciation	11,000	11,000
Advertising	5,000	4,200
Billing	3,500	3,000
Property taxes	1,200	1,000
Material and supplies	1,600	1,200
Supervisory salaries	9,000	9,500
Insurance	4,000	3,900
Wages	3,000	3,250
Gas and oil	2,800	3,400
Equipment depreciation	1,500	1,300

Instructions

- Prepare a responsibility report for the first quarter of 2020 for the Home Internet Service segment.
- Write a memo to Lenny Kirkland discussing the principles that should be used when preparing performance reports.

E25.12 (LO 2) Venetian Company has two production departments, Fabricating and Assembling. At a department managers' meeting, the controller uses flexible budget graphs to explain total budgeted costs. Separate graphs based on direct labor hours are used for each department. The graphs show the following.

State total budgeted cost formulas, and prepare flexible budget graph.

- At zero direct labor hours, the total budgeted cost line and the fixed cost line intersect the vertical axis at \$50,000 in the Fabricating Department and \$40,000 in the Assembling Department.
- At normal capacity of 50,000 direct labor hours, the line drawn from the total budgeted cost line intersects the vertical axis at \$150,000 in the Fabricating Department, and \$120,000 in the Assembling Department.

Instructions

- a. State the total budgeted cost formula for each department.
- b. Compute the total budgeted cost for each department, assuming actual direct labor hours worked were 53,000 and 47,000, in the Fabricating and Assembling Departments, respectively.
- c. Prepare the flexible budget graph for the Fabricating Department, assuming the maximum direct labor hours in the relevant range is 100,000. Use increments of 10,000 direct labor hours on the horizontal axis and increments of \$50,000 on the vertical axis.

Prepare reports in a responsibility reporting system.

E25.13 (LO 3) Fey Company's organization chart includes the president; the vice president of production; three assembly plants—Dallas, Atlanta, and Tucson; and two departments within each plant—Machining and Finishing. Budget and actual manufacturing cost data for July 2020 are as follows.

Finishing Department—Dallas: direct materials \$42,500 actual, \$44,000 budget; direct labor \$83,400 actual, \$82,000 budget; manufacturing overhead \$51,000 actual, \$49,200 budget.

Machining Department—Dallas: total manufacturing costs \$220,000 actual, \$219,000 budget.

Atlanta Plant: total manufacturing costs \$424,000 actual, \$420,000 budget.

Tucson Plant: total manufacturing costs \$494,200 actual, \$496,500 budget.

The Dallas plant manager's office costs were \$95,000 actual and \$92,000 budget. The vice president of production's office costs were \$132,000 actual and \$130,000 budget. Office costs are not allocated to departments and plants.

Instructions

Using the format shown in Illustration 25.19, prepare the reports in a responsibility system for:

- a. The Finishing Department—Dallas.
- b. The plant manager—Dallas.
- c. The vice president of production.

Prepare a responsibility report for a cost center.

E25.14 (LO 3) The Mixing Department manager of Malone Company is able to control all overhead costs except rent, property taxes, and salaries. Budgeted monthly overhead costs for the Mixing Department, in alphabetical order, are:

Indirect labor	\$12,000	Property taxes	\$ 1,000
Indirect materials	7,700	Rent	1,800
Lubricants	1,675	Salaries	10,000
Maintenance	3,500	Utilities	5,000

Actual costs incurred for January 2020 are indirect labor \$12,250; indirect materials \$10,200; lubricants \$1,650; maintenance \$3,500; property taxes \$1,100; rent \$1,800; salaries \$10,000; and utilities \$6,400.

Instructions

- a. Prepare a responsibility report for January 2020.
- b. What would be the likely result of management's analysis of the report?

Compute missing amounts in responsibility reports for three profit centers, and prepare a report.

E25.15 (LO 3) Horatio Inc. has three divisions which are operated as profit centers. Actual operating data for the divisions listed alphabetically are as follows.

Operating Data	Women's Shoes	Men's Shoes	Children's Shoes
Contribution margin	\$270,000	(3)	\$180,000
Controllable fixed costs	100,000	(4)	(5)
Controllable margin	(1)	\$ 90,000	95,000
Sales	600,000	450,000	(6)
Variable costs	(2)	320,000	250,000

Instructions

- a. Compute the missing amounts. Show computations.
- b. Prepare a responsibility report for the Women's Shoes Division assuming (1) the data are for the month ended June 30, 2020, and (2) all data equal budget except variable costs which are \$5,000 over budget.

Prepare a responsibility report for a profit center, and compute ROI.

E25.16 (LO 3, 4) The Sports Equipment Division of Harrington Company is operated as a profit center. Sales for the division were budgeted for 2020 at \$900,000. The only variable costs budgeted for the division were cost of goods sold (\$440,000) and selling and administrative (\$60,000). Fixed costs

were budgeted at \$100,000 for cost of goods sold, \$90,000 for selling and administrative, and \$70,000 for noncontrollable fixed costs. Actual results for these items were:

Sales	\$880,000
Cost of goods sold	
Variable	408,000
Fixed	105,000
Selling and administrative	
Variable	61,000
Fixed	66,000
Noncontrollable fixed	90,000

Instructions

- Prepare a responsibility report for the Sports Equipment Division for 2020.
- Assume the division is an investment center, and average operating assets were \$1,000,000. The noncontrollable fixed costs are controllable at the investment center level. Compute ROI using the actual amounts.

E25.17 (LO 4) The South Division of Wiig Company reported the following data for the current year.

Sales	\$3,000,000
Variable costs	1,950,000
Controllable fixed costs	600,000
Average operating assets	5,000,000

Top management is unhappy with the investment center's return on investment (ROI). It asks the manager of the South Division to submit plans to improve ROI in the next year. The manager believes it is feasible to consider the following independent courses of action.

- Increase sales by \$300,000 with no change in the contribution margin percentage.
- Reduce variable costs by \$150,000.
- Reduce average operating assets by 4%.

Compute ROI for current year and for possible future changes.

Instructions

- Compute the return on investment (ROI) for the current year.
- Using the ROI formula, compute the ROI under each of the proposed courses of action. (Round to one decimal.)

E25.18 (LO 4) Service Writing The Dinkle and Frizell Dental Clinic provides both preventive and orthodontic dental services. The two owners, Reese Dinkle and Anita Frizell, operate the clinic as two separate investment centers: Preventive Services and Orthodontic Services. Each of them is in charge of one of the centers: Reese for Preventive Services and Anita for Orthodontic Services. Each month, they prepare an income statement for the two centers to evaluate performance and make decisions about how to improve the operational efficiency and profitability of the clinic.

Prepare a responsibility report for an investment center.

Recently, they have been concerned about the profitability of the Preventive Services operations. For several months, it has been reporting a loss. The responsibility report for the month of May 2020 is shown below.

	Actual	Difference from Budget
Service revenue	\$40,000	<u>\$1,000 F</u>
Variable costs		
Filling materials	5,000	100 U
Novocain	3,900	100 U
Supplies	1,900	350 F
Dental assistant wages	2,500	-0-
Utilities	500	110 U
Total variable costs	<u>13,800</u>	<u>40 F</u>
Fixed costs		
Allocated portion of receptionist's salary	3,000	200 U
Dentist salary	9,800	400 U
Equipment depreciation	6,000	-0-
Allocated portion of building depreciation	<u>15,000</u>	<u>1,000 U</u>
Total fixed costs	<u>33,800</u>	<u>1,600 U</u>
Operating income (loss)	<u>\$ (7,600)</u>	<u>\$ 560 U</u>

In addition, the owners know that the investment in operating assets at the beginning of the month was \$82,400, and it was \$77,600 at the end of the month. They have asked for your assistance in evaluating their current performance reporting system.

Instructions

- Prepare an investment center responsibility report for the Preventative Services segment for May 2020.
- Write a memo to the owners discussing the deficiencies of their current reporting system.

Prepare missing amounts in responsibility reports for three investment centers.

E25.19 (LO 4) Service The Ferrell Transportation Company uses a responsibility reporting system to measure the performance of its three investment centers: Planes, Taxis, and Limos. Segment performance is measured using a system of responsibility reports and return on investment calculations. The allocation of resources within the company and the segment managers' bonuses are based in part on the results shown in these reports.

Recently, the company was the victim of a computer virus that deleted portions of the company's accounting records. This was discovered when the current period's responsibility reports were being prepared. The printout of the actual operating results appeared as follows.

	Planes	Taxis	Limos
Service revenue	\$?	\$500,000	\$?
Variable costs	5,500,000	?	300,000
Contribution margin	?	250,000	480,000
Controllable fixed costs	1,500,000	?	?
Controllable margin	?	80,000	210,000
Average operating assets	25,000,000	?	1,500,000
Return on investment	12%	10%	?

Instructions

Determine the missing pieces of information above.

Compare ROI and residual income.

***E25.20 (LO 5)** Presented below is selected information for three regional divisions of Medina Company.

	Divisions		
	North	West	South
Contribution margin	\$ 300,000	\$ 500,000	\$ 400,000
Controllable margin	\$ 140,000	\$ 360,000	\$ 210,000
Average operating assets	\$1,000,000	\$2,000,000	\$1,500,000
Minimum rate of return	13%	16%	10%

Instructions

- Compute the return on investment for each division.
- Compute the residual income for each division.
- Assume that each division has an investment opportunity that would provide a rate of return of 16%.
 - If ROI is used to measure performance, which division or divisions will probably make the additional investment?
 - If residual income is used to measure performance, which division or divisions will probably make the additional investment?

Fill in information related to ROI and residual income.

***E25.21 (LO 5)** Presented below is selected financial information for two divisions of Samberg Brewing.

	Lager	Lite Lager
Contribution margin	\$500,000	\$ 300,000
Controllable margin	200,000	(c)
Average operating assets	(a)	\$1,200,000
Minimum rate of return	(b)	11%
Return on investment	16%	(d)
Residual income	\$100,000	\$ 204,000

Instructions

Supply the missing information for the lettered items.

Problems: Set A

P25.1A (LO 2) Writing Bumblebee Company estimates that 300,000 direct labor hours will be worked during the coming year, 2020, in the Packaging Department. On this basis, the following budgeted manufacturing overhead cost data are computed for the year.

Prepare flexible budget and budget report for manufacturing overhead.

Fixed Overhead Costs		Variable Overhead Costs	
Supervision	\$ 96,000	Indirect labor	\$126,000
Depreciation	72,000	Indirect materials	90,000
Insurance	30,000	Repairs	69,000
Rent	24,000	Utilities	72,000
Property taxes	18,000	Lubricants	18,000
	<u>\$240,000</u>		<u>\$375,000</u>

It is estimated that direct labor hours worked each month will range from 27,000 to 36,000 hours.

During October, 27,000 direct labor hours were worked and the following overhead costs were incurred.

Fixed overhead costs: supervision \$8,000, depreciation \$6,000, insurance \$2,460, rent \$2,000, and property taxes \$1,500.

Variable overhead costs: indirect labor \$12,432, indirect materials \$7,680, repairs \$6,100, utilities \$6,840, and lubricants \$1,920.

Instructions

- Prepare a monthly manufacturing overhead flexible budget for each increment of 3,000 direct labor hours over the relevant range for the year ending December 31, 2020.
- Prepare a flexible budget report for October.
- Comment on management's efficiency in controlling manufacturing overhead costs in October.

- Total costs: DLH 27,000, \$53,750; DLH 36,000, \$65,000
- Total \$1,182 U

P25.2A (LO 2) Zelmer Company manufactures tablecloths. Sales have grown rapidly over the past 2 years. As a result, the president has installed a budgetary control system for 2020. The following data were used in developing the master manufacturing overhead budget for the Ironing Department, which is based on an activity index of direct labor hours.

Prepare flexible budget, budget report, and graph for manufacturing overhead.

Variable Costs	Rate per Direct Labor Hour	Annual Fixed Costs	
Indirect labor	\$0.40	Supervision	\$48,000
Indirect materials	0.50	Depreciation	18,000
Factory utilities	0.30	Insurance	12,000
Factory repairs	0.20	Rent	30,000

The master overhead budget was prepared on the expectation that 480,000 direct labor hours will be worked during the year. In June, 41,000 direct labor hours were worked. At that level of activity, actual costs were as shown below.

Variable—per direct labor hour: indirect labor \$0.44, indirect materials \$0.48, factory utilities \$0.32, and factory repairs \$0.25.

Fixed: same as budgeted.

Instructions

- Prepare a monthly manufacturing overhead flexible budget for the year ending December 31, 2020, assuming production levels range from 35,000 to 50,000 direct labor hours. Use increments of 5,000 direct labor hours.
- Prepare a budget report for June comparing actual results with budget data based on the flexible budget.
- Were costs effectively controlled? Explain.
- State the formula for computing the total budgeted costs for the Ironing Department.
- Prepare the flexible budget graph, showing total budgeted costs at 35,000 and 45,000 direct labor hours. Use increments of 5,000 direct labor hours on the horizontal axis and increments of \$10,000 on the vertical axis.

- Total costs: 35,000 DLH, \$58,000; 50,000 DLH, \$79,000
- Budget \$66,400
Actual \$70,090

State total budgeted cost formula, and prepare flexible budget reports for 2 time periods.

P25.3A (LO 1, 2) Ratchet Company uses budgets in controlling costs. The August 2020 budget report for the company's Assembling Department is as follows.

**Ratchet Company
Budget Report
Assembling Department
For the Month Ended August 31, 2020**

Manufacturing Costs	Budget	Actual	Difference
			Favorable F Unfavorable U
Variable costs			
Direct materials	\$ 48,000	\$ 47,000	\$1,000 F
Direct labor	54,000	51,200	2,800 F
Indirect materials	24,000	24,200	200 U
Indirect labor	18,000	17,500	500 F
Utilities	15,000	14,900	100 F
Maintenance	12,000	12,400	400 U
Total variable	<u>171,000</u>	<u>167,200</u>	<u>3,800 F</u>
Fixed costs			
Rent	12,000	12,000	-0-
Supervision	17,000	17,000	-0-
Depreciation	6,000	6,000	-0-
Total fixed	<u>35,000</u>	<u>35,000</u>	<u>-0-</u>
Total costs	<u><u>\$206,000</u></u>	<u><u>\$202,200</u></u>	<u><u>\$3,800 F</u></u>

The monthly budget amounts in the report were based on an expected production of 60,000 units per month or 720,000 units per year. The Assembling Department manager is pleased with the report and expects a raise, or at least praise for a job well done. The company president, however, is unhappy with the results for August because only 58,000 units were produced.

Instructions

- a. State the total monthly budgeted cost formula.
- b. Budget \$200,300
- c. Budget \$217,400
Actual \$218,920

Prepare responsibility report for a profit center.

P25.4A (LO 3) Writing Clarke Inc. operates the Patio Furniture Division as a profit center. Operating data for this division for the year ended December 31, 2020, are as shown below.

	Budget	Difference from Budget
Sales	\$2,500,000	\$50,000 F
Cost of goods sold		
Variable	1,300,000	41,000 F
Controllable fixed	200,000	3,000 U
Selling and administrative		
Variable	220,000	6,000 U
Controllable fixed	50,000	2,000 U
Noncontrollable fixed costs	70,000	4,000 U

In addition, Clarke incurs \$180,000 of indirect fixed costs that were budgeted at \$175,000. Twenty percent (20%) of these costs are allocated to the Patio Furniture Division.

Instructions

- a. Contribution margin
\$85,000 F
- Controllable margin
\$80,000 F
- b. Prepare a responsibility report for the Patio Furniture Division for the year.
- c. Comment on the manager's performance in controlling revenues and costs.
- c. Identify any costs excluded from the responsibility report and explain why they were excluded.

P25.5A (LO 4) Optimus Company manufactures a variety of tools and industrial equipment. The company operates through three divisions. Each division is an investment center. Operating data for the Home Division for the year ended December 31, 2020, and relevant budget data are as follows.

	Actual	Comparison with Budget
Sales	\$1,400,000	\$100,000 favorable
Variable cost of goods sold	665,000	45,000 unfavorable
Variable selling and administrative expenses	125,000	25,000 unfavorable
Controllable fixed cost of goods sold	170,000	On target
Controllable fixed selling and administrative expenses	80,000	On target

Average operating assets for the year for the Home Division were \$2,000,000 which was also the budgeted amount.

Prepare responsibility report for an investment center, and compute ROI.

Instructions

- a. Prepare a responsibility report (in thousands of dollars) for the Home Division.
- b. Evaluate the manager's performance. Which items will likely be investigated by top management?
- c. Compute the expected ROI in 2020 for the Home Division, assuming the following independent changes to actual data.
 - 1. Variable cost of goods sold is decreased by 5%.
 - 2. Average operating assets are decreased by 10%.
 - 3. Sales are increased by \$200,000, and this increase is expected to increase contribution margin by \$80,000.

a. **Controllable margin:**
Budget \$330;
Actual \$360

P25.6A (LO 3) Durham Company uses a responsibility reporting system. It has divisions in Denver, Seattle, and San Diego. Each division has three production departments: Cutting, Shaping, and Finishing. The responsibility for each department rests with a manager who reports to the division production manager. Each division manager reports to the vice president of production. There are also vice presidents for marketing and finance. All vice presidents report to the president.

Prepare reports for cost centers under responsibility accounting, and comment on performance of managers.

In January 2020, controllable actual and budget manufacturing overhead cost data for the departments and divisions were as shown below.

Manufacturing Overhead	Actual	Budget
Individual costs—Cutting Department—Seattle		
Indirect labor	\$ 73,000	\$ 70,000
Indirect materials	47,900	46,000
Maintenance	20,500	18,000
Utilities	20,100	17,000
Supervision	22,000	20,000
	<u>\$183,500</u>	<u>\$171,000</u>
Total costs		
Shaping Department—Seattle	\$158,000	\$148,000
Finishing Department—Seattle	210,000	205,000
Denver division	678,000	673,000
San Diego division	722,000	715,000

Additional overhead costs were incurred as follows: Seattle division production manager—actual costs \$52,500, budget \$51,000; vice president of production—actual costs \$65,000, budget \$64,000; president—actual costs \$76,400, budget \$74,200. These expenses are not allocated.

The vice presidents who report to the president, other than the vice president of production, had the following expenses.

Vice President	Actual	Budget
Marketing	\$133,600	\$130,000
Finance	109,000	104,000

Instructions

- a. \$12,500 U
- b. \$29,000 U
- c. \$42,000 U
- d. \$52,800 U

Compare ROI and residual income.

***P25.7A (LO 5) Writing** Sentinel Industries has manufactured prefabricated houses for over 20 years. The houses are constructed in sections to be assembled on customers' lots. Sentinel expanded into the precut housing market when it acquired Jensen Company, one of its suppliers. In this market, various types of lumber are precut into the appropriate lengths, banded into packages, and shipped to customers' lots for assembly. Sentinel designated the Jensen Division as an investment center.

Sentinel uses return on investment (ROI) as a performance measure with investment defined as average operating assets. Management bonuses are based in part on ROI. All investments are expected to earn a minimum rate of return of 18%. Jensen's ROI has ranged from 20.1% to 23.5% since it was acquired. Jensen had an investment opportunity in 2020 that had an estimated ROI of 19%. Jensen management decided against the investment because it believed the investment would decrease the division's overall ROI.

Selected financial information for Jensen are presented below. The division's average operating assets were \$12,300,000 for the year 2020.

Sentinel Industries Jensen Division Selected Financial Information For the Year Ended December 31, 2020	
Sales	\$24,000,000
Contribution margin	9,100,000
Controllable margin	2,460,000

Instructions

- a. Calculate the following performance measures for 2020 for the Jensen Division.
 1. Return on investment (ROI).
 2. Residual income.
- b. Would the management of Jensen Division have been more likely to accept the investment opportunity it had in 2020 if residual income were used as a performance measure instead of ROI? Explain your answer.

(CMA adapted)

Continuing Cases

Current Designs

CD25 The **Current Designs** staff has prepared the annual manufacturing budget for the rotomolded line based on an estimated annual production of 4,000 kayaks during 2020. Each kayak will require 54 pounds of polyethylene powder and a finishing kit (rope, seat, hardware, etc.). The polyethylene powder used in these kayaks costs \$1.50 per pound, and the finishing kits cost \$170 each. Each kayak will use two kinds of labor—2 hours of type I labor from people who run the oven and trim the plastic, and 3 hours of work from type II workers who attach the hatches and seat and other hardware. The type I employees are paid \$15 per hour, and the type II are paid \$12 per hour.

Manufacturing overhead is budgeted at \$396,000 for 2020, broken down as follows.

Variable costs	
Indirect materials	\$ 40,000
Manufacturing supplies	53,800
Maintenance and utilities	88,000
	<hr/>
	181,800

Fixed costs	
Supervision	90,000
Insurance	14,400
Depreciation	<u>109,800</u>
	214,200
Total	<u>\$396,000</u>

During the first quarter, ended March 31, 2020, 1,050 units were actually produced with the following costs.

Polyethylene powder	\$ 87,000
Finishing kits	178,840
Type I labor	31,500
Type II labor	39,060
Indirect materials	10,500
Manufacturing supplies	14,150
Maintenance and utilities	26,000
Supervision	20,000
Insurance	3,600
Depreciation	<u>27,450</u>
Total	<u>\$438,100</u>

Instructions

- Prepare the annual manufacturing budget for 2020, assuming that 4,000 kayaks will be produced.
- Prepare the flexible budget for manufacturing for the quarter ended March 31, 2020. Assume activity levels of 900, 1,000, and 1,050 units.
- Assuming the rotomolded line is treated as a cost center, prepare a flexible budget report for manufacturing for the quarter ended March 31, 2020, when 1,050 units were produced.

Waterways

(Note: This is a continuation of the Waterways case from Chapters 19–24.)

WP25 Waterways Corporation is continuing its budget preparations. This problem gives you static budget information as well as actual overhead costs, and asks you to calculate amounts related to budgetary control and responsibility accounting.

Go to WileyPLUS for complete case details and instructions.

Expand Your Critical Thinking

Decision-Making Across the Organization

CT25.1 Service Green Pastures is a 400-acre farm on the outskirts of the Kentucky Bluegrass, specializing in the boarding of broodmares and their foals. A recent economic downturn in the thoroughbred industry has made the boarding business extremely competitive. To meet the competition, Green Pastures planned in 2020 to entertain clients, advertise more extensively, and absorb expenses formerly paid by clients such as veterinary and blacksmith fees.

The budget report for 2020 follows. As shown, the static income statement budget for the year is based on an expected 21,900 boarding days at \$25 per mare. The variable expenses per mare per day were budgeted: feed \$5, veterinary fees \$3, blacksmith fees \$0.25, and supplies \$0.55. All other budgeted expenses were either semifixed or fixed.

During the year, management decided not to replace a worker who quit in March, but it did issue a new advertising brochure and did more entertaining of clients.¹

Green Pastures
Static Budget Income Statement
For the Year Ended December 31, 2020

	<u>Actual</u>	<u>Master Budget</u>	<u>Difference</u>
Number of mares	52	60	8 U
Number of boarding days	19,000	21,900	2,900 U
Sales	<u>\$380,000</u>	<u>\$547,500</u>	<u>\$167,500</u> U
Less: Variable expenses			
Feed	104,390	109,500	5,110 F
Veterinary fees	58,838	65,700	6,862 F
Blacksmith fees	4,984	5,475	491 F
Supplies	10,178	12,045	1,867 F
Total variable expenses	<u>178,390</u>	<u>192,720</u>	<u>14,330</u> F
Contribution margin	<u>201,610</u>	<u>354,780</u>	<u>153,170</u> U
Less: Fixed expenses			
Depreciation	40,000	40,000	-0-
Insurance	11,000	11,000	-0-
Utilities	12,000	14,000	2,000 F
Repairs and maintenance	10,000	11,000	1,000 F
Labor	88,000	95,000	7,000 F
Advertisement	12,000	8,000	4,000 U
Entertainment	7,000	5,000	2,000 U
Total fixed expenses	<u>180,000</u>	<u>184,000</u>	<u>4,000</u> F
Net income	<u>\$ 21,610</u>	<u>\$170,780</u>	<u>\$149,170</u> U

Instructions

With the class divided into groups, answer the following.

- a. Based on the static budget report:
 - 1. What was the primary cause(s) of the decline in net income?
 - 2. Did management do a good, average, or poor job of controlling expenses?
 - 3. Were management's decisions to stay competitive sound?
- b. Prepare a flexible budget report for the year.
- c. Based on the flexible budget report, answer the three questions in part (a) above.
- d. What course of action do you recommend for the management of Green Pastures?

Managerial Analysis

CT25.2 Lanier Company manufactures expensive watch cases sold as souvenirs. Three of its sales departments are Retail Sales, Wholesale Sales, and Outlet Sales. The Retail Sales Department is a profit center. The Wholesale Sales Department is a cost center. Its managers merely take orders from customers who purchase through the company's wholesale catalog. The Outlet Sales Department is an investment center because each manager is given full responsibility for an outlet store location. The manager can hire and discharge employees, purchase, maintain, and sell equipment, and in general is fairly independent of company control.

Mary Gammel is a manager in the Retail Sales Department. Stephen Flott manages the Wholesale Sales Department. Jose Gomez manages the Golden Gate Club outlet store in San Francisco. The following are the budget responsibility reports for each of the three departments.

¹Data for this case are based on Hans Sprohge and John Talbott, "New Applications for Variance Analysis," *Journal of Accountancy* (AICPA, New York), April 1989, pp. 137–141.

	Budget		
	Retail Sales	Wholesale Sales	Outlet Sales
Sales	\$ 750,000	\$ 400,000	\$200,000
Variable costs			
Cost of goods sold	150,000	100,000	25,000
Advertising	100,000	30,000	5,000
Sales salaries	75,000	15,000	3,000
Printing	10,000	20,000	5,000
Travel	20,000	30,000	2,000
Fixed costs			
Rent	50,000	30,000	10,000
Insurance	5,000	2,000	1,000
Depreciation	75,000	100,000	40,000
Investment in assets	1,000,000	1,200,000	800,000

	Actual Results		
	Retail Sales	Wholesale Sales	Outlet Sales
Sales	\$ 750,000	\$ 400,000	\$200,000
Variable costs			
Cost of goods sold	192,000	122,000	26,500
Advertising	100,000	30,000	5,000
Sales salaries	75,000	15,000	3,000
Printing	10,000	20,000	5,000
Travel	14,000	21,000	1,500
Fixed costs			
Rent	40,000	50,000	12,300
Insurance	5,000	2,000	1,000
Depreciation	80,000	90,000	56,000
Investment in assets	1,000,000	1,200,000	800,000

Instructions

- Determine which of the items should be included in the responsibility report for each of the three managers.
- Compare the budgeted measures with the actual results. Decide which results should be called to the attention of each manager.

Real-World Focus

CT25.3 Computer Associates International, Inc., the world's leading business software company, delivers the end-to-end infrastructure to enable e-business through innovative technology, services, and education. Recently, Computer Associates had 19,000 employees worldwide and revenue of over \$6 billion.

The following information is from the company's annual report.

Computer Associates International, Inc. Management Discussion

The Company has experienced a pattern of business whereby revenue for its third and fourth fiscal quarters reflects an increase over first- and second-quarter revenue. The Company attributes this increase to clients' increased spending at the end of their calendar year budgetary periods and the culmination of its annual sales plan. Since the Company's costs do not increase proportionately with the third- and fourth-quarters' increase in revenue, the higher revenue in these quarters results in greater profit margins and income. Fourth-quarter profitability is traditionally affected by significant new hirings, training, and education expenditures for the succeeding year.

Instructions

- Why don't the company's costs increase proportionately as the revenues increase in the third and fourth quarters?
- What type of budgeting seems appropriate for the Computer Associates situation?

Communication Activity

CT25.4 The manufacturing overhead budget for Fleming Company contains the following items.

Variable costs		Fixed costs	
Indirect materials	\$22,000	Supervision	\$17,000
Indirect labor	12,000	Inspection costs	1,000
Maintenance expense	10,000	Insurance expense	2,000
Manufacturing supplies	6,000	Depreciation	15,000
Total variable	<u><u>\$50,000</u></u>	Total fixed	<u><u>\$35,000</u></u>

The budget was based on an estimated 2,000 units being produced. During the past month, 1,500 units were produced, and the following costs incurred.

Variable costs		Fixed costs	
Indirect materials	\$22,500	Supervision	\$18,400
Indirect labor	13,500	Inspection costs	1,200
Maintenance expense	8,200	Insurance expense	2,200
Manufacturing supplies	5,000	Depreciation	14,700
Total variable	<u><u>\$49,200</u></u>	Total fixed	<u><u>\$36,500</u></u>

Instructions

- Determine which items would be controllable by Fred Bedner, the production manager.
- How much should have been spent during the month for the manufacture of the 1,500 units?
- Prepare a flexible manufacturing overhead budget report for Mr. Bedner.
- Prepare a responsibility report. Include only the costs that would have been controllable by Mr. Bedner. Assume that the supervision cost above includes Mr. Bedner's salary of \$10,000, both at budget and actual. In an attached memo, describe clearly for Mr. Bedner the areas in which his performance needs to be improved.

Ethics Case

CT25.5 American Products Corporation participates in a highly competitive industry. In order to meet this competition and achieve profit goals, the company has chosen the decentralized form of organization. Each manager of a decentralized investment center is measured on the basis of profit contribution, market penetration, and return on investment. Failure to meet the objectives established by corporate management for these measures has not been acceptable and usually has resulted in demotion or dismissal of an investment center manager.

An anonymous survey of managers in the company revealed that the managers feel the pressure to compromise their personal ethical standards to achieve the corporate objectives. For example, at certain plant locations there was pressure to reduce quality control to a level which could not assure that all unsafe products would be rejected. Also, sales personnel were encouraged to use questionable sales tactics to obtain orders, including gifts and other incentives to purchasing agents.

The chief executive officer is disturbed by the survey findings. In his opinion, such behavior cannot be condoned by the company. He concludes that the company should do something about this problem.

Instructions

- Who are the stakeholders (the affected parties) in this situation?
- Identify the ethical implications, conflicts, or dilemmas in the above described situation.
- What might the company do to reduce the pressures on managers and to decrease the ethical conflicts?

(CMA adapted)

All About You

CT25.6 It is one thing to prepare a personal budget; it is another thing to stick to it. Financial planners have suggested various mechanisms to provide support for enforcing personal budgets. One approach is called “envelope budgeting.”

Instructions

Do an Internet search on “envelope system money management” and then answer the following questions.

- a. Summarize the process of envelope budgeting.
- b. Evaluate whether you think you would benefit from envelope budgeting. What do you think are its strengths and weaknesses relative to your situation?

Considering Your Costs and Benefits

CT25.7 Preparing a personal budget is a great first step toward control over your personal finances. It is especially useful to prepare a budget when you face a big decision. For most people, the biggest decision they will ever make is whether to purchase a house. The percentage of people in the United States who own a home is high compared to many other countries. This is partially the result of U.S. government programs and incentives that encourage home ownership. For example, the interest on a home mortgage is tax-deductible.

Before purchasing a house, you should first consider whether buying it is the best choice for you. Suppose you just graduated from college and are moving to a new community. Should you immediately buy a new home?

YES: If I purchase a home, I am making my housing cost more like a “fixed cost,” thus minimizing increases in my future housing costs. Also, I benefit from the appreciation in my home’s value. Although recent turbulence in the economy has caused home prices in many communities to decline, I know that over the long term, home prices have increased across the country.

NO: I just moved to a new town, so I don’t know the housing market. I am new to my job, so I don’t know whether I will like it or my new community. Also, if my job does go well, it is likely that my income will increase in the next few years, so I will be able to afford a better house if I wait. Therefore, the flexibility provided by renting is very valuable to me at this point in my life.

Instructions

Write a response indicating your position regarding this situation. Provide support for your view.

Standard Costs and Balanced Scorecard

Chapter Preview

Standards are a fact of life. You met the admission standards for the school you are attending. The vehicle that you drive had to meet certain governmental emissions standards. The hamburgers and salads that you eat in a restaurant have to meet certain health and nutritional standards before they can be sold. As described in the following Feature Story, **Starbucks** has standards for the costs of its materials, labor, and overhead. The reason for standards in these cases is very simple: They help to ensure that overall product quality is high while keeping costs under control.

In this chapter, we continue the study of controlling costs. You will learn how to evaluate performance using standard costs and a balanced scorecard.

Feature Story

80,000 Different Caffeinated Combinations

When Howard Schultz purchased a small Seattle coffee-roasting business in 1987, he set out to create a new kind of company. He thought the company should sell coffee by the cup in its store, in addition to the bags of roasted beans it already sold. He also saw the store as a place where you could order a beverage, custom-made to your unique tastes, in an environment that would give you the sense that you had escaped, if only momentarily, from the chaos we call life. Finally, Schultz believed that the company would prosper if employees shared in its success.

In a little more than 20 years, Howard Schultz's company, **Starbucks**, grew from that one store to over 17,000 locations in 54 countries. That is an incredible rate of growth, and it didn't happen by accident. While Starbucks does everything it

can to maximize the customer's experience, behind the scenes it needs to control costs. Consider the almost infinite options of beverage combinations and variations at Starbucks. The company must determine the most efficient way to make each beverage, it must communicate these methods in the form of standards to its employees, and it must then evaluate whether those standards are being met.

Schultz's book, *Onward: How Starbucks Fought for Its Life Without Losing Its Soul*, describes a painful period in which Starbucks had to close 600 stores and lay off thousands of employees. However, when a prominent shareholder suggested that the company eliminate its employee healthcare plan, as so many other companies had done, Schultz refused. The healthcare plan represented one of the company's most tangible commitments to employee well-being as well as to corporate social responsibility. Schultz feels strongly that providing health care to the company's employees is an essential part of the standard cost of a cup of Starbucks' coffee.

In WileyPLUS, watch the *Starbucks* video to learn more about how the company sets standards, and watch the *Southwest Airlines* video to learn more about the real-world use of the balanced scorecard.

Overview of Standard Costs

LEARNING OBJECTIVE 1

Describe standard costs.

Standards are common in business. Those imposed by government agencies are often called **regulations**. They include the Fair Labor Standards Act, the Equal Employment Opportunity Act, and a multitude of environmental standards. Standards established internally by a company may extend to personnel matters, such as employee absenteeism and ethical codes of conduct, quality control standards for products, and standard costs for goods and services. In managerial accounting, **standard costs** are predetermined unit costs, which companies use as measures of performance.

We focus on manufacturing operations in this chapter. But you should recognize that standard costs also apply to many types of service businesses as well. For example, a fast-food restaurant such as **McDonald's** knows the price it should pay for pickles, beef, buns, and other ingredients. It also knows how much time it should take an employee to flip hamburgers. If the company pays too much for pickles or if employees take too much time to prepare Big Macs, McDonald's notices the deviations from standards and takes corrective action. Not-for-profit entities, such as universities, charitable organizations, and governmental agencies, also may use standard costs as measures of performance.

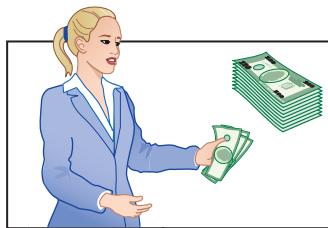

Standard costs offer a number of advantages to an organization, as shown in **Illustration 26.1**. The organization will realize these advantages only when standard costs are carefully established and prudently used. Using standards solely as a way to place blame can have a negative effect on managers and employees. To minimize this effect, many companies offer wage incentives to those who meet the standards.

ILLUSTRATION 26.1 Advantages of standard costs

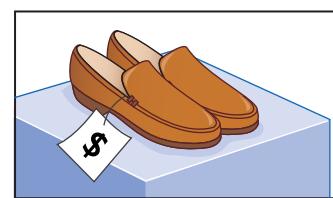

Advantages of Standard Costs

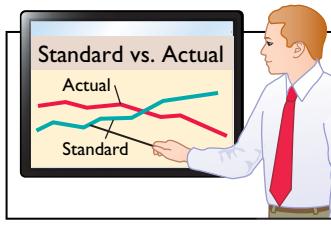

Facilitate management planning

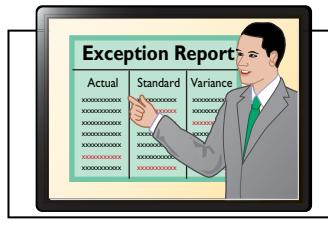

Promote greater economy by making employees more "cost-conscious"

Useful in setting selling prices

Contribute to management control by providing basis for evaluation of cost control

Useful in highlighting variances in management by exception

Simplify costing of inventories and reduce clerical costs

Distinguishing Between Standards and Budgets

Both **standards** and **budgets** are predetermined costs, and both contribute to management planning and control. There is a difference, however, in the way the terms are expressed. A standard is a **unit** amount. A budget is a **total** amount. Thus, it is customary to state that the **standard cost** of direct labor for a unit of product is, say, \$10. If the company produces 5,000 units of the product, the \$50,000 of direct labor is the **budgeted** labor cost. A standard is the **budgeted cost per unit** of product. A standard is therefore concerned with each individual cost component that makes up the entire budget.

There are important accounting differences between budgets and standards. Except in the application of manufacturing overhead to jobs and processes, budget data are not journalized in cost accounting systems. In contrast, as we illustrate in the appendix to this chapter, standard costs may be incorporated into cost accounting systems. Also, a company may report its inventories at standard cost in its financial statements, but it would not report inventories at budgeted costs.

Setting Standard Costs

The setting of standard costs to produce a unit of product is a difficult task. It requires input from all persons who have responsibility for costs and quantities. To determine the standard cost of direct materials, management consults purchasing agents, product managers, quality control engineers, and production supervisors. In setting the standard cost for direct labor, managers obtain pay rate data from the payroll department. Industrial engineers generally determine the labor time requirements. The managerial accountant provides important input for the standard-setting process by accumulating historical cost data and by knowing how costs respond to changes in activity levels.

To be effective in controlling costs, standard costs need to be current at all times. Thus, standards are under continuous review. They should change whenever managers determine that the existing standard is not a good measure of performance. Circumstances that warrant revision of a standard include changed wage rates resulting from a new union contract, a change in product specifications, or the implementation of a new manufacturing method.

Ideal versus Normal Standards

Companies set standards at one of two levels: ideal or normal. **Ideal standards** represent optimum levels of performance under perfect operating conditions. **Normal standards** represent efficient levels of performance that are attainable under expected operating conditions.

Some managers believe ideal standards will stimulate workers to ever-increasing improvement. However, most managers believe that ideal standards lower the morale of the workforce because they are difficult, if not impossible, to meet (see **Ethics Note**). Very few companies use ideal standards.

Most companies that use standards set them at a normal level. Properly set, normal standards should be **rigorous but attainable**. Normal standards allow for rest periods, machine breakdowns, and other “normal” contingencies in the production process. In the remainder of this chapter, we will assume that standard costs are set at a normal level.

How Do Standards Help a Business?

A number of organizations, including corporations, consultants, and governmental agencies, share information regarding performance standards in an effort to create a standard set of measures for thousands of business

processes. The group, referred to as the Open Standards Benchmarking Collaborative, includes **IBM**, **Procter and Gamble**, the **U.S. Navy**, and the **World Bank**. Companies that are interested in participating can go to the group’s website and enter their information.

Source: Becky Partida, “Benchmark Your Manufacturing Performance,” Control Engineering (February 4, 2013).

How will the creation of such standards help a business or organization? (Go to WileyPLUS for this answer and additional questions.)

ETHICS NOTE

When standards are set too high, employees sometimes feel pressure to consider unethical practices to meet these standards.

A Case Study

To establish the standard cost of producing a product, it is necessary to establish standards for each manufacturing cost element—direct materials, direct labor, and manufacturing overhead. The standard for each element is derived from the standard price to be paid and the standard quantity to be used.

To illustrate, we use an extended example. Xonic Beverage Company uses standard costs to measure performance at the production facility of its caffeinated energy drink, Xonic Tonic. Xonic produces one-gallon containers of concentrated syrup that it sells to coffee and smoothie shops, and other retail outlets. The syrup is mixed with ice water or ice “slush” before serving. The potency of the beverage varies depending on the amount of concentrated syrup used.

Direct Materials. The **direct materials price standard** is the cost per finished unit of product of direct materials that should be incurred. This standard is based on the purchasing department’s best estimate of the **cost of raw materials**. This cost is frequently based on current purchase prices. The price standard also includes an amount for related costs such as receiving, storing, and handling. **Illustration 26.2** shows the materials price standard per pound of material for Xonic Tonic.

Item	Price
Purchase price, net of discounts	\$2.70
Freight	0.20
Receiving and handling	<u>0.10</u>
Standard direct materials price per pound	\$3.00

ILLUSTRATION 26.2

Setting direct materials price standard

The **direct materials quantity standard** is the quantity of direct materials that management determines should be used per unit of finished goods. This standard is expressed as a physical measure, such as pounds, barrels, or board feet. In setting the standard, management considers both the quality and quantity of materials required to manufacture the product. The standard includes allowances for unavoidable waste and normal spoilage. The standard quantity per unit for Xonic Tonic is shown in **Illustration 26.3**.

Item	Quantity (Pounds)
Required materials	3.5
Allowance for waste	0.4
Allowance for spoilage	0.1
Standard direct materials quantity per unit	4.0

ILLUSTRATION 26.3

Setting direct materials quantity standard

The **standard direct materials cost per unit** is the **standard direct materials price times the standard direct materials quantity**. For Xonic, the standard direct materials cost per gallon of Xonic Tonic is \$12.00 ($\3×4 pounds).

Direct Labor. The **direct labor price standard** is the rate per hour that should be incurred for direct labor (see **Alternative Terminology**). This standard is based on current wage rates, adjusted for anticipated changes such as cost of living adjustments (COLAs). The price standard also generally includes employer payroll taxes and fringe benefits, such as paid holidays and vacations. For Xonic, the direct labor price standard is as shown in **Illustration 26.4**.

Item	Price
Hourly wage rate	\$12.50
COLA	0.25
Payroll taxes	0.75
Fringe benefits	1.50
Standard direct labor rate per hour	\$15.00

ALTERNATIVE TERMINOLOGY

The direct labor price standard is also called the *direct labor rate standard*.

ILLUSTRATION 26.4

Setting direct labor price standard

ALTERNATIVE TERMINOLOGY

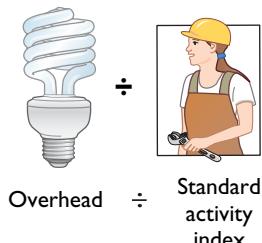

The direct labor quantity standard is also called the *direct labor efficiency standard*.

The **direct labor quantity standard** is the time that management determines should be required to make one unit of the product (see **Alternative Terminology**). This standard is especially critical in labor-intensive companies. Allowances should be made in this standard for rest periods, cleanup, machine setup, and machine downtime. **Illustration 26.5** shows the direct labor quantity standard for Xonic.

ILLUSTRATION 26.5

Setting direct labor quantity standard

Item	Quantity (Hours)
Actual production time	1.5
Rest periods and cleanup	0.2
Setup and downtime	0.3
Standard direct labor hours per unit	2.0
	==

Calculating the overhead rate

The **standard direct labor cost per unit of finished product is the standard direct labor rate times the standard direct labor hours**. For Xonic, the standard direct labor cost per gallon is \$30 ($\15×2 hours).

Manufacturing Overhead. For manufacturing overhead, companies use a **standard predetermined overhead rate** in setting the standard. This overhead rate is determined by dividing budgeted overhead costs by an expected standard activity index. For example, the index may be standard direct labor hours or standard machine hours.

Many companies employ activity-based costing (ABC) to allocate overhead costs. Because ABC uses multiple activity indices to allocate overhead costs, it results in a better correlation between activities and costs incurred than do other methods. As a result, the use of ABC can significantly improve the usefulness of standard costing for management decision-making.

Xonic uses standard direct labor hours as the activity index. The company expects to produce 13,200 gallons of Xonic Tonic during the year at normal capacity. **Normal capacity** is the average activity output that a company should experience over the long run. Since it takes two direct labor hours for each gallon, total standard direct labor hours are 26,400 ($13,200$ gallons $\times 2$ hours).

At normal capacity of 26,400 direct labor hours, overhead costs are budgeted to be \$132,000. Of that amount, \$79,200 are variable and \$52,800 are fixed. **Illustration 26.6** shows computation of the standard predetermined overhead rates for Xonic.

ILLUSTRATION 26.6

Computing predetermined overhead rates

Budgeted Overhead Costs	Amount	÷	Standard Direct Labor Hours	=	Overhead Rate per Direct Labor Hour
Variable	\$ 79,200		26,400		\$3.00
Fixed	52,800		26,400		2.00
Total	<u>\$132,000</u>		26,400		\$5.00

The **standard manufacturing overhead cost per unit is the predetermined overhead rate times the activity index quantity standard**. For Xonic, which uses direct labor hours as its activity index, the standard manufacturing overhead cost per gallon of Xonic Tonic is \$10 ($\5×2 hours).

Total Standard Cost per Unit. After a company has established the standard quantity and price per unit of finished product for each cost element, it can determine the total standard cost. The total standard cost per unit is the sum of the standard costs of direct materials, direct labor, and manufacturing overhead. The total standard cost per gallon of Xonic Tonic is \$52, as the standard cost card in **Illustration 26.7** shows.

Product: Xonic Tonic		Unit Measure: Gallon	
Manufacturing Cost Elements	Standard Quantity	Standard Price	Standard Cost
Direct materials	4 pounds	\$ 3.00	\$12.00
Direct labor	2 hours	\$15.00	30.00
Manufacturing overhead	2 hours	\$ 5.00	10.00
			<u><u>\$52.00</u></u>

ILLUSTRATION 26.7

Standard cost per gallon of Xonic Tonic

The company prepares a standard cost card for each product. This card provides the basis for determining variances from standards.

DO IT! 1 | Standard Costs

Ridette Inc. accumulated the following standard cost data concerning product Cty31.

Direct materials per unit: 1.5 pounds at \$4 per pound

Direct labor per unit: 0.25 hours at \$13 per hour.

Manufacturing overhead: allocated based on direct labor hours at a predetermined rate of \$15.60 per direct labor hour.

Compute the standard cost of one unit of product Cty31.

Solution

Manufacturing Cost Element	Standard Quantity	Standard Price	Standard Cost
Direct materials	1.5 pounds	\$ 4.00	\$ 6.00
Direct labor	0.25 hours	\$13.00	3.25
Manufacturing overhead	0.25 hours	\$15.60	3.90
Total			<u><u>\$13.15</u></u>

Related exercise material: BE26.2, BE26.3, DO IT! 26.1, E26.1, E26.2, and E26.3.

ACTION PLAN

- Know that standard costs are predetermined unit costs.
- To establish the standard cost of producing a product, establish the standard for each manufacturing cost element—direct materials, direct labor, and manufacturing overhead.
- Compute the standard cost for each element from the standard price to be paid and the standard quantity to be used.

Direct Materials Variances

LEARNING OBJECTIVE 2

Determine direct materials variances.

Analyzing and Reporting Variances

One of the major management uses of standard costs is to identify variances from standards. **Variances** are the differences between total actual costs and total standard costs (see **Alternative Terminology**).

To illustrate, assume that in producing 1,000 gallons of Xonic Tonic in the month of June, Xonic incurred the costs listed in **Illustration 26.8**.

ALTERNATIVE TERMINOLOGY

In business, the term *variance* is also used to indicate differences between total budgeted and total actual costs.

ILLUSTRATION 26.8**Actual production costs**

Direct materials	\$13,020
Direct labor	31,080
Variable overhead	6,500
Fixed overhead	4,400
Total actual costs	<u><u>\$55,000</u></u>

Companies determine total standard costs by multiplying the units produced by the standard cost per unit. The total standard cost of Xonic Tonic is \$52,000 ($1,000 \text{ gallons} \times \52). Thus, the total variance is \$3,000, as shown in **Illustration 26.9**.

ILLUSTRATION 26.9**Computation of total variance**

Actual costs	\$55,000
Less: Standard costs	52,000
Total variance	\$ 3,000

Note that the variance is expressed in total dollars, not on a per unit basis.

When actual costs exceed standard costs, the variance is **unfavorable**. The \$3,000 variance in June for Xonic Tonic is unfavorable. An unfavorable variance has a negative connotation as it reduces profit. It suggests that the company paid too much for one or more of the manufacturing cost elements or that it used the elements inefficiently.

If actual costs are less than standard costs, the variance is **favorable**. A favorable variance has a positive connotation. It suggests efficiencies in incurring manufacturing costs and in using direct materials, direct labor, and manufacturing overhead.

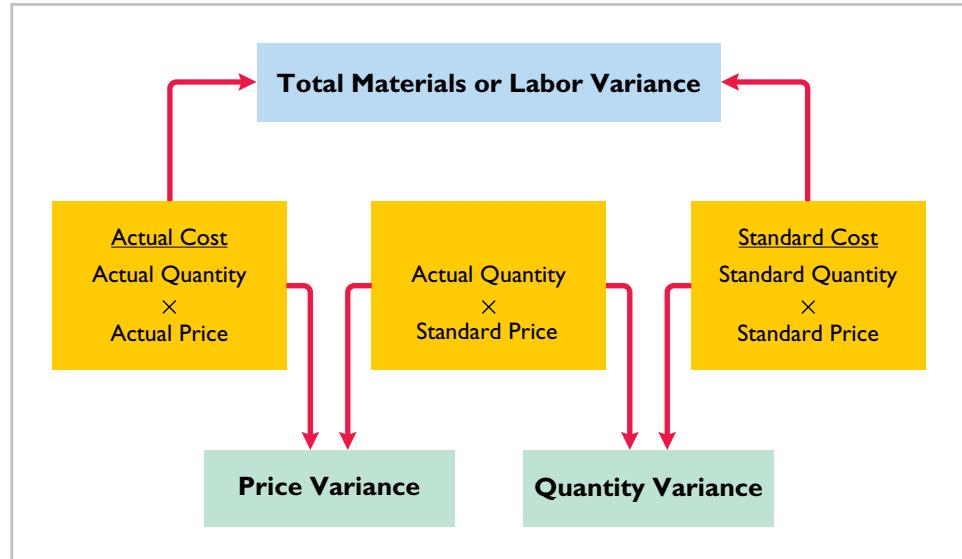

However, be careful: A favorable variance could be obtained by using inferior materials. In printing wedding invitations, for example, a favorable variance could result from using an inferior grade of paper. Or, a favorable variance might be achieved in installing tires on an automobile assembly line by tightening only half of the lug bolts. A variance is not favorable if the company has sacrificed quality control standards.

To interpret a variance, you must analyze its components. A variance can result from differences related to the cost of materials, labor, or overhead. **Illustration 26.10** shows that the total variance is the sum of the materials, labor, and overhead variances.

ILLUSTRATION 26.10**Components of total variance**

$$\text{Materials Variance} + \text{Labor Variance} + \text{Overhead Variance} = \text{Total Variance}$$

In the following discussion, you will see that the materials variance and the labor variance are the sum of variances resulting from price differences and quantity differences. **Illustration 26.11** shows a format for computing the price and quantity variances.

ILLUSTRATION 26.11**Breakdown of materials or labor variance into price and quantity variances**

Note that the left side of the matrix is actual cost (actual quantity times actual price). The right hand is standard cost (standard quantity times standard price). The difference between these two amounts (shown in the blue box in Illustration 26.11) is the total materials or labor variance. The only additional element you need in order to compute the price and quantity variances is the middle element, the actual quantity at the standard price.

To compute the price variance, we hold the quantity constant (at the actual quantity) but vary the price (actual versus standard). Similarly, to compute the quantity variance, we hold the price constant (at the standard price) but vary the quantity (actual versus standard).

Calculating Direct Materials Variances

Part of Xonic's total variance of \$3,000 is due to a materials variance. In completing the order for 1,000 gallons of Xonic Tonic, the company used 4,200 pounds of direct materials. From Illustration 26.3, we know that Xonic's standards require it to use 4 pounds of materials per gallon produced, so it should have only used 4,000 ($4 \times 1,000$) pounds of direct materials to produce 1,000 gallons. The direct materials were purchased at a price of \$3.10 per unit. Illustration 26.2 shows that the standard cost of each pound of direct materials is \$3 instead of the \$3.10 actually paid. **Illustration 26.12** shows that the **total materials variance** is computed as the difference between the amount paid (actual quantity times actual price) and the amount that should have been paid based on standards (standard quantity times standard price of materials).

Actual Quantity × Actual Price	–	Standard Quantity × Standard Price	=	Total Materials Variance
(AQ) × (AP)	–	(SQ) × (SP)		(TMV)
(4,200 × \$3.10)	–	(4,000* × \$3.00)		
\$13,020	–	\$12,000	=	\$1,020 U

*1,000 units × 4 pounds

ILLUSTRATION 26.12

Formula for total materials variance

Thus, for Xonic, the total materials variance is \$1,020 (\$13,020 – \$12,000) unfavorable (abbreviated as “U”). It is unfavorable because the actual cost exceeded the standard cost.

The total materials variance could be caused by differences in the price paid for the materials or by differences in the amount of materials used. **Illustration 26.13** shows that the total materials variance is the sum of the materials price variance and the materials quantity variance.

$$\text{Materials Price Variance} + \text{Materials Quantity Variance} = \text{Total Materials Variance}$$

ILLUSTRATION 26.13

Components of total materials variance

The materials price variance results from a difference between the actual price and the standard price. **Illustration 26.14** shows that the **materials price variance** is computed as the difference between the actual amount paid (actual quantity of materials times actual price) and the standard amount that should have been paid for the materials used (actual quantity of materials times standard price).¹

Actual Quantity × Actual Price	–	Actual Quantity × Standard Price	=	Materials Price Variance
(AQ) × (AP)	–	(AQ) × (SP)		(MPV)
(4,200 × \$3.10)	–	(4,200 × \$3.00)		
\$13,020	–	\$12,600	=	\$420 U

ILLUSTRATION 26.14

Formula for materials price variance

For Xonic, the materials price variance is \$420 (\$13,020 – \$12,600) unfavorable.

¹Assume that all materials purchased during the period are used in production and that no units remain in inventory at the end of the period.

HELPFUL HINT

The alternative formula is:

$$\boxed{AQ} \times \boxed{AP - SP} = \boxed{MPV}$$

The price variance can also be computed by multiplying the actual quantity purchased by the difference between the actual and standard price per unit (see **Helpful Hint**). The computation in this case is $4,200 \times (\$3.10 - \$3.00) = \$420$ U.

As seen in Illustration 26.13, the other component of the materials variance is the quantity variance. The quantity variance results from differences between the amount of material actually used and the amount that should have been used. As shown in **Illustration 26.15**, the **materials quantity variance** is computed as the difference between the standard cost of the actual quantity (actual quantity times standard price) and the standard cost of the amount that should have been used (standard quantity times standard price for materials).

ILLUSTRATION 26.15

Formula for materials quantity variance

Actual Quantity × Standard Price	–	Standard Quantity × Standard Price	=	Materials Quantity Variance
$(AQ) \times (SP)$	–	$(SQ) \times (SP)$		(MQV)
$(4,200 \times \$3.00)$	–	$(4,000 \times \$3.00)$		
\$12,600	–	\$12,000	=	\$600 U

HELPFUL HINT

The alternative formula is:

$$\boxed{SP} \times \boxed{AQ - SQ} = \boxed{MQV}$$

Thus, for Xonic, the materials quantity variance is \$600 ($\$12,600 - \$12,000$) unfavorable.

The quantity variance can also be computed by applying the standard price to the difference between actual and standard quantities used (see **Helpful Hint**). The computation in this example is $\$3.00 \times (4,200 - 4,000) = \600 U.

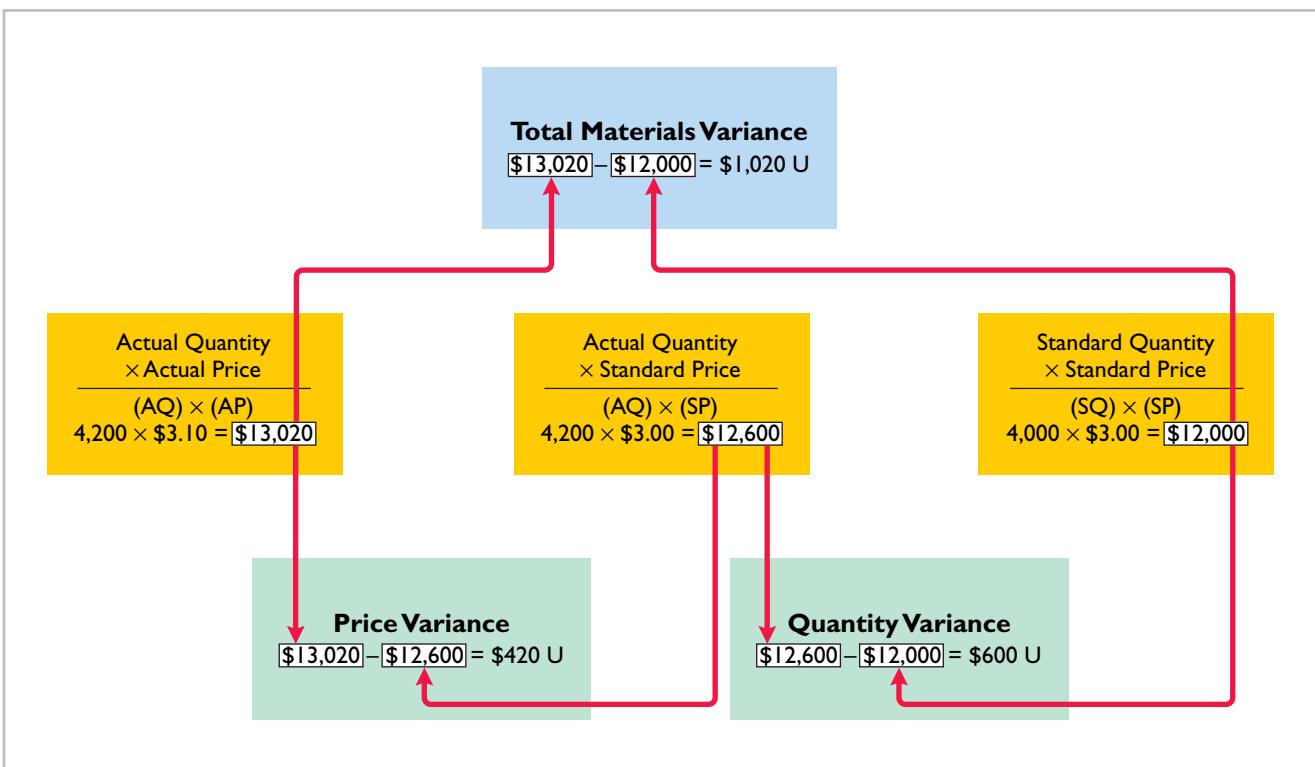

Illustration 26.16 summarizes the total materials variance of \$1,020 U.

ILLUSTRATION 26.16

Summary of materials variances

Materials price variance	\$ 420 U
Materials quantity variance	600 U
Total materials variance	\$1,020 U

Companies sometimes use a matrix to analyze a variance. When the matrix is used, a company computes the amounts using the formulas for each cost element first and then computes the variances. **Illustration 26.17** shows the completed matrix for the direct materials variance for Xonic. The matrix provides a convenient structure for determining each variance.

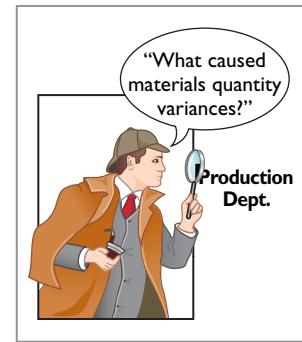

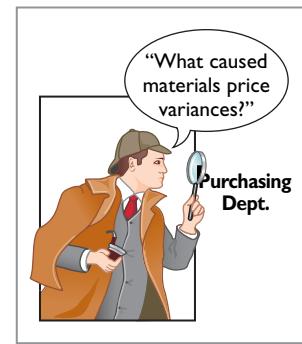

ILLUSTRATION 26.17 Matrix for direct materials variances

Causes of Materials Variances

What are the causes of a variance? The causes may relate to both internal and external factors. The investigation of a **materials price variance usually begins in the purchasing department**. Many factors affect the price paid for raw materials. These include availability of quantity and cash discounts, the quality of the materials requested, and the delivery method used. To the extent that these factors are considered in setting the price standard, the purchasing department is responsible for any variances.

However, a variance may be beyond the control of the purchasing department. Sometimes, for example, prices may rise faster than expected. Moreover, actions by groups over which the company has no control, such as the OPEC nations' oil price increases, may cause an unfavorable variance. For example, during a recent year, **Kraft Foods** and **Kellogg Company** both experienced unfavorable materials price variances when the cost of dairy and wheat products jumped unexpectedly. There are also times when a production department may be responsible for the price variance. This may occur when a rush order forces the company to pay a higher price for the materials.

The starting point for determining the cause(s) of a significant **materials quantity variance is in the production department**. If the variances are due to inexperienced workers, faulty machinery, or carelessness, the production department is responsible. However, if the materials obtained by the purchasing department were of inferior quality, then the purchasing department is responsible.

DO IT! 2 | Direct Materials Variances

The standard cost of Wonder Walkers includes two units of direct materials at \$8.00 per unit. During July, the company buys 22,000 units of direct materials at \$7.50 and uses those materials to produce 10,000 Wonder Walkers. Compute the total, price, and quantity variances for materials.

Solution

$$\text{Standard quantity} = 10,000 \times 2 = 20,000$$

Substituting amounts into the formulas, the variances are:

$$\text{Total materials variance} = (22,000 \times \$7.50) - (20,000 \times \$8.00) = \$5,000 \text{ unfavorable}$$

$$\text{Materials price variance} = (22,000 \times \$7.50) - (22,000 \times \$8.00) = \$11,000 \text{ favorable}$$

$$\text{Materials quantity variance} = (22,000 \times \$8.00) - (20,000 \times \$8.00) = \$16,000 \text{ unfavorable}$$

Related exercise material: **BE26.4, DO IT! 26.2, and E26.5.**

ACTION PLAN

Use the formulas for computing each of the materials variances:

- Total materials variance = $(AQ \times AP) - (SQ \times SP)$
- Materials price variance = $(AQ \times AP) - (AQ \times SP)$
- Materials quantity variance = $(AQ \times SP) - (SQ \times SP)$

Direct Labor and Manufacturing Overhead Variances

LEARNING OBJECTIVE 3

Determine direct labor and total manufacturing overhead variances.

Direct Labor Variances

The process of determining direct labor variances is the same as for determining the direct materials variances. In completing the Xonic Tonic order, the company incurred 2,100 direct labor hours. The standard hours allowed for the units produced were 2,000 hours (1,000

gallons \times 2 hours). The standard labor rate was \$15 per hour, and the actual labor rate was \$14.80.

The total labor variance is the difference between the amount actually paid for labor versus the amount that should have been paid. **Illustration 26.18** shows that the **total labor variance** is computed as the difference between the amount actually paid for labor (actual hours times actual rate) and the amount that should have been paid (standard hours times standard rate for labor).

ILLUSTRATION 26.18

Formula for total labor variance

Actual Hours \times Actual Rate	–	Standard Hours \times Standard Rate	=	Total Labor Variance
(AH) \times (AR)		(SH) \times (SR)		(TLV)
(2,100 \times \$14.80)	–	(2,000 \times \$15.00)		
\$31,080	–	\$30,000	=	\$1,080 U

The total labor variance is \$1,080 (\$31,080 – \$30,000) unfavorable.

The total labor variance is caused by differences in the labor rate or difference in labor hours. **Illustration 26.19** shows that the total labor variance is the sum of the labor price variance and the labor quantity variance.

ILLUSTRATION 26.19

Components of total labor variance

$$\text{Labor Price Variance} + \text{Labor Quantity Variance} = \text{Total Labor Variance}$$

The labor price variance results from the difference between the rate paid to workers versus the rate that was supposed to be paid. **Illustration 26.20** shows that the **labor price variance** is computed as the difference between the actual amount paid (actual hours times actual rate) and the amount that should have been paid for the number of hours worked (actual hours times standard rate for labor).

ILLUSTRATION 26.20

Formula for labor price variance

Actual Hours \times Actual Rate	–	Actual Hours \times Standard Rate	=	Labor Price Variance
(AH) \times (AR)		(AH) \times (SR)		(LPV)
(2,100 \times \$14.80)	–	(2,100 \times \$15.00)		
\$31,080	–	\$31,500	=	\$420 F

For Xonic, the labor price variance is \$420 (\$31,080 – \$31,500) favorable.

The labor price variance can also be computed by multiplying actual hours worked by the difference between the actual pay rate and the standard pay rate (see **Helpful Hint**). The computation in this example is $2,100 \times (\$15.00 - \$14.80) = \$420 F$.

The other component of the total labor variance is the labor quantity variance. The labor quantity variance results from the difference between the actual number of labor hours and the number of hours that should have been worked for the quantity produced. **Illustration 26.21** shows that the **labor quantity variance** is computed as the difference between the amount that should have been paid for the hours worked (actual hours times standard rate) and the amount that should have been paid for the amount of hours that should have been worked (standard hours times standard rate for labor).

ILLUSTRATION 26.21

Formula for labor quantity variance

Actual Hours \times Standard Rate	–	Standard Hours \times Standard Rate	=	Labor Quantity Variance
(AH) \times (SR)		(SH) \times (SR)		(LQV)
(2,100 \times \$15.00)	–	(2,000 \times \$15.00)		
\$31,500	–	\$30,000	=	\$1,500 U

Thus, for Xonic, the labor quantity variance is \$1,500 ($\$31,500 - \$30,000$) unfavorable.

The same result can be obtained by multiplying the standard rate by the difference between actual hours worked and standard hours allowed (see **Helpful Hint**). In this case, the computation is $\$15.00 \times (2,100 - 2,000) = \$1,500$ U.

Illustration 26.22 summarizes the total direct labor variance of \$1,080 U.

HELPFUL HINT

The alternative formula is:

$$\text{SR} \times (\text{AH} - \text{SH}) = \text{LQV}$$

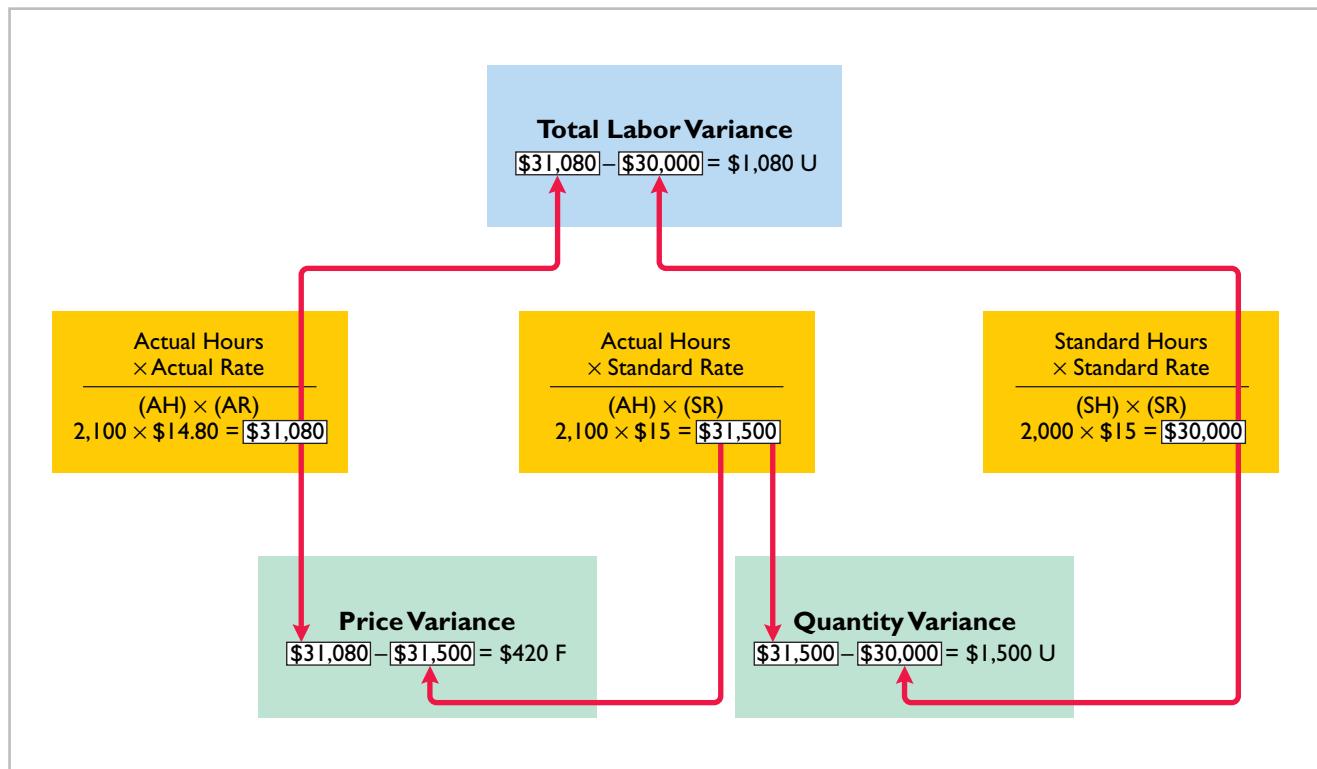

Labor price variance	\$ 420 F
Labor quantity variance	1,500 U
Total direct labor variance	\$1,080 U

ILLUSTRATION 26.22

Summary of labor variances

These results can also be obtained from the matrix in **Illustration 26.23**.

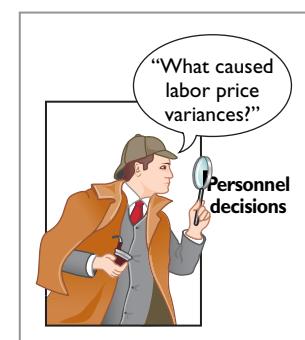

ILLUSTRATION 26.23 Matrix for direct labor variances

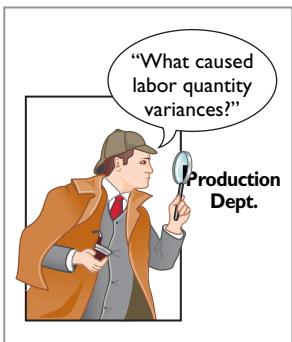

Causes of Labor Variances

Labor price variances usually result from two factors: (1) paying workers **different wages than expected**, and (2) **misallocation of workers**. In companies where pay rates are determined by union contracts, labor price variances should be infrequent. When workers are not unionized, there is a much higher likelihood of such variances. The responsibility for these variances rests with the manager who authorized the wage change.

Misallocation of the workforce refers to using skilled workers in place of unskilled workers and vice versa. The use of an inexperienced worker instead of an experienced one will result in a favorable price variance because of the lower pay rate of the unskilled worker. An unfavorable price variance would result if a skilled worker were substituted for an inexperienced one. The production department generally is responsible for labor price variances resulting from misallocation of the workforce.

Labor quantity variances relate to the **efficiency of workers**. The cause of a quantity variance generally can be traced to the production department. The causes of an unfavorable variance may be poor training, worker fatigue, faulty machinery, or carelessness. These causes are the responsibility of the **production department**. However, if the excess time is due to inferior materials, the responsibility falls outside the production department and resides instead with the purchasing department.

Manufacturing Overhead Variances

The **total overhead variance** is the difference between the actual overhead costs and overhead costs applied based on standard hours allowed for the amount of goods produced. As indicated in Illustration 26.8, Xonic incurred overhead costs of \$10,900 to produce 1,000 gallons of Xonic Tonic in June. The computation of the actual overhead is comprised of a variable and a fixed component. **Illustration 26.24** shows this computation.

ILLUSTRATION 26.24
Actual overhead costs

Variable overhead	\$ 6,500
Fixed overhead	4,400
Total actual overhead	\$10,900

To find the total overhead variance in a standard costing system, we determine the overhead costs applied based on standard hours allowed. **Standard hours allowed** are the hours that *should* have been worked for the units produced. Overhead costs for Xonic Tonic are applied based on direct labor hours. Because it takes two hours of direct labor to produce one gallon of Xonic Tonic, for the 1,000-gallon Xonic Tonic order, the standard hours allowed are 2,000 hours ($1,000 \text{ gallons} \times 2 \text{ hours}$). We then apply the predetermined overhead rate to the 2,000 standard hours allowed.

Recall from Illustration 26.6 that the amount of budgeted overhead costs at normal capacity of \$132,000 was divided by normal capacity of 26,400 direct labor hours, to arrive at a predetermined overhead rate of \$5 ($\$132,000 \div 26,400$). The predetermined rate of \$5 is then multiplied by the 2,000 standard hours allowed, to determine the overhead costs applied.

Illustration 26.25 shows the formula for the total overhead variance and the calculation for Xonic for the month of June.

ILLUSTRATION 26.25
Formula for total overhead variance

Actual Overhead	-	Overhead Applied*	=	Total Overhead Variance
\$10,900	-	\$10,000	=	\$900 U
(\$6,500 + \$4,400)		(\$5 × 2,000 hours)		

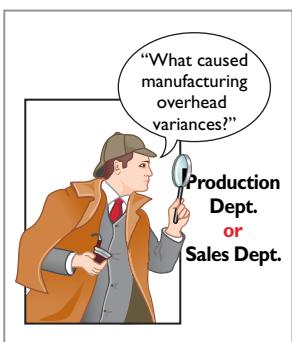

*Based on standard hours allowed.

Thus, for Xonic, the total overhead variance is \$900 unfavorable.

The overhead variance is generally analyzed through a price and a quantity variance. (These computations are discussed in more detail in advanced courses.) The name usually given to the price variance is the **overhead controllable variance**; the quantity variance is referred to as the **overhead volume variance**. Appendix 26B discusses how the total overhead variance can be broken down into these two variances.

Causes of Manufacturing Overhead Variances

One reason for an overhead variance relates to over- or underspending on overhead items. For example, overhead may include indirect labor for which a company paid wages higher than the standard labor price allowed. Or, the price of electricity to run the company's machines increased, and the company did not anticipate this additional cost. Companies should investigate any spending variances to determine whether they will continue in the future. Generally, the responsibility for these variances rests with the production department.

The overhead variance can also result from the inefficient use of overhead. For example, because of poor maintenance, a number of the manufacturing machines are experiencing breakdowns on a consistent basis, leading to reduced production. Or, the flow of materials through the production process is impeded because of a lack of skilled labor to perform the necessary production tasks, due to a lack of planning. In both of these cases, the production department is responsible for the cause of these variances. On the other hand, overhead can also be underutilized because of a lack of sales orders. When the cause is a lack of sales orders, the responsibility rests outside the production department and resides instead with the sales department. For example, at one point **Chrysler** experienced a very significant unfavorable overhead variance because plant capacity was maintained at excessively high levels, due to overly optimistic sales forecasts.

People, Planet, and Profit Insight Starbucks

Archer Colin/SIPA/NewsCom

What's Brewing at Starbucks?

It's easy for a company to say it's committed to corporate social responsibility. But **Starbucks** actually spells out measurable goals. Recently, the company published its annual *Global Responsibility Report* in which it describes its goals, achievements, and even its shortcomings related to corporate social responsibility. For example, Starbucks achieved its goal of getting more than 50% of its electricity from renewable sources. It also has numerous goals related to purchasing coffee from sources that are certified as responsibly grown

and ethically traded; providing funds for loans to coffee farmers; and fostering partnerships with **Conservation International** to provide training to farmers on ecologically friendly growing.

The report also candidly explains that the company did not meet its goal to cut energy consumption by 25%. It also fell far short of its goal of getting customers to reuse their cups. In those instances where it didn't achieve its goals, Starbucks set new goals and described steps it would take to achieve them. You can view the company's *Global Responsibility Report* at www.starbucks.com.

Source: "Starbucks Launches 10th Global Responsibility Report," *Business Wire* (April 18, 2011).

What implications does Starbucks' commitment to corporate social responsibility have for the standard cost of a cup of coffee? (Go to WileyPLUS for this answer and additional questions.)

DO IT! 3 | Labor and Manufacturing Overhead Variances

The standard cost of Product YY includes 3 hours of direct labor at \$12.00 per hour. The predetermined overhead rate is \$20.00 per direct labor hour. During July, the company incurred 3,500 hours of direct labor at an average rate of \$12.40 per hour and \$71,300 of manufacturing overhead costs. It produced 1,200 units.

- Compute the total, price, and quantity variances for labor.
- Compute the total overhead variance.

Solution

Substituting amounts into the formulas, the variances are:

$$\text{Total labor variance} = (3,500 \times \$12.40) - (3,600 \times \$12.00) = \$200 \text{ unfavorable}$$

$$\text{Labor price variance} = (3,500 \times \$12.40) - (3,500 \times \$12.00) = \$1,400 \text{ unfavorable}$$

$$\text{Labor quantity variance} = (3,500 \times \$12.00) - (3,600 \times \$12.00) = \$1,200 \text{ favorable}$$

$$\text{Total overhead variance} = \$71,300 - \$72,000^* = \$700 \text{ favorable}$$

$$*(1,200 \times 3 \text{ hours}) \times \$20.00$$

ACTION PLAN

- Use the formulas for computing each of the variances:

$$\text{Total labor variance} = (AH \times AR) - (SH \times SR)$$

$$\text{Labor price variance} = (AH \times AR) - (AH \times SR)$$

$$\text{Labor quantity variance} = (AH \times SR) - (SH \times SR)$$

$$\text{Total overhead variance} = \text{Actual overhead} - \text{Overhead applied}^*$$

*Based on standard hours allowed.

Variance Reports and Balanced Scorecards

LEARNING OBJECTIVE 4

Prepare variance reports and balanced scorecards.

Reporting Variances

All variances should be reported to appropriate levels of management as soon as possible. The sooner managers are informed, the sooner they can evaluate problems and take corrective action.

The form, content, and frequency of variance reports vary considerably among companies. One approach is to prepare a weekly report for each department that has primary responsibility for cost control. Under this approach, materials price variances are reported to the purchasing department, and all other variances are reported to the production department that did the work. The report for Xonic shown in **Illustration 26.26**, with the materials for the Xonic Tonic order listed first, illustrates this approach.

ILLUSTRATION 26.26

Materials price variance report

Xonic Variance Report—Purchasing Department For Week Ended June 8, 2020					
Type of Materials	Quantity Purchased	Actual Price	Standard Price	Price Variance	Explanation
X100	4,200 lbs.	\$3.10	\$3.00	\$420 U	Rush order
X142	1,200 units	2.75	2.80	60 F	Quantity discount
A85	600 doz.	5.20	5.10	60 U	Regular supplier on strike
Total price variance				\$420 U	

The explanation column is completed after consultation with the purchasing department manager.

Variance reports facilitate the principle of “management by exception” explained in Chapter 25. For example, the vice president of purchasing can use the report shown above to evaluate the effectiveness of the purchasing department manager. Or, the vice president of production can use production department variance reports to determine how well each production manager is controlling costs. In using variance reports, top management normally looks for **significant variances**. These may be judged on the basis of some quantitative measure, such as more than 10% of the standard or more than \$1,000.

Income Statement Presentation of Variances

In income statements **prepared for management** under a standard cost accounting system, **cost of goods sold is stated at standard cost and the variances are disclosed separately**. Unfavorable variances increase cost of goods sold, while favorable variances decrease cost of goods sold. **Illustration 26.27** shows the presentation of variances in an income statement. This income statement is based on the production and sale of 1,000 units of Xonic Tonic at \$70 per unit. It also assumes selling and administrative costs of \$3,000. Observe that each variance is shown, as well as the total net variance. In this example, variations from standard costs reduced net income by \$3,000.

Standard costs may be used in financial statements prepared for stockholders and other external users. The costing of inventories at standard costs is in accordance with generally accepted accounting principles when there are no significant differences between actual costs and standard costs. **Hewlett-Packard** and **Jostens, Inc.**, for example, report their inventories at standard costs. However, if there are significant differences between actual and standard costs, the financial statements must report inventories and cost of goods sold at actual costs.

It is also possible to show the variances in an income statement prepared in the variable costing (CVP) format. To do so, it is necessary to analyze the overhead variances into variable and fixed components. This type of analysis is explained in cost accounting texts.

Xonic Income Statement For the Month Ended June 30, 2020	
Sales revenue	\$70,000
Cost of goods sold (at standard)	<u>52,000</u>
Gross profit (at standard)	18,000
Variances	
Materials price	\$ 420 U
Materials quantity	600 U
Labor price	420 F
Labor quantity	1,500 U
Overhead	<u>900 U</u>
Total variance unfavorable	<u>3,000</u>
Gross profit (actual)	15,000
Selling and administrative expenses	<u>3,000</u>
Net income	<u><u>\$12,000</u></u>

ILLUSTRATION 26.27

Variances in income statement for management

Balanced Scorecard

Financial measures (measurement of dollars), such as variance analysis and return on investment (ROI), are useful tools for evaluating performance. However, many companies now supplement these financial measures with nonfinancial measures to better assess performance and anticipate future results. For example, airlines like **Delta** and **United** use capacity utilization as an important measure to understand and predict future performance. Companies that publish the *New York Times* and the *Chicago Tribune* newspapers use circulation figures as another measure by which to assess performance. **Penske Automotive Group**, the owner of 300 dealerships, rewards executives for meeting employee retention targets. **Illustration 26.28** lists some key nonfinancial measures used in various industries.

ILLUSTRATION 26.28 Nonfinancial measures used in various industries

Industry	Measure
Automobiles	Capacity utilization of plants. Average age of key assets. Impact of strikes. Brand-loyalty statistics.
Computer Systems	Market profile of customer end-products. Number of new products. Employee stock ownership percentages. Number of scientists and technicians used in R&D.
Chemicals	Customer satisfaction data. Factors affecting customer product selection. Number of patents and trademarks held. Customer brand awareness.
Regional Banks	Number of ATMs by state. Number of products used by average customer. Percentage of customer service calls handled by interactive voice response units. Personnel cost per employee. Credit card retention rates.

Source: Financial Accounting Standards Board, *Business Reporting: Insights into Enhancing Voluntary Disclosures* (Norwalk, Conn.: FASB, 2001).

Most companies recognize that both financial and nonfinancial measures can provide useful insights into what is happening in the company. As a result, many companies now use a broad-based measurement approach, called the **balanced scorecard**, to evaluate performance. The **balanced scorecard** incorporates financial and nonfinancial measures in an integrated system that links performance measurement with a company's strategic goals. Nearly 50% of the largest companies in the United States, including **Unilever**, **Chase**, and **Wal-Mart Stores Inc.**, are using the balanced scorecard approach.

The balanced scorecard evaluates company performance from a series of "perspectives." The four most commonly employed perspectives are as follows.

1. The **financial perspective** is the most traditional view of the company. It employs financial measures of performance used by most firms.
2. The **customer perspective** evaluates the company from the viewpoint of those people who buy its products or services. This view compares the company to competitors in terms of price, quality, product innovation, customer service, and other dimensions.
3. The **internal process perspective** evaluates the internal operating processes critical to success. All critical aspects of the value chain—including product development, production, delivery, and after-sale service—are evaluated to ensure that the company is operating effectively and efficiently.
4. The **learning and growth perspective** evaluates how well the company develops and retains its employees. This would include evaluation of such things as employee skills, employee satisfaction, training programs, and information dissemination.

Within each perspective, the balanced scorecard identifies objectives that contribute to attainment of strategic goals. **Illustration 26.29** shows examples of objectives within each perspective.

ILLUSTRATION 26.29 Examples of objectives within the four perspectives of balanced scorecard

Perspective	Objective
Financial	Return on assets. Net income. Credit rating. Share price. Profit per employee.
Customer	Percentage of customers who would recommend product. Customer retention. Response time per customer request. Brand recognition. Customer service expense per customer.
Internal Process	Percentage of defect-free products. Stockouts. Labor utilization rates. Waste reduction. Planning accuracy.
Learning and Growth	Percentage of employees leaving in less than one year. Number of cross-trained employees. Ethics violations. Training hours. Reportable accidents.

The objectives are linked across perspectives in order to tie performance measurement to company goals. The financial-perspective objectives are normally set first, and then objectives are set in the other perspectives in order to accomplish the financial goals.

For example, within the financial perspective, a common goal is to increase profit per dollars invested as measured by ROI. In order to increase ROI, a customer-perspective objective might be to increase customer satisfaction as measured by the percentage of customers

who would recommend the product to a friend. In order to increase customer satisfaction, an internal-process-perspective objective might be to increase product quality as measured by the percentage of defect-free units. Finally, in order to increase the percentage of defect-free units, the learning-and-growth-perspective objective might be to reduce factory employee turnover as measured by the percentage of employees leaving in under one year.

Illustration 26.30 illustrates this linkage across perspectives.

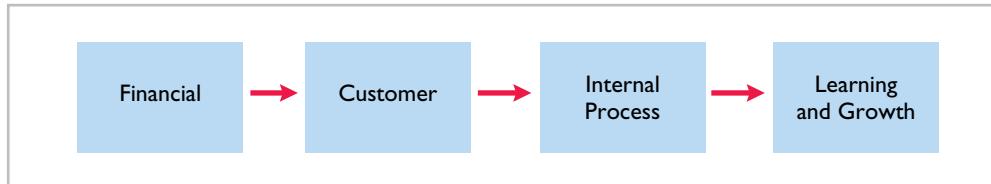

ILLUSTRATION 26.30

Linked process across balanced scorecard perspectives

Through this linked process, the company can better understand how to achieve its goals and what measures to use to evaluate performance.

In summary, the balanced scorecard does the following:

1. Employs both **financial and nonfinancial measures**. (For example, ROI is a financial measure; employee turnover is a nonfinancial measure.)
2. Creates **linkages** so that high-level corporate goals can be communicated all the way down to the shop floor.
3. Provides **measurable objectives for nonfinancial measures** such as product quality, rather than vague statements such as “We would like to improve quality.”
4. Integrates all of the company’s goals into a single performance measurement system, so that **an inappropriate amount of weight will not be placed on any single goal**.

Service Company Insight United Airlines

PhotoDisc, Inc./Getty Images

It May Be Time to Fly United Again

Many of the benefits of a balanced scorecard approach are evident in the improved operations at **United Airlines**. At the time it filed for bankruptcy, United had a reputation for some of the worst service in the airline business. But when Glenn Tilton took over as United’s chief executive officer, he recognized that things had to change.

He implemented an incentive program that allows all of United’s 63,000 employees to earn a bonus of 2.5% or more of their wages if the company “exceeds its goals for on-time flight departures and for customer intent to fly United again.” After instituting this program,

the company’s on-time departures were among the best, its customer complaints were reduced considerably, and the number of customers who said that they would fly United again was at its highest level ever. However, after a recent, highly publicized incident where a traveler was injured as he was dragged off an overbooked flight United must once again overcome a negative public image.

Sources: Susan Carey, “Friendlier Skies: In Bankruptcy, United Airlines Forges a Path to Better Service,” *Wall Street Journal* (June 15, 2004); and Emre Serpen, “More to Maintain,” *Airline Business* (November 2012), pp. 38–40.

Which of the perspectives of a balanced scorecard were the focus of United’s CEO? (Go to WileyPLUS for this answer and additional questions.)

DO IT! 4 | Reporting Variances

Polar Vortex Corporation experienced the following variances: materials price \$250 F, materials quantity \$1,100 F, labor price \$700 U, labor quantity \$300 F, and overhead \$800 F. Sales revenue was \$102,700, and cost of goods sold (at standard) was \$61,900. Determine the actual gross profit.

Solution

Sales revenue	\$102,700
Cost of goods sold (at standard)	61,900
Standard gross profit	40,800
Variances	
Materials price	\$ 250 F
Materials quantity	1,100 F
Labor price	700 U
Labor quantity	300 F
Overhead	800 F
Total variance favorable	1,750
Gross profit (actual)	\$ 42,550

ACTION PLAN

- Gross profit at standard is sales revenue less cost of goods sold at standard.
- Adjust standard gross profit by adding a net favorable variance or subtracting a net unfavorable variance.

Appendix 26A

Standard Cost Accounting System

LEARNING OBJECTIVE *5

Identify the features of a standard cost accounting system.

A **standard cost accounting system** is a double-entry system of accounting. In this system, companies use standard costs in making entries, and they formally recognize variances in the accounts. Companies may use a standard cost system with either job order or process costing.

In this appendix, we will explain and illustrate a **standard cost, job order cost accounting system**. The system is based on two important assumptions:

1. Variances from standards are recognized at the earliest opportunity.
2. The Work in Process account is maintained exclusively on the basis of standard costs.

In practice, there are many variations among standard cost systems. The system described here should prepare you for systems you see in the “real world.”

Journal Entries

We will use the transactions of Xonic to illustrate the journal entries. Note as you study the entries that the major difference between the entries here and those for the job order cost accounting system in Chapter 20 is the **variance accounts**.

1. Purchase raw materials on account for \$13,020 when the standard cost is \$12,600.

Raw Materials Inventory	12,600
Materials Price Variance	420
Accounts Payable	
(To record purchase of materials)	13,020

Xonic debits the inventory account for actual quantities at standard cost. This enables the perpetual materials records to show actual quantities. Xonic debits the price variance, which is unfavorable, to Materials Price Variance.

- 2.** Incur direct labor costs of \$31,080 when the standard labor cost is \$31,500.

Factory Labor	31,500	
Labor Price Variance		420
Factory Wages Payable		31,080
(To record direct labor costs)		

Like the raw materials inventory account, Xonic debits Factory Labor for actual hours worked at the standard hourly rate of pay. In this case, the labor variance is favorable. Thus, Xonic credits Labor Price Variance.

- 3.** Incur actual manufacturing overhead costs of \$10,900.

Manufacturing Overhead	10,900	
Accounts Payable/Cash/Acc. Depreciation		10,900
(To record overhead incurred)		

The controllable overhead variance (see Appendix 26B) is not recorded at this time. It depends on standard hours applied to work in process. This amount is not known at the time overhead is incurred.

- 4.** Issue raw materials for production at a cost of \$12,600 when the standard cost is \$12,000.

Work in Process Inventory	12,000	
Materials Quantity Variance		600
Raw Materials Inventory		12,600
(To record issuance of raw materials)		

Xonic debits Work in Process Inventory for standard materials quantities used at standard prices. It debits the variance account because the variance is unfavorable. The company credits Raw Materials Inventory for actual quantities at standard prices.

- 5.** Assign factory labor to production at a cost of \$31,500 when standard cost is \$30,000.

Work in Process Inventory	30,000	
Labor Quantity Variance		1,500
Factory Labor		31,500
(To assign factory labor to jobs)		

Xonic debits Work in Process Inventory for standard labor hours at standard rates. It debits the unfavorable variance to Labor Quantity Variance. The credit to Factory Labor produces a zero balance in this account.

- 6.** Apply manufacturing overhead to production \$10,000.

Work in Process Inventory	10,000	
Manufacturing Overhead		10,000
(To assign overhead to jobs)		

Xonic debits Work in Process Inventory for standard hours allowed multiplied by the standard overhead rate.

- 7.** Transfer completed work to finished goods \$52,000.

Finished Goods Inventory	52,000	
Work in Process Inventory		52,000
(To record transfer of completed work to finished goods)		

In this example, both inventory accounts are at standard cost.

- 8.** Sell the 1,000 gallons of Xonic Tonic for \$70,000.

Accounts Receivable	70,000	
Cost of Goods Sold		52,000
Sales		70,000
Finished Goods Inventory		52,000
(To record sale of finished goods and the cost of goods sold)		

The company debits Cost of Goods Sold at standard cost. Gross profit, in turn, is the difference between sales and the standard cost of goods sold.

9. Recognize unfavorable total overhead variance:

Overhead Variance	900	
Manufacturing Overhead		900
(To recognize overhead variances)		

Prior to this entry, a debit balance of \$900 existed in Manufacturing Overhead because overhead of \$10,900 was incurred but only \$10,000 of overhead was applied. This entry therefore adjusts the account to a zero balance in the Manufacturing Overhead account. The information needed for this entry is often not available until the end of the accounting period.

HELPFUL HINT

Each debit balance in variance accounts indicates an unfavorable variance; each credit balance indicates a favorable variance.

Ledger Accounts

Illustration 26A.1 shows the cost accounts for Xonic after posting the entries. Note that five variance accounts, highlighted in red, are included in the ledger (see **Helpful Hint**). The six other accounts are the same as those illustrated for a job order cost system in Chapter 20, in which only actual costs were used.

ILLUSTRATION 26A.1

Cost accounts with variances

Raw Materials Inventory (1) 12,600 (4) 12,600	Materials Price Variance (1) 420	Work in Process Inventory (4) 12,000 (7) 52,000 (5) 30,000 (6) 10,000
Factory Labor (2) 31,500 (5) 31,500	Materials Quantity Variance (4) 600	Finished Goods Inventory (7) 52,000 (8) 52,000
Manufacturing Overhead (3) 10,900 (6) 10,000 (9) 900	Labor Price Variance (2) 420	Cost of Goods Sold (8) 52,000
	Labor Quantity Variance (5) 1,500	
	Overhead Variance (9) 900	

Appendix 26B

Overhead Controllable and Volume Variances

LEARNING OBJECTIVE *6

Compute overhead controllable and volume variances.

As indicated in the chapter, the total overhead variance is generally analyzed through a price variance and a quantity variance. The name usually given to the price variance is the **overhead controllable variance**; the quantity variance is referred to as the **overhead volume variance**.

Overhead Controllable Variance

The **overhead controllable variance** shows whether overhead costs are effectively controlled. To compute this variance, the company compares actual overhead costs incurred with budgeted costs for the **standard hours allowed**. The budgeted costs are determined from a flexible manufacturing overhead budget. The concepts related to a flexible budget were discussed in Chapter 25.

For Xonic, the budget formula for manufacturing overhead is variable manufacturing overhead cost of \$3 per hour of labor plus fixed manufacturing overhead costs of \$4,400 ($\$52,800 \div 12$, per Illustration 26.6). **Illustration 26B.1** shows the monthly flexible budget for Xonic.

Xonic					
	Home	Insert	Page Layout	Formulas	Data
	P18	fx			
1	A	B	C	D	E
2	Xonic				
3	Flexible Manufacturing Overhead Monthly Budget				
4	Activity Index				
5	Standard direct labor hours	1,800	2,000	2,200	2,400
6	Costs				
7	Variable costs				
8	Indirect materials	\$1,800	\$ 2,000	\$ 2,200	\$ 2,400
9	Indirect labor	2,700	3,000	3,300	3,600
10	Utilities	900	1,000	1,100	1,200
11	Total variable costs	5,400	6,000	6,600	7,200
12					
13	Fixed costs				
14	Supervision	3,000	3,000	3,000	3,000
15	Depreciation	1,400	1,400	1,400	1,400
16	Total fixed costs	4,400	4,400	4,400	4,400
17	Total costs	\$9,800	\$10,400	\$11,000	\$11,600

ILLUSTRATION 26B.1

Flexible budget using standard direct labor hours

As shown, the budgeted costs for 2,000 standard hours are \$10,400 (\$6,000 variable and \$4,400 fixed).

Illustration 26B.2 shows the formula for the overhead controllable variance and the calculation for Xonic at 1,000 units of output (2,000 standard labor hours).

ILLUSTRATION 26B.2

Formula for overhead controllable variance

Actual Overhead	–	Overhead Budgeted*	=	Overhead Controllable Variance
\$10,900 (\$6,500 + \$4,400)	–	\$10,400 (\$6,000 + \$4,400)	=	\$500 U

*Based on standard hours allowed.

The overhead controllable variance for Xonic is \$500 unfavorable.

Most controllable variances are associated with variable costs, which are controllable costs. Fixed costs are often known at the time the budget is prepared and are therefore not as likely to deviate from the budgeted amount. In Xonic's case, all of the overhead controllable variance is due to the difference between the actual variable overhead costs (\$6,500) and the budgeted variable costs (\$6,000).

Management can compare actual and budgeted overhead for each manufacturing overhead cost that contributes to the controllable variance. In addition, management can develop cost and quantity variances for each overhead cost, such as indirect materials and indirect labor.

Overhead Volume Variance

The **overhead volume variance** is the difference between normal capacity hours and standard hours allowed times the fixed overhead rate. The overhead volume variance relates to whether fixed costs were under- or overapplied during the year. For example, the overhead volume variance answers the question of whether Xonic effectively used its fixed costs. If Xonic produces less Xonic Tonic than normal capacity would allow, an unfavorable variance results. Conversely, if Xonic produces more Xonic Tonic than what is considered normal capacity, a favorable variance results.

Illustration 26B.3 provides the formula for computing the overhead volume variance.

ILLUSTRATION 26B.3

Formula for overhead volume variance

Fixed Overhead Rate	×	$\left(\begin{array}{l} \text{Normal Capacity Hours} \\ - \\ \text{Standard Hours Allowed} \end{array} \right)$	=	Overhead Volume Variance
---------------------	---	--	---	--------------------------

To illustrate the fixed overhead rate computation, recall that Xonic budgeted fixed overhead cost for the year of \$52,800 (Illustration 26.6). At normal capacity, 26,400 standard direct labor hours are required. The fixed overhead rate is therefore \$2 per hour ($\$52,800 \div 26,400$ hours).

Xonic produced 1,000 units of Xonic Tonic in June. The standard hours allowed for the 1,000 gallons produced in June is 2,000 (1,000 gallons \times 2 hours). For Xonic, normal capacity for June is 1,100, so standard direct labor hours for June at normal capacity is 2,200 (26,400 annual hours \div 12 months). The computation of the overhead volume variance in this case is as shown in **Illustration 26B.4**.

ILLUSTRATION 26B.4

Computation of overhead volume variance for Xonic

Fixed Overhead Rate	×	$\left(\begin{array}{l} \text{Normal Capacity Hours} \\ - \\ \text{Standard Hours Allowed} \end{array} \right)$	=	Overhead Volume Variance
\$2	×	(2,200 – 2,000)	=	\$400 U

In Xonic's case, a \$400 unfavorable volume variance results. The volume variance is unfavorable because Xonic produced only 1,000 gallons rather than the normal capacity of 1,100 gallons in the month of June. As a result, it underapplied fixed overhead for that period.

In computing the overhead variances, it is important to remember the following.

1. Standard hours allowed are used in each of the variances.
2. Budgeted costs for the controllable variance are derived from the flexible budget.
3. The controllable variance generally pertains to variable costs.
4. The volume variance pertains solely to fixed costs.

Review and Practice

Learning Objectives Review

1 Describe standard costs.

Both standards and budgets are predetermined costs. The primary difference is that a standard is a unit amount, whereas a budget is a total amount. A standard may be regarded as the budgeted cost per unit of product.

Standard costs offer a number of advantages. They (a) facilitate management planning, (b) promote greater economy, (c) are useful in setting selling prices, (d) contribute to management control, (e) permit “management by exception,” and (f) simplify the costing of inventories and reduce clerical costs.

The direct materials price standard should be based on the delivered cost of raw materials plus an allowance for receiving and handling. The direct materials quantity standard should establish the required quantity plus an allowance for waste and spoilage.

The direct labor price standard should be based on current wage rates and anticipated adjustments such as COLAs. It also generally includes payroll taxes and fringe benefits. Direct labor quantity standards should be based on required production time plus an allowance for rest periods, cleanup, machine setup, and machine downtime.

For manufacturing overhead, a standard predetermined overhead rate is used. It is based on an expected standard activity index such as standard direct labor hours or standard machine hours.

2 Determine direct materials variances.

The formulas for the direct materials variances are as follows.

$$(\text{Actual quantity} \times \text{Actual price}) - (\text{Standard quantity} \times \text{Standard price}) = \begin{array}{l} \text{Total} \\ \text{materials} \\ \text{variance} \end{array}$$

$$(\text{Actual quantity} \times \text{Actual price}) - (\text{Actual quantity} \times \text{Standard price}) = \begin{array}{l} \text{Materials} \\ \text{price} \\ \text{variance} \end{array}$$

$$(\text{Actual quantity} \times \text{Standard price}) - (\text{Standard quantity} \times \text{Standard price}) = \begin{array}{l} \text{Materials} \\ \text{quantity} \\ \text{variance} \end{array}$$

3 Determine direct labor and total manufacturing overhead variances.

The formulas for the direct labor variances are as follows.

$$(\text{Actual hours} \times \text{Actual rate}) - (\text{Standard hours} \times \text{Standard rate}) = \begin{array}{l} \text{Total} \\ \text{labor} \\ \text{variance} \end{array}$$

$$(\text{Actual hours} \times \text{Actual rate}) - (\text{Actual hours} \times \text{Standard rate}) = \begin{array}{l} \text{Labor} \\ \text{price} \\ \text{variance} \end{array}$$

$$(\text{Actual hours} \times \text{Standard rate}) - (\text{Standard hours} \times \text{Standard rate}) = \begin{array}{l} \text{Labor} \\ \text{quantity} \\ \text{variance} \end{array}$$

The formula for the total manufacturing overhead variance is as follows.

$$(\text{Actual overhead}) - (\text{Overhead applied at standard hours allowed}) = \begin{array}{l} \text{Total overhead} \\ \text{variance} \end{array}$$

4 Prepare variance reports and balanced scorecards.

Variances are reported to management in variance reports. The reports facilitate management by exception by highlighting significant differences. Under a standard costing system, an income statement prepared for management will report cost of goods sold at standard cost and then disclose each variance separately.

The balanced scorecard incorporates financial and nonfinancial measures in an integrated system that links performance measurement and a company’s strategic goals. It employs four perspectives: financial, customer, internal process, and learning and growth. Objectives are set within each of these perspectives that link to objectives within the other perspectives.

*5 Identify the features of a standard cost accounting system.

In a standard cost accounting system, companies journalize and post standard costs, and they maintain separate variance accounts in the ledger.

*6 Compute overhead controllable and volume variances.

The total overhead variance is generally analyzed through a price variance and a quantity variance. The name usually given to the price variance is the overhead controllable variance. The quantity variance is referred to as the overhead volume variance.

Glossary Review

Balanced scorecard An approach that incorporates financial and non-financial measures in an integrated system that links performance measurement and a company's strategic goals. (p. 26-18).

Customer perspective A viewpoint employed in the balanced scorecard to evaluate the company from the perspective of those people who buy and use its products or services. (p. 26-18).

Direct labor price standard The rate per hour that management determines should be incurred for direct labor to produce one unit of product. (p. 26-5).

Direct labor quantity standard The time that management determines should be required to produce one unit of product. (p. 26-6).

Direct materials price standard The cost per unit of direct materials that management determines should be incurred to produce one unit of product. (p. 26-5).

Direct materials quantity standard The quantity of direct materials that management determines should be used per unit of finished goods. (p. 26-5).

Financial perspective A viewpoint employed in the balanced scorecard to evaluate a company's performance using financial measures. (p. 26-18).

Ideal standards Standards based on the optimum level of performance under perfect operating conditions. (p. 26-4).

Internal process perspective A viewpoint employed in the balanced scorecard to evaluate the effectiveness and efficiency of a company's value chain, including product development, production, delivery, and after-sale service. (p. 26-18).

Labor price variance The difference between the actual hours times the actual rate and the actual hours times the standard rate for labor. (p. 26-12).

Labor quantity variance The difference between actual hours times the standard rate and standard hours times the standard rate for labor. (p. 26-12).

Learning and growth perspective A viewpoint employed in the balanced scorecard to evaluate how well a company develops and retains its employees. (p. 26-18).

Materials price variance The difference between the actual quantity times the actual price and the actual quantity times the standard price for materials. (p. 26-9).

Materials quantity variance The difference between the actual quantity times the standard price and the standard quantity times the standard price for materials. (p. 26-10).

Normal capacity The average activity output that a company should experience over the long run. (p. 26-6).

Normal standards Standards based on an efficient level of performance that are attainable under expected operating conditions. (p. 26-4).

***Overhead controllable variance** The difference between actual overhead incurred and overhead budgeted for the standard hours allowed. (p. 26-23).

***Overhead volume variance** The difference between normal capacity hours and standard hours allowed times the fixed overhead rate. (p. 26-24).

***Standard cost accounting system** A double-entry system of accounting in which standard costs are used in making entries, and variances are recognized in the accounts. (p. 26-20).

Standard costs Predetermined unit costs which companies use as measures of performance. (p. 26-3).

Standard hours allowed The hours that should have been worked for the units produced. (p. 26-14).

Standard predetermined overhead rate An overhead rate determined by dividing budgeted overhead costs by an expected standard activity index. (p. 26-6).

Total labor variance The difference between actual hours times the actual rate and standard hours times the standard rate for labor. (p. 26-12).

Total materials variance The difference between the actual quantity times the actual price and the standard quantity times the standard price of materials. (p. 26-9).

Total overhead variance The difference between actual overhead costs and overhead costs applied to work done, based on standard hours allowed. (p. 26-14).

Variance The difference between total actual costs and total standard costs. (p. 26-7).

Practice Multiple-Choice Questions

1. (LO 1) Standards differ from budgets in that:

- a. budgets but not standards may be used in valuing inventories.
- b. budgets but not standards may be journalized and posted.
- c. budgets are a total amount and standards are a unit amount.
- d. only budgets contribute to management planning and control.

2. (LO 1) Standard costs:

- a. are imposed by governmental agencies.
- b. are predetermined unit costs which companies use as measures of performance.
- c. can be used by manufacturing companies but not by service or not-for-profit companies.
- d. All of the above.

3. (LO 1) The advantages of standard costs include all of the following except:

- a. management by exception may be used.

- b. management planning is facilitated.

- c. they may simplify the costing of inventories.

- d. management must use a static budget.

4. (LO 1) Normal standards:

- a. allow for rest periods, machine breakdowns, and setup time.
- b. represent levels of performance under perfect operating conditions.
- c. are rarely used because managers believe they lower workforce morale.
- d. are more likely than ideal standards to result in unethical practices.

5. (LO 1) The setting of standards is:

- a. a managerial accounting decision.

- b. a management decision.
c. a worker decision.
d. preferably set at the ideal level of performance.
- 6. (LO 2)** Each of the following formulas is correct **except**:
- Labor price variance = $(\text{Actual hours} \times \text{Actual rate}) - (\text{Actual hours} \times \text{Standard rate})$.
 - Total overhead variance = Actual overhead – Overhead applied.
 - Materials price variance = $(\text{Actual quantity} \times \text{Actual price}) - (\text{Standard quantity} \times \text{Standard price})$.
 - Labor quantity variance = $(\text{Actual hours} \times \text{Standard rate}) - (\text{Standard hours} \times \text{Standard rate})$.
- 7. (LO 2)** In producing product AA, 6,300 pounds of direct materials were used at a cost of \$1.10 per pound. The standard was 6,000 pounds at \$1.00 per pound. The direct materials quantity variance is:
- \$330 unfavorable.
 - \$300 unfavorable.
 - \$600 unfavorable.
 - \$630 unfavorable.
- 8. (LO 3)** In producing product ZZ, 14,800 direct labor hours were used at a rate of \$8.20 per hour. The standard was 15,000 hours at \$8.00 per hour. Based on these data, the direct labor:
- quantity variance is \$1,600 favorable.
 - quantity variance is \$1,600 unfavorable.
 - price variance is \$3,000 favorable.
 - price variance is \$3,000 unfavorable.
- 9. (LO 3)** Which of the following is **correct** about the total overhead variance?
- Budgeted overhead and overhead applied are the same.
 - Total actual overhead is composed of variable overhead, fixed overhead, and period costs.
 - Standard hours actually worked are used in computing the variance.
 - Standard hours allowed for the work done is the measure used in computing the variance.
- 10. (LO 3)** The formula for computing the total overhead variance is:
- actual overhead less overhead applied.
 - overhead budgeted less overhead applied.
 - actual overhead less overhead budgeted.
 - No correct answer is given.
- 11. (LO 4)** Which of the following is **incorrect** about variance reports?
- They facilitate “management by exception.”
 - They should only be sent to the top level of management.
- c. They should be prepared as soon as possible.
d. They may vary in form, content, and frequency among companies.
- 12. (LO 4)** In using variance reports to evaluate cost control, management normally looks into:
- all variances.
 - favorable variances only.
 - unfavorable variances only.
 - both favorable and unfavorable variances that exceed a predetermined quantitative measure such as a percentage or dollar amount.
- 13. (LO 4)** Generally accepted accounting principles allow a company to:
- report inventory at standard cost but cost of goods sold must be reported at actual cost.
 - report cost of goods sold at standard cost but inventory must be reported at actual cost.
 - report inventory and cost of goods sold at standard cost as long as there are no significant differences between actual and standard cost.
 - report inventory and cost of goods sold only at actual costs; standard costing is never permitted.
- 14. (LO 4)** Which of the following would **not** be an objective used in the customer perspective of the balanced scorecard approach?
- Percentage of customers who would recommend product to a friend.
 - Customer retention.
 - Brand recognition.
 - Earnings per share.
- *15. (LO 5)** Which of the following is **incorrect** about a standard cost accounting system?
- It is applicable to job order costing.
 - It is applicable to process costing.
 - It reports only favorable variances.
 - It keeps separate accounts for each variance.
- *16. (LO 6)** The formula to compute the overhead volume variance is:
- Fixed overhead rate $\times (\text{Standard hours} - \text{Actual hours})$.
 - Fixed overhead rate $\times (\text{Normal capacity hours} - \text{Actual hours})$.
 - Fixed overhead rate $\times (\text{Normal capacity hours} - \text{Standard hours allowed})$.
 - (Variable overhead rate + Fixed overhead rate) $\times (\text{Normal capacity hours} - \text{Standard hours allowed})$.

Solutions

- 1. c.** Budgets are expressed in total amounts, and standards are expressed in unit amounts. The other choices are incorrect because (a) standards, not budgets, may be used in valuing inventories; (b) standards, not budgets, may be journalized and posted; and (d) both budgets and standards contribute to management planning and control.
- 2. b.** Standard costs are predetermined units costs which companies use as measures of performance. The other choices are incorrect because (a) only those that are called regulations are imposed by governmental agencies, (c) standard costs can be used by all types of companies, and (d) choices (a) and (c) are incorrect.
- 3. d.** Standard costs are separate from a static budget. The other choices are all advantages of using standard costs.

- 4. a.** Normal standards allow for rest periods, machine breakdowns, and setup time. The other choices are incorrect because they describe ideal standards, not normal standards.
- 5. b.** Standards are set by management. The other choices are incorrect because setting standards requires input from (a) managerial accountants and (c) sometimes workers, but the final decision is made by management. Choice (d) is incorrect because setting standards at the ideal level of performance is uncommon because of the perceived negative effect on worker morale.
- 6. c.** Materials price variance = $(\text{Actual quantity} \times \text{Actual price}) - (\text{Actual quantity} \times \text{Standard quantity} \times \text{Standard price})$. The other choices are correct formulas.
- 7. b.** The direct materials quantity variance is $(6,300 \times \$1.00) - (6,000 \times \$1.00) = \$300$. This variance is unfavorable because more material was used than prescribed by the standard. The other choices are therefore incorrect.
- 8. a.** The direct labor quantity variance is $(14,800 \times \$8) - (15,000 \times \$8) = \$1,600$. This variance is favorable because fewer labor hours were used than prescribed by the standard. The other choices are therefore incorrect.
- 9. d.** Standard hours allowed for work done is the measure used in computing the variance. The other choices are incorrect because (a) budgeted overhead is used to calculate the predetermined overhead rate while overhead applied is equal to standard hours allowed times the predetermined overhead rate, (b) overhead is a product cost and does not include period costs, and (c) standard hours allowed, not hours actually worked, are used in computing the overhead variance.
- 10. a.** Total overhead variance equals actual overhead less overhead applied. The other choices are therefore incorrect.
- 11. b.** Variance reports should be sent to the level of management responsible for the area in which the variance occurred so it can be remedied as quickly as possible. The other choices are correct statements.
- 12. d.** In using variance reports to evaluate cost control, management normally looks into both favorable and unfavorable variances that exceed a predetermined quantitative measure such as percentage or dollar amount. The other choices are therefore incorrect.
- 13. c.** GAAP allows a company to report both inventory and cost of goods sold at standard cost as long as there are no significant differences between actual and standard cost. The other choices are therefore incorrect.
- 14. d.** Earnings per share is not an objective used in the customer perspective of the balanced scorecard approach. The other choices are all true statements.
- *15. c.** A standard cost accounting system reports both favorable and unfavorable variances. The other choices are all correct statements.
- *16. c.** The formula to compute the overhead volume variance is $\text{Fixed overhead rate} \times (\text{Normal capacity hours} - \text{Standard hours allowed})$. The other choices are therefore incorrect.

Practice Brief Exercises

Set direct materials standard.

- 1. (LO 1)** Castellen Company accumulates the following data concerning raw materials in making one quart of finished product. (1) Price—purchase price \$3.00; terms 2/10, n/30; freight-in \$0.25; and receiving and handling \$0.10. (2) Quantity—required materials 2.7 pounds, allowance for waste and spoilage 0.3 pounds. Compute the following.
- Standard direct materials price per quart.
 - Standard direct materials quantity per quart.
 - Total standard materials cost per quart

Solution

- Standard direct materials price per quart = $(\$3.00 - \$0.06 + \$0.25 + \$0.10) = \$3.29$
- Standard direct materials quantity per quart = $(2.7 + .3) = 3$ pounds
- Standard materials cost per quart = $(\$3.29 \times 3) = \9.71

Compute direct materials variances.

- 2. (LO 2)** Spandrell Company's standard materials cost per unit of output is \$12 (3 pounds \times \$4). During July, the company purchases and uses 5,800 pounds of materials costing \$22,910 in making 2,000 units of finished product. Compute the total, price, and quantity materials variances.

Solution

- Total materials variance = $[(5,800 \times \$3.95*) - (6,000** \times \$4.00)] = \$1,090 \text{ F}$
Materials price variance = $[(5,800 \times \$3.95) - (5,800 \times \$4.00)] = \$290 \text{ F}$
Materials quantity variance $[(5,800 \times \$4.00) - (6,000 \times \$4.00)] = \$800 \text{ F}$
- *\$22,910 \div 5,800; **2,000 \times 3

- 3. (LO 3)** Timemore Company's standard labor cost per unit of output is \$34 (2 hours \times \$17 per hour). During August, the company incurs 1,960 hours of direct labor at an hourly cost of \$17.20 per hour in making 1,000 units of finished product. Compute the total, price, and quantity labor variances.

Compute direct labor variances.

Solution

3. Total labor variance = $[(1,960 \times \$17.20) - (2,000 \times \$17.00)] = \$288 \text{ F}$
 Labor price variance = $[(1,960 \times \$17.20) - (1,960 \times \$17.00)] = \$392 \text{ U}$
 Labor quantity variance = $[(1,960 \times \$17.00) - (2,000 \times \$17.00)] = \$680 \text{ F}$

Practice Exercises

- 1. (LO 2, 3)** Hector Inc., which produces a single product, has prepared the following standard cost sheet for one unit of the product.

Compute materials and labor variances.

Direct materials (6 pounds at \$2.50 per pound)	\$15.00
Direct labor (3.1 hours at \$12.00 per hour)	\$37.20

During the month of April, the company manufactures 250 units and incurs the following actual costs.

Direct materials purchased and used (1,600 pounds)	\$4,192
Direct labor (760 hours)	\$8,740

Instructions

Compute the total, price, and quantity variances for materials and labor.

Solution

1. Total materials variance:

$$\begin{array}{rcl} (\text{AQ} \times \text{AP}) & - & (\text{SQ} \times \text{SP}) \\ (1,600 \times \$2.62^*) & - & (1,500^{**} \times \$2.50) \\ \$4,192 & - & \$3,750 = \$442 \text{ U} \end{array}$$

$*\$4,192 \div 1,600$ $^{**}250 \times 6$

Materials price variance:

$$\begin{array}{rcl} (\text{AQ} \times \text{AP}) & - & (\text{AQ} \times \text{SP}) \\ (1,600 \times \$2.62) & - & (1,600 \times \$2.50) \\ \$4,192 & - & \$4,000 = \$192 \text{ U} \end{array}$$

Materials quantity variance:

$$\begin{array}{rcl} (\text{AQ} \times \text{SP}) & - & (\text{SQ} \times \text{SP}) \\ (1,600 \times \$2.50) & - & (1,500 \times \$2.50) \\ \$4,000 & - & \$3,750 = \$250 \text{ U} \end{array}$$

Total labor variance:

$$\begin{array}{rcl} (\text{AH} \times \text{AR}) & - & (\text{SH} \times \text{SR}) \\ (760 \times \$11.50^*) & - & (775^{**} \times \$12.00) \\ \$8,740 & - & \$9,300 = \$560 \text{ F} \end{array}$$

$*\$8,740 \div 760$ $^{**}250 \times 3.1$

Labor price variance:

$$\begin{array}{rcl} (\text{AH} \times \text{AR}) & - & (\text{AH} \times \text{SR}) \\ (760 \times \$11.50) & - & (760 \times \$12.00) \\ \$8,740 & - & \$9,120 = \$380 \text{ F} \end{array}$$

Labor quantity variance:

$$\begin{array}{rcl} (\text{AH} \times \text{SR}) & - & (\text{SH} \times \text{SR}) \\ (760 \times \$12.00) & - & (775 \times \$12.00) \\ \$9,120 & - & \$9,300 = \$180 \text{ F} \end{array}$$

Compute overhead variances.

- 2. (LO 3)** Manufacturing overhead data for the production of Product H by Yamato Company are as follows.

Overhead incurred for 35,000 actual direct labor hours worked	\$140,000
Overhead rate (variable \$3; fixed \$1) at normal capacity of 36,000 direct labor hours	\$4
Standard hours allowed for work done	34,000

Instructions

Compute the total overhead variance.

Solution

- 2.** Total overhead variance:

$$\begin{array}{rcl} \text{Actual Overhead} & - & \text{Overhead Applied} \\ \$140,000 & - & \$136,000 \\ & & = \$4,000 \text{ U} \\ & & (34,000 \times \$4) \end{array}$$

Practice Problem*Compute variances.*

- (LO 2, 3)** Manlow Company makes a cologne called Allure. The standard cost for one bottle of Allure is as follows.

Manufacturing Cost Elements	Standard		
	<u>Quantity</u>	<u>Price</u>	<u>Cost</u>
Direct materials	6 oz.	× \$ 0.90	= \$ 5.40
Direct labor	0.5 hrs.	× \$12.00	= 6.00
Manufacturing overhead	0.5 hrs.	× \$ 4.80	= 2.40
			<u><u>\$13.80</u></u>

During the month, the following transactions occurred in manufacturing 10,000 bottles of Allure.

1. 58,000 ounces of materials were purchased at \$1.00 per ounce.
2. All the materials purchased were used to produce the 10,000 bottles of Allure.
3. 4,900 direct labor hours were worked at a total labor cost of \$56,350.
4. Variable manufacturing overhead incurred was \$15,000 and fixed overhead incurred was \$10,400.

The manufacturing overhead rate of \$4.80 is based on a normal capacity of 5,200 direct labor hours. The total budget at this capacity is \$10,400 fixed and \$14,560 variable.

Instructions

- a. Compute the total variance and the variances for direct materials and direct labor elements.
- b. Compute the total variance for manufacturing overhead.

Solution

a.

Total Variance

Actual costs incurred	
Direct materials	\$ 58,000
Direct labor	56,350
Manufacturing overhead	25,400
	<u><u>139,750</u></u>
Standard cost (10,000 × \$13.80)	138,000
Total variance	\$ 1,750 U

Direct Materials Variances

Total	= \$58,000 (58,000 × \$1.00)	-	\$54,000 (60,000* × \$0.90)	= \$4,000 U
Price	= \$58,000 (58,000 × \$1.00)	-	\$52,200 (58,000 × \$0.90)	= \$5,800 U
Quantity	= \$52,200 (58,000 × \$0.90)	-	\$54,000 (60,000 × \$0.90)	= \$1,800 F

*10,000 × 6

Direct Labor Variances

Total	= \$56,350 ($4,900 \times \11.50^*)	-	\$60,000 ($5,000^{**} \times \12.00)	=	\$3,650 F
Price	= \$56,350 ($4,900 \times \11.50)	-	\$58,800 ($4,900 \times \12.00)	=	\$2,450 F
Quantity	= \$58,800 ($4,900 \times \12.00)	-	\$60,000 ($5,000 \times \12.00)	=	\$1,200 F

* $56,350 \div 4,900$; ** $10,000 \times 0.5$

b.

Overhead Variance

Total	= \$25,400 ($\$15,000 + \$10,400$)	-	\$24,000 ($5,000 \times \4.80)	=	\$1,400 U
-------	--------------------------------------	---	------------------------------------	---	-----------

WileyPLUS

Brief Exercises, DO IT! Exercises, Exercises, Problems, and many additional resources are available for practice in WileyPLUS.

Note: All asterisked Questions, Exercises, and Problems relate to material in the appendices to the chapter.

Questions

1. a. "Standard costs are the expected total cost of completing a job." Is this correct? Explain.
1. b. "A standard imposed by a governmental agency is known as a regulation." Do you agree? Explain.
2. a. Explain the similarities and differences between standards and budgets.
2. b. Contrast the accounting for standards and budgets.
3. Standard costs facilitate management planning. What are the other advantages of standard costs?
4. Contrast the roles of the management accountant and management in setting standard costs.
5. Distinguish between an ideal standard and a normal standard.
6. What factors should be considered in setting (a) the direct materials price standard and (b) the direct materials quantity standard?
7. "The objective in setting the direct labor quantity standard is to determine the aggregate time required to make one unit of product." Do you agree? What allowances should be made in setting this standard?
8. How is the predetermined overhead rate determined when standard costs are used?
9. What is the difference between a favorable cost variance and an unfavorable cost variance?
10. In each of the following formulas, supply the words that should be inserted for each number in parentheses.
 - a. $(\text{Actual quantity} \times (1)) - (\text{Standard quantity} \times (2)) = \text{Total materials variance}$
 - b. $((3) \times \text{Actual price}) - (\text{Actual quantity} \times (4)) = \text{Materials price variance}$
 - c. $(\text{Actual quantity} \times (5)) - ((6) \times \text{Standard price}) = \text{Materials quantity variance}$
11. In the direct labor variance matrix, there are three factors: (1) Actual hours \times Actual rate, (2) Actual hours \times Standard rate, and (3) Standard hours \times Standard rate. Using the numbers, indicate the formulas for each of the direct labor variances.
12. Mikan Company's standard predetermined overhead rate is \$9 per direct labor hour. For the month of June, 26,000 actual hours were worked, and 27,000 standard hours were allowed. How much overhead was applied?
13. How often should variances be reported to management? What principle may be used with variance reports?
14. What circumstances may cause the purchasing department to be responsible for both an unfavorable materials price variance and an unfavorable materials quantity variance?
15. What are the four perspectives used in the balanced scorecard? Discuss the nature of each, and how the perspectives are linked.
16. Kerry James says that the balanced scorecard was created to replace financial measures as the primary mechanism for performance evaluation. He says that it uses only nonfinancial measures. Is this true?
17. What are some examples of nonfinancial measures used by companies to evaluate performance?
18. (a) How are variances reported in income statements prepared for management? (b) May standard costs be used in preparing financial statements for stockholders? Explain.
19. (a) Explain the basic features of a standard cost accounting system. (b) What type of balance will exist in the variance account when (1) the materials price variance is unfavorable and (2) the labor quantity variance is favorable?
20. If the \$9 per hour overhead rate in Question 12 includes \$5 variable, and actual overhead costs were \$248,000, what is the overhead controllable variance for June? The normal capacity hours were 28,000. Is the variance favorable or unfavorable?
21. What is the purpose of computing the overhead volume variance? What is the basic formula for this variance?
22. Alma Ortiz does not understand why the overhead volume variance indicates that fixed overhead costs are under or overapplied. Clarify this matter for Alma.
23. John Hsu is attempting to outline the important points about overhead variances on a class examination. List four points that John should include in his outline.

Brief Exercises

Distinguish between a standard and a budget.

Set direct materials standard.

Set direct labor standard.

Compute direct materials variances.

Compute direct labor variances.

Compute total overhead variance.

Match balanced scorecard perspectives.

Journalize materials variances.

Journalize labor variances.

Compute the overhead controllable variance.

Compute overhead volume variance.

BE26.1 (LO 1) Lopez Company uses both standards and budgets. For the year, estimated production of Product X is 500,000 units. Total estimated cost for materials and labor are \$1,400,000 and \$1,700,000. Compute the estimates for (a) a standard cost and (b) a budgeted cost.

BE26.2 (LO 1) Tang Company accumulates the following data concerning raw materials in making one gallon of finished product. (1) Price—net purchase price \$2.30, freight-in \$0.20, and receiving and handling \$0.10. (2) Quantity—required materials 3.6 pounds, allowance for waste and spoilage 0.4 pounds. Compute the following.

- Standard direct materials price per gallon.
- Standard direct materials quantity per gallon.
- Total standard materials cost per gallon.

BE26.3 (LO 1) Labor data for making one gallon of finished product in Bing Company are as follows. (1) Price—hourly wage rate \$14.00, payroll taxes \$0.80, and fringe benefits \$1.20. (2) Quantity—actual production time 1.1 hours, rest periods and cleanup 0.25 hours, and setup and downtime 0.15 hours. Compute the following.

- Standard direct labor rate per hour.
- Standard direct labor hours per gallon.
- Standard labor cost per gallon.

BE26.4 (LO 2) Simba Company's standard materials cost per unit of output is \$10 (2 pounds \times \$5). During July, the company purchases and uses 3,200 pounds of materials costing \$16,192 in making 1,500 units of finished product. Compute the total, price, and quantity materials variances.

BE26.5 (LO 3) Mordica Company's standard labor cost per unit of output is \$22 (2 hours \times \$11 per hour). During August, the company incurs 2,150 hours of direct labor at an hourly cost of \$10.80 per hour in making 1,000 units of finished product. Compute the total, price, and quantity labor variances.

BE26.6 (LO 3) In October, Pine Company reports 21,000 actual direct labor hours, and it incurs \$118,000 of manufacturing overhead costs. Standard hours allowed for the work done is 20,600 hours. The predetermined overhead rate is \$6 per direct labor hour. Compute the total overhead variance.

BE26.7 (LO 4) The four perspectives in the balanced scorecard are (1) financial, (2) customer, (3) internal process, and (4) learning and growth. Match each of the following objectives with the perspective it is most likely associated with: (a) plant capacity utilization, (b) employee work days missed due to injury, (c) return on assets, and (d) brand recognition.

***BE26.8 (LO 5)** Journalize the following transactions for Combs Company.

- Purchased 6,000 units of raw materials on account for \$11,500. The standard cost was \$12,000.
- Issued 5,600 units of raw materials for production. The standard units were 5,800.

***BE26.9 (LO 5)** Journalize the following transactions for Shelton, Inc.

- Incurred direct labor costs of \$24,000 for 3,000 hours. The standard labor cost was \$24,900.
- Assigned 3,000 direct labor hours costing \$24,000 to production. Standard hours were 3,150.

***BE26.10 (LO 6)** Some overhead data for Pine Company are given in BE26.6. In addition, the flexible manufacturing overhead budget shows that budgeted costs are \$4 variable per direct labor hour and \$50,000 fixed. Compute the overhead controllable variance.

***BE26.11 (LO 6)** Using the data in BE26.6 and BE26.10, compute the overhead volume variance. Normal capacity was 25,000 direct labor hours.

DO IT! Exercises

Compute standard cost.

DO IT! 26.1 (LO 1) Larkin Company accumulated the following standard cost data concerning product I-Tal.

Direct materials per unit: 2 pounds at \$5 per pound

Direct labor per unit: 0.2 hours at \$16 per hour

Manufacturing overhead: Allocated based on direct labor hours at a predetermined rate of \$20 per direct labor hour

Compute the standard cost of one unit of product I-Tal.

DO IT! 26.2 (LO 2) The standard cost of product 777 includes 2 units of direct materials at \$6.00 per unit. During August, the company bought 29,000 units of materials at \$6.30 and used those materials to produce 16,000 units. Compute the total, price, and quantity variances for materials.

DO IT! 26.3 (LO 3) The standard cost of product 5252 includes 1.9 hours of direct labor at \$14.00 per hour. The predetermined overhead rate is \$22.00 per direct labor hour. During July, the company incurred 4,000 hours of direct labor at an average rate of \$14.30 per hour and \$81,300 of manufacturing overhead costs. It produced 2,000 units.

- Compute the total, price, and quantity variances for labor.
- Compute the total overhead variance.

DO IT! 26.4 (LO 4) Tropic Zone Corporation experienced the following variances: materials price \$350 U, materials quantity \$1,700 F, labor price \$800 F, labor quantity \$500 F, and total overhead \$1,200 U. Sales revenue was \$92,100, and cost of goods sold (at standard) was \$51,600. Determine the actual gross profit.

Compute materials variance.

Compute labor and manufacturing overhead variances.

Prepare variance report.

Exercises

E26.1 (LO 1) Writing Parsons Company is planning to produce 2,000 units of product in 2020. Each unit requires 3 pounds of materials at \$5 per pound and a half-hour of labor at \$16 per hour. The overhead rate is 70% of direct labor.

Compute budget and standard.

Instructions

- Compute the budgeted amounts for 2020 for direct materials to be used, direct labor, and applied overhead.
- Compute the standard cost of one unit of product.
- What are the potential advantages to a corporation of using standard costs?

E26.2 (LO 1) Hank Itzek manufactures and sells homemade wine, and he wants to develop a standard cost per gallon. The following are required for production of a 50-gallon batch.

Compute standard materials costs.

3,000 ounces of grape concentrate at \$0.06 per ounce
54 pounds of granulated sugar at \$0.30 per pound
60 lemons at \$0.60 each
50 yeast tablets at \$0.25 each
50 nutrient tablets at \$0.20 each
2,600 ounces of water at \$0.005 per ounce

Hank estimates that 4% of the grape concentrate is wasted, 10% of the sugar is lost, and 25% of the lemons cannot be used.

Instructions

Compute the standard cost of the ingredients for one gallon of wine. (Carry computations to two decimal places.)

E26.3 (LO 1) Stefani Company has gathered the following information about its product.

Compute standard cost per unit.

Direct materials. Each unit of product contains 4.5 pounds of materials. The average waste and spoilage per unit produced under normal conditions is 0.5 pounds. Materials cost \$5 per pound, but Stefani always takes the 2% cash discount all of its suppliers offer. Freight costs average \$0.25 per pound.

Direct labor. Each unit requires 2 hours of labor. Setup, cleanup, and downtime average 0.4 hours per unit. The average hourly pay rate of Stefani's employees is \$12. Payroll taxes and fringe benefits are an additional \$3 per hour.

Manufacturing overhead. Overhead is applied at a rate of \$7 per direct labor hour.

Instructions

Compute Stefani's total standard cost per unit.

Compute labor cost and labor quantity variance.

E26.4 (LO 1, 3) Service Monte Services, Inc. is trying to establish the standard labor cost of a typical brake repair. The following data have been collected from time and motion studies conducted over the past month.

Actual time spent on the brake repair	1.0 hour
Hourly wage rate	\$12
Payroll taxes	10% of wage rate
Setup and downtime	20% of actual labor time
Cleanup and rest periods	30% of actual labor time
Fringe benefits	25% of wage rate

Instructions

- Determine the standard direct labor hours per brake repair.
- Determine the standard direct labor hourly rate.
- Determine the standard direct labor cost per brake repair.
- If a brake repair took 1.6 hours at the standard hourly rate, what was the direct labor quantity variance?

Compute materials price and quantity variances.

E26.5 (LO 2) The standard cost of Product B manufactured by Pharrell Company includes three units of direct materials at \$5.00 per unit. During June, 29,000 units of direct materials are purchased at a cost of \$4.70 per unit, and 29,000 units of direct materials are used to produce 9,400 units of Product B.

Instructions

- Compute the total materials variance and the price and quantity variances.
- Repeat (a), assuming the purchase price is \$5.15 and the quantity purchased and used is 28,000 units.

Compute labor price and quantity variances.

E26.6 (LO 3) Lewis Company's standard labor cost of producing one unit of Product DD is 4 hours at the rate of \$12.00 per hour. During August, 40,600 hours of labor are incurred at a cost of \$12.15 per hour to produce 10,000 units of Product DD.

Instructions

- Compute the total labor variance.
- Compute the labor price and quantity variances.
- Repeat (b), assuming the standard is 4.1 hours of direct labor at \$12.25 per hour.

Compute materials and labor variances.

E26.7 (LO 2, 3) Levine Inc., which produces a single product, has prepared the following standard cost sheet for one unit of the product.

Direct materials (8 pounds at \$2.50 per pound)	\$20
Direct labor (3 hours at \$12.00 per hour)	\$36

During the month of April, the company manufactures 230 units and incurs the following actual costs.

Direct materials purchased and used (1,900 pounds)	\$5,035
Direct labor (700 hours)	\$8,120

Instructions

Compute the total, price, and quantity variances for materials and labor.

Compute the materials and labor variances and list reasons for unfavorable variances.

E26.8 (LO 2, 3) Writing The following direct materials and direct labor data pertain to the operations of Laurel Company for the month of August.

Costs	Quantities	
Actual labor rate	\$13 per hour	Actual hours incurred and used
Actual materials price	\$128 per ton	Actual quantity of materials purchased and used
Standard labor rate	\$12.50 per hour	Standard hours used
Standard materials price	\$130 per ton	Standard quantity of materials used
		4,150 hours
		1,220 tons
		4,300 hours
		1,200 tons

Instructions

- Compute the total, price, and quantity variances for materials and labor.
- Provide two possible explanations for each of the unfavorable variances calculated above, and suggest where responsibility for the unfavorable result might be placed.

E26.9 (LO 2, 3) You have been given the following information about the production of Usher Co., and are asked to provide the plant manager with information for a meeting with the vice president of operations.

Determine amounts from variance report.

Standard Cost Card	
Direct materials (5 pounds at \$4 per pound)	\$20.00
Direct labor (0.8 hours at \$10)	8.00
Variable overhead (0.8 hours at \$3 per hour)	2.40
Fixed overhead (0.8 hours at \$7 per hour)	5.60
	<hr/>
	\$36.00
	<hr/>

The following is a variance report for the most recent period of operations.

Costs	Total Standard Cost	Variances	
		Price	Quantity
Direct materials	\$410,000	\$2,095 F	\$ 9,000 U
Direct labor	164,000	3,906 U	22,000 U

Instructions

- How many units were produced during the period?
- How many pounds of raw materials were purchased and used during the period?
- What was the actual cost per pound of raw materials?
- How many actual direct labor hours were worked during the period?
- What was the actual rate paid per direct labor hour?

(CGA adapted)

E26.10 (LO 3, 4) During March 2020, Toby Tool & Die Company worked on four jobs. A review of direct labor costs reveals the following summary data.

Prepare a variance report for direct labor.

Job Number	Actual		Standard		Total Variance
	Hours	Costs	Hours	Costs	
A257	221	\$4,420	225	\$4,500	\$ 80 F
A258	450	9,450	430	8,600	850 U
A259	300	6,180	300	6,000	180 U
A260	116	2,088	110	2,200	112 F
Total variance					\$838 U

Analysis reveals that Job A257 was a repeat job. Job A258 was a rush order that required overtime work at premium rates of pay. Job A259 required a more experienced replacement worker on one shift. Work on Job A260 was done for one day by a new trainee when a regular worker was absent.

Instructions

Prepare a report for the plant supervisor on direct labor cost variances for March. The report should have columns for (1) Job No., (2) Actual Hours, (3) Standard Hours, (4) Quantity Variance, (5) Actual Rate, (6) Standard Rate, (7) Price Variance, and (8) Explanation.

E26.11 (LO 3) Manufacturing overhead data for the production of Product H by Shakira Company, assuming the company uses a standard cost system, are as follows.

Compute overhead variance.

Overhead incurred for 52,000 actual direct labor hours worked	\$263,000
Overhead rate (variable \$3; fixed \$2) at normal capacity of 54,000 direct labor hours	\$5
Standard hours allowed for work done	52,000

Instructions

Compute the total overhead variance.

Compute overhead variances.

E26.12 (LO 3) Byrd Company produces one product, a putter called GO-Putter. Byrd uses a standard cost system and determines that it should take one hour of direct labor to produce one GO-Putter. The normal production capacity for this putter is 100,000 units per year. The total budgeted overhead at normal capacity is \$850,000 comprised of \$250,000 of variable costs and \$600,000 of fixed costs. Byrd applies overhead on the basis of direct labor hours.

During the current year, Byrd produced 95,000 putters, worked 94,000 direct labor hours, and incurred variable overhead costs of \$256,000 and fixed overhead costs of \$600,000.

Instructions

- Compute the predetermined variable overhead rate and the predetermined fixed overhead rate.
- Compute the applied overhead for Byrd for the year.
- Compute the total overhead variance.

Compute variances for materials.

E26.13 (LO 2, 3) Writing Celo Company purchased (at a cost of \$10,200) and used 2,400 pounds of materials during May. Celo's standard cost of materials per unit produced is based on 2 pounds per unit at a cost \$5 per pound. Production in May was 1,050 units.

Instructions

- Compute the total, price, and quantity variances for materials.
- Assume Celo also had an unfavorable labor quantity variance. What is a possible scenario that would provide one cause for the variances computed in (a) and the unfavorable labor quantity variance?

Prepare a variance report.

E26.14 (LO 2, 4) Service Picard Landscaping plants grass seed as the basic landscaping for business campuses. During a recent month, the company worked on three projects (Remington, Chang, and Wyco). The company is interested in controlling the materials costs, namely the grass seed, for these plantings projects.

In order to provide management with useful cost control information, the company uses standard costs and prepares monthly variance reports. Analysis reveals that the purchasing agent mistakenly purchased poor-quality seed for the Remington project. The Chang project, however, received higher-than-standard-quality seed that was on sale. The Wyco project received standard-quality seed. However, the price had increased and a new employee was used to spread the seed.

Shown below are quantity and cost data for each project.

Project	Actual		Standard		Total Variance
	Quantity	Costs	Quantity	Costs	
Remington	500 lbs.	\$1,200	460 lbs.	\$1,150	\$ 50 U
Chang	400	920	410	1,025	105 F
Wyco	550	1,430	480	1,200	230 U
Total variance					\$175 U

Instructions

- Prepare a variance report for the purchasing department with the following columns: (1) Project, (2) Actual Pounds Purchased, (3) Actual Price per Pound, (4) Standard Price per Pound, (5) Price Variance, and (6) Explanation.
- Prepare a variance report for the production department with the following columns: (1) Project, (2) Actual Pounds, (3) Standard Pounds, (4) Standard Price per Pound, (5) Quantity Variance, and (6) Explanation.

Complete variance report.

E26.15 (LO 4) Urban Corporation prepared the following variance report.

**Urban Corporation
Variance Report—Purchasing Department
For the Week Ended January 9, 2020**

Type of Materials	Quantity Purchased	Actual Price	Standard Price	Price Variance	Explanation
Rogue11	? lbs.	\$5.20	\$5.00	\$5,500 ?	Price increase
Storm17	7,000 oz.	?	3.30	1,050 U	Rush order
Beast29	22,000 units	0.40	?	660 F	Bought larger quantity

Instructions

Fill in the appropriate amounts or letters for the question marks in the report.

E26.16 (LO 4) Fisk Company uses a standard cost accounting system. During January, the company reported the following manufacturing variances.

Materials price variance	\$1,200 U	Labor quantity variance	\$750 U
Materials quantity variance	800 F	Overhead variance	800 U
Labor price variance	550 U		

In addition, 8,000 units of product were sold at \$8 per unit. Each unit sold had a standard cost of \$5. Selling and administrative expenses were \$8,000 for the month.

Prepare income statement for management.

Instructions

Prepare an income statement for management for the month ended January 31, 2020.

E26.17 (LO 1, 4) The following is a list of terms related to performance evaluation.

Identify performance evaluation terminology.

- | | |
|------------------------------------|---------------------------------|
| 1. Balanced scorecard | 5. Customer perspective |
| 2. Variance | 6. Internal process perspective |
| 3. Learning and growth perspective | 7. Ideal standards |
| 4. Nonfinancial measures | 8. Normal standards |

Instructions

Match each of the following descriptions with one of the terms above.

- a. The difference between total actual costs and total standard costs.
- b. An efficient level of performance that is attainable under expected operating conditions.
- c. An approach that incorporates financial and nonfinancial measures in an integrated system that links performance measurement and a company's strategic goals.
- d. A viewpoint employed in the balanced scorecard to evaluate how well a company develops and retains its employees.
- e. An evaluation tool that is not based on dollars.
- f. A viewpoint employed in the balanced scorecard to evaluate the company from the perspective of those people who buy its products or services.
- g. An optimum level of performance under perfect operating conditions.
- h. A viewpoint employed in the balanced scorecard to evaluate the efficiency and effectiveness of the company's value chain.

E26.18 (LO 4) Indicate which of the four perspectives in the balanced scorecard is most likely associated with the objectives that follow.

Identify balanced scorecard perspectives.

1. Percentage of repeat customers.
2. Number of suggestions for improvement from employees.
3. Contribution margin.
4. Brand recognition.
5. Number of cross-trained employees.
6. Amount of setup time.

E26.19 (LO 4) Indicate which of the four perspectives in the balanced scorecard is most likely associated with the objectives that follow.

Identify balance scorecard perspectives.

1. Ethics violations.
2. Credit rating.
3. Customer retention.
4. Stockouts.
5. Reportable accidents.
6. Brand recognition.

***E26.20 (LO 5)** Vista Company installed a standard cost system on January 1. Selected transactions for the month of January are as follows.

Journalize entries in a standard cost accounting system.

1. Purchased 18,000 units of raw materials on account at a cost of \$4.50 per unit. Standard cost was \$4.40 per unit.
2. Issued 18,000 units of raw materials for jobs that required 17,500 standard units of raw materials.
3. Incurred 15,300 actual hours of direct labor at an actual rate of \$5.00 per hour. The standard rate is \$5.50 per hour. (Credit Factory Wages Payable.)
4. Performed 15,300 hours of direct labor on jobs when standard hours were 15,400.
5. Applied overhead to jobs at the rate of 100% of direct labor cost for standard hours allowed.

Instructions

Journalize the January transactions.

Answer questions concerning missing entries and balances.

***E26.21 (LO 2, 3, 5)** Lopez Company uses a standard cost accounting system. Some of the ledger accounts have been destroyed in a fire. The controller asks your help in reconstructing some missing entries and balances.

Instructions

Answer the following questions.

- a. Materials Price Variance shows a \$2,000 unfavorable balance. Accounts Payable shows \$138,000 of raw materials purchases. What was the amount debited to Raw Materials Inventory for raw materials purchased?
- b. Materials Quantity Variance shows a \$3,000 favorable balance. Raw Materials Inventory shows a zero balance. What was the amount debited to Work in Process Inventory for direct materials used?
- c. Labor Price Variance shows a \$1,500 favorable balance. Factory Labor shows a debit of \$145,000 for wages incurred. What was the amount credited to Factory Wages Payable?
- d. Factory Labor shows a credit of \$145,000 for direct labor used. Labor Quantity Variance shows a \$900 favorable balance. What was the amount debited to Work in Process for direct labor used?
- e. Overhead applied to Work in Process totaled \$165,000. If the total overhead variance was \$1,200 favorable, what was the amount of overhead costs debited to Manufacturing Overhead?

Journalize entries for materials and labor variances.

Compute manufacturing overhead variances and interpret findings.

***E26.22 (LO 5)** Data for Levine Inc. are given in E26.7.

Instructions

Journalize the entries to record the materials and labor variances.

***E26.23 (LO 6) Writing** The information shown below was taken from the annual manufacturing overhead cost budget of Connick Company.

Variable manufacturing overhead costs	\$34,650
Fixed manufacturing overhead costs	\$19,800
Normal production level in labor hours	16,500
Normal production level in units	4,125
Standard labor hours per unit	4

During the year, 4,050 units were produced, 16,100 hours were worked, and the actual manufacturing overhead was \$55,500. Actual fixed manufacturing overhead costs equaled budgeted fixed manufacturing overhead costs. Overhead is applied on the basis of direct labor hours.

Instructions

- a. Compute the total, fixed, and variable predetermined manufacturing overhead rates.
- b. Compute the total, controllable, and volume overhead variances.
- c. Briefly interpret the overhead controllable and volume variances computed in (b).

Compute overhead variances.

***E26.24 (LO 6) Service** The loan department of Calgary Bank uses standard costs to determine the overhead cost of processing loan applications. During the current month, a fire occurred, and the accounting records for the department were mostly destroyed. The following data were salvaged from the ashes.

Standard variable overhead rate per hour	\$9
Standard hours per application	2
Standard hours allowed	2,000
Standard fixed overhead rate per hour	\$6
Actual fixed overhead cost	\$12,600
Variable overhead budget based on standard hours allowed	\$18,000
Fixed overhead budget	\$12,600
Overhead controllable variance	\$ 1,200 U

Instructions

- a. Determine the following.
1. Total actual overhead cost.
 2. Actual variable overhead cost.
 3. Variable overhead costs applied.
 4. Fixed overhead costs applied.
 5. Overhead volume variance.
- b. Determine how many loans were processed.

***E26.25 (LO 6)** Seacrest Company's overhead rate was based on estimates of \$200,000 for overhead costs and 20,000 direct labor hours. Seacrest's standards allow 2 hours of direct labor per unit produced. Production in May was 900 units, and actual overhead incurred in May was \$19,500. The overhead budgeted for 1,800 standard direct labor hours is \$17,600 (\$5,000 fixed and \$12,600 variable).

Compute variances.

Instructions

- a. Compute the total, controllable, and volume variances for overhead.
- b. What are possible causes of the variances computed in part (a)?

Problems: Set A

P26.1A (LO 2, 3) Rogen Corporation manufactures a single product. The standard cost per unit of product is shown below. *Compute variances.*

Direct materials—1 pound plastic at \$7.00 per pound	\$ 7.00
Direct labor—1.6 hours at \$12.00 per hour	19.20
Variable manufacturing overhead	12.00
Fixed manufacturing overhead	4.00
Total standard cost per unit	<u><u>\$42.20</u></u>

The predetermined manufacturing overhead rate is \$10 per direct labor hour ($\$16.00 \div 1.6$). It was computed from a master manufacturing overhead budget based on normal production of 8,000 direct labor hours (5,000 units) for the month. The master budget showed total variable costs of \$60,000 (\$7.50 per hour) and total fixed overhead costs of \$20,000 (\$2.50 per hour). Actual costs for October in producing 4,800 units were as follows.

Direct materials (5,100 pounds)	\$ 36,720
Direct labor (7,400 hours)	92,500
Variable overhead	59,700
Fixed overhead	21,000
Total manufacturing costs	<u><u>\$209,920</u></u>

The purchasing department buys the quantities of raw materials that are expected to be used in production each month. Raw materials inventories, therefore, can be ignored.

Instructions

- a. Compute all of the materials and labor variances. a. MPV \$1,020 U
- b. Compute the total overhead variance.

Compute variances, and prepare income statement.

P26.2A (LO 2, 3, 4) Ayala Corporation accumulates the following data relative to jobs started and finished during the month of June 2020.

Costs and Production Data	<u>Actual</u>	<u>Standard</u>
Raw materials unit cost	\$2.25	\$2.10
Raw materials units	10,600	10,000
Direct labor payroll	\$120,960	\$120,000
Direct labor hours	14,400	15,000
Manufacturing overhead incurred	\$189,500	
Manufacturing overhead applied		\$193,500
Machine hours expected to be used at normal capacity		42,500
Budgeted fixed overhead for June		\$55,250
Variable overhead rate per machine hour		\$3.00
Fixed overhead rate per machine hour		\$1.30

Overhead is applied on the basis of standard machine hours. Three hours of machine time are required for each direct labor hour. The jobs were sold for \$400,000. Selling and administrative expenses were \$40,000. Assume that the amount of raw materials purchased equaled the amount used.

Instructions

a. LQV \$4,800 F

- a. Compute all of the variances for (1) direct materials and (2) direct labor.
- b. Compute the total overhead variance.
- c. Prepare an income statement for management. (Ignore income taxes.)

Compute and identify significant variances.

P26.3A (LO 2, 3, 4) Writing Rudd Clothiers is a small company that manufactures tall-men's suits. The company has used a standard cost accounting system. In May 2020, 11,250 suits were produced. The following standard and actual cost data applied to the month of May when normal capacity was 14,000 direct labor hours. All materials purchased were used.

Cost Element	Standard (per unit)	Actual
Direct materials	8 yards at \$4.40 per yard	\$375,575 for 90,500 yards (\$4.15 per yard)
Direct labor	1.2 hours at \$13.40 per hour	\$200,925 for 14,250 hours (\$14.10 per hour)
Overhead	1.2 hours at \$6.10 per hour (fixed \$3.50; variable \$2.60)	\$49,000 fixed overhead \$37,000 variable overhead

Overhead is applied on the basis of direct labor hours. At normal capacity, budgeted fixed overhead costs were \$49,000, and budgeted variable overhead was \$36,400.

Instructions

a. MPV \$22,625 F

- a. Compute the total, price, and quantity variances for (1) materials and (2) labor.
- b. Compute the total overhead variance.
- c. Which of the materials and labor variances should be investigated if management considers a variance of more than 4% from standard to be significant?

Answer questions about variances.

P26.4A (LO 2, 3) Kansas Company uses a standard cost accounting system. In 2020, the company produced 28,000 units. Each unit took several pounds of direct materials and 1.6 standard hours of direct labor at a standard hourly rate of \$12.00. Normal capacity was 50,000 direct labor hours. During the year, 117,000 pounds of raw materials were purchased at \$0.92 per pound. All materials purchased were used during the year.

Instructions

b. 4.0 pounds

- a. If the materials price variance was \$3,510 favorable, what was the standard materials price per pound?
- b. If the materials quantity variance was \$4,750 unfavorable, what was the standard materials quantity per unit?
- c. What were the standard hours allowed for the units produced?
- d. If the labor quantity variance was \$7,200 unfavorable, what were the actual direct labor hours worked?
- e. If the labor price variance was \$9,080 favorable, what was the actual rate per hour?

- f. If total budgeted manufacturing overhead was \$360,000 at normal capacity, what was the predetermined overhead rate?
- g. What was the standard cost per unit of product?
- h. How much overhead was applied to production during the year?
- i. Using one or more answers above, what were the total costs assigned to work in process?

f. \$7.20 per DLH

P26.5A (LO 2, 3, 4) Service Writing Hart Labs, Inc. provides mad cow disease testing for both state and federal governmental agricultural agencies. Because the company's customers are governmental agencies, prices are strictly regulated. Therefore, Hart Labs must constantly monitor and control its testing costs. Shown below are the standard costs for a typical test.

Direct materials (2 test tubes @ \$1.46 per tube)	\$ 2.92
Direct labor (1 hour @ \$24 per hour)	24.00
Variable overhead (1 hour @ \$6 per hour)	6.00
Fixed overhead (1 hour @ \$10 per hour)	10.00
Total standard cost per test	<u><u>\$42.92</u></u>

Compute variances, prepare an income statement, and explain unfavorable variances.

The lab does not maintain an inventory of test tubes. As a result, the tubes purchased each month are used that month. Actual activity for the month of November 2020, when 1,475 tests were conducted, resulted in the following.

Direct materials (3,050 test tubes)	\$ 4,270
Direct labor (1,550 hours)	35,650
Variable overhead	7,400
Fixed overhead	15,000

Monthly budgeted fixed overhead is \$14,000. Revenues for the month were \$75,000, and selling and administrative expenses were \$5,000.

Instructions

- a. Compute the price and quantity variances for direct materials and direct labor.
- b. Compute the total overhead variance.
- c. Prepare an income statement for management.
- d. Provide possible explanations for each unfavorable variance.

a. LQV \$1,800 U

***P26.6A (LO 2, 3, 4, 5)** Jorgensen Corporation uses standard costs with its job order cost accounting system. In January, an order (Job No. 12) for 1,900 units of Product B was received. The standard cost of one unit of Product B is as follows.

Direct materials	3 pounds at \$1.00 per pound	\$ 3.00
Direct labor	1 hour at \$8.00 per hour	8.00
Overhead	2 hours (variable \$4.00 per machine hour; fixed \$2.25 per machine hour)	12.50
Standard cost per unit		<u><u>\$23.50</u></u>

Journalize and post standard cost entries, and prepare income statement.

Normal capacity for the month was 4,200 machine hours. During January, the following transactions applicable to Job No. 12 occurred.

1. Purchased 6,200 pounds of raw materials on account at \$1.05 per pound.
2. Requisitioned 6,200 pounds of raw materials for Job No. 12.
3. Incurred 2,000 hours of direct labor at a rate of \$7.80 per hour.
4. Worked 2,000 hours of direct labor on Job No. 12.
5. Incurred manufacturing overhead on account \$25,000.
6. Applied overhead to Job No. 12 on basis of standard machine hours allowed.
7. Completed Job No. 12.
8. Billed customer for Job No. 12 at a selling price of \$65,000.

Instructions

- a. Journalize the transactions.
- b. Post to the job order cost accounts.

- d. NI \$15,890
- c. Prepare the entry to recognize the total overhead variance.
 - d. Prepare the January 2020 income statement for management. Assume selling and administrative expenses were \$2,000.

Compute overhead controllable and volume variances.

***P26.7A (LO 6)** Using the information in P26.1A, compute the overhead controllable variance and the overhead volume variance.

Compute overhead controllable and volume variances.

***P26.8A (LO 6)** Using the information in P26.2A, compute the overhead controllable variance and the overhead volume variance.

Compute overhead controllable and volume variances.

***P26.9A (LO 6)** Using the information in P26.3A, compute the overhead controllable variance and the overhead volume variance.

Compute overhead controllable and volume variances.

***P26.10A (LO 6)** Using the information in P26.5A, compute the overhead controllable variance and the overhead volume variance.

Continuing Cases

Current Designs

CD26 The executive team at **Current Designs** has gathered to evaluate the company's operations for the last month. One of the topics on the agenda is the special order from Huegel Hollow, which was presented in CD2. Recall that Current Designs had a special order to produce a batch of 20 kayaks for a client, and you were asked to determine the cost of the order and the cost per kayak.

Mike Cichanowski asked the others if the special order caused any particular problems in the production process. Dave Thill, the production manager, made the following comments: "Since we wanted to complete this order quickly and make a good first impression on this new customer, we had some of our most experienced type I workers run the rotomold oven and do the trimming. They were very efficient and were able to complete that part of the manufacturing process even more quickly than the regular crew. However, the finishing on these kayaks required a different technique than what we usually use, so our type II workers took a little longer than usual for that part of the process."

Deb Welch, who is in charge of the purchasing function, said, "We had to pay a little more for the polyethylene powder for this order because the customer wanted a color that we don't usually stock. We also ordered a little extra since we wanted to make sure that we had enough to allow us to calibrate the equipment. The calibration was a little tricky, and we used all of the powder that we had purchased. Since the number of kayaks in the order was fairly small, we were able to use some rope and other parts that were left over from last year's production in the finishing kits. We've seen a price increase for these components in the last year, so using the parts that we already had in inventory cut our costs for the finishing kits."

Instructions

- a. Based on the comments above, predict whether each of the following variances will be favorable or unfavorable. If you don't have enough information to make a prediction, use "NEI" to indicate "Not Enough Information."

- | | |
|---|---|
| 1. Quantity variance for polyethylene powder. | 5. Quantity variance for type I workers. |
| 2. Price variance for polyethylene powder. | 6. Price variance for type I workers. |
| 3. Quantity variance for finishing kits. | 7. Quantity variance for type II workers. |
| 4. Price variance for finishing kits. | 8. Price variance for type II workers. |

- b. Diane Buswell examined some of the accounting records and reported that Current Designs purchased 1,200 pounds of pellets for this order at a total cost of \$2,040. Twenty (20) finishing kits were assembled at a total cost of \$3,240. The payroll records showed that the type I employees worked 38 hours on this project at a total cost of \$570. The type II finishing employees worked 65 hours at a total cost of \$796.25. A total of 20 kayaks were produced for this order.

The standards that had been developed for this model of kayak were used in CD2 and are reproduced here. For each kayak:

54 pounds of polyethylene powder at \$1.50 per pound

1 finishing kit (rope, seat, hardware, etc.) at \$170

2 hours of type I labor from people who run the oven and trim the plastic at a standard wage rate of \$15 per hour

3 hours of type II labor from people who attach the hatches and seat and other hardware at a standard wage rate of \$12 per hour.

Calculate the eight variances that are listed in part (a) of this problem.

Waterways

(This is a continuation of the Waterways case from Chapters 19–25.)

WP26 Waterways Corporation uses very stringent standard costs in evaluating its manufacturing efficiency. These standards are not “ideal” at this point, but management is working toward that as a goal. This problem asks you to calculate and evaluate the company’s variances.

Go to WileyPLUS for complete case details and instructions.

Expand Your Critical Thinking

Decision-Making Across the Organization

CT26.1 Service Milton Professionals, a management consulting firm, specializes in strategic planning for financial institutions. James Hahn and Sara Norton, partners in the firm, are assembling a new strategic planning model for use by clients. The model is designed for use on most personal computers and replaces a rather lengthy manual model currently marketed by the firm. To market the new model, James and Sara will need to provide clients with an estimate of the number of labor hours and computer time needed to operate the model. The model is currently being test-marketed at five small financial institutions. These financial institutions are listed below, along with the number of combined computer/labor hours used by each institution to run the model one time.

Financial Institutions	Computer/Labor Hours Required
Midland National	25
First State	45
Financial Federal	40
Pacific America	30
Lakeview National	30
Total	170
Average	34

Any company that purchases the new model will need to purchase user manuals for the system. User manuals will be sold to clients in cases of 20, at a cost of \$320 per case. One manual must be used each time the model is run because each manual includes a nonreusable computer-accessed password for operating the system. Also required are specialized computer forms that are sold only by Milton. The specialized forms are sold in packages of 250, at a cost of \$60 per package. One application of the model requires the use of 50 forms. This amount includes two forms that are generally wasted in each application due to printer alignment errors. The overall cost of the strategic planning model to clients is \$12,000. Most clients will use the model four times annually.

Milton must provide its clients with estimates of ongoing costs incurred in operating the new planning model, and would like to do so in the form of standard costs.

Instructions

With the class divided into groups, answer the following.

- a. What factors should be considered in setting a standard for computer/labor hours?
- b. What alternatives for setting a standard for computer/labor hours might be used?
- c. What standard for computer/labor hours would you select? Justify your answer.
- d. Determine the standard materials cost associated with the user manuals and computer forms for each application of the strategic planning model.

Managerial Analysis

***CT26.2** Ana Carillo and Associates is a medium-sized company located near a large metropolitan area in the Midwest. The company manufactures cabinets of mahogany, oak, and other fine woods for use in expensive homes, restaurants, and hotels. Although some of the work is custom, many of the cabinets are a standard size.

One such non-custom model is called Luxury Base Frame. Normal production is 1,000 units. Each unit has a direct labor hour standard of 5 hours. Overhead is applied to production based on standard direct labor hours. During the most recent month, only 900 units were produced; 4,500 direct labor hours were allowed for standard production, but only 4,000 hours were used. Standard and actual overhead costs were as follows.

	Standard (1,000 units)	Actual (900 units)
Indirect materials	\$ 12,000	\$ 12,300
Indirect labor	43,000	51,000
(Fixed) Manufacturing supervisors salaries	22,500	22,000
(Fixed) Manufacturing office employees salaries	13,000	12,500
(Fixed) Engineering costs	27,000	25,000
Computer costs	10,000	10,000
Electricity	2,500	2,500
(Fixed) Manufacturing building depreciation	8,000	8,000
(Fixed) Machinery depreciation	3,000	3,000
(Fixed) Trucks and forklift depreciation	1,500	1,500
Small tools	700	1,400
(Fixed) Insurance	500	500
(Fixed) Property taxes	300	300
Total	<u>\$144,000</u>	<u>\$150,000</u>

Instructions

- Determine the overhead application rate.
- Determine how much overhead was applied to production.
- Calculate the total overhead variance, controllable variance, and volume variance.
- Decide which overhead variances should be investigated.
- Discuss causes of the overhead variances. What can management do to improve its performance next month?

Real-World Focus

CT26.3 Glassmaster Company is organized as two divisions and one subsidiary. One division focuses on the manufacture of filaments such as fishing line and sewing thread; the other division manufactures antennas and specialty fiberglass products. Its subsidiary manufactures flexible steel wire controls and molded control panels.

The annual report of Glassmaster provides the following information.

Glassmaster Company

Management Discussion

Gross profit margins for the year improved to 20.9% of sales compared to last year's 18.5%. All operations reported improved margins due in large part to improved operating efficiencies as a result of cost reduction measures implemented during the second and third quarters of the fiscal year and increased manufacturing throughout due to higher unit volume sales. Contributing to the improved margins was a favorable materials price variance due to competitive pricing by suppliers as a result of soft demand for petrochemical-based products. This favorable variance is temporary and will begin to reverse itself as stronger worldwide demand for commodity products improves in tandem with the economy. Partially offsetting these positive effects on profit margins were competitive pressures on sales prices of certain product lines. The company responded with pricing strategies designed to maintain and/or increase market share.

Instructions

- a. Is it apparent from the information whether Glassmaster utilizes standard costs?
- b. Do you think the price variance experienced should lead to changes in standard costs for the next fiscal year?

CT26.4 Service The **Balanced Scorecard Institute** is a great resource for information about implementing the balanced scorecard. One item of interest provided at its website is an example of a balanced scorecard for a regional airline.

Instructions

Go to the Balanced Scorecard Institute website, do a search on “Examples and Success Stories,” scroll down to select the Regional Airline example under Commercial Organizations, and then answer the following questions.

- a. What are the objectives identified for the airline for each perspective?
- b. What measures are used for the objectives in the customer perspective?
- c. What initiatives are planned to achieve the objective in the learning perspective?

Communication Activity

CT26.5 The setting of standards is critical to the effective use of standards in evaluating performance.

Instructions

Explain the following in a memo to your instructor.

- a. The comparative advantages and disadvantages of ideal versus normal standards.
- b. The factors that should be included in setting the price and quantity standards for direct materials, direct labor, and manufacturing overhead.

Ethics Case

CT26.6 At Symond Company, production workers in the Painting Department are paid on the basis of productivity. The labor time standard for a unit of production is established through periodic time studies conducted by Douglas Management Consultants. In a time study, the actual time required to complete a specific task by a worker is observed. Allowances are then made for preparation time, rest periods, and cleanup time. Bill Carson is one of several veterans in the Painting Department.

Bill is informed by Douglas that he will be used in the time study for the painting of a new product. The findings will be the basis for establishing the labor time standard for the next 6 months. During the test, Bill deliberately slows his normal work pace in an effort to obtain a labor time standard that will be easy to meet. Because it is a new product, the Douglas representative who conducted the test is unaware that Bill did not give the test his best effort.

Instructions

- a. Who was benefited and who was harmed by Bill’s actions?
- b. Was Bill ethical in the way he performed the time study test?
- c. What measure(s) might the company take to obtain valid data for setting the labor time standard?

All About You

CT26.7 From the time you first entered school many years ago, instructors have been measuring and evaluating you by imposing standards. In addition, many of you will pursue professions that administer professional examinations to attain recognized certification. A federal commission presented proposals suggesting all public colleges and universities should require standardized tests to measure their students’ learning.

Instructions

Do an Internet search on “Union Tribune U.S. panel endorses standards for college,” read the **San Diego Union-Tribune** article, and then answer the following questions.

- a. What areas of concern did the panel’s recommendations address?
- b. What are possible advantages of standard testing?
- c. What are possible disadvantages of standard testing?
- d. Would you be in favor of standardized tests?

Considering Your Costs and Benefits

CT26.8 Do you think that standard costs are used only in making products like wheel bearings and hamburgers? Think again. Standards influence virtually every aspect of our lives. For example, the next time you call to schedule an appointment with your doctor, ask the receptionist how many minutes the appointment is scheduled for. Doctors are under increasing pressure to see more patients each day, which means the time spent with each patient is shorter. As insurance companies and employers push for reduced medical costs, every facet of medicine has been standardized and analyzed. Doctors, nurses, and other medical staff are evaluated in every part of their operations to ensure maximum efficiency. While keeping medical treatment affordable seems like a worthy goal, what are the potential implications for the quality of health care? Does a focus on the bottom line result in a reduction in the quality of health care?

A simmering debate has centered on a very basic question: To what extent should accountants, through financial measures, influence the type of medical care that you receive? Suppose that your local medical facility is in danger of closing because it has been losing money. Should the facility put in place incentives that provide bonuses to doctors if they meet certain standard-cost targets for the cost of treating specific ailments?

YES: If the facility is in danger of closing, then someone should take steps to change the medical practices to reduce costs. A closed medical facility is of no use to me, my family, or the community.

NO: I don't want an accountant deciding the right medical treatment for me. My family and I deserve the best medical care.

Instructions

Write a response indicating your position regarding this situation. Provide support for your view.

Planning for Capital Investments

Chapter Preview

Companies like **Holland America Line** (as discussed in the following Feature Story) must constantly determine how to invest their resources. Other examples: **Dell** announced plans to spend \$1 billion on data centers for cloud computing. **ExxonMobil** announced that two wells off the Brazilian coast, which it had spent hundreds of millions of dollars to drill, would produce no oil. **Renault** and **Nissan** spent over \$5 billion during a nearly 20-year period to develop electric cars, such as the Leaf.

The process of making such capital expenditure decisions is referred to as **capital budgeting**. Capital budgeting involves choosing among various capital projects to find those that will maximize a company's return on its financial investment. The purpose of this chapter is to discuss the various techniques used to make effective capital budgeting decisions.

Feature Story

Floating Hotels

Do you own a boat? Maybe you think it's a nice boat, but how many swimming pools, movie theaters, shopping malls, or restaurants does it have on board? If you are in the cruise-line business, like **Holland America Line**, you need all of these amenities and more just to stay afloat. Holland America Line is considered by many to be the leader of the premium luxury-liner segment.

Carnival Corporation, which owns Holland America Line and other cruise lines, is one of the largest vacation companies in the world. During one recent three-year period, Carnival spent more than \$3 billion per year on capital expenditures. That's a big number, but keep in mind that Carnival estimates that at any given time there are 270,000 people (200,000 customers and 70,000 crew) on its 100 ships somewhere in the world.

The cruise industry is a tricky business. When times are good, customers are looking for ways to splurge. But when times get tough, people are more inclined to take a trip in a minivan than a luxury yacht. So, if you are a cruise line executive, it's important to time your investment properly. For example, during one stretch of solid global economic growth, many cruise lines decided to add capacity. The industry built 14 new ships at a total price of \$4.7 billion. (That's an average price of about \$330 million.) But, it takes up to three years to build one of these giant vessels. Unfortunately, by the time the ships were completed, the economy was in a nose-dive.

To maintain passenger numbers during the recession, cruise prices had to be cut by up to 40%. While the lower prices attracted lots of customers, that wasn't enough to offset an overall decline in revenue of 10%. The industry had added capacity at just the wrong time.

Watch the *Holland America Line* video in WileyPLUS to learn more about real-world capital budgeting.

Capital Budgeting and Cash Payback

LEARNING OBJECTIVE 1

Describe capital budgeting inputs and apply the cash payback technique.

Many companies follow a carefully prescribed capital budgeting process similar to the following. At least once a year, top management requests proposals for projects from departments, plants, and authorized personnel. A capital budgeting committee screens the proposals and submits its findings to the officers of the company. The officers select the projects they believe to be most worthy of funding. They submit this list of projects to the board of directors. Ultimately, the directors approve the capital expenditure budget for the year. **Illustration 27.1** shows this process.

ILLUSTRATION 27.1 Corporate capital budget authorization process

The involvement of top management and the board of directors in the process demonstrates the importance of capital budgeting decisions. These decisions often have a significant impact on a company's future profitability. In fact, poor capital budgeting decisions can cost a lot of money. Such decisions have even led to the bankruptcy of some companies.

Cash Flow Information

In this chapter, we look at several methods that help companies make effective capital budgeting decisions. Most of these methods employ **cash flow numbers**, rather than accrual accounting revenues and expenses. Remember from your financial accounting course that accrual accounting records **revenues** and **expenses**, rather than cash inflows and cash outflows. In fact, revenues and expenses measured during a period often differ significantly from their cash flow counterparts. Accrual accounting has advantages over cash accounting in many contexts. **For purposes of capital budgeting, though, estimated cash inflows and outflows are the preferred inputs.** Why? Because ultimately the value of all financial investments is determined by the value of cash flows received and paid.

Sometimes cash flow information is not available. In this case, companies can make adjustments to accrual accounting numbers to estimate cash flow. Often, they estimate net annual cash flow by adding back depreciation expense to net income. Depreciation expense is added back because it is an expense that does not require an outflow of cash. By adding depreciation expense back to net income, companies approximate net annual cash flow. Suppose, for

example, that Reno Company's net income of \$13,000 includes a charge for depreciation expense of \$26,000. Its estimated net annual cash flow would be \$39,000 ($\$13,000 + \$26,000$).

Illustration 27.2 lists some typical cash outflows and inflows related to equipment purchase and replacement.

ILLUSTRATION 27.2

Typical cash flows relating to capital budgeting decisions

Cash Outflows

Initial investment
Repairs and maintenance
Increased operating costs
Overhaul of equipment

Cash Inflows

Proceeds from sale of old equipment
Increased cash received from customers
Reduced cash outflows related to operating costs
Salvage value of equipment

These cash flows are the inputs that are considered relevant in capital budgeting decisions.

The capital budgeting decision, under any technique, depends in part on a variety of considerations:

- **The availability of funds:** Does the company have unlimited funds, or will it have to ration capital investments?
- **Relationships among proposed projects:** Are proposed projects independent of each other, or does the acceptance or rejection of one depend on the acceptance or rejection of another?
- **The company's basic decision-making approach:** Does the company want to produce an accept-reject decision or a ranking of desirability among possible projects?
- **The risk associated with a particular project:** How certain are the projected returns? The certainty of estimates varies with such issues as market considerations or the length of time before returns are expected.

Illustrative Data

To compare the results of the various capital budgeting techniques, we use a continuing example. Assume that Stewart Shipping Company is considering an investment of \$130,000 in new equipment. The new equipment is expected to last 10 years. It is estimated to have a zero salvage value at the end of its useful life. The expected annual cash inflows are \$200,000, and the annual cash outflows are \$176,000. **Illustration 27.3** summarizes these data.

ILLUSTRATION 27.3

Investment information for Stewart Shipping example

Initial investment	\$130,000
Estimated useful life	10 years
Estimated salvage value	-0-
Estimated annual cash flows	
Cash inflows from customers	\$200,000
Cash outflows for operating costs	<u>176,000</u>
Net annual cash flow	<u><u>\$ 24,000</u></u>

In the following two sections, we examine two popular techniques for evaluating capital investments: cash payback and the net present value method.

Cash Payback

The **cash payback technique** identifies the time period required to recover the cost of the capital investment from the net annual cash flow produced by the investment. **Illustration 27.4**

presents the formula for computing the cash payback period assuming equal annual cash flows.

Cost of Capital Investment	÷	Net Annual Cash Flow	=	Cash Payback Period
-----------------------------------	---	-----------------------------	---	----------------------------

ILLUSTRATION 27.4
Cash payback formula

The cash payback period in the Stewart Shipping example is 5.42 years, computed as follows (see **Helpful Hint**).

$$\$130,000 \div \$24,000 = 5.42 \text{ years}$$

The evaluation of the payback period is often related to the expected useful life of the asset. For example, assume that at Stewart Shipping a project is unacceptable if the payback period is longer than 60% of the asset's expected useful life. The 5.42-year payback period is 54.2% ($5.42 \div 10$) of the project's expected useful life. Thus, the project is acceptable.

It follows that when the payback technique is used to decide among acceptable alternative projects, **the shorter the payback period, the more attractive the investment**. This is true for two reasons: First, the earlier the investment is recovered, the sooner the company can use the cash funds for other purposes. Second, the risk of loss from obsolescence and changed economic conditions is less in a shorter payback period.

The preceding computation of the cash payback period assumes **equal** net annual cash flows in each year of the investment's life. In many cases, this assumption is not valid. In the case of **uneven** net annual cash flows, the company determines the cash payback period **when the cumulative net cash flows from the investment equal the cost of the investment**.

To illustrate, assume that Chen Company proposes an investment in a new website that is estimated to cost \$300,000. **Illustration 27.5** shows the proposed investment cost, net annual cash flows, cumulative net cash flows, and the cash payback period.

Year	Investment	Net Annual Cash Flow	Cumulative Net Cash Flow
0	\$300,000		
1		\$ 60,000	\$ 60,000
2		90,000	150,000
3		90,000	240,000
4		120,000	360,000
5		100,000	460,000

Cash payback period = 3.5 years

ILLUSTRATION 27.5
Computation of cash payback period—unequal cash flows

As Illustration 27.5 shows, at the end of year 3, cumulative net cash flow of \$240,000 is less than the investment cost of \$300,000, but at the end of year 4 the cumulative cash inflow of \$360,000 exceeds the investment cost. The cash flow needed in year 4 to equal the investment cost is \$60,000 ($\$300,000 - \$240,000$). Assuming the cash inflow occurred evenly during year 4, we divide \$60,000 by the net annual cash flow in year 4 (\$120,000) to determine the point during the year when the cash payback occurs. Thus, we get 0.50 ($\$60,000/\$120,000$), or half of the year, and the cash payback period is 3.5 years.

The cash payback technique may be useful as an initial screening tool. It may be the most critical factor in the capital budgeting decision for a company that desires a fast turnaround of its investment because of a weak cash position. It also is relatively easy to compute and understand.

However, cash payback should not ordinarily be the only basis for the capital budgeting decision because it **ignores the expected profitability of the project**. To illustrate, assume that Projects A and B have the same payback period, but Project A's useful life is double the useful life of Project B. Project A's earning power, therefore, is twice as long as Project B's. A further—and major—disadvantage of this technique is that it **ignores the time value of money**. We address time value of money with the approach described in the next section.

HELPFUL HINT

Net annual cash flow can also be approximated by “Net cash provided by operating activities” from the statement of cash flows.

DO IT! 1 | Cash Payback Period

Watertown Paper Corporation is considering adding another machine for the manufacture of corrugated cardboard. The machine would cost \$900,000. It would have an estimated life of 6 years and no salvage value. The company estimates that annual cash inflows would increase by \$400,000 and that annual cash outflows would increase by \$190,000. Compute the cash payback period.

Solution

Estimated annual cash inflows	\$400,000
Estimated annual cash outflows	190,000
Net annual cash flow	<u><u>\$210,000</u></u>

$$\text{Cash payback period} = \$900,000/\$210,000 = 4.3 \text{ years}$$

ACTION PLAN

- Annual cash inflows – Annual cash outflows = Net annual cash flow.
- Cash payback period = Cost of capital investment/Net annual cash flow.

Related exercise material: **BE27.1** and **DO IT! 27.1**.

Net Present Value Method

LEARNING OBJECTIVE 2

Use the net present value method.

The time value of money can have a significant impact on a capital budgeting decision. Cash flows that occur early in the life of an investment are worth more than those that occur later—because of the time value of money. Therefore, it is useful to recognize the timing of cash flows when evaluating projects.

Capital budgeting techniques that take into account both the time value of money and the estimated net cash flows from an investment are called **discounted cash flow techniques**. They are generally recognized as the most informative and best conceptual approaches to making capital budgeting decisions. The expected net cash flow used in discounting cash flows consists of the annual net cash flows plus the estimated liquidation proceeds (salvage value) when the asset is sold for salvage at the end of its useful life.

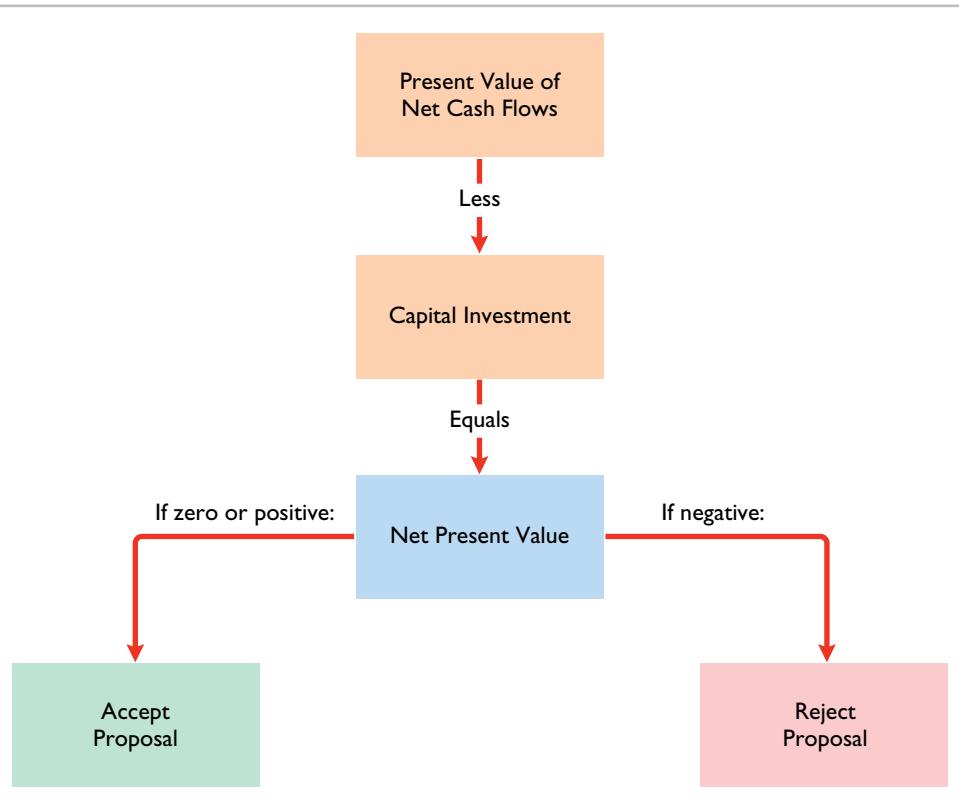

The primary discounted cash flow technique is the **net present value method**. A second method, discussed later in the chapter, is the **internal rate of return**. At this point, we recommend that you examine Appendix G to review the time value of money concepts upon which these methods are based. Also, the Excel tutorial provided in WileyPLUS for this chapter demonstrates the use of the NPV (net present value) and IRR (internal rate of return) functions in Excel.

The **net present value (NPV) method** involves discounting net cash flows to their present value and then comparing that present value with the capital outlay required by the investment. The difference between these two amounts is referred to as **net present value (NPV)**. Company management determines what interest rate to use in discounting the future net cash flows. This rate, often referred to as the **discount rate** or **required rate of return**, is discussed in a later section.

The NPV decision rule is this: **A proposal is acceptable when net present value is zero or positive.** A zero or positive NPV indicates that the rate of return on the investment equals or exceeds (respectively) the required rate of return. The **required rate of return** is management's minimum acceptable rate of return on investments, sometimes called the discount rate or cost of capital. When net present value is negative, the project is unacceptable. **Illustration 27.6** shows the net present value decision criteria.

ILLUSTRATION 27.6

Net present value decision criteria

When making a selection among acceptable proposals, **the higher the positive net present value, the more attractive the investment**. The application of this method to two cases is described in the next two sections. In each case, we assume that the investment has no salvage value at the end of its useful life.

Equal Annual Cash Flows

In our Stewart Shipping Company example, the company's net annual cash flows are \$24,000. If we assume this amount is **uniform over the asset's useful life**, we can compute the present value of the net annual cash flows by using the present value of an annuity of 1 for 10 payments (from Table 4, Appendix G). Assuming a discount rate of 12%, the present value of net cash flows are as shown in **Illustration 27.7** (rounded to the nearest dollar) (see **Helpful Hint**).

HELPFUL HINT

The ABC Co. expects equal cash flows over an asset's 5-year useful life. The discount factor it should use in determining present values if management wants a 12% return is 3.60478 (using Table 4).

ILLUSTRATION 27.7

Computation of present value of equal net annual cash flows

	Present Value at 12%
Discount factor for 10 periods	<u>5.65022</u>
Present value of net cash flows:	<u><u>\$135,605</u></u>
$\$24,000 \times 5.65022$	<u><u>\$135,605</u></u>

Illustration 27.8 shows the analysis of the proposal by the net present value method.

ILLUSTRATION 27.8

Computation of net present value—equal net annual cash flows

	12%
Present value of net cash flows	\$135,605
Less: Capital investment	130,000
Net present value	\$ 5,605

The proposed capital expenditure is acceptable at a required rate of return of 12% because the net present value is positive. The positive NPV indicates the expected return on the investment exceeds 12%.

Unequal Annual Cash Flows

HELPFUL HINT

Appendix G demonstrates the use of a financial calculator to solve time value of money problems.

ILLUSTRATION 27.9

Computation of present value of unequal annual cash flows

Year	Assumed Net Annual Cash Flows	Discount Factor	Present Value
	(1)	(2)	(1) × (2)
1	\$ 34,000	.89286	\$ 30,357
2	30,000	.79719	23,916
3	27,000	.71178	19,218
4	25,000	.63552	15,888
5	24,000	.56743	13,618
6	22,000	.50663	11,146
7	21,000	.45235	9,499
8	20,000	.40388	8,078
9	19,000	.36061	6,852
10	18,000	.32197	5,795
	\$240,000		\$144,367

Therefore, the analysis of the proposal by the net present value method is as shown in **Illustration 27.10**.

ILLUSTRATION 27.10

Computation of net present value—unequal annual cash flows

	12%
Present value of net cash flows	\$144,367
Less: Capital investment	130,000
Net present value	\$ 14,367

In this example, the present value of the net cash flows is greater than the \$130,000 capital investment. Thus, the project is acceptable at a 12% required rate of return. The difference between the present values using the 12% rate under equal cash flows (\$135,605) and unequal cash flows (\$144,367) is due to the pattern of the flows. Since more money is received sooner under this particular uneven cash flow scenario, its present value is greater.

Management Insight

Verizon

Trevor Smith/iStockphoto

Can You Hear Me—Better?

What's better than 3G wireless service? 4G. But the question for wireless service providers is whether customers will be willing to pay extra for that improvement. **Verizon** has spent billions on upgrading its networks in the past few years, so it now offers 4G LTE service to 97% of the nation. Verizon is hoping that its investment in 4G works out better than its \$23 billion investment in its FIOS

fiber-wired network for TV and ultrahigh-speed Internet. One analyst estimates that the present value of each FIOS customer is \$800 less than the cost of the connection.

Sources: Martin Peers, "Investors: Beware Verizon's Generation GAP," *Wall Street Journal Online* (January 26, 2010); and Chad Fraser, "What Warren Buffett Sees in Verizon," *Investing Daily* (May 30, 2014).

If customers are slow to initially adopt 4G, how might the conclusions of a cash payback analysis of Verizon's 4G investment differ from a present value analysis? (Go to WileyPLUS for this answer and additional questions.)

Choosing a Discount Rate

Now that you understand how companies apply the net present value method, it is logical to ask a related question: How is a discount rate (required rate of return) determined in real capital budgeting decisions? In most instances, a company uses a required rate of return equal to its **cost of capital**—that is, the rate that it must pay to obtain funds from creditors and stockholders.

The cost of capital is a weighted average of the rates paid on borrowed funds as well as on funds provided by investors in the company's common stock and preferred stock (see **Helpful Hint**). If management believes a project is riskier than the company's usual line of business, the discount rate should be increased. That is, the discount rate has two elements, a cost of capital element and a risk element. Often, companies assume the risk element is equal to zero.

Using an incorrect discount rate can lead to incorrect capital budgeting decisions. Consider again the Stewart Shipping example in Illustration 27.8, where we used a discount rate of 12%. Suppose that this rate does not take into account the fact that this project is riskier than most of the company's investments. A more appropriate discount rate, given the risk, might be 15%. **Illustration 27.11** compares the net present values at the two rates. At the higher, more appropriate discount rate of 15%, the net present value is negative. The negative NPV indicates that the expected rate of return on the investment is less than the required rate of return of 15%. The company should reject the project (discount factors from Appendix G, Table 4).

HELPFUL HINT

Cost of capital is the rate that management expects to pay on all borrowed and equity funds. It does not relate to the cost of funding a *specific* project.

ILLUSTRATION 27.11

Comparison of net present values at different discount rates

	Present Values at Different Discount Rates	
	12%	15%
Discount factor for 10 payments	5.65022	5.01877
Present value of net cash flows:		
\$24,000 × 5.65022	\$135,605	
\$24,000 × 5.01877		\$120,450
Less: Capital investment	130,000	130,000
Positive (negative) net present value	<u><u>\$ 5,605</u></u>	<u><u>\$ (9,550)</u></u>

The discount rate is often referred to by alternative names, including the **required rate of return**, the **hurdle rate**, and the **cutoff rate**. Determination of the cost of capital varies somewhat depending on whether the entity is a for-profit or not-for-profit business. Calculation of the cost of capital is discussed more fully in advanced accounting and finance courses.

Simplifying Assumptions

In our examples of the net present value method, we made a number of simplifying assumptions:

- **All cash flows occur at the end of each year.** In reality, cash flows will occur at uneven intervals throughout the year. However, it is far simpler to assume that all cash flows come at the end (or in some cases the beginning) of the year. In fact, this assumption is frequently made in practice.
- **All cash flows are immediately reinvested in another project that has a similar return.** In most capital budgeting situations, companies receive cash flows during each year of a project's life. In order to determine the return on the investment, some assumption must be made about how the cash flows are reinvested in the year that they are received. It is customary to assume that cash flows received are reinvested in some other project of similar return until the end of the project's life.
- **All cash flows can be predicted with certainty.** The outcomes of business investments are full of uncertainty, as the **Holland America Line** Feature Story shows. There is no way of knowing how popular a new product will be, how long a new machine will last, or what competitors' reactions might be to changes in a product. But, in order to

make investment decisions, analysts must estimate future outcomes. In this chapter, we have assumed that future amounts are known with certainty.¹ In reality, little is known with certainty. More advanced capital budgeting techniques deal with uncertainty by considering the probability that various outcomes will occur.

Comprehensive Example

Best Taste Foods is considering investing in new equipment to produce fat-free snack foods. Management believes that although demand for fat-free foods has leveled off, fat-free foods are here to stay. The estimated costs, cost of capital, and cash flows shown in **Illustration 27.12** were determined in consultation with the marketing, production, and finance departments.

ILLUSTRATION 27.12

Investment information for Best Taste Foods example

Initial investment	\$1,000,000
Cost of equipment overhaul in 5 years	\$200,000
Salvage value of equipment in 10 years	\$20,000
Cost of capital (discount rate)	15%
Estimated annual cash flows	
Cash inflows received from sales	\$500,000
Cash outflows for cost of goods sold	\$200,000
Maintenance costs	\$30,000
Other direct operating costs	\$40,000

Remember that we are using cash flows in our analysis, not accrual revenues and expenses. Thus, for example, the direct operating costs would not include depreciation expense, since depreciation expense does not use cash. **Illustration 27.13** presents the computation of the net annual cash flows of this project.

ILLUSTRATION 27.13

Computation of net annual cash flow

Cash inflows received from sales	\$ 500,000
Cash outflows for cost of goods sold	(200,000)
Maintenance costs	(30,000)
Other direct operating costs	(40,000)
Net annual cash flow	\$ 230,000

Illustration 27.14 shows computation of the net present value for this proposed investment (discount factors from Appendix G, Tables 3 and 4).

ILLUSTRATION 27.14

Computation of net present value for Best Taste Foods investment

Event	Time Period	Cash Flow	×	15% Discount Factor	=	Present Value
Net annual cash flow	1–10	\$ 230,000	×	5.01877	=	\$1,154,317
Salvage value	10	20,000		.24719		4,944
Less: Equipment purchase	0	1,000,000		1.00000		1,000,000
Less: Equipment overhaul	5	200,000		.49718		99,436
Net present value						\$ 59,825

Because the net present value of the project is positive, Best Taste should accept the project.

¹One exception is a brief discussion of sensitivity analysis later in the chapter.

DO IT! 2 | Net Present Value

Watertown Paper Corporation is considering adding another machine for the manufacture of corrugated cardboard. The machine would cost \$900,000. It would have an estimated life of 6 years and no salvage value. The company estimates that annual cash inflows would increase by \$400,000 and that annual cash outflows would increase by \$190,000. Management has a required rate of return of 9%. Calculate the net present value on this project and discuss whether it should be accepted.

Solution

Estimated annual cash inflows	\$400,000
Estimated annual cash outflows	<u>190,000</u>
Net annual cash flow	<u><u>\$210,000</u></u>

	Cash Flow	9% Discount Factor	Present Value
Present value of net annual cash flows	\$210,000	4.48592 ^a	\$942,043
Less: Capital investment			<u>900,000</u>
Net present value			<u><u>\$ 42,043</u></u>

^aTable 4, Appendix G, 9%, 6 years

Since the net present value is greater than zero, Watertown should accept the project.

Related exercise material: **BE27.2, BE27.3, DO IT! 27.2, E27.1, E27.2, and E27.3.**

ACTION PLAN

- Recall that estimated annual cash inflows – Estimated annual cash outflows = Net annual cash flow.
- Use the NPV technique to calculate the difference between net cash flows and the initial investment.
- Accept the project if the net present value is positive.

Capital Budgeting Challenges and Refinements

LEARNING OBJECTIVE 3

Identify capital budgeting challenges and refinements.

Now that you understand how the net present value method works, we can add some “additional wrinkles.” Specifically, these are the impact of intangible benefits, a way to compare mutually exclusive projects, refinements that take risk into account, and the need to conduct post-audits of investment projects.

Intangible Benefits

The NPV evaluation techniques employed thus far rely on tangible costs and benefits that can be relatively easily quantified. Some investment projects, especially high-tech projects, fail to make it through initial capital budget screens because only the project’s tangible benefits are considered. **Intangible benefits** might include increased quality, improved safety, or enhanced employee loyalty. By ignoring intangible benefits, capital budgeting techniques might incorrectly eliminate projects that could be financially beneficial to the company.

To avoid rejecting projects that actually should be accepted, analysts suggest two possible approaches:

1. Calculate net present value ignoring intangible benefits. Then, if the NPV is negative, ask whether the project offers any intangible benefits that are worth at least the amount of the negative NPV.
2. Project conservative estimates of the value of the intangible benefits, and incorporate these values into the NPV calculation.

Example

Assume that Berg Company is considering the purchase of a new mechanical robot to be used for soldering electrical connections. **Illustration 27.15** shows the estimates related to this proposed purchase (discount factor from Appendix G, Table 4).

ILLUSTRATION 27.15

Investment information for Berg Company example

Initial investment	\$200,000			
Annual cash inflows	\$ 50,000			
Annual cash outflows	20,000			
Net annual cash flow	\$ 30,000			
Estimated life of equipment	10 years			
Discount rate	12%			
	Cash Flows	×	12% Discount Factor	=
Present value of net annual cash flows	\$30,000	×	5.65022	=
Less: Initial investment				
Net present value				\$ (30,493)

Based on the negative net present value of \$30,493, the proposed project is not acceptable. This calculation, however, ignores important information. First, the company's engineers believe that purchasing this machine will improve the quality of electrical connections in the company's products. As a result, future warranty costs may be reduced. Also, this higher quality may translate into higher future sales. Finally, the new machine will be safer than the current machine.

The managers at Berg Company do not have confidence in their ability to accurately estimate these potentially higher revenues and lower costs. But Berg can incorporate this new information into the capital budgeting decision in the two ways discussed earlier. First, management might simply ask whether the reduced warranty costs, increased sales, and improved safety benefits have an estimated total present value to the company of at least \$30,493. If yes, then the project is acceptable.

Alternatively, analysts can estimate the annual cash flows of these benefits. In our initial calculation, we assumed each of these benefits to have a value of zero. It seems likely that their actual values are much higher than zero. Given the difficulty of estimating these benefits, however, conservative values should be assigned to them. If, after using conservative estimates, the net present value is positive, Berg should accept the project.

To illustrate, assume that Berg estimates that improved sales will increase cash inflows by \$10,000 annually as a result of an increase in perceived quality. Berg also estimates that annual cost outflows would be reduced by \$5,000 as a result of lower warranty claims, reduced injury claims, and fewer missed work days. Consideration of the intangible benefits results in the revised NPV calculation shown in **Illustration 27.16** (discount factor from Appendix G, Table 4).

ILLUSTRATION 27.16

Revised investment information for Berg Company example, including intangible benefits

Initial investment	\$200,000			
Annual cash inflows (revised)	\$ 60,000 (\$50,000 + \$10,000)			
Annual cash outflows (revised)	15,000 (\$20,000 - \$5,000)			
Net annual cash flow	\$ 45,000			
Estimated life of equipment	10 years			
Discount rate	12%			
	Cash Flows	×	12% Discount Factor	=
Present value of net annual cash flows	\$45,000	×	5.65022	=
Less: Initial investment				
Net present value				\$ 54,260

Using these conservative estimates of the value of the additional benefits, Berg should accept the project.

Ethics Insight

Carol Gering/iStockphoto

It Need Not Cost an Arm and a Leg

Most manufacturers say that employee safety matters above everything else. But how many back up this statement with investments that improve employee safety? Recently, a woodworking hobbyist, who also happens to be a patent attorney with a Ph.D. in physics, invented a mechanism that automatically shuts down a power saw when the saw blade comes in contact with human flesh. The blade stops so quickly that only minor injuries result.

Power saws injure 40,000 Americans each year, and 4,000 of those injuries are bad enough to require amputation. Therefore, one might think that power-saw companies would be lined up to incorporate this mechanism into their saws. But, in the words of one power-tool company, "Safety doesn't sell." Since existing saw manufacturers were unwilling to incorporate the device into their saws, eventually the inventor started his own company to build the devices and sell them directly to businesses that use power saws.

Source: Melba Newsome, "An Edgy New Idea," *Time: Inside Business* (May 2006), p. A16.

In addition to the obvious humanitarian benefit of reducing serious injuries, how else might the manufacturer of this product convince potential customers of its worth? (Go to WileyPLUS for this answer and additional questions.)

Profitability Index for Mutually Exclusive Projects

In theory, companies should accept all projects with positive NPVs. However, companies rarely are able to adopt all positive-NPV proposals. First, proposals often are **mutually exclusive**. This means that if the company adopts one proposal, it would be impossible or impractical also to adopt the other proposal. For example, a company may be considering the purchase of a new packaging machine and is looking at various brands and models. It needs only one packaging machine. Once the company has determined which brand and model to purchase, the others will not be purchased—even though they also may have positive net present values.

Even in instances where projects are not mutually exclusive, managers often must choose between various positive-NPV projects because of **limited resources**. For example, the company might have ideas for two new lines of business, each of which has a projected positive NPV. However, both of these proposals require skilled personnel, and the company determines that it will not be able to find enough skilled personnel to staff both projects. Management will have to choose the project it thinks is a better option.

When choosing between alternative proposals, it is tempting simply to choose the project with the higher NPV. Consider the following example of two mutually exclusive projects. Each is assumed to have a 10-year life and a 12% discount rate (discount factors from Appendix G, Tables 3 and 4). **Illustration 27.17** shows the estimates for each project and the computation of the present value of the net cash flows.

	Project A	Project B
Initial investment	\$40,000	\$ 90,000
Net annual cash inflow	10,000	19,000
Salvage value	5,000	10,000
Present value of net cash flows		
$(\$10,000 \times 5.65022) + (\$5,000 \times .32197)$	58,112	
$(\$19,000 \times 5.65022) + (\$10,000 \times .32197)$		110,574

ILLUSTRATION 27.17

Investment information for mutually exclusive projects

Illustration 27.18 computes the net present values of Project A and Project B by subtracting the initial investment from the present value of the net cash flows.

ILLUSTRATION 27.18**Net present value computation**

	Project A	Project B
Present value of net cash flows	\$58,112	\$110,574
Less: Initial investment	40,000	90,000
Net present value	\$18,112	\$ 20,574

As Project B has the higher NPV, it would seem that the company should adopt it. However, Project B also requires more than twice the original investment of Project A. In choosing between the two projects, the company should also include in its calculations the amount of the original investment.

One relatively simple method of comparing alternative projects is the **profitability index**. This method takes into account both the size of the original investment and the discounted cash flows. The profitability index is calculated by dividing the present value of net cash flows that occur after the initial investment by the amount of the initial investment, as **Illustration 27.19** shows.

ILLUSTRATION 27.19**Formula for profitability index**

Present Value of Net Cash Flows	÷	Initial Investment	=	Profitability Index
--	----------	-------------------------------	----------	--------------------------------

The profitability index allows comparison of the relative desirability of projects that require differing initial investments. Note that any project with a positive NPV will have a profitability index above 1. The profitability index for each of the mutually exclusive projects is calculated in **Illustration 27.20**.

ILLUSTRATION 27.20**Calculation of profitability index**

Profitability Index = $\frac{\text{Present Value of Net Cash Flows}}{\text{Initial Investment}}$	
Project A	Project B

$$\frac{\$58,112}{\$40,000} = \mathbf{1.45}$$

$$\frac{\$110,574}{\$90,000} = \mathbf{1.23}$$

In this case, the profitability index of Project A exceeds that of Project B. Thus, Project A is more desirable. Again, if these were not mutually exclusive projects and if resources were not limited, then the company should invest in both projects since both have positive NPVs. Additional considerations related to preference decisions are discussed in more advanced courses.

Risk Analysis

A simplifying assumption made by many financial analysts is that projected results are known with certainty. In reality, projected results are only estimates based upon the forecaster's belief as to the most probable outcome. One approach for dealing with such uncertainty is **sensitivity analysis**. Sensitivity analysis uses a number of outcome estimates to get a sense of the variability among potential returns. An example of sensitivity analysis was presented in Illustration 27.11, where we illustrated the impact on NPV of different discount rate assumptions. A higher-risk project would be evaluated using a higher discount rate.

Similarly, to take into account that more distant cash flows are often more uncertain, a higher discount rate can be used to discount more distant cash flows. Other techniques to address uncertainty are discussed in advanced courses.

Elnur/Shutterstock

Big Spenders

Investments in electricity production and transmission represent some of society's biggest capital budgeting decisions. For example, billionaire Philip Anshutz is backing a project to build a 3,000-megawatt Wyoming

wind farm as well as a 730-mile transmission line that would efficiently transfer the electricity to Las Vegas, where it could then travel on existing lines to locations in California. Total cost: \$9 billion. This would be the biggest wind farm in the United States except that an even bigger, 4,000-megawatt wind farm is being planned by a different group of investors. In the past, these investments were

made by regulated utility companies which were allowed to pass on their costs to customers and thus essentially guaranteed a steady revenue stream. Today, many of the biggest projects are instead being financed by private investors. These investors will be selling their electricity in energy markets driven by market demand. This provides for more potential upside on their investment but also more uncertainty regarding revenue flows.

Source: Russell Gold, "Investors Are Building Their Own Green-Power Lines," *Wall Street Journal* (April 6, 2017).

How does the financing of today's big energy investments differ from big energy capital investments of the past, and what are the implications? (Go to WileyPLUS for this answer and additional questions.)

Post-Audit of Investment Projects

Any well-run organization should perform an evaluation, called a **post-audit**, of its investment projects after their completion. A post-audit is a thorough evaluation of how well a project's actual performance matches the original projections. An example of a post-audit is seen in a situation that occurred at **Campbell Soup**. The company made the original decision to invest in the Intelligent Quisine line based on management's best estimates of future cash flows. During the development phase of the project, Campbell hired an outside consulting firm to evaluate the project's potential for success. Because actual results during the initial years were far below the estimated results and because the future also did not look promising, the project was terminated.

Performing a post-audit is important for a variety of reasons. First, if managers know that the company will compare their estimates to actual results, they will be more likely to submit reasonable and accurate data when they make investment proposals. This clearly is better for the company than for managers to submit overly optimistic estimates in an effort to get pet projects approved. Second, as seen with Campbell Soup, a post-audit provides a formal mechanism by which the company can determine whether existing projects should be supported or terminated. Third, post-audits improve future investment proposals because, by evaluating past successes and failures, managers improve their estimation techniques.

A post-audit involves the same evaluation techniques used in making the original capital budgeting decision—for example, use of the NPV method. The difference is that, in the post-audit, analysts insert actual figures, where known, and they revise estimates of future amounts based on new information. The managers responsible for the estimates used in the original proposal must explain the reasons for any significant differences between their estimates and actual results.

Post-audits are not foolproof. In the case of Campbell Soup, some observers suggested that the company was too quick to abandon the project. Industry analysts suggested that with more time and more advertising expenditures, the company might have enjoyed success.

DO IT! 3 | Profitability Index

Taz Corporation has decided to invest in renewable energy sources to meet part of its energy needs for production. It is considering solar power versus wind power. After considering cost savings as well as incremental revenues from selling excess electricity into the power grid, it has determined the following.

	Solar	Wind
Present value of annual cash flows	\$78,580	\$168,450
Initial investment	\$45,500	\$125,300

Determine the net present value and profitability index of each project. Which energy source should it choose?

ACTION PLAN

- Determine the present value of annual cash flows of each mutually exclusive project.
- Determine profitability index by dividing the present value of annual cash flows by the amount of the initial investment.
- Choose project with highest profitability index.

Solution

	Solar	Wind
Present value of annual cash flows	\$78,580	\$168,450
Less: Initial investment	<u>45,500</u>	<u>125,300</u>
Net present value	<u><u>\$33,080</u></u>	<u><u>\$ 43,150</u></u>
Profitability index	1.73*	1.34**

*\$78,580 ÷ \$45,500

**\$168,450 ÷ \$125,300

While the investment in wind power generates the higher net present value, it also requires a substantially higher initial investment. The profitability index favors solar power, which suggests that the additional net present value of wind is outweighed by the cost of the initial investment. The company should choose solar power.

Related exercise material: BE27.5, DO IT! 27.3, and E27.4.

Internal Rate of Return

LEARNING OBJECTIVE 4

Use the internal rate of return method.

The **internal rate of return method** differs from the net present value method in that it finds the **interest yield of the potential investment**. The **internal rate of return (IRR)** is the interest rate that causes the present value of the proposed capital expenditure to equal the present value of the expected net annual cash flows (that is, NPV equal to zero). Because it recognizes the time value of money, the internal rate of return method is (like the NPV method) a discounted cash flow technique.

How do we determine the internal rate of return? One way is to use a financial calculator (see Appendix G) or electronic spreadsheet (see the Excel tutorial provided in WileyPLUS) to solve for this rate. Or, we can use a trial-and-error procedure.

To illustrate, assume that Stewart Shipping Company is considering the purchase of a new front-end loader at a cost of \$244,371. Net annual cash flows from this loader are estimated to be \$100,000 a year for three years. To determine the internal rate of return on this front-end loader, the company finds the discount rate that results in a net present value of zero. As **Illustration 27.21** shows, at a rate of return of 10%, Stewart Shipping has a positive net present value of \$4,315. At a rate of return of 12%, it has a negative net present value of \$4,188. At an 11% rate, the net present value is zero. Therefore, 11% is the internal rate of return for this investment (discount factors from Appendix G, Table 3).

ILLUSTRATION 27.21 Estimation of internal rate of return

Year	Net Annual Cash Flows	Discount Factor 10%	Present Value 10%	Discount Factor 11%	Present Value 11%	Discount Factor 12%	Present Value 12%
1	\$100,000	.90909	\$ 90,909	.90090	\$ 90,090	.89286	\$ 89,286
2	\$100,000	.82645	82,645	.81162	81,162	.79719	79,719
3	\$100,000	.75132	<u>75,132</u>	.73119	<u>73,119</u>	.71178	<u>71,178</u>
			248,686		244,371		240,183
Less: Initial investment			<u>244,371</u>		<u>244,371</u>		<u>244,371</u>
Net present value			<u><u>\$ 4,315</u></u>		<u><u>\$ -0-</u></u>		<u><u>\$ (4,188)</u></u>

An easier approach to solving for the internal rate of return can be used if the net annual cash flows are **equal**, as in the Stewart Shipping example. In this special case, we can find the internal rate of return using the formula provided in **Illustration 27.22**.

$$\frac{\text{Capital Investment}}{\text{Net Annual Cash Flows}} = \text{Internal Rate of Return Factor}$$

ILLUSTRATION 27.22

Formula for internal rate of return—even cash flows

Applying this formula to the Stewart Shipping example, we find:

$$\$244,371 \div 100,000 = 2.44371$$

We then look up the factor 2.44371 in Table 4 of Appendix G in the three-payment row and find it under 11%. Row 3 is reproduced for your convenience.

Table 4 Present Value of an Annuity of 1

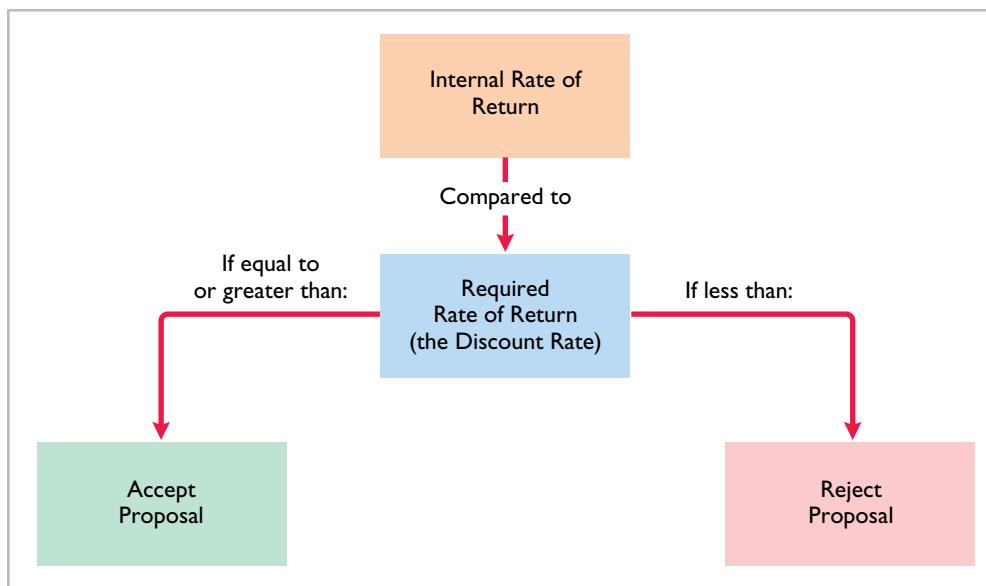

(n)	4%	5%	6%	7%	8%	9%	10%	11%	12%	15%
Payments	2.77509	2.72325	2.67301	2.62432	2.57710	2.53130	2.48685	2.44371	2.40183	2.28323
3										

Recognize that if the cash flows are **uneven**, then a trial-and-error approach or a financial calculator or computerized spreadsheet must be used.

Once managers know the internal rate of return, they compare it to the company's required rate of return (the discount rate). The IRR decision rule is as follows: **Accept the project when the internal rate of return is equal to or greater than the required rate of return. Reject the project when the internal rate of return is less than the required rate of return.** **Illustration 27.23** shows these relationships. The internal rate of return method is widely used in practice, largely because most managers find the internal rate of return easy to interpret.

ILLUSTRATION 27.23

Internal rate of return decision criteria

Comparing Discounted Cash Flow Methods

Illustration 27.24 compares the two discounted cash flow methods—net present value and internal rate of return. When properly used, either method will provide management with relevant quantitative data for making capital budgeting decisions.

ILLUSTRATION 27.24**Comparison of discounted cash flow methods**

	Net Present Value	Internal Rate of Return
1. Objective	Compute net present value (a dollar amount).	Compute internal rate of return (a percentage).
2. Decision Rule	If net present value is zero or positive, accept the proposal. If net present value is negative, reject the proposal.	If internal rate of return is equal to or greater than the required rate of return, accept the proposal. If internal rate of return is less than the required rate of return, reject the proposal.

DO IT! 4 | Internal Rate of Return

Watertown Paper Corporation is considering adding another machine for the manufacture of corrugated cardboard. The machine would cost \$900,000. It would have an estimated life of 6 years and no salvage value. The company estimates that annual cash inflows would increase by \$400,000 and that annual cash outflows would increase by \$190,000. Management has a required rate of return of 9%. Calculate the internal rate of return on this project and discuss whether it should be accepted.

Solution

Estimated annual cash inflows	\$400,000
Estimated annual cash outflows	190,000
Net annual cash flow	<u><u>\$210,000</u></u>

$\$900,000/\$210,000 = 4.285714$. Using Table 4 of Appendix G and the factors that correspond with the six-payment row, 4.285714 is between the factors for 10% and 11%. Since the project has an internal rate that is greater than 10% and the required rate of return is only 9%, the project should be accepted.

Related exercise material: **BE27.7, BE27.8, DO IT! 27.4, E27.5, E27.6, and E27.7.**

ACTION PLAN

- Estimated annual cash inflows – Estimated annual cash outflows = Net annual cash flow.
- Capital investment/Net annual cash flows = Internal rate of return factor.
- Look up the factor in the present value of an annuity table to find the internal rate of return.
- Accept the project if the internal rate of return is equal to or greater than the required rate of return.

Annual Rate of Return**LEARNING OBJECTIVE 5**

Use the annual rate of return method.

The final capital budgeting technique we will look at is the **annual rate of return method**. It is based directly on accrual accounting data rather than on cash flows. It indicates the **profitability of a capital expenditure** by dividing expected annual net income by the average investment. **Illustration 27.25** shows the formula for computing annual rate of return.

ILLUSTRATION 27.25**Annual rate of return formula**

$$\frac{\text{Expected Annual Net Income}}{\text{Average Investment}} = \text{Annual Rate of Return}$$

Assume that Reno Company is considering an investment of \$130,000 in new equipment. The new equipment is expected to last five years and have zero salvage value at the end of its

useful life. Reno uses the straight-line method of depreciation for accounting purposes. **Illustration 27.26** shows the expected annual revenues and costs of the new product that will be produced from the investment.

Sales		\$200,000
Less: Costs and expenses		
Manufacturing costs (exclusive of depreciation)	\$132,000	
Depreciation expense ($\$130,000 \div 5$)	26,000	
Selling and administrative expenses	<u>22,000</u>	<u>180,000</u>
Income before income taxes		20,000
Income tax expense		7,000
Net income		<u><u>\$ 13,000</u></u>

ILLUSTRATION 27.26

Estimated annual net income from Reno Company's capital expenditure

Reno's expected annual net income is \$13,000. Average investment is derived from the formula shown in **Illustration 27.27**.

$$\frac{\text{Original Investment} + \text{Value at End of Useful Life}}{2} = \text{Average Investment}$$

ILLUSTRATION 27.27

Formula for computing average investment

The value at the end of useful life is equal to the asset's salvage value, if any. For Reno, average investment is \$65,000 [$(\$130,000 + \$0) \div 2$]. The expected annual rate of return for Reno's investment in new equipment is therefore 20%, computed as follows.

$$\$13,000 \div \$65,000 = 20\%$$

Management then compares the annual rate of return with its **required rate of return** for investments of similar risk. The required rate of return is generally based on the company's cost of capital. The decision rule is: **A project is acceptable if its rate of return is greater than management's required rate of return. It is unacceptable when the reverse is true.** When companies use the rate of return technique in deciding among several acceptable projects, **the higher the rate of return for a given risk, the more attractive the investment.**

The principal advantages of this method are the simplicity of its calculation and management's familiarity with the accounting terms used in the computation. A major limitation of the annual rate of return method is that it does not consider the time value of money. For example, no consideration is given as to whether cash inflows will occur early or late in the life of the investment. As explained in Appendix G, recognition of the time value of money can make a significant difference between the future value and the discounted present value of an investment. A second disadvantage is that this method relies on accrual accounting numbers rather than expected cash flows (see **Helpful Hint**).

HELPFUL HINT

A capital budgeting decision based on only one technique may be misleading. It is often wise to analyze an investment from a number of different perspectives.

DO IT! 5 | Annual Rate of Return

Watertown Paper Corporation is considering adding another machine for the manufacture of corrugated cardboard. The machine would cost \$900,000. It would have an estimated life of 6 years and no salvage value. The company estimates that annual revenues would increase by \$400,000 and that annual expenses excluding depreciation would increase by \$190,000. It uses the straight-line method to compute depreciation expense. Management has a required rate of return of 9%. Compute the annual rate of return.

ACTION PLAN

- Expected annual net income = Annual revenues – Annual expenses (including depreciation expense).
- Average investment = $(\text{Original investment} + \text{Value at end of useful life})/2$.

Solution

Revenues	\$400,000
Less:	
Expenses (excluding depreciation)	\$190,000
Depreciation (\$900,000/6 years)	<u>150,000</u>
Annual net income	<u><u>\$ 60,000</u></u>

Average investment = $(\$900,000 + \$0)/2 = \$450,000$.

Annual rate of return = $\$60,000/\$450,000 = 13.3\%$.

Since the annual rate of return (13.3%) is greater than Watertown's required rate of return (9%), the proposed project is acceptable.

Related exercise material: **BE27.9, DO IT! 27.5, E27.8, E27.9, E27.10, and E27.11.**

ACTION PLAN (cont.)

- Annual rate of return = Expected annual net income/Average investment.

Review and Practice

Learning Objectives Review

1 Describe capital budgeting inputs and apply the cash payback technique.

Management gathers project proposals from each department; a capital budget committee screens the proposals and recommends worthy projects. Company officers decide which projects to fund, and the board of directors approves the capital budget. In capital budgeting, estimated cash inflows and outflows, rather than accrual-accounting numbers, are the preferred inputs.

The cash payback technique identifies the time period required to recover the cost of the investment. The formula when net annual cash flows are equal is: Cost of capital investment ÷ Estimated net annual cash flow = Cash payback period. The shorter the payback period, the more attractive the investment.

2 Use the net present value method.

The net present value method compares the present value of future cash inflows with the capital investment to determine net present value. The NPV decision rule is: Accept the project if net present value is zero or positive. Reject the project if net present value is negative.

3 Identify capital budgeting challenges and refinements.

Intangible benefits are difficult to quantify and thus are often ignored in capital budgeting decisions. This can result in incorrectly rejecting some projects. One method for considering intangible benefits is to calculate the NPV, ignoring intangible benefits. If the resulting NPV

is below zero, evaluate whether the benefits are worth at least the amount of the negative net present value. Alternatively, intangible benefits can be incorporated into the NPV calculation, using conservative estimates of their value.

The profitability index is a tool for comparing the relative merits of alternative capital investment opportunities. It is computed as Present value of net cash flows ÷ Initial investment. The higher the index, the more desirable the project.

A post-audit is an evaluation of a capital investment's actual performance. Post-audits create an incentive for managers to make accurate estimates. Post-audits also are useful for determining whether a company should continue, expand, or terminate a project. Finally, post-audits provide feedback that is useful for improving estimation techniques.

4 Use the internal rate of return method.

The objective of the internal rate of return method is to find the interest yield of the potential investment, which is expressed as a percentage rate. The IRR decision rule is: Accept the project when the internal rate of return is equal to or greater than the required rate of return. Reject the project when the internal rate of return is less than the required rate of return.

5 Use the annual rate of return method.

The annual rate of return uses accrual accounting data to indicate the profitability of a capital investment. It is calculated as Expected annual net income ÷ Amount of the average investment. The higher the rate of return, the more attractive the investment.

Glossary Review

Annual rate of return method The determination of the profitability of a capital expenditure, computed by dividing expected annual net income by the average investment. (p. 27-18).

Capital budgeting The process of making capital expenditure decisions in business. (p. 27-1).

Cash payback technique A capital budgeting technique that identifies the time period required to recover the cost of a capital investment from the net annual cash flow produced by the investment. (p. 27-4).

Cost of capital The weighted-average rate of return that the firm must pay to obtain funds from creditors and stockholders. (p. 27-9).

Discounted cash flow technique A capital budgeting technique that considers both the estimated net cash flows from the investment and the time value of money. (p. 27-6).

Discount rate The interest rate used in discounting the future net cash flows to determine present value. (p. 27-6).

Internal rate of return (IRR) The interest rate that will cause the present value of the proposed capital expenditure to equal the present value of the expected net annual cash flows. (p. 27-16).

Internal rate of return (IRR) method A method used in capital budgeting that results in finding the interest yield of the potential investment. (p. 27-16).

Net present value (NPV) The difference that results when the original capital outlay is subtracted from the discounted net cash flows. (p. 27-6).

Net present value (NPV) method A method used in capital budgeting in which net cash flows are discounted to their present value and then compared to the capital outlay required by the investment. (p. 27-6).

Post-audit A thorough evaluation of how well a project's actual performance matches the original projections. (p. 27-15).

Profitability index A method of comparing alternative projects that takes into account both the size of the investment and its discounted net cash flows. It is computed by dividing the present value of net cash flows by the initial investment. (p. 27-14).

Required rate of return Management's minimum acceptable rate of return on investments, sometimes called the discount rate or cost of capital. (p. 27-6).

Sensitivity analysis An approach that uses a number of outcome estimates to get a sense of the variability among potential returns. (p. 27-14).

Practice Multiple-Choice Questions

1. **(LO 1)** Which of the following is **not** an example of a capital budgeting decision?
 - a. Decision to build a new plant.
 - b. Decision to renovate an existing facility.
 - c. Decision to buy a piece of machinery.
 - d. All of these are capital budgeting decisions.

2. **(LO 1)** What is the order of involvement of the following parties in the capital budgeting authorization process?
 - a. Plant managers, officers, capital budget committee, board of directors.
 - b. Board of directors, plant managers, officers, capital budget committee.
 - c. Plant managers, capital budget committee, officers, board of directors.
 - d. Officers, plant managers, capital budget committee, board of directors.

3. **(LO 1)** What is a weakness of the cash payback approach?
 - a. It uses accrual-based accounting numbers.
 - b. It ignores the time value of money.
 - c. It ignores the useful life of alternative projects.
 - d. Both (b) and (c) are true.

4. **(LO 1)** Siegel Industries is considering two capital budgeting projects. Project A requires an initial investment of \$48,000. It is expected to produce net annual cash flows of \$7,000. Project B requires an initial investment of \$75,000 and is expected to produce net annual cash flows of \$12,000. Using the cash payback technique to evaluate the two projects, Siegel should accept:
 - a. Project A because it has a shorter cash payback period.
 - b. Project B because it has a shorter cash payback period.
 - c. Project A because it requires a smaller initial investment.
 - d. Project B because it produces a larger net annual cash flow.

5. **(LO 2)** Which is a **true** statement regarding using a higher discount rate to calculate the net present value of a project?
 - a. It will make it less likely that the project will be accepted.
 - b. It will make it more likely that the project will be accepted.

6. **(LO 1)** It is appropriate to use a higher rate if the project is perceived as being less risky than other projects being considered.
 - a. It is appropriate to use a higher rate if the project will have a short useful life relative to other projects being considered.

7. **(LO 2)** A positive net present value means that the:
 - a. project's rate of return is less than the cutoff rate.
 - b. project's rate of return exceeds the required rate of return.
 - c. project's rate of return equals the required rate of return.
 - d. project is unacceptable.

8. **(LO 3)** Which of the following is **not** an alternative name for the discount rate?
 - a. Hurdle rate.
 - b. Required rate of return.
 - c. Cutoff rate.
 - d. All of these are alternative names for the discount rate.

9. **(LO 3)** If a project has intangible benefits whose value is hard to estimate, the best thing to do is:
 - a. ignore these benefits, since any estimate of their value will most likely be wrong.
 - b. include a conservative estimate of their value.
 - c. ignore their value in your initial net present value calculation, but then estimate whether their potential value is worth at least the amount of the net present value deficiency.
 - d. Either (b) or (c) is correct.

10. **(LO 3)** An example of an intangible benefit provided by a capital budgeting project is:
 - a. the salvage value of the capital investment.
 - b. a positive net present value.
 - c. a decrease in customer complaints regarding poor quality.
 - d. an internal rate of return greater than zero.

11. **(LO 3)** The following information is available for a potential capital investment.

Initial investment	\$80,000
Salvage value	10,000
Net annual cash flow	14,820
Present value of net annual cash flows	98,112
Net present value	18,112
Useful life	10 years

The potential investment's profitability index (rounded to two decimals) is:

- a. 5.40.
- c. 1.23.
- b. 1.19.
- d. 1.40.

11. (LO 3) A post-audit of an investment project should be performed:

- a. on all significant capital expenditure projects.
- b. on all projects that management feels might be financial failures.
- c. on randomly selected projects.
- d. only on projects that enjoy tremendous success.

12. (LO 4) A project should be accepted if its internal rate of return exceeds:

- a. zero.
- b. the rate of return on a government bond.
- c. the company's required rate of return.
- d. the rate the company pays on borrowed funds.

13. (LO 4) The following information is available for a potential capital investment.

Initial investment	\$60,000
Net annual cash flow	15,400
Net present value	3,143
Useful life	5 years

The potential investment's internal rate of return is approximately:

- a. 5%.
- c. 4%.
- b. 10%.
- d. 9%.

14. (LO 5) Which of the following is incorrect about the annual rate of return technique?

- a. The calculation is simple.
- b. The accounting terms used are familiar to management.
- c. The timing of the cash inflows is not considered.
- d. The time value of money is considered.

15. (LO 5) The following information is available for a potential capital investment.

Initial investment	\$120,000
Annual net income	15,000
Net annual cash flow	27,500
Salvage value	20,000
Useful life	8 years

The potential investment's annual rate of return is approximately:

- a. 21%.
- c. 30%.
- b. 15%.
- d. 39%.

Solutions

1. d. Choices (a), (b), and (c) are all examples of capital budgeting decisions, so choice (d) is the best answer.

2. c. The process of authorizing capital budget expenditures starts with plant managers, moves on to the capital budgeting committee, goes next to the officers of the firm and finally is acted upon by the board of directors. The other choices are therefore incorrect.

3. d. Choices (b) and (c) are both correct; therefore, choice (d) is the best answer. Choice (a) is incorrect as the use of accrual-based accounting numbers is not a weakness of the cash payback approach.

4. b. Project B ($\$75,000 \div \$12,000$) has a shorter cash payback period than Project A ($\$48,000 \div \$7,000$). The other choices are therefore incorrect.

5. a. If a higher discount rate is used in calculating the net present value of a project, the resulting net present value will be lower and the project will be less likely to be accepted. The other choices are therefore incorrect.

6. b. A positive net present value means that the project's rate of return exceeds the required rate of return. The other choices are therefore incorrect.

7. d. Choices (a), (b), and (c) are all alternative names for the discount rate; therefore, choice (d) is the best answer.

8. d. Choices (b) and (c) are both reasonable approaches to including intangible benefits in the capital budgeting process; therefore,

choice (d) is the best answer. Choice (a) is incorrect because even though these intangible benefits may be hard to quantify, they should not be ignored in the capital budgeting process.

9. c. A decrease in customer complaints regarding poor quality is one example of an intangible benefit provided by a capital budgeting project. The other choices are incorrect because (a) salvage value, (b) net present value, and (d) internal rate of return are all quantitative measures, i.e., tangible.

10. c. $(\$18,112 + \$80,000) \div \$80,000 = 1.23$, not (a) 5.40, (b) 1.19, or (d) 1.40.

11. a. A post-audit should be performed on all significant capital expenditure projects, not just on (b) financial failures, (c) randomly selected projects, or (d) tremendous successes, because the feedback gained will help to improve the process in the future and also will give managers an incentive to be more realistic in preparing capital expenditure proposals.

12. c. A project should be accepted if its internal rate of return exceeds the company's required rate of return, not (a) zero, (b) the rate of return on a government bond, or (d) the rate the company pays on borrowed funds.

13. d. $(\$60,000 \div \$15,400)$ equals 3.8961, which corresponds with approximately 9% in Table 4 of Appendix G, not (a) 5%, (b) 10%, or (c) 4%.

14. d. The time value of money is not considered when applying the annual rate of return method. The other choices are correct statements.

15. a. $\$15,000 \div [(\$120,000 + \$20,000) \div 2] = 21\%$, not (b) 15%, (c) 30%, or (d) 39%.

Practice Brief Exercises

- 1. (LO 1)** Carson Company is considering purchasing new equipment for \$600,000. Annual depreciation over the 8-year useful life of the equipment is \$75,000. It is expected that the equipment will produce net annual cash inflows of \$100,000 over its 8-year useful life. Compute the cash payback period.

Compute the cash payback period for a capital investment.

Solution

$$1. \text{ Cash payback period} = \$600,000 / \$100,000 = 6 \text{ years}$$

- 2. (LO 2)** Hilred Company is considering two different, mutually exclusive capital expenditure proposals. Project A will cost \$400,000, has an expected useful life of 8 years, a salvage value of zero, and is expected to increase net annual cash flows by \$80,000. Project B will also cost \$400,000, has an expected useful life of 8 years, a salvage value of \$100,000, and is expected to increase net annual cash flows by \$70,000. A discount rate of 10% is appropriate for both projects. Compute the net present value of each project. Which project should be accepted?

Compute net present values.

Solution

2.

Project A

	Cash Flows	×	10% Discount Factor	=	Present Value
Present value of net annual cash flows	\$ 80,000	×	5.33493	=	\$426,794
Present value of salvage value	0	×	.46651	=	0
					426,794
Less: Capital investment					400,000
Net present value					\$ 26,794

Project B

	Cash Flows	×	10% Discount Factor	=	Present Value
Present value of net annual cash flows	\$ 70,000	×	5.33493	=	\$373,445
Present value of salvage value	100,000	×	.46651	=	46,651
					420,096
Less: Capital investment					400,000
Net present value					\$ 20,096

Project A has a higher net present value than Project B, and it should therefore be accepted.

- 3. (LO 5)** King-Roken Company is considering investing in new automated equipment. It is expected that the equipment will increase annual revenues by \$200,000 and annual expenses by \$120,000 (including depreciation). The equipment will cost \$540,000 and have a \$20,000 salvage value at the end of its 10-year useful life. Calculate the annual rate of return.

Calculate annual rate of return.

Solution

3. The annual rate of return is calculated by dividing expected annual income by the average investment. The company's expected annual income is:

$$\$200,000 - \$120,000 = \$80,000$$

Its average investment is:

$$\frac{\$540,000 + \$20,000}{2} = \$280,000$$

Therefore, its annual rate of return is:

$$\$80,000 / \$280,000 = 28.6\%$$

Practice Exercises

Calculate payback period, internal rate of return, and apply decision rules.

- 1. (LO 1, 4)** BTMS Inc. wants to purchase a new machine for \$30,000. Installation costs are \$1,500. The old machine was bought five years ago and had an expected economic life of 10 years without salvage value. This old machine now has a book value of \$2,000, and BTMS Inc. expects to sell it for that amount. The new machine would decrease operating costs by \$8,000 each year of its economic life. The straight-line depreciation method would be used for the new machine, for a five-year period with no salvage value.

Instructions

- Determine the cash payback period.
- Determine the approximate internal rate of return.
- Assuming the company has a required rate of return of 10%, state your conclusion on whether the new machine should be purchased.

(CGA adapted)

Solution

- 1. a.** Total net investment = $\$30,000 + \$1,500 - \$2,000 = \$29,500$

Annual net cash flow = \$8,000

Payback period = $\$29,500 \div \$8,000 = 3.7$ years

- b.** Net present value approximates zero when discount rate is 11%.

Item	Amount	Years	PV Factor	Present Value
Net annual cash flows	\$8,000	1–5	3.69590	\$29,567
Less: Capital investment				29,500
Net present value				\$ 67

- c.** Because the approximate internal rate of return of 11% exceeds the required rate of return of 10%, the investment should be accepted.

Calculate payback, annual rate of return, and net present value

- 2. (LO 1, 2, 5)** MCA Corporation is reviewing an investment proposal. The initial cost is \$105,000. Estimates of the book value of the investment at the end of each year, the net cash flows for each year, and the net income for each year are presented in the schedule below. All cash flows are assumed to take place at the end of the year. The salvage value of the investment at the end of each year is equal to its book value. There would be no salvage value at the end of the investment's life.

Investment Proposal			
Year	Book Value	Annual Cash Flows	Annual Net Income
1	\$70,000	\$45,000	\$16,000
2	42,000	40,000	18,000
3	21,000	35,000	20,000
4	7,000	30,000	22,000
5	0	25,000	24,000

MCA Corporation uses a 15% target rate of return for new investment proposals.

Instructions

- What is the cash payback period for this proposal?
- What is the annual rate of return for the investment?
- What is the net present value of the investment?

(CMA-Canada adapted)

Solution**2. a.**

	<u>Year</u>	<u>Amount</u>	<u>Balance</u>
Initial investment	0	\$(105,000)	\$(105,000)
Less: Cash flow	1	45,000	(60,000)
	2	40,000	(20,000)
	3	35,000	15,000

$$\text{Payback period} = 2 + (\$20,000 \div \$35,000) = 2.57 \text{ years}$$

b. Average annual net income = $(\$16,000 + \$18,000 + \$20,000 + \$22,000 + \$24,000) \div 5 = \$20,000$

$$\text{Average investment} = (\$105,000 + \$0) \div 2 = \$52,500$$

$$\text{Annual rate of return} = \$20,000 \div \$52,500 = 38.10\%$$

c.

	<u>Year</u>	<u>Discount Factor, 15%</u>	<u>Amount</u>	<u>Present Value</u>
Net cash flows	1	0.86957	\$45,000	\$ 39,131
	2	0.75614	40,000	30,246
	3	0.65752	35,000	23,013
	4	0.57175	30,000	17,153
	5	0.49718	25,000	12,430
Present value of cash inflows				121,973
Less: Initial investment				105,000
Net present value				<u><u>\$ 16,973</u></u>

Practice Problem

(LO 1, 2, 5) Cornfield Company is considering a long-term capital investment project in laser equipment. This will require an investment of \$280,000, and it will have a useful life of 5 years. Annual net income is expected to be \$16,000 a year. Depreciation is computed by the straight-line method with no salvage value. The company's cost of capital is 10%, and it desires a cash payback of 60% of a project's useful life or less. (*Hint:* Assume cash flows can be computed by adding back depreciation expense.)

Compute annual rate of return, cash payback, and net present value.

Instructions

(Round all computations to two decimal places unless directed otherwise.)

- Compute the cash payback period for the project.
- Compute the net present value for the project. (Round to nearest dollar.)
- Compute the annual rate of return for the project.
- Should the project be accepted? Why?

Solution

a. $\$280,000 \div \$72,000 (\$16,000 + \$56,000) = 3.89 \text{ years}$

b.

	<u>Present Value at 10%</u>
Discount factor for 5 payments	<u>3.79079</u>
Present value of net cash flows: $\$72,000 \times 3.79079$	\$272,937
Less: Capital investment	<u>280,000</u>
Negative net present value	<u><u>\$ (7,063)</u></u>

c. $\$16,000 \div \$140,000 (\$280,000 \div 2) = 11.4\%$

- d. The annual rate of return of 11.4% is reasonable. However, the cash payback period is 78% of the project's useful life, and net present value is negative. The recommendation is to reject the project.

Brief Exercises, DO IT! Exercises, Exercises, Problems, and many additional resources are available for practice in WileyPLUS.

Questions

1. Describe the process a company may use in screening and approving the capital expenditure budget.
2. What are the advantages and disadvantages of the cash payback technique?
3. Tom Wells claims the formula for the cash payback technique is the same as the formula for the annual rate of return technique. Is Tom correct? What is the formula for the cash payback technique?
4. Two types of present value tables may be used with the discounted cash flow techniques. Identify the tables and the circumstance(s) when each table should be used.
5. What is the decision rule under the net present value method?
6. Discuss the factors that determine the appropriate discount rate to use when calculating the net present value.
7. What simplifying assumptions were made in the chapter regarding the calculation of net present value?
8. What are some examples of potential intangible benefits of investment proposals? Why do these intangible benefits complicate the capital budgeting evaluation process? What might happen if intangible benefits are ignored in a capital budgeting decision?
9. What steps can be taken to incorporate intangible benefits into the capital budget evaluation process?
10. What advantages does the profitability index provide over direct comparison of net present value when comparing two projects?
11. What is a post-audit? What are the potential benefits of a post-audit?
12. Identify the steps required in using the internal rate of return method when the net annual cash flows are equal.
13. El Cajon Company uses the internal rate of return method. What is the decision rule for this method?
14. What are the strengths of the annual rate of return approach? What are its weaknesses?
15. Your classmate, Mike Dawson, is confused about the factors that are included in the annual rate of return technique. What is the formula for this technique?
16. Sveta Pace is trying to understand the term “cost of capital.” Define the term and indicate its relevance to the decision rule under the internal rate of return technique.

Brief Exercises

Compute the cash payback period for a capital investment.

BE27.1 (LO 1) Rihanna Company is considering purchasing new equipment for \$450,000. It is expected that the equipment will produce net annual cash flows of \$60,000 over its 10-year useful life. Annual depreciation will be \$45,000. Compute the cash payback period.

Compute net present value of an investment.

BE27.2 (LO 2) Hsung Company accumulates the following data concerning a proposed capital investment: cash cost \$215,000, net annual cash flows \$40,000, and present value factor of cash inflows for 10 years is 5.65 (rounded). Determine the net present value, and indicate whether the investment should be made.

Compute net present value of an investment.

BE27.3 (LO 2) Thunder Corporation, an amusement park, is considering a capital investment in a new exhibit. The exhibit would cost \$136,000 and have an estimated useful life of 5 years. It can be sold for \$60,000 at the end of that time. (Amusement parks need to rotate exhibits to keep people interested.) It is expected to increase net annual cash flows by \$25,000. The company’s borrowing rate is 8%. Its cost of capital is 10%. Calculate the net present value of this project to the company.

Compute net present value of an investment and consider intangible benefits.

BE27.4 (LO 2, 3) Caine Bottling Corporation is considering the purchase of a new bottling machine. The machine would cost \$200,000 and has an estimated useful life of 8 years with zero salvage value. Management estimates that the new bottling machine will provide net annual cash flows of \$34,000. Management also believes that the new bottling machine will save the company money because it is expected to be more reliable than other machines, and thus will reduce downtime. How much would the reduction in downtime have to be worth in order for the project to be acceptable? Assume a discount rate of 9%. (*Hint:* Calculate the net present value.)

Compute net present value and profitability index.

BE27.5 (LO 2, 3) McKnight Company is considering two different, mutually exclusive capital expenditure proposals. Project A will cost \$400,000, has an expected useful life of 10 years, a salvage value of zero, and is expected to increase net annual cash flows by \$70,000. Project B will cost \$310,000, has an

expected useful life of 10 years, a salvage value of zero, and is expected to increase net annual cash flows by \$55,000. A discount rate of 9% is appropriate for both projects. Compute the net present value and profitability index of each project. Which project should be accepted?

BE27.6 (LO 3) Quillen Company is performing a post-audit of a project completed one year ago. The initial estimates were that the project would cost \$250,000, would have a useful life of 9 years, zero salvage value, and would result in net annual cash flows of \$46,000 per year. Now that the investment has been in operation for 1 year, revised figures indicate that it actually cost \$260,000, will have a total useful life of 11 years (including the year just completed), and will produce net annual cash flows of \$39,000 per year. Evaluate the success of the project. Assume a discount rate of 10%.

Perform a post-audit.

BE27.7 (LO 4) Kanye Company is evaluating the purchase of a rebuilt spot-welding machine to be used in the manufacture of a new product. The machine will cost \$176,000, has an estimated useful life of 7 years, a salvage value of zero, and will increase net annual cash flows by \$35,000. What is its approximate internal rate of return?

BE27.8 (LO 4) Viera Corporation is considering investing in a new facility. The estimated cost of the facility is \$2,045,000. It will be used for 12 years, then sold for \$716,000. The facility will generate annual cash inflows of \$400,000 and will need new annual cash outflows of \$150,000. The company has a required rate of return of 7%. Calculate the internal rate of return on this project, and discuss whether the project should be accepted.

Calculate internal rate of return.

BE27.9 (LO 5) Swift Oil Company is considering investing in a new oil well. It is expected that the oil well will increase annual revenues by \$130,000 and will increase annual expenses by \$70,000 including depreciation. The oil well will cost \$490,000 and will have a \$10,000 salvage value at the end of its 10-year useful life. Calculate the annual rate of return.

Calculate internal rate of return.

DO IT! Exercises

DO IT! 27.1 (LO 1) Wayne Company is considering a long-term investment project called ZIP. ZIP will require an investment of \$140,000. It will have a useful life of 4 years and no salvage value. Annual cash inflows would increase by \$80,000, and annual cash outflows would increase by \$40,000. Compute the cash payback period.

Compute the cash payback period for an investment.

DO IT! 27.2 (LO 2) Wayne Company is considering a long-term investment project called ZIP. ZIP will require an investment of \$120,000. It will have a useful life of 4 years and no salvage value. Annual cash inflows would increase by \$80,000, and annual cash outflows would increase by \$40,000. The company's required rate of return is 12%. Calculate the net present value on this project and discuss whether it should be accepted.

Calculate net present value of an investment.

DO IT! 27.3 (LO 3) Ranger Corporation has decided to invest in renewable energy sources to meet part of its energy needs for production. It is considering solar power versus wind power. After considering cost savings as well as incremental revenues from selling excess electricity into the power grid, it has determined the following.

	Solar	Wind
Present value of annual cash flows	\$52,580	\$128,450
Initial investment	\$39,500	\$105,300

Determine the net present value and profitability index of each project. Which energy source should it choose?

Compute profitability index.

DO IT! 27.4 (LO 4) Wayne Company is considering a long-term investment project called ZIP. ZIP will require an investment of \$120,000. It will have a useful life of 4 years and no salvage value. Annual cash inflows would increase by \$80,000, and annual cash outflows would increase by \$40,000. The company's required rate of return is 12%. Calculate the internal rate of return on this project and discuss whether it should be accepted.

Calculate internal rate of return.

DO IT! 27.5 (LO 5) Wayne Company is considering a long-term investment project called ZIP. ZIP will require an investment of \$120,000. It will have a useful life of 4 years and no salvage value. Annual revenues would increase by \$80,000, and annual expenses (excluding depreciation) would increase by \$41,000. Wayne uses the straight-line method to compute depreciation expense. The company's required rate of return is 12%. Compute the annual rate of return.

Calculate annual rate of return.

Exercises

Compute cash payback and net present value.

E27.1 (LO 1, 2) Linkin Corporation is considering purchasing a new delivery truck. The truck has many advantages over the company's current truck (not the least of which is that it runs). The new truck would cost \$56,000. Because of the increased capacity, reduced maintenance costs, and increased fuel economy, the new truck is expected to generate cost savings of \$8,000. At the end of 8 years, the company will sell the truck for an estimated \$27,000. Traditionally the company has used a rule of thumb that a proposal should not be accepted unless it has a payback period that is less than 50% of the asset's estimated useful life. Larry Newton, a new manager, has suggested that the company should not rely solely on the payback approach, but should also employ the net present value method when evaluating new projects. The company's cost of capital is 8%.

Instructions

- Compute the cash payback period and net present value of the proposed investment.
- Does the project meet the company's cash payback criteria? Does it meet the net present value criteria for acceptance? Discuss your results.

Compute cash payback period and net present value.

E27.2 (LO 1, 2) Doug's Custom Construction Company is considering three new projects, each requiring an equipment investment of \$22,000. Each project will last for 3 years and produce the following net annual cash flows.

Year	AA	BB	CC
1	\$ 7,000	\$10,000	\$13,000
2	9,000	10,000	12,000
3	12,000	10,000	11,000
Total	\$28,000	\$30,000	\$36,000

The equipment's salvage value is zero, and Doug uses straight-line depreciation. Doug will not accept any project with a cash payback period over 2 years. Doug's required rate of return is 12%.

Instructions

- Compute each project's payback period, indicating the most desirable project and the least desirable project using this method. (Round to two decimals and assume in your computations that cash flows occur evenly throughout the year.)
- Compute the net present value of each project. Does your evaluation change? (Round to nearest dollar.)

Calculate net present value and apply decision rule.

E27.3 (LO 2) Hillsong Inc. manufactures snowsuits. Hillsong is considering purchasing a new sewing machine at a cost of \$2.45 million. Its existing machine was purchased five years ago at a price of \$1.8 million; six months ago, Hillsong spent \$55,000 to keep it operational. The existing sewing machine can be sold today for \$250,000. The new sewing machine would require a one-time, \$85,000 training cost. Operating costs would decrease by the following amounts for years 1 to 7:

Year 1	\$390,000
2	400,000
3	411,000
4	426,000
5	434,000
6	435,000
7	436,000

The new sewing machine would be depreciated according to the declining-balance method at a rate of 20%. The salvage value is expected to be \$400,000. This new equipment would require maintenance costs of \$100,000 at the end of the fifth year. The cost of capital is 9%.

Instructions

Use the net present value method to determine whether Hillsong should purchase the new machine to replace the existing machine, and state the reason for your conclusion.

(CGA adapted)

Compute net present value and profitability index.

E27.4 (LO 2, 3) BAK Corp. is considering purchasing one of two new diagnostic machines. Either machine would make it possible for the company to bid on jobs that it currently isn't equipped to do. Estimates regarding each machine are provided below.

	Machine A	Machine B
Original cost	\$75,500	\$180,000
Estimated life	8 years	8 years
Salvage value	–0–	–0–
Estimated annual cash inflows	\$20,000	\$40,000
Estimated annual cash outflows	\$5,000	\$10,000

Instructions

Calculate the net present value and profitability index of each machine. Assume a 9% discount rate. Which machine should be purchased?

E27.5 (LO 4) Bruno Corporation is involved in the business of injection molding of plastics. It is considering the purchase of a new computer-aided design and manufacturing machine for \$430,000. The company believes that with this new machine it will improve productivity and increase quality, resulting in an increase in net annual cash flows of \$101,000 for the next 6 years. Management requires a 10% rate of return on all new investments.

Determine internal rate of return.

Instructions

Calculate the internal rate of return on this new machine. Should the investment be accepted?

E27.6 (LO 1, 4) BSU Inc. wants to purchase a new machine for \$29,300, excluding \$1,500 of installation costs. The old machine was purchased five years ago and had an expected economic life of 10 years with no salvage value. The old machine has a book value of \$2,000, and BSU Inc. expects to sell it for that amount. The new machine will decrease operating costs by \$7,000 each year of its economic life. The straight-line depreciation method will be used for the new machine for a six-year period with no salvage value.

Calculate cash payback period, internal rate of return, and apply decision rules.

Instructions

- Determine the cash payback period.
- Determine the approximate internal rate of return.
- Assuming the company has a required rate of return of 10%, state your conclusion on whether the new machine should be purchased.

(CGA adapted)

E27.7 (LO 4) Iggy Company is considering three capital expenditure projects. Relevant data for the projects are as follows.

Project	Investment	Annual Income	Life of Project
22A	\$240,000	\$15,500	6 years
23A	270,000	20,600	9 years
24A	280,000	15,700	7 years

Annual income is constant over the life of the project. Each project is expected to have zero salvage value at the end of the project. Iggy Company uses the straight-line method of depreciation.

Determine internal rate of return.

Instructions

- Determine the internal rate of return for each project. Round the internal rate of return factor to three decimals.
- If Iggy Company's required rate of return is 10%, which projects are acceptable?

E27.8 (LO 5) Service Pierre's Hair Salon is considering opening a new location in French Lick, California. The cost of building a new salon is \$300,000. A new salon will normally generate annual revenues of \$70,000, with annual expenses (including depreciation) of \$41,500. At the end of 15 years the salon will have a salvage value of \$80,000.

Calculate annual rate of return.

Instructions

Calculate the annual rate of return on the project.

E27.9 (LO 1, 5) Service Legend Service Center just purchased an automobile hoist for \$32,400. The hoist has an 8-year life and an estimated salvage value of \$3,000. Installation costs and freight charges were \$3,300 and \$700, respectively. Legend uses straight-line depreciation.

Compute cash payback period and annual rate of return.

The new hoist will be used to replace mufflers and tires on automobiles. Legend estimates that the new hoist will enable his mechanics to replace five extra mufflers per week. Each muffler sells for \$72 installed. The cost of a muffler is \$36, and the labor cost to install a muffler is \$16.

Instructions

- Compute the cash payback period for the new hoist.
- Compute the annual rate of return for the new hoist. (Round to one decimal.)

Compute annual rate of return, cash payback period, and net present value.

E27.10 (LO 1, 2, 5) Vilas Company is considering a capital investment of \$190,000 in additional productive facilities. The new machinery is expected to have a useful life of 5 years with no salvage value. Depreciation is by the straight-line method. During the life of the investment, annual net income and net annual cash flows are expected to be \$12,000 and \$50,000, respectively. Vilas has a 12% cost of capital rate, which is the required rate of return on the investment.

Instructions

(Round to two decimals.)

- Compute (1) the cash payback period and (2) the annual rate of return on the proposed capital expenditure.
- Using the discounted cash flow technique, compute the net present value.

Calculate payback, annual rate of return, and net present value.

E27.11 (LO 1, 2, 5) Drake Corporation is reviewing an investment proposal. The initial cost is \$105,000. Estimates of the book value of the investment at the end of each year, the net cash flows for each year, and the net income for each year are presented in the schedule below. All cash flows are assumed to take place at the end of the year. The salvage value of the investment at the end of each year is assumed to equal its book value. There would be no salvage value at the end of the investment's life.

Investment Proposal

Year	Book Value	Annual Cash Flows	Annual Net Income
1	\$70,000	\$45,000	\$10,000
2	42,000	40,000	12,000
3	21,000	35,000	14,000
4	7,000	30,000	16,000
5	0	25,000	18,000

Drake Corporation uses an 11% target rate of return for new investment proposals.

Instructions

- What is the cash payback period for this proposal?
- What is the annual rate of return for the investment?
- What is the net present value of the investment?

(CMA-Canada adapted)

Problems: Set A

Compute annual rate of return, cash payback, and net present value.

P27.1A (LO 1, 2, 5) U3 Company is considering three long-term capital investment proposals. Each investment has a useful life of 5 years. Relevant data on each project are as follows.

	Project Bono	Project Edge	Project Clayton
Capital investment	\$160,000	\$175,000	\$200,000
Annual net income:			
Year 1	14,000	18,000	27,000
2	14,000	17,000	23,000
3	14,000	16,000	21,000
4	14,000	12,000	13,000
5	14,000	9,000	12,000
Total	\$ 70,000	\$ 72,000	\$ 96,000

Depreciation is computed by the straight-line method with no salvage value. The company's cost of capital is 15%. (Assume that cash flows occur evenly throughout the year.)

Instructions

- a. Compute the cash payback period for each project. (Round to two decimals.)
- b. Compute the net present value for each project. (Round to nearest dollar.)
- c. Compute the annual rate of return for each project. (Round to two decimals.) (*Hint:* Use average annual net income in your computation.)
- d. Rank the projects on each of the foregoing bases. Which project do you recommend?

P27.2A (LO 1, 2, 5) Service Writing Lon Timur is an accounting major at a midwestern state university located approximately 60 miles from a major city. Many of the students attending the university are from the metropolitan area and visit their homes regularly on the weekends. Lon, an entrepreneur at heart, realizes that few good commuting alternatives are available for students doing weekend travel. He believes that a weekend commuting service could be organized and run profitably from several suburban and downtown shopping mall locations. Lon has gathered the following investment information.

1. Five used vans would cost a total of \$75,000 to purchase and would have a 3-year useful life with negligible salvage value. Lon plans to use straight-line depreciation.
2. Ten drivers would have to be employed at a total payroll expense of \$48,000.
3. Other annual out-of-pocket expenses associated with running the commuter service would include Gasoline \$16,000, Maintenance \$3,300, Repairs \$4,000, Insurance \$4,200, and Advertising \$2,500.
4. Lon has visited several financial institutions to discuss funding. The best interest rate he has been able to negotiate is 15%. Use this rate for cost of capital.
5. Lon expects each van to make ten round trips weekly and carry an average of six students each trip. The service is expected to operate 30 weeks each year, and each student will be charged \$12.00 for a round-trip ticket.

b. E \$(7,312); C \$2,163

Compute annual rate of return, cash payback, and net present value.

Instructions

- a. Determine the annual (1) net income and (2) net annual cash flows for the commuter service.
- b. Compute (1) the cash payback period and (2) the annual rate of return. (Round to two decimals.)
- c. Compute the net present value of the commuter service. (Round to the nearest dollar.)
- d. What should Lon conclude from these computations?

a. (1) \$5,000
b. (1) 2.5 years

P27.3A (LO 2, 3, 4) Service Brooks Clinic is considering investing in new heart-monitoring equipment. It has two options. Option A would have an initial lower cost but would require a significant expenditure for rebuilding after 4 years. Option B would require no rebuilding expenditure, but its maintenance costs would be higher. Since the Option B machine is of initial higher quality, it is expected to have a salvage value at the end of its useful life. The following estimates were made of the cash flows. The company's cost of capital is 8%.

Compute net present value, profitability index, and internal rate of return.

	Option A	Option B
Initial cost	\$160,000	\$227,000
Annual cash inflows	\$71,000	\$80,000
Annual cash outflows	\$30,000	\$31,000
Cost to rebuild (end of year 4)	\$50,000	\$0
Salvage value	\$0	\$8,000
Estimated useful life	7 years	7 years

Instructions

- a. Compute the (1) net present value, (2) profitability index, and (3) internal rate of return for each option. (*Hint:* To solve for internal rate of return, experiment with alternative discount rates to arrive at a net present value of zero.)
- b. Which option should be accepted?

a. (1) NPVA \$16,709
(3) IRR B 12%

P27.4A (LO 2, 3) Service Jane's Auto Care is considering the purchase of a new tow truck. The garage doesn't currently have a tow truck, and the \$60,000 price tag for a new truck would represent a major expenditure. Jane Austen, owner of the garage, has compiled the estimates shown below in trying to determine whether the tow truck should be purchased.

Compute net present value considering intangible benefits.

Initial cost	\$60,000
Estimated useful life	8 years
Net annual cash flows from towing	\$8,000
Overhaul costs (end of year 4)	\$6,000
Salvage value	\$12,000

Jane's good friend, Rick Ryan, stopped by. He is trying to convince Jane that the tow truck will have other benefits that Jane hasn't even considered. First, he says, cars that need towing need to be fixed. Thus, when Jane tows them to her facility, her repair revenues will increase. Second, he notes that the tow truck could have a plow mounted on it, thus saving Jane the cost of plowing her parking lot. (Rick will give her a used plow blade for free if Jane will plow Rick's driveway.) Third, he notes that the truck will generate goodwill; people who are rescued by Jane's tow truck will feel grateful and might be more inclined to use her service station in the future or buy gas there. Fourth, the tow truck will have "Jane's Auto Care" on its doors, hood, and back tailgate—a form of free advertising wherever the tow truck goes. Rick estimates that, at a minimum, these benefits would be worth the following.

Additional annual net cash flows from repair work	\$3,000
Annual savings from plowing	750
Additional annual net cash flows from customer "goodwill"	1,000
Additional annual net cash flows resulting from free advertising	750

The company's cost of capital is 9%.

Instructions

a. NPV \$(13,950)

b. NPV \$16,491

- a. Calculate the net present value, ignoring the additional benefits described by Rick. Should the tow truck be purchased?
- b. Calculate the net present value, incorporating the additional benefits suggested by Rick. Should the tow truck be purchased?
- c. Suppose Rick has been overly optimistic in his assessment of the value of the additional benefits. At a minimum, how much would the additional benefits have to be worth in order for the project to be accepted?

Compute net present value and internal rate of return with sensitivity analysis.

P27.5A (LO 2, 3, 4) Service Coolplay Corp. is thinking about opening a soccer camp in southern California. To start the camp, Coolplay would need to purchase land and build four soccer fields and a sleeping and dining facility to house 150 soccer players. Each year, the camp would be run for 8 sessions of 1 week each. The company would hire college soccer players as coaches. The camp attendees would be male and female soccer players ages 12–18. Property values in southern California have enjoyed a steady increase in value. It is expected that after using the facility for 20 years, Coolplay can sell the property for more than it was originally purchased for. The following amounts have been estimated.

Cost of land	\$300,000
Cost to build soccer fields, dorm and dining facility	\$600,000
Annual cash inflows assuming 150 players and 8 weeks	\$920,000
Annual cash outflows	\$840,000
Estimated useful life	20 years
Salvage value	\$1,500,000
Discount rate	8%

Instructions

a. NPV \$207,277

d. IRR 12%

- a. Calculate the net present value of the project.
- b. To gauge the sensitivity of the project to these estimates, assume that if only 125 players attend each week, annual cash inflows will be \$805,000 and annual cash outflows will be \$750,000. What is the net present value using these alternative estimates? Discuss your findings.
- c. Assuming the original facts, what is the net present value if the project is actually riskier than first assumed and an 10% discount rate is more appropriate?
- d. Assume that during the first 5 years, the annual net cash flows each year were only \$40,000. At the end of the fifth year, the company is running low on cash, so management decides to sell the property for \$1,332,000. What was the actual internal rate of return on the project? Explain how this return was possible given that the camp did not appear to be successful.

Continuing Cases

Current Designs

CD27 A company that manufactures recreational pedal boats has approached Mike Cichanowski to ask if he would be interested in using **Current Designs'** rotomold expertise and equipment to produce some of the pedal boat components. Mike is intrigued by the idea and thinks it would be an interesting way of complementing the present product line.

One of Mike's hesitations about the proposal is that the pedal boats are a different shape than the kayaks that Current Designs produces. As a result, the company would need to buy an additional rotomold oven in order to produce the pedal boat components. This project clearly involves risks, and Mike wants to make sure that the returns justify the risks. In this case, since this is a new venture, Mike thinks that a 15% discount rate is appropriate to use to evaluate the project.

As an intern at Current Designs, Mike has asked you to prepare an initial evaluation of this proposal. To aid in your analysis, he has provided the following information and assumptions.

1. The new rotomold oven will have a cost of \$256,000, a salvage value of \$0, and an 8-year useful life. Straight-line depreciation will be used.
2. The projected revenues, costs, and results for each of the 8 years of this project are as follows.

Sales	\$220,000
Less:	
Manufacturing costs	\$140,000
Depreciation	32,000
Shipping and administrative costs	<u>22,000</u>
Income before income taxes	194,000
Income tax expense	26,000
Net income	<u>10,800</u>
	<u><u>\$ 15,200</u></u>

Instructions

- a. Compute the annual rate of return. (Round to two decimal places.)
- b. Compute the payback period. (Round to two decimal places.)
- c. Compute the net present value using a discount rate of 9%. (Round to nearest dollar.) Should the proposal be accepted using this discount rate?
- d. Compute the net present value using a discount rate of 15%. (Round to nearest dollar.) Should the proposal be accepted using this discount rate?

Waterways

(Note: This is a continuation of the Waterways case from Chapters 19–26.)

WP27 Waterways Corporation puts much emphasis on cash flow when it plans for capital investments. The company chose its discount rate of 8% based on the rate of return it must pay its owners and creditors. Using that rate, Waterways then uses different methods to determine the best decisions for making capital outlays. Waterways is considering buying five new backhoes to replace the backhoes it now has. This problem asks you to evaluate that decision, using various capital budgeting techniques.

Go to WileyPLUS for complete case details and instructions.

Comprehensive Cases

CC27.1 For this case, revisit the Greetings Inc. company presented in earlier chapters. The company is now searching for new opportunities for growth. This case will provide you with the opportunity to evaluate a proposal based on initial estimates as well as conduct sensitivity analysis. It also requires evaluation of the underlying assumptions used in the analysis.

CC27.2 Armstrong Helmet Company needs to determine the cost for a given product. For this case, you will have the opportunity to explore cost-volume-profit relationships and prepare a set of budgets.

Go to WileyPLUS for details and instructions for both cases.

Expand Your Critical Thinking

Decision-Making Across the Organization

CT27.1 Luang Company is considering the purchase of a new machine. Its invoice price is \$122,000, freight charges are estimated to be \$3,000, and installation costs are expected to be \$5,000. Salvage value of the new machine is expected to be zero after a useful life of 4 years. Existing equipment could be

retained and used for an additional 4 years if the new machine is not purchased. At that time, the salvage value of the equipment would be zero. If the new machine is purchased now, the existing machine would be scrapped. Luang's accountant, Lisa Hsung, has accumulated the following data regarding annual sales and expenses with and without the new machine.

1. Without the new machine, Luang can sell 10,000 units of product annually at a per unit selling price of \$100. If the new unit is purchased, the number of units produced and sold would increase by 25%, and the selling price would remain the same.
2. The new machine is faster than the old machine, and it is more efficient in its usage of materials. With the old machine the gross profit rate will be 28.5% of sales, whereas the rate will be 30% of sales with the new machine. (*Note:* These gross profit rates do not include depreciation on the machines. For purposes of determining net income, treat depreciation expense as a separate line item.)
3. Annual selling expenses are \$160,000 with the current equipment. Because the new equipment would produce a greater number of units to be sold, annual selling expenses are expected to increase by 10% if it is purchased.
4. Annual administrative expenses are expected to be \$100,000 with the old machine, and \$112,000 with the new machine.
5. The current book value of the existing machine is \$40,000. Luang uses straight-line depreciation.
6. Luang's management has a required rate of return of 15% on its investment and a cash payback period of no more than 3 years.

Instructions

With the class divided into groups, answer the following. (Ignore income tax effects.)

- a. Calculate the annual rate of return for the new machine. (Round to two decimals.)
- b. Compute the cash payback period for the new machine. (Round to two decimals.)
- c. Compute the net present value of the new machine. (Round to the nearest dollar.)
- d. On the basis of the foregoing data, would you recommend that Luang buy the machine? Why?

Managerial Analysis

CT27.2 Hawke Skateboards is considering building a new plant. Bob Skerritt, the company's marketing manager, is an enthusiastic supporter of the new plant. Lucy Liu, the company's chief financial officer, is not so sure that the plant is a good idea. Currently, the company purchases its skateboards from foreign manufacturers. The following figures were estimated regarding the construction of a new plant.

Cost of plant	\$4,000,000	Estimated useful life	15 years
Annual cash inflows	4,000,000	Salvage value	\$2,000,000
Annual cash outflows	3,540,000	Discount rate	11%

Bob Skerritt believes that these figures understate the true potential value of the plant. He suggests that by manufacturing its own skateboards the company will benefit from a "buy American" patriotism that he believes is common among skateboarders. He also notes that the firm has had numerous quality problems with the skateboards manufactured by its suppliers. He suggests that the inconsistent quality has resulted in lost sales, increased warranty claims, and some costly lawsuits. Overall, he believes sales will be \$200,000 higher than projected above, and that the savings from lower warranty costs and legal costs will be \$60,000 per year. He also believes that the project is not as risky as assumed above, and that a 9% discount rate is more reasonable.

Instructions

Answer each of the following.

- a. Compute the net present value of the project based on the original projections.
- b. Compute the net present value incorporating Bob's estimates of the value of the intangible benefits, but still using the 11% discount rate.
- c. Compute the net present value using the original estimates, but employing the 9% discount rate that Bob suggests is more appropriate.
- d. Comment on your findings.

Real-World Focus

CT27.3 Tecumseh Products Company has its headquarters in Tecumseh, Michigan. It describes itself as "a global multinational corporation producing mechanical and electrical components essential to

industries creating end-products for health, comfort, and convenience.” The following was excerpted from the management discussion and analysis section of a recent annual report.

Tecumseh Products Company Management Discussion and Analysis

The company has invested approximately \$50 million in a scroll compressor manufacturing facility in Tecumseh, Michigan. After experiencing setbacks in developing a commercially acceptable scroll compressor, the Company is currently testing a new generation of scroll product. The Company is unable to predict when, or if, it will offer a scroll compressor for commercial sale, but it does anticipate that reaching volume production will require a significant additional investment. Given such additional investment and current market conditions, management is currently reviewing its options with respect to scroll product improvement, cost reductions, joint ventures and alternative new products.

Instructions

Discuss issues the company should consider and techniques the company should employ to determine whether to continue pursuing this project.

CT27.4 Campbell Soup Company is an international provider of soup products. Management is very interested in continuing to grow the company in its core business, while “spinning off” those businesses that are not part of its core operation.

Instructions

Go to the home page of Campbell Soup Company and access its current annual report. Review the financial statements and management’s discussion and analysis, and answer the following questions.

- a. What was the total amount of capital expenditures in the current year, and how does this amount compare with the previous year? In your response, note what year you are using.
- b. What interest rate did the company pay on new borrowings in the current year?
- c. Assume that this year’s capital expenditures are expected to increase cash flows by \$50 million. What is the expected internal rate of return (IRR) for these capital expenditures? (Assume a 10-year period for the cash flows.)

Communication Activity

CT27.5 Refer back to E27.9 to address the following.

Instructions

Prepare a memo to Maria Fierro, your supervisor. Show your calculations from E27.9 (a) and (b). In one or two paragraphs, discuss important nonfinancial considerations. Make any assumptions you believe to be necessary. Make a recommendation based on your analysis.

Ethics Case

CT27.6 NuComp Company operates in a state where corporate taxes and workers’ compensation insurance rates have recently doubled. NuComp’s president has just assigned you the task of preparing an economic analysis and making a recommendation relative to moving the entire operation to Missouri. The president is slightly in favor of such a move because Missouri is his boyhood home and he also owns a fishing lodge there.

You have just completed building your dream house, moved in, and sodded the lawn. Your children are all doing well in school and sports and, along with your spouse, want no part of a move to Missouri. If the company does move, so will you because the town is a one-industry community and you and your spouse will have to move to have employment. Moving when everyone else does will cause you to take a big loss on the sale of your house. The same hardships will be suffered by your coworkers, and the town will be devastated.

In compiling the costs of moving versus not moving, you have latitude in the assumptions you make, the estimates you compute, and the discount rates and time periods you project. You are in a position to influence the decision singlehandedly.

Instructions

- a. Who are the stakeholders in this situation?
- b. What are the ethical issues in this situation?
- c. What would you do in this situation?

All About You

CT27.7 Numerous articles have been written that identify early warning signs that you might be getting into trouble with your personal debt load. You can find many good articles on this topic on the Web.

Instructions

Find an article that identifies early warning signs of personal debt trouble. Write a summary of the article and bring your summary and the article to class to share.

Considering Your Costs and Benefits

CT27.8 The March 31, 2011, edition of the *Wall Street Journal* includes an article by Russell Gold entitled “Solar Gains Traction—Thanks to Subsidies.”

Instructions

Read the article and then answer the following questions.

- a. What was the total cost of the solar panels installed? What was the “out-of-pocket” cost to the couple?
- b. Using the total annual electricity bill of \$5,000 mentioned in the story, what is the cash payback of the project using the total cost? What is the cash payback based on the “out-of-pocket” cost?
- c. Solar panel manufacturers estimate that solar panels can last up to 40 years with only minor maintenance costs. Assuming no maintenance costs, a 6% rate of interest, a more conservative 20-year life, and zero salvage value, what is the net present value of the project based on the total cost? What is the net present value of the project based on the “out-of-pocket” cost?
- d. What was the wholesale price of panels per watt at the time the article was written? At what price per watt does the article say that subsidies will no longer be needed? Does this price appear to be achievable?

Specimen Financial Statements: Apple Inc.

Once each year, a corporation communicates to its stockholders and other interested parties by issuing a complete set of audited financial statements. The **annual report**, as this communication is called, summarizes the financial results of the company's operations for the year and its plans for the future. Many annual reports are attractive, multicolored, glossy public relations pieces, containing pictures of corporate officers and directors as well as photos and descriptions of new products and new buildings. Yet the basic function of every annual report is to report financial information, almost all of which is a product of the corporation's accounting system.

The content and organization of corporate annual reports have become fairly standardized. Excluding the public relations part of the report (pictures, products, etc.), the following are the traditional financial portions of the annual report:

- Financial Highlights
- Letter to the Stockholders
- Management's Discussion and Analysis
- Financial Statements
- Notes to the Financial Statements
- Management's Responsibility for Financial Reporting
- Management's Report on Internal Control over Financial Reporting
- Report of Independent Registered Public Accounting Firm
- Selected Financial Data

The official SEC filing of the annual report is called a **Form 10-K**, which often omits the public relations pieces found in most standard annual reports. On the following pages, we present **Apple Inc.**'s financial statements taken from the company's 2015 Form 10-K. The complete Form 10-K, including notes to the financial statements, is available at the company's website.

Time Value of Money

Appendix Preview

Would you rather receive \$1,000 today or a year from now? You should prefer to receive the \$1,000 today because you can invest the \$1,000 and then earn interest on it. As a result, you will have more than \$1,000 a year from now. What this example illustrates is the concept of the **time value of money**. Everyone prefers to receive money today rather than in the future because of the interest factor.

Interest and Future Values

LEARNING OBJECTIVE 1

Compute interest and future values.

Nature of Interest

Interest is payment for the use of another person's money. It is the difference between the amount borrowed or invested (called the **principal**) and the amount repaid or collected. The

amount of interest to be paid or collected is usually stated as a rate over a specific period of time. The rate of interest is generally stated as an annual rate.

The amount of interest involved in any financing transaction is based on three elements:

1. **Principal (*p*):** The original amount borrowed or invested.
2. **Interest Rate (*i*):** An annual percentage of the principal.
3. **Time (*n*):** The number of periods that the principal is borrowed or invested.

Simple Interest

Simple interest is computed on the principal amount only. It is the return on the principal for one period (we use an annual interest rate unless stated otherwise). Simple interest is usually expressed as shown in **Illustration G.1**.

ILLUSTRATION G.1

Interest computation

$$\text{Interest} = \frac{\text{Principal}}{p} \times \frac{\text{Rate}}{i} \times \frac{\text{Time}}{n}$$

For example, if you borrowed \$5,000 for 2 years at a simple interest rate of 12% annually, you would pay \$1,200 in total interest, computed as follows.

$$\begin{aligned}\text{Interest} &= p \times i \times n \\ &= \$5,000 \times .12 \times 2 \\ &= \$1,200\end{aligned}$$

Compound Interest

Compound interest is computed on principal **and** on any interest earned that has not been paid or withdrawn. It is the return on (or growth of) the principal for two or more time periods. Compounding computes interest not only on the principal but also on the interest earned to date on that principal, assuming the interest is left on deposit.

To illustrate the difference between simple and compound interest, assume that you deposit \$1,000 in Bank Two, where it will earn simple interest of 9% per year, and you deposit another \$1,000 in Citizens Bank, where it will earn compound interest of 9% per year compounded annually. Also assume that in both cases you will not withdraw any cash until three years from the date of deposit. **Illustration G.2** shows the computation of interest to be received and the accumulated year-end balances.

ILLUSTRATION G.2 Simple versus compound interest

Bank Two			Citizens Bank		
Simple Interest Calculation	Simple Interest	Accumulated Year-End Balance	Compound Interest Calculation	Compound Interest	Accumulated Year-End Balance
Year 1 $\$1,000.00 \times 9\%$	\$ 90.00	\$1,090.00	Year 1 $\$1,000.00 \times 9\%$	\$ 90.00	\$1,090.00
Year 2 $\$1,000.00 \times 9\%$	90.00	\$1,180.00	Year 2 $\$1,090.00 \times 9\%$	98.10	\$1,188.10
Year 3 $\$1,000.00 \times 9\%$	90.00	\$1,270.00	Year 3 $\$1,188.10 \times 9\%$	106.93	\$1,295.03
	<u>\$ 270.00</u>			<u>\$ 295.03</u>	
			\$25.03 Difference		

Note in Illustration G.2 that simple interest uses the initial principal of \$1,000 to compute the interest in all three years. Compound interest uses the accumulated balance (principal plus interest to date) at each year-end to compute interest in the succeeding year—which explains why your compound interest account is larger.

Obviously, if you had a choice between investing your money at simple interest or at compound interest, you would choose compound interest, all other things—especially risk—being equal. In the example, compounding provides \$25.03 of additional interest income. For practical purposes, compounding assumes that unpaid interest earned becomes a part of the principal, and the accumulated balance at the end of each year becomes the new principal on which interest is earned during the next year.

Most business situations use compound interest. Simple interest is generally applicable only to short-term situations of one year or less.

Future Value of a Single Amount

The **future value of a single amount** is the value at a future date of a given amount invested, assuming compound interest. For example, in Illustration G.2, \$1,295.03 is the future value of the \$1,000 investment earning 9% for three years. The \$1,295.03 is determined more easily by using the formula shown in **Illustration G.3**.

$$FV = p \times (1 + i)^n$$

ILLUSTRATION G.3

Formula for future value

where:

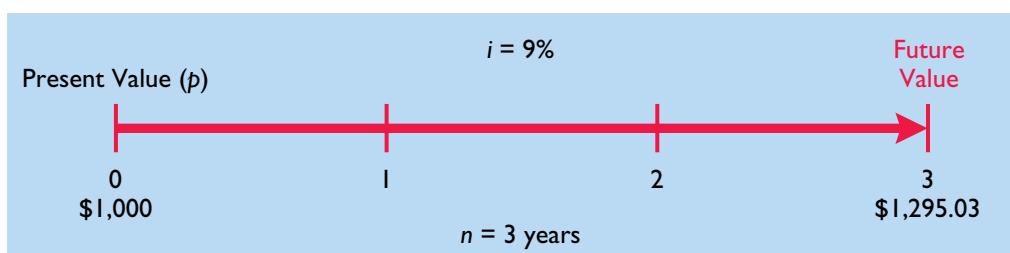

- FV = future value of a single amount
- p = principal (or present value; the value today)
- i = interest rate for one period
- n = number of periods

The \$1,295.03 is computed as follows.

$$\begin{aligned} FV &= p \times (1 + i)^n \\ &= \$1,000 \times (1 + .09)^3 \\ &= \$1,000 \times 1.29503 \\ &= \$1,295.03 \end{aligned}$$

The 1.29503 is computed by multiplying $(1.09 \times 1.09 \times 1.09)$. The amounts in this example can be depicted in the time diagram shown in **Illustration G.4**.

ILLUSTRATION G.4 Time diagram

Another method used to compute the future value of a single amount involves a compound interest table. This table shows the future value of 1 for n periods. **Table 1** is such a table.

In Table 1, n is the number of compounding periods, the percentages are the periodic interest rates, and the 5-digit decimal numbers in the respective columns are the future value of 1 factors. To use Table 1, you multiply the principal amount by the future value factor for the specified number of periods and interest rate. For example, the future value factor for two periods at 9% is 1.18810. Multiplying this factor by \$1,000 equals \$1,188.10—which is the

TABLE 1 Future Value of 1

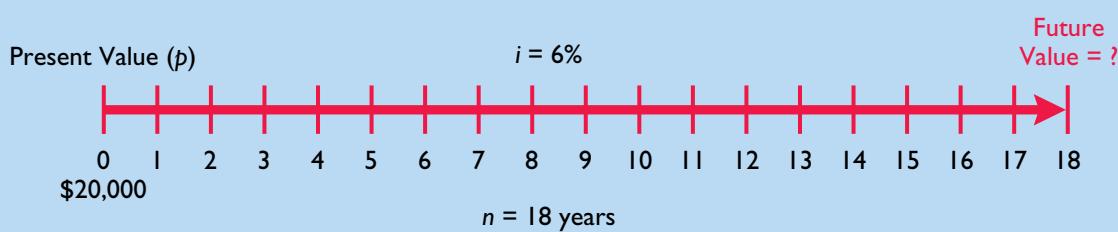

(n)	4%	5%	6%	7%	8%	9%	10%	11%	12%	15%

20	2.19112	2.65330	3.20714	3.86968	4.66096	5.60441	6.72750	8.06231	9.64629	16.36654

accumulated balance at the end of year 2 in the Citizens Bank example in Illustration G.2. The \$1,295.03 accumulated balance at the end of the third year is calculated from Table 1 by multiplying the future value factor for three periods (1.29503) by the \$1,000.

The demonstration problem in **Illustration G.5** shows how to use Table 1.

ILLUSTRATION G.5 Demonstration problem—Using Table 1 for FV of 1

John and Mary Rich invested \$20,000 in a savings account paying 6% interest at the time their son, Mike, was born. The money is to be used by Mike for his college education. On his 18th birthday, Mike withdraws the money from his savings account. How much did Mike withdraw from his account?

Answer: The future value factor from Table 1 is 2.85434 (18 periods at 6%). The future value of \$20,000 earning 6% per year for 18 years is **\$57,086.80** (\$20,000 × 2.85434).

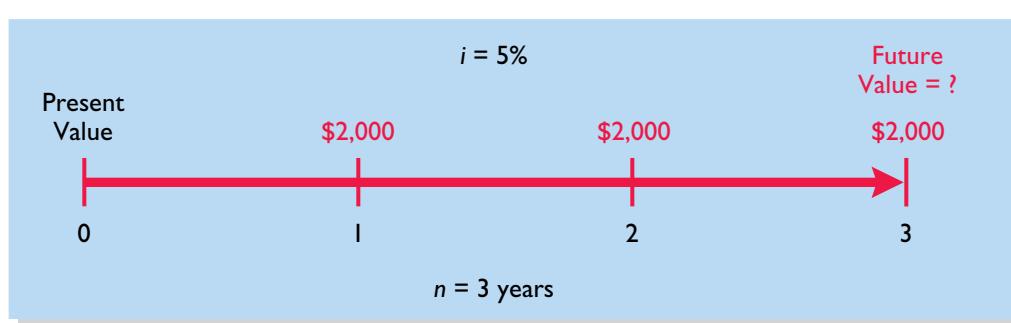

Future Value of an Annuity

The preceding discussion involved the accumulation of only a single principal sum. Individuals and businesses frequently encounter situations in which a **series** of equal dollar amounts are to be paid or received at evenly spaced time intervals (periodically), such as loans or lease (rental) contracts. A series of payments or receipts of equal dollar amounts is referred to as an **annuity**.

The **future value of an annuity** is the sum of all the payments (receipts) plus the accumulated compound interest on them. In computing the future value of an annuity, it is necessary to know (1) the interest rate, (2) the number of payments (receipts), and (3) the amount of the periodic payments (receipts).

To illustrate the computation of the future value of an annuity, assume that you invest \$2,000 at the end of each year for three years at 5% interest compounded annually. This situation is depicted in the time diagram in **Illustration G.6**.

ILLUSTRATION G.6 Time diagram for a three-year annuity

The \$2,000 invested at the end of year 1 will earn interest for two years (years 2 and 3), and the \$2,000 invested at the end of year 2 will earn interest for one year (year 3). However, the last \$2,000 investment (made at the end of year 3) will not earn any interest. Using the future value factors from Table 1, the future value of these periodic payments is computed as shown in **Illustration G.7**.

Invested at End of Year	Number of Compounding Periods	Amount Invested	×	Future Value of 1 Factor at 5%	=	Future Value
1	2	\$2,000		1.10250		\$2,205
2	1	2,000		1.05000		2,100
3	0	2,000		1.00000		2,000
				3.15250		\$6,305

The first \$2,000 investment is multiplied by the future value factor for two periods (1.1025) because two years' interest will accumulate on it (in years 2 and 3). The second \$2,000 investment will earn only one year's interest (in year 3) and therefore is multiplied by the future value factor for one year (1.0500). The final \$2,000 investment is made at the end of the third year and will not earn any interest. Thus, $n = 0$ and the future value factor is 1.00000. Consequently, the future value of the last \$2,000 invested is only \$2,000 since it does not accumulate any interest.

Calculating the future value of each individual cash flow is required when the periodic payments or receipts are not equal in each period. However, when the periodic payments (receipts) are **the same in each period**, the future value can be computed by using a future value of an annuity of 1 table. **Table 2** is such a table.

Table 2 shows the future value of 1 to be received periodically for a given number of payments. It assumes that each payment is made at the **end** of each period. We can see from Table 2

ILLUSTRATION G.7

Future value of periodic payment computation

TABLE 2 Future Value of an Annuity of 1

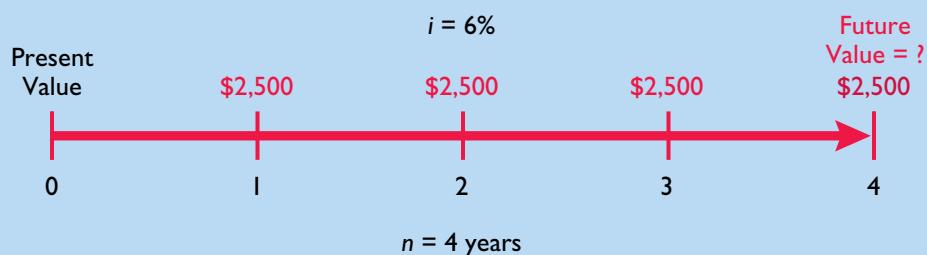

(n) Payments	4%	5%	6%	7%	8%	9%	10%	11%	12%	15%

that the future value of an annuity of 1 factor for three payments at 5% is 3.15250. The future value factor is the total of the three individual future value factors was shown in Illustration G.7. Multiplying this amount by the annual investment of \$2,000 produces a future value of \$6,305.

The demonstration problem in **Illustration G.8** shows how to use Table 2.

ILLUSTRATION G.8 Demonstration problem—Using Table 2 for FV of an annuity of 1

John and Char Lewis's daughter, Debra, has just started high school. They decide to start a college fund for her and will invest \$2,500 in a savings account at the end of each year she is in high school (4 payments total). The account will earn 6% interest compounded annually. How much will be in the college fund at the time Debra graduates from high school?

Answer: The future value factor from Table 2 is 4.37462 (4 payments at 6%). The future value of \$2,500 invested each year for 4 years at 6% interest is **\$10,936.55** ($\$2,500 \times 4.37462$).

Present Values

LEARNING OBJECTIVE 2

Compute present values.

Present Value Variables

The **present value** is the value now of a given amount to be paid or received in the future, assuming compound interest. The present value, like the future value, is based on three variables: (1) the dollar amount to be received (future amount), (2) the length of time until the amount is received (number of periods), and (3) the interest rate (the discount rate). The process of determining the present value is referred to as **discounting the future amount**.

Present value computations are used in measuring many items. For example, the present value of principal and interest payments is used to determine the market price of a bond. Determining the amount to be reported for notes payable and lease liabilities also involves present value computations. In addition, capital budgeting and other investment proposals are evaluated using present value computations. Finally, all rate of return and internal rate of return computations involve present value techniques.

Present Value of a Single Amount

To illustrate present value, assume that you want to invest a sum of money today that will provide \$1,000 at the end of one year. What amount would you need to invest today to have \$1,000 one year from now? If you want a 10% rate of return, the investment or present value is \$909.09 ($\$1,000 \div 1.10$). The formula for calculating present value is shown in **Illustration G.9**.

$$\text{Present Value (PV)} = \text{Future Value (FV)} \div (1 + i)^n$$

ILLUSTRATION G.9

Formula for present value

The computation of \$1,000 discounted at 10% for one year is as follows.

$$\begin{aligned} PV &= FV \div (1 + i)^n \\ &= \$1,000 \div (1 + .10)^1 \\ &= \$1,000 \div 1.10 \\ &= \$909.09 \end{aligned}$$

The future amount (\$1,000), the discount rate (10%), and the number of periods (1) are known. The variables in this situation are depicted in the time diagram in **Illustration G.10**.

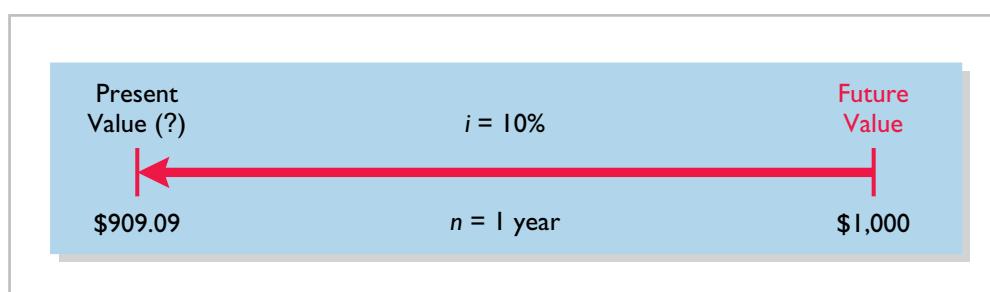

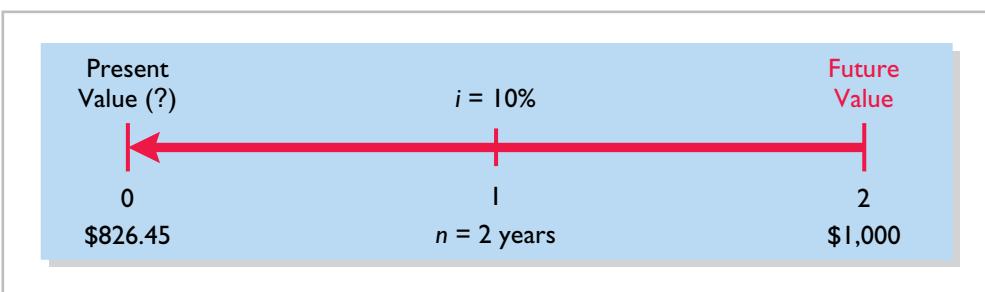

ILLUSTRATION G.10

Finding present value if discounted for one period

If the single amount of \$1,000 is to be received **in two years** and discounted at 10%, the formula $PV = \$1,000 \div (1 + .10)^2$ is used, where $(1 + .10)^2$ is equal to 1.21 (1.10×1.10). Its present value is \$826.45 ($\$1,000 \div 1.21$), depicted in **Illustration G.11**.

ILLUSTRATION G.11

Finding present value if discounted for two periods

The present value of 1 may also be determined through tables that show the present value of 1 for n periods. In **Table 3**, n is the number of discounting periods involved. The percentages are the periodic interest rates or discount rates, and the 5-digit decimal numbers in the respective columns are the present value of 1 factors.

When using Table 3, the future value is multiplied by the present value factor specified at the intersection of the number of periods and the discount rate.

TABLE 3 Present Value of 1

For example, the present value factor for one period at a discount rate of 10% is .90909, which is the value used to compute \$909.09 ($\$1,000 \times .90909$) in Illustration G.10. For two periods at a discount rate of 10%, the present value factor is .82645, which is the value used to compute \$826.45 ($\$1,000 \times .82645$) in Illustration G.11.

Note that a higher discount rate produces a smaller present value. For example, using a 15% discount rate, the present value of \$1,000 due one year from now is \$869.57 ($\$1,000 \times .86957$), versus \$909.09 at 10%. Also note that the further in the future that the future value is, the smaller the present value. For example, using the same discount rate of 10%, the present value of \$1,000 due in **five years** at 10% is \$620.92 ($\$1,000 \times .62092$). The present value of \$1,000 due in **one year** is \$909.09, a difference of \$288.17.

The following two demonstration problems (**Illustrations G.12** and **G.13**) illustrate how to use Table 3.

Suppose you have a winning lottery ticket and the state gives you the option of taking \$10,000 3 years from now or taking the present value of \$10,000 now. The state uses an 8% rate in discounting. How much will you receive if you accept your winnings now?

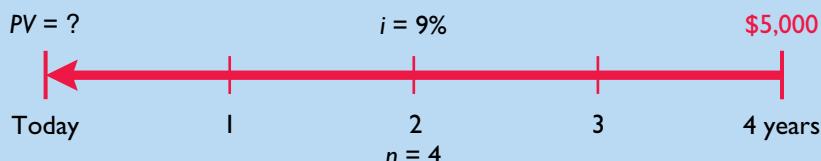

Answer: The present value factor from Table 3 is .79383 (3 periods at 8%). The present value of \$10,000 to be received in 3 years discounted at 8% is **\$7,938.30** (\$10,000 × .79383).

ILLUSTRATION G.12

Demonstration problem—
Using Table 3 for PV of 1

Determine the amount you must deposit today in your super savings account, paying 9% interest, in order to accumulate \$5,000 for a down payment 4 years from now on a new car.

Answer: The present value factor from Table 3 is .70843 (4 periods at 9%). The present value of \$5,000 to be received in 4 years discounted at 9% is **\$3,542.15** (\$5,000 × .70843).

ILLUSTRATION G.13

Demonstration problem—
Using Table 3 for PV of 1

Present Value of an Annuity

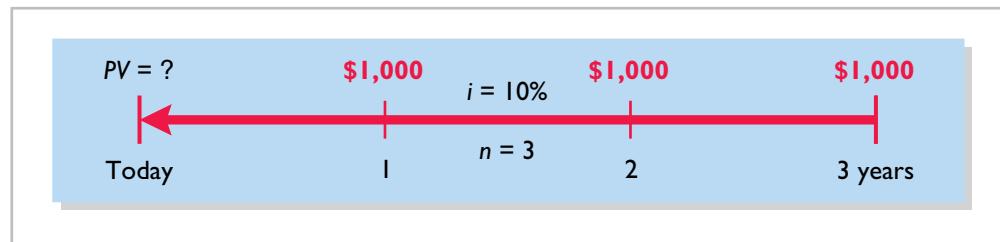

The preceding discussion involved the discounting of only a single future amount. Businesses and individuals frequently engage in transactions in which a series of equal dollar amounts are to be received or paid at evenly spaced time intervals (periodically). Examples of a series of periodic receipts or payments are loan agreements, installment sales, mortgage notes, lease (rental) contracts, and pension obligations. As discussed earlier, these periodic receipts or payments are **annuities**.

The **present value of an annuity** is the value now of a series of future receipts or payments, discounted assuming compound interest. In computing the present value of an annuity, it is necessary to know (1) the discount rate, (2) the number of payments (receipts), and (3) the amount of the periodic receipts or payments. To illustrate the computation of the present value of an annuity, assume that you will receive \$1,000 cash annually for three years

at a time when the discount rate is 10%. This situation is depicted in the time diagram in **Illustration G.14**. **Illustration G.15** shows the computation of its present value in this situation.

ILLUSTRATION G.14

Time diagram for a three-year annuity

**ILLUSTRATION G.15**

Present value of a series of future amounts computation

Future Amount	\times	Present Value of 1 Factor at 10%	=	Present Value
\$1,000 (1 year away)		.90909		\$ 909.09
1,000 (2 years away)		.82645		826.45
1,000 (3 years away)		.75132		751.32
		2.48686		\$2,486.86

This method of calculation is required when the periodic cash flows are not uniform in each period. However, when the future receipts are the same in each period, an annuity table can be used. As illustrated in **Table 4**, an annuity table shows the present value of 1 to be received periodically for a given number of payments. It assumes that each payment is made at the end of each period.

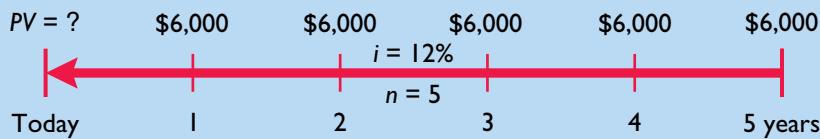

TABLE 4 Present Value of an Annuity of 1

(n) Payments	4%	5%	6%	7%	8%	9%	10%	11%	12%	15%

Table 4 shows that the present value of an annuity of 1 factor for three payments at 10% is 2.48685.¹ This present value factor is the total of the three individual present value factors, as shown in Illustration G.15. Applying this amount to the annual cash flow of \$1,000 produces a present value of \$2,486.85.

The following demonstration problem (Illustration G.16) illustrates how to use Table 4.

Kildare Company has just signed a capitalizable lease contract for equipment that requires rental payments of \$6,000 each, to be paid at the end of each of the next 5 years. The appropriate discount rate is 12%. What is the present value of the rental payments—that is, the amount used to capitalize the leased equipment?

Answer: The present value factor from Table 4 is 3.60478 (5 payments at 12%). The present value of 5 payments of \$6,000 each discounted at 12% is **\$21,628.68** ($\$6,000 \times 3.60478$).

ILLUSTRATION G.16

Demonstration problem—Using Table 4 for PV of an annuity of 1

Time Periods and Discounting

In the preceding calculations, the discounting was done on an annual basis using an annual interest rate. Discounting may also be done over shorter periods of time such as monthly, quarterly, or semiannually.

When the time frame is less than one year, it is necessary to convert the annual interest rate to the applicable time frame. Assume, for example, that the investor in Illustration G.14 received \$500 **semiannually** for three years instead of \$1,000 annually. In this case, the number of periods becomes six (3×2), the discount rate is 5% ($10\% \div 2$), the present value factor from Table 4 is 5.07569 (6 periods at 5%), and the present value of the future cash flows is \$2,537.85 ($5.07569 \times \500). This amount is slightly higher than the \$2,486.86 computed in Illustration G.15 because interest is computed twice during the same year. That is, during the second half of the year, interest is earned on the first half-year's interest.

Present Value of a Long-Term Note or Bond

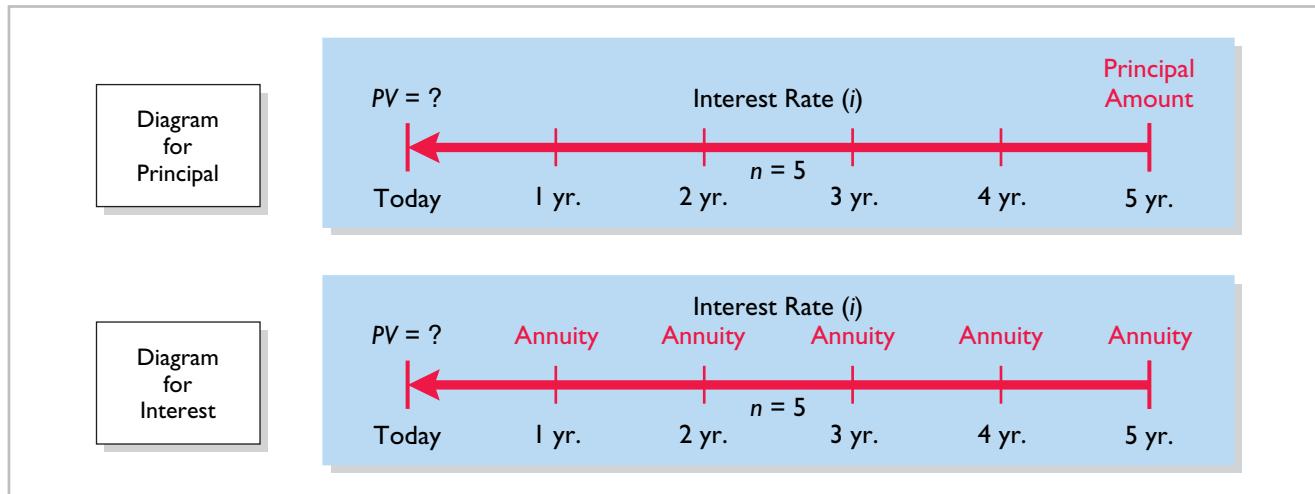

The present value (or market price) of a long-term note or bond is a function of three variables: (1) the payment amounts, (2) the length of time until the amounts are paid, and (3) the discount rate. Our example uses a five-year bond issue.

The first variable (dollars to be paid) is made up of two elements: (1) a series of interest payments (an annuity) and (2) the principal amount (a single sum). To compute the present

¹The difference of .00001 between 2.48686 and 2.48685 is due to rounding.

value of the bond, both the interest payments and the principal amount must be discounted—two different computations. The time diagrams for a bond due in five years are shown in **Illustration G.17**.

ILLUSTRATION G.17 Time diagrams for the present value of a bond

When the investor's market interest rate is equal to the bond's contractual interest rate, the present value of the bonds will equal the face value of the bonds. To illustrate, assume a bond issue of 5%, 10-year bonds with a face value of \$100,000 with interest payable **annually** on January 1. If the discount rate is the same as the contractual rate, the bonds will sell at face value. In this case, the investor will receive (1) \$100,000 at maturity and (2) a series of ten \$5,000 interest payments ($\$100,000 \times 5\%$) over the term of the bonds. The length of time is expressed in terms of interest periods—in this case—10, and the discount rate per interest period, 5%. The time diagram in **Illustration G.18** depicts the variables involved in this discounting situation.

ILLUSTRATION G.18 Time diagram for present value of a 5%, 10-year bond paying interest annually

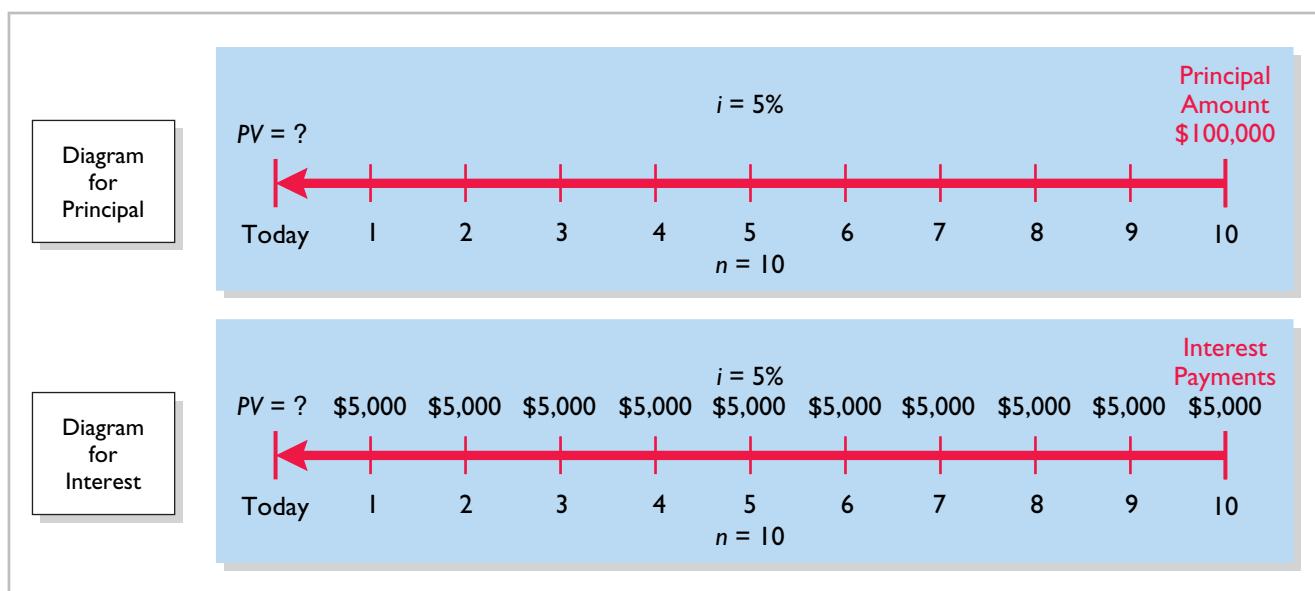

Illustration G.19 shows the computation of the present value of these bonds.

5% Contractual Rate—5% Discount Rate

Present value of principal to be received at maturity

$\$100,000 \times PV$ of 1 due in 10 periods at 5%

$\$100,000 \times .61391$ (Table 3)

\$ 61,391

Present value of interest to be received periodically over the term of the bonds

$\$5,000 \times PV$ of 1 due periodically for 10 periods at 5%

$\$5,000 \times 7.72173$ (Table 4)

38,609*

Present value of bonds

\$100,000

*Rounded

ILLUSTRATION G.19

Present value of principal and interest—face value

Now assume that the investor's required rate of return is 6%, not 5%. The future amounts are again \$100,000 and \$5,000, respectively, but now a discount rate of 6% must be used. The present value of the bonds is \$92,639, as computed in **Illustration G.20**.

5% Contractual Rate—6% Discount Rate

Present value of principal to be received at maturity

$\$100,000 \times .55839$ (Table 3)

\$55,839

Present value of interest to be received periodically over the term of the bonds

$\$5,000 \times 7.36009$ (Table 4)

36,800

Present value of bonds

\$92,639

ILLUSTRATION G.20

Present value of principal and interest—discount

Conversely, if the discount rate is 4% and the contractual rate is 5%, the present value of the bonds is \$108,111, computed as shown in **Illustration G.21**.

5% Contractual Rate—4% Discount Rate

Present value of principal to be received at maturity

$\$100,000 \times .67556$ (Table 3)

\$ 67,556

Present value of interest to be received periodically over the term of the bonds

$\$5,000 \times 8.11090$ (Table 4)

40,555*

Present value of bonds

\$108,111

ILLUSTRATION G.21

Present value of principal and interest—premium

The above discussion relied on present value tables in solving present value problems. Calculators may also be used to compute present values without the use of these tables. Many calculators, especially financial calculators, have present value (PV) functions that allow you to calculate present values by merely inputting the proper amount, discount rate, periods, and pressing the PV key. We discuss the use of financial calculators in a later section.

*Rounded

Capital Budgeting Situations

LEARNING OBJECTIVE 3

Compute the present value in capital budgeting situations.

The decision to make long-term capital investments is best evaluated using discounting techniques that recognize the time value of money. To do this, many companies calculate the present value of the cash flows involved in a capital investment.

To illustrate, Nagel-Siebert Trucking Company, a cross-country freight carrier in Montgomery, Illinois, is considering adding another truck to its fleet because of a purchasing opportunity. **Navistar Inc.**, Nagel-Siebert's primary supplier of overland rigs, is overstocked and offers to sell its biggest rig for \$154,000 cash payable upon delivery. Nagel-Siebert knows that the rig will produce a net cash flow per year of \$40,000 for five years (received at the end of each year), at which time it will be sold for an estimated salvage value of \$35,000. Nagel-Siebert's discount rate in evaluating capital expenditures is 10%. Should Nagel-Siebert commit to the purchase of this rig?

The cash flows that must be discounted to present value by Nagel-Siebert are as follows.

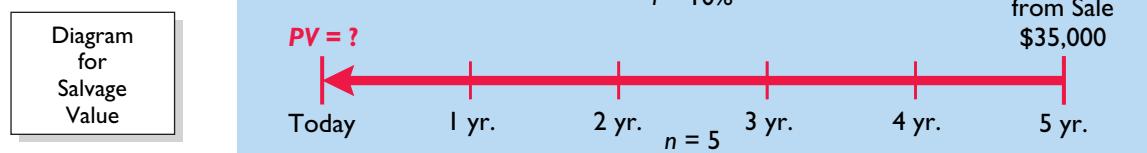

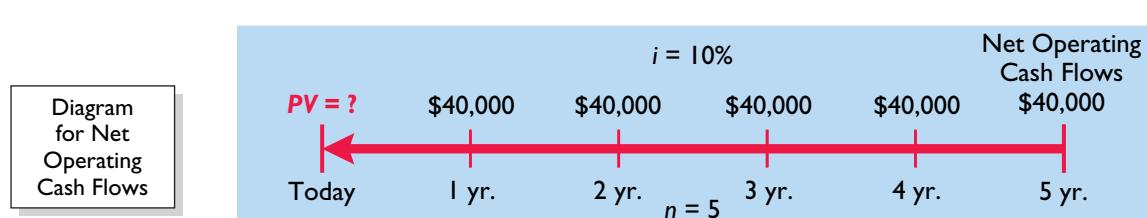

Cash payable on delivery (today): \$154,000.

Net cash flow from operating the rig: \$40,000 for 5 years (at the end of each year).

Cash received from sale of rig at the end of 5 years: \$35,000.

The time diagrams for the latter two cash flows are shown in **Illustration G.22**.

ILLUSTRATION G.22 Time diagrams for Nagel-Siebert Trucking Company

Notice from the diagrams that computing the present value of the net operating cash flows (\$40,000 at the end of each year) is **discounting an annuity** (Table 4), while computing the present value of the \$35,000 salvage value is **discounting a single sum** (Table 3). The computation of these present values is shown in **Illustration G.23**.

Present Values Using a 10% Discount Rate

Present value of net operating cash flows received annually over 5 years	
\$40,000 × PV of 1 received annually for 5 years at 10%	
\$40,000 × 3.79079	\$ 151,631.60
Present value of salvage value (cash) to be received in 5 years	
\$35,000 × PV of 1 received in 5 years at 10%	
\$35,000 × .62092	<u>21,732.20</u>
Present value of cash inflows	173,363.80
Present value of cash outflows (purchase price due today at 10%)	
\$154,000 × PV of 1 due today	
\$154,000 × 1.00000	(154,000.00)
Net present value	<u><u>\$ 19,363.80</u></u>

ILLUSTRATION G.23

Present value computations at 10%

Because the present value of the cash receipts (inflows) of \$173,363.80 (\$151,631.60 + \$21,732.20) exceeds the present value of the cash payments (outflows) of \$154,000.00, the net present value of \$19,363.80 is positive, and **the decision to invest should be accepted**.

Now assume that Nagel-Siebert uses a discount rate of 15%, not 10%, because it wants a greater return on its investments in capital assets. The cash receipts and cash payments by Nagel-Siebert are the same. The present values of these receipts and cash payments discounted at 15% are shown in **Illustration G.24**.

Present Values Using a 15% Discount Rate

Present value of net operating cash flows received annually over 5 years at 15%	
\$40,000 × 3.35216	\$ 134,086.40
Present value of salvage value (cash) to be received in 5 years at 15%	
\$35,000 × .49718	<u>17,401.30</u>
Present value of cash inflows	\$ 151,487.70
Present value of cash outflows (purchase price due today at 15%)	
\$154,000 × 1.00000	(154,000.00)
Net present value	<u><u>\$ (2,512.30)</u></u>

ILLUSTRATION G.24

Present value computations at 15%

Because the present value of the cash payments (outflows) of \$154,000.00 exceeds the present value of the cash receipts (inflows) of \$151,487.70 (\$134,086.40 + \$17,401.30), the net present value of \$2,512.30 is negative, and **the investment should be rejected**.

The above discussion relied on present value tables in solving present value problems. As we show in the next section, calculators may also be used to compute present values without the use of these tables. Financial calculators have present value (PV) functions that allow you to calculate present values by merely identifying the proper amount, discount rate, periods, and pressing the PV key.

Using Financial Calculators

LEARNING OBJECTIVE 4

Use a financial calculator to solve time value of money problems.

Business professionals, once they have mastered the underlying time value of money concepts, often use a financial calculator to solve these types of problems. To use financial

calculators, you enter the time value of money variables into the calculator. **Illustration G.25** shows the five most common keys used to solve time value of money problems.²

ILLUSTRATION G.25

Financial calculator keys

where:

- N = number of periods
- I = interest rate per period (some calculators use I/YR or i)
- PV = present value (occurs at the beginning of the first period)
- PMT = payment (all payments are equal, and none are skipped)
- FV = future value (occurs at the end of the last period)

In solving time value of money problems in this appendix, you will generally be given three of four variables and will have to solve for the remaining variable. The fifth key (the key not used) is given a value of zero to ensure that this variable is not used in the computation.

Present Value of a Single Sum

To illustrate how to solve a present value problem using a financial calculator, assume that you want to know the present value of \$84,253 to be received in five years, discounted at 11% compounded annually. **Illustration G.26** depicts this problem.

ILLUSTRATION G.26

Calculator solution for present value of a single sum

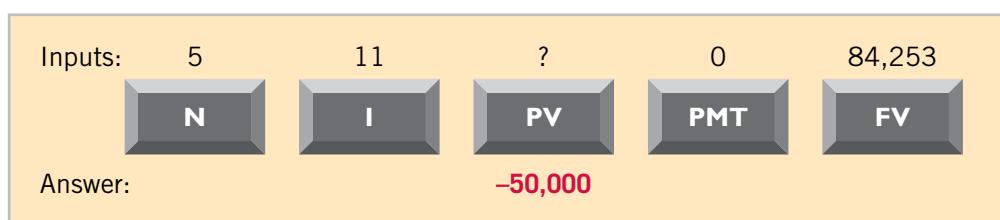

Illustration G.26 shows you the information (inputs) to enter into the calculator: $N = 5$, $I = 11$, $PMT = 0$, and $FV = 84,253$. You then press PV for the answer: $-\$50,000$. As indicated, the PMT key was given a value of zero because a series of payments did not occur in this problem.

Plus and Minus

The use of plus and minus signs in time value of money problems with a financial calculator can be confusing. Most financial calculators are programmed so that the positive and negative cash flows in any problem offset each other. In the present value problem above, we identified the \$84,253 future value initial investment as a positive (inflow); the answer $-\$50,000$ was shown as a negative amount, reflecting a cash outflow. If the 84,253 were entered as a negative, then the final answer would have been reported as a positive 50,000.

Hopefully, the sign convention will not cause confusion. If you understand what is required in a problem, you should be able to interpret a positive or negative amount in determining the solution to a problem.

Compounding Periods

In the problem above, we assumed that compounding occurs once a year. Some financial calculators have a default setting, which assumes that compounding occurs 12 times a year. You must determine what default period has been programmed into your calculator and change it as necessary to arrive at the proper compounding period.

²On many calculators, these keys are actual buttons on the face of the calculator; on others, they appear on the display after the user accesses a present value menu.

Rounding

Most financial calculators store and calculate using 12 decimal places. As a result, because compound interest tables generally have factors only up to five decimal places, a slight difference in the final answer can result. In most time value of money problems, the final answer will not include more than two decimal places.

Present Value of an Annuity

To illustrate how to solve a present value of an annuity problem using a financial calculator, assume that you are asked to determine the present value of rental receipts of \$6,000 each to be received at the end of each of the next five years, when discounted at 12%, as pictured in [Illustration G.27](#).

Inputs:	5	12	?	6,000	0
	N	I	PV	PMT	FV
Answer:	-21,628.66				

ILLUSTRATION G.27

Calculator solution for present value of an annuity

In this case, you enter N = 5, I = 12, PMT = 6,000, FV = 0, and then press PV to arrive at the answer of -\$21,628.66.

Future Value of a Single Sum

Now let us look at an investment to illustrate how to solve a future value problem using a financial calculator. Assume that you will invest \$20,000 today into a fund and you intend to leave it there for 15 years. The fund earns 7% interest. [Illustration G.28](#) shows how to compute the future value of the fund at the end of year 15.

Inputs:	15	7	20,000	0	?
	N	I	PV	PMT	FV
Answer:	-55,180.63				

ILLUSTRATION G.28

Calculator solution for future value of single sum

In this case, you enter N = 15, I = 7, PV = 20,000, PMT = 0, and then press FV to calculate the future value of -\$55,180.63.

Future Value of an Annuity

You can use a financial calculator to solve a future value of an annuity problem for an annuity investment. Assume that you will invest \$8,000 into a fund at the end of each of the next eight years. The fund earns 9% interest. [Illustration G.29](#) shows how to compute the future value of the fund at the end of the eighth year.

Inputs:	8	9	0	8,000	?
	N	I	PV	PMT	FV
Answer:	-88,227.79				

ILLUSTRATION G.29

Calculator solution for future value of an annuity

In this case, you enter N = 8, I = 9, PV = 0, PMT = 8,000, and then press FV to determine the future value of -\$88,227.79.

Internal Rate of Return

You can also use these same calculator keys to compute the internal rate of return of an investment that has equal cash flows. Suppose that a purchase of a piece of equipment with a seven-year life requires an initial investment of \$54,000, has positive cash flows of \$7,800 per year, and has an estimated salvage value of \$11,000. The computation is shown in **Illustration G.30**.

ILLUSTRATION G.30

Calculator solution for internal rate of return

Inputs:	7	?	-54,000	7,800	11,000
	N	I	PV	PMT	FV
Answer:	4.52%				

In this case, you enter $N = 7$, $PV = -54,000$ (we entered as a negative, since it is an outflow), $PMT = 7,800$, $FV = 11,000$, and then press **FV** to determine the answer of 4.52%. Notice that the advantage to this approach is that you arrive at a much more precise result, rather than the rough approximation provided by the present value tables. To determine the internal rate of return using your calculator for an investment with unequal cash flows, you need to employ the cash flow key (**CF**) and the internal rate of return key (**IRR**). The use of these function keys varies across calculators, so you should consult the user manual for your calculator or the manufacturer's website for specific information.

Useful Applications of the Financial Calculator

With a financial calculator, you can solve for any interest rate or for any number of periods in a time value of money problem. Here are some examples of these applications.

Auto Loan

Assume you are financing the purchase of a used car with a three-year loan. The loan has a 9.5% stated annual interest rate, compounded monthly. The price of the car is \$6,000, and you want to determine the monthly payments, assuming that the payments start one month after the purchase. This problem is pictured in **Illustration G.31**.

ILLUSTRATION G.31

Calculator solution for auto loan payments

Inputs:	36	9.5	6,000	?	0
	N	I	PV	PMT	FV
Answer:	-192.20				

To solve this problem, you enter $N = 36$ (12×3), $I = 9.5$, $PV = 6,000$, $FV = 0$, and then press **PMT**. You will find that the monthly payments will be \$192.20. Note that the payment key is usually programmed for 12 payments per year. Thus, you must change the default (compounding period) if the payments are other than monthly.

Mortgage Loan Amount

Say you are evaluating financing options for a loan on a house (a mortgage). You decide that the maximum mortgage payment you can afford is \$700 per month. The annual interest rate is 8.4%. If you get a mortgage that requires you to make monthly payments over a 15-year period, what is the maximum home loan you can afford? **Illustration G.32** depicts this problem.

Inputs:	180	8.4	?	-700	0
	N	I	PV	PMT	FV
Answer:	71,509.81				

ILLUSTRATION G.32

Calculator solution for mortgage amount

You enter $N = 180$ (12×15 years), $I = 8.4$, $PMT = -700$, $FV = 0$, and then press PV. With the payments-per-year key set at 12, you find a present value of \$71,509.81—the maximum home loan you can afford, given that you want to keep your mortgage payments at \$700. Note that by changing any of the variables, you can quickly conduct “what-if” analyses for different situations.

Review

Learning Objectives Review

1 Compute interest and future values.

Simple interest is computed on the principal only, while compound interest is computed on the principal and any interest earned that has not been withdrawn.

To solve for future value of a single amount, prepare a time diagram of the problem. Identify the principal amount, the number of compounding periods, and the interest rate. Using the future value of 1 table, multiply the principal amount by the future value factor specified at the intersection of the number of periods and the interest rate.

To solve for future value of an annuity, prepare a time diagram of the problem. Identify the amount of the periodic payments (receipts), the number of payments (receipts), and the interest rate. Using the future value of an annuity of 1 table, multiply the amount of the payments by the future value factor specified at the intersection of the number of periods and the interest rate.

2 Compute present values.

The following three variables are fundamental to solving present value problems: (1) the future amount, (2) the number of periods, and (3) the interest rate (the discount rate).

To solve for present value of a single amount, prepare a time diagram of the problem. Identify the future amount, the number of discounting periods, and the discount (interest) rate. Using the present value of a single amount table, multiply the future amount by the present value factor specified at the intersection of the number of periods and the discount rate.

To solve for present value of an annuity, prepare a time diagram of the problem. Identify the amount of future periodic receipts or payments (annuities), the number of payments (receipts), and the discount (interest) rate. Using the present value of an annuity of 1 table, multiply the amount of the annuity by the present value factor specified at the intersection of the number of payments and the interest rate.

To compute the present value of notes and bonds, determine the present value of the principal amount and the present value of the interest payments. Multiply the principal amount (a single future amount) by the present value factor (from the present value of 1 table) intersecting at the number of periods (number of interest payments) and the discount rate. To determine the present value of the series of interest payments, multiply the amount of the interest payment by the present value factor (from the present value of an annuity of 1 table) intersecting at the number of periods (number of interest payments) and the discount rate. Add the present value of the principal amount to the present value of the interest payments to arrive at the present value of the note or bond.

3 Compute the present value in capital budgeting situations.

Compute the present values of all cash inflows and all cash outflows related to the capital budgeting proposal (an investment-type decision). If the **net** present value is positive, accept the proposal (make the investment). If the **net** present value is negative, reject the proposal (do not make the investment).

4 Use a financial calculator to solve time value of money problems.

Financial calculators can be used to solve the same and additional problems as those solved with time value of money tables. Enter into the financial calculator the amounts for all of the known elements of a time value of money problem (periods, interest rate, payments, future or present value), and it solves for the unknown element. Particularly useful situations involve interest rates and compounding periods not presented in the tables.

Glossary Review

Annuity A series of equal dollar amounts to be paid or received at evenly spaced time intervals (periodically). (p. G-5).

Compound interest The interest computed on the principal and any interest earned that has not been paid or withdrawn. (p. G-2).

Discounting the future amount(s) The process of determining present value. (p. G-7).

Future value of an annuity The sum of all the payments (receipts) plus the accumulated compound interest on them. (p. G-5).

Future value of a single amount The value at a future date of a given amount invested, assuming compound interest. (p. G-3).

Interest Payment for the use of another person's money. (p. G-1).

Present value The value now of a given amount to be paid or received in the future, assuming compound interest. (p. G-7).

Present value of an annuity The value now of a series of future receipts or payments, discounted assuming compound interest. (p. G-9).

Principal The amount borrowed or invested. (p. G-1).

Simple interest The interest computed on the principal only. (p. G-2).

WileyPLUS

Many additional resources are available for practice in WileyPLUS.

Brief Exercises

(Use tables to solve exercises BEG.1 to BEG.23.)

Compute the future value of a single amount.

BEG.1 (LO 1) Jozy Altidore invested \$6,000 at 5% annual interest, and left the money invested without withdrawing any of the interest for 12 years. At the end of the 12 years, Jozy withdrew the accumulated amount of money. (a) What amount did Jozy withdraw, assuming the investment earns simple interest? (b) What amount did Jozy withdraw, assuming the investment earns interest compounded annually?

Use future value tables.

BEG.2 (LO 1) For each of the following cases, indicate (a) what interest rate columns and (b) what number of periods you would refer to in looking up the future value factor.

- In Table 1 (future value of 1):

	Annual Rate	Number of Years Invested	Compounded
Case A	5%	3	Annually
Case B	12%	4	Semiannually

- In Table 2 (future value of an annuity of 1):

	Annual Rate	Number of Years Invested	Compounded
Case A	3%	8	Annually
Case B	8%	6	Semiannually

Compute the future value of a single amount.

BEG.3 (LO 1) Liam Company signed a lease for an office building for a period of 12 years. Under the lease agreement, a security deposit of \$9,600 is made. The deposit will be returned at the expiration of the lease with interest compounded at 4% per year. What amount will Liam receive at the time the lease expires?

Compute the future value of an annuity.

BEG.4 (LO 1) Bates Company issued \$1,000,000, 10-year bonds. It agreed to make annual deposits of \$78,000 to a fund (called a sinking fund), which will be used to pay off the principal amount of the bond at the end of 10 years. The deposits are made at the end of each year into an account paying 6% annual interest. What amount will be in the sinking fund at the end of 10 years?

Compute the future value of a single amount and of an annuity.

BEG.5 (LO 1) Andrew and Emma Garfield invested \$8,000 in a savings account paying 5% annual interest when their daughter, Angela, was born. They also deposited \$1,000 on each of her birthdays until she was 18 (including her 18th birthday). How much was in the savings account on her 18th birthday (after the last deposit)?

BEG.6 (LO 1) Hugh Curtin borrowed \$35,000 on July 1, 2020. This amount plus accrued interest at 8% compounded annually is to be repaid on July 1, 2025. How much will Hugh have to repay on July 1, 2025?

Compute the future value of a single amount.

BEG.7 (LO 2) For each of the following cases, indicate (a) what interest rate columns and (b) what number of periods you would refer to in looking up the discount rate.

Use present value tables.

1. In Table 3 (present value of 1):

	Annual Rate	Number of Years Involved	Discounts per Year
Case A	12%	7	Annually
Case B	8%	11	Annually
Case C	10%	8	Semiannually

2. In Table 4 (present value of an annuity of 1):

	Annual Rate	Number of Years Involved	Number of Payments Involved	Frequency of Payments
Case A	10%	20	20	Annually
Case B	10%	7	7	Annually
Case C	6%	5	10	Semiannually

BEG.8 (LO 2) a. What is the present value of \$25,000 due 9 periods from now, discounted at 10%?
b. What is the present value of \$25,000 to be received at the end of each of 6 periods, discounted at 9%?

Determine present values.

BEG.9 (LO 2) Messi Company is considering an investment that will return a lump sum of \$900,000 6 years from now. What amount should Messi Company pay for this investment to earn an 8% return?

Compute the present value of a single amount investment.

BEG.10 (LO 2) Lloyd Company earns 6% on an investment that will return \$450,000 8 years from now. What is the amount Lloyd should invest now to earn this rate of return?

Compute the present value of a single amount investment.

BEG.11 (LO 2) Robben Company is considering investing in an annuity contract that will return \$40,000 annually at the end of each year for 15 years. What amount should Robben Company pay for this investment if it earns an 8% return?

Compute the present value of an annuity investment.

BEG.12 (LO 2) Kaehler Enterprises earns 5% on an investment that pays back \$80,000 at the end of each of the next 6 years. What is the amount Kaehler Enterprises invested to earn the 5% rate of return?

Compute the present value of an annual investment.

BEG.13 (LO 2) Dempsey Railroad Co. is about to issue \$400,000 of 10-year bonds paying an 11% interest rate, with interest payable semiannually. The discount rate for such securities is 10%. How much can Dempsey expect to receive for the sale of these bonds?

Compute the present value of bonds.

BEG.14 (LO 2) Assume the same information as BEG.13 except that the discount rate is 12% instead of 10%. In this case, how much can Dempsey expect to receive from the sale of these bonds?

Compute the present value of bonds.

BEG.15 (LO 2) Neymar Taco Company receives a \$75,000, 6-year note bearing interest of 4% (paid annually) from a customer at a time when the discount rate is 6%. What is the present value of the note received by Neymar?

Compute the present value of a note.

BEG.16 (LO 2) Gleason Enterprises issued 6%, 8-year, \$2,500,000 par value bonds that pay interest semiannually on October 1 and April 1. The bonds are dated April 1, 2020, and are issued on that date. The discount rate of interest for such bonds on April 1, 2020, is 8%. What cash proceeds did Gleason receive from issuance of the bonds?

Compute the present value of bonds.

BEG.17 (LO 2) Frazier Company issues a 10%, 5-year mortgage note on January 1, 2020, to obtain financing for new equipment. Land is used as collateral for the note. The terms provide for semiannual installment payments of \$48,850. What are the cash proceeds received from the issuance of the note?

Compute the present value of a note.

BEG.18 (LO 2) If Colleen Mooney invests \$4,765.50 now and she will receive \$12,000 at the end of 12 years, what annual rate of interest will Colleen earn on her investment? (Hint: Use Table 3.)

Compute the interest rate on a single amount.

BEG.19 (LO 2) Tim Howard has been offered the opportunity of investing \$36,125 now. The investment will earn 11% per year and at the end of that time will return Tim \$75,000. How many years must Tim wait to receive \$75,000? (Hint: Use Table 3.)

Compute the number of periods of a single amount.

Compute the interest rate on an annuity.

Compute the number of periods of an annuity.

Compute the present value of a machine for purposes of making a purchase decision.

Compute the maximum price to pay for a machine.

Determine interest rate.

Determine interest rate.

Various time value of money situations.

Various time value of money situations.

Determine internal rate of return.

BEG.20 (LO 2) Joanne Quick made an investment of \$10,271.38. From this investment, she will receive \$1,200 annually for the next 15 years starting one year from now. What rate of interest will Joanne's investment be earning for her? (*Hint:* Use Table 4.)

BEG.21 (LO 2) Kevin Morales invests \$7,793.83 now for a series of \$1,300 annual returns beginning one year from now. Kevin will earn a return of 9% on the initial investment. How many annual payments of \$1,300 will Kevin receive? (*Hint:* Use Table 4.)

BEG.22 (LO 3) Barney Googal owns a garage and is contemplating purchasing a tire retreading machine for \$12,820. After estimating costs and revenues, Barney projects a net cash inflow from the retreading machine of \$2,700 annually for 7 years. Barney hopes to earn a return of 9% on such investments. What is the present value of the retreading operation? Should Barney Googal purchase the retreading machine?

BEG.23 (LO 3) Snyder Company is considering purchasing equipment. The equipment will produce the following cash inflows: Year 1, \$25,000; Year 2, \$30,000; and Year 3, \$40,000. Snyder requires a minimum rate of return of 11%. What is the maximum price Snyder should pay for this equipment?

BEG.24 (LO 4) Carly Simon wishes to invest \$18,000 on July 1, 2020, and have it accumulate to \$50,000 by July 1, 2030. Use a financial calculator to determine at what exact annual rate of interest Carly must invest the \$18,000.

BEG.25 (LO 4) On July 17, 2019, Keith Urban borrowed \$42,000 from his grandfather to open a clothing store. Starting July 17, 2020, Keith has to make 10 equal annual payments of \$6,500 each to repay the loan. Use a financial calculator to determine what interest rate Keith is paying.

BEG.26 (LO 4) As the purchaser of a new house, Carrie Underwood has signed a mortgage note to pay the Nashville National Bank and Trust Co. \$8,400 every 6 months for 20 years, at the end of which time she will own the house. At the date the mortgage is signed, the purchase price was \$198,000 and Underwood made a down payment of \$20,000. The first payment will be made 6 months after the date the mortgage is signed. Using a financial calculator, compute the exact rate of interest earned on the mortgage by the bank.

BEG.27 (LO 4) Using a financial calculator, solve for the unknowns in each of the following situations.

- On June 1, 2019, Jennifer Lawrence purchases lakefront property from her neighbor, Josh Hutchinson, and agrees to pay the purchase price in seven payments of \$16,000 each, the first payment to be payable June 1, 2020. (Assume that interest compounded at an annual rate of 7.35% is implicit in the payments.) What is the purchase price of the property?
- On January 1, 2019, Gerrard Corporation purchased 200 of the \$1,000 face value, 8% coupon, 10-year bonds of Sterling Inc. The bonds mature on January 1, 2029, and pay interest annually beginning January 1, 2020. Gerrard purchased the bonds to yield 10.65%. How much did Gerrard pay for the bonds?

BEG.28 (LO 4) Using a financial calculator, provide a solution to each of the following situations.

- Lynn Anglin owes a debt of \$42,000 from the purchase of her new sport utility vehicle. The debt bears annual interest of 7.8% compounded monthly. Lynn wishes to pay the debt and interest in equal monthly payments over 8 years, beginning one month hence. What equal monthly payments will pay off the debt and interest?
- On January 1, 2020, Roger Molony offers to buy Dave Feeney's used snowmobile for \$8,000, payable in five equal annual installments, which are to include 7.25% interest on the unpaid balance and a portion of the principal. If the first payment is to be made on December 31, 2020, how much will each payment be?

BEG.29 (LO 4) Renolds Corporation is considering two alternative investments in excavating equipment. Investment A requires an initial investment of \$184,000, has positive cash flows of \$27,500 per year, and has an estimated salvage value of \$21,000. Investment B requires an initial investment of \$234,000, has positive cash flows of \$32,800 per year, and has an estimated salvage value of \$19,000. Each piece of equipment is expected to have a 12-year useful life. Use a financial calculator to determine the internal rate of return of each project to decide which is more desirable. (Round to two decimal places, e.g., 9.74%).

Just-in-Time Processing and Activity-Based Costing

Appendix Preview

Traditional costing systems are not the best answer for every company. Some companies have suspected that their traditional costing systems were masking significant differences in their real cost structure, so they sought a new method of assigning costs. These searches by companies for ways to improve operations and gather more accurate data for decision-making have resulted in the development of powerful management tools, including just-in-time (JIT) processing and activity-based costing (ABC). The objective of this appendix is to explain these two management tools.

Appendix Outline

LEARNING OBJECTIVES

1 Explain just-in-time (JIT) processing and activity-based costing (ABC).	<ul style="list-style-type: none">• Just-in-time processing• Activity-based costing
2 Apply activity-based costing to a manufacturer.	<ul style="list-style-type: none">• Identify and classify activities and assign overhead to cost pools• Identify cost drivers• Compute activity-based overhead rates• Allocate overhead costs to products• Comparing unit costs• Benefits of ABC• Limitations of ABC

Just-in-Time Processing and Activity-Based Costing

LEARNING OBJECTIVE 1

Explain just-in-time (JIT) processing and activity-based costing (ABC).

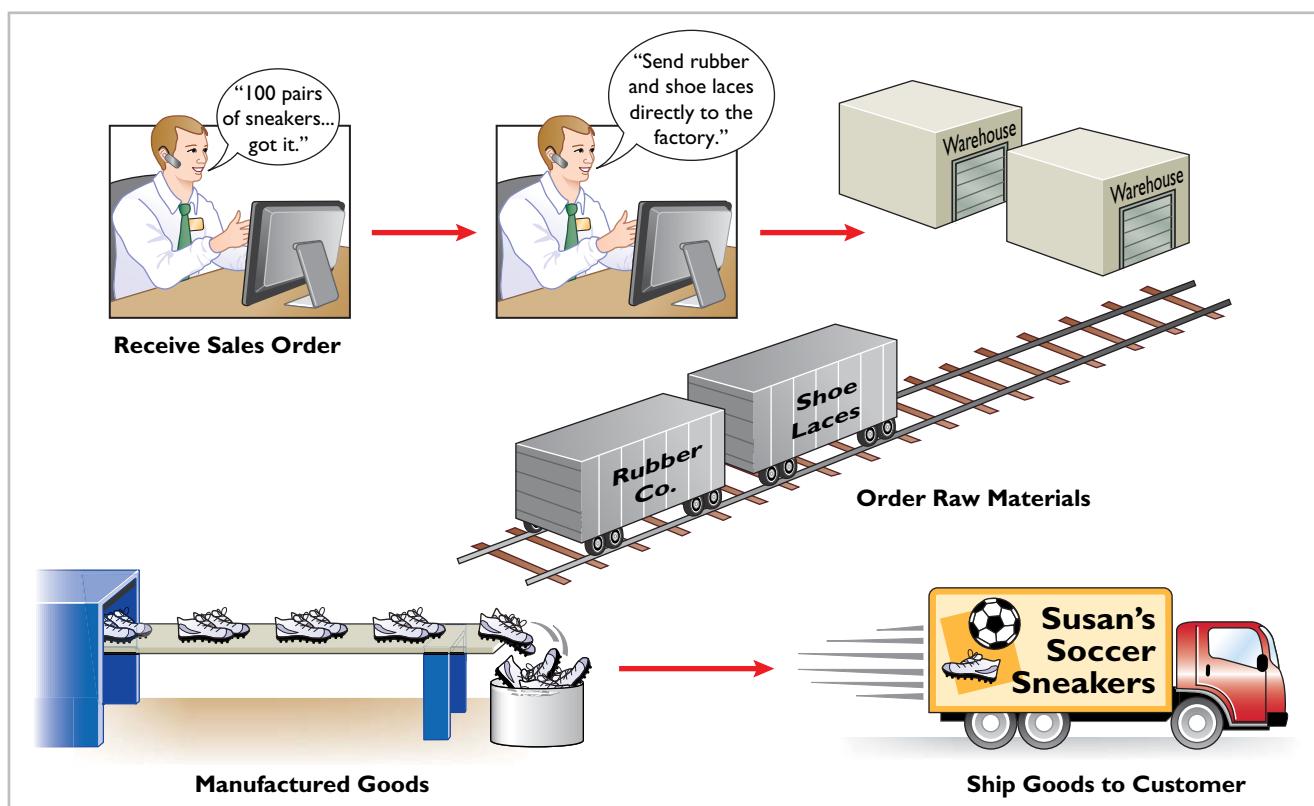

Just-in-Time Processing

Traditionally, continuous process manufacturing has been based on a **just-in-case** philosophy: Inventories of raw materials are maintained *just in case* some items are of poor quality or a key

supplier is shut down by a strike. Similarly, subassembly parts are manufactured and stored *just in case* they are needed later in the manufacturing process. Finished goods are completed and stored *just in case* unexpected and rush customer orders are received. This philosophy often results in a “**push approach**,” in which raw materials and subassembly parts are pushed through each process. Traditional processing often results in the buildup of extensive manufacturing inventories.

Primarily in response to foreign competition, many U.S. firms have switched to **just-in-time (JIT) processing**. JIT manufacturing is dedicated to having the right amount of materials, parts, or products just as they are needed. JIT first hit the United States in the early 1980s when automobile companies adopted it to compete with foreign automakers. Many companies, including **Dell**, **Caterpillar**, and **Harley-Davidson**, now successfully use JIT. Under JIT processing, companies receive raw materials **just in time** for use in production, they complete subassembly parts **just in time** for use in finished goods, and they complete finished goods **just in time** to be sold. **Illustration H.1** shows the sequence of activities in just-in-time processing.

ILLUSTRATION H.1 Just-in-time processing

Objective of JIT Processing

A primary objective of JIT is to eliminate all manufacturing inventories. Inventories have an adverse effect on net income because they tie up funds and storage space that could be put to more productive uses. JIT strives to eliminate inventories by using a “**pull approach**” in manufacturing. This approach begins with the customer placing an order with the company, which starts the process of pulling the product through the manufacturing process. A computer at the final workstation sends a signal to the preceding workstation. This signal indicates the exact materials (parts and subassemblies) needed to complete the production of a specified product for a specified time period, such as an eight-hour shift. The next-preceding process, in turn, sends its signal to other processes back up the line. The goal is a smooth continuous flow in the manufacturing process, with no buildup of inventories at any point.

Elements of JIT Processing

There are three important elements in JIT processing:

- 1. Dependable suppliers.** Suppliers must be willing to deliver on short notice exact quantities of raw materials according to precise quality specifications (even including multiple

deliveries within the same day). Suppliers must also be willing to deliver the raw materials at specified workstations rather than at a central receiving department. This type of purchasing requires constant and direct communication. Such communication is facilitated by an online computer linkage between the company and its suppliers (see **Helpful Hint**).

- 2. A multiskilled work force.** Under JIT, machines are often strategically grouped into work cells or workstations. Much of the work is automated. As a result, one worker may operate and maintain several different types of machines.
- 3. A total quality control system.** The company must establish total quality control throughout the manufacturing operations (see **Helpful Hint**). Total quality control means **no defects**. Since the pull approach signals only required quantities, any defects at any workstation will shut down operations at subsequent workstations. Total quality control requires continuous monitoring by both line employees and supervisors at each workstation.

HELPFUL HINT

Buyer leverage is important in finding dependable suppliers. Companies like **GM** and **GE** have more success than smaller companies.

HELPFUL HINT

Without its emphasis on quality control, JIT would be impractical or even impossible. In JIT, quality is engineered into the production process.

Benefits of JIT Processing

The major benefits of implementing JIT processing are as follows.

1. Significant reduction or elimination of manufacturing inventories.
2. Enhanced product quality.
3. Reduction or elimination of rework costs and inventory storage costs.
4. Production cost savings from the improved flow of goods through the processes.

The effects in many cases have been dramatic. For example, after using JIT for two years, a major division of **Hewlett-Packard** found that work in process inventories (in dollars) were down 82%, scrap/rework costs were down 30%, space utilization improved by 40%, and labor efficiency improved 50%. As indicated, JIT not only reduces inventory but also enables a company to manufacture a better product faster and with less waste.

One of the major accounting benefits of JIT is the elimination of separate raw materials and work in process inventory accounts. These accounts are replaced by **one account**, Raw and In-Process Inventory. All materials and conversion costs are charged to this account. The reduction (or elimination) of in-process inventories results in a simpler computation of equivalent units of production.

Activity-Based Costing

Activity-based costing (ABC) focuses on the activities required to produce a product or perform a service. An ABC system is similar to conventional costing systems in accounting for direct materials and direct labor, but it differs in regard to manufacturing overhead.

A conventional cost system uses a **single unit-level** basis to allocate overhead costs to products. The basis may be direct labor or machine hours used to manufacture the product. The assumption in this approach is that as volume of units produced increases, so does the cost of overhead. However, in recent years the amount of direct labor used in many industries has greatly **decreased**, and total overhead costs resulting from depreciation on expensive equipment and machinery, utilities, repairs, and maintenance have significantly **increased**.

In ABC, the cost of a product is equal to the sum of the costs of all activities performed to manufacture it. ABC recognizes that to have accurate and meaningful cost data, **more than one basis** of allocating activity costs to products is needed.

In selecting the allocation basis, ABC seeks to identify the **cost drivers** that measure the activities performed on the product. A **cost driver** may be any factor or activity that has a direct cause-effect relationship with the resources consumed. **Illustration H.2** lists examples of activities and possible cost drivers.

Two important assumptions must be met in order to obtain accurate product costs under ABC:

1. All overhead costs related to the activity must be driven by the cost driver used to assign costs to products.
2. All overhead costs related to the activity should respond proportionally to changes in the activity level of the cost driver.

ILLUSTRATION H.2**Activities and cost drivers
in ABC**

Activity	Cost Driver
Ordering raw materials	Ordering hours; number of orders
Receiving raw materials	Receiving hours; number of shipments
Materials handling	Number of requisitions; weight of materials; handling hours
Production scheduling	Number of orders
Machine setups	Setup hours; number of setups
Machining (fabricating, assembling, etc.)	Machine hours
Quality control inspections	Number of inspections
Factory supervision	Number of employees

For example, if there is little or no correlation between changes in the cost driver and consumption of the overhead cost, inaccurate product costs are inevitable. We provide an example of the use of ABC later in this appendix.

Activity-based costing may be used with either a job order or a process cost accounting system. The primary benefit of ABC is more accurate and meaningful product costing. Also, improved cost data about an activity can lead to reduced costs for the activity. In sum, ABC makes managers realize that it is **activities**, and not products, that determine the profitability of a company—a realization that should lead to better management decisions.

Applying Activity-Based Costing

LEARNING OBJECTIVE 2

Apply activity-based costing to a manufacturer.

In this section, we present a simple case example that compares activity-based costing with traditional costing. It illustrates how ABC eliminates the distortion that can occur in traditional overhead cost allocation. As you study this example, you should understand that ABC does not *replace* an existing job order or process cost system. What ABC does is to segregate overhead into various cost pools in an effort to provide more accurate cost information. As a result, ABC supplements—rather than replaces—these cost systems.

Assume that Atlas Company produces two abdominal fitness products—the Ab Bench and the Ab Coaster. Each year, the company produces 25,000 Ab Benches but only 5,000 Ab Coasters. Each unit produced requires one hour of direct labor, for a total of 30,000 labor hours ($25,000 + 5,000$). The direct labor cost is \$12 per unit for each product. The direct materials cost per unit is \$40 for the Ab Bench and \$30 for the Ab Coaster.

Atlas also expects to incur annual manufacturing overhead costs of \$900,000. Atlas allocates overhead using a single predetermined overhead rate based on the 30,000 direct labor hours it expects to use. Thus, the predetermined overhead rate is \$30 per direct labor hour ($\$900,000 / 30,000$ direct labor hours).

Since both products require one direct labor hour per unit, both products are allocated overhead costs of \$30 per unit under traditional costing. **Illustration H.3** shows the total unit costs for the Ab Bench and the Ab Coaster.

With this information, we can now calculate unit costs under ABC for the Ab Bench and the Ab Coaster. Activity-based costing involves the following four steps.

- 1. Identify and classify the activities** involved in the manufacture of specific products and **assign overhead to cost pools**.
- 2. Identify the cost driver** that has a strong correlation to the costs accumulated in each cost pool.
- 3. Compute the activity-based overhead rate** for each cost pool.
- 4. Allocate overhead costs to products** using the overhead rates determined for each cost pool.

Atlas Company			
	A	B	C
1	Atlas Company		
2	Manufacturing Costs	Ab Bench	Ab Coaster
3	Direct materials	\$40	\$30
4	Direct labor	12	12
5	Overhead	30	30
6	Total direct cost per unit	\$82	\$72
7			

ILLUSTRATION H.3

Total unit costs—traditional costing

Identify and Classify Activities and Assign Overhead to Cost Pools (Step 1)

Activity-based costing starts with an analysis of the activities needed to manufacture a product or perform a service. This analysis should identify all resource-consuming activities. It requires documenting every activity undertaken to accomplish a task. Atlas Company identifies five activity cost pools: manufacturing, setups, purchase ordering, product development, and property and plant.

Next, the company assigns overhead costs directly to the appropriate activity cost pool. For example, Atlas assigns all overhead costs directly associated with machine setups (such as salaries, supplies, and depreciation) to the setup cost pool. **Illustration H.4** shows the five cost pools, along with the estimated overhead assigned to each cost pool.

Atlas Company		
	A	B
1	Atlas Company	
2	Activity Cost Pools	Estimated Overhead
3	Manufacturing	\$500,000
4	Setups	100,000
5	Purchase ordering	50,000
6	Product development	200,000
7	Property and plant	50,000
8	Total	\$900,000
9		

ILLUSTRATION H.4

Activity cost pools and estimated overhead

Identify Cost Drivers (Step 2)

After costs are assigned to the activity cost pools, the company must identify the cost drivers for each cost pool. The cost driver must accurately measure the actual consumption of the activity by the various products. To achieve accurate costing, a **high degree of correlation** must exist between the cost driver and the actual consumption of the overhead costs in the cost pool.

Illustration H.5 shows the cost drivers that Atlas Company identifies and their total expected use per activity cost pool.

Availability and ease of obtaining data relating to the cost driver is an important factor that must be considered in its selection.

ILLUSTRATION H.5

Cost drivers and their expected use

Activity Cost Pools	Cost Drivers	Expected Use of Cost Drivers per Activity
Manufacturing	Machine hours	50,000 machine hours
Setups	Number of setups	2,000 setups
Purchase ordering	Number of purchase orders	2,500 purchase orders
Product development	Products developed	2 products developed
Property and plant	Square footage	25,000 square feet

Compute Activity-Based Overhead Rates (Step 3)

Next, the company computes an **activity-based overhead rate** per cost driver by dividing the estimated overhead per activity by the number of cost drivers expected to be used per activity. **Illustration H.6** shows the formula for this computation.

ILLUSTRATION H.6

Formula for computing activity-based overhead rate

$$\frac{\text{Estimated Overhead per Activity}}{\text{Expected Use of Cost Drivers per Activity}} = \text{Activity-Based Overhead Rate}$$

Atlas Company computes its activity-based overhead rates by using the estimated overhead per activity cost pool, shown in Illustration H.4, and the expected use of cost drivers per activity, shown in Illustration H.5. These computations are presented in **Illustration H.7**.

ILLUSTRATION H.7

Computation of activity-based overhead rates

Atlas Company					
	A	B	C	D	F
1					
2	Activity Cost Pools	Estimated Overhead	÷	Expected Use of Cost Drivers per Activity	=
3	Manufacturing	\$500,000	50,000 machine hours	\$10 per machine hour	
4	Setups	100,000	2,000 setups	\$50 per setup	
5	Purchase ordering	50,000	2,500 purchase orders	\$20 per order	
6	Product development	200,000	2 products developed	\$100,000 per product	
7	Plant and property	50,000	25,000 square feet	\$2 per square foot	
8	Total	\$900,000			
9					

Allocate Overhead Costs to Products (Step 4)

In allocating overhead costs, the company must know the expected use of cost drivers **for each product**. Because of its low volume and higher number of components, the Ab Coaster requires more setups and purchase orders than the Ab Bench. **Illustration H.8** shows the expected use of cost drivers per product for each of Atlas Company's products.

ILLUSTRATION H.8

Expected use of cost drivers per product

Activity Cost Pools	Cost Drivers	Expected Use of Cost Drivers per Activity	Expected Use of Cost Drivers per Product	
			Ab Bench	Ab Coaster
Manufacturing	Machine hours	50,000 machine hours	30,000	20,000
Setups	Number of setups	2,000 setups	500	1,500
Purchase ordering	Number of purchase orders	2,500 purchase orders	750	1,750
Product development	Products developed	2 products developed	1	1
Property and plant	Square feet	25,000 square feet	10,000	15,000

To allocate overhead costs to each product, Atlas multiplies the activity-based overhead rates per cost driver (Illustration H.7) by the number of cost drivers expected to be used per product (Illustration H.8). **Illustration H.9** shows the overhead cost allocated to each product.

ILLUSTRATION H.9 Allocation of activity cost pools to products

Atlas Company												
	A	B	C	D	E	F	G	H	I	J	K	L
1	Atlas Company											
2												
3	Activity Cost Pools		Expected Use of Cost Drivers per Product	×	Activity-Based Overhead Rates	=	Cost Allocated	Expected Use of Cost Drivers per Product	×	Activity-Based Overhead Rates	=	Cost Allocated
4	Manufacturing	30,000		\$10		\$300,000	20,000		\$10		\$200,000	
5	Setups	500		\$50		25,000	1,500		\$50		75,000	
6	Purchase ordering	750		\$20		15,000	1,750		\$20		35,000	
7	Product development	1		\$100,000		100,000	1		\$100,000		100,000	
8	Property and plant	10,000		\$2.00		20,000	15,000		\$2.00		30,000	
9	Total costs allocated (a)					\$460,000					\$440,000	
10	Units produced (b)					25,000					5,000	
11	Overhead cost per unit [(a) ÷ (b)], rounded					\$18.40					\$88.00	
12												

Under ABC, the overhead cost per unit is \$18.40 for the Ab Bench and \$88.00 for the Ab Coaster. We see next how this per unit amount substantially differs from that computed under a traditional costing system.

Comparing Unit Costs

Illustration H.10 compares the unit costs for Atlas Company's Ab Bench and Ab Coaster under traditional costing and ABC.

	Ab Bench		Ab Coaster	
	Traditional Costing	ABC	Traditional Costing	ABC
Manufacturing Costs				
Direct materials	\$40.00	\$40.00	\$30.00	\$ 30.00
Direct labor	12.00	12.00	12.00	12.00
Overhead	30.00	18.40	30.00	88.00
Total direct cost per unit	<u>\$82.00</u>	<u>\$70.40</u>	<u>\$72.00</u>	<u>\$130.00</u>
	Overstated \$11.60		Understated \$58.00	

ILLUSTRATION H.10

Comparison of unit product costs

The comparison shows that unit costs under traditional costing are different and often misleading. Traditional costing overstates the cost of producing the Ab Bench by \$11.60 per unit and understates the cost of producing the Ab Coaster by \$58 per unit. These differences are attributable to how Atlas allocates manufacturing overhead across the two systems. Thus, ABC helps Atlas avoid some negative consequences of a traditional costing system, such as overpricing its Ab Benches and thereby possibly losing market share to competitors. Atlas has also been sacrificing profitability by underpricing the Ab Coaster.

Benefits of ABC

The primary benefit of ABC is **more accurate product costing**. Here's why:

- ABC leads to more cost pools** being used to assign overhead costs to products. Instead of one plantwide pool (or even departmental pools) and a single cost driver, companies use numerous activity cost pools with more relevant cost drivers. Costs are assigned more directly on the basis of the cost drivers used to produce each product.
- ABC leads to enhanced control over overhead costs.** Under ABC, companies can trace many overhead costs directly to activities—allowing some indirect costs to be identified as direct costs. Thus, managers have become more aware of their responsibility to control the activities that generate those costs.
- ABC leads to better management decisions.** More accurate product costing should contribute to setting selling prices that can help achieve desired product profitability levels. In addition, more accurate cost data could be helpful in deciding whether to make or buy a product part or component, and sometimes even whether to eliminate a product.

Activity-based costing does not change the amount of overhead costs. What it does do is allocate those overhead costs in a more accurate manner. Furthermore, if the scorekeeping is more realistic and more accurate, managers should be able to better understand cost behavior and overall profitability.

Limitations of ABC

Although ABC systems often provide better product cost data than traditional volume-based systems, there are limitations:

- ABC can be expensive to use.** The increased cost of identifying multiple activities and applying numerous cost drivers discourages many companies from using ABC. Activity-based costing systems are more complex than traditional costing systems—sometimes significantly more complex. So companies must ask, is the cost of implementation greater than the benefit of greater accuracy? Sometimes it may be. For some companies, there may be no need to consider ABC at all because their existing system is sufficient. If the costs of ABC outweigh the benefits, then the company should not implement ABC.
- Some arbitrary allocations continue.** Even though more overhead costs can be assigned directly to products through ABC's multiple activity cost pools, certain overhead costs remain to be allocated by means of some arbitrary volume-based cost driver such as labor or machine hours.

Review

Learning Objectives Review

1 Explain just-in-time (JIT) processing and activity-based costing (ABC).

JIT is a manufacturing technique dedicated to producing the right products at the right time as needed. One of the principal accounting effects is that a Raw and In-Process Inventory account replaces both the raw materials and work in process inventory accounts. ABC is a method of product costing that focuses on the activities performed to produce products. It assigns the cost of the activities to products by

using cost drivers that measure the activities performed. The primary objective of ABC is accurate and meaningful product costs.

2 Apply activity-based costing to a manufacturer.

In applying ABC, it is necessary to compute the overhead rate for each activity by dividing total expected overhead by the total expected usage of the cost driver. The overhead cost for each activity is then assigned to products on the basis of each product's use of the cost driver.

Glossary Review

Activity-based costing (ABC) A costing system that focuses on the activities required to produce a product or perform a service. (p. H-3).

Cost driver Any factor or activity that has a direct cause-effect relationship with the resources consumed. (p. H-3)

Just-in-time (JIT) processing A processing system dedicated to having the right amount of materials, parts, or products arrive as they are needed, thereby reducing the amount of inventory. (p. H-2).

WileyPLUS

Many additional resources are available for practice in WileyPLUS.

Exercises

EH.1 (LO 1) Sam Snead has formulated the following list of statements about contemporary developments in managerial accounting.

JIT processing and ABC.

1. Just-in-time processing results in a push approach; that is, raw materials are pushed through each process.
2. A primary objective of just-in-time processing is to eliminate all manufacturing inventories.
3. A major disadvantage of just-in-time processing is lower product quality.
4. A primary benefit of activity-based costing is more accurate and meaningful product costing.
5. A major advantage of activity-based costing is that it uses a single unit-level basis, such as direct labor or machine hours, to allocate overhead.

Identify each statement as true or false. If false, indicate how to correct the statement to make it true.

EH.2 (LO 2) Mordica Company identifies three activities in its manufacturing process: machine setups, machining, and inspections. Estimated annual overhead cost for each activity is \$150,000, \$325,000, and \$87,500, respectively. The cost driver for each activity and the expected annual usage are number of setups 2,500, machine hours 25,000, and number of inspections 1,750. Compute the overhead rate for each activity.

Compute activity-based overhead rates.

EH.3 (LO 2) Writing Major Instrument, Inc. manufactures two products: missile range instruments and space pressure gauges. During April, 50 range instruments and 300 pressure gauges were produced, and overhead costs of \$94,500 were estimated. An analysis of estimated overhead costs reveals the following activities.

Compute overhead rates and assign overhead using ABC.

Activities	Cost Drivers	Total Cost
1. Materials handling	Number of requisitions	\$40,000
2. Machine setups	Number of setups	27,500
3. Quality inspections	Number of inspections	27,000
		<u><u>\$94,500</u></u>

The cost driver volume for each product was as follows.

Cost Drivers	Instruments	Gauges	Total
Number of requisitions	400	600	1,000
Number of setups	200	300	500
Number of inspections	200	400	600

Instructions

- a. Determine the overhead rate for each activity.
- b. Assign the manufacturing overhead costs for April to the two products using activity-based costing.
- c. Write a memorandum to the president of Major Instrument explaining the benefits of activity-based costing.

Compute product cost using traditional costing and ABC.

EH.4 (LO 2) Kowalski Company manufactures a number of specialized machine parts. Part Compo-24 uses \$35 of direct materials and \$15 of direct labor per unit. Kowalski's estimated manufacturing overhead is as follows.

Materials handling	\$150,000
Machining	180,000
Factory supervision	138,000
Total	<u><u>\$468,000</u></u>

Overhead is applied based on direct labor costs, which were estimated at \$200,000.

Kowalski is considering adopting activity-based costing. The cost drivers are estimated at:

Activity	Cost Driver	Expected Use
Materials handling	Weight of materials	50,000 pounds
Machining	Machine hours	20,000 hours
Factory supervision	Direct labor hours	12,000 hours

Instructions

- Compute the cost of 1,000 units of Compo-24 using the current traditional costing system.
- Compute the cost of 1,000 units of Compo-24 using the proposed activity-based costing system. Assume the 1,000 units use 2,500 pounds of materials, 500 machine hours, and 1,000 direct labor hours.

Assign overhead to products using ABC and evaluate decision.

EH.5 (LO 2) Writing Schultz Electronics manufactures two large-screen television models: the Royale which sells for \$1,600, and a new model, the Majestic, which sells for \$1,300. The production cost computed per unit under traditional costing for each model in 2020 was as follows.

Traditional Costing	Royale	Majestic
Direct materials	\$ 700	\$420
Direct labor (\$20 per hour)	120	100
Manufacturing overhead (\$38 per DLH)	<u>228</u>	<u>190</u>
Total per unit cost	<u><u>\$1,048</u></u>	<u><u>\$710</u></u>

In 2020, Schultz manufactured 25,000 units of the Royale and 10,000 units of the Majestic. The overhead rate of \$38 per direct labor hour was determined by dividing total expected manufacturing overhead of \$7,600,000 by the total direct labor hours (200,000) for the two models.

Under traditional costing, the gross profit on the models was Royale \$552 or (\$1,600 – \$1,048), and Majestic \$590 or (\$1,300 – \$710). Because of this difference, management is considering phasing out the Royale model and increasing the production of the Majestic model.

Before finalizing its decision, management asks Schultz's controller to prepare an analysis using activity-based costing (ABC). The controller accumulates the following information about overhead for the year ended December 31, 2020.

Activities	Cost Drivers	Estimated Overhead	Expected Use of Cost Drivers	Activity-Based Overhead Rate
Purchasing	Number of orders	\$1,200,000	40,000	\$30/order
Machine setups	Number of setups	900,000	18,000	\$50/setup
Machining	Machine hours	4,800,000	120,000	\$40/hour
Quality control	Number of inspections	700,000	28,000	\$25/inspection

The cost drivers used for each product were:

Cost Drivers	Royale	Majestic	Total
Purchase orders	17,000	23,000	40,000
Machine setups	5,000	13,000	18,000
Machine hours	75,000	45,000	120,000
Inspections	11,000	17,000	28,000

Instructions

- Assign the total 2020 manufacturing overhead costs to the two products using activity-based costing (ABC) and determine the overhead cost per unit.
- What was the cost per unit and gross profit of each model using ABC?
- Are management's future plans for the two models sound? Explain.
